5/

THE NEWS

OCTOBER 1942

'Under the direction of the General Executive Committee and the Administration the first "Massachusetts General Hospital Bulletin" was published in 1913. Mention was made of it in the Annual Report of that year: "Beginning December 10, the Hospital now issues to its staff, trustees, and friends of the Hospital, a bulletin containing notes of new rules, appointments, meetings and other matters of interest. This bulletin is issued as often as there is anything of importance to say, and serves to keep all those who work for the Hospital in touch with what is going on in the different departments."

'Issues appeared until November 17, 1917 (No. 25), when publication was interrupted by War activities. In June 1919 the General Executive Committee record as their unanimous opinion "that the Bulletins were very valuable and should be continued." The "Bulletin" reappeared on December 1, 1919, and twelve later issues were published, the last on July 1, 1926.

'In February 1928 it was decided to renew this activity, and in the autumn of that year the first number of the "Massachusetts General Hospital News" appeared. The Editorial Board were: Drs. Henry R. Viets, William B. Breed, Joseph Garland, Edward D. Churchill, Ralph K. Ghormley, Chester M. Jones, Edward P. Richardson. In 1932, in the great depression, this publication was given up for reasons of economy.'

With this statement from the Hospital history as an introduction, a new series of THE NEWS presents itself. It hopes to carry on the usefulness and interest of the earlier publications. This it can do only with the help of the whole Hospital organization. The activities of your department should be known to all the other departments. In these days the economy and encouragement of coöperation are a contribution not only to the work of the Hospital but to the progress of the war toward victory.

* * *

It seems impractical to include here all appointments made by the Trustees since the publication of the Annual Report. This journal will publish currently appointments made during the preceding month, and according to that plan this issue gives only those made at the August meeting:

Dr. Warren R. Sisson, Associate Physician, Children's Medical Service
Dr. Clemens E. Benda, Assistant in Psychiatry
Dr. Laurance W. Kinsell, Research Fellow in Medicine
Dr. Francis R. Foldes, Resident in Anaesthesia
Dr. Russel L. Baker, Resident, Neurology Service
Dr. Charles W. Ordman, Assistant Resident, Medical Service
Dr. John G. Flynn, Dr. William R. Eyler, and Dr. Samuel G. Holmes, Interns, Children's Medical Service, to begin July 1, 1943
Dr. Arthur W. Watts, Intern, Surgical Service

In addition the Trustees voted:

To grant leave of absence for Dr. Henry F. Howe from his duties in the Surgical Out-Patient Department for the duration of the war as he has accepted a commission as Captain in the Medical Corps of the Army.

The Hospital will observe October 12, Columbus Day, as a legal holiday.

Ether Day, October 16, will be celebrated informally by a luncheon in the Brick Corridor.

✣ ✣ ✣

Dr. Thomas A. Devan was appointed an Assistant Director, effective July 1, 1942. Dr. Devan is a graduate of Rutgers College, Johns Hopkins Medical School, and the Presbyterian Hospital, New York. He was an Assistant Director at the Peter Bent Brigham Hospital from 1913-1919, and then returned to Rutgers as Professor of Hygiene and College Physician. He gave up that post in 1925 to serve in Rochester, N. Y., as an Assistant Director under Dr. Faxon at the Strong Memorial Hospital, which had just opened its new plant. In 1930 he went to take charge of the Eastern Maine General Hospital in Bangor. He retired in 1937, but was called from the comforts of private life by Dr. Faxon to serve here during the present war emergency.

✣ ✣ ✣

With the enlistment of Dr. Albert G. Engelbach, Dr. Frederic A. Washburn has been "demoted" at Cambridge Hospital from Consulting Director to Director.

* * *

In the Annual Report for 1941 the General Executive Committee mentioned the problems of providing medical personnel for the Armed Forces, while maintaining in a teaching hospital the best possible care of patients in a large community. In addition to releasing members of its staff for duty in the field, the Hospital was faced with the additional problem presented by the Army restriction of medical school graduates to one year internships. This called for more than mere change in teaching and visiting schedules. As was there pointed out, a shorter schedule for interns meant their closer supervision—by a staff to be reduced by about fifty per cent.

What the reduced "Home Guard" must contribute to the solution of both problems can be counted on more easily than it can be estimated. Dr. Means has given the following statement and comment on the practical plans made by the Medical Service to suit these changed conditions:

> To meet the exigencies of wartime and to provide doctors for the Army and Navy at the earliest possible moment we closed up our traditional graded internship in medicine on April first last and substituted a one-year service. This service is planned as follows:
>
> For the first six months the interns serve in three rotations of two months each. During this period each man (or woman, for we have appointed a woman to this service for the first time in history) serves in three out of five possible rotations. These rotations are: Psychiatry, Neurology, Medicine in the Baker Memorial, Communicable Diseases in the Haynes Memorial (Massachusetts Memorial Hospitals), and in Dermatology and Syphilology. During the following six months, they serve on the medical wards, assigned two to a ward, dividing the cases between them and doing everything on their cases except what is performed by fourth-year medical students. An Assistant Resident oversees their work. During this period they also serve in rotation one day each week in the medical out-patient department and one day in the emergency ward. This type of internship has been known as horizontal instead of vertical, which is what we had before.
>
> The Department plans to take eight new interns twice a year, on April 1 and October 1. This means that we shall take sixteen a year and keep them one year, instead of taking eight per year and keeping them two years, as we did formerly. It will be seen that the total number living in at any one time remains the same. It was thought that this type of internship would prove to be distinctly inferior to the old; as a matter of fact it is working out better than we expected. At the time of writing the Medical Service has lost fifty per cent of its resident staff. It will probably have a small increase in the autumn, but it is doubtful if we can maintain our full quota of six until the war is over. We are quite aware also of the possibility that we may not be able to fill up our internships. If we don't fill them, we shall have to do the best we can with fourth-year students and older visiting physicians.

Dr. Means mentions further contributions on the part of hospital and staff:

> Within the last few months several members of the medical staff have undertaken contracts with the Government to do research under the Office of Scientific Research and Development. These are projects with reference to the war effort. Ward 4 is being used for that purpose, and to help in carrying out this work it is being kept open during the summer, for the first time in its history.

Similar problems have confronted the Surgical Services, and the carefully planned five-year training period for the surgical house staff has had to be changed to suit the new requirements. Dr.

Churchill reports the following adjustments:

> The new program of graduate education in surgery, launched on January 1, 1940, came to an untimely end with the declaration of war. At that time the general and special surgical services were providing graduate education to thirty-nine young surgeons. All but six of this house staff were men of more than one year's experience. To meet the demand of the emergency it was necessary to reduce the assistant resident and resident group to nine, and to offer a one year internship to twenty-eight men a year. During the past year the required adjustments have been carried out in an orderly way, trying in so far as possible to arrange for men nearing the end of their service to carry on to completion.
>
> One-year appointments have been made from the 1942 and 1943 graduating classes. The acceleration of the medical school course will allow twenty-one internships for each graduating class. The one-year internship includes periods on the special services as well as general surgery. Time spent by the house staff in the Phillips House and Baker Memorial has always been a problem so far as securing educational returns from service rendered. To improve this service the visiting staff has been divided into "teams" to each of which an intern is assigned. The intern becomes an apprentice to the small group of surgeons who comprise his team. Some confusion was caused by vacation periods during the summer, but on the whole the experiment has been successful.
>
> To date the war has brought no reduction in the surgery of the general hospital or the private wards. With a reduction of the visiting staff and with a relatively untrained house staff it is quite probable that a postponement of certain major elective operations, particularly those requiring elaborate and detailed post-operative supervision, may be advisable. By grouping undergraduate students into larger sections, the teaching load has been considerably lightened without materially reducing standards.

* * *

THE NEWS hopes to maintain relative continuity of information about every department. It can make no attempt, however, to bring up to date the activity of each since the last issue of its predecessor late in 1931. In only one instance does a summary seem both possible and desired.

There have already gone to the Armed Forces of the United States and the Allies approximately 100 members of the staff and about 100 nurses. In addition about 40 residents, graduate assistants, and house officers have entered the service. Some mention of the main units to which they have gone will make for clarity and economy in presenting later news. It will also show the good round sum of the Hospital's war effort to date.

By granting leave of absence in October 1940 to Dr. Gerald F. Houser, an Assistant Director, the Hospital early coöperated in providing medical service in connection with the war. Dr. Houser had received appointment as Superintendent of the American Red Cross-Harvard Field Hospital. The preliminary surveys and arrangements in England for this hospital, planned as a gift to England, for erection there for the study and treatment of communicable diseases under wartime conditions, had been made by Dr. John E. Gordon, with Dr. John R. Mote as his assistant, and the undertaking was organized with Dr. Gordon as Director. A 126-bed hospital, with 22 fully equipped buildings, was planned and prefabricated in this country. It was equipped under Dr. Houser's supervision and transported across the Atlantic, where its administrative organization was completed. Dr. Houser embarked in March 1941; the hospital opened on September 23, 1941. The story of this achievement, with brief mention of the difficulties encountered, was given by Dr. Houser in *Hospitals* for December 1941.

The hospital has now been taken over by the U.S. Army Medical Corps and has recently been under the command of Dr. Storer P. Humphreys. Dr. Humphreys has already seen service with the Royal Canadian Army. Dr. Gordon has been commissioned Lieutenant Colonel, M.C., U.S.A., to act as consultant in sanitation and as liaison between the British Ministry of Health and the U. S. Army. Miss Walborg G. Peterson, who accompanied the unit and served as Supervisor, has returned. In October she is to resume her duties as an Executive Assistant at the Massachusetts Eye and Ear Infirmary. The hospital is to be the central laboratory for the U.S. Armed Forces in Great Britain, and has been mentioned by Secretary Stimson as "a truly splendid addition to the Army's medical facilities."

* * *

An earlier contribution was made by "the American Hospital in Britain." Dr. Philip D. Wilson was instrumental in organizing this group, and was in command of its first unit, which sailed in August 1940. It took over a 300-bed hospital unit in Basingstoke, with Dr. Wilson as Resident Medical Director, and later moved to Oxford. Dr. Wilson returned to help establish it there in the newly built Churchill Hospital, a unit of the Emergency Medical Service under the British Ministry of Health. Dr. Wilson was succeeded by his brother, Dr. E. Harlan Wilson. Doctors, nurses, technicians and secretaries were sent over, and the services supplied included medicine, general surgery, and orthopaedic, plastic and neurosurgery. On July 15, 1942, the hospital was formally transferred to the United States Army.

* * *

Before attempting to bring news of General Hospital No. 6 up to date, it may be mentioned that the term General Hospital now designates medical units that were called Base Hospitals in the last war. The organization of G.H. No. 6 was undertaken early in 1940; it took its departure, fully equipped and militarized, on May 15, 1942. Its foundation, however, was laid during the early months of 1916 in this hospital, where the idea that civil hospitals should serve as the parents of army hospitals was first worked out. To repeat the story of how U.S. Base Hospital No. 6 was organized twenty-five years ago, as the representative of the Massachusetts General Hospital in World War I, will furnish a preliminary history of General Hospital No. 6 and give to a later generation the story of the contribution inaugurated by civilian hospitals in the last war, and taken for granted in this one. The following is reprinted from the history of the Hospital:—

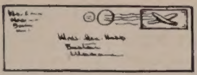
> There was early proposal made that hospital units for service with the army should be organized in connection with medical schools, but when Colonel Jefferson R. Kean, M.C., U.S.A., who was detailed to the American Red Cross, came to Boston to discuss this matter, it was insisted on by officers of the Massachusetts General Hospital that such units should appertain to hospitals, not to medical schools. This conclusion was reached for two sufficient reasons: First, that the parent of a hospital should be a hospital, and, second, that there were many hospitals and few schools—and many military hospitals might be needed. A visit to the Surgeon General of the Army, General Gorgas, by Dr. Washburn and Dr. Winford H. Smith, Director of Johns Hopkins Hospital, resulted in a decision to organize under the Red Cross both groups—one sponsored by medical schools, the other by hospitals. General Gorgas asked Dr. Smith and Dr. Washburn to organize such military units at their respective hospitals. . . . Base Hospital No. 6 was but one of many hospitals thus organized. When they became going concerns in France and England they gave the American soldier a high-grade hospitalization that he had never had in previous wars. These hospitals were the backbone of the Medical Department in the American Expeditionary Force.

When it sailed from New York on July 9, 1917, Base Hospital No. 6 carried with it equipment for a 500-bed hospital. It took over a French hospital of about 1000 beds established in a boys' school at Talence, a suburb of Bordeaux. It saw nearly two years of active duty as a part of the American Expeditionary Force, and left behind it a hospital of over 4000 beds.

Many other members of the Massachusetts General Hospital staff or its graduates served in hospitals similarly organized: Base Hospital No. 5, bombed at Camiers and transferred to Boulogne; U.S. Army Base Hospital No. 55 at Toul; General Hospital No. 22, British Expeditionary Force; Army Base Hospital No. 204. Many more might be named. After the Armistice a number of officers and nurses saw service under the Red Cross in Serbia, Poland, and Greece. The final roster of the Hospital in World War I numbered 585 persons. Thirteen of these gave their lives.

* * *

General Hospital No. 6 was authorized on May 16, 1941, and Colonel Thomas R. Goethals was to become its commanding officer. The Massachusetts General Hospital as its sponsoring institution was to provide 55 officers, 120 nurses, and 10 civilians (4 physiotherapists, 4 dietitians, 2 dental hygienists). The enlisted personnel of 500 was to be provided by the War Department on activation, but permission was given in February 1942 to procure technicians and specialists for later assignments, and 71 were here enlisted. On July 1, 1941, after the major proportion of its officer complement was enrolled, Colonel Goethals was called in-



Colonel Goethals, Major Thorndike, and Captain Hamilton have sent news from Camp Blanding in weekly letters to Dr. Faxon. These letters are posted currently in Dr. Faxon's office. In later issues they can be quoted more fully, but the following excerpts will give details on General Hospital No. 6 in training:

May 30: The 6th General Hospital seems to be progressing toward its full strength without too much delay. On Monday, the 25th, Miss Barbour and her group arrived and were promptly put up in the Red Cross quarters at the Station Hospital. On Wednesday, the 27th, Major Herman Nathan, QMC, our Supply Officer arrived from Camp Lee. On that same day, at about 10:30 P.M. our enlisted reservists came in, having been sent down from Fort Devens. There were 78 of them in all, which brings our enlisted complement up to 430, or within 70 of full strength.

Of the officers, those on the medical services spend every morning and those on the surgical services every other morning at the hospital. The remaining surgeons have classes here. As I understand it the dietitians are working every day and the nurses every other day at the Station Hospital. The afternoons are taken up (by us) in military matters. We usually have an hour of demonstration (litter-bearing, for instance), an hour of movies on some military subject (and they are surprisingly well directed), then a little less than an hour of close-order drill. The drill is followed, after a short pause for water and/or coca-cola, by a meeting of all the officers, at which some such matters as military correspondence are discussed. This closes our day, except for such extra-curricular activities as mess, swimming, letter-writing, or just plain sitting.

June 14: A telegram from the Adjutant General arrived on the tenth sending fourteen of our officers to the 160th Station Hospital at Fort Story, Va. Their new post, I understand, is a stone's throw from Virginia Beach, and is practically palatial, what with barracks and all. An added advantage is that they are together and will constitute over half the officer complement of the Station Hospital.

All the officers, under the tutelege of Colonel Rogers, have been spending mornings this week in learning military matters as they affect them in the hospital—records, boards, etc. . . . The daily rains with which we are visited this season of the year seem to be effective mainly in keeping the humidity high. The official thermometer rarely goes over 88, but some of these muggy days it certainly feels as though it were 120. . . . The spouse situation continues about like Chicken Pox—some go and others come.

June 21: Our enlisted men's tents have been moved from their regular sites in order that wooden 15-man hutments may be erected in their stead. When they are finished I imagine that work will be begun on the officers' tents. These structures go up rapidly as the foundations are hollow cement blocks and the roofs prefabricated. This leaves little other than the floors and sides to be built on the spot.

July 1: Last week was, as a matter of fact, somewhat routine. We had our usual two marches, on Tuesday and Friday, the latter, for the men, consisting of a nine-mile hike out to a bivouac site, establishing bivouac there, having dinner in the field, striking camp, and marching back. The officers were taken to the camp site in trucks about noon, having chow there, and marching back with the men. There were several cases of heat exhaustion, but none were serious. Training progresses reasonably well. Colonel Troutt, the Station Surgeon, has spoken to me in terms of highest approbation of the work being done by our officers and nurses at the Station Hospital. This accolade, being unsolicited, is quite refreshing.

July 12: This week marks a milestone in the development of the 6th General Hospital in that our organized basic military training schedule has ended. Our new schedule gives evidence of this in two main respects: we have no more daily close-order drill and, instead of training-film and didactic instruction of the officer personnel in the function of their various military duties, they have now started the instruction of picked groups of enlisted personnel in their detailed duties in their respective departments. The last week has also seen the transfer of fifteen of our nurses to other stations, mostly to the 160th Station Hospital, our offspring. We hate to see them go but we are more nearly cut down to the requirements of the new table of organization. We now have the exact authorized officer and nurse strength and lack only one dietitian to be at full strength as far as civilian personnel are concerned. Also we expect the rest (about 70) of our authorized enlisted men, who I understand have already received their orders.

July 26: As we close the first week of our third month here the rumors continue to multiply by arithmetic progression. Despite all tales we continue to reside and to work here with nothing definite as to when or where we shall go. As Colonel Goethals undoubtedly reported to you our enlisted complement is very nearly full, we having received about fifty-eight men last week. They have received only their basic training to date. These new men participated Friday in the second of our relatively formal reviews. In these we have made our first use of our flag. They are carried out in what to my unmilitary eye is a good soldierly fashion, with the men going through drill manoeuvers and marching in review past the Colonel. To date they haven't risked the formations by calling on the officers to participate.

August 2: Saturday morning we had our dress review, complete with flag, officers platoon, and all the trimmings. It was recorded by Lt. McKittrick and Lt. McGahey who took both movies and stills, the latter in color. Although there were a few minor slip-ups, the show was, on the whole, a most impressive one.

The news this week is somewhat scant. The main event for all was that after two and a half months of sand and bugs we finally moved into our hutments. They are a little warmer than the tents, but there are many advantages to compensate for this. By setting the beds up on blocks we have been able to avail ourselves of the night breeze and have been very comfortable the past two nights. The absence of bugs and sand everywhere, coupled with the luxury of electric light make our new homes most pleasant indeed. The weather continues to be that of Florida in the summer. The mornings are clear, with gradual clouding during the day, the late afternoon or evening shower and a clear, relatively cool night. We thus get rained upon by the same water day after day. The past week we have been free of excessive heat, but it is still warm enough.

August 17: We are still living here from day to day, and working as though we were to be here permanently. We have received no alerting order as yet, but since we have completed our "three months basic training" we are in hopes that the alert will not be too far in the future.

* * *

The News has just received a copy of a publication called the *Sixth Sense*. In other words General Hospital No. 6 is first at the post. For, although this *Sixth Sense* includes in its title head a sketch of an unmistakeable Bulfinch Building, a line at the bottom of the first page reads "Volume 1, Number 1. Camp Blanding, Florida, Sept. 16, 1942." Its six pages include a report of the celebration of the unit's Hospital Day on September 1, and comments on the less formal occupations of a base hospital in training. A copy of this journal is posted in the exhibition case opposite the General Store in the Moseley Building.

• • • —— V • • • ——

The Blood Bank is aiding in Air Raid Defense by storing blood for the protection of the people of Greater Boston in case of an air disaster. It will take your pint by appointment.

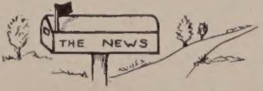
War Savings Stamps may be purchased at the Cashier's Office and at the General Store. No comment is offered as to whether the present total seems creditable to the Hospital, for every one sold the better represents our effort.

* * *

The Volunteer Service Bureau is in need of recruits. Persons interested in working at the Hospital should register at that office in the Moseley Building. Any department needing volunteers should also communicate with the director of the bureau, so that she may supply them as her staff increases.

The new News is under way. At the outset of a journey anxieties commonly resolve themselves into that uneasy, subconscious attempt to remember what it is one has forgotten. And usually it is unimportant, like toothpaste, and can be purchased at the nearest drugstore. The News finds that it has set out with a different dilemma. Our dilemma is this: It will be impossible to publish any journal concerning this hospital without frequent mention of its former Director, Dr. F. A. Washburn. He objects. Nevertheless, we have persisted in telling how it happened that during the last war army base hospitals for the first time proceeded from civilian hospitals. We quoted the deprecative account published in Dr. Washburn's history. It was there recorded by him so that this hospital should receive a share of the credit for this sound plan. With estimable restraint we did not add that the plan became a reality and a credit because Dr. Washburn made his sponsorship of the idea both active, effective, and actual.

Perhaps this final paragraph is what lawyers call a waiver. In any event, this first issue of The News wishes to state that if unsuspecting portions of Dr. Washburn escape from the bushels under which, by request, we shall faithfully try to hide him, be convinced that the fault is ours—and the bushels'. His proportions and achievements are ill adapted to concealment. (He is, incidentally, largely responsible for the resumption of a Hospital news sheet.)



Information for publication in The News should be addressed to the Archives, Massachusetts General Hospital, Fruit Street, Boston, Mass.

to active service, to gain further experience in military matters before assuming the highly responsible position of commanding officer of the hospital. From that date Lt. Col. Horatio Rogers acted as Unit Director to help complete the organization. Four months later he went into active service and was succeeded by Lt. Col. Donald S. King. On May 15, 1942, the entire unit began active service. The enrolment of the nurses, who hold the rank of 2d Lieutenant, Army Nurse Corps, was begun by Miss Johnson and completed by Lt. Doris Knights, Principal Chief Nurse of the unit. Over seventy are Massachusetts General Hospital graduates.

A voluntary training program of lectures, conferences and motion pictures was offered during the two winters of preparation, and unit training was begun at Camp Blanding, where the unit was ordered into active service. Excerpts from letters reporting informally on progress in that field will be found on a later page.

At the request of Colonel Goethals a Red Cross unit consisting of two medical social workers, two recreational workers, and a secretary has been assigned to General Hospital No. 6 under Josephine C. Barbour, formerly Administrative Assistant of our Social Service Department, and now an Assistant Field Director, American Red Cross.

* * *

When Colonel Goethals accepted the flag presented to G.H. No. 6 by B.H. No. 6 he made the startling assertion that G.H. No. 6 was the offspring of a father 25 years old and a mother 121 years old. Under his command G.H. No. 6 has become a father at the age of 26 months! On June 10, fourteen of its personnel were ordered to Fort Story, Virginia, 160th Station Hospital, to constitute over half the officer complement there. They were: Major Thorp, Captains Chafee, Clark, Dawes, Graham, Whiting, and Zeller on the Medical Service, Captains Staples, Garrett Sullivan, Suby, and Ulfelder on the Surgical Service, Captain Sahler on X-ray, and Lieutenants Coggins and Poulin on the Dental Service. Early in July several nurses were sent from G.H. No. 6 to join this hospital, which has since been ordered overseas.

* * *

U.S. Naval Mobile Hospital No. 6 has gone overseas, accompanied by "1200 tons of hospital" which it is to build and staff. According to report the Massachusetts General Hospital has contributed the largest single element to the hospital and its chiefs of service. It may therefore be considered informally as the Massachusetts General Hospital Naval Hospital by the following representation: Comdr. Howard B. Sprague, Lt. Comdrs. Harrison E. Kennard, Charles I. Johnson, Francis T. Hunter, John T. Carmody, and Lt. Sylvester McGinn.

General Hospital No. 5, commissioned as the Harvard University Unit and a direct descendant of a similar unit in World War I, was organized under Dr. Elliott C. Cutler as Unit Director, and Dr. Thomas H. Lanman and Dr. Theodore L. Badger as Chiefs of the Surgical and Medical Service. At the urgent request of the University, Dr. Cutler, a veteran of the first unit, was refused permission by the Surgeon General to accompany G. H. No. 5 when it was ordered abroad last March. He has since gone overseas, with the rank of Colonel, M.C., U.S.A., to serve as Chief Surgical Consultant of the American Expeditionary Force in the Atlantic. After activation this hospital was divided into two units. Of these G. H. No. 5 was the first to go overseas. Among the Massachusetts General Hospital members on service with it are: Major Moses S. Strock; Captains Fiorindo H. Simeone, Richard Warren, Gordon A. Saunders; Lt. Henry H. Brewster.

General Hospital No. 105, the second unit, was organized under the direction of Major Augustus Thorndike. It is now on active duty abroad. Massachusetts General Hospital members on this service include: Majors Myles P. Baker, Edwin F. Cave, Milton H. Clifford, J. Evarts Greene, George A. Marks; Captains Albert H. Coons, Richard S. Cosby, Donald P. Ham, Gustav G. Kaufman, John J. Kneisel, John L. Newell, Carter R. Rowe, Charles P. Sheldon, Richard H. Thompson; Lieutenants Edwin C. Albright, Lewis K. Dahl, John T. Lambert, Arthur S. Pier, Jr. and Lester B. K. Yee.

Of service at home only a brief mention can be made. The importance of civilian defense in this geographical sector was early recognized. An organization for voluntary training was planned under the Massachusetts Committee on Public Safety to duplicate defense precautions in over 350 cities and towns. Dr. Elliott C. Cutler was made Director of the Medical Division, to organize mobile medical units, arrange for dressing stations, hospital capacity, supplies, and transportation in case of military emergencies. Dr. A. William Reggio was his assistant. The work of the Medical Division is now under the direction of Dr. Reggio, who upon Dr. Cutler's departure for service in the Army was appointed State Medical Director, with Dr. Horace P. Stevens as Deputy. Dr. Reggio has also been commissioned Surgeon (Reserve) in the U. S. Public Health Service, a rank equivalent to major.

The first public disaster demonstration was given in the Moseley rotunda on Hospital Day. It was arranged by Dr. Robert B. Osgood as deputy chief medical officer. Dr. Arthur W. Allen, who is in charge of the disaster triage at the Hospital, conducted the demonstrations.

Departments of the Hospital and individual members of the staff have cooperated in other war services; for example in the classification of applicants for the air service and in definite research problems bearing on the war, in the work of the Committee on Procurement and Assignment, of which Dr. Faxon is a member, and by the establishment of a blood bank and a decontamination chamber for gas victims. When immediate protection for the Hospital against bombs and sabotage was called for on December 7, a defense organization was at once set up and black-outs arranged for. Blood typing of employees has been carried out. The Hospital is also not exempt from the restrictions of rationing, priorities, employment shortages, increased prices, or transportation problems, and with the absence of so large a percentage of its staff the Home Guard will have many demands to meet.

* * *

Individual members of the staff have been called to important and interesting military posts. A few of them are reported herewith.

Dr. James C. White joined the Naval Reserve in February 1939, and was commissioned a Lieutenant Commander. On being assigned to the U.S. Naval Hospital in Chelsea as mobilization billet, he began working there as a volunteer in March 1941. Dr. White was assigned to active duty in July 1941, and went to England to observe British war procedures in neurosurgery. Upon his return he was again placed on inactive service. After the incident of December 7 he asked to be returned to active duty and since that time has been assigned to the U.S. Naval Hospital in Chelsea, in charge of neurosurgery. This permits him, however, to continue his investigative work and teaching at Harvard and at the Hospital. During the spring of 1942 Dr. White was sent to Canada and later to Norfolk, Va., to observe cases of exposure and determine routine treatment for "immersion foot." His report is to be published in a forthcoming issue of *The Naval Medical Bulletin.*

* * *

Dr. Robert S. Schwab has been a member of the Naval Reserve since May 1936, when he was commissioned Lieutenant (s.g.) in the Volunteer Reserve and designated as specialist. He began volunteer duty in March 1941, assigned to the U.S. Naval Hospital in Chelsea as mobilization billet, and in December 1941 was placed on active duty there in the department of neuro-psychiatry, with an additional assignment to the Massachusetts General Hospital Brain Wave Laboratory. Dr. Schwab has made a preliminary investigation of chronic seasickness in navy personnel at the Naval Hospital. This was presented before the Neurological Association in Chicago in June 1940 and will be published in *The Naval Medical Bulletin.* He has also investigated the neuropsychiatric findings in survivors of ship-wreck. Naval personnel requiring electroencephalograms are examined in the Brain Wave Laboratory here and reports turned in directly to the Navy. Dr. Schwab now holds a commission as Lieutenant Commander.

* * *

At the request of the Surgeon General, Dr. Walter Bauer has gone into service as Medical Consultant and Coördinator of Medical Activities for the 8th Service Command. He has been commissioned Lieutenant Colonel, M.C., to act as supervisor of medical service in the hospitals assigned to that command. He left early in August to report at the Army Medical Center in Washington and observe treatment at the Walter Reed Hospital. He also visited the Lawson General Hospital and the laboratory of the Fourth Service Command in Atlanta and the LaGarde Hospital in New Orleans. His headquarters are San Antonio, Texas, and the area under his supervision includes that state, Arkansas, Oklahoma, Louisiana, and New Mexico.

* * *

Detailed news of the service of other members has recently been received, and similar items, as they reach us, will be included in later issues.

Dr. Ward I. Gregg was commissioned on August 20, with the rank of Captain, M.C., U.S.A. Because of his interest in skiing and mountaineering, he was approached by the American Alpine Club and asked to volunteer in the Army Medical Corps for duty in the mountain units in the organization of mobile surgical groups. His previous experience in climbing and skiing in Austria and Germany and in the observation of Italian Alpine paraphernalia, more than qualify him for this commission. Captain Gregg reported for active duty in the Pacific Northwest on September 1, assigned to Mountain Infantry.

Dr. Howard C. Coggeshall is now a member of the Station Hospital Staff at Camp Carson, Colorado Springs. This is an 1800-bed hospital which has been opened only a few weeks. Dr. Coggeshall, with the rank of Captain, M.C., U.S.A., is Chief of the Arthritic Service in an activating camp of some 30,000 men sent in from induction boards.

* * *

Dr. Dana L. Farnsworth is with the University of Pennsylvania Specialists Unit of the U. S. Navy. He hold a commission of Lieutenant. This unit is now in charge of a hospital ship in the Pacific.

* * *

Lt. Comdr. Robert F. Legge has been in the Naval Reserve since 1935. He served for six months on active service at the Mare Island Naval Hospital, and is now detailed for duty in the South Pacific.

* * *

THE NEWS regrets that it can give only the name and rank of the following Hospital members whose service was reported previous to September 1. Many of those named below joined the Armed Forces early, and have been assigned to interesting and responsible posts, but space forbids giving a detailed account of each and much of our information is necessarily incomplete. Several months ago Mrs. James H. Means began to collect military information concerning the staff and alumni, and forms were sent out with the Annual Reports. Thanks to her similar work during World War I the details of the military service of Hospital members have been preserved. The Hospital is grateful for her interest in these important records. Notices of military service should be sent to Mrs. Means, c/o Treadwell Library. It is hoped that additions and corrections will be received.

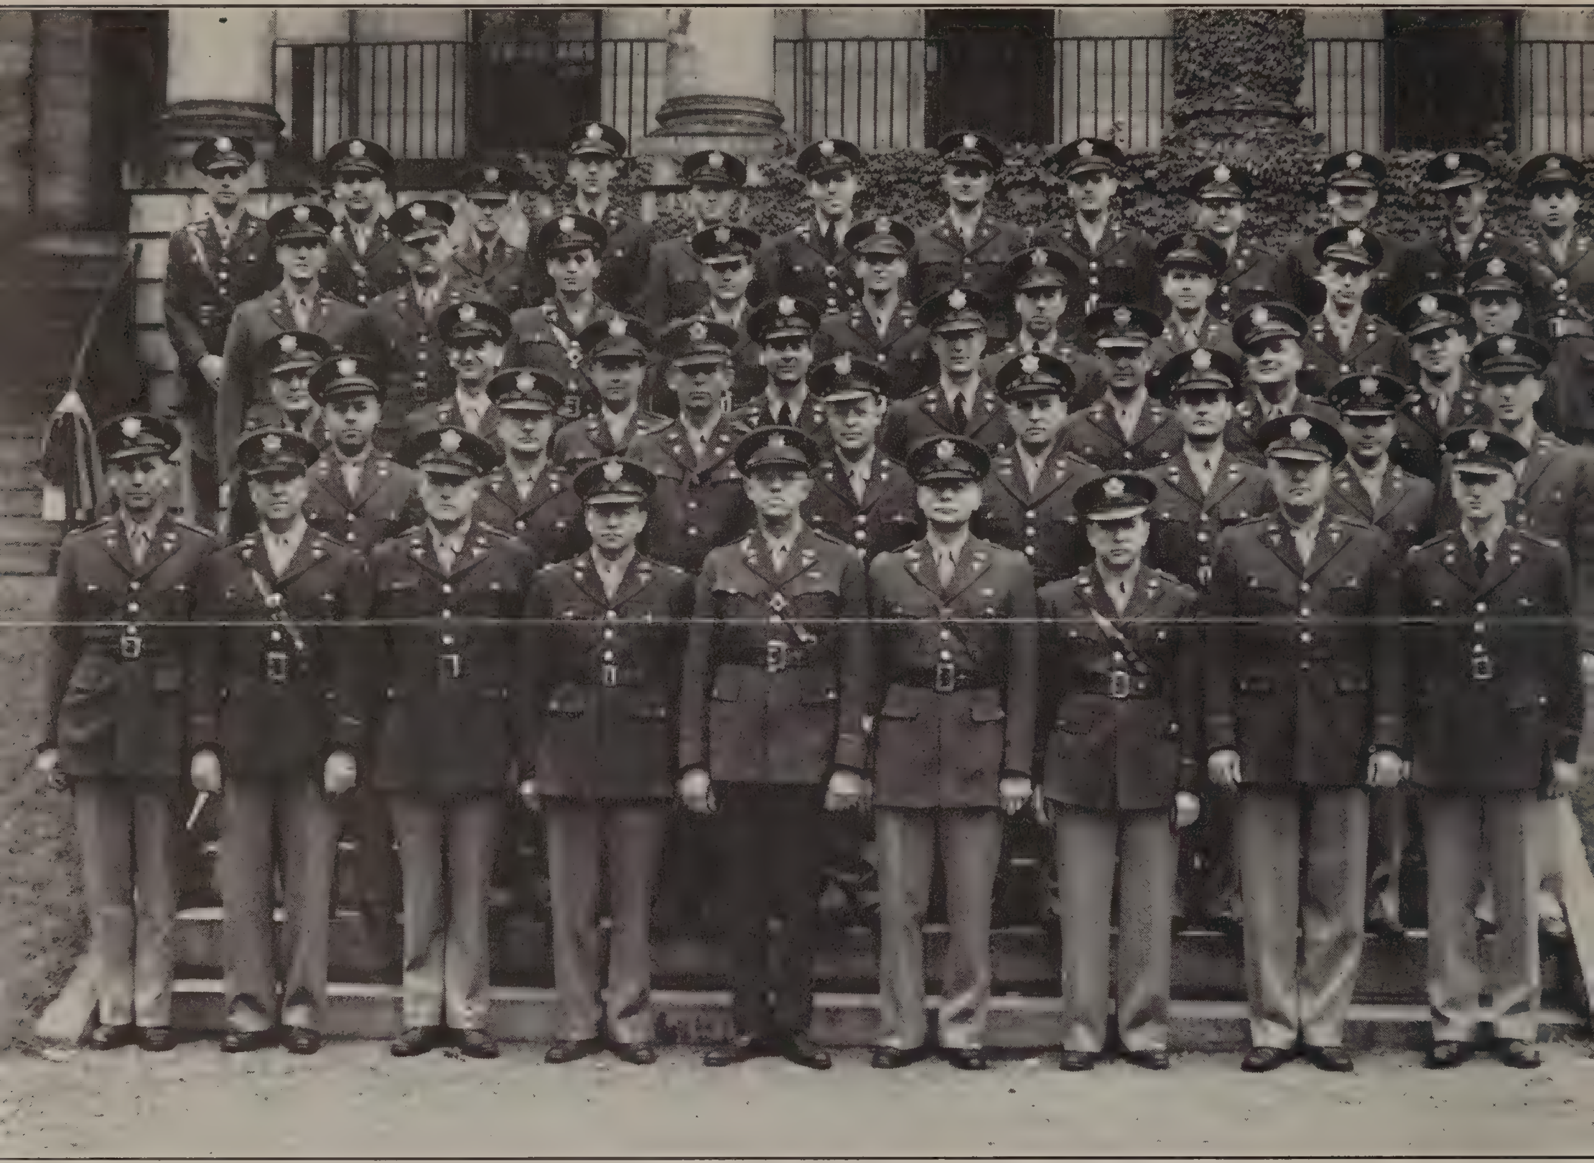
The following are serving as Medical Officers with commercial airlines: Drs. W. P. Chapman, L. P. Eliel, R. B. Miller, O. H. Pearson. Dr. G. M. Saunders is Medical Director for Pan-American Airlines in Africa.

* * *

Many hospital employees have left to join the Armed Forces. THE NEWS hopes to publish a list of their names in a future issue.



6TH GENERAL HOSPITAL—MASSACHUSETTS GENERAL HOSPITAL UNIT

FIRST ROW, left to right: Major James A. Halsted, Major James H. Townsend, Major Langdon Parsons, Major Edward F. Bland, Colonel Thomas R. Goethals, Lt. Col. Donald S. King, Major John H. Talbott, Major William T. S. Thorndike, Major Sylvester B. Kelley.

SECOND ROW: Major Marshall K. Bartlett, Major Grantley W. Taylor, Major Henry H. Faxon, Major Charles L. Short, Major Trygve Gundersen, Major Garrett L. Sullivan, Capt. Howard I. Suby, Major Alfred Kranes.

THIRD ROW: Major Jackson M. Thomas, Capt. Otto E. Aufranc, Capt. Oscar S. Staples, Capt. Somers H. Sturgis, Capt. Francis H. Chafee, Capt. Richard J. Clark, Capt. Lowrey F. Davenport, Capt. Otto D. Sahler.

FOURTH ROW: Capt. John R. Graham, Capt. Daniel C. Dawes, Capt. T. Stewart Hamilton, Capt. John R. Frazee, Capt. Alfred O. Ludwig, Capt. J. Harold DeMers, Capt. Richard G. Whiting, Capt. John W. Zeller, Capt. Hermann B. Seyfarth.

BACK ROW: Major Edward G. Thorp, Chaplain William Arnold, Capt. Daniel J. Holland, 1st Lt. Stanley Wyman, 1st Lt. William C. Burrage, 1st Lt. John B. McKittrick, 1st Lt. Calvin R. Coggins, 1st Lt. Marlow B. Harrison, 1st Lt. Knowles B. Lawrence, 1st Lt. Sedgwick Mead, 1st Lt. Robert M. Bailey, Capt. Spiros P. Sarris.

NOT PRESENT: Lt. Col. Horatio Rogers, Major James R. Lingley, Major Robert G. Rae, Capt. Henry L. Heyl, Capt. Theodore H. Ingalls, Capt. Eugene R. Sullivan, Capt. Howard E. Ulfelder, Capt. Claude E. Welch, 1st Lt. Edward L. Cantlon, 1st Lt. Daniel S. Ellis, 1st Lt. Claud E. McGahey.

* * *

Of the nurses enrolled with General Hospital No. 6 the following are graduates of the Massachusetts General Hospital School of Nursing They hold the rank of 2d Lieutenant, Army Nurse Corps.

Ethel A. Anderson, Dorothy E. Ayer, Grace R. Babcock, Katherine C. Barrett, Laurianne Beaudette, Julia L. Binns, Evelyn M. Blaney, Rita L. Boyle, Geraldine R. Brandon, Mary E. Brebbia, Jessie E. Brooks, Linda B. Burgess, Edith J. Butcher, Mary A. Canning, Mary L. Casey, Dorothy M. Chrystal, Helen J. Coghlan, Thelma B. Cogswell, Mary E. Connolly, Alice M. Corcoran, Eleanor B. Crafts, Caroline Eaton, Edna L. Emerson, Margaret F. Emery, Annette L. Eveleth, Helen A. Forrant, Mary A. Fraser, Florence L. Giberti, Virginia C. Griswold, Blanche B. Haley, Emelyn O. Harlow, Ruth Hathaway, Margaret R. Hazen, Helen G. Hewit, Louise H. Hollister, Cynthia Holt, Martha E. Jewell, Harriet L. Johnsen, Evelyn V. King, Doris Knights, Elsie V. Krook, Ruth Lawrence, Catherine E. Lyons, Christine McKinnon, Hazel W. MacNeill, Mary C. MacSwain, Phillis Madden, Margaret F. Mahoney, Barbara E. Maxwell, Marjorie A. May, Jeannette C. McDonald, Rose C. McDonnell, Bessie McLellan, Dorothy I. Moles, Anna L. Moore, Christine H. Moore, Dorothy A. Nickerson, Rita E. O'Leary, Ruth F. Penniman, Barbara E. Peterson, Eleanor Pitman, Eunice B. Plant, Anna E. Pritchard, Eunice Rose, Virginia L. Sears, Helen D. Shaw, Louise C. Sherer, Ethel M. Slattery, Elinor C. Stacy, Anna L. Tinkham, Chloe D. Wilcox, Irene E. Willis, Mary E. Wilson.

* * *

The Red Cross unit, as mentioned earlier, is in charge of Josephine C. Barbour, and has as its secretary Patricia Baker, who had recently been secretary of the Diagnostic Clinic. Two of the four dietitians, Constance Beth Hayes in charge and Deborah Bardwell an assistant, are former staff dietitians. The physiotherapists are Priscilla T. Chandler, a former staff physiotherapist and in charge of the group, and Frances Morgan, Helen Beer, and Arline Adams, who were completing their training at this hospital. Of the laboratory technicians Robert Melville was formerly in Dr. Talbott's laboratory, and George Shallcross in the Cardiographic Laboratory.

THE NEWS

No. 2 Boston, Mass. November 1942

The seal used as a part of our mast head was selected by the Trustees in 1817 when funds sufficient to secure the establishment of this hospital were in hand. A description of it is recorded in the first volume of the Trustees' Records, and an old seal, possibly the original, is still in existence. It is too worn for further use, and was replaced within the last few years. This seal is now on exhibition in the Archives Room.

Nov. 24, 1817—Voted: That the Chairman cause a Seal to be engraved, with a suitable device, as the Seal of the Corporation.

Nov. 30, 1817—Col. May appointed at the last meeting to procure a seal, laid one before the Board, having, in the center, the arms of Massachusetts, viz. an Indian with his bow in one hand, and arrow in the other, & on his right a star; and being encircled with the inscription "Massachusetts General Hospital 1811." Voted to accept the said Seal, & that the same be constituted the Seal of the Corporation. . . . Joseph May esq. was authorized to draw on the Treasurer for the sum of Ten Dolars & fifty cents, to pay for the Seal procured by him.

The incorrect deduction is sometimes made that the Massachusetts General Hospital, because of its name, is a state institution. In 1811 it received from the Commonwealth the grant of the Province House estate; the stone for the Bulfinch Building was cut by prison labor, and this service was given to the Hospital; the Massachusetts Hospital Life Insurance Company for years paid a part of its income to the Hospital as one of the provisions of its act of incorporation. Later, when other insurance companies were granted charters, it was decided no longer to hold this company to the agreement and in friendly manner the company made suitable financial adjustments with the Hospital.

So it may be seen that in the early days the Massachusetts General Hospital was much indebted to the Commonwealth of Massachusetts for help in starting on its career. Historians of the Hospital have repeatedly called attention to this, and advised that it be remembered and that the name of the Hospital never be altered. Also, the Governor of the Commonwealth annually appoints four of the twelve trustees, and in that way continues the original connection.

The fact of its name has thus led people not familiar with the Hospital's history to consider that it is owned and managed by the Commonwealth. It should be emphasized that this is not the case and that the Massachusetts General Hospital is a private, non-profit, charitable institution.

Many members of the Corporation and first Board of Trustees were well within an age to remember the year 1780 when the State of Massachusetts was a new member of a new company of states. In that year the State seal was determined on by a committee appointed for that purpose. This committee set down the decree that the design should contain a star, to show that Massachusetts was so represented on the national flag, and an Indian in a buckskin shirt with a bow in his left hand. These devices were to be surrounded by a wreath, botanical denomination unprescribed. Within these general restrictions the State seal was often modified according to the fancy of the particular engraver or printer as to the fringes on the Indian's wardrobe and the size and shape of his bow and arrows. The present design was adopted by the legislature in 1885.

It may be supposed that the Indian was given place on the State seal because in 1629 he had appeared, not inappropriately but clad in leaves, on the official seal for the colony sent over by the English governor and used until 1684. Also, the State had taken its name from one of the tribes. In one particular the Hospital Indian is quite independent of the State Indian. He declares himself a man of the common people by holding his bow in his left hand—as all Indians did, good or bad. The State Indian is now obliged by law and design to hold his in his right hand.

Until 1851 the Hospital had in its possession an actual bronze Indian of its own. He was mounted as the weathervane on the Province House until that building was damaged by fire. And he was a distinguished Indian, of hammered copper with glass eyes, the work of Deacon Shem Drowne who made the Faneuil Hall grasshopper.

This Indian is still in existence but has, regrettably, passed out of the Hospital's custody. It passed from the hands of Mr. Henry Greenough, who held the lease of the Province House, to Dr. John C. Warren, a founder and the first surgeon of this hospital. Dr. Warren set it up at his Brookline house, but in 1876 his daughter Emily, Mrs. William Appleton, presented it, not to the Massachusetts General Hospital but to the Massachusetts Historical Society. There it may still be seen, well protected but leading a life unfortunately dim and obscure compared to the admiration and attention it would receive in our busy halls.

As stated in our first issue, THE NEWS will attempt to publish only the appointments made by the Trustees during the preceding month. Appointments for August have already been printed; those below were made during September and October. Many other appointments have been made and leaves of absence granted since the publication of the Annual Report for 1941. THE NEWS regrets that it cannot include them all.

The Trustees have granted leave of absence because of military service to:

Drs. John C. Angley
Robert H. Barker
H. Irving Bixby
Joseph A. Doherty
Luke Gillespie
Aubrey O. Hampton
I. Paley Rak
Keith A. Shangraw
Robert H. Talkov
Frederic Tudor
Thomas V. Urmy

The following appointments have been made:

Dr. George W. Holmes, Acting Chief of the Department of Radiology
Dr. William E. Davis, Radiologist
Dr. Dorothy Tebbe, Assistant, Children's Medical Service
Dr. Dorothy Gill and Dr. Javier Robles-Gil, Research Fellows in Medicine
Dr. Morton L. Mazer, Assistant Resident, Radiology Dept.
Drs. Nels W. Ahnlund, Samuel M. Reichel, and Chung-Chang T'an, Interns, Orthopaedic Service
Dr. Robert Rubin, Intern, Medical Service, for six months

Appointments for future internships are:

Dr. Harold M. Somberg, Assistant Resident, Neurology Service, for six months beginning Jan. 1, 1943
Dr. Norman Zamcheck, Pathology Service, Jan. 1-Oct. 1, 1943
Dr. Richard R. Evans, Pathology Service, July 1- 1943-July 1, 1944
Dr. Victor C. Vaughan III, Children's Medical Service, beginning July 1, 1943

Medical House Officers have been appointed as follows:

April 1, 1943

George H. Carter
Ernest Craige
Allan L. Friedlich, Jr.
Duane H. Mitchel
Edward P. Richardson, Jr.
Royal S. Schaaf
John R. Spencer
Wade Volwiler

Oct. 1, 1943

Kenneth T. Bird
D. Campagna-Pinto
Harold E. Elrick
Oscar W. Hills
Lawrence B. Hobson
William N. Nundy, 3d
Robert P. Smith
John F. Tannheimer

Surgical House Officers have been appointed as follows:

April 1, 1943

Henry F. Allen
Rafe Banks, Jr.
Ben Eiseman
Sidney W. Ellery
Charles R. Horn
George R. Livermore
Guy B. Maynard, Jr.
Henry D. Moorman, Jr.
Grant V. Rodkey
Benson B. Roe
Cornelius J. Shea
Jesse E. Thompson
Richard C. Webster, Jr.
Frank C. Wheelock, Jr.

July 1, 1943

Robinson L. Bidwell, 2d.
Joseph D. Enterline
Joseph P. Holihan
Roger W. Morrison
James W. Newell
Gardiner Pier
David W. Williams

* * *

Christmas mail for persons in service overseas should be sent at once.

The Hospital will observe Armistice Day, November 11, as a legal holiday.

Thanksgiving falls this year on November 26, and will be celebrated by the Hospital on that date.

The Hospital Research Council meetings have been resumed for the winter. Notices for these are sent out in advance. They will take place as usual on the fourth Tuesday of the month at five o'clock.

* * *

The Surgical Department reports a distinguished visitor. Dr. José Arce, Director of the Clinical Surgical Institute of Buenos Aires and former Professor of Surgery at the University of Buenos Aires, was a visitor at the Hospital from Oct. 19 to 21. Dr. Arce now holds the title of Professor of Thoracic Surgery in the University of Buenos Aires.

* * *

Announcement was made at the convention of the American Hospital Association in St. Louis that Massachusetts was awarded first prize for "Hospital Day" programs. The air-raid demonstration in the Moseley Rotunda was mentioned in the first issue of THE NEWS, and the Massachusetts General Hospital is proud of the contribution made by Mrs. Lois D. McCoy, Personnel Director, who served as State Chairman of Hospital Day.

* * *

NOTICE

Because of the large number of members of the surgical staff who are now in the armed forces the active surgical staff is greatly reduced.

The number of men over forty-five years of age who may be expected to remain at the Hospital and who may be counted upon to do the general surgery is inadequate to cope with the demands of the General Hospital, Baker Memorial, and Phillips House. It is necessary, therefore, to declare a certain number of the men under forty-five years of age as essential to the Hospital.

Therefore, the following men have been declared to Procurement and Assignment Service as essential for the conduct of the Surgical Department of the Massachusetts General Hospital until they may be replaced by equally competent men:

Dr. R. H. Smithwick
Dr. R. H. Sweet
Dr. R. R. Linton
Dr. Oliver Cope
Dr. R. H. Wallace
Dr. Edward Hamlin, Jr.
Dr. F. A. Simmons

For the General Executive Committee
N. W. Faxon, M.D., Secretary

* * *

The official statements below are included at the request of the Administration. It is suggested that other committees bear in mind that such reports may be included in this journal.

* * *

The following report of the Record Committee has been approved and accepted by the General Executive Committee.

Orders for the Treatment of Patients are written by the Doctors on the "medication sheet". The space for the Doctor is not wide enough. The cancellation of orders deserves more than a check mark and, after this, cancellation will be by a new written order: "October 15th—Omit morphine". All this is very easy to fix, but this small improvement has led to larger questions:—

So soon as the Doctor writes his orders the Nurse immediately copies them (or many of them) onto a "Cardex" form. There are two reasons for doing this. First, the Cardex provides a quick and easy reference, and second, it includes a check system to insure that each order is carried out. This copying appears to be a necessary evil. The Record Committee has tried to develop a combination of order sheet and Cardex System that would prevent duplication and save work all around, but so far it has been unable to think of a scheme that will do several things at the same time:

1. Show the orders as written from day to day
2. make the orders readily available to the nurses
3. provide checks on the preparation and giving of orders and
4. provide a permanent record of what was done from day to day.

If anyone can suggest one or more printed forms that will fill these functions and simplify the process, the Record Committee and all the Nurses will be immensely grateful.

Meantime, there are several ways in which the Doctors can help the Nurses very materially:

1. Write orders neatly and legibly in black ink.
2. Orders given verbally are always subject to error. Even if the nurse is willing to write them, they must be read and initiated by the Doctor or his assistant.
3. Medicines given regularly "T.I.D." are handled by an easy routine. But other medicines ordered for odd times call for special arrangements. They are usually a nuisance.
4. The omission of orders after this will be by writing a new order to omit the old.
5. In long cases, where the orders are numerous, periodic revisions of all orders will be very helpful. When the nurse reads "Cancel all previous orders" she need no longer look at any old papers. Incidentally, the patient may be pleased that the chloral hydrate or the nux vomica which was necessary when he was sick has been given up at last.
6. Abbreviations must be used cautiously: "K.I."—"T.I.D."—"M.G.&W." may be clear to most of us, but what is "G.O.M."? God's own Medicine might be either whiskey or morphine but "G.O.K."
7. Follow up notes do not belong on the medication sheet.

Suggestions from one and all will be welcomed by the

M.G.H. Record Committee

Oct. 13, 1942

Some of the adjustments for the House Staff, made necessary by wartime regulations for intern service, were reported last month in statements by Dr. Means and Dr. Churchill. This month we include news of the Out-Patient service and comments on its wartime adjustment. These were provided by Miss Elspeth S. Campbell, supervisor of the department and at present in administrative charge.

"When the 6th General Hospital left for Camp Blanding on May 15th, 1942, the Out-Patient Department lost its assistant director, Dr. Thomas Stewart Hamilton, and many members of its senior and junior staffs. Since then many others have joined different branches of the Armed Forces. To fill in during their absence we are fortunate in having members of our consultation and senior staffs return to active service in the clinics:—

Surgical Clinic: Dr. Charles L. Scudder, Franklin G. Balch, Robert H. Vose, Lincoln Davis, Hugh Williams, Beth Vincent, Harold G. Giddings, Arthur M. Jackson, Harold M. Frost, John B. Sears.
Tumor Clinic: Dr. Channing C. Simmons
Medical Clinic: Dr. Willard S. Parker
South Medical Clinic: Dr. William D. Smith
Orthopaedic Clinic: Dr. Andrew P. Cornwall
Skin Clinic: Dr. Charles E. Wells
Neurology Clinic: Drs. Charles A. MacDonald, George Clymer
Urology Clinic: Drs. J. Dellinger Barney, Richard F. O'Neil
Eye Clinic: Drs. Edward K. Ellis, Fred M. Spalding, Ralph A. Hatch, Hugo B. C. Riemer

It has meant a great deal to the successful running of our clinics to have the assistance of these men of mature judgment. Not only the Hospital and the patients are benefitted, but the teaching value of the clinics is maintained.

"Although the clinics are below last year's daily average they have continued rather large, in spite of gas rationing and increased employment. The specific changes made necessary by shortage in staff and other wartime considerations will be of interest to absent members.

"On May 1 the Diagnostic Clinic was closed for the duration of the war. First opened in 1915, it was closed two years later because of the departure of the staff for service during World War I. Re-opened in 1920, it has been in operation since that time. Early in May it was necessary to close the Peripheral Circulatory Clinic, also, and to limit the Gastro-Intestinal Clinic. For the present Peripheral Circulatory patients are being cared for in the General Surgical Clinic. The other special clinics are functioning, but on a restricted basis. The Orthopaedic Clinic reports the loss of its plaster man, Bill Murphy. He has been called into the Army. The nursing situation has been reasonably stable in this division, and in the administration there have been few changes.

"These notes will give a definite idea that things are not as they use to be. Our members in service with the Armed Forces

Early last winter it became evident to the Ladies' Visiting Committee that the nursing staff of the General Hospital was going to be short-handed. After conferences with Dr. Faxon and Miss Johnson the Committee decided to undertake, under the Nursing Office, a service that would provide two members of the Committee in the hospital every morning from nine to one o'clock. These members would make the rounds of the wards and do errands that would take nurses or ward helpers off their wards. The service was started in January and, except for Saturday mornings during the summer, has been operating without a break ever since.

The uniform of white smock, red armband and red basket soon became familiar in the hospital and, as head nurses came to know the service, demands on it increased. At first the workers came only from the Ladies' Visiting Committee, but the service soon outgrew this limited group and outside volunteers are now welcomed. However, the training of these volunteers and the conduct of the service is still the responsibility of the Ladies' Visiting Committee. Although the Ward Errands Service is a most important undertaking, the Committee has placed its volunteers in many other departments of the Hospital. They make surgical dressings, sew, act as ward secretaries, work in the Occupational Therapy Department, etc.

The Ladies' Visiting Committee expects the demands on its service to grow and hopes to be able to meet future calls on it as it has met the calls in the past. Persons interested to volunteer for training for such auxiliary service should get in touch with Mrs. Brooks Potter at the Hospital.

* * *

The report above, provided by the Ladies' Visiting Committee, is incomplete without some comment of appreciation from the nursing staff and the Hospital. The service provided through the red baskets would be keenly appreciated in the best of times. Under present conditions it has earned the personal gratitude of every ward and every nurse in the General Hospital, and merits its new title the Massachusetts General Hospital War Service.

* * *

Mrs. Robert Homans is Director of the Women's Division of the Massachusetts Committtee on Public Safety. She has been connected with this auxiliary service since August 1940, when she was appointed by Governor Saltonstall to its executive committee. Mrs. Homans has organized 20,000 Massachusetts women in their work of spotting planes, operating report centers, canteens, salvage enterprises, preserving foods, and in their training for civilian defense in the classes offered by the Committee in air-raid precautions, canteen work, and nutrition.

With this issue THE NEWS opens its Suggestion Box. Any member of the Hospital personnel with anything on his mind relating to the Hospital is urged to contribute. Address your suggestions to the Archives, and put them, signed or unsigned, in the postoffice. They will all be considered by the administration and selections from them will be printed here.

* * *

Here is the first:

"To the day-workers in the Hospital, the Pay Cafeteria provides not merely a solution of their lunch problem but an exceptionally agreeable solution. The cafeteria does its full share, but it must leave it to us to furnish one important element in a pleasant atmosphere.

"Too many of us lunch alone because too many of us lunch together! In seating themselves, individuals look earnestly about for companions from their own department, or at least for other persons already known to them. Strangers and newcomers hesitate to trespass on this pseudo-collegiate atmosphere. This is not to say that one should nobly select some lonely luncher and make labored conversation through a hard half-hour. It is simply to say that the dining room offers a personal bill of fare as varied and satisfying as the menu. It offers you an opportunity to associate with members of other departments and get acquainted with the Hospital personnel as a whole. As the adult, the democratic, even the cosmopolitan thing to do, why not walk into the dining-room and sit in the first convenient vacancy? We all need to widen our worlds.

"And one thing more. The Cafeteria employees are, like you, members of the Hospital personnel. With the industrial demand for young and unskilled workers it has been difficult to keep a full quota for clearing the dining-room tables. Remember that trays are heavy. The girls in the green uniforms appreciate your cooperation."

* * *

The Hospital has had many occasions to appreciate the interest and loyalty of its employees: never more than at the present time and never more than in the instance gratefully reported by the Personnel Office. Two "dieners" recently left the Path. Lab., after service of several years to take defense jobs. But they kept in touch with the Lab., strolling over occasionally on a Sunday to see how things were going. The Personnel Office could tell you of its anxieties and problems in filling the positions of the large number of Hospital employees who have gone into service with the Army, the Navy, and on defense work. But nobody had to tell Anthony Scavongelli and Warren Clark. They saw for themselves and one Sunday appeared suddenly, separately, and simultaneously, rolled up their sleeves and spent their free day of the week cleaning up the Media Room.

A later NEWS will attempt to give report of the military service of former employees and comment on the problems and achievements of the Personnel Office. No comment seems necessary on the service of these two "dieners." They do honor to an honored term.

The Houghton Mifflin Company, publishers of Boston, Mass., announce the fourth award of its $2500 prize for books about Life in America to Dr. Frederick C. Irving. His book is described as "a biography of a man and of a hospital." The publishers' announcement states in part: "Some doctors inherit legends: some make their own. Dr. Irving has done both. As chief-of-staff, he inherited the legend of the Boston Lying-In Hospital. As a surgeon and specialist he has built up his own legend of brilliance, debonair dexterity, independence, courage, and sardonic humor. This book shows the origin and development of both legends. It carries the biography of the hospital from its small beginnings through recent years when obstetrics has become a true science." The book is scheduled for publication on November 5.

* * *

THE NEWS is distributed to members of the staffs, visiting and house, to the heads of Hospital departments, and to members of the staff and graduates who are in military service. It is also on sale at the General Store for 5¢ a copy.

By celebrating its first Hospital Day on September 1, the 6th General Hospital continued to authenticate its parentage but complicate the problem of its age. On this date in 1821 the Trustees declared the Massachusetts General Hospital open for the reception of patients; on that day in 1917, Base Hospital No. 6 took over from the French its hospital at Talence near Bordeaux. In observing this date as its own organization day the 6th General Hospital adds importance to the day—and pays a delicate compliment to its parents.

A copy of the official program and speeches may be seen in the Archives Room. Brief addresses by Colonel Goethals and the chiefs of the various services were made, and messages were read from Major N. W. Faxon, late of Field Hospital No. 28, and Col. F. A. Washburn, Lt. Col. Lincoln Davis, Major J. H. Means, and Chief Nurse Sara E. Parsons, late of Base Hospital No. 6. The picture of the complete unit, now exhibited in the Brick Corridor, was taken immediately after the celebration. The 6th General Hospital reports an appropriate observance of Ether Day, also.

are greatly missed, but we want to assure them that we will keep the patients moving and the flag flying until their return."

That Dr. Faxon has no apprehensions for the continuance of service in the Out-Patient Department is attested by the statements he has added to this brief account.

"Miss Campbell graduated from the Massachusetts General Hospital School of Nursing in 1909. She entered the employ of the Hospital in 1918 as Assistant in the Out-Patient Department and has served in the various grades of Nurse, Chief Nurse in the Out-Patient Department, Supervisor, and Assistant to the Assistant Director. Miss Campbell has now served in the Out-Patient Department for twenty-four years. During this time she has seen pass through that department as a training school, a constant succession of Assistant Directors. Her influence upon these men starting out in administrative work can hardly be over-estimated. Her calmness, kindly disposition, her knowledge of hospital affairs and procedures, her clearness of vision and her increasing experience have made her an invaluable teacher for this group. Many men now occupying positions of responsibility in hospital administration look back with keen realization of the debt that they owe to Elspeth S. Campbell.

"In times of stress as in the World War, when the Staff of the Hospital has been depleted, Miss Campbell has carried the burden of the Out-Patient Department practically alone. Now this burden falls upon her again. The Massachusetts General Hospital is fortunate in having her to lean upon."

Ether Day was celebrated informally with the usual luncheon in the Brick Corridor, and had as background an exhibition of especial interest. In one corner were set up two hospital beds: 1942, streamlined and proud of its efficiency, and 1821, with handmade ingenious devices for extension and for draping the indispensable fly netting. Against the walls were hung posters relating to particular clinics and to auxiliary departments: x-ray therapy, physical and occupational therapy, administration, school of nursing, accounting, diet, photography, medical art, laundry, kitchens, etc. By a few photographs, charts, maps, and brief statements, the posters showed the current work and personnel of each department as well as its earliest beginnings. It was not possible to show every department, and the current posters will be replaced by others.

For the idea of these "Do You Know the—" posters and for their presentation credit is due Miss Muriel McLatchie, Medical Artist of the Hospital, Mrs. Betty Foss Strachan, Assistant, Mr. Wilbour C. Lown, Clinical Photographer, and Mrs. Marjorie Acree, Secretary. The photography would attract attention anywhere for its exceptional technique and striking spontaneity. The posters were notably well designed, and their deceptively simple but complete presentation of familiar subjects within such limited space attested great pains and excellent judgment. The News hopes in later issues to give a brief account of the work of the Division of Medical Illustration, and of other departments. Without further delay, however, it wishes to thank Mrs. Strachan for the drawing of the little devices that appear in these columns.

In the absence of so many of the staff on military duty, a panorama photograph of the 6th General Hospital, including officers, nurses, enlisted men and other personnel, was eagerly inspected. Much interest was shown in the exhibition of an embroidery by Mrs. James H. Means, reproducing in needlepoint the watercolor of the Bulfinch Building by Dr. Means, loaned for the occasion by Dr. Faxon's office. Early views of the Bulfinch were shown on the posters.

To complete the occasion the Ether Day film was again shown in the Dome, and in the Archives Room were displayed "the Ether Day relics"—sponge, inhaler, pincushion, daguerreotypes, manuscript letter of Dr. Morton's, the first publication of the discovery by Dr. Bigelow, and other papers.

* * *

The following items of news about staff and alumni now in service appear in the order in which they came to hand. Our military members are so widely scattered that these items will keep them informed as to each other—and they are of special interest to Hospital personnel. The News hopes that men in service will send back any possible information about themselves and their units, and will let us have some of their interesting experiences.

* * *

Dr. Elbert L. Persons has been commissioned Lieutenant Colonel, MC, USA, and is acting as chief of medical service with the 65th General Hospital. The officer personnel of this hospital is made up largely from the staff of Duke University and former staff members or alumni of Duke University School of Medicine. The unit was activated on July 15, 1942.

* * *

Dr. F. Phinizy Calhoun, Jr., Captain, MC, USA, is with the 2d General Hospital as Opthalmologist. This unit was organized at the Presbyterian Hospital, New York City, and is now in service abroad.

* * *

Major John Lyle Shaw and Capt. Robert N. Buchanan, Jr., are listed on the staff of the 300th General Hospital, the Vanderbilt University School of Medicine Unit now activated at Camp Forrest, Tenn.

Major Frank B. Cutts has been on active duty since Aug. 17 with the 48th Evacuation Hospital, a unit affiliated with the Rhode Island Hospital, as Assistant Chief of the Medical Service. This hospital is at present serving troops on manoeuvres in Tennessee.

* * *

Dr. William M. Shedden is now a Lieutenant Commander, MC, USNR, on foreign duty. He is at present in the Canal Zone, and has been made surgeon-in-chief of a submarine hospital there. Dr. Shedden also has two sons in the service; both are fliers and officers, one in the Army and one in the Navy Air Corps.

* * *

Dr. Monroe A. McIver is with the 33rd General Hospital, temporarily stationed at Fort Eustis, Va. His commission is that of Major, MC, AUS.

* * *

Dr. Denis O'Connor is serving as a Lieutenant Commander in the Naval Reserve. He was activated during December 1941 and was first stationed at the Recruiting Station in New Haven, Conn. He is now with Naval Mobile Hospital No. 4, somewhere in the Pacific. This unit has erected a 400-bed hospital to supplement a base hospital already in service.

* * *

Dr. Henry F. Howe was commissioned Captain in the Medical Corps, USA, on Aug. 10, 1942. He reported for active duty on Sept. 7 at Camp Kilmer, N. J., where he is at present assigned to the surgical staff at the Station Hospital.

* * *

Captain Leo B. Burgin has been in service since July 1941 with the 1st Medical battalion. After a period of training at Camp Devens the Battalion followed maneuvers along the eastern coast, and was stationed at Camp Blanding just previous to the arrival there of the 6th General Hospital. Capt. Burgin has been abroad since early in August. He is assigned to administrative work.

A recent letter from him states: "I was fortunate recently to have in tow Dr. Cutler, who is representing the Secretary of War in seeing that our boys have the best medical attention. He lectured to our group on some of the fundamentals of war surgery. It really was good—the first 'medicine' given us in over a year of activity in the 'field.' He also arranged other lectures."

It might be added here that in the last war a post similar to Colonel Cutler's was held by another Hospital alumnus. Brig. Gen. John M. T. Finney was Chief of Surgery in the A.E.F. It was his job to see that surgery was well done in all the hospitals of the Expeditionary Forces. That he did well.

* * *

Dr. William H. Sweet went overseas with the American Hospital in Britain as neurosurgeon on its staff. He later joined the British Emergency Medical Service, and has been on detached duty at the

Queen Elizabeth Hospital in Birmingham since November 1941.

* * *

Dr. Robert J. Joplin's rank was incorrectly given in the last issue. He is a Lieutenant Commander, USNR, and his commission dates from June 17. He is attached to the Chelsea Naval Hospital, and has recently been assigned to recruiting duty at the Federal Building in Boston. Lt. Richard E. Alt is assigned to the same duty.

* * *

Lt. Alfred L. Duncombe is with US Naval Mobile Base Hospital No. 3, which left this country in April and is now at a land base in the Pacific. It spent the first months ashore in constructing the hospital unit.

* * *

Dr. Allen G. Brailey has been commissioned as Lieutenant Commander, MC, USNR, and is to go on active duty at the U.S. Naval Hospital at Norfolk, Va., on November 9.

* * *

Dr. Ernest D. Thompson has been commissioned a Lieutenant Commander, Class MC-V (S), USNR, and has reported for duty.

* * *

Dr. Storer P. Humphreys was commissioned in the Royal Canadian Army Medical Corps on Dec. 22, 1939, with the rank of Lieutenant. On June 7, 1940, he received the rank of Captain and sailed for England as a member of Neurological Hospital No. 1, which he helped to organize there for active service. He arrived before the Battle of Dunkirk and was in service during the heavy air raids of the following winter. On May 1, 1942 he transferred to the United States Army and in July was promoted to the rank of Major. Shortly after that date he was placed in command of the former American Red Cross-Harvard Field Hospital Unit as reported in the first issue of THE NEWS.

* * *

Major Richard Collins, Jr., has been promoted to Lieutenant Colonel, and is at present serving as a member of the Staff and Faculty, Field Artillery School, Fort Sill, Okla.

* * *

Lt. Harvey E. Billig, Jr., MC-V(S), USNR, is on active duty. He is assigned to the Dept. of Physiology, California Institute of Technology, doing research on nerve regeneration. He writes: "We have been able to restore functional power in paretic muscles by means of increased nerve axon division in regrowth, and are investigating the adaptability of such procedure."

* * *

Dr. Rodney F. Atsatt was incorrectly listed in our first issue as a Lieutenant Commander. He received his promotion to Commander, (MC) USNR (Ret), on July 1, 1939, was then retired and in July 1942 recalled to active duty. He was assigned first to the US Naval Hospital, San Diego, and is now at the US Naval Section Base at Santa Barbara.

* * *

Dr. C. F. Goeringer, listed as a Captain, MC, USA, in our first issue, now holds the rank of Major. Since January 1941 he has been chief of the orthopaedic service of the Station Hospital at Camp Edwards, and has recently been made Executive Officer at that station.

* * *

Drs. Russell V. Fuldner and Luther M. Strayer have been commissioned as Captain, MC, USA, and are serving with the 39th General Hospital (Yale University Medical School unit). This unit was activated on July 15 and assigned to Camp Edwards. It is now on duty overseas.

* * *

Dr. Dana L. Farnsworth, who was reported in our first issue as a Lieutenant, MC, USNR, is a Lieutenant Commander. He is with the University of Pennsylvania Specialists Unit serving in the Pacific, and is aboard the hospital ship USS "Solace."

The following officers, formerly attached to the U.S. Naval Hospital, Chelsea, have been assigned to active duty: Lt. Comdr. Charles H. Allman to USS "Richmond," Lt. Comdr. Frank I. Rhodes to USS "Denebola." Lt. Comdr. Theodore C. Pratt was assigned to the 1st Marine Division, New River, N. C., and since then has been serving in the Pacific. Lt. Hannibal Hamlin was transferred to Pearl Harbor, T.H.

* * *

Lt. Comdr. Richard W. Dwight, who had been on duty at the Naval Hospital in Portsmouth, N.H., is now attached to USS "Dobbin," and Lt. Comdr. Benjamin Tenney has been transferred from the Naval Air Station at Pensacola, Fla., to USS "Argonne."

* * *

Information has been received as to the rank and service of the following members of the staff and graduates. THE NEWS will be glad to receive any corrections and further details as to assignment.

J. C. Angley, Capt., MC, AAF
R. H. Barker, Lt., MC, USNR
G. B. Beaman, Jr., Capt., MC, USA
S. B. Beaser, Capt., MC, USA
R. R. Carter, Lt., MC, USA
R. H. Detweiler, Capt., MC, USA
J. A. Doherty, Lt. Comdr., MC, USNR
G. F. Emerson, Capt., MC, AAF
A. G. Engelbach, Major, MC, USA
A. P. Freedburg, Lt., MC, USA
W. P. Giddings, Lt., MC, USA
L. Gillespie, Capt., MC, USA
S. C. Graves, Lt. Comdr. MC, USNR
L. E. Hawes, Lt., MC, USA
I. F. Hermann, Lt., MC, AAF
W. R. Hochwalt, Major, MC, USA
B. L. Huntington, Lt., MC, USA
A. F. Knoll, Capt., MC, USA
C. H. Landers, Capt., MC, USA
R. E. Mabrey, Lt. Comdr., MC, USNR
H. C. Moffitt, Jr., Lt., MC, USNR
W. A. Perkins, Major, MC, USA
I. P. Rak, Capt., MC, USA
J. W. Raker, Lt., MC, USNR
L. F. Ray, Lt., MC, USA
M. D. Ruffin, Lt., MC, AAF
J. D. Schuler, Capt., MC, USA
S. P. Seigle, Lt., MC, USNR
P. E. Spangler, Lt. Comdr., MC, USNR
C. Staples, Lt., MC, AAF
G. A. Staples, Lt., MC, USNR
R. H. Talkov, Capt., MC, USA
P. P. Thompson, Jr., Lt., MC, USA
F. Tudor, Lt., MC, USNR
O. M. Welch, Capt., MC, USA

* * *

Dr. Hugh Tatlock was listed last month among those in active service. Because of a back operation two years ago, Dr. Tatlock did not receive his commission. He is doing research at the New Haven Hospital in the virus field, on the problem of "atypical pneumonia."

* * *

Other corrections and promotions should be noted. Dr. Charles H. Burnett's name was given as F. L. Burnett, and Dr. Walter S. Burrage's as W.C. Burrage.

Dr. James E. Fish is now a Major, on service in the Pacific. Dr. Donald Murnaghan is a Flight Lieutenant, RCA, and Dr. George E. May has been made a Lieutenant Commander.

The following have been promoted from Lieutenant to Captain: H. T. Ballantine, F. L. Bauer, G. T. Hyatt, E. H. Trowbridge.

* * *

Additional appointments of interest in connection with the war have been reported:—

Dr. Wilbur A. Sawyer holds the following appointments: Director of the Commission on Tropical Diseases under the Board for the Investigation and Control of Influenza and other Epidemic Diseases in the Army; Director of the International Health Division of the Rockefeller Foundation and of the Rockefeller Foundation Health Commission, both engaged in health work related to the war situation; Consultant to the Medical Department of the Navy. He is also a member of the Committee on Tropical Diseases, under the National Research Council.

* * *

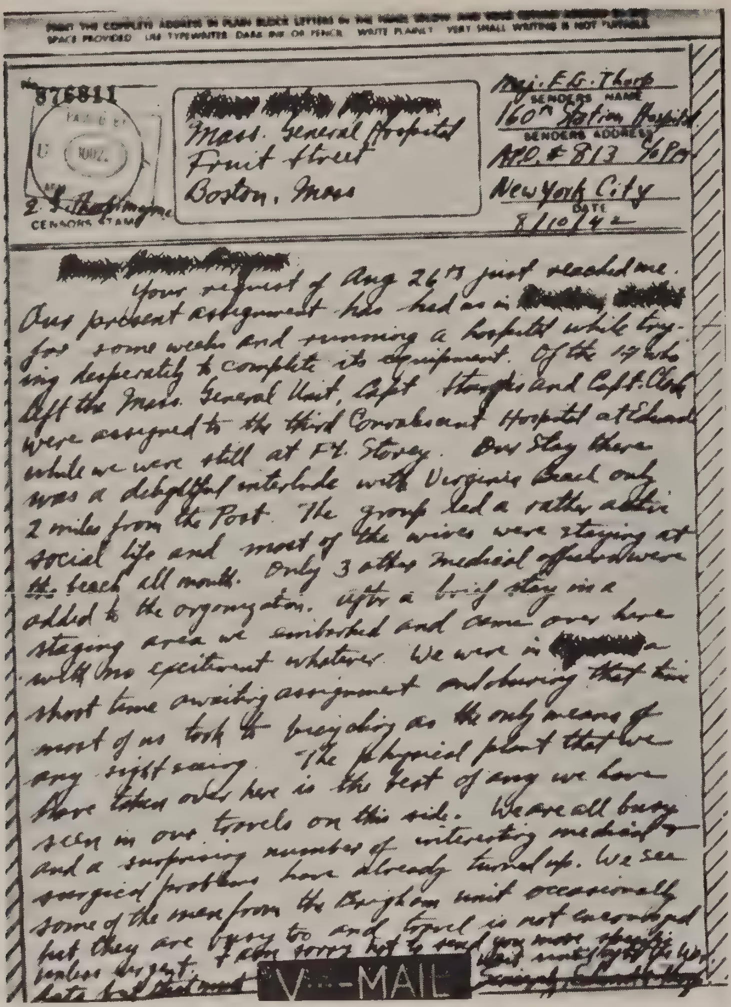
Dr. Milton V. Veldee has held commissions under the U.S. Public Health Service since 1921. He is now a Senior Surgeon and Chief of the Division of Biological Control, National Institute of Health.

* * *

Dr. Joseph Stokes, Jr., is Director of the Commission on Measles and Mumps, a member of the Commission on Cross-Infections in Army Hospitals under the Board of the Investigation and Control of Influenza and other Epidemic Diseases in the Army, and a Consultant to the Surgeon-General, U.S. War Department.

* * *

Dr. John C. Snyder, a staff member of the International Health Division of the Rockefeller Foundation, served in Europe from February to July 1941 with the Rockefeller Foundation Health Commission, and is a member of the Conference on Typhus, Cholera and Plague called by the Committee on Tropical Diseases of the Medical Research Council.



PRINT THE COMPLETE ADDRESS IN PLAIN BLOCK LETTERS IN THE PANEL BELOW, AND YOUR RETURN ADDRESS IN THE SPACE PROVIDED. USE TYPEWRITER, DARK INK, OR PENCIL. WRITE PLAINLY. VERY SMALL WRITING IS NOT SUITABLE.

[redacted]
Your request of Aug 26th just reached me.
Our present assignment has had us in [redacted]
for some weeks and running a hospital while try-
ing desperately to complete its equipment. Of the 14 who
left the Mass. General Unit, Capt Staples and Capt. Clark
were assigned to the third Convalescent Hospital at Edwards
while we were still at Ft. Storey. Our stay there
was a delightful interlude with Virginia Beach only
2 miles from the Post. The group led a rather active
social life and most of the wives were staying at
the beach all month. Only 3 other medical officers were
added to the organization. After a brief stay in a
staging area we embarked and came over here
with no excitement whatever. We were in [redacted] a
short time awaiting assignment and during that time
most of us took to bicycling as the only means of
any sightseeing. The physical plant that we
have taken over here is the best of any we have
seen in our travels on this side. We are all busy
and a surprising number of interesting medical &
surgical problems have already turned up. We see
some of the men from the Brigham unit occasionally
but they are busy too and travel is not encouraged
unless urgent. I am sorry not to send you more specific
data but that must [illegible]

V-MAIL

Plans for Hospital Day were reported from Camp Blanding—and the resumption of life as usual:

August 27: This will be our annual holiday, the day when the progress of the year is summarized and hopes for the future expressed. We haven't much to talk about this year except the deeds of our predecessor and hopes for our future. If we were completely set up and operating we probably would have a more elaborate program, but this year it is confined to the formal gathering. We plan to assemble at about 2 p.m. and march to one of the theaters on the post. We are borrowing a band for the occasion.

September 7: Our motor equipment is coming in now, and the Service Command has sent a representative to check up our equipment status in general. The weather is gradually cooling and the days shortening. Possibly our roots in Florida are gradually loosening too.

September 20: As we proceed on our serene way from day to day many are the theories to explain our continued presence here. The best explanation to date is that the pin which marked the 6th General Hospital fell off the map in the Surgeon General's Office and was swept up by the janitor. . . . We are at present experiencing some of the hottest days of the summer, with the thermometer well up toward the 100's. What makes it even harder is the thought of the turning foliage in New England and the soon-to-be-smelled burning leaves. . . . Our social activities of the past week included a dance in honor of the 9th Evacuation Hospital (Roosevelt, N. Y.). Despite the fact that it came on a hike-day the dance was a great success. Harpo Marx was here for two days with a USO show, so you see that we are pretty well entertained.

Letters from the Unit have included many reports of the fine quality of the enlisted personnel: "We are proud of the men we are sending off to become officers. They are a fine bunch." Colonel Goethals gives the following details. The second letter is of immediate interest.

September 27: We have sent off a cadre of thirty enlisted men and one officer to Atlanta to help germinate the 85th General Hospital. One result of our remaining here is that a large proportion of our enlisted men of the best type are being separated from us to go to officer-candidate schools. The cadre above mentioned syphoned off thirty more, so that we are hard pushed to keep in training. However, it's all pro bono publico, so we have no reasonable kick. . . . Everyone is a bit bored by our remaining here but is taking it in good part. For myself, a long period in my late specialty stands me in good stead, in that I am inured to masterly inactivity interspersed with rather frantic mobility and action.

October 18: Colonel Goethals announced at Officers' Call on Thursday that leaves would again be in order, to be taken according to a master plan devised to give everyone as fair a break as possible. Each officer is to have a total of ten days from May 15. Those who have had no leave get priority; those who have had, say three days, get seven, their time of departure depending upon when the last leave was taken. The first group is leaving tomorrow, eight officers and fifteen nurses.

This information has been confirmed by the appearance of Lieutenant Colonel Rogers, Major Bartlett, Major Thorndike and Lieutenant McKittrick as visitors at the Massachusetts General Hospital.

...—V...—

In our illustration a Victory Mail letter from Major Edward G. Thorp is reproduced in facsimile. The actual letter, as reprinted from microfilm, may be seen in the Archives Room, together with the regulation sheets issued by the U.S. Postoffice for this purpose. The sheets measure about 8½" x 11" and form their own envelopes. They are opened at Government postal stations, photographed on micro-film and sent in that form to stations overseas, where they are printed in an enlargement of about 4" x 5" and delivered.

The letter reads as follows:

8/10/42

Dear Editors:

Your request of Aug. 26th just reached me. Our present assignment has had us in xxxxx for some weeks running a hospital while trying desperately to complete its equipment. Of the 14 who left the Massachusetts General Unit, Capt. Staples and Capt. Clark were assigned to the Third Convalescent Hospital at Edwards while we were still at Ft. Storey. Our stay there was a delightful interlude with Virginia Beach only 2 miles from the Post. The group led a rather active social life and most of the wives were staying at the beach all month. Only 3 other medical officers were added to the organization. After a brief stay in a staging area we embarked and came over here with no excitement whatever. We were xxxxx a short time awaiting assignment and during that time most of us took to bicycling as the only means of sightseeing.

The physical plant that we have taken over here is the best of any we have seen in our travels on this side. We are all busy and a surprising number of interesting medical and surgical problems have already turned up. We see some of the men from the Brigham unit occasionally but they are busy too and travel is not encouraged unless urgent. I am sorry not to send you more specific data, but that must wait until after the War.

Sincerely,
Edward G. Thorp.

* * *

A roster of the Massachusetts General Hospital nurses now in service with the 6th General Hospital was given in the first issue of THE NEWS. To these should be added the names of forty other graduates who have gone into military service and are assigned to other duty. It is not possible to name their posts, but they will be found in stations in the Atlantic and Pacific, wherever the medical services have accompanied troops on active duty:

Sylvia Abbott, Kathleen Atto, Goldie Barton, Rowena Barton, Sybil Beatham, Marion Blake, Mary L. Carpenter, Helen O. Chadborne, Alice Clark, Eileen Coffey, Sadie Convelski, Edna Cree, Josephine Donohue, Doris Ellinwood, Yvonne Goethel, Loretta Guillemette, Hazel Halladay, Edwina Hussey, Barbara Jensen, Violet Kellogg, Mildred Kerzich, Naomi Lanouette, Kathryn Lovejoy, Carolyn Lowney, Anne McKenzie, Winona Meilleur, Anna Mulholland, Eleanor Nason, Margaret E. Nelson, Jean Ottley, Esther Pietrasek, Claire Pentecost, Walborg Peterson, Louise Pincus, Ruth Riley, Fay Snelgrove, Phyllis Smith, Barbara Uhl, Alice M. White, Nellie Wrigley.

THE NEWS

No. 3 Boston, Mass. December 1942

The Baker Memorial was planned for 330 beds, but when it was opened it was found desirable to use a small room on each of eight floors as a consultation room. This reduced the capacity to 322 beds, which is the figure usually named. All of these were not immediately equipped for patients. The unit was opened with 189 beds and 30 bassinets. This number was reduced by 30, and during the first ten months the unit operated with a capacity of 159 beds. The remaining space was used for other services and as quarters for personnel of the General Hospital. In 1936 the number of beds in use was increased to 242 beds, and by 1941 the beds available for patients were 284. These increases were made as the purpose of the unit became known and the demand for them was apparent. During the last year it has been thought desirable to reduce the ultimate capacity for patients in order to meet demands for more space on the first floor for the X-ray department and for the administrative personnel. At the present writing the Baker has all its beds, to the number of 304 with 30 bassinets, available for patients.

In April 1942 a re-arrangement of facilities on the first and second floors was begun. The purchase and refurnishing of 25 Parkman Street provided housing for house officers formerly cared for in the north and south wings of the third floor, and permitted the use of that entire floor for patients. The second floor was given over to the accommodation of Industrial Accident patients, which permitted the closing of the two 9-bed wards on the first floor. With the establishment of the Blue Shield, arrangements have been made for the admission of Blue Cross-Blue Shield ward patients as well as Industrial Accident cases to the second floor.

The removal of patients from the first floor allowed an extensive re-arrangement of space there. The entire east wing was turned over to X-ray, the former kitchen becoming the fluoroscopy room, and the former record rooms the dressing rooms. One record room is to be transferred to the former secretaries' office and the other to the Central Record Room. The Information Desk was moved to one of the former reception rooms, so that on entering the building patients and visitors are immediately oriented. The offices for Dr. Gorrell, Assistant Director in charge, Miss Griffin, Assistant in Charge of Nursing, and their secretaries and for the Nursing Supervisors were moved to the north wing. Space there also provided a doctors' consulting room, a room for conference with the doctors, and a social service office. A large reception room was made from a part of the 9-bed ward, and is thus placed in the center of the building opposite the elevators.

The Baker Memorial was opened in 1930, after twenty years of effort to establish in the public and medical mind the soundness of the idea that a hospital for people of moderate means can be a self-sustaining unit of a general hospital. The funds for building it—a large gift of $1,000,000, made by Mary Rich Richardson in memory of her parents, Richard Baker, Jr., and Ellen Maria Baker, and later gifts to the amount of $900,000 received through public subscription—were fortunately in hand and the building under way before the depression established itself. Since its opening in 1930, the steady progress made by the Baker Memorial, not only as an important unit of this hospital but as a real answer to the problem of giving to people of moderate means the most scientific and kindly medical and surgical care at a price they can afford to pay, has been of the greatest satisfaction to its initiators.

In its first and second years of operation it received study and favorable comment from Dr. C. Rufus Rorem, of the Rosenwald Fund. After ten years of operation it is again surveyed by Dr. Haven Emerson, well known as an authority on public health, in a small book recently published, "The Baker Memorial, 1930-1939." A review of this is best given by quoting its foreword, written by Bishop Henry K. Sherrill, as Chairman of the Board of Trustees.

> The Baker Memorial unit of the Massachusetts General Hospital, providing hospital care with limited medical fees for patients of moderate means, is an unique institution with no exact counterpart elsewhere in this country. The interest it has aroused in the hospital and medical fields during the ten years since it was established led to the belief on the part of the Trustees that a thorough and objective analysis of its experience and of the service it has rendered would be of value to hospital trustees, administrators, and medical staffs.
>
> This study, made by Dr. Haven Emerson and financed by the Commonwealth Fund, is the result. Dr. Emerson has set forth adequately the principles and objectives of the Baker Memorial, the history of its operation, its practices and policies, its financial experience, the judgment of its patients, and the attitude of the medical profession including both physicians identified with the institution and other physicians in the community.
>
> It is hoped that this study will be helpful in assisting the larger urban communities in determining the practicability and desirability of developing similar services for middle-rate patients.

The success of the Baker Memorial and our justified pride in it warrants two brief quotations from Dr. Emerson's text:

> Medical opinion in Boston is to the effect that the Baker Memorial has contributed to medical education of interns and residents; has been a boon to young practitioners who are entitled to the privileges; has played an active part in raising the quality of medical care of outside physicians who refer their patients here for hospital care; has convinced the ablest teachers and practitioners in the medical community of Boston that medical and surgical care of persons of moderate means can be and has been provided at least equal to the best to be found in ward services for non-paying patients or in pavilions for patients of abundant means.
>
> The opinion is general that the operation of the Baker Memorial has been a well-conducted attempt to solve a problem of large importance to the public and to the medical profession which has existed widely in American communities. . . .
>
> The last word, the latest ingenuity of hospital administrators and of medical and surgical staffs, has certainly not yet been expressed in the continuing effort of many communities to provide for hospital care of patients of moderate means. It would seem, however, to be a wise precaution for communities eager to make their own contribution to a solution of this problem to study the experience of the Baker Memorial of the Massachusetts General Hospital in Boston, and to make sure that they have overlooked no one of the essential factors of success which have been found useful in this, the earliest, the largest, and the most nearly self-supporting undertaking in this field.

Copies of the book may be seen in the Treadwell and Warren Libraries, or in the Archives Room.

The Surgical Department reports three distinguished visitors at the Massachusetts General Hospital: Dr. Manuel Riveros Molinari, Professor of Surgery from Paraguay, Dr. Felix de Amesli, Professor of Surgery at the University of Chile, and Dr. Antonio Rodríguez Diaz, a surgeon from Havana, Cuba.

⁂

The Trustees have accepted the resignation of Dr. Harry L. Mueller as Assistant to the Children's Medical Service, and have granted leave of absence because of military service to Drs. Allen G. Brailey and Ernest D. Thompson.

The have made the following appointments:

Dr. Francis M. Ingersoll, Assistant in Surgery
Dr. Eleanor J. Herring, Interne, Children's

Medical Service, for the term Jan. 1-Mar. 15, 1943

Dr. Robert C. Miner, Dental Intern, for the term beginning July 1, 1943.

* * *

The Hospital need not be reminded to check Christmas and New Year on the calendar. Other dates are noted below.

* * *

The first Medical Staff Meeting of the winter was held on Nov. 16 in the Staff Room, with contributions from two surgeons. Dr. Lamar Soutter gave a report on "The First Six Months of the Blood Bank," and Dr. Robert R. Linton spoke on "The Surgical Treatment of Phlebothrombosis." The second meeting will be held Dec. 21. Dr. Francis M. Rackemann is to speak on "Drug Allergy" and Dr. George W. Holmes on "Drug Allergy as it applies to X-ray Examinations." A summary of Dr. Soutter's talk appears in a later column.

* * *

The program for the first winter meeting of the Hospital Research Council Meeting, held on Oct. 27 at 5 p.m. in the Bigelow Amphitheatre of the White Building, was as follows:

Some new data on oxygen poisoning: Drs. Henry K. Beecher and Carroll M. Williams.

Notes on the action of colchicine: Dr. Austin M. Brues.

The relation of vascular disease to the hypertensive state based upon a study of renal biopsies from 100 hypertensive patients: Dr. Benjamin Castleman and Reginald H. Smithwick.

17-ketosteroids excretion in normal and abnormal children: Drs. Allan M. Butler and Nathan B. Talbot.

The second meeting is announced for November 24, at the same time and place, with the following program:

Some studies on corneal physiology: Drs. V. Everett Kinsey, David G. Cogan.

Small bowel enema: Dr. Richard Schatzki.

Bacteroides infection: Dr. Wm. E. Smith.

Hypoestrinism with hyper-, hypo-, and especially iso-production of follicle stimulating hormone: Drs. Fuller Albright, Grace Griswold, and Harry F. Klinefelter, Jr.

* * *

The Bulletin of the Dermatology Department, dated Nov. 1, states that the first staff meeting of the current year was held on Oct. 2, with a demonstration of interesting cases and a lively discussion; that the first fall meeting of the N.E. Dermatological Society, well attended, took place here on Oct. 14; and that at the staff meeting of Nov. 6, Drs. Jacob H. Swartz and Walter F. Lever will speak on the studies they have been carrying on with dermatitis herpetiformis. It also reported that Dr. Swartz has started testing cases of psoriasis with stool vaccine (streptococcus fecalis).

* * *

Among the professors emeriti who, at the request of the President and Fellows of the College, have returned to active duty at the Harvard Medical School are Drs. Henry A. Christian, John Homans, William C. Quinby, Franklin S. Newell, George W. Holmes, and Fritz B. Talbot.

NOTICE

Because of the present world situation, there is a very rapid turn-over in certain groups of employees. Therefore, it has become necessary to make regulations relative to the use of Entrances and Exits. It has also become necessary to have some supervision of bundles carried from the institution.

Regulations for the Control of Entrances and Exits:

1. Members of the dietary, housekeeping, laundry, and nursing employee groups will enter and leave by the Employees' Doorway in the Moseley Building during the hours when it is open.
2. Bundles, boxes or bags will be subject to inspection by the man in charge of Doorway or upon request of proper authority anywhere. It will save time if bundles are left open until after they have been inspected.
3. Only persons having a special pass issued by the Director will be allowed to use the Allen Street gate.
4. The Emergency Ward entrance will be used only for the admission and discharge of patients.
5. The Out-Patient Department doorway will be open for patients at 7:30 a.m. and closed at 5:00 p.m. Only Out-Patient employees may use this as an entrance or exit.
6. M.G.H. employees must not enter or leave through the Massachusetts Eye and Ear Infirmary doorway.
7. These regulations shall become effective Nov. 20, 1942.

N. W. Faxon, M.D., Director

* * *

BULLETIN NO. 9
Notice Concerning Blood Grouping

Beginning Monday, Nov. 16, 1942, the Baker Laboratory will do RH determinations on all patients when requested by a visiting man on service.

It is desirable to ask for this determination on all pregnant women who may need transfusion and all people receiving multiple transfusions, especially if they have had reactions in the past.

Blood will be collected, on a request from the visiting man on service, by the Baker Laboratory throughout the hospital. The form to use is the regular Laboratory Requisition Slip now in use by the laboratories.

The charge for this service will be:

General Hospital	$2.00
Baker Memorial	3.00
Phillips House	4.00
Eye & Ear Infirmary	2.00

If a patient is RH negative and RH negative blood is needed for transfusing the patient note this fact on the yellow requisition each time blood is requested.

N. W. Faxon, M.D., Director

* * *

BULLETIN NO. 10
Drug Allergy

Intravenous injection of diodrast and similar drugs for intravenous pyelograms, or other examinations, may cause anaphylactic shock, slight or severe. Fortunately, death is rare since only 25 deaths have been reported in a total of 600,000 injections. Nevertheless, since death may occur it must be guarded against.

Preventive Measures:

Before ordering an intravenous pyelogram every doctor shall ascertain and note in the record:

1. Whether patient is allergic with history of hay fever or asthma,
2. Whether diodrast has been given before or whether it or any other drug has caused a reaction or discomfort.

If affirmative answers have been given to these questions, the possibility of a retrograde pyelogram should be considered. If an intravenous pyelogram is still believed necessary, note on x-ray requisition the information obtained from the above questions.

Precautions for X-ray Department:

Before injecting diodrast have on hand ready for immediate use:

1. Ampules of adrenalin chloride 1-1000 sterile hypodermic syringe and needle,
2. Flask of 5% glucose in saline with appropriate apparatus for intravenous infusion.

Finally, any reaction following intravenous injection of any drug should be carefully *noted* in record for future warning. This warning applies not only to diodrast but to arsphenamines, bromo-quinines, barbiturates, sulphonamides, and others.

N. W. Faxon, M.D., Director

* * *

The new Lambert Professorship at the Columbia University School of Medicine is to be held by Dr. Robert F. Loeb. Since his graduation here in 1920, Dr. Loeb has been a member of that faculty. He is also associate attending physician at the Presbyterian Hospital and attending physician at the Neurological Institute.

* * *

Dr. George W. Thorn, a research fellow in medicine during 1934-35 at this hospital, has been appointed to succeed the late Dr. Soma Weiss as Hersey Professor of the Theory and Practice of Physic at the Harvard Medical School. He will also assume Dr. Weiss's post as physician-in-chief at the Peter Bent Brigham Hospital.

* * *

It has been suggested that the Hospital status of each person mentioned in this journal should appear after his name. This *can* be done, of course, but THE NEWS hopes instead that, if you are not absent on military duty, you will be willing to reach for your Annual Report and satisfy yourself as to the vintage and brand of any individual mentioned. The directory included at the back of the Report lists all present members of the staff and all living alumni. Names published in THE NEWS but not found in this directory are either house officers and residents who have been appointed since the Report was printed, or graduate assistants, or occasional persons briefly mentioned in connection with other information.

Last December, Lt. Leon F. Ray, MC, USA, joined the 46th General Hospital (University of Oregon Affiliated Unit), and has been on active service since July 15. The unit is now at Fort Riley, Kansas, "in the throes of practical organization." Lieutenant Ray has been assigned to do clinical work in dermatology and communicable diseases.

* * *

Capt. George F. Emerson, MC, AAF, received his commission on Sept. 11, 1942, and reported for active duty on Oct. 11 at the San Antonio (Texas) Aviation Cadet Center for a month's indoctrination training. He is now assigned to the Station Hospital there as an assisant ward officer on the surgical service.

* * *

THE NEWS makes the following additions to former lists of Hospital members now in military service. We are informed at present only of their ranks, and shall be glad to have further details as to their assignments:

F. D. Adams, Lt. Col., MC, USA
W. Bloomberg, Major, MC, USA
A. M. Boyden, Capt., MC, USA
I. M. Dixson, Major, MC, USA
L. C. Dodson, Major, MC, USA
E. B. Dunphy, Lt. Comdr., MC, USNR
L. B. Ellis, Lt. Col., MC, USA
P. H. Gates, Capt., MC, USA
D. C. Greene, Jr., Lt., MC, AAF
T. E. Gunderson, Capt., MC, USA
H. H. Hamilton, Major, MC, USA
G. E. Heels, Capt., MC, USA
E. B. Howard, Capt., MC, USA
A. Marble, Lt. Col., MC, USA
H. Montgomery, Lt., MC, USNR
E. Parnall, Major, MC, USA
R. L. Pearse, Lt. Comdr., MC, USNR
F. Sanborn, Lt., MC, USNR
R. P. Stetson, Major, MC, USA
G. W. Thomas, Capt., MC, USA
M. S. Thompson, Major, MC, USA
G. M. Wyatt, Capt., MC, USA

* * *

In the first issue of THE NEWS, Capt. T. A. Warthin was incorrectly listed as a Lieutenant. He is assigned to the Army Air Force, at Westover Field, Mass.

The following promotions and changes of address should also be noted: Capt. Gilbert T. Hyatt has been promoted to Major. Lt. Robert S. Hormell holds the rank of 1st Lieutenant and is serving in the Pacific with the 27th Station Hospital. Lt. Comdr. Frank L. Rhodes is now at the US Training Station, Bainbridge, Md. Lt. John L. Wilson has been transferred to Moffett Field, Calif. Capt. Thomas C. Worth is with the 2d Evacuation Hospital, and is now overseas.

* * *

Dr. Clyde H. Landers has been commissioned Captain, MC, AUS. He is at present assigned to the Station Hospital, Camp San Luis Obispo, Calif.

* * *

In addition to the absences on leave, the 6th General Hospital sends further news of its officer personnel. Major Jackson M. Thomas, who was serving in the neuropsychiatric section, has been detached. He has gone overseas, where he is to be Consultant in Psychiatry. His place has been taken by Major Merrill O. Parker, who was formerly in practice as a psychiatrist at Auburn, N. Y. Dr. Daniel S. Ellis, assigned as an assistant medical ward officer of the unit, is now taking a course in tropical medicine in Washington. Miss Hayes, dietitian in charge, has resigned. She has accepted the position of consultant nutritionist for the Tennessee Valley Authority, and will supervise the cafeterias of the project. Her assistant, Miss Bardwell, resigned on Oct. 25, and the announcement of her marriage to Lt. Charles H. Gresham, of the Chemical Warfare Service attached to Camp Blanding, has been received.

And, as we should have reported in our last issue, the weather has improved:

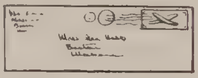
Oct. 5: After a "spell" of real New England fall weather it has warmed up considerably. It was cold enough for field jackets during the day and three blankets and bedsocks (where available) at night. Since last week, however, it has become considerably warmer until at last we are satisfied. The skies are clear, the days warm and the evenings cool. After living close to the earth and out in the country for over four months we pay great attention to the weather. It affects our activities a great deal and thereby merits notice.

Oct. 26: We of course have no idea how long we shall be here, but are making plans for a prolonged visit. The steel so-called mirrors in the shaving pavilion have been replaced by glass and new lights have been added. Stoves have been placed in the hutments. Lights are being erected on the volley-ball court. . . . Our drum and bugle corps is improving steadily; it led the command yesterday in what was our finest review to date. We may soon be able to compete with the line outfits, for our reviews are carried out with precision and smartness.

Nov. 2: Saturday evening we had a Halloween party with the nurses, on the beach at the Station Hospital. In addition to the usual apple-bobbing and fortune-telling a new feature was added. This was a cigar-smoking contest, with Colonel Goethals as defending champion. The original idea was to see who could smoke a cigar farthest in five minutes, but the contest had to be stopped at the end of three or the Colonel would have burned his lips. . . . After having our enlisted strength drop to below 400, replacements began arriving. We came up to full strength and are now well over, with men still trickling in day by day. They have come mostly from camps in Illinois and Texas, though the men's homes are scattered all over the United States. Not only the 6th General Hospital but all of Camp Blanding is filling up, and a new secret weapon is being displayed by some of the new arrivals. It sounds like an outboard motor but is in reality a bicycle with a small gasoline motor.

We, however, are still on foot. The last two hikes were varied: the first by smoke- and tear-gas, the last by a trip to the camouflage area. This latter proved most interesting and impressive. Our officers and men were asked to pick out soldiers lying about. When we couldn't find any, the camouflaged soldiers stood up, showing their positions, then as they returned to cover they again became invisible. The greatest surprise was after we were asked to find the soldier in the spider-hole (a vertical hole about six feet deep, large enough to accommodate one man, and covered with sod). After many guesses as to his whereabouts, the man arose not twenty feet away. Such trips as this, and the one with the tanks, have given us an idea of what is being done to train our army. The sight is a heartening one.

Nov. 15: On Friday almost all the officers went to the rifle range, where we shot 32 rounds apiece through the new Garand. We fired 16 shots at slow fire (4 each prone, kneeling, sitting, and standing) then 16 at rapid fire, sitting. Scores varied widely, with Lieutenant Wyman excelling at slow fire and Major Gundersen at rapid fire. The Garand rifle is truly a beauty-smooth, rapid action (except when dropped in the sand with the breech open), has beautiful simple sights and not much kick. This date is a momentous one to us, for it marks our six months' birthday in the Army. Now we can go crazy, develop diabetes, cancer, or hypertension and it will be line-of-duty yes.



Major Thorp sends the following news from the 160th Station Hospital.

The size of our hospital increases steadily and now keeps us busy, which is a great relief after so many months of professional inactivity. A fair number of interesting problems exercise our wits; there is a minimum of paper work; we pass on all chronic cases so there results a rapid turnover. All this makes for general satisfaction among the medical personnel. The equipment keeps coming in and now is adequate if not complete.

We have finally accepted the weather, though we rejoice in the occasional good days. It is easy to see why the U. S. appealed to the Irish!

* * *

Dr. Edwin F. Cave writes from somewhere in the Pacific that the 105th General Hospital is building a large hospital and getting increasingly busy.

* * *

THE NEWS sees no need for inaugurating a rumor column—and just possibly this statement in the November "Reader's Digest" isn't a rumor anyway. It comments on the American soldier, and is reported from Ireland.

The doctors revealed one curious fact: When they first arrived they used British X-ray plates. But these plates were too small for the chests of present-day American soldiers. They had to use two plates until larger plates arrived from the U.S. This tells more than adjectives can about the physique of our men over there.

* * *

S-O-S! Calling all Hospital personnel! S-O-S!

Are you available in an emergency? In the event of an air raid, sabotage accident, etc., can you leave your present duty and report for volunteer messenger or clerical service? If so, please notify Miss Greenwood, chief of volunteer service, Extension 257, at once, so that she may assign you to an emergency post.

East Medical Pup

Dr. James H. Means presents a report on a well-known Hospital alumnus:

> The pup shown above was given to Dr. Aub when he was a house officer, by the East Medical nurses on Christmas 1914. Drs. Edsall and Lord wrote their initials on the bridge of his nose, and he was placed in the East Medical lab., where he resided until April 1, 1942. Known first as the "metabolism pup," he later became the "East Medical pup," and most of the pup house officers during the intervening years added their initials somewhere on his woody carcass. When, with the adoption of a one-year war internship, there ceased to be (temporarily we hope) any pup house officers, a ribbon was tied about the neck of the East Medical pup, and he was delivered to Dr. Means for safe-keeping for the duration.

The News hoped to exhibit the pup, but Dr. Means writes: "I can't let you have the pup for exhibition in the Archives. He was entrusted to me for safe keeping for duration of the war by the House Officers when the pup service was given up. I wouldn't let him leave this office without a fight."

So instead of inviting you to see the present "Pup," the Archives contributes the lineage of the word, as derived from "Apothecary"! For until 1828 the medical intern was so called! He was then relieved of such duties, and became the House Physician, as a counterpart to the House Surgeon. A total of two they were so designated until 1849. They had then become four, and were thought to warrant disciplinary action and a decree that they should be called House Pupils. "The Committee of the Trustees report in favor of filling the offices in question with medical pupils of two years' standing. What is lost from their having one year's less professional experience will be more than made up by their greater degree of docility and obedience. The proposed change of name is also acceded to, though the present names designate better than any other the exact relation which these young men hold to the Institution." Thus the "House Pupil," a name so honorably borne by so many men who have become medical leaders. By 1894 there were eighteen of 'em, and each service had its senior, junior, and out-patient man. The latter it was who was known colloquially as the "pup." On the surgical side there was that even lower person, the etherizer! The first resident was appointed in 1911, but it was not until 1922 that House Pupils, after periodic appeals, were relieved of the name they had brought upon themselves in 1849. In 1922 House Officers officially received their chosen name for themselves, and one they felt was a recognition of their dignity. Two years later they were required to be graduates in medicine, as had been the custom since 1896 and was the requirement before 1849. Interpreted by those days the present number of house officers and residents is astronomical,—a total of 81, military service permitting. How fortunate that the House Pupils Alumni Association was firmly established in 1906, for all who were once House Pupils like to feel that their name will be perpetuated by that title—and by the Pup himself.

Perhaps a postscript should be added to the above. In 1942 a new diploma for house officers and residents was designed. They graduate as "Internes"! But long live the Pup,—whereby to hang a tale.

* * *

A new series of posters will be found in the Brick Corridor, replacing those arranged for Ether Day by the Department of Medical Illustration. The new posters show the work and personnel of the Admitting Office, the Social Service Department, the Volunteer Service Bureau, and something of their early history.

Dr. Lamar Soutter, under whose charge the Blood Bank was organized and has seen its first six months of service, kindly provides a brief history of the Bank. This gives the substance of his talk at the first Medical Staff Meeting. Its publication here allows this information to circulate (!) to a larger audience. The Blood Bank occupies the basement rooms along the north wall of the Moseley Building that were formerly used for the Emergency Ward. The corridor provides a waiting room.

> On October 1st, 1942, the Blood Bank had been in operation for six months. In April and May it had run for the general wards only but by the end of June, it had expanded to include the entire Hospital. Transfusions given by the Bank increased from 150 in April to 330 in September. The general rate of transfusions for the entire Hospital rose from 258 per month in 1941 to an average of 300 per month. This increase of transfusions was most marked in the Baker and Phillips House and the Medical Services.
>
> The distribution of blood by departments was 53% for the White Building, (that is, the Surgical Services), 29% for the Baker, 15% for the general Medical Services, 3% for the Phillips House, and a fraction of a percent for the Eye and Ear Infirmary.
>
> The stock of plasma has been gradually accumulating for use in case of civilian disaster. As we go to press, the Hospital has on hand 365 flasks containing 250cc. of plasma with 250cc. of saline. These are kept frozen at various points in the Hospital. We have given out 30 flasks to patients on the wards and 81 flasks to the Faulkner Hospital, and have had one pool of 7 flasks contaminated,—a total of 483 flasks. A system of blood tests, histories and physical examinations has been instituted for all donors coming to the Bank, on which basis we now reject over 16% of all donors on the ground that the giving of the donation of blood would be harmful to them or that their blood was of a poor quality or would be dangerous for administration.
>
> The blood is now filtered in the Bank, prior to being sent to the wards. This system of filtering was instituted in June, and has cut the reaction rate in half. It also permitted the blood to flow uninterrupted through an intravenous drip on the wards. The type of filter used in the Bank is a stainless steel sieve, the openings of which are so fine as to be almost microscopic. The reaction rate for the last few months has been 6.3%, of which 0.9% have been serious reactions, 1% moderate, 3% slight, 1% anaphylactic, and 0.4% unclassified.
>
> At the present time the Bank is trying to expand in order to take on more voluntary donors on a regular appointment system for the collection of frozen plasma for air raid defense. This supply will be stored partially in the Hospital and partially in other hospitals too small to operate banks but in vital areas where air raid casualties may be expected.
>
> The credit for the successful operation of the Blood Bank is largely due to Mrs. Sedgwick Mead, the first Head Nurse of the Bank, and now to Miss Mary Kennedy, and their co-workers, and also to the interest and coöperation of the interne staff and the Information Desk in furnishing the Bank with donors and in performing the routine job of physical examinations and so forth for the Bank.

Dr. Soutter's account of the blood bank at this hospital is but too timely. As final copy goes to press, THE NEWS appends a brief statement and an appeal on its behalf.

The recent catastrophe in Boston, where more than 400 lives were lost in the fire and panic at the Cocoanut Grove nightclub, has demonstrated the enormous value to the civilian community, as well as to the armed forces, of the blood banks of the hospitals in Boston and neighboring cities. The lives of many of the victims of this tragedy were dependent upon a transfusion given promptly. Friends and relatives of the victims should be the first to advertise this need in their communities, and to help send the following hospitals, donors in numbers sufficient to give an adequate reserve of blood for this community:

Massachusetts General Hospital
Boston City Hospital
Massachusetts Memorial Hospitals
Carney Hospital
U. S. Marine Hospital
Beth Israel Hospital
New England Deaconess Hospital
Peter Bent Brigham Hospital
Cambridge Hospital
Malden Hospital
Quincy Hospital

The operation of the banks at some of these hospitals was made possible by grants from the Office of Civilian Defense.

The ranks of the Massachusetts General Hospital War Service are being rapidly filled by volunteers who are assigned to various jobs to help out the nurses. We should like to make special mention of the ever-increasing number of girls from the Hood Rubber Company in Watertown, who give at least two mornings a week before going on their 3 to 11 P.M. shift. An equally large number of Radcliffe students give their afternoons, and are learning their way around the Hospital so that our Red Basket Errands may be an all-day service.

There is work to be done that can be fitted into almost everyone's schedule, especially in the Solarium on White 8 where a little regular time from you will help make the ace bandages, sew on the buttons, and mend the rubber gloves.

* * *

For several years the McLean Hospital, the other main branch of the Massachusetts General Hospital, has published for its patients an attractive journal, the McLean Gazette. All the text and illustrations, and the work of reproduction is done by the patients, under the editorship of the librarian. This gives an interesting variety of format to its pages. A copy may be seen in the Archives Room.

Dr. Richard P. Strong has been re-commissioned Colonel in the Army Specialist Corps, USA, and has been assigned to duty at the Army Medical Center in Washington as Director of Tropical Medicine. An intensive course of training in that field is being given at that institution to medical officers before they are sent overseas. This is Colonel Strong's fourth term of military duty. He had his first experience in the Spanish War. During the Philippine Insurrection he was a medical officer in the Regular Army, and served for many years at the Manila General Hospital. He returned to the United States to head a new department of tropical diseases at the Harvard Medical School. From 1915 to 1928, when the Massachusetts General Hospital had a special clinic for tropical diseases, Dr. Strong was chief of that department. His service in the last war, especially in the study of typhus, is well known.

* * *

Dr. George M. Saunders, who was until recently senior medical officer of Pan-American Airways Africa, Inc., is now in Brazil acting as medical director for a rubber project in the Amazon Valley under the Division of Health and Sanitation of the Office of the Coördinator of Inter-American Affairs.

Drs. Leonard P. Eliel, Robert P. Tucker, Gordon E. Jones, and Olof H. Pearson are still on the African Gold Coast at or near Accra, serving as medical officers for Pan-American Airways Africa, Inc. This division of Pan-American is now being militarized by the Air Transport Command, U. S. Army Air Corps. These men will either go into the military services or be assigned to duty elsewhere in connection with military projects undertaken by this company for the Government.

Drs. R. Bretney Miller and LeMoyne White are serving in a similar capacity with Transcontinental & Western Airways. Dr. Miller is now on a tour of inspection in Africa.

Dr. William P. Chapman, as a member of the selection board and medical examiner for Pan-American Ferry Command and the Atlantic Division of Northeast Airlines, assists in examining pilots for the training school of Northeast Airlines. These pilots will be assigned to Pan-American Airways Africa and Pan-American Airways Ferries for transport work in Africa.

Within a few weeks it will probably be possible to give some account of the medical aspects of these assignments in Africa as noted by Dr. Ross A. McFarland, the medical coördinator of the Pan-American Airways system, who has just returned from an inspection flight there. He reports that these men are all well and doing excellent work.

Under date of Oct. 12, Comdr. H. B. Sprague, MC, USNR, reports U.S. Naval Mobile Hospital No. 6 as "overseas in a combat area and operating an active hospital." As reported in the first issue of THE NEWS, the other MGH men attached to this unit are Drs. Johnson, Kennard, Hunter, Carmody, and McGinn.

* * *

Capt. James K. Keeley, MC, USA, is presumably still in the Philippine area. Assurance has been received that he was neither on Bataan nor Corregidor, although the latest communication from him, which arrived May 1, 1942, was from Cagayan. This stated his promotion from Lieutenant.

* * *

Lt. Comdr. Paul E. Spangler was on active duty at the Naval Hospital in Pearl Harbor on Dec. 7, 1941. He writes: "I have the questionable honor of performing the first operation of this war."

...—V...—

Major Ernest E. Myers, MC, USA, is chief of the orthopaedic section of the Bushnell General Hospital at Brigham, Utah. This is a new hospital with a potential capacity of 2000 patients.

* * *

Dr. Roy E. Mabrey has received his commission as a Lieutenant Commander, MC, USNR. His present station is at the US Naval Hospital, Chelsea, Mass.

* * *

Lt. Col. Henry M. Thomas, Jr., MC, USA, is Medical Consultant at Hq. 4th Service Command, in Atlanta, Ga.

* * *

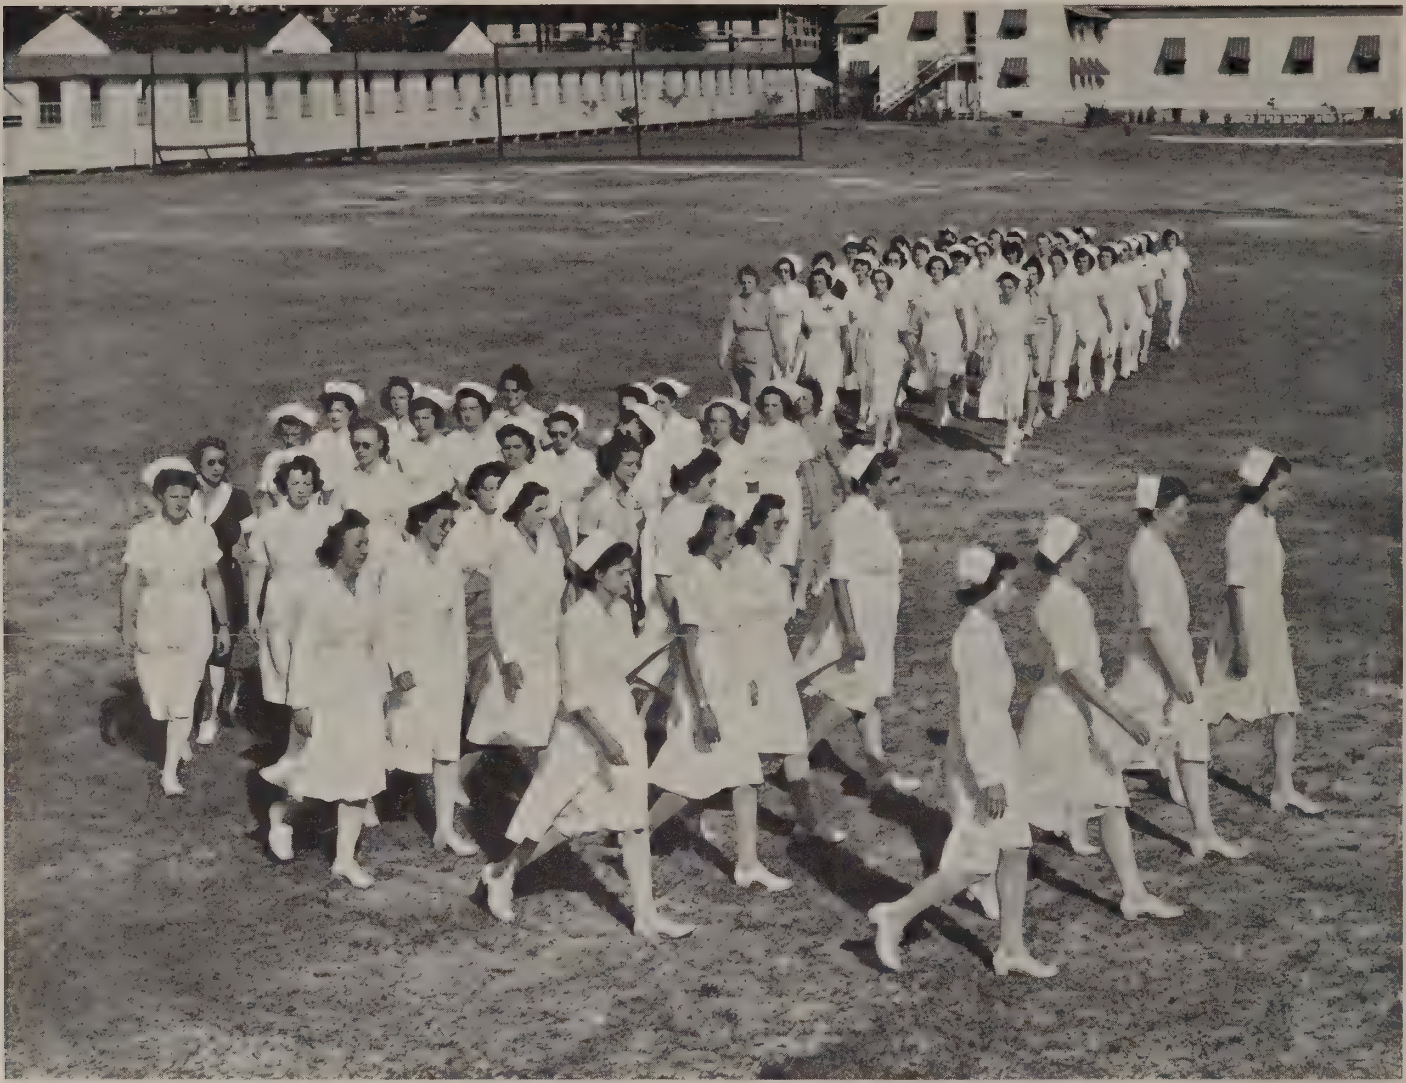
Dr. Robert H. Talkov, recently appointed a Research Fellow in the Arthritis Clinic, has been commissioned Captain, MC, USA, and is assigned to the 8th Service Command Station Hospital at Camp Barkley, Abiline, Texas.

* * *

Dr. G. L. Adamson holds the rank of Squadron Leader, and is president of No. 2 Medical Selection Board at No. 2 Initial Training School, R.C.A.F., Regina, Saskatchewan. He writes: "The Board consists of six medical officers, and its function is to examine candidates for aircrew to undergo basic training at an Initial Training School. Special examinations such as electro-encephalography and low pressure chamber reactions are done routinely in addition to the general physical examination. As the officers of the board are specialists, they also act as consultants to the training command in which they happen to be situated."

* * *

Dr. Walter B. Crandell joined the Roosevelt (NY) Hospital Unit, and was commissioned 1st Lieutenant. He is now overseas with the 9th Evacuation Hospital.



Nurses of the 6th General Hospital on the Parade Ground at Camp Blanding

Lt. Eleanor B. Pitman, formerly an executive assistant in Phillips House, sends an interesting letter describing the photograph above:

All nurses and civilians of the 6th General Hospital are required to attend drill twice a week. One half of the group of nurses are released from duty on alternate days for a period of one hour. We drill on the field in front of the Red Cross Recreation Building shown in the background of the picture. To the left may be seen a part of the Station Hospital, where we are assigned to duty. The platoon in the foreground is about to complete a left column movement, which accounts for the irregularity of the lines.

For convenience we wear the hospital uniform for drill, since in this Florida climate we are apt to be very much over-heated when the prescribed time is up. The regulation Army uniform and cap are worn by all nurses in the Army Nurse Corps, regardless of the hospital from which they graduated.

In the first platoon, reading right to left, may be seen Marjorie May, Margaret Mahoney, Hattie Miller and Eleanor Rich. In the second row are Mary Kennedy, Doris Murphy, Harriet Johnsen and Chloe Wilcox. Priscilla Tripp, Patricia Baker (Red Cross secretary), Mary Wilson, Frances Purcell and Evelyn King are in the next row. Others who may be recognized are Dorothy Moles, extreme left corner, Christine MacKinnon beside her, and Arline Adams, physical therapist, in back of her. In the second platoon Miss Barbour of the Red Cross is seen on the left, then Louise Sherer, Anna Tinkham and Catherine Lyons. Miss Knights is in the platoon also, but is not recognized in this picture, also Priscilla T. Chandler, head physical therapy aide.

In our enlargement Lieutenant Knights is now identified as third from the rear in the row headed by Lieutenant Tinkham.

* * *

Like every other department, the School of Nursing is trying to make a helpful contribution to hospital and national needs in the present emergency. One of the major contributions thus far is the increase in admissions. During 1941, students to a total of 121 were admitted; during 1942 the total has been 169,—an increase of 39%. This increase was made possible in part by federal funds. Under the National Defense Act of 1941-2, Congress appropriated a sum to assist nursing schools to increase their admissions. These funds have contributed toward equipment for an additional class room, paid for a share of the maintenance costs of extra students, furnished instructors for larger classes, and given four scholarships to students of the September-1942 class.

On Oct. 20 the Nursing Service of the General Hospital began its third refresher course to prepare inactive nurses for return to active service. One MGH graduate (Constance Bigelow, 1921) and eighteen graduates of other nursing schools are enrolled. The course is to cover ten weeks, two days a week, with the days divided into a 6-hour period of ward practice and a 2-hour class period. Mrs. Jean Stevens McLeod (1931) is in charge of the course. Classes are given by members of the visiting medical and surgical staffs and by instructors and supervisors from the School of Nursing.

* * *

To facilitate enrollment in the Red Cross Nursing Service and Army and Navy Nurse Corps, the Student Reserve was organized in the summer of 1942. Membership is offered only to senior student nurses. Seven of our seniors are now enrolled with the Red Cross.

* * *

Official word has now been received that the Army Nurse Corps is to admit married nurses.

THE NEWS

No. 4 Boston, Mass. January 1943

This issue of THE NEWS brings New Year greetings from all the Hospital, but it goes to press while Merry Christmases are being exchanged. So plans for Christmas in the Hospital are here given as of future date.

This year the fire commissioner will allow no trees, wreaths, or decorations in hospitals. There will be a few exterior trimmings, and everybody is taking in good part their real disappointment that there can be no Christmas trees on the wards. One Christmas tree is to be permitted in the Brick Corridor, where the Children's Party will be held.

Miss Morse (For what would Christmas be without the Occupational Therapy Department to make it so?) sounds another lament: "Our usual Brick-Corridor-Party talent for the grown ups is down in Florida, and we feel bereft. For the first time we are having to call in an outsider for entertainment." But there will be music each day and, as usual, the candle-light service in the Moseley rotunda.

Thanks again to O.T., patients' trays will have their bright favors: For women patients in the General, a bit of pseudo "costume-jewelry" in the form of a silver and red star with a jingle bell; for the men a Christmas "candle" that will promptly meet the fate of any cigarette masquerading in a red candy stand.

For distant readers THE NEWS wishes it might reproduce here the appetising Christmas menu and the whole red-printed program of events, December 17-25. On its red cover is a red block-print of the White Building, with a 13-story Victory "V" in front of it and a fat Christmas candle at one side, its lively flame saying in smoke, "Christmas Cheer!"

* * *

The following appointments were made by the Trustees at the meeting of November 27 and December 11:

Dr. James G. Miller, Assistant Resident Physician, Psychiatry Service

Dr. Alexander J. Michie, Assistant Resident Surgeon, Urology Service.

* * *

The following program is announced for the Hospital Research Council Meeting of January 26, 1943:

Metabolism of Thyrotropic Hormone in Thyroid Tissue: Dr. R. W. Rawson

The Influence of Aspirin on Uric Acid Metabolism: Dr. F. Klemperer

Deafness Caused by Degeneration in the Organ of Corti: Dr. M. H. Lurie

Quantitative Measurements of Pain Sensitivity in the Neurotic Individual: Drs. J. E. Finesinger and W. P. Chapman.

The letter reprinted below was prepared for circulation in recognition of the general concern in the recent catastrophe.

December 14, 1942.

DEAR FRIEND;—

Because of your long interest in the Hospital, we are sending you this report of our part in the Cocoanut Grove disaster.

The Cocoanut Grove fire started about 10:15 p.m. Saturday, Nov. 28, 1942. The first patients arrived at the emergency ward of the Hospital at 10:30 p.m. Shortly thereafter the Hospital was notified of the disaster and asked to be ready for a large number of patients. The hospital organization set up under "Civilian Defense" for the handling of war casualties was immediately put into operation, the house staff and nurses on duty were called to the emergency ward; the teams for burns and resuscitation were summoned; members of the visiting staff, nurses off duty, social workers, volunteers, orderlies, and others were notified. By 11:15 p.m. nearly the entire organization had been assembled; volunteers continued to arrive during the night.

The emergency ward was immediately cleared of all other patients, but that its facilities would be over-taxed was soon realized, and the sixth floor of the White Building, containing forty beds, was evacuated. Thirty surgical patients were removed to other beds in the Hospital.

Between 10:30 p.m. and 12:45 a.m., 114 casualties were received. Of these 75 were either dead on arrival or died within a few minutes after admission.

The 39 living patients showed, besides burns of varying degrees, the effects of cold, exposure, fright, shock, and partial asphyxia. Clothing was dripping wet, exposed surfaces grimy and blackened. The majority were quiet and cooperative. Some were comatose, others were greatly agitated, requiring restraint. In some this was due to hysteria; in others to cerebral anoxia (lack of oxygen supply to the brain). There was little or no evidence of intoxication. There were no fractures and only slight trauma of soft parts.

Wet clothing was immediately removed; burned surfaces covered with sterile towels and the patients wrapped in blankets. Morphine was given subcutaneously to all.

Meanwhile, two members of the house staff had been stationed at the entrance of the Hospital to determine whether those admitted were living or dead. Those pronounced dead were carried directly to an emergency morgue established in the Brick Corridor; the bodies were covered with sheets and the area screened off.

Some of the dead showed no burns; others showed burns of varying degrees, but death evidently had come from asphyxia in most cases. Many showed the cherry red color indicative of carbon monoxide asphyxia. A few were severely burned; one almost beyond recognition. Identification of the dead was started at once, and all but two of the men were identified by 5:00 a.m. Identification of the women was very difficult on account of the lack of identifying data in their clothing. They were identified only after direct inspection by relatives or friends.

Preliminary treatment having been given to the living in the emergency ward, patients were moved to White-6. By 1:30 a.m. all the living, 39 in number, had been treated and put to bed in this ward. Burns had been dressed, shock was being treated, and asphyxia cases were given oxygen therapy. The emergency ward was cleared and ready for more admissions. Thirty of the thirty-nine patients had surface burns of clinical significance, and many showed evidence of damage to the respiratory tract. In some this was very severe. In some cases it developed twenty-four hours later. In one case artificial respiration was required for the first six hours. The patient recovered. Seven cases required tracheotomy, and in one or two tracheal intubation was performed.

The surface burns were treated by a single method. There was no cleansing or debridement. The burned surfaces were covered with gauze impregnated with boric petrolatum and a voluminous dressing applied with elastic pressure bandages. Splints of folded newspaper were used for forearms and hands. Eyes were examined by staff and residents from the Massachusetts Eye and Ear Infirmary, and appropriate treatment instituted in seven cases.

Blood plasma from the Hospital blood bank was administered to all patients in shock. By 1:00 a.m. all patients in shock were receiving plasma. Salt solution and glucose solution had previously been administered intravenously, and was continued thereafter for long periods in many cases. In the first 24 hours 120 units of frozen plasma were used; in 7 days a total of 141 units. In addition 16 whole blood transfusions were given where there was reduced oxygen capacity. Teams of interns and nurses under the direction of surgeons, residents and the chief anesthetist were assigned to individual patients and to groups, and were in constant attendance. There were 20 trained nurses on 8-hour duty on this ward, or 60 each 24 hours. Oxygen therapy, directly by catheter or in tents, was given in appropriate cases; carbon dioxide 5% to 7% in oxygen was given to three patients, showing evidence of carbon monoxide poisoning. Sterile suction tubes for intratracheal intubation were used in several cases. In addition to the more intricate treatment, routine intravenous medication, blood pressure determinations, blood tests, etc. were carried out.

Sulfadiazine was given intravenously by 2:00 a.m. Sunday to all patients, including those without burns, and its administration was continued thereafter in appropriate amounts. All patients having been previously serum-tested were given antitetanic serum, except Army and Navy personnel and those with serious pulmonary lesions.

By 3:00 a.m. Sunday a list of all the living, with names and addresses, was made and given to police and press.

During the first week seven patients died. These were all cases showing severe respiratory tract damage from inhalation of flame or fumes. No cases of true bacterial pneumonia developed.

All the patients were segregated and isolated on the sixth floor of the White Building. Admission to the ward was strictly limited with a doorkeeper in constant attendance. Besides professional staff and attendants, only immediate relatives, clergy, family doctors, and officials on errands of importance were admitted, and all were masked and gowned.

The east solarium was converted into a dressing station where all dressings were done under aseptic precautions. X-ray examinations of the chest were carried on in the south solarium on the same floor. All patients were so examined by 10:30 a.m. on Sunday.

The clinical laboratories were manned immediately on the night of the disaster, and were kept busy continually thereafter. Hematocrit and serum protein determinations to guide the administration of fluids and plasma were available that night. Determinations of oxygen and carbon dioxide content of blood, oxygen capacity, non-protein nitrogen, prothrombin time, blood chloride, phosphorus, sodium, and other tests including various bacteriological examinations were also made.

The pathological laboratory was called into action in making tissue examinations and later in performing autopsies.

Invaluable service was rendered by members of the Social Service Department. They helped in various places where needed. Their training and skill in dealing with people emotionally disturbed fitted them for the trying tasks of interviewing distracted relatives and friends of patients and in answering innumerable telephone calls. They also helped in the identification of the living and the dead.

The services of volunteers from the Ladies' Visiting Committee and the War Service Committee proved of great value. They were persons of poise and they knew the Hospital.

Medical students assigned to the Hospital gave valiant aid that night and thereafter. A group of Harvard under-graduates who had been doing volunteer work as orderlies for six months, some of whom were on duty that night and others who came in afterwards, rendered splendid service. They also knew the Hospital.

The Red Cross gave invaluable service in the emergency. The motor corps brought casualties to the Hospital. The nurses' aides were of immediate assistance that night, and the next day large numbers replaced and relieved regular nurses on duty in other parts of the Hospital. The Red Cross Canteen, in connection with the Hospital dietary department, served coffee and sandwiches during that night, which was a great help in sustaining the energy and morale of workers and giving comfort to relatives and friends.

The Massachusetts Women's Defense Corps sent volunteers who aided in identification and also were of great help with the Blood Bank.

Many private nurses from Baker Memorial and Phillips House contributed their services during time off duty. Over one hundred outside nurses from the following institutions volunteered and were put to work:

McLean Hospital
N. E. Deaconess Hospital
Children's Hospital
Cambridge Hospital
Emerson Hospital in Concord
Free Hospital for Women
The Faulkner Hospital
Chelsea Naval Hospital
State Department of Public Health
Quincy Women's Defense Corps, O.C.D.
Community Health Association
John Hancock Life Insurance Company
Boston University Graduate School of Nursing
Simmons College Students
Red Cross Nurses

The regular staff of the Hospital, administrative, medical, surgical, and special, nurses, orderlies, technicians, telephone operators, dietitians, porters, maids, and maintenance personnel labored long hours that night and Sunday without stint in unsparing efforts each to do his part.

In conclusion it may be said that the Hospital organization met the emergency adequately and well. Much credit should be accorded to the Civilian Defense organization for having made the Hospital "catastrophe-minded" beforehand. There was no shortage of supplies or equipment of any kind.

Of course, some minor faults and difficulties were developed by the situation, which will serve a useful lesson in preparing for any future emergency.

"An emergency anticipated and prepared for ceases to be an emergency."

Faithfully yours,
The Trustees of the
Massachusetts General Hospital

* * *

This letter gives the substance of the "Preliminary Account of the Cocoanut Grove Disaster in Boston," prepared for circulation in the medical journals. To this account is appended a section of "General Comments and Lessons Learned." They are listed under the following general headings but with fuller detail on procedure.

1. The value of a well organized telephone service.
2. The necessity for immediate examination and separation of living and dead at the very entrance of the hospital.
3. The organization of staff and nurses into successive teams for medical procedures.
4. The importance of concentration of casualties in one group for concentrated medical treatment and isolation procedures.
5. Catastrophe organization to include experts assigned to the scene of disaster to determine the nature of the trauma.
6. An emergency morgue selected in advance.
7. A list of living, giving name and address.
8. Police assistance to control yard traffic and to guard hospital corridors and morgue.
9. The serving of coffee and sandwiches by the hospital dietary department and Red Cross.
10. Ample quantity of emergency supplies.

* * *

It has been the policy of the National Research Council to give no publicity to the investigative work of particular teams of doctors in civilian hospitals all over the country. Under the direction of the Council, particular problems of special importance to the prosecution of the war have been receiving intensive study. It may be of consolation to many to know that work on burns and resuscitation had been under way at this hospital, and that the victims of the disastrous fire at the Cocoanut Grove found at their command not only the regular emergency resources of the Hospital but this special service as well.

Dr. Churchill adds further word to the general statement above: "It is also of importance to note that studies and observations on the management of these patients are being closely followed by authorities responsible for the formulation of the principles that govern the treatment of burns in the armed forces. The disaster afforded an opportunity to apply in a large number of cases certain new principles that have emerged, particularly from the use of chemotherapeutic drugs."

The nurse's aides trained by the Red Cross are familiar figures in hospital wards and corridors. These volunteers have become, in fact, a part of the hospital scheme, and their service everywhere receives unreserved praise. A report from their chairman of their work in the Cocoanut Grove disaster states the following facts and provides this opportunity for recognition of their inestimable help in present-day needs.

An alert was sent out to the nurses's aides at 10:45 on the night of November 28, and by 11:30 they were reporting at the Massachusetts General Hospital, as well as at the Boston City Hospital. They stayed on duty here until 2 a.m. November 29. Up to 9:30 that night 69 aides had worked 296 hours, and from 11:30 that night until 7 a.m. November 30, three aides worked 33 hours. From that time until December 4, day aides to the number of 80 worked here 1261 hours, and 35 evening aides worked 143 hours. Also, five aides worked in regular shifts on 24-hour service on the Disaster Ward, White 6, until December 3, when the number was reduced to three on each shift. The total service, at both the Boston City and the Massachusetts General Hospitals, was 397 aides (294 individuals) and 3621 hours.

Pictures of the disaster show the aides at work, and the report of their chairman gives these details:

* * *

> In the hospitals, the aides did everything that was asked of them and voluntarily did many things besides. They worked in the emergency wards, operating rooms, and disaster wards. They tagged the dead, mopped up the floors of the emergency wards, which were covered with burned clothes, pieces of skin and bits of hair. They put fresh covers on the stretcher carts. On the wards they made clothes lists, forced fluids, put cold compresses on burned eyes, held arms and legs while intravenous injections were applied, made beds, gave mouth care, and put the wards in order. In the kitchens the aides washed and sterilized dishes, tubes, glasses and pitchers. . . .

* * *

Lt. Col. F. Dennette Adams has been called to active duty and is at present at the Army Medical Center in Washington.

* * *

Dr. Morris B. Sanders, formerly a member of the staff of the American Hospital at Neuilly-sur-Seine, has been interned since the beginning of the war.

* * *

From his home in Palm Beach, Fla., Dr. Hobart E. Warren sends a statement of the wartime activities of "an ancient graduate like myself." He states briefly: "I am Chief of Emergency Medical Services for Civilian Defense, and in September the Governor appointed me Chairman of the Health and Housing Division here, which places twelve other divisions including casualty stations, nursing service, medical center, blood bank, ambulance corps, et cetera under my jurisdiction." He adds: "Some headache!"

The December Bulletin of the Department of Dermatology reports that Lt. Alan P. Freedberg, MC, USA, a graduate assistant in the Department, is now with the 179th Station Hospital, assigned at present to Fort Lewis, Washington, and states: "Lt. Dorothy Duffy, our former head nurse, is at the Station Hospital, Fort Devens, Mass." The Bulletin also gives news of two of its recent interns:

> Capt. Robert N. Buchanan writes from Camp Forrest, Tenn., that he is stationed there, attached to the 300th General Hospital. He spent an interesting summer at the Walter Reed Hospital studying the course of an epidemic of jaundice. After the Vanderbilt unit was activated, Captain Buchanan was assigned to duty with them at Camp Forrest. He is in charge of a 37-bed dermatology ward in the Station Hospital, but seems anxious for more active duty.
>
> 1st Lt. William E. Flood is still at Fort Sam Houston, filling the position of Venereal Disease Control Officer. In this capacity he is giving lectures, inspecting dispensaries, looking after prophylactic stations, and inspecting troops for possible infection.

* * *

The Dental Service reports to THE NEWS the following:

Lt. Comdr. F. I. Rhodes, who was on a tender plying between Iceland and the U. S. for a year and a half, is now at the U. S. Naval Training Station at Bainbridge, Maryland. Capt. D. J. Holland, of the 6th General Hospital, has gone to the Walter Reed Hospital to take a course in plastic surgery. Major G. R. Rae, still at Camp Blanding, sends greetings.

Major M. S. Strock of the 5th General Hospital writes a card of Christmas greetings from Ireland. He and Lt. F. K. Poulin mention with gratitude the safe and prompt delivery of gifts sent by the dental staff of the Hospital. Lt. Poulin has recently been transferred from the 160th Station Hospital to the air force, and is at present stationed at a lovely spot somewhere in England.

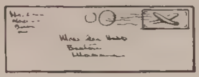
* * *

Dr. William H. Sweet sends a note from his post in England as Neurosurgeon of the Queen Elizabeth Hospital of Birmingham United Hospital:

> When the American Hospital in Britain's principal unit, the Churchill Hospital in Oxford, was taken over by the United States Army in the summer of this year, I transferred to the British Emergency Medical Service but continued to work at the same post and with the same personnel and equipment as previously. The generosity of Dr. Philip Wilson not only made it possible for me to keep all the American Hospital in Britain's equipments but he also arranged, through the British War Relief Society, to give me a sum of money so that the service could be run essentially as it was before. He did this after it was found impossible for me to arrange with the United States Army to do neurosurgery under its aegis. My tentative plan is to continue here at least until the end of June next year.

* * *

Comdr. Charles H. Allman, MC, V(S), USNR, received this rank as of July 1942, and has been for some time on duty with the Pacific Fleet. In connection with his service Dr. Allman has published "Peroral Endoscopy in a Navy Hospital" in the US Naval Medical Bulletin for Oct. 1942. This concerned his work in the Bronchoscopy Clinic at Chelsea Naval Hospital.



To give news of the 6th General Hospital for this issue, a letter of November 24, from Eleanor B. Pitman, 2d Lt., ANC, Res., is quoted from "The Quarterly Record."

> Six months at Blanding! Not what we bargained for, but here we are and making the most and the best of it, too. Units come and units go, but we stay on forever; and so it seems. One hears a lot about morale. It has always puzzled me as to what constitutes "good morale." But whatever it is, I think the 6th General has it. Like the wind "we cannot tell from whence it cometh nor whither it goeth, but we hear the sound thereof." We hear it in the voices of these girls: their gaiety in quarters as they sing an accompaniment to the victrola or the radio; the way they "josh" each other and play practical jokes; the loveliness of them as they depart with their "dates" for the various clubs where they dance to their hearts' content; the way they have with the patients. It's fun to nurse these boys; they are so appreciative of even the simplest service, and a little kindness goes a long way.
>
> The "leaves" we are now having in groups of fifteen at a time are enjoyed by each one of us every ten days. It is just as thrilling for the "have beens" to see others go off, for they know what joy is in store for them. And those who are waiting to go are smug—it is still theirs to enjoy. Just now we are having our turn on night duty. Twenty of us are on at present. Night duty is from 7.00 p.m. to 7 a.m., and usually for a period of one month. At present we are doing only two weeks, to make it fit in better with the leaves. It's not much like night duty at home. Except on the recovery ward, the officers' wards, the nurses' ward and the seriously ill ward, each nurse takes care of from three to four wards, depending on the type of patient. Her work is mostly supervisory: she instructs the corpsmen, and also convalescent patients who can be allocated to certain duties.
>
> This work often has a humorous side to it. The corpsmen are for the most part untrained, and the nurse finds them very raw recruits. One nurse asked the corpsman to toast three loaves of bread. When she went to the kitchen he had the three loaves of bread, waxed paper and all, in the oven. Another nurse had a can of evaporated milk to be opened. The corpsman looked at it, and was puzzled. "Punch two holes in it," she instructed. The next minute the milk was pouring all over the floor. He had punched one hole in the top and the other in the bottom!
>
> We drill twice a week, and hope that soon the Commanding Officer will consider us good enough to be in the review, which takes place Saturday mornings at 11.00. And what a thrill it is to watch our unit. They have a fine drum and bugle corps of their own now, and they march very smartly. I go over as often as possible, and never fail to feel a surge of pride that I am part of this organization.

* * *

A letter of December 20 from Colonel Goethals adds a brief word to this:

> On Thanksgiving Day our nurses were called, at the Station Hospital, to cope with a sudden influx of acute gastro-intestinal cases. Very flattering remarks have been made about the way they handled the situation. Furthermore, today they participated in a review given in honor of the Camp Commander, and in this connection attracted very favorable comment.
>
> Tell Pete Churchill that his report on the Cocoanut Grove fire is being circulated; and give him the thanks of all of us. What do you mean you miss us? We would have done no more than you did.

NOTICE

Dr. Faxon requests that every woman employed in the Hospital provide herself at once with an identification tag. Such a tag should show complete name on one side and the individual's blood type on the other.

The report of the recent disaster, here published, comments on the difficulty of identifying women in case of accident. Immediate identification of persons at the time of an accident will spare relatives and friends harrowing experiences and the useless hope of doubt.

The General Store at the Hospital plans to carry inexpensive tags, and information may be obtained there.

Less formal aspects of the recent disaster as a civilian emergency met by the Hospital have been given in "The Quarterly Record" for December by Grace P. Follett, an instructor in the School of Nursing and a graduate of 1939:

> No one of us yet has the perspective to evaluate our response to the Cocoanut Grove disaster. We know that when the last of our thirty-nine disaster patients is discharged, all departments will wish that some things had been done differently, and we shall do them differently another time, if we should have occasion to use the knowledge we have gained. But for all that, in this first test of our disaster service, each of us must feel as one surgeon did when he finally got home at nine o'clock Sunday night. When his wife asked, "How are you?" his reply was, "I am proud to have been part of the M.G.H. at a time like this." . . .
>
> Two surgical supervisors have acted as head nurse on White 6, relieving each other. One of them had time off on the sixth day for the first time and took every minute of it to answer questions that should presently form the basis of a complete discussion of nursing care for the disaster patients. . . . In a place where a lot of people know their jobs that well and stick to them with that kind of tenacity in an emergency, someone in authority is needed in the background, but the authority does not get a great deal of exercise. All the way from the surgeons in charge to student nurses who worked under direction, I have heard that people did not need to be told what to do, because they were doing it. Each one of us, whether a nurse or a member of another department, after this experience should have a clearer idea of her own function, of others' functions, and how to work together in the future.

Very properly, also, Miss Follett records an aspect that should be found in any great human experience. There should be small bits of humor even in great catastrophe.

> In the west wing of White 6 on the afternoon following admission there were fifteen male patients, and twelve of these showed no faces, just great mounds of gauze retained by bender bandage (with apertures for nostrils and terribly swollen lips). Of the three men who showed faces, one was sitting up in bed eating supper from his own tray. The next day he was discharged from the west wing at the same time his wife was discharged from the east; they met in the center and went home together, a happy couple. But they had been protected from news of the catastrophe, and the wife was bewildered because nearly all her clothes were missing. She could not understand how a hospital like the M.G.H. could have managed to lose them! She did not realize that she may well have been admitted without them.

Dr. Churchill kindly allows readers of THE NEWS to share his correspondence with alumni now in war service by sending the following information and comment:

> Lt. Walter B. Crandell writes from Northwest Africa that he spent Thanksgiving in Oran. "Some work and facilities for bathing would make us reasonably content." No complaints have been heard from Florida about the latter item.
>
> Capt. F. H. Simeone has been polishing off what he learned about thoracic surgery at the M. G. H. with a course under Mr. Tudor Edwards in England. "Simie" would now appear to be qualified not only in urology, but in thoracic surgery, and the surgery of the sympathetic nervous system. It shows what a sound basic training will do!
>
> Lt. Comdr. Roy Whitham was called to active duty July 28, 1941, at the U.S. Naval Hospital, Great Lakes, Ill. He writes, "I have often thought it a remarkable accomplishment that the men from the Massachusetts General Hospital are imbued with a spirit of professional honesty and scientific and medical idealism that is greater than is acquired anywhere else." Thanks, Roy. We will be proud to hoist an "E" pennant on that citation.
>
> Carl Hedblom (East Surgical 1913), who died in 1934, is represented in this war by two sons. Carl, Jr., is with the 52nd Evacuation Hospital (Pennsylvania Hospital) in New Caledonia. George is piloting a flying fortress based in England.

* * *

THE NEWS has received the following information about the military service of former employees of the Hospital, and hopes to have more to publish in later issues.

John T. Keating, who entered the employ of the Hospital in 1921 and had been for several years in charge of the lower store, is serving as a private with a squadron of the Air Force in Northern Ireland.

Three men from the general hospital and outpatient pharmacies are serving at the following posts: Joseph Trotta at Sioux Falls, South Dakota; Cyril Fitzgibbon, on Guadalcanal; and Joseph Conti, in England. A fourth, Dominick Cervizzi, is Technical Sergeant with the task force of a medical regiment now in the Pacific.

* * *

Word has been received of the promotion of Lt. Col. Augustus Thorndike to this rank. The 105th General Hospital, the second Harvard University unit and organized under Lieutenant Colonel Thorndike's command, has been on service in the Pacific area for several months. It is hoped that some of the twenty MGH members of that unit will soon send THE NEWS a report of its activities for special inclusion in these pages.

* * *

Comdr. James C. White received word from Washington on December 3 of his promotion to this rank. His commission dates from July 17, 1942, and he is to continue his service at the Chelsea Naval Hospital.

The organization of the USA Typhus Commission was announced on November 19. Dr. John C. Snyder, earlier reported as a member of the Conference on Typhus, Cholera and Plague called by the Committee on Tropical Diseases of the Medical Research Council, is one of the four typhus research specialists composing the Commission. He holds the rank of Major, M.C., AUS.

* * *

The 7th General Hospital (Boston City Hospital unit) has not yet been activated, but many of its members are on active duty. Dr. Phillip H. Gates, of the McLean staff, was commissioned a Captain, MC, USA, to act as assistant to Major Wilfred Bloomberg, chief of the neuropsychiatry section of the 7th General Hospital. He is now at the Station Hospital, Fort Hayes, Columbus, O. Lt. Col. Laurence B. Ellis is chief of service for the unit, with Major Richard P. Stetson as assistant. Major Albert G. Engelbach was appointed executive officer of the unit, and has been at the Lovell General Hospital at Fort Devens since August. Capt. George E. Heels, also a member of the unit, is now on duty at the Recruiting and Induction Station at Portland, Maine.

* * *

A brief account recently received from Comdr. Howard B. Sprague, in charge of U.S.N. Mobile Hospital No. 6, gives an interesting picture of this unit in action in the Pacific.

> Our hospital has been busy caring for casualties for over two months, and our bed capacity is steadily expanding. I think we have one of the best, and from a personnel standpoint, the best naval set-up in this part of the world. We have had one formal clinical meeting with two M.G.H. papers on the program: Kennard on the treatment of burns, and McGinn on the electrocardiograph in war. Our location, though a bit inconvenient, is comfortable and healthy, and the scenery is beautiful. Give our best to everybody. Please note our new address.

The address is Navy 607, c/o Fleet Post office, San Francisco. It is given here for other M.G.H. units who may wish to communicate with this naval group, which includes Drs. Sprague, Johnson, Kennard, Hunter, Carmody, and McGinn.

A further comment from Dr. Sprague's letter is given: "There has just come to hand the first issue of the M.G.H. NEWS. We have enjoyed having it very much, as we get very little information about other outfits." This quotation is made in the hope that other units will send word of themselves, to be published here and thus reach interested readers in the remote areas.

* * *

Lt. Col. Thomas H. Lanman, who went overseas several months ago as commanding officer of the 5th General Hospital (the first Harvard University unit), has recently been serving temporarily as commanding officer of another General Hospital stationed in a neighboring sector. On Thanksgiving night the officers of his temporary command tendered him a dinner of appreciation.

Dr. Ralph Winward French died on December 7, 1942 at the Truesdale Hospital in Fall River, Mass. Dr. French graduated at Harvard College in 1907, and received his degree *cum laude* from the Medical School in 1910. He began service as an intern at the Massachusetts General Hospital on August 1 of that year, and was on both the South and East Surgical Services. In 1912 he joined the staff of Truesdale Hospital. In addition to his active work as surgeon there, he was instrumental in establishing the Training School for Nurses.

To this brief statement, Dr. Means adds a personal tribute. "Dr. French's life was one of real beauty. Modest, unselfish, kindly, devoted to both friend and patient, he became the beloved surgeon in his community and endeared himself to people in every walk of life. The gentle twinkle in his eye made those about him happier. His mere presence inspired confidence. To these treasures of character he added surgical skill and judgment of a high order."

* * *

Dr. Andrew Watson Sellards died on December 1, 1942, at Newton, Mass. Dr. Sellards had been a member of the staff of this hospital since 1915, when he was appointed an assistant in medicine and assigned to the newly-created sub-department of tropical medicine under Dr. Richard P. Strong as chief. When this clinic was discontinued here Drs. Strong and Sellards, with Dr. George C. Shattuck, were made consultants in tropical medicine. Dr. Sellards received his college training at the University of Kansas and graduated at Johns Hopkins in 1909. Until 1911 he was an instructor in tropical medicine at the University of the Philippines but then returned to Johns Hopkins as an instructor of medicine there. Since 1914 he had been a member of the Faculty of the Harvard Medical School, and at the time of his death was Richard Pearson Strong Associate Professor of Tropical Medicine.

To the facts stated above Dr. Rackemann gives a special significance. "Dr. Sellards travelled extensively and spent much time in the tropics, where he did important work on yaws and especially on yellow fever. He was a close friend of Noguchi and of the French scientist Nicolle. Dr. Sellards was one of those shy, self-effacing, quiet people who hate publicity and go out of their way to avoid the limelight. He was ready to give everything and to do everything for other people, but it was always difficult to do things for him. In the Medical School he kept to himself but he had the happy faculty of making friends, especially with the students, and it was remarkable to find how much he knew of the personal as well as professional affairs of this or that young man who might be having trouble of various sorts. The door of his laboratory was always open, and visitors were always welcomed.

"He left this world so quietly that most people hardly knew of his passing. His friends, however, will miss him sorely."

* * *

"William S. Ripley, purchasing agent of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary, died in the Baker Memorial Hospital on December 23, 1942. He had been ill for several months. The outlook was hopeless. His death a merciful release.

"He began his connection with the Massachusetts General Hospital as storekeeper at the McLean Hospital. In 1906 he came to the General Hospital as secretary to Dr. Howard, the Administrator, who was in charge of the business affairs of both institutions. As the Hospital grew in size with the construction of the Phillips House and Baker Memorial, a definite Purchasing Department was established and Mr. Ripley became its head. He served Drs. Cowles, Howard, Washburn, Howland, Bigelow, and Faxon. In all he was an officer of the Massachusetts General Hospital for forty-four years.

"Slow-spoken and deliberate, he carefully weighed the evidence before each decision. Honest and loyal, the Hospital has never had a more faithful servant. Sympathetic and kindly, he was a valued friend of many still connected with the Hospital and many who have passed on."

F.A.W.

"The Quarterly Record" reports the death of Miss Blanche M. Thayer, a graduate of the Class of 1879 and "the oldest living alumna" of the Training School for Nurses, at a nursing home in Quincy, Mass., on Oct. 25, 1942, after several years of ill health following a fractured hip. Miss Thayer came from an old Braintree family. She commanded great respect because of her dignity and fine personal appearance, had travelled extensively, and enjoyed life to the fullest. Many years of her professional life were spent as superintendent of nurses at the Quincy City Hospital, where Miss McCrae was for a time assistant superintendent. She had held similar positions in New York, North Carolina, and Connecticut.

The principal recommendation of the editorial committee of the Scientific Book Club for September was the following book, "Civilian Health in Wartime," by Dr. Francis R. Dieuaide. It is published by the Harvard University Press. They say of it that it is "not a medical treatise nor one that is intended for any professional group; it should appeal to all intelligent citizens." The book has been cordially reviewed by newspapers and the medical journals, but The News hopes it may later add to this number.

The following ranks and addresses have been received. News of the special assignments of these officers will be published as soon as it is received:

A. M. Bassett, MC, USA, 49th Service Group, Army Air Field, Walla Walla, Wash.
W. L. Holt, Jr., MC, USNR, Puerto Rico.
J. Homans, Jr., MC, AAF, Air Force Training School, Miami Beach, Fla.
R. F. MacDonald, Lt. Col., MC, USA, Chicago, Ill.
J. C. Placak, Jr., Lt., MC, USNR, U. S. Naval Hospital, Great Lakes, Ill.
H. M. Spence, Lt., MC, USA, Moffett Field, Calif.
S. McN. Talmadge, Capt., MC, USA, Lawson General Hospital, Atlanta, Ga.

* * *

Lt. Comdr. A. Gordon Gauld, MC, USNR, has been on active duty since May 19, 1941. He is at present assigned to the USS "Chenango."

* * *

Major Ira Dixson, MC, AAF, has been assigned to the Air Force Officers' Training School at Miami Beach, Fla.

* * *

Lt. Hugh Montgomery, MC, USNR, was called to active duty on Feb. 23, 1942, and assigned to the Philadelphia Naval Hospital. He later joined the USS "Solace," a hospital ship of the Pacific Fleet, and is one of the two internists of the University of Pennsylvania Naval Unit assigned to this vessel.

* * *

Capt. I. Paley Rak, MC, USA, sends word of his service at the Station Hospital, Camp Phillips, Kansas, where he is chief of the neuropsychiatry service.

* * *

Lt. Col. Richard Collins, Jr., FA, USA, sends a letter from Hq., 87th Infantry, Division of Artillery, at Camp McCain, Miss. He very kindly calls The News "a fine undertaking," and says it "does those of us who are far away a lot of good. We are scattered to the winds, and move so often that we cannot keep in touch with our many friends from the Hospital. The News affords a means of keeping track of one another." But, better than that, he sends word of his own activities:

> I entered the Army on active duty in December 1940. After taking a three months' course at the Field Artillery School, I was retained as an instructor in the Gunnery Department. While there I was successively an instructor, a group supervisor, and finally a Class Director in the Gunnery Department. I have learned much about teaching that will prove of value when I return to my former haunts. After another month as a student in the same school, I came down here to be Plans and Training Officer for the Artillery of the 87th Division. This division is a new one, now in the process of building. The work is strenuous and interesting. There is never a dull moment.
>
> In Jackson, Miss., on my way here, by the merest chance I ran into Dr. Harter, a contemporary of mine at the Hospital. He has been very kind to my family. If all goes well we hope to spend Christmas Day with his family. My wife, Jean Chapman Collins is a former MGH nurse. She and my daughter, Deborah are living in Jackson at 1620 Myrtle Street.

(This photograph, taken in the Surgical Conference Room at the Massachusetts General Hospital, is reproduced here through the courtesy of the Boston *Herald*. It appeared on the front page of its edition for December 9, 1942, with the title below.)

DISTINGUISHED MEDICAL AUTHORITIES here to review the treatment of Cocoanut Grove survivors. From left to right, seated: Dr. F. L. Meleney, Presbyterian Hospital, New York; Dr. Oliver Cope, Massachusetts General Hospital; Dr. Robert Elman, Barnes Hospital, St. Louis, Mo.; Dr. Edward D. Churchill, Massachusetts General Hospital; Dr. R. D. McClure, Henry Ford Hospital, Detroit, Mich.; Dr. Allen O. Whipple, Presbyterian Hospital. Standing: Dr. Charles C. Lund, Boston City Hospital; Dr. F. W. Rhinelander, Dr. Henry K. Beecher, and Dr. Champ Lyons of Massachusetts General Hospital; Lt. Col. B. Noland Carter and Lt. Col. D. B. Kendrick of the Surgeon General's Office; Dr. W. Jason Mixter, Massachusetts General Hospital; and Dr. Sumner L. Koch, Passavant Memorial Hospital, Chicago.

The paragraphs below are brief quotations from the newspaper report that accompanied the photograph:

> The delegation, including the membership of the burn committee of the National Research Council, said the visit was prompted by a desire to study at first-hand reports of magnificent work accomplished by trained disaster groups in the city.
>
> In the morning they toured the Boston City Hospital with Dr. Charles C. Lund, who directed the care given fire victims, then were guests of hospital trustees at luncheon. In the afternoon they visited survivors at the Massachusetts General Hospital, where their tour was conducted by Dr. Edward D. Churchill.

Dr. Churchill received a note of appreciation from Lt. Col. B. N. Carter, who represented the Office of the Surgeon General in the review of the treatment of the casualties. It includes this tribute: "I can't tell you how much admiration I have for your staff in the way in which the burned cases were handled. It was a revelation in efficiency, skill and forethought."

Major Linn F. Cooper, MC, USA, has been assigned to the Station Hospital at Drew Field, Tampa, Fla.

* * *

Major Roy B. Cohn is serving overseas with the 59th Evacuation Hospital.

* * *

Lt. Comdr. Richard L. Pearse, is at the US Naval Station at Key West.

* * *

Capt. Alfred Hurwitz, MC, USA, entered the service on October 31, 1942, and has been at Fort Sam Houston, Texas, with the 3d Auxiliary Surgical Group.

...—V...—

Dr. Robert S. Hurlbut has been commissioned a Lieutenant, jg, MC, USNR. He has been on duty at the Chelsea Naval Hospital, and recently was serving on the Naval Aviation Cadet Selection Board at the First Naval District Headquarters.

* * *

Lt. James E. Conley, MC, USNR, has recently joined Naval Construction Battalion No. 69 at Camp Peary, Williamsburg, Va.

The Ladies' Visiting Committee draws attention to the fact that a year ago there was established a Memorial Gift Fund. Instead of sending flowers to bereaved friends, persons may prefer to make a contribution to the Hospital "in memoriam." Gifts will be acknowledged by the Trustees to any designated member of the family of the deceased.

Checks should be made payable to Mr. Henry Guild, Treasurer, Massachusetts General Hospital, Boston, Mass.

THE NEWS

No. 5 Boston, Mass. February, 1943

This letter has been posted on one of the Hospital bulletin boards, so that the active personnel may receive the well-deserved praise it expresses. Absent and distant Hospital members should also share in it:

MASSACHUSETTS COMMITTEE ON
PUBLIC SAFETY
18 Tremont St., Boston
December 22, 1942

Dr. Nathaniel W. Faxon, Director
Massachusetts General Hospital
Boston, Massachusetts
Dear Dr. Faxon;—

I want to thank you personally for the splendid way in which the Massachusetts General Hospital and your entire staff, medical, surgical, nursing, social service and lay, functioned in the recent Cocoanut Grove disaster. As a result of your emergency set-up and your practicing in the event of disaster so as to meet it more successfully, you had your baptismal fire and came out on top. Nothing but the greatest praise of your hospital has come to my ears. . . .

I wish to thank you again and all your staff, to whom please transmit my sincere thanks. It makes us all feel better to know that if in the future we are to taste some enemy action on our own shore, we have the assurance that any of our injured population will be taken care of in the best possible manner.

Sincerely yours,
J. W. Farley,
Executive Director

* * *

A recent issue of one of the major scientific journals has a special interest for members of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary. It contains the following dedication page:

THIS VOLUME
OF THE
ANNALS OF OTOLOGY, RHINOLOGY
AND LARYNGOLOGY
IS DEDICATED
TO
HARRIS PEYTON MOSHER
A.B., M.D., Sc.D., LL.D.
Walter Augustus LeCompte Professor of
Otology, Emeritus
and
Professor of Laryngology, Emeritus
of
The Harvard Medical School
Boston, Massachusetts

The contributions are by his students and residents, who hereby acknowledge their indebtedness to him for his stimulation and encouragement in their preparation for the specialty of Otolaryngology.

September, 1942

The frontispiece of the issue is an informal picture, "Dr. Mosher photographed at his desk by Dr. Werner Mueller." This shows Dr. Mosher as his associates have so often found him, in his laboratory coat and busy with reports. That this is only one aspect of his achievement and personality is suggested in the first paragraph of the brief biographical account:

> A member and past president of all the American otolaryngological societies; the president, from its organization, of the American Board of Otolaryngology; anatomist, sculptor, wood carver, artist, inventor, musician, teacher, trail blazer; a name associated with studies of the nasal sinuses, the esophagus, pus in the neck, brain abscess, the paraffin mould for skin grafting radical mastoid cavities, with many original instruments; dean of American otolaryngologists.

Mention is then made of Dr. Mosher's outstanding contributions in the specialty he was to select,—after internship at the Massachusetts General Hospital (*ES* 1897), residency at the Boston Lying-In Hospital, service in the Spanish-American War, a term of general practice and of teaching anatomy, as well as further study abroad! Dr. Mosher was the first American to deliver the Semon lecture and receive the Semon Medal in 1929, and has been honored with other medals and degrees. Also:

> During World War I, Dr. Mosher volunteered early for military service and came out of the service late. After a tour of duty as a consultant in otolaryngology in both England and France, he was assigned to the personnel department of the Surgeon General's office. Here he was impressed by the need of better training in otolaryngology; and from this need, as a stimulus, the American Board of Otolaryngology was formed. Upon his retirement from the Medical Corps of the Army, Dr. Mosher held the rank of Colonel.
>
> World War II finds him Chairman of the Section on Otolaryngology of the National Defense Council. He is kept busy as an air raid warden in Marblehead, and is active in First Aid, the Red Cross, and British Relief.

A quotation from another magazine here suggests that even the material instruments Dr. Mosher has helped to perfect seem to show his versatility. *The Reader's Digest* for January contains this paragraph:

> An employe of one of the automobile plants that makes aircraft engines got to worrying about the inner surfaces of drilled oil lines. Dirt or pieces of metal left in them might stop the oil flow and wreck the engine in the midst of combat. He had read of the bronchoscope, with which surgeons explore children's lungs for obstructions. He tried one out on the oil lines, and it worked.

* * *

The Hospital bulletin board calls attention to the symposium being presented weekly from January 17 to February 21 by the Boston City Hospital, at the request of the USA Medical Corps, for the training of medical officers for service with aviation units. The lectures are open to members of the medical profession. A program is announced:

"Rôle of the Medical Program in Civil Aviation," Ross A. McFarland, Ph.D., Assistant Professor of Industrial Research, Harvard University; coördinator of the Medical Program, Pan American Airways System

"Effects of High Altitude in Aviation," Ross A. McFarland, Ph.D.

"Application of Psychiatry to Military Needs," Comdr. A. Warren Stearns, MC, USNR, also

"Application of Psychology to Selection and Maintenance of Aircraft Pilots," Lt. Edward J. Galway, USNR

"Naval Aviation," Capt. J. C. Adams, MC, USN, Chief of Division of Aviation, Bureau of Medicine and Surgery, USN, also

"Demonstration of a USN Flight Physical Examination," Lt. Comdr. L. R. Philbrook, MC, USNR, Senior Aviation Examiner, First Naval District

"Early Treatment of Traumatic Injuries of Face and Jaw," Dr. V. H. Kazanjian, Professor of Plastic Surgery, Harvard Dental School; Consultant in Plastic Surgery, Massachusetts Eye and Ear Infirmary and Boston City Hospital

"Head and Spinal Injuries," Dr. Donald Munro, Assistant Professor of Neurosurgery, Harvard Medical School; Chief of Department of Neurosurgery, Boston City Hospital.

* * *

The Christmas party held by the nurses at the Massachusetts Eye and Ear residence this year on December 22 was made the occasion of a special birthday celebration. The nurses invited to their party Mr. Russell G. Fessenden, President of the Board of Managers, Dr. Faxon, Director of the Infirmary, Mrs. Faxon, Miss Johnson, and the following employees who have given twenty or more years of service there; for the party had been planned in their honor.

John Blood	Engineer	30 years
Mary Mungovin	Seamstress	27 '
Charles Fowler	Orderly	27 "
Ellen McCann	X-Ray Nurse	24 "
Florence Morrissey	Anaesthetist	23 "
Dr. A. S. Macmillan	Roentgenologist	23 "
Anne Raymond	Attendant	22 "
Winifred Glidden	Clerk, Front Desk	21 "
William S. Ripley	Purchasing Agt,	21 "
Helen F. Kerwin	Social Service	21 "
Mary Hayden	Nurse O.P.D.	21 "
Elizabeth Farley	Asst. Bookkeeper	20 "
Margaret MacDonald	Bookkeeper	20 "

Dr. Burton E. Lovesey, in costume, acted as the Town Crier of the occasion. He presented to the twelve employees who were present one of the Wedgewood plates showing the Infirmary building of the old days, and had an amusing tale to tell about each person as the presentation was made. The plates were the gift of the Board of Managers. After these ceremonies a birthday cake was cut, but due to the rationing program and a shortage of that week it could not be accompanied by the usual ice cream. Two pounds of coffee, however, a gift from a nurse necessarily nameless, gave the final flavor and distinction to the occasion. The party was held in the living room of the residence,—and Dr. Faxon, for one, said he hadn't been to a nicer party ever.

The Trustees have granted leave of absence because of military service to:

Drs. Edward D. Churchill
Maurice M. Tolman

Dr. Churchill has received a commission as Colonel, MC, AUS, and will act as Consulting Surgeon to one of the Armies. He is now in Washington.

At its meeting of January 8, the administrative board of the Harvard Medical School "voted to appoint Dr. Oliver Cope as acting head of the Department of Surgery, located at the Massachusetts General Hospital, from the date of the beginning of Dr. Churchill's leave of absence." Dr. Cope holds the appointment of Assistant Professor of Surgery at the Medical School.

* * *

The following appointments have been made by the Trustees:

Dr. Leland S. McKittrick, Acting Chief of the West Surgical Service during Dr. Churchill's absence
Dr. William J. Turtle, Assistant Physician, Children's Medical Service
Dr. Dario Morelli, Assistant, Children's Medical Service
Dr. Harriet Hardy, Assistant in Medicine
Dr. Robert S. Grier, Assistant Resident Physician, Medical Service, for three months or longer, beginning January 1, 1943
Dr. Robert L. Allen, House Officer, Surgical Service, for three months, beginning January 1, 1943
Dr. Robert E. Mason, Assistant Resident, Medical Service, beginning April 1, 1943.

Dr. Arthur W. Allen gives the following information as to the schedule for teams of staff and house officers in the Surgical Services, and the purposes for which this arrangement has been made.

"One-year interns are rotating through the private wards for three months of their service under a tutorial system. They are assigned to various teams, in such order that the work is equally distributed. At the end of six weeks the men are shifted to different teams.

"Staff members working in the private wards have taken this responsibility of teaching very seriously. So far the staff and the interns seem to like the arrangement very well." Present assignments for team, house officer, and staff are:

No. 1 Brooks, P.; Drs. A. W. Allen, R. H. Wallace, G. A. Donaldson, Phillips House Courtesy Staff
No. 2 Millett, J. B.; Drs. J. V. Meigs, E. P. Hayden, F. A. Simmons, F. M. Ingersoll
No. 3 McDermott, W. V.; Drs. L. S. McKittrick, V. H. Kazanjian, H. K. Sowles, O. Cope, J. W. Spellman, G. S. Speare, Blood Bank
No. 4 Baker, D. V.; Drs. R. H. Sweet, H. C. Marble, B. Cannon, L. Soutter, C. C. Miller, C. C. Simmons, R. K. Brown
No. 5 Farmer, D. A.; Drs. R. H. Smithwick, C. G. Mixter, S. G. Jones, I. T. Nathanson, E. B. Benedict, Obstetrics
No. 6 Carroll, R. E.; Drs. R. R. Linton, R. H. Miller, E. L. Young, E. M. Daland, E. Hamlin, Jr.

(Patients of Dr. C. Lyons to be covered by House Officers assigned to Ward 12)

Elliott Gray Brackett 1860-1942

Oliver Wendell Holmes applied the title "The Beloved Physician" to James Jackson, the first Physician of the Massachusetts General Hospital. Many doctors have to a greater or lesser degree deserved this title. Elliott Gray Brackett was outstanding among them. Skilful in orthopedic surgery, he held high rank in this specialty. He became Chief of the Orthopedic Department of the Massachusetts General Hospital. He was Surgeon at the Children's Hospital. As Colonel with the Medical Corps in World War I, he was Director of Orthopedics in this country. He was editor of the *Journal of Bone and Joint Surgery* and author of many articles on orthopedic surgery.

This is by no means a complete list of his professional positions; but it is the man himself, his fine character, his love of his fellow man, whom we delight to honor. When Elliott Brackett died on December 30, 1942, this country lost an outstanding orthopedic surgeon. Boston, his patients and friends lost a man of high character, of sympathetic devotion, who had lived a life of service, the main thing that makes life worth while. He was "The Beloved Physician."

F. A. W.

* * *

Notice has been received of the death of Dr. Warren L. Babcock in St. Petersburg, Fla., on January 3, 1942. Dr. Babcock was for thirty-four years director of Grace Hospital, Detroit, and is known to many readers because of his connection with Base Hospital No. 6 during the First World War. He succeeded Colonel F. A. Washburn in command of that unit in France on April 25, 1918, and continued in this command so long as Base Hospital No. 6 functioned as an active hospital in France. At the close of the war he held the rank of Colonel, MC, USA. He resigned from his directorship at Grace Hospital in June 1937.

* * *

The program for the Hospital Research Council Meeting of February 23, is announced as follows:

Effect of Cholesterol Administration on Anesthesia: Drs. H. K. Beecher and F. F. Foldes
Ocular Maldevelopment in Premature Infants: Dr. T. L. Terry
Study of Some Growth Factors Associated with Oral Aciduric Bacteria: Dr. D. Weisberger
Action of Soap on the Skin: Drs. C. G. Lane and I. H. Blank

* * *

The program for the regular meeting of the Medical Staff on January 18 was as follows:

Dr. M. Fremont-Smith: Dysmenorrhoea
Dr. Joe V. Meigs: On his Syndrome (Fibroma of the Ovary associated with Ascites and Hydrothorax).

The following notice has been received by Dr. Arthur W. Allen from Dr. Miley B. Wesson, Chairman of the Committee on Scientific Research of the American Urological Association:

Urology Award — The American Urological Association offers an annual award "not to exceed $500" for an essay (or essays) on the result of some specific clinical or laboratory research in Urology. The amount of the prize is based on the merits of the work presented, and if the Committee on Scientific Research deem none of the offerings worthy, no award will be made. Competitors shall be limited to residents in urology in recognized hospitals and to urologists who have been in such specific practice for not more than five years.

The selected essay (or essays) will appear on the program of the forthcoming meeting of the American Urological Association, May 31-June 3, 1943, Hotel Jefferson, St. Louis, Missouri. Essays must be in the hands of the Secretary, Dr. Thomas D. Moore, 899 Madison Avenue, Memphis, Tennessee, on or before March 1, 1943.

Following the recent fire disaster, publicity was given to the suggestion that identification tags should be worn by women universally. In a notice published in last month's issue, Dr. Faxon requested women employees of the Hospital to provide themselves with such means of identification, to give their names, blood type, and to be worn at all times. This movement is now receiving the endorsement and coöperation of the Massachusetts Hospital Service, Inc., more generally known as the Blue Cross. This organization now makes available to its subscribers an attractive tag, made of sterling silver in the form of the cross that is its own insignia. Personal identification is to be engraved on one side, and on the reverse the Blue Cross certificate number of the subscriber. The price of the tag is 40¢, and it may be worn as bracelet, anklet, locket or watch charm. Order forms will soon be distributed to all Blue Cross subscribers among Massachusetts General Hospital employees.

In wearing their identification tags, members of the Hospital personnel will be interested to know and remember that the need for such tags for women and the movement toward supplying them on the part of the Blue Cross and other organizations was started by Dr. Faxon and at this hospital. After three experiences with the difficulty of identifying women victims of major catastrophes Dr. Faxon was not merely convinced of the need for them but took action in the matter. In recognition of this fact and to launch their state-wide identification disc campaign, the Blue Cross made presentation of its first tag on January 22 in the Trustees' Room. The tag was presented to Miss Marion G. Gaddis, a patient at the Hospital following the Cocoanut Grove disaster, by Dr. R. F. Cahalane, executive director of the Blue Cross, with Dr. Charles F. Wilinsky, president of the Massachusetts Hospital Association, and Dr. Faxon as special witnesses.

Announcement and explanation are given here for yet another hospital service offering opportunity for the training and enrollment of volunteers especially with reference to war needs. Courses are now available for the training of assistants in Occupational Therapy. The rapid development of O.T. since the last war permits re-statement of its history.

Occupational Therapy has received slow recognition in the medical world. It was given this name only within the last twenty-five years. At this hospital some minor, and pioneer, provisions were made for it in about 1905, but both here and elsewhere O.T. received no real definition and acknowledgment until the First World War. Then its application to the needs of thousands of men, partially incapacitated through wounds and shell shock, was seen and seized upon. Slowly, through merit hard-worn, it has become a profession and its graduates are now a registered group.

During the last ten years O.T. has gained firmer foothold in this hospital, and reports that it recently achieved one of its chief aims: It has been moved upstairs out of the reclaimed regions, has been placed next to Physical Therapy; and, best of all, is under the close supervision of a medical director, Dr. Arthur L. Watkins, in charge of that department. This new organization is providing a good demonstration for similar set-ups both civilian and military.

Now another World War gives emphasis to the immediate need for more trained workers in Occupational Therapy. This circumstance becomes less disheartening when it is pointed out that the preparations being made to meet the need are not only a sound and timely contribution to the war effort but also answer a demand, constantly increasing, in civilian fields. Schools of Occupational Therapy have increased their enrollments, and several new schools have been started. This has brought an increase in the number of students assigned to the Massachusetts General Hospital for clinical training. Besides the regular Boston School students, the Department has been asked to take others from Toronto University, Milwaukee-Downer College, and Michigan State Normal College. This increase will help supply the demand in civilian fields, but it is evident that it will not supply the anticipated military needs as well. The military demand for trained occupational therapists and their aides may come suddenly. It is important that, when their contribution to military needs is seen and called for, the civilian field shall be able to supply such workers without too great restriction of its own needs.

The following details concerning the immediate training of occupational assistants have been received from the department. Miss Morse, incidentally, represents history at this hospital inasmuch as she was appointed in 1931 as its first full-time, registered therapist and is now the director of a department including 3½ therapists (numerically) and an average of 20 students a year.

Anticipating the time when the Army will take graduate occupational therapists from the civilian field, a course has been planned by the American Occupational Therapy Association to train volunteer workers to help in departments that are understaffed. The third course to be given in Boston will start on February 2, 1943. It will meet at the Boston YMCA, eighth floor, every Tuesday and Thursday, from nine to one o'clock, through the second week in March.

Persons wishing information about the course should call Mrs. Henry Bradlee, Longwood 0611, or Miss Gertrude Murray, Kenmore 6467.

To this should be added a word about volunteers already trained in these courses. Graduates of the first two courses are now working at both the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary. They have not only served the number of hours required to win their insignia but have continued their service. Already they are extremely useful members of the two departments.

THE NEWS considers it a privilege to print these portions from letters written by 2d Lt. Alice M. White, ANC (*MGH* 1930) to Miss McLatchie. They give delightful pictures of the compensations of military assignment in Puerto Rico:

The country around here is becoming more beautiful. It seems to be coming to life. The weather is cooler and the sugar cane is in bloom. You have no idea how pretty it is. It resembles the wheat of our western country but instead of rich gold it is a gleaming silver, and for miles you see fields of what might be corn topped with liquid moonlight. The blooms are very feathery and delicate, and I so often wish you were here to paint it in detail. The poinsettias are also in bloom and the colors are much more brilliant than in Bermuda. They say at Christmas it is in full bloom, and far more beautiful, but at present I find it breathtaking. We are very carefully rationed on gas, so traveling is limited, but I do wish I could see more of the country. Every little shack has its brilliant flower patch and bougainvillea vines cover the roofs in a mantle of loveliness. Such beautiful, brilliant colors, too. I didn't realize that there were so many different shades.

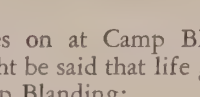
Christmas here was very strange. We had a Christmas party at six in the evening around a Christmas tree that one of the pilots had flown in from the States, all properly trimmed and all, and we spent the evening discussing what our folks were doing and listening to Christmas carols over the radio. Later we sat in rocking chairs on the front porch, kicking because we weren't in the land of snow and ice but admitting we could be much worse off. As I sat there looking out at the sky filled with stars and the palm trees silhouetted in the distance, I could almost see the three wise men looking for the manger and realized that the first Christmas must have taken place in much the same climate as ours. How different we all interpret Christmas! Here, they celebrate it on January 6, and they call it "Three Kings Day." For the last month the beggars have been going from door to door singing their native carols, which are truly beautiful, dressed in strange Spanish costumes. For music they used gourds which rattle, and strange stringed instruments. They collect the money with dignity and stroll off to serenade another household. On the eve of Three Kings Day the children set out boxes filled with grass and hay for the camels of the kings, and these boxes are filled with presents from the kings instead of stockings filled by Santa. The week preceding their holiday is spent in dancing and revelry, and I tell you it is an endurance contest. The dances last until five in the morning, and they put everything into their dances here —all their muscles, I mean. The working people apparently sleep for a few hours after work, and about eleven they all go dancing and keep it up until almost daybreak. The air is filled with gayety and laughter. These revelers are masked and the masks are not removed all week until the Eve of Christmas. They are all in fancy costume too, and I guess there is much hilarity when the masks are finally removed and partners make discoveries.

We have all been interested and upset about the terrible fire at the "Cocoanut Grove." I read a very interesting article in the Boston *Globe* about the efficient way the good old M.G.H. treated its cases, and of course I glowed with reasonable pride.

I am in the operating room now and on call every day. I like it very much, but tell Cordelia King that I wish I had spent some time with her before I left for foreign duty. I hadn't realized what I could forget in twelve years away from the "field of operations." However, it is slowly coming back to me and I hope I don't disgrace my old school. Of course all the instruments have different names; and they use cotton to tie off and suture here, and each needle holds just one stitch. You can't imagine how fast one has to thread needles to keep up with the surgeon. They sometimes use French eye needles which are new to me but are a great help. You don't have to thread them in the usual way but from the top.

I have been trying to get a machete. I want a real native one, and when I asked one of the native officers to get me one, he looked at me and blandly asked, "How many notches do you want on the handle?" We could use it pruning our bushes in the springtime! They use them for everything here except picking their teeth and cutting their fingernails. They cut grass, open cocoanuts, trim bushes, cut cane, and even settle arguments with them. Some are the most wicked-looking things with long sabre-like blades and sharp enough to shave with.

It doesn't seem quite fair, our having such delightfully warm weather, all the sugar and coffee, and you folks rationed and freezing.



Life goes on at Camp Blanding; in fact, it might be said that life goes on and on, at Camp Blanding:

Dec. 1942: We had a hike yesterday that was a dandy. We went a little over 9¼ miles in 2 hours 10 minutes, total time (included in that were 18 minutes rest). We walked at 120-126 all the way, which is *some* stepping. After several very warms days (swimming on Christmas), it became very windy and cold and rainy. We hiked in a downpour all the way, and couldn't keep warm even at the pace we were going. We wore fatigue uniforms, leggings and the new helmet. That helmet is a corker, for it kept our heads dry, didn't drain water down the back of the neck, and was *very* comfortable. The reaction of the men was interesting, in that they didn't gripe about the discomfort at all, only saying, "If the Colonel can take it, we can."

Dec. 30: We are at present at Tables of Organization strength as far as military personnel go.

News that the nurses are to get full pay of rank is a joy to them; commissioning the physical-therapy aides and the dietitians will be a wonderful thing for all of us. They sorely need it, both for necessary prestige and for

A brief notice has already been made of the recent award to Dr. Frederick I. Irving (*WS* 1911) of the $2500 prize of the Houghton Mifflin Company for books on Life in America. Dr. White's review of the book gives it more appropriate recognition.

Safe Deliverance. By Frederick C. Irving. Houghton Mifflin Company, Boston, 1942.

> "The snow, which had been coming down since twilight, fell straight from the sky, for there was not even the whisper of a wind. It hid the roofs and obscured the lower stories of the city buildings, so that they could be seen by the faint, haloed glow of the street lights only indistinctly as through a curtain of flickering gauze. So late was the hour that few were abroad; few indeed were awake except for the night crews in the pressrooms of the newspapers, the firemen on watch at each engine house, and the policemen who trudged their way between signal boxes through the ever deepening snow, taking refuge from time to time in a sheltered doorway. No sound of wheels or motors was heard; only occasionally a remote melancholy bellow came from a tug in the harbor shepherding its tow of barges into their slip. Behind the hospital a row of automobiles, their noses to the wall, were fast accumulating a thick white frosting upon their roofs, hoods, and fenders. Above them, except for a few lighted windows, all was dark until the eye reached the pale blue glow of the operating room under the projecting eaves.
>
> "On this upper floor the world was much awake. Doctors and nurses in their white scrub clothes passed rapidly up and down the corridor, and from time to time some of them pushed aside the swinging doors of the operating room and entered. There upon the table, her head lowered and her feet raised, lay a blanched, haggard, red-haired woman. Her white skin was translucent, her lips were pale and tinged with blue, and the freckles left from last summer's sun, which covered liberally her forehead and nose, were sharply defined like greenish copper sequins. At her right upon a stool sat a large man with gray hair, whose heavy-lidded and slightly slanting eyes watched her intently over his half-moon-shaped operating glasses. His left hand upon her pulse, and his right, below the several blankets with which she was covered, rested upon the dressing over her lower abdomen and noted constantly the condition of her recently emptied uterus. On the other side stood the young resident obstetrician, also intent upon the patient. Suspended from a high standard was a conical flask of blood. The outlet at its base was connected by a rubber tube with an infusion needle inserted in a vein in the patient's left elbow, and interposed in the tube just below the flask was a glass sight feed within which blood was dripping steadily. Above the table, set in the ceiling, was a battery of rectangular lights whence came the pale blue radiance that shone out through the great window of the operating room upon the night. Aside from the soft sounds of rubber-shod feet in the corridor and the occasional muffled thud of the swinging doors as someone entered or left, it was very quiet. Behind a glass screen on one side of the room a half-dozen students, also dressed in white, sat on the double row of seats, their chins cupped in their hands, watching the patient or dozing.
>
> "The woman stirred slightly and looked up at the older man.
>
> " 'Doctor!' said she, 'am I going to die?' "

There follows the vivid tale of the hard fought battle that went on through the night to save that woman's life, for she went deeply into the valley of the shadow of death. In the early morning hours the chief looked out of the windows at a reawakening world oblivious to the heroic event that was warp and woof of his life. What was the secret of the fascination of his special work, what the secret of the inner urge of the true follower of Asklepios? Some of it is expressed in the concluding paragraph of his soliloquy which ends the book.

> "All last night I had nothing to do but to care for one patient; no part to play, no rôle to fill, and no audience but a few tired medical students; in one sense it was peaceful. The hospital staff was superb, it functioned as smoothly as it always does—for emergencies may occur in obstetrics when they are least expected—there was no tumult; there were no false moves, no mistakes. Before I go, I must tell the resident and the head nurse how much I appreciate it. I am glad that I decided to operate on Mrs. MacDonald, otherwise she would not be alive this morning; and now, when the time comes, she can go home to her children and her husband, which is no small thing. It would have been a bitter disappointment if I had lost her. 'If after the manner of men I have fought with beasts at Ephesus, what advantageth it me if the dead arise not?' "

The magic touch in this book is no surprise to old friends of the author who were present at the delivery of the Ballad of Chambers Street, how many years ago. There still ring through my head scattered couplets and quatrains and indeed single lines that are immortal; long ago I mislaid or hid my copy for safe keeping, where I know not, but like the old Greek legends it will be handed down from one disciple to another.

> "Far in the East the lambent wheel of Phoebus' car was turning.
>
> "High up in a suite in Chambers Street the gas was dimly burning;"

And to that suite the buzzy bell summoned the medical student then on duty at the old Lying-In Hospital at 24 McLean Street, which hundreds, yes I suppose thousands, of us remember so vividly with mixed regrets, and which is brought back to us in the delightful accounts of those days in the first two parts of the book.

Really the only complaint I have about the volume is that it isn't three books instead of one. Part One, the Apprenticeship of a Doctor, might, with the various personal reminiscences later on, have been expanded most delightfully into the size of the present volume; I was sorry when I came to page 57 and the end of this first part. There follows thereupon the Biography of a Hospital, with much of interest concerning medical history in Boston in the last 100 years, and, of course, especial attention to the Lying-In Hospital which now stands, under Dr. Irving's own direction, as one of the great obstetric institutions of the world.

Intermingled in Part II and throughout Part III, Aspects of a Profession, there are most instructive chapters of obstetrical history, well worth reading separately by any one interested in any of the subjects discussed: cesarean section, obstetrical forceps, puerperal fever, eclampsia, abortion, mother's milk, and last but not least anesthesia. There is to my mind the best appraisal that I have ever read of the ether controversy between Morton and Jackson, and between Boston and Athens, Ga.; and indeed between the U.S.A. and England. With charm and wit Dr. Irving pokes fun at many of the people and customs about which he writes, but at the same time pays his respects to the Yankee tradition that is the inheritance of his hospital and school and of his own position in both.

It is a pleasure to pay this little tribute to the work of a colleague and old friend who richly deserves the high place he holds in this community and in American medicine.

PAUL D. WHITE

* * *

The following mailing address gives both rank and assignment for Lt. Col. John E. Gordon, MC, Chief Preventive Medicine, Headquarters, SOS, ETO, Office of the Chief Surgeon, APO 871, U.S. Army.

A second promotion for Lt. Col. James E. Fish, MC, AUS, (*ES* 1930) should be noted. He is Chief of Surgical Service at the North Sector General Hospital, Honolulu.

Lt. Comdr. B. M. Jacobson (*a.p,* 1937) received this promotion as of October 1, 1942. He is still attached to the Navy Yard, acting as Senior Medical Officer in charge of the Dispensary, USN Dry Dock, South Boston.

A letter from Major Francis D. Pierce, MC, AUS, (*res. WM* 1931) now with the 59th Station Hospital at Camp Gruber, Okla., states that he is Commanding Officer of the hospital.

Lt. Comdr. Walter E. Garrey, MC, USNR (*ES* 1933) received his promotion in October. He is on duty in the South Pacific.

The 29th General Hospital, the unit of the University of Colorado School of Medicine and Hospitals, was recently activated at Fort Meade, Maryland, with Major Foster M. Matchett, MC, AUS, (*Or.* 1934) as chief of the orthopaedic section.

♧ ♧ ♧

Major Edward Parnall, MC, AUS, (*Or.* 1932) sent the following letter to the Harvard Medical Alumni Bulletin, and a copy was transmitted to the War Records. It is headed Pan American Highway, US Engineer Dept. Managua, Nicaragua:

> This is just by way of locating one member of your eminent (if at present largely belligerent) body. I received today a copy of the M.G.H. NEWS, which gave me a heavy touch of nostalgia. I may refer to this disease now that it has official place on the Army Standard "diagnosis" list.)
>
> In November, I was suddenly transferred from Camp White, Ore., where I was chief of the orthopaedic section, Station Hospital, to down here where I am chief medical officer for this project, now made public but concerning which I can, of course, tell you nothing. You may take it for granted, however, that we will *not* have a white Christmas here!

The following ranks and addresses have been received from the War Records Office:

P. J. Culver, Lt., MC, AUS; School of Aviation Medicine, Miami, Fla.
I. H. Jaffee, Capt., MC, AUS; Fort Devens, Mass.
W. McK. Jefferies, Lt., MC, AUS; Station Hospital, SAACC, San Antonio, Texas
E. L. Persons, Lt. Col., MC, AUS; 6th General Hospital, Ft. Bragg, N. C.
M. M. Pinckney, Major, MC, AUS; 45th General Hospital, Camp Lee, Va.
P. P. Thompson, Jr., Lt., MC, AUS; 466th Sq., CA (AA) Bn., Camp Stewart, Ga.
M. M. Tolman, Lt. Comdr., MC, USNR, USN Hospital, St. Albans, Long Island, N. Y.
T. V. Urmy, Major, MC, AUS; Station Hospital, Camp Chaffee, Ark.
J. L. Ward, Lt., MC, USNR; USN Hospital, Newport, R. I.

* * *

Several graduates of the Massachusetts General Hospital, as was reported in a recent issue, are already serving the air companies and units. One of them has written: "Any doubts I may have had as to the nature of this work and its relation to the war effort have been completely dispelled. This is entirely and completely a war job."

* * *

The Department of Radiology transmits word that 1st Lt. Lloyd E. Hawes (*EM* 1939) has been assigned to the X-ray Department of the Halleran General Hospital at Staten Island, N. Y., and that he writes with enthusiasm of his work and his fellow workers there.

Also, that Dr. J. Maurice Robinson (*res. R* 1936) sent New Year greetings from the USN Training Station at Farragut, Idaho. Dr. Robinson does not say how long he has been in service nor give his present rank but states that he is "a former examining physician for a Marine Corps Recruiting Station; the erstwhile Medical Officer of the Submarine Base, Midway Island; and, it is said, a one-time radiologist."

Capt. Otto J. Sahler, (*res. R* 1941), assigned to duty with the 160th Station Hospital, wrote to the department early in November. His duties overseas appear to combine both radiology and clinical medicine, and he is enjoying both. He had recently spent a "day off" bicycling around the country. A 47-mile trip is, as he remarked, "a lot of pedaling in one afternoon."

The promotion of Lieutenant Colonel given to former Major James R. Lingley (*res. R* 1930) in charge of the X-ray Department of the 6th General Hospital, is mentioned more fully in a Camp Blanding letter on a later page, which notes similar promotions for Lieutenant Colonels Talbott and Rae.

* * *

A note from 1st lt. John R. McDaniel, MC, AUS, (*res. ES* 1940) who is assigned to an Engineer regiment, was sent by him early in December from "Somewhere in Africa."

When future archaeologists come to trace the "culture" of the mid-Twentieth Century, they may be puzzled to discover odd copies of one small journal at unrelated geographical points. But how pleasant it is for that one small journal to discover in its morning mail this letter from a present-day reader:

January 3, 1943

Dear Editors:

Was delighted with the arrival of your November issue in this morning's mail, and the more appreciative of it because of its belated appearance. Your bits of news and gossip are the sustaining tonic out here 10,000 miles from home.

Following a rapid, pleasant, and most secure voyage over the Equator and beyond the International Date Line, we disembarked at the capital of this island in the Southwest Pacific. Disappointed thus far in not locating Dorothy Lamour or her sarong. Have been at it for three weeks, and already the ebony-skinned, kinky-haired natives appear more attractive.

We have pitched a tent city just at the outskirts of the capital to house us during the construction period—estimated to require another two months, at the end of which time we hope that we may well serve that purpose for which our unit has travelled almost half-way around the world.

Our camp is situated upon a hillside overlooking several fjords of the bay a mile before us, with the mineral-saturated mountains rising majestically out of the sea just beyond the bay. The scenic panorama is incomparable, especially in the reflection of the glorious sunsets and sunrises. Although we are now in the midst of the alleged hot and rainy season, the days have been warm and dry with a constant refreshing breeze from the sea (not to mention a daily swim at the beach), while a blanket has been necessary at bedtime.

My deepest appreciation for the copy of the News and my best to everyone for the New Year.

Daniel H. Hindman, Lt. (jg) USNR
Navy 608, c/o Fleet P. O., San Francisco

* * *

Boston newspapers have recently given some publicity to the excellent medical attention being received by the wounded soldiers of the American forces in New Guinea. They mention Major George A. Marks, MC, AUS, (*ES* 1931) and Lt. John T. Lambert (*WM* 1942) at work with portable equipment in jungle huts sometimes within sniping distance of the enemy lines. One newspaper states: "On the average, men hurt on the Buna front get quicker and better medical attention than the victims of ordinary street accidents in American cities." Major Marks and Lieutenant Lambert were among the nineteen M.G.H. men who went overseas last summer, under the command of Lt. Col. Augustus Thorndike (*WS* 1923), as members of the 105th General Hospital.

Lt. (jg) Charles C. Derrick, MC, USNR, (*P* 1940) is with Naval Mobile Hospital No. 8, and is assigned to duty in the Pacific.

* * *

Capt. David W. Wallwork, MC, AUS, (*ES* 1932) entered upon active service on September 26, 1942, and is now Surgeon, 8th Ferrying Group, North Atlantic Wing, Air Transport Command. His first assignment with this command was at Morrison Field, West Palm Beach, and he afterward attended the Medical Field Service School at Carlisle, Pa.

Dr. Churchill shares the following pleasant, and tantalizing information: "Lt. Floyd H. Jergesen (*Or.* 1942) writes that in the vicinity of —— the flowers are in full bloom and wine is cheap." The deletion was made, presumably, in the interests of military safety and not at the request of transportation services. Nor should attention be called to the fact that no location is given for Colonel Churchill's assignment to military service!

* * *

Capt E. H. Trowbridge, Jr., MC, AUS (*res. N* 1940) sends an account of his assignment at Camp Joseph T. Robinson, Ark., and gives word of Lt. Col. Walter Bauer:

This is a replacement training center for infantry and medical units. In World War I, it was Camp Pike. . . . Since my arrival at the Station Hospital, I have had the pleasure of being chief of the neuropsychiatric division. This is composed of three wards, but we shall soon have two additional. . . . Occupational, recreational and some psychotherapy is provided for patients on the neuropsychiatric service.

Lt. Col. Walter Bauer, the Medical Consultant of the 8th Service Command, visited our hospital, and it was pleasant to chat with a staff member of Massachusetts General Hospital.

* * *

News has reached the Dental Clinic of the promotion of Lt. F. K. Poulin (*Dn.* 1942) to Captain and of his transfer from England to the North Africa Hqrs. of the Air Force unit to which he is attached. He writes an enthusiastic report of life in North Africa, where "they are really doing things"; of the French people and how fine they are; of living in B shelters and learning how to open cans and feed themselves in pitch darkness; of reading by flashlight the grand letters from home that reach them with marvellous speed via Uncle Sam's airmail. And The News was interested to learn that the Dental Department sends each week an airmail letter of messages and news to its members in military service.

* * *

A note from Major O. Sherwin Staples, MC, AUS, (*Or.* 1938) gives information both about him and Major Richard J. Clark (*WM* 1933):

Majors R. J. Clark and O. S. Staples who represent grandchildren of the 6th General Hospital, having been transferred from the 160th Station Hospital in July 1942, are with the 3d Convalescent Hospital in Camp Livingston, La. They were recently promoted, and are assigned as Chiefs of the Medical and Surgical Services, respectively. After leaving the 160th Station Hospital they joined the 3d Convalescent Hospital at Camp Edwards, and moved southward with that organization in September.

* * *

Comdr. Howard B. Sprague (*EM* 1924) keeps the Hospital in touch with US Naval Mobile Hospital No. 6, on duty in the Pacific, and says, "Give our best to the new clinic doctors."

Our outfit remains in the same location, busy with (I can't tell you how many) war casualties. The hospital compares favorably in size to the M.G.H. itself. Another member of the M.G.H. staff has recently been a patient here, and I hope to keep him as an addition to our own surgical group.

morale; as for us, it will take one of our major headaches, civilian procurement authority and payrolls, off our hands.

The counting of enlisted time for officers' longevity pay will prove a great boon to several of our officers, particularly Capt. Jenkins the mess officer, who has over twenty years' service. I believe that World War I service counts, too, so Colonel Rogers and Major Rae will benefit as well. And the extra $100 uniform allowance for lieutenants and captains will make us rich as Croesus; guess I'll save mine to help pay my income tax.

Jan. 6: About the only thing we have to talk about are the weather and our state of health. The former has been fine, the latter not so fine. There is a minor outbreak of upper respiratory infection going the rounds. At the present writing Lt. Colonel (please note promotion) Talbott, Majors Taylor and Parsons and Captain Davenport are in the hospital. They aren't very sick, but are better there than in our wind-blown area. A few of the others are down with the same bug but have as yet not been hospitalized.

Rank has been blossoming here, with Lt. Colonel Talbott's promotion (effective December 31) and Lt. Colonels Lingley and Rae's promotions (effective January 1) all having come through within the past few days. Their gold has turned to silver but we love them all the same.

Our years-end reports have given us some busy times of late, but they are pretty well under control by now. Which reminds me that your Annual Report headache must be just about beginning.

Jan. 14: Our epidemic (if such it could be called) of upper respiratory infections seems to be subsiding. Colonel Talbott, Majors Taylor and Bartlett, Captains Ludwig and Sarris and Lt. Wyman are still in the hospital, but Majors Parsons and Faxon and Captain Davenport are back with us and pretty nearly normal. A few of the officers should have gone to the hospital and didn't, and a few are still hanging around and feeling none too good, but the majority of us continue to enjoy good health.

You will be interested to learn, if you don't already know, that Miss Gilbert, late of the E. W. and South Medical, is an Ensign in the Waves, working in the personnel office at the Jacksonville Naval Air Station. She looks very trim indeed in her new uniform, and reports that she is enjoying her work immensely.

We have embarked on a new training schedule, a semi-formal one dealing largely with problems with which we may be faced in the near future, and one which may be dropped at a moment's notice, should the occasion demand. Among other exercises, Captain Davenport has been passing on to us some of the information he received at Chemical Warfare School. His talks have been both instructive and entertaining. Aside from them, the problems of tent-pitching and striking take up most of our free time. Beneath what exercises we have runs the constant undercurrent of watchful, hopeful expectancy as we wait not too patiently for the 6th General Hospital's part in the Battle of Blanding to end.

* * *

Surgeon Lieutenant W. G. Breckenridge, RCNVR, (*Or.* 1941) reports that he has been on active duty in Canada since January 28, 1942. At present he is serving on one of the traded U.S. destroyers, now known as HMCS "Hamilton."

* * *

A third graduate of the Hospital is serving aboard the USS "Solace." Lt. Comdr. Dana L. Farnsworth (*WM* 1935) and Lt. Hugh Montgomery (*EM* 1932) have been reported previously. Lt. Comdr. Jesse T. Nicholson, MC, USNR, (*res. O* 1933) is assigned to the same vessel.

Give enough

. . . soon enough

GREATER BOSTON
UNITED WAR FUND

The annual gathering of staff and employees in the Moseley Auditorium for the opening of the United War Fund drive was held at 4 p.m. on January 12. Mr. Henry R. Guild, Treasurer of the Hospital (General Chairman of the Fund in 1940, and now acting as Associate Vice-Chairman of the Community Fund) spoke, presenting the aims of the campaign for 1943.

To bring further word of the significance of the present Fund drive and some report of its practical results, we hope to include in our next issue quotations from a letter recently received from Capt. T. Stewart Hamilton, now at Camp Blanding. Last year Captain Hamilton was the Community Fund representative here at the Hospital; this year he sends first-hand observations on "the magnificent work being done by the U.S.O. and the Red Cross" and says, "They are both contributing vital services to the armed forces." The amount contributed this year at the Massachusetts General Hospital to the larger objects of the United War Fund, will have special interest for members in service. We shall hope to report that figure in our next issue.

* * *

Appreciation of the conduct of the Hospital in time of public disaster has not been confined to official circles. Many letters have been received from our own members, who, through their loyalty to this institution and their pride in it, share its achievements.

> Congratulations to the M.G.H. for a masterful handling of a tragic catastrophe. Add another star to the crown of the M.G.H. to shine brilliantly with the many others already present. Fred Coller once said the Alumni of the M.G.H. belong to "the finest club in the world"—and so it is. Wherever one goes it is the password to gracious reception, respect and comradeships professional and social.

This letter comes from Lt. Comdr. Eugene A. Osius, MC, USNR, (*WM* 1923) He writes from Navy 1105, Fleet P.O., San Francisco, and adds: "John Wilson (*ES* 1940) and I have been out here since August and hope to be doing more soon."

One more letter suggests that all roads lead to the war and to the war effort. Dr. Henry B. Ruley (*WS* 1940) writes on the letterhead of the Louisville City Hospital, Under Director of Health, and with the local address of Kenvir, Ky.:

January 13, 1943

THE NEWS
Mass. General Hospital
Boston, Mass.

DEAR FRIENDS:

I have been receiving "The News" and have greatly enjoyed learning what is happening to my friends and other alumni of M.G.H., particularly since at the moment I feel out of touch with the world at large.

When I left the M.G.H. last spring I went to Iceland with a naval construction company, and worked up there all summer. We returned to the States via the British Isles, and lost everything but our shirts when our ship, the former "Manhattan" caught fire and burned two days out from the East Coast.

On my return home I applied for a commission in the Army Medical Corps, but the Procurement and Assignment Service took a hand, and for the past three months I've been working as surgeon for a mining town of nearly 6000 people in the mountains of Eastern Kentucky. It's a far cry from the West Surgical Service of the M.G.H., but we have a 15-bed hospital which we keep filled most of the time. In addition to general surgery, I find myself practicing general medicine, pediatrics and obstetrics, frequently after climbing a mile up the mountainside!

* * *

2d Lt. Donald J. Emery, CWS, AUS, a research fellow in Dermatology during 1941, reports on his training for duty as Post Chemical Officer:

> Enlisted February 6, 1942, and assigned to Camp Lee, Va., for basic training in the Medical Department. Then assigned to Camp Cooke, Calif., as medical technician (T/5) in the 75th Armored Medical Battalion, 5th Armored Division. Accepted for Officer Candidate School, and spent three arduous months at Edgewood Arsenal, Md. Commissioned 2d lieutenant in the Chemical Warfare Service on October 31, 1942. After various temporary duties over the entire country, finally assigned as Post Chemical Officer, Air Depot Training Station, Albuquerque, N. M.

News of another branch of the Services comes from 1st Lt. Marshall deG. Ruffin (*P* 1939):

> I have been in the Air Forces for over seven months, stationed in Washington, Maxwell Field, and Maimi Beach. For the past three months I've been an instructor in The School Aviation Medicine at Randolph Field, Texas, where we are turning out 300-odd flight surgeons in embryo every six weeks. I took the course last June.

* * *

Recent news from Major A. A. Holbrook, MC, AUS, (*CM* 1933) gives the following account of his service to date:

> I am affiliated with General Hospital 44, which is being activated at Fort Sill, Okla. My orders to report there have not come through yet. Since June 22, 1942, I have been at Camp Grant, Ill., with the exception of the month of December, when I attended the 4th Medical Officers' Course, Chemical Warfare School, Edgewood Arsenal. I was delighted to meet Captain Davenport there, and hear first-hand about so many of my friends in Hospital #6.

The 44th General Hospital was formed at the University of Wisconsin, Madison.

* * *

Lt. H. C. Moffitt, Jr., MC, USNR, (*EM* 1942) is now serving aboard the USS "Foote."

THE NEWS

No. 6 Boston, Mass. March 1943

When the White Building was completed, the former Children's Ward on the second floor of the Bulfinch Building was returned to administrative use. It was restored to its original architectural appearance and became the present Medical Staff Room. In the early days of the Hospital it was the "Trustees' Parlour," and a photograph of it ,taken about 1890, shows it furnished with distinctly Victorian decor. In this photograph may be seen, for instance, a good-sized covered box, with a stuffed top rounding up plumply and the sides concealed by a full ruffle of material with an opulent-looking border of heavy fringe along the bottom.

A colored photograph would have shown the whole to be a concoction in red. For this very same box was to be found until recently in one of the Hospital's vaults. And it still contained, as had apparently been its original purpose, the files of the Secretary of the Hospital. These papers were folded in narrow lengths and tied together in chronological bundles dating from 1810. The box was brought out from the vault in 1938 so that Dr. Washburn might look through these documents in preparation for writing his history of the Hospital.

The papers were in excellent condition —but the box had lost its looks completely. It was still covered with plush now a dingy dark red, and the top was lumpy, and the ruffle had lost every vestige of its elegant fringe. The wooden sides of the box showed under it all the way around. It could have said to itself, "This be none of I!"

When the papers it contained had been distributed into the files of the Archives Department, the box itself was tenderly considered for its old associations, but, as it appeared to have no other redeeming qualifications, it was set out to be collected by Mr. Frankson's department.

Not long after, Mr. Frankson came to the Archives Office one day and asked what was known about the old box. He listened to its honorable history. "But it's solid mahogany," he said, "and I'm going to fix it up." So, if you come to the Archives Room, you will now see there a large sturdy box with a fine wood surface in natural mahogany finish, with dowelled corners, its old lock restored, and four neat feet to keep it from further wear. Mr. Frankson has covered the top once again, but not so plumply, with red plush—a piece he had left from relining the old surgical instrument cases in the Dome a few years ago.

The Archives is proud of its old record box—as the Hospital is of all the relics preserved for it by the vigilance of Mr. Eric Frankson.

At the request of the Surgeon General's Office, the Courses for Graduates of the Harvard Medical School is conducting at the Massachusetts General Hospital a series of courses for the training of army medical officers. These officer graduate students have been assigned from posts all over the country.

Dr. Arthur W. Allen, Chairman of the Committee on Graduate Teaching at the Hospital, is in supervisory charge of the courses, and the plans for them were outlined by him and Dr. Edward D. Churchill. As Dr. Churchill left for military duty a few days after the opening of the first course, his lectures have been taken over by Dr. Oliver Cope in basic surgery, and by Dr. Richard H. Sweet and Dr. Robert K. Brown in thoracic surgery.

Dr. Allen provides a general statement of the schedules of the groups: "The first course started on January 4, with 38 officers reporting. After two weeks of intensive instruction in general surgical principles, the group was divided into sections according to a pre-arranged plan with the Surgeon General's Office. Seventeen were assigned to a course in lesions of the extremities, under Dr. M. N. Smith-Petersen; eleven to maxillo-facial and plastic surgery, under Dr. LeRoy A. Schall and Dr. V. H. Kazanjian; and ten to thoracic surgery under Dr. Richard H. Sweet.

"A second group of 38 officers began their course on February 15, and will later be similarly divided. The course is to be repeated again on March 29 and May 10, with the exception that no students in the March 29 group will be assigned to thoracic surgery."

To these facts Dr. Allen adds a pleasant comment: "The first two groups have been well selected; the men are intelligent, coöperative, and are showing tremendous interest in our efforts in their behalf."

"In Faith and Hope the world will disagree
But all Mankind's concern is Charity."
—*Alexander Pope.*

The Massachusetts General Hospital's quota for the Greater Boston United War Fund was $11,650. Dr. Houser, chairman of the campaign in the Hospital, reports that this objective was reached the day before the drive closed and that to date a total of $12,002 has been subscribed. Besides the usual publicity for the Fund, with its now familiar red feathers, two displays in the lobby of the White Building attracted visitors and personnel: a huge thermometer registered in red the daily rise of contributions, and a large rotating illuminator showed pictures and graphs of services made possible or benefited by gifts to the Fund. This exhibition represented the ingenuity and work of the Medical Illustration Division and the Maintenance Department. Mr. Albert Wait, chief electrician, set up the time-meter and light mechanism of the revolving display. Our large picture of the 6th General Hospital was also exhibited. The total hoped for in this year's combined campaign is $7,800,000. It is expected this will be reached within a few weeks.

During the month of March the American Red Cross makes its appeal. Everyone knows the scope and excellence of the work done at all times by this organization. A portion of a recent letter from Captain Hamilton at Camp Blanding gives direct report of some of its war work and that of the U.S.O.:

> I only wish everyone could see first-hand, as we do, the magnificent work being done by the Red Cross and the U.S.O. They are both, particularly the Red Cross, contributing vital services to the armed forces, services that would otherwise have to be maintained out of tax-money. In addition to its well-known camp shows, which, contrary to rumor, are free, the U.S.O. maintains excellent recreation buildings with libraries and cafeterias, and guest houses. It sponsors dances for the men, furnishing everything except refreshments.
>
> I believe the work of the Red Cross, while less visible, is even more important. Its services to prisoners of war are well known. In hospitals it maintains recreation centers. In addition, it verifies requests for emergency furloughs and maintains an interest-free loan service for soldiers. The liaison maintained by the Red Cross between the soldier, his family, and the army seems to me its most vital service, one of the few classes of military problems that can be solved better by civilian than by army authorities.
>
> My rather hasty notes on these two organizations are to tell you all at the Massachusetts General Hospital that, looking at it from the Army side, I feel sure these organizations are eminently worthy of our whole-hearted support, for they are performing a magnificent service in our war effort.

At the meetings of January 23 and February 3, the Trustees voted:

That Dr. Lamar Soutter be granted leave of absence because of service with the armed forces, with the understanding that he may resume his present position on the Staff upon completion of such service.

That Dr. James B. Ayer be continued as Chief of the Neurological Department and Dr. C. Guy Lane as Chief of the Dermatological Department, in spite of the fact that they have reached the retiring age of sixty years for part-time men.

To appoint Dr. Conrad Wesselhoeft as Consultant in Medicine.

Dr. Wesselhoeft is Physician in Chief at the Haynes Memorial Hospital, and a Trustee of the Massachusetts Memorial Hospitals. He is also Clinical Professor of Communicable Diseases at the Harvard Medical School.

Promotions made by the Board at these meetings are:

Dr. William W. Beckman, from Assistant in Medicine to Assistant Physician
Dr. Friedrich W. Klemperer, from Graduate Assistant to Assistant in Medicine
Dr. Gregory N. Rochlin, from Graduate Assistant to Assistant in Psychiatry.

Other appointments then made are as follows:

Dr. Charles B. Burbank, Assistant in Surgery, beginning January 1, 1943
Dr. Robert P. Keiser, Assistant in Orthopedic Surgery
Dr. Daniel W. Badal, Assistant in Psychiatry
Dr. John B. Graham, Research Fellow in Surgery, to work with Dr. Cope
Dr. Thomas S. Risley, Assistant Resident Surgeon, beginning February 1, 1943
Dr. Earl Sanborn, Assistant Resident on the Neurosurgical Service for a term of six months beginning February 1, 1943
Drs. John H. Talinski, William A. Stephen and Laszlo Ormandy, Interns on the Orthopedic Service for the terms beginning January 1, March 1, and May 1, 1943, respectively.

Dr. Kurt H. Thoma has been appointed Chief of the Dental Service, effective February 19, 1943. Dr. Thoma's contributions to dental surgery are well known. He is Professor of Oral Surgery and Charles A. Brackett Professor of Oral Pathology at the Harvard School of Dental Medicine, and since 1933 has been a member of the Administrative Board of the Dental School.

* * *

The annual meeting of the Corporation was held on February 3 in the Trustees' Room. The Treasurer and the Trustees presented their reports, and the Corporation re-elected the eight trustees appointed by them. Word of this has been sent to the Governor of the Commonwealth, so that he may proceed to name the four additional trustees whom he is entitled to elect. Mr. John R. Macomber, Vice President of the Corporation, presided at the meeting.

* * *

This is the program announced for the Hospital Research Council Meeting of Tuesday, March 23:

Studies with Radioactive Colloids: Dr. Francis D. Moore, L. H. Tobin and Dr. O. Cope
Capillary Permeability and the Adrenal Cortex: Drs. Oliver Cope, F. D. Moore, G. Mixter, Jr., and J. B. Graham
Physiological Response to the Ingestion of Sea Water: Drs. Allan Butler and N. Talbot, and E. MacLachlan and E. Bolton
The Spirogram (Respiratory Tracing) in Certain Psychiatric Disorders: Dr. Jacob Finesinger.

OFFICIAL NOTICE

Collection of War Records

Following the precedent established in World War No. 1, the Hospital believes that it is desirable to begin immediately the collection of war records of staff, graduates, nurses, and other personnel. Particular emphasis is placed upon that of staff and graduates.

The proper place to do this seems to be in the Treadwell Library, as a part of the activities of the Library. It is understood that the librarian will not have time to do this and that it must be done by volunteer workers. Mrs. James H. Means has kindly consented to carry on this activity.

To this end Mrs. Means has established a file for letters from staff and graduates, together with other information pertinent to them, and has started a card file on which will be collected important factual data relating to each individual. These records will not be open, naturally, for general inspection but information regarding them can be obtained, by proper person, from Mrs. Means or, in her absence, Miss Lewis.

It is requested that all members of the Hospital family send to the War Records letters they may receive from staff members. These will either be filed or portions copied from them. Persons depositing letters should block out any passages they consider purely personal and also limit the right of publication of any part of the letter. If requested, the War Records will return personal letters to the owner.

From time to time the War Records will be authorized to send out forms to staff and graduates, asking for additional information regarding their activities, together with return envelopes addressed to War Records. The sending out of questionnaires and the collection of information regarding the war records shall be the responsibility of War Records. Other departments should try not to duplicate this work.

Information coming to "The News" regarding staff and graduates will, like other letters coming to individuals in the Hospital, be forwarded to the War Records to be filed or returned, according to the nature of the communication. It makes little difference whether letters from members of the Hospital family telling about their experiences are addressed to War Records or "The News." Their letters are the important thing. They will ultimately be filed in War Records and such items as may be published will appear in "The News."

N. W. Faxon, M.D., Director

OFFICIAL NOTICE

Memorandum: February 17, 1943
To: Staff and Nursing Service
From: Dr. N. W. Faxon

At a meeting of the General Executive Committee held on February 10, 1943, it was agreed that intravenous barbituate anesthesia is never to be used in any part of the hospital unless

(a) facilities are at hand for aspirating the pharynx and

(b) complete facilities (oxygen and apparatus) are at hand for administering high oxygen atmospheres.

N. W. Faxon, M.D., Director

No meeting of the Medical Staff was held during February. Dr. James H. Means makes the following announcement of future meetings:

On March 15, Dr. Conrad Wesselhoeft has consented to speak to us. His subject will be "Problems in the Care of Communicable Disease." As Dr. Wesselhoeft always has something interesting to say, I hope there will be a full attendance.

On April 12, Dr. Leland S. McKittrick will speak on "The Surgical Belly"—a talk by a surgeon to internists.

* * *

RESOLVED that an annual cash prize of $100 be offered during each calendar year for the best original essay, the subject of which shall be germane to Orthopaedic Surgery. Any orthopaedic house officer or orthopaedic resident surgeon of any approved hospital located within the New England States shall be eligible for this award. Any individual who holds a full-time fellowship in research shall not be eligible.

The Editorial Committee of the American Academy of Orthopaedic Surgeons has consented to act as judge of the essays submitted and to recommend the award. A suitable certificate of award will then be issued to the successful candidate. If, in the opinion of the committee, no paper in any calendar year is worthy of the prize, no award will be made.

It is further provided that, should the treasury of the Boston Orthopaedic Club be insufficient to warrant giving the full amount of $100 provided originally, the sum may be reduced to an amount deemed advisable by the Executive Committee of the Club.

John W. O'Meara, *President*
Robert J. Joplin, Secretary

Boston Orthopaedic Club
372 Marlborough Street

To our inquiry for a date for submitting essays, Dr. Joplin replies: "There is no set date for the submission of papers at the present time. The Orthopaedic Club holds meetings from October to May, inclusive, each year. Any papers received could be acted upon during those months only."

* * *

During February the Simmons College School of Social Work conducted at Boston hospitals a program for students studying for Masters' degrees in medical and psychiatric social work. Lectures and discussion were on the subject, "The Emotional Component in Illness." A major part of the program, from February 9-20, was held at this hospital. About 25 students attended the course, which was in charge of Mrs. Louise Bandler, Head Worker, Psychiatric Social Service, and Miss Harriett M. Bartlett, Educational Director of the Social Service Department here.

On Sunday, February 7, at St. Paul's Cathedral the M.G.H. graduating nurses heard Rev. Dr. John Haynes Holmes of New York deliver their baccalaureate sermon. Graduation exercises took place on February 11 in the rotunda of the Moseley Memorial Building as usual. Rt. Rev. Henry K. Sherrill, Chairman of the Board of Trustees, presided, and Rev. Cornelius P. Trowbridge, Rector of the Church of the Redeemer, Newton, gave the principal address. Eighty-four students were graduated, five of whom had taken the accelerated course and completed the work in less than three years.

A new class entered the School of Nursing on February 12. It numbered seventy-four students, and is the largest February class ever accepted.

THE NEWS makes a special effort to publish letters from abroad. Consequently, it is specially flattered to find itself received with the warmth accorded all news from home and old associates. On January 15, Commander Sprague sent a welcome letter from our naval group, USN Mobile Unit No. 6:

> I am glad to acknowledge the receipt of two numbers of "The News," eagerly studied by all the Boston group here. The censor tells us that we may now tell you that we are in New Zealand, and you may draw your own conclusions about our activities in the South Pacific struggle. As you know, we have been busy in our professional work, and the war has altered the character of work for all of us. Hunter is temporarily detached for investigation of a special problem, but we hope to see him back.
>
> Because of the detachment of our Executive Officer, a Captain in the regular Navy, I have inherited the position as Executive and Charlie Johnson is Chief of Medicine. Luckily Charlie is very adaptable and he is certainly helpful to me and to the outfit. We all feel sufficiently experienced to tackle any naval medical problem after four months as a going concern overseas.

* * *

Recent word has been received from Comdr. John P. Wood, MC, USN, that he came ashore from the fleet last fall and is now on planning and procurement duty. Commander Wood was a graduate assistant in Radiology during 1938-39 as one of the officers assigned by the Navy for a year's work and study at this hospital. In a letter addressed to Dr. Aubrey O. Hampton (now Major Hampton, MC, AUS, and absent on military service) and written from a USN Medical Supply Depot he says: "The Navy decided I had been to sea long enough and sent me ashore for a while. I am now here at the Depot in connection with procurement of X-ray equipment, supplies and related items. Where I have been I have heard very little from the General crowd." The Department is very glad again to have word from Commander Wood. After leaving the Hospital he was assigned to the Chelsea Naval Hospital and then to the Naval Hospital at Pearl Harbor. Shortly before the attack there, he wrote that he had been transferred to his first sea duty.

Several other members have seen service in or near Honolulu, and it is perhaps not without general interest to mention that the staff of the US Naval Hospital at Pearl Harbor received from Admiral Nimitz an unusual honor, a blanket citation of the entire unit, for its meritorious service on December 7, 1941.

Certainly one MGH graduate is entitled to share in this citation. An article by Lt. Comdr. Paul E. Spangler, MC, USNR, (*WS 1925*) entitled "Burns: A Treatment Plan for Large Numbers," appeared in the Hawaii Medical Journal for September-October 1942. Commander Spangler, promoted in rank as of July 1942, is chief of surgical service with USN Mobile Hospital No. 2. In an earlier issue THE NEWS mentioned that Commander Spangler was on active duty at the Naval Hospital at Pearl Harbor on December 7, 1941, and had had "the questionable honor of performing the first operation of this war." A few general statements from his article suggest the magnitude of the Pearl Harbor attack and a comparison with the recent Boston disaster:

> At the Naval Hospital at Pearl Harbor on December 7 we treated several hundred burns. Many different methods of treatment were used. We had an excellent chance to observe the results of these different methods of treatment and their applicability to mass treatment. Following this experience a burn committee, of which I was a member, was appointed to evaluate our results, to adopt a standardized procedure adaptable to a large number of casualties, and to make provisions for equipment supplies and instructions. We have adapted the report of this committee to our use at Mobile Base Hospital No. 2.

Opportunely, a letter from Commander Spangler has been forwarded by Dr. Churchill. It adds these recent details and comments:

> Promoted to Commander, same date as Jim White. Also am now Executive Officer as well as Chief of Surgery of this hospital. We expect to be going down soon to help Howard Sprague out, and then we shall find out whether No. 6 is as good as No. 2 or not.
>
> Noted your brief remarks about the Cocoanut Grove burns and noted the absence of cleansing and debridement. If we can get away with that I believe the sterile compression treatment of burns will prove equally practical and more efficient than the tannic acid, silver nitrate, which the Navy is advising at the present time. Send me the dope. Give my best regards to all the gang and old friends.

* * *

From the Station Hospital at an Army Air Base, Major Ira M. Dixson, MC, AAF, (*WS 1930*) wrote to the Hospital on January 20:

> I am at my first station after completing the Air Force Training School at Miami Beach. This hospital is just seventeen days old today, and this is my fifth day here as Chief of the Medical Service. Very little equipment as yet, but — patients. I'm having a swell time organizing my service, with more and diverse problems than you can shake a stick at. Pike's Peak is our backdrop, lovely in its snow and sunlight—and, let me add, it's 22 below zero.

To this we add a portion of a letter dated February 4, from Major Dixson to Dr. Arthur W. Allen:

> I find myself Chief of Medicine here at this Station Hospital, which was opened on January 3rd last. We have about — patients, 90% of whom are medical. Until this morning we had no nurses whatever and our Medical Detachment personnel is only partially trained and entirely inadequate as to numbers. Just how we have got through these past few weeks is something of a mystery to me. But all the boys seem to be going out the front door cured and with a smile on their faces (probably accounted for entirely by the pleasure of release).

Lt. Col. Alexander Marble, MC, AUS, (*res. WM 1930*) was transferred from Camp Edwards early in January, to become Chief of the Medical Service at Harmon General Hospital, Longview, Texas. He writes from there to the War Records:

> Reported for duty at this new General Hospital on January 11, after two years spent at the Station Hospital, Camp Edwards, Mass., and (during this past summer) with the Massachusetts Medical Officers' Recruiting Board. Am impressed with the nearby oil fields and the variability of Texas weather. Major Herbert Jones, a brother of Dr. T. Duckett Jones, is a member of the staff here.

Lt. Arthur T. Willetts, USNR, (*res. U 1941*) is with USMC Unit No. 595. As an officer with the Marines he has been "somewhere in the South Seas, Pacific Area," for months. He was promoted to senior grade since leaving the U.S.A.

Lt. Comdr. M. M. Tolman, MC-V(S), USNR, (*a derm.*) writes from US Naval Hospital at St. Albans, Long Island:

> A new hospital, just ready to be commissioned. It is much like a General Hospital, with full and adequate facilities for interdepartmental consultation. As near as possible, qualified specialists are given their own field of endeavor: for example, I have been put in charge of the department of dermatology and syphilis, with two excellently equipped wards.

Lt. Charles G. Mixter, Jr., MC, AUS, (*WS 1940*) is listed as a recent graduate at the School of Aviation Medicine in Texas. He has been assigned to service in the southwest Pacific area, and his post-office address is: 1st Lieut. Charles G. Mixter, Jr., MC, AC, 801 Medical Squadron, Air Evacuation Transport, APO 502, San Francisco. His father, Charles G. Mixter, (*WS 1907*) sends these details of his training and present service:

> Following his entrance into active service in May 1942, he was assigned to the Air Corps of the Army first at Rome, N. Y., then for flight surgeon's training at Randolph and then Kelley Fields in Texas. Following his graduation as flight surgeon he was ordered to Bowman Field, Louisville, and later to Hamilton Field in San Francisco and was ordered overseas about the first of the year. His duties, of course, are in the air evacuation of casualties.

Lt. Irad B. Hardy, Jr., MC, USNR, (*ES 1939*), whose first assignment was at a submarine base, has sent word to the War Records that he is temporarily with the Hdq. Bat. Casual Co., Fleet Marine Force Training Centre, Camp Lejeune, N. C., taking a course with the Marines in anticipation of attachment with a battalion for foreign duty as a medical officer.

* * *

Brief news of numerous promotions has been received as follows:

Lt. Comdr. James M. Faulkner, MC, USNR, (*EM 1925*) was promoted to Commander on December 6, 1942, and is still at the Chelsea Naval Hospital. Comdr. Walter S. Burrage, MC, USNR, (*EM 1927*) was promoted on February 5, 1943, as of August 1, 1942, and is also at the Chelsea Naval Hospital. Comdr. Joseph S. Barr, MC, USNR, (*Or. 1929*) has received this promotion and been assigned to a new hospital at USN Hqrs. at St. Albans, L. I. Lt. L. M. Woodruff, MC, USNR, (*ES 1939*) was promoted to s.g. in July 1942. Lt. Col. Neil L. Crone, MC, AUS, (*WM 1933*), promoted as of November 6, 1942, from Major, is chief of the section of preventive medicine, 1st Army, Eastern Defense Command, at Governor's Island, N. Y. Major Ernest B. Howard, MC, AUS, (*a. in M*) received this promotion on November 9, 1942. He is still assigned to Hqrs. 4th Service Command, Atlanta, Ga. The promotion of Capt. William McK. Jefferies, MC, AUS, (*EM 1942*) to this rank dates from January 21, 1943. Captain Robert N. Buchanan, Jr., MC, AUS, (*res. D 1941*) was promoted to Major on February 5, 1943.

Capt. Lloyd S. Saltus, MC, AUS, (*CM 1938*) received this promotion on December 15, 1942, and is now taking the Officers Medical Field Service Course at Carlisle Barracks, Pa.

At the meetings of January 23 and February 3, the Trustees voted:

That Dr. Lamar Soutter be granted leave of absence because of service with the armed forces, with the understanding that he may resume his present position on the Staff upon completion of such service.

That Dr. James B. Ayer be continued as Chief of the Neurological Department and Dr. C. Guy Lane as Chief of the Dermatological Department, in spite of the fact that they have reached the retiring age of sixty years for part-time men.

To appoint Dr. Conrad Wesselhoeft as Consultant in Medicine.

Dr. Wesselhoeft is Physician in Chief at the Haynes Memorial Hospital, and a Trustee of the Massachusetts Memorial Hospitals. He is also Clinical Professor of Communicable Diseases at the Harvard Medical School.

Promotions made by the Board at these meetings are:

Dr. William W. Beckman, from Assistant in Medicine to Assistant Physician
Dr. Friedrich W. Klemperer, from Graduate Assistant to Assistant in Medicine
Dr. Gregory N. Rochlin, from Graduate Assistant to Assistant in Psychiatry.

Other appointments then made are as follows:

Dr. Charles B. Burbank, Assistant in Surgery, beginning January 1, 1943
Dr. Robert P. Keiser, Assistant in Orthopedic Surgery
Dr. Daniel W. Badal, Assistant in Psychiatry
Dr. John B. Graham, Research Fellow in Surgery, to work with Dr. Cope
Dr. Thomas S. Risley, Assistant Resident Surgeon, beginning February 1, 1943
Dr. Earl Sanborn, Assistant Resident on the Neurosurgical Service for a term of six months beginning February 1, 1943
Drs. John H. Talinski, William A. Stephen and Laszlo Ormandy, Interns on the Orthopedic Service for the terms beginning January 1, March 1, and May 1, 1943, respectively.

Dr. Kurt H. Thoma has been appointed Chief of the Dental Service, effective February 19, 1943. Dr. Thoma's contributions to dental surgery are well known. He is Professor of Oral Surgery and Charles A. Brackett Professor of Oral Pathology at the Harvard School of Dental Medicine, and since 1933 has been a member of the Administrative Board of the Dental School.

During February the Simmons College School of Social Work conducted at Boston hospitals a program for students studying for Masters' degrees in medical and psychiatric social work. Lectures and discussion were on the subject, "The Emotional Component in Illness." A major part of the program, from February 9-20, was held at this hospital. About 25 students attended the course, which was in charge of Mrs. Louise Bandler, Head Worker, Psychiatric Social Service, and Miss Harriett M. Bartlett, Educational Director of the Social Service Department here.

On Sunday, February 7, at St. Paul's Cathedral the M.G.H. graduating nurses heard Rev. Dr. John Haynes Holmes of New York deliver their baccalaureate sermon. Graduation exercises took place on February 11 in the rotunda of the Moseley Memorial Building as usual. Rt. Rev. Henry K. Sherrill, Chairman of the Board of Trustees, presided, and Rev. Cornelius P. Trowbridge, Rector of the Church of the Redeemer, Newton, gave the principal address. Eighty-four students were graduated, five of whom had taken the accelerated course and completed the work in less than three years.

A new class entered the School of Nursing on February 12. It numbered seventy-four students, and is the largest February class ever accepted.

Letters and telegrams have been received from the Red Cross and members of the 6th General Hospital announcing their safe arrival in North Africa.

NWF:ARM:q
3/6/43

In February the Harvard University Press published a small book entitled "William Lawrence: Latter Years of a Happy Life." The author of the book is the Right Reverend Henry K. Sherrill, Chairman of the Board of Trustees. Material for the book was provided by an unpublished diary covering the years of Bishop Lawrence's life from his retirement in 1926 until his death in November 1941. It will be remembered that Bishop Lawrence, in his ninetieth year, raised the money for building the Chapel, was active in planning it, and was present at its opening in April 1941.

* * *

Mr. Ralph Lowell, since 1940 a member of the Board of Trustees, has succeeded President Lowell as Trustee of the Lowell Institute. He has also been made treasurer and trustee of the U.S.O. Greater Boston Soldiers and Sailors Committee. Recently he was appointed a member of the Executive Committee of the Massachusetts Committee of the Conference of Christians and Jews, and has been elected treasurer of the New England Grenfell Association, of which he has served as a director for several years.

* * *

A statement of his new assignment on February 1, 1943, has been received from Dr. André W. Reggio (*WS 1914*): "Released by the Massachusetts Committee on Public Safety as Director of Medical Division for Massachusetts to take over new duties at the Office of Civilian Defense, 17 Court Street, Boston, as Acting Medical Officer of OCD Region I, which comprises the six New England States." Dr. Horace P. Stevens (*WS 1907*) has been made Acting Medical Director of the Massachusetts Committee on Public Safety.

* * *

As members of a course completed in December, more than a hundred officers were graduated from the Specialists' Course in Tropical and Military Medicine at the Army Medical School in Washington. Col. Richard P. Strong (*Hon. Phys.*), director of the series, delivered the address. Another class is now in session. Dr. George C. Shattuck (*Cons.*) is one of the lecturers in the course.

* * *

A recent release from the National Committee for the Resettlement of Foreign Physicians states that 1500 refugee physicians have been placed in hospitals as interns, resident physicians, and in laboratories. A maximum use of 6000 *emigré* doctors is planned for, on the basis of temporary placement for the duration of the war. Dr. Tracy J. Putnam (*ES* 1923) is vice-chairman of this committee, chairman of the sub-committee on war neuroses of the National Research Council, and a member of the committee on neuro-psychiatry and of the sub-committee on neurosurgery. As Director of Services on Neurology and Neurosurgery at the Neurological Institute, New York, he is also giving a series of courses in neurosurgery for the Army.

A growing attention to South American relations gives special interest to the recent good-will tour of Dr. Fred H. Albee. Dr. Albee visited Brazil, Argentina, Chile, Peru, and Panama. He was delegated by the Rehabilitation Commission of New Jersey, of which he has been chairman since the last war, to report on its work in these countries. He also addressed the Brazilian National Orthopaedic Association and lectured at the University of Chile, of which he is an honorary faculty member. At the invitation of the University of Buenos Aires he had the further honor of dedicating its new operating room, which is to be called the Professor Fred H. Albee Operating Room.

* * *

Dr. Juan Salamanca has completed his internship at the Massachusetts General Hospital and returned to his home in Bogotá, Colombia. An interesting statement about Dr. Salamanca's appointment here and its purpose has been given to THE NEWS by Dr. Henry K. Beecher:

"In the summer of 1941, I had the privilege of going as an exchange lecturer from Harvard to the National University of Colombia at Bogotá under the auspices of the Department of State. While there I was given the opportunity by the Department of State of choosing one of their young physicians to bring back to this country to train in anesthesia. Dr. Juan Salamanca was the choice and has now completed an internship here.

"It is widely recognized at the University of Colombia that two major deficiencies are retarding the development of medicine in that part of South America, namely anesthesia and nursing care. Until these are improved, small hope is held by the faculty for modernization of their practice of medicine. They are making earnest effors to bring about changes in these fields and I believe deserve whatever support this country can give them."

* * *

Dr. Walter B. Cannon, Consultant in Physiology at the McLean Hospital, and George Higginson Professor of Physiology at the Harvard Medical School, was elected foreign secretary of the National Academy of Sciences in 1942. He has recently been made an honorary member of the Medical Association of Argentina.

* * *

Dr. Francis R. Dieuaide, who has been a member of the Hospital staff since 1939 as a Physician and Chief of the Syphilis Clinic and is Clinical Professor of Medicine at the Harvard Medical School, has been commissioned Lt. Colonel, MC, AUS. He has been assigned to the Surgeon General's Office in Washington, and is to do work in the field of tropical medicine.

* * *

Dr. Fuller Albright (*P.*) delivered the fourth Harvey Society Lecture in the current series at the New York Academy of Medicine. His subject was "Studies on the Pathological Physiology of Cushing's Syndrome."

Mr. George L. Alcock has accepted the position of superintendent of works at Cambridge Hospital. He came to the Massachusetts General Hospital in November 1939, to take charge of the alterations in the Bulfinch Building, and in February 1942 took over the duties of Mr. Norman M. Dahl, then assistant superintendent of works here. Mr. Dahl resigned to become a civilian employee of the U.S. Navy in the Technical Division. After completing a course in naval architecture, given at the Massachusetts Institute of Technology for the training of naval personnel, Mr. Dahl is now assigned to duty in Boston district and is making stabilization tests on converted vessels.

Walter A. Ryan, messenger for over five years at the Baker information desk, is now in military service. He is a private, attached to an air base in Nebraska.

* * *

The appointment (without limit of time) of Dr. Richard M. Smith (*WM 1909*) as Thomas Morgan Rotch Professor of Pediatrics at the Harvard Medical School dates from July 1, 1942. Dr. Smith was previously Clinical Professor of Pediatrics and Child Hygiene. He is also a member of the Harvard Infantile Paralysis Commission.

Dr. George H. Acheson (*WM 1939*), an Instructor in Physiology until October 1, 1942, has received the term appointment of Associate in Pharmacology, at the Harvard Medical School.

Lt. William W. L. Glenn, MC, AUS, (*r.s. 1941*) is working on a research project at the Harvard School of Public Health, where he has held an appointment as Assistant in Physiology since July 1, 1942.

Dr. John G. Young (*CM 1926*) is Chief of Staff at the Children's Hospital of Dallas, and has recently been appointed Associate Professor of Pediatrics at the Baylor Medical School.

Dr. Frederic C. Bost (*Or* 1929) writes from San Francisco:

> I am Associate Clinical Professor in Orthopedic Surgery at the University of California, and for the present have been deferred as a member of the University Staff so that I have not had the opportunity of entering the Service. I have had many pleasant visits with former Massachusetts General Hospital House Pupils en route through this port.

* * *

Major Harold H. Hamilton, MC, AUS, (*res. PH 1933*) sends to the War Records pleasant news of himself and his M.G.H. associates at Westover Field, Chicopee Falls, Mass.:

> No citations, decorations, etc. Have been in service since May 27, 1942, planted right here. The job: Chief of Surgical Service, Station Hospital. Capt. Thomas Warthin is here also, and is doing a fine job as Hospital Registrar. He is also Assistant Chief of the Medical Service. Lt. D. Crosby Greene, Jr., pediatrician, is also stationed here, just now on detached service at Carlisle, Pa.
>
> Our hospital has been favored by fortnightly ward-walks and lectures from Drs. Cattell, Munro, Ober, Levine, and Keefer. This program is still going on, and is under the direction of the Mass. Med. Society.

Major Richard B. Capps, MC, AUS, (*CM 1931*) is with the 12th General Hospital, until recently stationed at Fort Benjamin Harrison, Ind.

Interesting news of civilian practice in Hawaii comes from Dr. Stewart (*Or. 1921*); under date of January 15, 1943, in a letter headed The Medical Group, 1133 Punchbowl, Honolulu, Department of Orthopaedic Surgery, Steele F. Stewart, M.D.:

> My job here is a very interesting and extensive one. First of all I have charge of the Shriners' Hospital for Crippled Children, a thirty-bed hospital in the midst of beautiful tropical surroundings. Then I am Orthopaedic Consultant for the Territorial Board of Health, and make semi-annual trips to the other islands to examine crippled children. All our travelling is done by plane, but unfortunately for the esthetic senses the windows are all frosted. I've made the trip in earlier days and have seen the beauty of the seas, the coasts and mountains. I also have private practice.
>
> I came down here the first of March, so I'm not a veteran of the war, although the second night after I arrived a Japanese plane dropped four big bombs about half a mile away. Sounded like a big gun going off. When I arrived people were still jittery, as you can well imagine. . . . However, things aren't that way any more. . . . The work done on these islands has been Hollywoodian in character except it isn't just a show. . . . All lights have to be blacked out by 7 p.m. and not exposed till 7:15 a.m. Each month that will be increased 15 minutes to half an hour, till in midsummer the hour will be 6 a.m. and 8 p.m. Until recently all cars had to be off the street after 8 p.m. except physicians, ambulances, utilities and military cars. Now it is 10 p.m. As a physician I am allowed twice the light of the civilian car. . . . Strange as it may seem, all this blackness has not raised the incidence of disease but markedly lowered it. I expect the recent ruling about theatres and bowling alleys being allowed open till 9:30 p.m. will probably be followed by an increase of communicable diseases.
>
> About one-third of the population here are Japanese. That makes our problem different from even California. They are scattered over the sugar and pineapple plantations and in the cities. They are very closely watched and cannot go from district to district except by permission of the military. There are many very loyal Japanese of the younger generation, like the Victory Volunteers—University boys of Japanese ancestry who were denied the privilege of bearing arms against Japan but who volunteered to do anything to help win the war. They worked cutting trees, cooking, digging ditches and whatnot, any menial task they might be set at. Some of the older Japanese are disloyal and some very loyal, as the dresser in our office whose son is a Victory Volunteer. Then there are the younger American-Japanese, educated in Japan; these are considered dangerous. I feel that the trouble stems from two or three sources (1) The continuance up to December 7 of Japanese language schools; (2) the Japanese influence of the home; (3) the Japanese nationalistic churches—Shinto temples; (4) the Japanese language papers. We can't and should never try to break up the influence of the home, but I think we should insist on all schools being in English, the abolition of all foreign newspapers twenty years after the stoppage of emigration, and the prohibition of all churches other than catholic churches—not Roman Catholic but churches with nationalistic boundaries, i.e. Lutheran churches Yes, German Lutheran or Swedish Lutheran No.
>
> Another interesting medical feature in the islands is the paternalistic form of medicine practiced on the plantations. On the sugar plantations there are about forty hospitals with thirty doctors in charge. These men take care of about 100,000 plantation employees and their families. The latter are provided with complete medical care, and the cost to the plantations runs from $11 to $15 per person per year. The hospitals vary from old wooden structures to new fireproof structures, all one story. All have adequate fresh air and light, but they have no heating problems—even blankets are not routine, only a sheet. These men are doing really splendid medicine in these little hospitals, and they are doing it because they have enough patients to keep them busy.

Dr. Stewart added that he had seen Lt. Hannibal Hamlin, MC, USNR, (*res. NS 1942*) from time to time. Word has since come that Lieutenant Hamlin is aboard the USS "Solace."

* * *

Lt. Comdr. Walter E. Garrey, MC, USNR, (*a. in S*) wrote the following letter on January 28, aboard the USS "American Legion." It brings good news of a notable number of MGH members in service, and suggests that Lt. Commander Garrey has not spent overmuch time in port.

> The Editors, M.G.H. News:
>
> With our long overdue mail arrived yesterday the October and November issues of "The News," and they were greatly enjoyed. Mail from home is our biggest event and so far in ten months in the South Pacific we have only received it at intervals of two or three months.
>
> I've enjoyed what may be a unique opportunity to see most of our graduates in this area within recent months. I'm hoping to give you some real news of them and still not break the censor rules of the "silent service."
>
> Ted Pratt was seen both before and after his long and trying time at the front. He had much surgery to do, under fire over a long period, and all who were with him sing his praises. Bob Legge I have seen several times, doing orthopedics at one place, and like most of us stepping out of his rôle to treat malaria at another. He has had quite a series of cases of gas gangrene foisted upon him.
>
> Nicholson, Montgomery, and Farnsworth have been very busy indeed, especially the former, who has been using up astronomical amounts of plaster of paris. Jack Gibbon was seen by a lucky coincidence and was treating war casualties. Ben Tenney I have seen twice, Joe Holmes was found at work doing a grand job making an active surgical hospital out of his relatively small field unit.
>
> A very pleasant experience was to have temporary duty for a time with the group of Howard Sprague, Charley Johnson, et al. Carmody was busy especially with peripheral nerve wounds, and Kennard with gunshot wounds and burns. McGinn had some unusual medical cases and Hunter's lab. was grinding out the malaria smears.
>
> Joe Placak was seen busy with war wounds in a fine hospital.
>
> It was a grand break to spend a night with Gus Thorndike and his group, and swap experiences with them all. They are quite busy with surgical and medical casualties. George Marks was away and will have some interesting tales to tell of his detached duty.
>
> Others seen who have been students with us are Weir, Crile, and Mr. McMillan who was with Beecher in anaesthesia. All are now busy after variable waiting periods.
>
> My best to all in and from Boston, wherever they may be.

* * *

From NEWSWEEK for December 21, 1942, we take a description of one aspect of the work being done by the 105th General Hospital:

> In the main base hospital in Australia, surgeons have performed more than a thousand operations. . . . Special attention is given to the mental and nervous rehabilitation of sufferers from shock. To a big psychiatric hospital in a small Australian town, staffed by a famous Harvard unit under Major Augustus Thorndike, Jr., go members of the fighting forces needing the most skilled psychiatric treatment. Major Thorndike is interested in the experiment of using phonographic records of the thud of mortars, shrieking bombs, rattling machine guns, and human cries to make the victims relive their hours of horror on the battlefield, and to realize that they are not now in actual danger.
>
> Mental cases run to only 2 per cent of total casualties—far below that of the United States troops in the last war. The milder war neuroses wear off quickly, and most of the men go back into action. In both New Guinea and the Solomons, the morale of the convalescent soldier is exceedingly high. Doctors say that of all the men they have treated, they can recall only a few who have failed to grin about their condition. One American soldier was typical. A sergeant in the morning, on the same day he was made a second lieutenant, went into action, and was wounded. His only comment was: 'They sure initiated me fast.'

* * *

Lt. Comdr. Alfred L. Duncombe, MC, USNR, (*EM 1934*) received this promotion from Lieutenant on November 1, 1942. Word of him sent to the War Records states that he was one of the attending physicians to Captain Rickenbacker and his party during their convalescence; also, that he returned from the Pacific area to duty in the States early in December and was given two weeks' leave at home. He has since returned to his former duty in the Pacific section.

Lt. Alexander M. Waldron, MC, AUS, (*EM 1938*) was promoted on January 1, 1943, to Captain. The War Records reports that he has been in Australia since June 4, on the staff of the 166th Station Hospital.

Capt. Otto D. Sahler, MC, AUS, (*res. R 1941*) still on service in the British Isles, early in January sent word of his unit to his former department:

> We have just moved here to a brand new hospital. It isn't open or completed yet but is to be ready in a couple of days. . . . Smedal has been bumped up to Lt. Col. recently. They are here some place. Simeone is now a Major. I went all over Northern Ireland the last two weeks we were there. Visited Belfast, etc., and had a nice plane ride while there. Saw a bit of the Atlantic and sort of wanted to head West but couldn't for we didn't have enough gas!

Lt. Col. William A. Reilly, MC, AUS, (*CM* 1928) is in charge of the medical service in an evacuation hospital now in Africa.

Major Milton S. Thompson, MC, AUS, (*Or. 1934*), now with the 67th General Hospital, writes from "Somewhere in England" and sends news of Major Jack Spencer, MC, (*res. R 1934*), and Major Wilfred Comeau, MC, AUS, (*a. in M 1937-39*).

> Our unit (the Maine General Hospital Unit) was activated on September 1 and on December 1 arrived here, after a brief two months in El Paso, Texas. We have opened a fine new hospital and are beginning to become doctors again.
>
> There are three M.G.H. alumni in this unit. Major Jack Spencer, Major Wilfred Comeau and myself are in charge, respectively, of the X-ray, the cardiology and the orthopedic sections.

Dr. Gordon E. Jones, (*ES 1939*) writes that he has been transferred from the African Division of Pan American Airways to the Alaska Division, and is based in Seattle.

Lt. Col. Henry A. Kind, MC, AUS, (*CM 1935*) went into the service as a Lieutenant in November 1935, and has since received these promotions: Captain, MC, USA, November 12, 1938; Major, MC, AUS, March 22, 1942; Lt. Colonel, MC, AUS, November 17, 1942. He is now at the Tilton General Hospital, Fort Dix, N. J., but has seen service at Fort Adams, R. I., Fort McKinley, Me., Army Medical School at Washington, Carlisle Barracks, Pa., and Schofield Barracks, T. H.

Major Richard Chute, MC, AUS, (*ES 1929*) has been called to active duty and is to report at Carlisle Barracks, Pa.

THE NEWS makes a special effort to publish letters from abroad. Consequently, it is specially flattered to find itself received with the warmth accorded all news from home and old associates. On January 15, Commander Sprague sent a welcome letter from our naval group, USN Mobile Unit No. 6:

> I am glad to acknowledge the receipt of two numbers of "The News," eagerly studied by all the Boston group here. The censor tells us that we may now tell you that we are in New Zealand, and you may draw your own conclusions about our activities in the South Pacific struggle. As you know, we have been busy in our professional work, and the war has altered the character of work for all of us. Hunter is temporarily detached for investigation of a special problem, but we hope to see him back.
>
> Because of the detachment of our Executive Officer, a Captain in the regular Navy, I have inherited the position as Executive and Charlie Johnson is Chief of Medicine. Luckily Charlie is very adaptable and he is certainly helpful to me and to the outfit. We all feel sufficiently experienced to tackle any naval medical problem after four months as a going concern overseas.

* * *

Recent word has been received from Comdr. John P. Wood, MC, USN, that he came ashore from the fleet last fall and is now on planning and procurement duty. Commander Wood was a graduate assistant in Radiology during 1938-39 as one of the officers assigned by the Navy for a year's work and study at this hospital. In a letter addressed to Dr. Aubrey O. Hampton (now Major Hampton, MC, AUS, and absent on military service) and written from a USN Medical Supply Depot he says: "The Navy decided I had been to sea long enough and sent me ashore for a while. I am now here at the Depot in connection with procurement of X-ray equipment, supplies and related items. Where I have been I have heard very little from the General crowd." The Department is very glad again to have word from Commander Wood. After leaving the Hospital he was assigned to the Chelsea Naval Hospital and then to the Naval Hospital at Pearl Harbor. Shortly before the attack there, he wrote that he had been transferred to his first sea duty.

Several other members have seen service in or near Honolulu, and it is perhaps not without general interest to mention that the staff of the US Naval Hospital at Pearl Harbor received from Admiral Nimitz an unusual honor, a blanket citation of the entire unit, for its meritorious service on December 7, 1941.

Certainly one MGH graduate is entitled to share in this citation. An article by Lt. Comdr. Paul E. Spangler, MC, USNR, (*WS 1925*) entitled "Burns: A Treatment Plan for Large Numbers," appeared in the Hawaii Medical Journal for September-October 1942. Commander Spangler, promoted in rank as of July 1942, is chief of surgical service with USN Mobile Hospital No. 2. In an earlier issue THE NEWS mentioned that Commander Spangler was on active duty at the Naval Hospital at Pearl Harbor on December 7, 1941, and had had "the questionable honor of performing the first operation of this war." A few general statements from his article suggest the magnitude of the Pearl Harbor attack and a comparison with the recent Boston disaster:

> At the Naval Hospital at Pearl Harbor on December 7 we treated several hundred burns. Many different methods of treatment were used. We had an excellent chance to observe the results of these different methods of treatment and their applicability to mass treatment. Following this experience a burn committee, of which I was a member, was appointed to evaluate our results, to adopt a standardized procedure adaptable to a large number of casualties, and to make provisions for equipment supplies and instructions. We have adapted the report of this committee to our use at Mobile Base Hospital No. 2.

Opportunely, a letter from Commander Spangler has been forwarded by Dr. Churchill. It adds these recent details and comments:

> Promoted to Commander, same date as Jim White. Also am now Executive Officer as well as Chief of Surgery of this hospital. We expect to be going down soon to help Howard Sprague out, and then we shall find out whether No. 6 is as good as No. 2 or not.
>
> Noted your brief remarks about the Cocoanut Grove burns and noted the absence of cleansing and debridement. If we can get away with that I believe the sterile compression treatment of burns will prove equally practical and more efficient than the tannic acid, silver nitrate, which the Navy is advising at the present time. Send me the dope. Give my best regards to all the gang and old friends.

* * *

From the Station Hospital at an Army Air Base, Major Ira M. Dixson, MC, AAF, (*WS 1930*) wrote to the Hospital on January 20:

> I am at my first station after completing the Air Force Training School at Miami Beach. This hospital is just seventeen days old today, and this is my fifth day here as Chief of the Medical Service. Very little equipment as yet, but — patients. I'm having a swell time organizing my service, with more and diverse problems than you can shake a stick at. Pike's Peak is our backdrop, lovely in its snow and sunlight—and, let me add, it's 22 below zero.

To this we add a portion of a letter dated February 4, from Major Dixson to Dr. Arthur W. Allen:

> I find myself Chief of Medicine here at this Station Hospital, which was opened on January 3rd last. We have about — patients, 90% of whom are medical. Until this morning we had no nurses whatever and our Medical Detachment personnel is only partially trained and entirely inadequate as to numbers. Just how we have got through these past few weeks is something of a mystery to me. But all the boys seem to be going out the front door cured and with a smile on their faces (probably accounted for entirely by the pleasure of release).

Lt. Col. Alexander Marble, MC, AUS, (*res. WM 1930*) was transferred from Camp Edwards early in January, to become Chief of the Medical Service at Harmon General Hospital, Longview, Texas. He writes from there to the War Records:

> Reported for duty at this new General Hospital on January 11, after two years spent at the Station Hospital, Camp Edwards, Mass., and (during this past summer) with the Massachusetts Medical Officers' Recruiting Board. Am impressed with the nearby oil fields and the variability of Texas weather. Major Herbert Jones, a brother of Dr. T. Duckett Jones, is a member of the staff here.

Lt. Arthur T. Willetts, USNR, (*res. U 1941*) is with USMC Unit No. 595. As an officer with the Marines he has been "somewhere in the South Seas, Pacific Area," for months. He was promoted to senior grade since leaving the U.S.A.

Lt. Comdr. M. M. Tolman, MC-V(S), USNR, (*a derm.*) writes from US Naval Hospital at St. Albans, Long Island:

> A new hospital, just ready to be commissioned. It is much like a General Hospital, with full and adequate facilities for interdepartmental consultation. As near as possible, qualified specialists are given their own field of endeavor: for example, I have been put in charge of the department of dermatology and syphilis, with two excellently equipped wards.

Lt. Charles G. Mixter, Jr., MC, AUS, (*WS 1940*) is listed as a recent graduate at the School of Aviation Medicine in Texas. He has been assigned to service in the southwest Pacific area, and his post-office address is: 1st Lieut. Charles G. Mixter, Jr., MC, AC, 801 Medical Squadron, Air Evacuation Transport, APO 502, San Francisco. His father, Charles G. Mixter, (*WS 1907*) sends these details of his training and present service:

> Following his entrance into active service in May 1942, he was assigned to the Air Corps of the Army first at Rome, N. Y., then for flight surgeon's training at Randolph and then Kelley Fields in Texas. Following his graduation as flight surgeon he was ordered to Bowman Field, Louisville, and later to Hamilton Field in San Francisco and was ordered overseas about the first of the year. His duties, of course, are in the air evacuation of casualties.

Lt. Irad B. Hardy, Jr., MC, USNR, (*ES 1939*), whose first assignment was at a submarine base, has sent word to the War Records that he is temporarily with the Hdq. Bat. Casual Co., Fleet Marine Force Training Centre, Camp Lejeune, N. C., taking a course with the Marines in anticipation of attachment with a battalion for foreign duty as a medical officer.

* * *

Brief news of numerous promotions has been received as follows:

Lt. Comdr. James M. Faulkner, MC, USNR, (*EM 1925*) was promoted to Commander on December 6, 1942, and is still at the Chelsea Naval Hospital. Comdr. Walter S. Burrage, MC, USNR, (*EM 1927*) was promoted on February 5, 1943, as of August 1, 1942, and is also at the Chelsea Naval Hospital. Comdr. Joseph S. Barr, MC, USNR, (*Or. 1929*) has received this promotion and been assigned to a new hospital at USN Hqrs. at St. Albans, L. I. Lt. L. M. Woodruff, MC, USNR, (*ES 1939*) was promoted to s.g. in July 1942. Lt. Col. Neil L. Crone, MC, AUS, (*WM 1933*), promoted as of November 6, 1942, from Major, is chief of the section of preventive medicine, 1st Army, Eastern Defense Command, at Governor's Island, N. Y. Major Ernest B. Howard, MC, AUS, (*a. in M*) received this promotion on November 9, 1942. He is still assigned to Hqrs. 4th Service Command, Atlanta, Ga. The promotion of Capt. William McK. Jefferies, MC, AUS, (*EM 1942*) to this rank dates from January 21, 1943. Captain Robert N. Buchanan, Jr., MC, AUS, (*res. D 1941*) was promoted to Major on February 5, 1943.

Capt. Lloyd S. Saltus, MC, AUS, (*CM 1938*) received this promotion on December 15, 1942, and is now taking the Officers Medical Field Service Course at Carlisle Barracks, Pa.

In his Annual Report to the Surgeon General, Colonel Goethals includes general statements that are of special interest to us all now.

> Function and Organization: The 6th General Hospital is a numbered General Hospital organized as a Field Medical Unit for service in a Theater of Operations. . . . During 1942 the 6th General Hospital was administered entirely as a unit in training. It performed no professional duties except as its personnel were assigned for special duty at the Station Hospital, Camp Blanding. Consequently the bulk of its administrative functions was concerned with personnel, and supply and training activities.
>
> Training of Personnel: The training objective of a General Hospital is the attainment of the maximum state of proficiency in the shortest practicable time, in order that it may be prepared to take the field on brief notice in any designated theater of operations and carry out the mission for an organization of its type as a functional unit with the field forces. . . . Of the personnel assigned the officers and nurses, for the greater part, had had no previous military experience or training. The enlisted men were about equally divided between one group of men who had had one year of military training with the 63rd General Hospital, the source unit, and a junior group of enlisted men who had been in the military service from one to six months prior to May 15, 1942. The enlisted personnel had had their basic military training and the detachment as a whole had been carried through several training programs in accordance with Medical Department Mobilization Training Program 8-1, in addition to which about one-third had been trained at various Medical Department Technicians' Schools and at the local Station Hospital.
>
> Facilities available for training comprised the following: The A-6 Area in Camp Blanding, to which the officers and men were assigned, included adequate quarters for living and messing; a motor pool area, used for instruction in close order drill, calisthenics, litter drill, ambulance loading and weekly reviews. Two day rooms, designed for enlisted personnel and one recreation building for officers were suitable for use as class rooms and the projection of training films; a dispensary building, equipped and maintained with supplies drawn by the 63rd General Hospital, was used for sick call, dispensary service and class room. There were adequate instructional aids and training equipment improvised by the unit or by the use of Training Unit E belonging to the 63rd General Hospital. Training films, film strips and projectors were borrowed from the Camp Film Library.
>
> The CASO Station Hospital, Camp Blanding, Florida, was available for two main purposes:
>
> (1) All female personnel of the 6th General Hospital, including nurses, dietitians, dental hygienists, physical therapy aides and Red Cross Workers were attached to the Station Hospital for special duty, rations, quarters and in all technical matters were under command of the Camp Surgeon. Basic military training, including defense against chemical warfare, was conducted by the 6th General Hospital.
>
> (2) Facilities of the Station Hospital were made available for technical training of officers and enlisted men of the medical, surgical, laboratory and X-ray services of the 6th General Hospital. In addition, Camp Dental Clinic No. 1 was utilized to a great extent by officers and enlisted personnel of the dental service.
>
> Consideration of the factors outlined in the two preceding paragraphs constituted a preliminary estimate of the training situation from which an initial training program was drawn up. Subsequent training programs were altered to conform with changes in training situation.

The training program then reported in detail is too long to quote, but one section is given:

> Housing: On activation the officers and enlisted personnel of the 6th General Hospital were assigned quarters in Area A-6 of Camp Blanding. This area was shared with the 63rd General Hospital and miscellaneous smaller units which were changed from time to time. The nurses and civilian personnel were quartered in the buildings of the Station Hospital. The officers and men assigned to Area A-6 were quartered initially in winterized pyramidal tents, which were replaced in June and July by the construction of 16 x 48 foot hutments for the enlisted men and of 16 x 16 foot hutments for the officers.

Colors of the 6th General Hospital at Camp Blanding

These brief statements on disease control are included:

> Insect borne diseases: No case of insect borne disease was reported among the personnel of the 6th General Hospital admitted to sick report during 1942. This is believed due to effective eradication of mosquitoes by the control measures instituted by the Camp Medical Inspector.
>
> Common diarrheas: No common diarrheas in epidemic form occurred through the year; only one such case was admitted to hospital.
>
> Common respiratory diseases: At no time during 1942 was there an epidemic of common respiratory diseases. Of the 158 hospital diagnoses 63 were due to this cause, but they were of sporadic rather than epidemic occurrence.
>
> Contagious diseases: One case of measles and one of German measles were transferred to the Station Hospital during the months of May and December respectively and the diagnoses confirmed. No further cases occurred.
>
> Primary pneumonia, atypical: The diagnosis of this condition was made at the Station Hospital on 10 cases transferred thereto.
>
> Venereal Disease Control: Educational and prophylactic measures designed to prevent venereal disease, as prescribed in Section VII, AR 40-210, were provided in this command during the year.

Under Welfare, Social Service and Recreation, the report lists nine forms under Recreation and the last-named of these is "Securing the approval of an appropriate unit insignia from the Office of the Quartermaster General"!

It also states:

> Activation of the 6th General Hospital at Camp Blanding placed it from the beginning in a well established and excellently organized Army post. Social service facilities provided by the Camp were drawn on principally for verifying reports of illness and death in families of the unit personnel, and occasionally for advancing money to a soldier granted furlough by reason of a family emergency.
>
> Morale was maintained at a high level throughout the year. Despite delay in fulfilment of prospects of early duty in an oversea Theater, officers, nurses and enlisted men entered their military environment enthusiastically and without question, and accepted the necessity for subordination of their individual eagerness to the interests of the Army as a whole.

Under Problems and their Solutions, Colonel Goethals first states under the heading "General":

> Problems incident to activation, administration, and supply of the 6th General Hospital were neither more frequent nor more difficult than those which may arise in any unit in garrison status. The one problem of greater magnitude than any other was that of training, including, as it did, four separate approaches, one each for officers, nurses and civilians, enlisted men, and for the combined unit.

The details of those problems are too long to quote. They are suggested by the following sentences: "When this unit was activated only eight of the fifty-seven medical and dental officers originally assigned had had prior active duty during 1941 or 1942. . . . On the date of activation the 6th General Hospital had no information as to when it might receive movement orders for oversea service." That all training difficulties were met and really solved may be inferred in the last section:

> Problems in combined (unit) training. In the strict sense of the phrase combined unit training of all personnel of a General Hospital is impossible until the hospital itself is established, equipped, and in operation. Consequently this problem was never completely solved by the 6th General Hospital in 1942. The nearest practicable equivalent to it, however, was attained. First, all personnel were thoroughly grounded in basic military training. Second, the professional qualifications of the officers and nurses were unquestionable. Third, the enlisted personnel were instructed intensively in technical subjects by the officers under whom they were to serve. Fourth, a standing operating procedure was prepared and adopted. It may be stated with confidence that the 6th General Hospital is trained and qualified to fulfill its mission adequately wherever it may be stationed.

The Summary of the Report merely confirms the confidence and admiration the Hospital feels for its unit.

> Review of the organization, activation and early training of the 6th General Hospital during 1942 leads this reporter to the conclusion that the policy of the War Department, announced in 1940, to rely upon outstanding civilian hospitals and medical teaching centers for furnishing professionally trained officer personnel and nurses for field medical units, especially those of the fixed type, has met with a gratifying degree of success.
>
> It is believed, based upon the first seven and a half months of its existence, that the 6th General Hospital is prepared to meet the final test of its competency,—field duty,—and that it will discharge its mission with credit to itself and with benefit to the Force in which it serves.

* * *

No definite word has yet been received concerning Capt. James K. Keeley, MC, AUS, (*NS 1937*). He received this promotion in April 1942 while serving in the Philippine area, and sent word of it in May. The following gallant statements have been received from his mother, Mrs. James Keeley:

> No news since May 1, 1942. Presumably still in Philippine area. All those in Japanese-occupied territory are reported by the U. S. Government as "Missing in Action." The organization known as "Relief for Americans in the Philippines," 101 Fifth Avenue, has a list of internees in Santo Tomas, Manila. My son's name is not among them. He may be in hiding in the mountains of Mindanao. We have heard of friends there, but do not know if he is with them. This organization issues a letter about once a month culling items from many sources, the Churches, Red Cross, etc., and I have found several items of interest. Also, a book has been published giving considerable information of Santo Tomas and Manila—"Internews," a combined comic-serious record with many drawings. Mr. Shelby of War Prisoners Monitory System, gets news at times through [a western city].

THE NEWS

No. 7 Boston, Mass. April 1943

On April 16 the Harvard Dental Alumni Association will celebrate its annual Alumni Day and the 75th anniversary of Harvard University Dental School. Dr. Elbert S. Godfrey (Dn.S) is chairman of the celebration committee. This date is, also, approximately the 75th anniversary of the Dental Service at the Massachusetts General Hospital. Although no Dentist was appointed here until 1872, from the beginning of the School its students worked in the Out-Patient Department, and its first quarters were houses in the neighboring streets. In 1883 it inherited the building of the old Medical School itself, and continued there until 1909. As this building stood on the north side of Fruit Street, plumb at the end of North Grove Street, and bore a large sign proclaiming it the Harvard Dental School and Dental and Oral Hospital, it will be remembered by all who were members of the M.G.H. in those years. The building was acquired by the Hospital after the departure of the Dental School to Longwood Avenue. It was razed in 1915 to provide a part of the site for the Moseley Building and the new front entrance of the Hospital. Perhaps some will recall it when for a time the top story was used to house employees and was reached by an eerie bridge from the top of the Gay Ward!

Although this year marks the 75th anniversary of the Harvard University Dental School, the main subject in the minds of its alumni will be the proposed Harvard School of Dental Medicine. It is hoped to make a later report of the program in celebration of Alumni Day.

At the December meeting of the dental staff of the Hospital, the retirement of Dr. LeRoy M. S. Miner was announced. Dr. Miner who was appointed to the staff in 1910 and has been Chief of Dental Service since 1924, was presented with an engraved compendium in testimony of his long service. He spoke briefly on the evolution of the dental clinic, in which the treatment given to patients now amounts annually to more than 6000 visits.

The recent issue of the Harvard Dental Alumni Bulletin gives its first pages to an account of Dr. Varaztad H. Kazanjian (Bd. of Cons.) and a tribute to him as "a most distinguished contributor to the art and science of surgery." Dr. Kazanjian was the essayist at the December 1942 meeting of the Harvard Odontological Society. The Bulletin reports that he did not present a formal paper but "just talked", and it recalled that Dr. Kazanjian's first essay before any professional group was delivered before the Society in 1910. For that occasion Dr. Kazanjian prepared his manuscript with some trepidation since at that time he could read English better than he could speak it. But, with some editing in that respect by a colleague, this paper was printed in the Allied Dental Journal and became Dr. Kazanjian's first publication. This was five years after he had received his degree in Dentistry and eleven years before he completed his studies for a degree in Medicine.

Dr. Kazanjian's name has long been known from his work in plastic surgery during World War I. "He was in France from June 1915 until January 1919, held the commission of Honorary Major in the Royal Army Medical Corps, was mentioned three times in dispatches, and was awarded the Order of St. Michael and St. George." The Bulletin gives the further informing detail that although Dr. Kazanjian had no courtesy appointment from any Boston hospital previous to his military service he had treated over 400 cases of jaw fracture, an "unwanted" type of case turned over to the Prosthetic Department at the Dental School. "Consequently, when the first Harvard unit had to have a dental chief, it is not surprising that Dr. Edward Nichols took some good advice and offered the job to Kazanjian."

The account includes other interesting biographical details about Dr. Kazanjian's first years after his arrival here in 1895 from Sivas in Turkish Armenia, and closes with an incident of his "student" days in 1920:

> Some surgical demonstration had been planned at the Brigham for a group of medical students, who crowded the surgical amphitheatre. Dr. Cushing made his appearance, accompanied by two high ranking officers from the Royal Army Medical Corps. The attention of the students was fixed upon Dr. Cushing and his guests, and the occasion was an impressive one.
>
> On glancing up at the group of students above him, one of these British medical officers suddenly grasped his companion's arm and pointed. And then, with greater haste than dignity, the students assembled were startled to see these two high ranking officers climb up the steps and literally drag down to the amphitheatre floor the quiet, black-haired little dentist whom the medical students thought they had successfully ignored. And Kazanjian was introduced as the man who had taught these guests the technique to be demonstrated.

Staff changes approved at the Trustees' meetings of February 19 and March 5 are here reported:

Leaves of absence have been granted to Drs. Francis R. Dieuaide and Richard Chute because of military service, and to Dr. Louis Nathan because of service with the Veteran's Bureau, "with the understanding that they may resume their positions on the Staff upon completion of such service."

It was voted that Drs. J. Herbert Young, Charles A. McDonald, Carlisle Reed, and Frank C. Colloten, "who have reached the retiring age, be continued on active duty for the duration of the war." The resignation of Dr. B. Thurber Guild was accepted with regret.

The following promotions were made:

Drs. William R. Hill, Jr., and Marian W. Ropes from Assistant in Medicine to Assistant Physician
Drs. G. Colket Caner and Charles S. Kubik from Assistant Neurologist to Associate Neurologist
Elizabeth M. Hincks, Ph.D. from Assistant Psychologist to Psychologist
Dr. John C. Stanton from Assistant Dental Surgeon to Dental Surgeon
Drs. John Adams, Jr., G. Marshall Crawford, and Mildred Ryan from Assistant in Dermatology to Assistant Dermatologist
Dr. Jost Michelsen from Assistant in Neurosurgery to Assistant Neurosurgeon
Drs. Madelaine R. Brown, Edwin M. Cole, Augustus S. Rose, and Robert S. Schwab from Assistant in Neurology to Assistant Neurologist
Dr. Rulon W. Rawson from Research Fellow to Assistant in Medicine
Dr. Samuel Lowis from Graduate Assistant to Assistant in Neurosurgery
Dr. Robert H. Hepburn from Assistant Resident to Resident in Urology, effective Feb. 12, 1943

Dr. Hill has since been appointed to have charge of the South Medical Clinic during Dr. Dieuaide's absence on military service.

The following appointments were made:

Dr. LeRoy M. S. Miner as a member of the Board of Consultation, effective February 19, 1943
Dr. Kurt H. Thoma as Oral Surgeon and Chief of Dental Service, effective upon Dr. Miner's retirement
Robert A. Young, Ph.D. as Research Fellow in the Psychiatric Department rather than Psychologist
Dr. Gertrud C. Reyersbach as Research Fellow in Pediatrics and Bacteriology beginning August 1, 1943
Dr. Janet Ward McArthur as Assistant Resident Physician beginning July 1, 1943

It was also decided to appoint "an Assistant Resident Surgeon, assigned to the

Tumor Clinic, if a suitable man can be obtained."

Dr. Marianna Taylor, Assistant Psychiatrist, is to be continued on the active staff for another year, and the resignation of Dr. Jurgen Ruesch, Psychologist, has been accepted.

Among Harvard appointments recently announced were the following as new members of the Administrative Board of the Harvard Medical School from February 1 to July 1, 1943:

George Widmer Thorn, M.D., A.M. (hon.) In place of Walter Bauer, on leave.)

Oliver Cope, A.B., M.D. (In place of Edward Delos Churchill, on leave.)

The advancement of Dr. Ralph A. Ross (a.p. CM) to Associate in Pediatrics, as of January 11, 1943, is also noted.

As stated in a recent issue, Dr. Cope, who holds the position of Assistant Professor of Surgery, had already been appointed to carry on Medical School interests here during Dr. Churchill's absence.

Dr. Thorn, who was a research fellow in medicine here during 1934-5 and has succeeded Dr. Soma Weiss as physician-in-chief at the Peter Bent Brigham Hospital and Hersey Professor of the Theory and Practice of Physic recently received a medal for "notable public service" from the University of Buffalo, where he formerly taught at the School of Medicine. He was cited as "an acknowledged leader in the young science of endocrinology."

On January 27, 1943, Dr. George S. C. Badger (WM 1898) became physician-in-chief *emeritus* of the New England Baptist Hospital.

During April Dr. Chester M. Jones is again to do some special teaching at the Vanderbilt University Medical School in Nashville, Tenn., where for the term of 1940-41 he took over the work of Dr. John Youmans. Also, on April 23 in Chicago, Dr. Jones will deliver the Frank Billings Lecture.

The following program is announced for the meeting of the Hospital Research Council for April 27:

A Possible Hormonal Effect of Total Gastrectomy in Rate: Dr. Donald C. Balfour, Jr.

Pyruvic and Lactic Acid Tolerance in Normal and Adrenolectomized Dogs: Dr. F. Lipmann, Dr. O. Cope

Renal Sulfonamide Changes in Dogs and Man: Dr. B. I. Maisel

Physiological Response to the Ingestion of Sea Water: Dr. Allan Butler, Dr. N. Talbot, E. MacLachlan, E. Bolton.

Our cross-reference department suggests that an anouncement from the Harvard University Gazette be reprinted here. Among the current exhibitions listed at the Fogg Museum (March 24 through April 24) appears: "North Africa interpreted by European artists, 1796-1941."

OFFICIAL NOTICE

March 18, 1943

Memorandum:

To: Surgeons and Anesthetists

At a meeting of the Surgical Executive Committee held on March 16th it was VOTED:

1. That the time of operation shall be the time that anesthesia is started.

2. It shall be the responsibility of the surgeon to notify the Anesthesia Department if he is unable to maintain this schedule.

3. The anesthesia shall not be started unless it is known that the surgeon is in the building.

N. W. Faxon, M.D., Director

* * *

The Hospital will observe Patriots' Day, April 19, as a legal holiday.

* * *

Dr. Charles Shorey Butler died on February 23, 1943, at his home 257 Newbury Street, Boston, after an illness of several months. He was graduated from Harvard University in 1893, from the Harvard Medical School in 1898, *cum laude,* served his internship at the Massachusetts General Hospital and entered his signature as '99 in the old senior Surgical House Pupils' desk now in the Archives Room. He was on the East Surgical service. His name appears, also, in the Annual Report staff list for 1905 as an Assistant to the Surgeons. For ten years he taught anatomy at Harvard.

Dr. Butler was interested in military medicine, and for seven years served with the Massachusetts Volunteer Militia, becoming a captain and assistant surgeon in the 8th Infantry Regiment. Early in World War I he went to France and worked with the Red Cross and as a surgeon with the French Army. For this service the French Government decorated him as a chevalier of the *Légion d'Honneur.* In August 1916 he was commissioned a 1st Lieutenant, Medical Reserve Corps, USA, received promotions in rank to Major, and was discharged in April 1919. He later became a Lieutenant Colonel, MRC. For several years he again practised medicine in Boston, and after his retirement continued his interest in military medical work and in indicating preparedness among physicians in civil life. His long and able service as treasurer of the Massachusetts Medical Society received tribute in the New England Journal of Medicine for March 4.

Colonel Edward D. Churchill, MC, AUS, has arrived safely at his destination abroad. Further details as to his assignment have not yet been received at the Hospital.

The notice below is copied from the February issue of HOSPITALS:

Movement is well under way to establish a Pharmacy Corps in the United States Army. There are sound reasons for taking this action. The pharmacist in the Army is responsible for the performance of important duties: He must be well qualified, well trained, and well educated; he is, in fact, responsible for the procurement, storage, and distribution of medical supplies, although the officer directly in charge of this function is generally a commissioned officer in the Medical Corps of the Army. The establishment of a Pharmacy Corps would release a number of medical officers for other professional services with the Armed Forces.

In a civilian hospital, the pharmacist is one of the most important members of the organization; he is no less important in the military establishment, and should be given recognition and rank in keeping with his responsibilities, his training, and other qualifications.

A report on one of the activities of the Ladies' Visiting Committee has been received from Mrs. Arnold:

The M.G.H. War Service continues to grow. Besides the usual ward errands covered by the ladies with the red baskets, we have now established an "on call" errand service. In January, when this was started, we received from the different wards an average of 20 calls a day with every ward, including some in Baker, using this service. As many as 75 calls are now received in one day, and our workers cannot always give as prompt service as we should like. A few examples of these odd errands are: Taking patients to Physiotherapy, X-ray, Occupational Therapy, or to the Out-Patient Department, and later calling for the patients to return them to their wards. We are also asked to get from the coatroom the clothes of patients about to be discharged.

It is a pleasure to add to our list of workers some of the episcopal sisters from St. Anne's Convent on Temple Street. They are a real addition to our service.

The hours given by the War Service group have increased from 246 in February 1942 to 1619 in February 1943—with 23 different workers last February as compared with 75 this February. We are very proud to announce that 16 of this group have served regularly for one year or over.

In connection with the Red Cross subscription the Archives Room has on exhibition two letters from Clara Barton, written in 1881 and 1887 on Red Cross letterheads. To represent other women famous for their humanitarian interests, there are displayed a manuscript letter from Dorothea Dix, in recognition of her work with the insane, a book written by Florence Nightingale, and an engraving of Elizabeth Parsons, a Civil War nurse who first served at the Massachusetts General Hospital and was later to be instrumental in starting the Cambridge Hospital.

Major T. V. Urmy, MC, AUS, (*a.p.*) on service at the Station Hospital at Camp Chaffee, Ark., writes that he was "recently elevated to Chief of Medical Service."

Dr. Walter E. Vest, Jr., a recent graduate assistant, is now a 1st Lieutenant, MC, AUS, at the Station Hospital, Camp Chaffee, Ark.

Capt. A. C. van Ravenswaay, MC, AUS, (*P 1934*) writes from the Station Hospital at Jefferson Barracks, Mo., where he is Chief of the Medical Clinic.

Capt. George B. Beaman, MC, AAF, (*a. Psychi.*) has recently been appointed chief of the neuropsychiatric section of Station Hospital at Jefferson Barracks.

Major William A. Perkins, MC, AUS, (*ES* 1917) has been on duty at Fort Douglas, Utah, and is now at the Station Hospital, Camp White, Ore.

Lt. Col. Donald McNeil, MC (*Or.* 1930) sends word of his service and assignment: "The 51st Evacuation Hospital, a Sacramento, Calif. hospital unit, was activated Oct. 15, 1942 at Fort Lewis, Wash. We are still here but hope to be moving on soon."

Capt. Edwin R. Durno, MC, AUS, (*ES 1929*) received his commission and went into active service on October 30, 1942. He had been with the Barnes General Hospital in Vancouver, Washington (the Medical Reserve Pool); the Fitzsimmons General Hospital at Denver; and was recently assigned to the 1st Auxiliary Surgical Group at Fort Sam Houston.

Capt. T. Wiley Hodges, MC, AUS, (*Or. 1941*) sends an account of his military activities:

> I entered the Service in July 1941, and was sent to Station Hospital, Ft. Bliss, Texas, for two months and then transferred to Station Hospital, Camp Bowie. After a year there I was transferred to Station Hospital, Camp Hood, Texas. All my work has been in orthopaedic surgery, so I have felt quite fortunate. Camp Hood is a [deleted] center with very active training, so the orthopaedic service has been most active.

Commander Joseph S. Barr, MC, USNR, (*Or.* 1929) whose promotion was mentioned last month, writes: "After a brief stay at the Naval Hospital, St. Albans, L. I., I've been transferred to the Bureau of Medicine and Surgery in Washington."

Lt. Thornton Scott, MC, USNR (*res. WM* 1939) is assigned to the USN Preflight School at Chapel Hill, N. C. He reports to the War Records: "I am at present "Chief of Medicine" and sole member of that department at the Naval Hospital recently commissioned here, and have just completed a series of lectures in neurology at the University of N. C. Medical School."

Lt. R. Starr Lampson, MC, USNR, (ES 1936) sends his address as Maine Maritime Academy, at Castine.

Lt. Marcus E. Farrell, MC, USNR, (WM 1934) is on duty at the Main Dispensary, US Naval Air Station, Jacksonville, Fla.

The Hospital mail bag brings another friendly letter from a recent graduate, Capt. William E. Flood (res. D 1942).

> I have been receiving "The News" and have enjoyed every issue. It is a wonderful feeling to read about what is happening at the M.G.H. and the friends who are in the service. When I first arrived in Boston I thought Texas was the only place on earth, but since I am back here I have reversed my thoughts. I thoroughly enjoyed every minute I spent at the M.G.H.
>
> I am rather amused at what goes on with the M.G.H. unit, because the Baylor unit is in about the same situation and the remarks of the units are about the same. Both "gripe" about fighting the war at their respective stations.
>
> Since coming with the service I spent three delightful months at Johns Hopkins, and then was sent here to Fort Sam Houston as Post Venereal Disease Control Officer. I have had a very nice syphilis clinic which I established, and through some miracle, not my own, the V.D. rate has dropped. I received my captaincy in December 1942, but at the present time have been relieved of all duty and am now impatiently awaiting orders.
>
> I should like to send my regards to Buchanan, Dick Carter, and Charles Derrick.

Capt. Charles E. MacMahon, MC, AUS, (*ES 1938*) is at the 111th Station Hospital, Camp Wheeler, Macon, Ga., and has been joined there by Mrs. MacMahon (formerly Elizabeth Galey, secretary in the Surgical Department). He writes of his earlier service: "While at Lawson General, many pleasant visits with Tom Ballantine and on one occasion Ed Cantlon up from Blanding."

After a nine weeks' Service of Supply Course at Fort Leavenworth, Kansas, Major C. F. Goeringer, MC, AUS, (*Or. 1940*) returned to Camp Edwards on February 1, and is once again chief of the orthopaedic service there. Major and Mrs. Goeringer (Mary Poules, MGH 1938, and later a staff nurse on the Emergency Ward) are living in Pocasset.

After service with the 114th Medical Battalion at Camp Edwards and at Fort Dupont, Del., Major Otto C. Yens, MC, AUS, (*CM 1930*) is now with the Medical Detachment of the 181st Infantry at Camp Framingham, Mass.

Major Reno R. Porter, MC, AUS, a research fellow in medicine here during 1939-41 and now a member of the 7th General Hospital, received this promotion in September 1942. He is still at the Lovell General Hospital at Camp Devens.

Lt. Comdr. Roy E. Mabrey, MC, USNR, (*a. in* S) after being transferred from the US Naval Hospital in Chelsea to the Naval Operating Base at Norfolk, Va., is now at a Naval Air Base in Maryland.

Lt. Joseph A. Holmes, MC, USNR, (*P 1936 & ES 1938*) was promoted to senior grade on October 1, 1942. He was assigned to the Marine Barracks in Boston early last year, and is now with US Marine Corps Unit No. 640.

Lt. Robert H. Barker, MC, USNR, (*WS 1937*) is now assigned to the Office of Naval Officer Procurement at Nashville, Tenn. He was previously at the US Naval Hospital at Norfolk, Va.

Lt. Comdr. George E. May, MC, USNR, (*a. obst.*) is at the Receiving Station, South Boston.

Capt. Henry L. George, MC, AUS, (*CM 1929*) is stationed at the Halloran General Hospital, Staten Island.

Capt. David R. Weir, MC, AUS, (*res. P, 1938*) is with the 4th General Hospital, the unit of the Lakeside Hospital (Cleveland), and is now on service overseas.

Major Howard W. Berg, MC, AUS, (*res. D 1936*) is on service overseas with the 91st Evacuation Hospital.

Lt. Comdr. Robert L. Thomas, MC, USNR, (*NS* 1933, *ES* 1936) wrote recently that he was medical officer of the USS "President Hayes" and that on February 25 he ended a year of active service:

> The frequency with which I have come across doctors from the M.G.H. has fascinated me, and I have no doubt it might truly be said that the sun never sets on men from there. Among those I have seen are Lt. Comdr. D. L. Farnsworth, USS "Solace," Lt. Joseph C. Placak, USN Mobile Hospital Unit #5, and Lt. A. W. Kitts, 1st Marine Regt. Only yesterday I was sitting on a door stoop waiting to see the Force Surgeon when another doctor sat down beside me. One word led to another, and he turned out to be Commander Tenney, USS "Argonne."

Major Ernest J. Radcliffe, MC, AUS, (*Or* 1925) who was first assigned to service at the Station Hospital at Bradley Field, Conn., has sent the following news of himself, from A.P.O. 865, c/o Postmaster, New York, dated late in December: "At present I am in charge of a new and very nice Station Hospital (150 beds) at an air base. My only complaint is that we don't have enough to do to keep us busy." Later news from Major Radcliffe would probably contradict this view.

Lt. Richard R. Carter, MC, AUS (*res. N* 1942) sends a line for himself and Lt. Leon F. Ray (*res. D.* 1939) to the War Records from the 46th General Hospital at Fort Riley, Kansas: "We have been here longer than the 6th G.H. was at their first station, and put on several retreat parades before they did."

Feb. 15, 1943

Dear Dr. Faxon:

My attention has been called to a recent news item in the Massachusetts General "News" in which this hospital was referred to as the second Harvard Unit. To be sure, this organization was activated after the 5th General, but we wish to correct any impression that this unit is second to any.

This organization has been operating its permanent (if anything is in these days) installation for more than seven months and has been treating the sick and wounded. Even more noteworthy is the fact that it has provided two portable hospitals which have seen action and rendered a most distinguished service. George Marks and Neil Swinton have had command of two of the best three medical units. So creditably have they performed their duties that they have been mentioned by the Surgeon.

So many of your former staff members are with this organization that you will be interested to know we are plenty busy doing the task we originally set out to do. We are actually bulging, and have patients under canvas.

One of the editorials in The Boston Herald of March 11 was called "Portrait of a Bishop." It is here quoted entire, and provides disinterested comment on Bishop Sherrill's little book about Bishop Lawrence. A brief notice of the publication of the book was made in our issue of last month. This editorial confirms our natural suspicion that merit would be found in this biography, and also suggests much pleasure in it for all readers:

> Perhaps "The days of our youth are the days of our glory" and we can't retrieve the joys of early manhood, but the late Bishop Lawrence would probably not have assented to the dictum of the poet. He had a youth of vigor and large accomplishment—but, as Bishop Sherrill says in the new little book of the Harvard University Press, the sturdy old Bishop "did more than endure old age: he made it a career of strong living and happy service to others." The readers of this good biographical monograph, "William Lawrence: Later Years of a Happy Life", will be many. It is a sort of supplement to Bishop Lawrence's autobiographical "Memories of a Happy Life". Some who peruse it may question, however, whether the nestorian Bishop was not as happy as the youthful one. The book indicates that he, too, exemplified the remark which Justice Holmes made on that memorable 90th birthday: "To live is to function, that is all there is to living!"
>
> The autobiography covered the Bishop's life from birth to 1926, but in the remaining fifteen years, crises arose which tested a man's soul and intellect more severely than the problems of the earlier period. Civilization and American democracy came under attack. Many of the old concepts seemed, to the younger generation especially, no longer valid. The aged Bishop responded as if he were in his very prime. He analyzed things with keenness and expressed his convictions boldly. He appeared to be a prophet whose vision became clearer with age.
>
> The heart and soul of the Bishop are more clearly revealed in this compact book, many will find, than in the more pretentious autobiography. A reader may conclude that Bishop Sherrill knew the old Bishop better than Bishop Lawrence knew himself.

This book has just been published by the Harvard University Press.

Previous to his appointment as Chief of the Dental Service, noted above, we could not claim for this list "Traumatic Surgery of the Jaws," by Dr. Kurt H. Thoma. It was published last August by the C. V. Mosby Company, St. Louis.

Another book by an MGH graduate should be mentioned, and later reviewed we hope. "A Surgeon's Fight to Rebuild Men," by Dr. Fred H. Albee (SS 1904) has just been published by E. P. Dutton & Co., New York.

The New England Journal of Medicine for Feb. 25 contains a letter to the Editor on the "Need for Medical Officers." Its signature discloses a promotion in rank for Comdr. Robert S. Palmer, MC-V(S) (*WM* 1927) and give his present duty as Senior Medical Officer at the Office of Naval Officer Procurement, 1st Naval District, Boston.

Civilian Health in Wartime. By Francis R. Dieuaide, M.D., Associate Professor of Medicine, Harvard Medical School; Physician, Massachusetts General Hospital. Harvard University Press, 1942.

In a book recently published, "Civilian Health in Wartime," Dr. Dieuaide has presented to the public, lay and professional, matter for very serious consideration. This excellent book could well be called prophetic in that it was published some time before actual rationing went into effect or the problems of food shortages and absenteeism became a matter of public concern. Dr. Dieuaide has documented himself carefully, and has very wisely drawn on British and German sources of information in order to record some very intelligent judgments on the problems associated with total war.

The volume, which is well arranged and easily read, specifically concerns itself with national health in relation to nutritional needs, safety from infectious diseases, proper shelter and clothing, the peculiar problems of motherhood and the position of women in the present crisis, the problems of the aged, and the problems of mass industry under pressure. Finally, Dr. Dieuaide presents a very adequate picture of medical practice and medical obligations as they exist at the present time. Inasmuch as the book is written for laymen as well as for physicians, much of the material is given in simple, uncomplicated form. There is, however, a good deal that is of statistical value in the various tables provided, and the book could very easily form the basis of a proper and scientific consideration of many of the major medical problems attendant on war and postwar periods. Furthermore, references to the literature are frequent and very pertinent.

Dr. Dieuaide has recognized the faults of our own system, as well as those existing in England and on the continent, but has wisely referred to the experiences of both England and Germany in their attempts to produce better community health or better military and industrial health, as the case may be. Certainly, in the present conflict anything that can be learned from either friend or enemy should be utilized, and Dr. Dieuaide has done so very satisfactorily. Although not strictly a sociologic or economic treatise, his book provides an excellent background against which the present-day problems stand out in clear relief for careful consideration, including the whole subject of morale, propaganda and postwar aims.

The chapters on nutrition are essentially sound and are detailed enough to demonstrate the dietary inadequacies due to fads and the necessity of considering nutrition from the point of view of the maintenance of robust good health rather than from that of just avoiding deficiency disease. He points out very correctly that a varied diet may be quite unsatisfactory and is often merely unnecessarily expensive. The fallacies of commercial advertising as regards specific food problems and vitamins are fully and properly delineated, although he admits that "there is a long way to go before Americans as a whole approach their optimal nutritional state." The need for a greater community awareness of prophylaxis against infectious and contagious disease is strongly emphasized, with a good deal of detailed information that the general public should have if it were a thinking unit. Very logically he points out the rather obvious fact that intelligent reductions in diet and heating may produce better health, rather than otherwise, and that food and fuel rationing are not the calamities they superficially appear to be.

Birth control, problems of infant feeding, and care of the mother receive adequate attention. In a short review it is impossible to deal with the many subjects covered, except to note that they are discussed. The entire volume is well prepared in a very orderly fashion and represents a real contribution for thoughtful readers.

CHESTER M. JONES.

It is reported in a recent Journal of the A.M.A. that the names of Lt. Perry J. Culver (*EM* 1942) and Lt. John Homans, Jr. (*WM* 1942) were included among the ten highest in the class of student officers who graduated on January 9 at the OTC for Army Air Force Medical Department Officers at Miami Beach, Fla. The class numbered more than 600 officers and comprised about one third medical department officers.

Last month Lt. Comdr. Theodore C. Pratt's (*ES* 1929) service "at the front" was mentioned, but an equally brief entry in the recent Harvard Medical Alumni Bulletin says more: "With Marines in Solomons."

Lt. Comdr. James C. White, still active here in addition to his military service at the Chelsea Naval Hospital, shares two letters from former members of his staff. Lt. Comdr. John T. B. Carmody (*NS* 1934) writes as a member of USN Mobile Hospital No. 6:

> Censorship regulation now allows us to say that we are stationed somewhere in New Zealand, more than that must rest on speculation. We have been very busy, and I have had much to do neurosurgically; in fact up to date it has been an active service with many gunshot cranial cases, the type one would never see in civilian practice.

Lt. Hannibal Hamlin, MC, USNR (*res. NS* 1942) sends technical and other comments on his service both ashore and aboard a hospital ship.

> I have been converted to intraspinal lipiodal for diagnostic use. Had great success with it at Pearl Harbor and particularly on a very important officer at a critical time who had a mid-line 4th disc; returned to his ship on the 16th day. Fortunately we had an excellent x-ray man from U. of Calif.
>
> Despite many gripes I have been better off than most neurosurgeons out here. Some good experience at Pearl Harbor, with too many sterile gaps, and now some months of excellent experience on the "Solace," handling war wounds of all kinds. Little neurological work but invaluable nonetheless. Now I am being transferred to an advance base section, which should be a real opportunity to get at the material early. With air transport there is great need for the availability of neurosurgery in amphibious warfare, quite different from the usual naval action requirements. Censorship will not allow me to cite cases and observations. I can say that Jack Carmody has been getting some good material. Anyway it's an amazing war.

Major Thomas S. Claiborne, MC, AUS, (*WM 1934*) has been serving with the 43rd General Hospital. This unit was organized more than eighteen months ago as the Emory University Hospital Unit, and was activated on September 1, 1942, at Camp Livingston, La. A similar unit, Base Hospital No. 43, served at Blois during the First World War.

Dr. Louis Nathan (*Or. 1930*) has been with the Veteran's Administration since June 1, 1942. After a six weeks' training period at the Veterans' Hospital in Minneapolis, he was transferred to Pittsburgh, where he has been doing the orthopaedic examinations and surgery at the Veterans' Hospital there. He writes that most of the patients are veterans of World War I.

In medical annals the term "aviation medicine," or one to correspond with it, will date from this war. Its problems must remain military secrets for the present, but THE NEWS has been glad to receive a general description of one phase of the work from Dr. LeMoyne White (EM 1942). He wrote from Hangar No. 2, Washington National Airport, Transcontinental & Western Air, Inc., Intercontinental Division, to tell what he may of the work in which he and Dr. R. Bretney Miller (a. in M) are there engaged:

> It is fairly difficult to give you a complete picture, as our work is strictly military in nature. All told there are three of us in the Medical Department, with some 1600 personnel under our care. Of these 600 are on active flight service, and some 300 additional ground personnel are in the foreign field.
>
> Our work covers personnel here in Washington as well as those stationed outside the country. We have many of the problems of aviation medicine, but do not concern ourselves with the special needs of flight personnel involved in active combat duty. Ours is entirely transport work operating under the Air Transport Command. We have plenty of medical practice to keep us busy, with the added interest that problems in aviation medicine and tropical medicine present.
>
> Although none of us have as yet been actually stationed in the foreign field, trips outside the country for the survey and care of personnel are necessary.

Following this Dr. O. H. Pearson (WM 1941) sent to the War Records a brief report of another branch of the air service and the men attached to it. Dr. Pearson writes as a Medical Director, Pan American Airways, Africa-Orient Division, under contract with the U.S. Army Air Transport Command:

> In Africa from February to December 1942. The "first M.G.H. unit in Africa" consisted of Drs. Gordon E. Jones (ES 1939), Leonard P. Eliel (EM 1942), Robert P. Tucker (WS 1940) and myself. We had an interesting experience in tropical medicine, the highlights of which are to be reported shortly in "War Medicine." The Army took over in December 1942 and Jones was transferred to the Alaska Division, Eliel and Tucker to the Atlantic Division, and myself to the new Africa-Orient Division of Pan American Airways.

Dr. Eliel recently sent to the War Records a few facts about himself. After eight months as a medical officer at a main base hospital on the Gold Coast in Africa, he returned to the United States in December. His present assignment, still with Pan American Airways, is at La Guardia Field, N. Y.

Another phase of aviation medicine is mentioned by Capt. W. J. Tobin, MC, AUS, (Or 1939) in sending an account of his service.

> This is my second tour of duty at Fort Benning, Georgia, having been here after I left Boston and before I returned to civilian practice in Washington. I was recalled to active duty last April, going first to Walter Reed General Hospital and then being reassigned here. I am still interested in the "parachute injuries" and am gratified to report that the incidence among the jumpers is remaining incredibly low.

Major Albert G. Engelbach, MC, AUS, a former assistant director here and since 1937 director of Cambridge Hospital, is now with the 87th General Hospital at Fort Devens, "working as operations and training officer of the unit."

* * *

Lt. Col. Thomas H. Lanman (ES 1918) is now with the 10th Station Hospital, USA, and has been made Commanding Officer of that hospital. His address is APO 813, c/o Postmaster, N. Y.

Lt. Col. Ralph F. MacDonald, MC, AUS, (*ES* 1922) was inducted into the service on March 5, 1941. He is with the 210th F. A. Battalion and writes from Fort Lewis, Wash.: "Have no particular news but am delighted to hear from the M.G.H. Kindest regards."

Major Edgar S. Gordon, MC, AUS, (*P* 1935) is with the 44th General Hospital. He received his commission in June 1942, and was first assigned to Fort Knox. He is now at Fort Sill.

Capt. I. H. Jaffee, MC, AUS, a former graduate assistant in the Allergy Clinic, has been transferred from Fort Devens to the McCaw General Hospital at Walla Walla.

Lt. Benjamin L. Huntington, MC, AUS, (*WM* 1940), recently at the LeGard General Hospital at New Orleans, is now at the Nichols General Hospital at Louisville.

Major Walter M. Bartlett, MC, AUS, (*CM* 1927) who received his first commission as a Lieutenant, was given this second promotion in July 1942. His first assignment was at the Lawson General Hospital at Atlanta. He is now with the 16th General Hospital at Camp Bowie, Texas.

Capt. Ephraim P. Engleman, MC, AAF, who was a research fellow in medicine here during 1941-2, received this promotion in rank on January 22, 1943. He is still at Hammer Field, Fresno, Calif.

Lt. Col. Francis D. Pierce, MC, AUS, (*r.p.* WM 1931) was advanced in rank from Major on January 14, 1943. He is still Commanding Officer of the 59th Station Hospital, which is now at Camp Young, Indio, Calif., and of a sizable young camp Station Hospital recently added to it.

The War Records reports that Dr. Donald Murnaghan, a research fellow and graduate assistant in Medicine, 1940-2, received his commission as Flight Lieutenant, RCAF, and that this rank is equivalent to Captain. He is at No. 2 Initial Training School, Regina, Saskatchewan.

Major Louis A. Goldstein, MC, AUS, (*res. O 1937*) is attached to the 19th General Hospital. This unit was made up almost entirely of staff members of the Rochester (N. Y.) General Hospital, and has been on duty at Camp Livingston, La. Major Goldstein sends word that he is to be at the Mayo Foundation at Rochester, Minn., until April. He was formerly Assistant Professor of Orthopaedic Surgery at the University of Rochester.

Major Morton M. Pinckney, MC, (*WM 1932*) gives news of himself in late January and reports that Dr. W. Taliaferro Thompson (*r.p. 1941*) is also in service:

> I was commissioned Sept. 13, 1940, and our unit was activated May 15, 1942, at Camp Lee, where we have been sitting ever since. Our unit is composed principally of staff members of the Medical College of Virginia many of whom received their post-graduate training in Boston, among them William Taliaferro Thompson, who was at the M.G.H. in 1940-1. Others have trained at the Brigham or City.
>
> There is little news to report, and that's no military secret. Our unit excels at volley ball and Russian bank, with a modicum of medicine on alternate Tuesdays. We have enjoyed "The News" greatly, and hope to read more of our friends' activities.

Dr. Thompson holds the rank of Lieutenant, MC, AUS, and sends news of himself in response to our inquiry:

> "The News" did much to recall my very pleasant and profitable year at M.G.H. I appreciate your interest and have enjoyed the several issues.
>
> About myself—I have been expecting foreign service momentarily for over a year. I was a medical resident at the Medical College of Virginia when called to active service as a 1st Lieutenant on October 13, 1941, and held a reserve commission in the Medical Corps. Although I worked in the Station Hospital at Camp Lee, I requested assignment to the then inactive 45th General Hospital. This was granted, so when the 45th G.H. was activated on May 15, 1942, I was transferred.

Present members of the staff of the Ashford General Hospital at White Sulphur Springs, W. Va., include Capt. Frank L. Bauer (*P* 1941) and Capt. Samuel B. Kirkwood, (*WS* 1934). Captain Bauer has seen previous service in Station Hospitals at Camp Robinson, Ark., and Camp Maxey, Texas; Captain Kirkwood had been assigned to service with the Marines.

Lt. Henry C. Thacher, MC, AUS, (*CM* 1942), after his first assignment at Fort Devens, has been with the 50th Station Hospital at Fort Custer, Mich., and recently at Camp Lee, Va.

Major Wyland F. Leadbetter, MC, AUS (*a.u.*) writes to the War Records from the 33rd General Hospital, Fort Jackson, S. C.: "We're waiting patiently (?) for foreign service. In the meantime this is our place of business."

In completing his War Records blank, Lt. Col. Gilbert T. Hyatt (*WS* 1931 & *Or.* 1934) gives Mar. 5 as the date of this latest promotion, his third since entering the service. His present assignment is Chief of the Surgical Service at the Station Hospital, Camp Devens.

Capt. William P. Huber, MC, AUS, (*res. D 1937*) went into service in the spring of 1941 as a 1st Lieutenant. Until recently he was Battalion Surgeon, with the 305th Engineer Battalion, 80th Infantry Division, at Camp Forrest, Tenn. He is now with the 106th Infantry Division at Fort Jackson, S. C.

Capt. Luke Gillespie, MC, AUS, (*a. obst.*) of the 98th Evacuation Hospital (motorized) is on detached service with the 30th Evacuation Hospital (mtz.) He is at present chief of the surgical service, and the 30th E.H. is on manoeuvres in Louisiana.

Major T. V. Urmy, MC, AUS, (*a.p.*) on service at the Station Hospital at Camp Chaffee, Ark., writes that he was "recently elevated to Chief of Medical Service."

Dr. Walter E. Vest, Jr., a recent graduate assistant, is now a 1st Lieutenant, MC, AUS, at the Station Hospital, Camp Chaffee, Ark.

Capt. A. C. van Ravenswaay, MC, AUS, (*P 1934*) writes from the Station Hospital at Jefferson Barracks, Mo., where he is Chief of the Medical Clinic.

Capt. George B. Beaman, MC, AAF, (*a. Psychi.*) has recently been appointed chief of the neuropsychiatric section of Station Hospital at Jefferson Barracks.

Major William A. Perkins, MC, AUS, (*ES* 1917) has been on duty at Fort Douglas, Utah, and is now at the Station Hospital, Camp White, Ore.

Lt. Col. Donald McNeil, MC (*Or.* 1930) sends word of his service and assignment: "The 51st Evacuation Hospital, a Sacramento, Calif. hospital unit, was activated Oct. 15, 1942 at Fort Lewis, Wash. We are still here but hope to be moving on soon."

Capt. Edwin R. Durno, MC, AUS, (*ES 1929*) received his commission and went into active service on October 30, 1942. He had been with the Barnes General Hospital in Vancouver, Washington (the Medical Reserve Pool); the Fitzsimmons General Hospital at Denver; and was recently assigned to the 1st Auxiliary Surgical Group at Fort Sam Houston.

Capt. T. Wiley Hodges, MC, AUS, (*Or. 1941*) sends an account of his military activities:

> I entered the Service in July 1941, and was sent to Station Hospital, Ft. Bliss, Texas, for two months and then transferred to Station Hospital, Camp Bowie. After a year there I was transferred to Station Hospital, Camp Hood, Texas. All my work has been in orthopaedic surgery, so I have felt quite fortunate. Camp Hood is a [deleted] center with very active training, so the orthopaedic service has been most active.

Commander Joseph S. Barr, MC, USNR, (*Or.* 1929) whose promotion was mentioned last month, writes: "After a brief stay at the Naval Hospital, St. Albans, L. I., I've been transferred to the Bureau of Medicine and Surgery in Washington."

Lt. Thornton Scott, MC, USNR (*res. WM* 1939) is assigned to the USN Preflight School at Chapel Hill, N. C. He reports to the War Records: "I am at present "Chief of Medicine" and sole member of that department at the Naval Hospital recently commissioned here, and have just completed a series of lectures in neurology at the University of N. C. Medical School."

Lt. R. Starr Lampson, MC, USNR, (ES 1936) sends his address as Maine Maritime Academy, at Castine.

Lt. Marcus E. Farrell, MC, USNR, (WM 1934) is on duty at the Main Dispensary, US Naval Air Station, Jacksonville, Fla.

The Hospital mail bag brings another friendly letter from a recent graduate, Capt. William E. Flood (res. D 1942).

> I have been receiving "The News" and have enjoyed every issue. It is a wonderful feeling to read about what is happening at the M.G.H. and the friends who are in the service. When I first arrived in Boston I thought Texas was the only place on earth, but since I am back here I have reversed my thoughts. I thoroughly enjoyed every minute I spent at the M.G.H.
>
> I am rather amused at what goes on with the M.G.H. unit, because the Baylor unit is in about the same situation and the remarks of the units are about the same. Both "gripe" about fighting the war at their respective stations.
>
> Since coming with the service I spent three delightful months at Johns Hopkins, and then was sent here to Fort Sam Houston as Post Venereal Disease Control Officer. I have had a very nice syphilis clinic which I established, and through some miracle, not my own, the V.D. rate has dropped. I received my captaincy in December 1942, but at the present time have been relieved of all duty and am now impatiently awaiting orders.
>
> I should like to send my regards to Buchanan, Dick Carter, and Charles Derrick.

Capt. Charles E. MacMahon, MC, AUS, (*ES 1938*) is at the 111th Station Hospital, Camp Wheeler, Macon, Ga., and has been joined there by Mrs. MacMahon (formerly Elizabeth Galey, secretary in the Surgical Department). He writes of his earlier service: "While at Lawson General, many pleasant visits with Tom Ballantine and on one occasion Ed Cantlon up from Blanding."

After a nine weeks' Service of Supply Course at Fort Leavenworth, Kansas, Major C. F. Goeringer, MC, AUS, (*Or. 1940*) returned to Camp Edwards on February 1, and is once again chief of the orthopaedic service there. Major and Mrs. Goeringer (Mary Poules, MGH 1938, and later a staff nurse on the Emergency Ward) are living in Pocasset.

After service with the 114th Medical Battalion at Camp Edwards and at Fort Dupont, Del., Major Otto C. Yens, MC, AUS, (*CM 1930*) is now with the Medical Detachment of the 181st Infantry at Camp Framingham, Mass.

Major Reno R. Porter, MC, AUS, a research fellow in medicine here during 1939-41 and now a member of the 7th General Hospital, received this promotion in September 1942. He is still at the Lovell General Hospital at Camp Devens.

Lt. Comdr. Roy E. Mabrey, MC, USNR, (*a. in S*) after being transferred from the US Naval Hospital in Chelsea to the Naval Operating Base at Norfolk, Va., is now at a Naval Air Base in Maryland.

Lt. Joseph A. Holmes, MC, USNR, (*P 1936 & ES 1938*) was promoted to senior grade on October 1, 1942. He was assigned to the Marine Barracks in Boston early last year, and is now with US Marine Corps Unit No. 640.

Lt. Robert H. Barker, MC, USNR, (*WS 1937*) is now assigned to the Office of Naval Officer Procurement at Nashville, Tenn. He was previously at the US Naval Hospital at Norfolk, Va.

Lt. Comdr. George E. May, MC, USNR, (*a. obst.*) is at the Receiving Station, South Boston.

Capt. Henry L. George, MC, AUS, (*CM 1929*) is stationed at the Halloran General Hospital, Staten Island.

Capt. David R. Weir, MC, AUS, (*res. P, 1938*) is with the 4th General Hospital, the unit of the Lakeside Hospital (Cleveland), and is now on service overseas.

Major Howard W. Berg, MC, AUS, (*res. D 1936*) is on service overseas with the 91st Evacuation Hospital.

Lt. Comdr. Robert L. Thomas, MC, USNR, (*NS* 1933, *ES* 1936) wrote recently that he was medical officer of the USS "President Hayes" and that on February 25 he ended a year of active service:

> The frequency with which I have come across doctors from the M.G.H. has fascinated me, and I have no doubt it might truly be said that the sun never sets on men from there. Among those I have seen are Lt. Comdr. D. L. Farnsworth, USS "Solace," Lt. Joseph C. Placak, USN Mobile Hospital Unit #5, and Lt. A. W. Kitts, 1st Marine Regt. Only yesterday I was sitting on a door stoop waiting to see the Force Surgeon when another doctor sat down beside me. One word led to another, and he turned out to be Commander Tenney, USS "Argonne."

Major Ernest J. Radcliffe, MC, AUS, (*Or* 1925) who was first assigned to service at the Station Hospital at Bradley Field, Conn., has sent the following news of himself, from A.P.O. 865, c/o Postmaster, New York, dated late in December: "At present I am in charge of a new and very nice Station Hospital (150 beds) at an air base. My only complaint is that we don't have enough to do to keep us busy." Later news from Major Radcliffe would probably contradict this view.

Lt. Richard R. Carter, MC, AUS (*res. N* 1942) sends a line for himself and Lt. Leon F. Ray (*res. D.* 1939) to the War Records from the 46th General Hospital at Fort Riley, Kansas: "We have been here longer than the 6th G.H. was at their first station, and put on several retreat parades before they did."

Feb. 15, 1943

Dear Dr. Faxon:

My attention has been called to a recent news item in the Massachusetts General "News" in which this hospital was referred to as the second Harvard Unit. To be sure, this organization was activated after the 5th General, but we wish to correct any impression that this unit is second to any.

This organization has been operating its permanent (if anything is in these days) installation for more than seven months and has been treating the sick and wounded. Even more noteworthy is the fact that it has provided two portable hospitals which have seen action and rendered a most distinguished service. George Marks and Neil Swinton have had command of two of the best three medical units. So creditably have they performed their duties that they have been mentioned by the Surgeon.

So many of your former staff members are with this organization that you will be interested to know we are plenty busy doing the task we originally set out to do. We are actually bulging, and have patients under canvas.

Everybody is well and the weather is warm and for the most part clear.

This organization has a splendid commanding officer in Colonel Raymond O. Dart, who has built an administrative staff that functions smoothly and accomplished much. As well you might imagine, the problems have been many and difficult. The sick and wounded here get the best.

We suspect the 6th General is off by now and wish them the best of luck.

With kindest regards to you and all our friends at the hospital.

Sincerely,

Gus Thorndike.

A. Thorndike, Lt. Col., MC, AUS
105th General Hospital, A.P.O. 923
San Francisco, Calif.

To this should be added the more recent information that Colonel Thorndike, with this promotion, is now Commanding Officer of the unit, and that the writer of the following letter to The News, Lt. Col. Edwin F. Cave, has become chief of its surgical service, also with promotion in rank:

14 March 1943

To the Editors;—

I have been asked by Lieutenant Colonel Thorndike, Commanding Officer of the 105th General Hospital, APO 923, to send you a brief report of our organization, so that the Massachusetts General Hospital may know something of our unit and its work. We have been in this Theater of Operations for several months (Censorship forbids giving the number), and after spending one month in staging areas, we began active hospital work and care of patients. Since that time, our Hospital has grown steadily both in construction in buildings and in the number of patients admitted. Naturally the census of the hospital varies from time to time, depending upon the amount of activity at the Front. At one time, however, the number of patients was several times the usual census of the Massachusetts General Hospital.

We realize that we have been fortunate in getting to work so early in the war, and all in all, we have been having a very interesting time. The types of cases treated have varied from the usual routine of those seen in civilian practice to the most extensive battle casualties. We are particularly proud of the extraordinary good work our two Portable Units have done near the Front Lines.

This Unit is sponsored by the Harvard Medical School, and the Officers of the professional staff, representing the Massachusetts General Hosptal, are:

Thorndike
Cave
Greene
Marks
Baker
Sheldon
Newell
Clifford
Ham
Coons
Crosby
Kaufmann
Kneisel
Rowe
Thompson
Albright
Dahl
Pier
Lambert
Snow
Yee

Our geographical location has been very satisfactory, and since we are not in a large city, it is occasionally possible for us to see some of the countryside. The weather for the most part has been delightful. Our hottest time of the Summer, which is now drawing to a close, was Christmas Day, when the thermometer registered 95 degrees.

We think the "Massachusetts General Hospital News" is a great publication, and we look forward with keen interest to receiving it. We know that the Massachusetts General Hospital can function perfectly without us, but nevertheless we shall be glad to be back there at work again when the war is won.

Our kindest regards to our friends at the Hospital.

Lieutenant Colonel Cave had earlier sent informal word of the service of the 105th to Dr. F. A. Washburn and to Dr. Faxon:

We are proud of the work our portable units have done in the jungle near the front lines. They accomplished a hard job very effectively under most trying climatic conditions. The recent smashing victory over the Jap convoy approaching New Guinea has given us a great boost, and we look forward to more such triumphs.

We think of our many friends in No. 6 and wish them well and hope they are hard at work now. We shall look forward to seeing all of them when this scrap is over, unless we should be fortunate enough to meet them before that time. Walter Garrey paid us a visit not long ago and we have heard from Charles Johnson.

Please remember me to the staff members—we hope to see you before many months roll by—but we are here to finish our job.

...—V...—

Colonel Goethals' welcome report to Dr. Faxon of the transfer of our unit to North Africa was dated February 25 and written from Headquarters 6th General Hospital, A.P.O. 668, c/o Postmaster, New York:

One month to the day elapsed between our departure from our quondam station and our arrival in the Theater of Operations. The history of this unit will reveal dates, routes and incidents in due course, but for the moment censorship forbids all but a few details.

Our trip to the Port was uneventful and was conducted by Captains Heyl and Sullivan with all the "aplomb" of veteran transportation officers. Debarkation was effected in a convoy, the conduct of which spoke highly for the efficiency of the Army Transport Service. For myself I can only say that, as a veteran of two wars, I had no more qualms at crossing the sub-infested sea at my present ripe age than I had on R.M.S. "Saxonia" in 1917 when I was a callow and enthusiastic youth in my twenties. The nurses had a rush of officers at their beck and call and were organizing their "dates" at so much time per day per escort before the journey ended. There was a gentle sea, and an infinitesimal incidence of *mal de mer*.

Four officers,—Captains Ingalls, Holland, Sturgis and Ludwig,—and twenty-four nurses are temporarily on detached service, but we hope to get them back before long. Colonel Talbott was detached from us for duty with the Office of The Quartermaster General the day before we sailed: this, despite a long distance telephone call to The Surgeon General requesting that the order detaching Talbott be rescinded!

It will intrigue you and Colonel Washburn both to know that we are being set up in a college and an associated school. Shades of the *Lycée de Talence* of 1917! Much work has been done to convert the buildings for their projected use, and we are gratified by the progress made before our arrival. We are well quartered, amply fed on field ration "B", and in a climate reminiscent of Boston in late May. Our setup in many respects is reminiscent of the White Building, believe it or not. The Surgeon has done us proud, and we are ready to go into action after our equipment is sorted and set up and a little more construction has been accomplished.

Best regards from us all to all at the Massachusetts General Hospital.

From Lt. Col. James R. Lingley, through the X-ray Department, comes a delightfully informal supplement to Colonel Goethal's letter:

Well, aren't we in luck? It's worth all the time at Blanding to have fallen into a situation like this. To begin where I left off on the ship's log, the remainder of the voyage was quite uneventful. Our landing was held up . . . during which we remained on the boat looking longingly at dry land and studying as much as we could see of the city through field glasses. We disembarked after dark and were taken in ambulances through a complete black-out, still without the faintest idea of where we were going but expecting to be parked in tents or even shelter-halves somewhere outside the city limits. What was our surprise to have the convoy turn in at the most beautiful park-like grounds and deposit us in front of a magnificent cement and marble palace!

The *Collège des Jeunes Filles* is now the 6th General Hospital and if the school is any indication, the young ladies must have been multi-millionaires. By additions here and there and by much remodeling, we are making it over into a hospital. . . . The classrooms are becoming wards, an operating suite has been added and we are taking over a large garage for wards. The officers of field grade are at present billeted on the girls' dormitory floor which is constructed entirely of marble. Each of us has a booth in which there is a bed with straw mattress, a small bureau, mirror, sink with running water.

We expect to be here only about ten days, as this floor will be used for officer patients and we shall be billeted in hotels or private homes. Every department is getting a place to work in that exceeds its wildest expectations—except the X-ray Department. We are getting the only wooden building in the place and it is a very old French antique which cannot be torn down because of historical reasons. However, we arrived just in time to cancel the contemplated remodelling plans and I have submitted my own plans of just how I want it laid out. Gee, it's wonderful to have a real job of work to do and to be so busy that there's no time for anything else. Our first patients are arriving so we must do everything at double time to get ready for them.

I'm sorry I can't tell you the name of the city. It is a vacation resort with a climate about like that of Southern California. About half its population is Berber, and half French. French is the predominant language and practically all the stores are French. The houses are all made of cement and stucco and some of the buildings are very beautiful. There are department stores that look very much like Fifth Avenue. Every store, however, looks like the day after a bargain sale, the stock being depleted to a few articles no one would think of buying. I have seen no slums yet—the entire city being composed of stores and very large modern-looking apartment houses. On every corner there is a café with tables out on the sidewalk, and these places are very well patronized, the French people apparently parking there most of the day while they drink wine and watch the passers-by. The passing throng is really something to watch, too. I doubt if you find so many different costumes anywhere else in the world. The Arab males wear white robes or burnooses, and are the most evil looking cut-throats you ever saw. The females wear white robes and are veiled so that only their eyes are visible.

The French are very easy to get along with. They are very polite. The women are the last word in beauty culture. There are innumerable varieties of native military uniforms most of them remarkable for their bright colors. Then there are the French soldiers and sailors, English, Canadian and Australian soldiers, and plenty of American soldiers and gobs. It is better than any circus just to stand on a street corner and look.

THE NEWS

No. 8 Boston, Mass. May 1943

The Massachusetts General Hospital is proud to learn that Lt. Comdr. Theodore C. Pratt, M.C., U.S.N.R., (*ES* 1929) has been decorated with the Navy Cross, for "extraordinary heroism and distinguished service in the line of his profession as chief surgeon of a division field hospital on Guadalcanal during the period August 7 to September 24, 1942."

This, the first reported award of a military decoration to a member of the Hospital staff, was announced recently by the Fifth Naval District. The citation accompanying the medal states the uncommon quality of service implied by this distinguished award.

"While enemy planes repeatedly bombed the area and surface craft shelled the hospital, Lieutenant - Commander Pratt coolly and courageously attended the daily casualties which came under his care, operating and supervising the treatment of the wounded, at all times maintaining a high standard of efficiency. His fine professional skill and outstanding devotion to duty were in keeping with the highest traditions of the United States Naval Service."

Lieutenant Commander Pratt, commissioned in July 1941, went on active service in September, first at the Chelsea Naval Hospital and then with the 1st Marine Division at New River, N. C. Last December he was for a time a patient of his colleague, Lt. Comdr. Howard B. Sprague, at USN Mobile Hospital No. 6.

One vessel of the convoy carrying General Hospital No. 6 to North Africa was so badly damaged by accident, not by act of the enemy, that it could not proceed. Four of our officers and twenty-four of our nurses were compelled to turn back. We are happy to say they have rejoined their companions and are busy with them at the hospital that is being rapidly developed somewhere in North Africa.

Lt. Col. Horatio Rogers (*ES* 1925) sends an appreciation from General Hospital No. 6 via the War Records return:

> We are profiting to the full from our auxiliary supply of MGH instruments and equipment. They don't grow on trees in N. Africa, nor, for that matter, in Medical Supply Depots. We appreciate the work you and others put into that project more and more as we get busier.

May 12 is Hospital Day. This day will be observed nationally, and special emphasis will be placed on the need for candidates for the schools of nursing. At the present time other fields of work seem to offer more immediate advantages and returns. Do your part in calling to the attention of any well-qualified girl this opportunity for "War Work With a Future."

"War Work With a Future" is the slogan adopted for the nursing program sponsored by the General Federation of Women's Clubs, the American Red Cross, and the National Council for War Service. "The best thought and effort of all of us are needed to win the war on the health front and to apply the skills of medicine and nursing to the healing of the war-torn world."

The Hospital will observe Monday, May 31, as a holiday in celebration of Memorial Day on Sunday, May 30.

In his address at the 75th Anniversary celebration of the Harvard University Dental School, President Conant announced further changes in the dental education program at Harvard. The degree of D.M.D. is to be awarded only on completion of the course, which is to be reduced from five to four years (or three years under the accelerated wartime schedule). Students may register subsequently in the Medical School to qualify for the M.D. degree, to be conferred on the completion of one and a half additional academic years (or one calendar year) of study.

During the dinner meeting a portrait of Dr. LeRoy M. S. Miner, dean of the dental school, was unveiled and presented to him by the alumni, of whom more than four hundred were present. The portrait is the work of Bernard M. Keyes, A.N.A.

Another tribute to Dr. Kazanjian, is received from Major M. S. Strock (*dn. s.*), a member of General Hospital No. 5:

> In studying British methods of treatment of facio-maxillary wounds it is interesting to see how well the lessons of World War I have been remembered. The advances of this war have been in the crystalization of ideas and in the standardization of methods of treatment. There are differences in the American and British methods, but they are not fundamental ones. The influence of Kazanjian's pioneering is constantly felt, and the esteem in which he is held is ample evidence of the soundness of his teaching in the last war and in the interval since then.

With the departure of workers to higher-paid and defense jobs, the Hospital faces a constant problem in maintaining even a skeleton staff for routine care of the wards and upkeep of the buildings. To meet this shortage the War Hospital Service Corps has been organized to offer opportunity for service to the many women who are anxious to share in the wartime effort but hesitate to offer their help because their time and experience seem to them too limited. The following letter, planned by Mrs. Lois D. McCoy, Director of Personnel, has been sent to 285 women's clubs and church organizations. You can help by calling the plan to the attention of anyone who has a little time and a real wish to share in this emergency.

> We are making an appeal to the women of Greater Boston to give four hours of service once a week to hospital work. We hope response will be made in the same spirit that actuates women who go overseas to work under pressure in base hospitals. Civilian hospitals have been listed as essential activities. They safeguard the civilian population that stands behind the armed services. They protect you and yours.
>
> The Massachusetts General Hospital is under severe pressure because of lack of help. Our number of maids, ward helpers, and orderlies is 33% below normal. This means less help for our nurses; more detail for them to carry. And we have 39% fewer graduate nurses than normal for bedside care in our 968-bed hospital.
>
> We have formed a new group, the War Hospital Service Corps, for women coming in to help because of the need due to war conditions. College students and teachers are signing up for solid blocks of full-time work during the summer. They will be paid the regular rate for the job they do. Housewives and other women in the community are coming in for one or more mornings a week, with pay of 45¢ an hour.
>
> The War Hospital Service Corps can safeguard the security and continuity of the hospital service. Its members are needed to sweep floors, dust, wash down beds, wash dishes, take trays to patients. Those who have nursing aptitudes will learn to make a bed with a patient in it, and to perform similar bedside duties. Others will fill emergency vacancies until regular full-time workers can be secured.
>
> We expect to find 200 women to help the Massachusetts General Hospital by working four hours, preferably in the morning, once a week. The War Hospital Service Corps has begun its service. The pioneers are Radcliffe girls and a group of club women from Lexington. They say it is a job worth doing. Will you help?

On April 19 the Lexington group came in as usual, although they were scheduled to (and did) march, later in the day, in the Patriots' Day parade in old Lexington.

New appointments made by the Board of Trustees on March 19 and April 2 are:

Dr. Oscar F. Cox, Assistant Urologist
Dr. Robinson L. Bidwell, 2nd, Research Fellow in Surgery from March 17 to July 1, 1943, when he becomes a Surgical Intern
Dr. John R. Paul, Jr., Resident Physician on the Children's Medical Service beginning Aug. 1, 1943
Dr. James Solomon, Resident on the Neurology Service for one year, beginning Sept. 1, 1943
Dr. Emery O. Lewis, Assistant Resident Radiologist, beginning July 1, 1943
Hunter H. Comly, Intern on the Children's Medical Service, beginning Feb. 1, 1944.

Dr. Cox is a former member of the Hospital Staff. He was an Assistant in the Urology Department, 1925-7, and Assistant ~~Urologist from~~ 1927 ~~until~~ 1936.

The Inter-Staff teams for the Surgical Department, April 1 - June 30, are given below. As mentioned in the February issue, the Surgical Department has arranged these schedules to meet the exigencies of the wartime one-year internship, and to give the house officers in series a three-months service in the private wards under a tutorial system. The assignments for team, intern, and staff are:

No. 1 Robertson, C.; Drs. A. W. Allen, R. H. Wallace, G. W. Donaldson, Phillips House Courtesy Staff
No. 2 Richards, D.; Drs. J. V. Meigs, G. P. Hayden, F. A. Simmons, F. M. Ingersoll
No. 3 Fawcett, D.; Drs. L. S. McKittrick, V. H. Kazanjian, H. K. Sowles, O. Cope, J. W. Spellman, G. S. Speare, Blood Bank
No. 4 Mixter G.; Drs. C. C. Simmons, R. H. Sweet, H. C. Marble, C. C. Miller, R. K. Brown
No. 5 Rosenman, L.; Drs. R. H. Smithwick, C. G. Mixter, S. G. Jones, I. T. Nathanson, E. B. Benedict, Obstetrics
No. 6 Robie, T.; Drs. R. H. Miller, E. L. Young, E. M. Daland, E. Hamlin, Jr.
(Patients of Dr. C. Lyons to be covered by House Officers assigned to White 12.)

The next Medical Staff Meeting will be held on May 17. Dr. Alan R. Moritz, of the Department of Legal Medicine at the Harvard Medical School, is to be the speaker. He will discuss medico-legal problems.

Copies of the Staff Bibliography for 1941-2 have been mailed to Hospital members. Titles to the number of 264 are included.

The seventh Harvey Society Lecture, to be given on April 15 at the New York Academy of Medicine, was announced as "Sterilization of Air with Glycol Vapors," by Dr. Oswald H. Robertson (*WM* 1914), professor of medicine at the University of Chicago School of Medicine.

Dr. Harold W. Stevens (*CM* 1914, *EM* 1916) was recently elected president of the Massachusetts Public Health Association.

The annual session of the House of Delegates of the American Medical Association will be held in Chicago, beginning Monday, June 7, 1943. Among the six delegates from Massachusetts are Dr. Walter G. Phippen (*SS* 1906) and Dr. Richard H. Miller (*ES* 1911). Delegates from the Sections and Government Services are Dr. Henry R. Viets (*n.*) who will represent Nervous and Mental Diseases, Rear Admiral Harold W. Smith, M.C., U.S.N., (*SS* 1903) representing the United States Navy, and Brigadier General Larry B. McAfee, the United States Army. General McAfee will be remembered by members of Base Hospital No. 6 in World War I as Captain McAfee and Adjutant to the unit.

Major John C. Snyder (*WM* 1939) has gone overseas as a member of the USA Typhus Commission to coördinate military, government, and civilian efforts against typhus.

Dr. William H. Sweet (*NS* 1939), now at Queen Elizabeth Hospital in Birmingham, England, is Consultant in Neurosurgery to the Midlands Region.

Lt. Col. John H. Talbott (*a.p.*) gives his present assignment:

> Relieved from duty with the 6th General Hospital at the Port of Embarkation and assigned as Commanding Officer of the Climatic Research Laboratory at Lawrence, Mass. This laboratory was established by the Army Ground Forces for the study of food and clothing for the soldier. It comprises a cold chamber, jungle chamber, a physiology laboratory, chemical laboratory and a department for the study of subsistence.

◆

On March 30, 1943, Dr. W. Holbrook Lowell died at his home in Winchester. He was sixty-seven years old. Dr. Lowell was born in Halifax, N. S., and as a boy of twelve came to Newton with his family. He was graduated from Harvard in 1898, and from the Medical School in 1902. After internship at the Boston City Hospital and the Massachusetts Eye & Ear Infirmary, he entered the practice of ophthalmology and served continuously on the staff of the Infirmary. On his retirement in 1935 he was appointed consulting ophthalmic surgeon, and continued his interest in teaching surgery to the House Staff. His service on the staff of the Massachusetts General Hospital was that of consulting ophthalmic surgeon, 1924-1935. Dr. Lowell was widely recognized for his surgical methods, especially in operations for squint, and for his contribution to the literature of his specialty. From 1924 to 1935 he was Secretary of the Board of Surgeons in Ophthalmology.

His son, Capt. W. H. Lowell, Jr., MC, AUS, whose service is noted in another section, was an assistant medical resident in 1939-40.

The Harvard University Press includes in a recent announcement the following notices and descriptions. The "Handbook" by Dr. George C. Shattuck (*EM* 1906) and Dr. Charles G. Mixter (*WS* 1907), has been exhausted in its first printing. A second edition, which will include much revised material, is now in process:

Handbook of Health for Overseas Service. By G. C. Shattuck and C. G. Mixter. 1943. (210 pp. $1.25)

> A compact pocket guide to medical treatment explaining in non-technical language how the laymen, out of contact with medical help, may best cope with disease or injuries. Water-resistant materials are used in this book, which is prepared chiefly for aircraft pilots. Not for public sale. It is offered only to physicians and, in wholesale lots, to agencies engaged in overseas activities.

To this the New England Journal of Medicine for February 18 adds further details:

> This volume was prepared for the Co-ordinator of Information, Washington, D. C., now known as the Office of Strategic Services. Its purpose is to act as a guide for non-medical men who travel where medical services are not available. It covers such subjects as food, drinking water, camp hygiene, clothing and first aid, with a brief discussion of many diseased conditions that may be encountered. It is reasonably comprehensive, covering ailments of the tropical and arctic regions. A list of the drugs and surgical equipment that should be available is included.

Selection of Officer Candidates. By W. L. Woods, L. Brouha, and S. S. Selzer in collaboration with C. W. Heath, A. V. Bock, J. M. Flumerfelt, and F. L. Wells. 1943. (51 pp. $.75)

> Describes the rationale, results, and tests used in selecting young men most apt to succeed as officers in our armed forces.

Of these authors four have Hospital affiliations: Dr. William L. Woods (*a. Psychi.*), Dr. Clark W. Heath (*WM* 1928), Dr. Arlie V. Bock (*WM* 1917), and Dr. Frederic L. Wells (*Psychol.*).

Still attached to Hdq. Sqn. VII, AFCC, APO 639, NY, but now with the status of an officer, Sgt. John T. Keating, a long-term employee of the Store, sent a card while on leave in London: "I have always wanted to see London and here it is, still very much alive and unbeatable." Sergeant Keating's interest in London is only for the duration, according to a later letter from Northern Ireland:

> One of the biggest thrills overseas, outside of visiting the City of London, was when I received the January and February issues of the Hospital NEWS. It was like a letter from home, which in reality it is, for it brought with it so many cherished memories of years at the Hospital and of Boston. I am looking forward with pleasure to receiving future copies. Many thanks.

THE NEWS will be glad to have information about employees who have gone into service.

Lt. Henry C. Thacher (*CM* 1942) sent the following account of his service to Dr. Allan M. Butler, his former chief:

Feb. 24, 1943

The Army has treated me pretty well to date. At Lovell General for a month on a gastro-intestinal ward, and thence to Fort Custer to join my present unit. We trained in Michigan in the field and lecture room, and in September were sent here. The Camp Lee Station Hospital (2000 beds) took over our professional group, and we have been busy on their wards ever since. I have had a mild respiratory ward (includes anything from meningitis to snuffles with a fever), and have sorted over quite a bunch now, sending the sick ones elsewhere and attempting to get the mild cases out in a hurry because of the constant pressure for beds.

Our therapy isn't very academic, I'm afraid. I've used chemotherapy in perhaps 20% of the severe pharyngitis, tonsilitis, and bronchitis cases. On the so-called atypical pneumonia's, those with chest findings by X-ray, it has no effect as has been pointed out. It does seem to shorten the course of some of the others, purely a clinical impression.

Recently I have acquired a severe respiratory ward as well, and we see some lobar pneumonia, some undulant "virus" pneumonia, much chronic bronchitis and the suspects (very little open tbc, of course). On the whole I have been lucky to have been so close to clinical work. I have seen two pediatric cases only; little did I realize how fortunate I was at MGH. I certainly do miss it.

My best to you and friends there.

Sincerely,
HENRY THACHER

50th Station Hospital
Camp Lee, Va.

Scissor-work on the part of the censor cut down the information about the 160th Station Hospital sent by Capt. J. Wallace Zeller (*WM* 1935) himself a remnant of that unit:

The hospital is located on the grounds of an estate. There was a good deal of mud and coal smoke when we first arrived. The former difficulty is now completely overcome, and with the advent of warm weather the latter should be less troublesome. The hospital is well built. The wards, of large Nissen hut construction, are attractive and well lighted. There is sufficient space between the buildings to make a bicycle almost a necessity.

Of the medical officers who were sent from the original MGH unit there are now —— remaining. Needless to say, we have been very sorry to see each man go. In the past few days we have learned that Capt. Garrett Sullivan is to be assigned to another hospital unit [10th Station Hospital under Colonel Lanman] in need of a good ophthalmologist.

Our present location allows us to get off to London from time to time for short leaves. Judging from my experience there about six weeks ago, there is no dearth of MGH alumni in the city. I ran into Captains Tom Worth, Phinizy Calhoun, Gordon Saunders and Cavanaugh.

We have heard of the recent [transfer of G.H. No. 6] and are looking forward to future issues of THE NEWS for information concerning that organization.

Capt. Howard Ulfelder (*ES* 1939), of the same unit, added these comments to his War Records form:

We have moved to a new hospital site on the grounds of a pleasant Tudor estate in England. Spring is tip-toeing around and gives promise of a delightful season ahead. We are moderately busy.

In Boston there was no sign of spring until last week, but literature on farm gardening is available in the Personnel Office.

From Commander H. B. Sprague we again have interesting news from our naval unit in the Pacific:

Dear NEWS: 14 Mar. 1943

I have been waiting to report to you about our group until we were released from certain censorship regulations. Since last August, when we arrived, we have been part of the staff of USN Mobile Hospital #6, which landed here just in time to care for the casualties from the early part of the island campaign. The necessity for continued work in this area has resulted in our becoming USN Base Hospital #4, and now it can be told that our address is Wellington, New Zealand, c/o Fleet Post Office, San Francisco.

Except for Frank Hunter, who is detached, all our M.G.H. men have been transferred to this new activity in their same capacities. Since January 8, when our regular Navy Executive was detached, I have been acting executive officer and have the same job in Base #4. Charlie Johnson was promoted to Commander last month to rank from last July, and we made him chief of medicine, which he accepted with good grace and the necessary ability. Kennard ranks just under the chief of surgery, McGinn runs the major work of the medical wards, Carmody has neurosurgery.

We can report no casualties in our group, no citations, and no decorations. At the moment I see no likelihood of any of these. We haven't much glamour but have a lot of interesting work. Our best to all of you.

To this should be added comments made by Commander Johnson and quoted from his return War Records blank. He claims his title is "due purely to seniority," and that "the Executive Officer deserves more credit than anyone else for its proper functioning. One feels great pride in this hospital."

Lt. Robert S. Hormell, MC, AUS (*Or.* 1942), with the 27th Station Hospital writes that he is "a neighbor of Lieutenant Placak's, and living at present in a palm grove on a sandy beach. Lt. Charles Mixter is based near here." Word has come that Lt. Charles G. Mixter, Jr. (*WS* 1942), a flight surgeon with the Air Evacuation Transport, has received his promotion to Captain.

Major Frank B. Cutts (*WM* 1934) is with the 48th Evacuation Hospital:

We have recently arrived in India, where they have bigger rains, elephants, snakes, worms, leeches, centipedes, scorpions, cockroaches, etc. etc. than any place I know of. Our habits will soon be exemplary, as liquor and tobacco are practically collectors' items. Our medical work hasn't started yet but promises to be fascinating when we get under way.

And with this letter of March 19 from Captain Victor G. Balboni, MC, AUS (*WM* 1942) report is now made to the MGH from the four points of the compass:

Several days ago the mail came in, the first we have received since before Christmas. I was delighted to receive the M.G.H. NEWS, and to hear of the exciting and interesting new assignment of General Hospital No. 6. It is fascinating to see where we are scattered to.

For the past ten months I have been overseas at a base north of the Arctic Circle where I am chief of the medical service and medical supply officer of the 190th Station Hospital. On January 5, was promoted to Captain, MC, AUS. Up here where the temperatures range to 67 below zero we feel very sorry for those in the tropics.

The following, from Major Frederic W. Ilfeld (*Or.* 1937) gives news of him and of Capt. Carl E. Horn (*Or.* 1940):

I am assigned to the 78th General Hospital as chief of the orthopaedic section. Our unit is in training, and my present job is Plans and Training Officer. Before coming to the 78th, I was at the Station Hospital, Camp Callan, Cal., as chief of the orthopaedic section. While there we had an active service of about 160 beds. For a few months our unit was stationed at Camp White, Ore., where I saw Captain Carl Horn, who is chief of the orthopaedic section of that section hospital and incidentally doing a marvelous job.

Major Henry F. Howe (*r.s.* 1934) received this promotion on April 10 at the Station Hospital, Camp Kilmer, N. J., where he "spent some delightful evenings with members of the 6th General, several of whom were kind enough to present papers before our staff. They were in high spirits and raring to go."

An interesting account of General Hospital No. 6 on the high seas, and the safe crossing of the major part of the unit, can be presented through permission to publish these paragraphs of an informal letter from Captain Hamilton.

Aboard U.S.A.T. 10 Feb. 1943

We pulled out very quietly in the wee small hours the other morning and are at present riding the high seas in fine shape. We are, so far at least, in convoy. It certainly is reassuring to see the ring of escorting vessels on the horizon. Our ship is a good-sized one, but very well populated. Cols. and Lt. Cols., are treated to the luxury of a small double room with beds and a bath. Majors are in bunks, three deep, six to such a room. Our rooms are a little larger, with bath, and nine (count 'em) of us. I am in the uppermost by the port.

The men are packed in pretty tight, as you might well imagine, but it isn't as bad as I had feared. There are two or three officers up there with them at all times, and they sing a lot. They have free access to most decks, so they go out when they want to. That helps a lot. There is no smoking on deck after dark; decks are cleared at 9 P.M., and rules about throwing trash overboard are very strict. This last, of course, is so we won't leave a long long trail winding behind us.

It has been rolling a bit, especially when we cut across the waves, and a few of the boys are a bit woozy, but nothing serious. Our gravest inconvenience is that we must use cold salt water to keep clean. That isn't too bad. I use an ounce or so from my canteen to wet my shaving brush, and get along well.

Later

I have forsaken Col. King's palatial room this morning and am seated atop my bunk, feet hanging over and typewriter on knees. The sea is flattening out but there is still some roll. Almost everyone has his sea legs by now. Since the weather will be very old stuff by the time this letter reaches you, it won't do any harm to talk a little about it. It has been a lot like early June on Cape Cod except that there has been no fog. Occasionally we get a light rain, but for the most part it has been partly cloudy; occasionally warm enough to go on deck without a field jacket, but usually it is a welcome addition. Overall we wear a life jacket of kapok, which as you know, is quite warm. These are known as Mae Wests because most of the padding is where hers is.

Each day we have at least one "abandon ship" drill; it is surprising how quickly they get everyone out on deck. Whenever we go up for our turn around we wear our belt with canteen so that if they have a drill we won't have to buck the line to go back for ours.

One or two mornings we have been treated to gun drill. The first morning it came as a

From Dr. Allen information has been received about the following. Major Richard Chute, MC, AUS, (*ES* 1929) writes to him from Carlisle Barracks, Pa.:

Days are busy, with breakfast at seven, drill, an average of seven lectures, and about two hours of study per night. However, I like it, and this, the medical "West Point" of the Army, is a great place to be. We are getting a lot of medico-military "dope."

Capt. George F. Emerson, MC, AAF, (*ES* 1940) describes active service at San Antonio Aviation Cadet Center. He wrote on March 22, while "finishing up a 5-day quarantine for German measles I managed to catch during an O.D. tour."

I want to thank you and Colonel Churchill for remembering me at Christmas. The card with notes from both was a grand idea. Hearing from people at home brings a warm comfortable feeling which nothing else can duplicate. The M.G.H. NEWS each month helps to let us know what is happening, but I frequently wonder how the East Service is getting along—who is Resident, Asst. Resident and all. It would certainly seem good to make rounds again.

So far the Army has treated me very well, however. I have been stationed in San Antonio ever since I entered on active duty and have been at this hospital all but the first month. Along with many others I spent the first month in Officer Training School. That was almost completely a non-medical month during which we had courses in military law, courtesy, correspondence, intelligence, chemical warfare, plane identification and so forth. In addition half of each day was spent in drill and physical training. This school has now closed and all officers receive such training elsewhere. It was a good introduction to the Army for those of us who knew so little about it.

Following that I was assigned to the station hospital and have remained on the surgical service ever since. The hospital is not yet a year old but already has 1000 beds. I spent about two months at first as assistant ward officer learning about routine, records, etc. Then when the hospital expanded I was assigned to a ward of thirty patients for which I am now responsible.

During the first period another fellow and I had charge of all infections and pilonidal cysts. At present, I have clean surgical cases—hernias, appendectomies, veins, traumatic lacerations, etc. While we do not have as big a variety of cases as a general or civilian hospital, we have an unusual opportunity to see many acute abdomens. In the age group of the cadets, appendicitis is the most common surgical condition, but we see many cases of enteritis, ureteral calculus and traumatic strain as well as other differentials which include shingles, abdominal tuberculosis, German measles, rheumatic fever, and amoebiasis. So far we have not had a perforated ulcer. This is not a large list, but it provides many cases to think about and we all have cases to operate—an average of five or six a week. We feel most fortunate in being on active surgical service. The Air Force is a fine branch of the Service to be with, and I am more than glad I joined it.

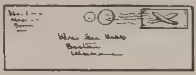
Lt. John McL. Morris, MC, USNR, (*ES* 1942) sends a good account to Dr. Allen, despite the usual restrictions: "They don't like you to write where you are, what you're doing, what anyone else is doing, or what the weather is like."

It certainly was nice to receive your Christmas card. I feel very far removed from the old hospital and it's most comforting to find that you are not completely forgotten. I guess I am rather far removed at that—in fact I am a good deal nearer Tokio than the U.S. just now. After a short stay at Quonset Naval Air Station, I was sent to Norfolk, and from there to the Pacific. I am at a so-called secret advance base at the moment.

I haven't had a chance to do much surgery, but I went through a fine course at Norfolk which included rifle, pistol, and machine-gun firing, hand grenade throwing, bayonet practice, and other allied arts. How much use this will be to me in post-war civilian life, I do not know. I have a jeep and a Colt .45, which consoles me somewhat, and I've had a chance to observe Japanese marksmanship (good, but not good enough, obviously).

I hope to come back to the MGH for more training when this is all over, but perhaps that is looking too far ahead. I think it will be some time yet. We have the Japs on the run in some of these outlying sectors, but we have a long way to go.

Thank you again for your Christmas card, and please give my best wishes to my friends back on the services.



A member of the Hospital staff has received from Lt. Louis K. Dahl, MC, AUS, (*r.p. WM* 1942) an account of his special assignment "down under." Lieutenant Dahl is with the 105th General Hospital.

About mid-December I returned from a stretch of two and a half months in the Australian "bush." Members of the unit have been detached for six to eight weeks' service with various Australian hospital units, and, since they had enjoyed their stays uniformly, it was with pleasure that in September I heard I was going. Another member of our group went with me.

After a long slow ride in a very poor train which stopped at every crossing and hitching post, we arrived at our destination, a little old Australian camp hospital, the only unit for a training area. In addition to ourselves, there was an Australian major, who had retired from practice in 1937 and offered himself and services in 1939 for whatever purpose they could be used.

The hospital was a station home (we would call it a ranch house, but on the super-deluxe side) on one of the largest properties in that part of the sheep country—some 80,000 acres. Its hospital facilities consisted mostly of bed space, plus a little equipment, and I do mean little. But with it, we managed to take care of the men surprisingly well. We had six sisters (nurses to you and me; the term has no religious connotation) plus five or six VAD's (Volunteer Aid Detachment) all of whom were pleasant. The sisters were very well trained; down here the routine course is four years, and most of them take post-graduate training in such things as obstetrics (midwifery down here), pediatrics, etc. They were independent, willing to take and carry out responsible jobs. For instance, these girls often made decisions at night as to whether we should be called for admissions; they often treated the burns after we had looked at them; I think in the entire stay out there, I did not do more than half a dozen dressings, yet we always had from six to fifteen on the wards. All in all, it made an ideal set-up for us.

Our lab. facilities were meager as you might suspect: a 'scope (obtained only after the Americans started going there) plus a lamp, hemacytometer, Wright's stain, methylene blue, and that's about all. Small as this was, it gave us a sense of security, far outweighing its actual value. Reared as we were in the age of dependence on lab. work, it somehow added confidence to our decisions. Perhaps for the first time in my medical career, I used my clinical judgment to its fullest, without benefit of high-powered aid, both laboratory and consultant.

But it was not the medicine that meant most to me. It was the people I came to know and respect. Foremost was the major in charge of the hospital. He didn't do much on the medical side; after he found we did the work satisfactorily, he left it pretty much up to us and just tended to administrative details. But he and I struck up a friendship somehow, and I came to enjoy him more than has been my pleasure with most people. He was a little, gray-haired man, kind and friendly, with a mind as sharp as a new blade, well read, a student of English literature, a mild Greek scholar, a raconteur who could relate his past experiences with refreshing and delightful manner.

Through him I came to appreciate their custom of tea-time. With three regular meals a day, then morning tea at ten-thirty, afternoon tea at three-thirty, and supper at nine (dinner is called just tea), it seemed at first a great waste of time, as perhaps it is in war-time. But, I found that it was not the complete loss I had envisaged. In the first place, it is a nice break in the day, just from the physical standpoint. In the second place, it has a sedative effect on a mind (and probably coronaries) running at too high a speed, letting little things upset one—the typical American manner, so to speak. Thirdly, it provides a pleasant interlude for discussion, intellectual or otherwise. With the typical American conception of sitting down to food, I thought at first the only reason for tea time was to eat. As I watched the Australians, I found most of them ate very little, that the time was spent in talking or listening. (Don't think I am suddenly looking down my nose at Americans, I still think the country and the people are the best anywhere.)

Through this same major we were invited out to the surrounding "stations"—ranches you and I would call them. Here we were treated like veritable kings and eminent visitors from afar. For most of the people out there, we were the first Americans they had ever seen, and their kindness and generosity knew no limits. With gas rationing in effect, and far more stringent than at home, it was no small sacrifice for us to be taken sometimes as far as sixty-five miles away. And had gas rationing not been in effect, we would have gone even further; we had numerous week-end invitations, none of which we could accept.

The station homes were fairly large, always one-storied affairs, with big porches. They usually have a tennis court, always have horses, at least one or two of which are race horses. In peacetime, station life must be luxury indeed. At present they have considerable trouble in getting enough help, transportation is no small problem, and some supplies are difficult to obtain.

The land itself was not pleasant. It was dusty, dry, hot, with a few clumps of grass in the paddocks (fields to us) here and there the gums (eucalyptus trees) rising up, half of them naked and dead: flat as far as the eye could see. The flies were thicker than hell—we wore nets during the day when outside. But withal, when my time to leave came, I found that I had grown to like it; I found that I had become a member of the little family there at the hospital; I had been accepted as one of the community in that region; I had grown to like the Australian soldier, and I think he had liked me. For the first time since I left my folks in Seattle, I was just a bit homesick the day I pulled out.

When I arrived back here on December 11th, I found our hospital had at last come into its own. All the new buildings were in use; the grounds were blooming; the place was full of patients who had been at the front. We were in fact, as well as name, a hospital for the American war casualties.

Capt. Gustav G. Kaufman (*r.p.* 1941) another member of General Hospital No. 105, sends enthusiastic word of it:

The hospital has gained a great reputation for itself and, as you may know, is now under the command of Col. Augustus Thorndike, a great honor for a reserve officer. This is my greatest experience. Greetings to all.

Word about Major Charles P. Sheldon (*ES* 1931) gives him this promotion in rank as of November 20, 1942, and states that he is executive officer of the 105th General Hospital.

* * *

Returns from the second questionnaire sent out by the War Records have brought much interesting information about Hospital members in service:

The assignment of Capt. Henry M. Hills, MC, AUS (*Or.* 1942) is with an evacuation hospital. After a short course of lectures in London, and with this promotion in rank on April 1, he has returned to active duty with the hospital.

Capt. Louis G. Johnson, MC, RCA (*P.* 1940, *EM* 1941) has been for some time with the 17th Canadian General Hospital.

Lt. Ralph W. Hunter, MC, USNR (*r.p. N.* 1939) is on service at a North Ireland Naval Base Hospital.

Major Robert L. Patterson (*Or.* 1935) received this promotion on December 20, 1942. He is with the 2d General Hospital, a unit of the Presbyterian (NY) Hospital now serving overseas.

Major Rafe N. Hatt (*Or.* 1919) is with the 3d Surgical Auxiliary Group, acting as orthopaedic consultant to a general hospital in North Africa.

Capt. Arthur M. Bassett, MC, AAF, a research fellow in Medicine here in 1941, received this promotion in January and is now with a service squadron overseas.

Lt. Comdr. H. Irving (*WS* 1924) was called into active service on January 1, 1943, at the Chelsea Naval Hospital. He was then transferred to a naval base in California, and is now with a construction battalion in the Pacific.

On active service since February 1942, and with advancement in rank as of June 15, Lt. Comdr. Robert L. Thomas (*NS* 1933, *ES* 1936) has been for some time senior medical officer aboard USS "President Hayes."

Lt. Richard D. Nies, MC, USNR (*An.* 1941), promoted on August 4, 1942, is serving in the Pacific with a division of aviation.

Lt. Col. Russel H. Patterson (*ES* 1919) is assigned to the Letterman General Hospital, San Francisco.

Major Richard P. Stetson (*WM* 1928), detached from General Hospital No. 7, has been with the Station Hospital at Camp Bowie, Texas, since March 15.

Capt. George F. Sutherland, MC, AUS, (*a. Psychi.*) is ward officer at Darnall General Hospital, Herrington Lake, Ky.

Capt. Carl B. Beeman, MC, AUS (*P* 1934) went into service as a member of the 36th General Hospital (Wayne University Unit, at Omaha. Since last August he has been on detached duty at the Station Hospital Annex, Fort Warren, Wyo.

Lt. Comdr. Robert F. Legge (*Or.* 1935) is now with Advance Base Hospital No. 3.

Capt. Luther M. Strayer, MC, AUS (*Or.* 1939) writes from his assignment overseas with General Hospital No. 39, a Yale University unit.

> Russ Fuldner (*Or.* 1940) and I are on the job out here together. THE NEWS is a great morale builder. We enjoy every issue immensely, and whoever had the idea of sending it to all of us out here should be thanked tremendously. It does help a lot. Our work is just beginning to shape up, and the machinery is working very smoothly, for which we are glad.

Lt. Hugh Montgomery (*EM* 1932) reports "plenty of work to do, under excellent auspices":

> Medical Specialists Unit No. 31, from the Hospital of the University of Pennsylvania, comprises the greater part of the medical staff of the Hospital Ship "Solace" but there are three M.G.H. representatives: Jesse T. Nicholson [*r.s. Or.* 1933] in charge of orthopedics, Dana L. Farnsworth [*WM* 1935] neurology and psychiatry, and I (medicine).

Lt. Hannibal Hamlin (*r.s. N* 1942) also saw several months' service aboard the "Solace."

In connection with the service of these men the War Records calls attention to an account in the *Army and Navy Journal* for April 3:

> Details of the medical care of more than 4000 land, sea and air casualties in the South and Southwest Pacific have been announced by the Bureau of Medicine and Surgery, disclosing encouraging results. The story is told in two reports. One is by a group of medical officers aboard a hospital ship operating in the Pacific at the time. . . .
>
> During an extended period beginning with the Solomon Islands offensive in August 1942, the hospital ship cared for 4039 patients. They represented almost every type of wound—rifle and machine gun bullets, shell fragments, severe burns, skull fractures, penetration of chest and abdomen, infections and many more. Many fell on Guadalcanal, others in sea engagements and in aerial combat. In some instances patients were aboard the hospital ship a few hours after being wounded. About two thirds, however, had received initial treatment at base and field hospitals ashore before being placed aboard the ship for evacuation to the mobile hospital at Auckland. Among all the 4039 cases, only seven deaths occurred. . . . Most of the patients were in "excellent condition" when taken aboard, especially those who had received prior treatment at field and base hospitals. Predominating among Marine casualties were shell and grenade fragment wounds, bullet and bayonet wounds and compound fractures. . . .

Among the authors of this report, Lt. Comr. J. T. Nicholson is named. The *Journal* continues with a quoted portion of it.

> "Bullets often caused no more trauma (injury) than might be expected if an icepick were suddenly thrust through a part and pulled out. Into these simple wounds sulfathiozole was sprayed and a pressure bandage of elastic webbing was applied. A patient with a through and through wound of the leg or thigh was usually able to be up and walking four or five days from the time of injury, and the wounds were healed in a week to ten days. We have not seen a single case of infection develop in a patient treated in this manner."

...—V...—

News of the following commissions and assignments has been received recently by the War Records and THE NEWS:

Lt. Donald V. Baker, MC, AAF, (*ES* 1943); Camp Carlisle, Pa.
Lt. Lemuel Bowden, MC, AUS, (*ES* 1942); 2d Medical Training Battalion, MRTC, Camp Pickett, Va.
Lt. Bradford Cannon, MC, AUS, (*a.Surg.*); Valley Forge General Hospital, Phoenixville, Pa.
Lt. Henry S. Fuller, MC, AUS, (*WM* 1943); Carlisle Barracks, Pa.
Lt. Comdr. Saul Hertz, MC, USNR, (*a.in M*); Naval Air Station Hospital, Pensacola, Fla.
Lt. Edward C. Lambert, MC, AUS, (*EM* 1943); Carlisle Barracks, Pa.
Lt. Oglesby Paul, MC, USNR, (*WM* 1943); South Boston Receiving Station
Major George C. Prather, MC, AUS, (*ES* 1925); Ashford General Hospital, White Sulphur Springs, W. Va.
Capt. William H. Snyder, MC, AUS, (*WS* 1933); 73rd Evacuation Hospital
Lt. John B. Stanbury, MC, USNR, (*WM* 1941); Naval Medical School, Bethesda, Md.
Lt. Lewis A. Vance, MC, USNR, (*P.* 1937, *r.p.* R 1939), Office of Naval Officer Procurement, Boston
Lt. Benjamin V. White, MC, USNR, (*res. fel. Psychi.*), Garrett Park, Md.

The present address for Capt. Alfred Yankauer (*CM* 1941), who has been with the 38th Evacuation Hospital, is 51st Medical Battalion, APO 302, c/o Postmaster, NY.

Capt. Henry B. Garrigues, MC, AUS (*WS* 1939), first assigned to the Field Service School at Carlisle, Pa., has received this promotion in rank and is attached to Company A, 82nd Armored Medical Battalion, 12th Armored Division at Camp Campbell, Ky. He is in charge of a "very mobile" small hospital designed to keep up with the division in action and care for casualties. As part of his training for such work Captain Garrigues was ordered to return to the M.G.H. as a member of the March 29 section of the series of courses for army medical officers being given here at the request of the Surgeon General's Office.

In February, when Capt. W. H. Lowell, Jr., MC, AUS, (*a.r.p.* 1940) sent these interesting details about his work with the 52nd Service Group Hq. & Hq. Squ., he was at a bombing and gunnery range in the Carolinas. His present address is A.P.O. 402, c/o Postmaster, Nashville, Tenn.

> At present I am commanding officer of the medical troops attached to the Group. It is a job of organization, planning, training in all military matters, and learning how to abide by Army regulations. Still we try to do good medicine, and I think we are doing it from all reports.
>
> Our main mission in the field, in addition to caring for our group personnel, will be to keep them flying, establishing a small mobile hospital, procuring, storing, and distributing medical supplies to combat plane groups. The flexibility of the set-up is amazing. We shall see, when actually tried.

SIXTH
GENERAL HOSPITAL
HEADQUARTERS

GENERAL HOSPITAL NO. 6 IN NORTH AFRICA
(*Showing Lt. D. S. Ellis, Lt. E. L. Cantlon, Capt. T. H. Ingalls*)
This picture was received through the kindness of Major Herbert P. MacNeal, M.C., transport surgeon aboard the vessel that carried the delayed officers and nurses of the 6th General to rejoin the unit in North Africa. Other pictures, taken aboard ship and at destination, are on display in the Brick Corridor and the Archives Room.

complete surprise. All of a sudden it sounded like all hell had broken loose. It appears that the ship which is to practice runs up a red flag, and shortly thereafter away they go. The tracers are what make it interesting, for without them there would be very little except noise. They leave the muzzle as a white flash which very soon changes to a red ball. It resembles, more than anything else, a rocket, but it has a much flatter trajectory, goes much faster, lasts lots longer, and doesn't explode (No stars!). To us who have done shooting it is fascinating, for you follow the course of your bullet.

I know Ann will be delighted to hear that we had some of her beloved blimps over and round us on the first day out. It wasn't so very rough, but there was a good wind blowing and let me tell you they can have their job. Those things rolled and pitched like bucking broncos. We are now escorted by seaplanes put off from escorting vessels.

We eat two meals a day in three shifts. I eat at 7:30 and 4:30. A bit of a gap in between, but we manage on chocolate bars. The food is plentiful and delicious. To our surprise we eat at tables, with table cloths, abundant silverware (no licking your fork so it will be clean for the pie) and good table service. I am getting used to eating two meals a day, and ride along beautifully on "Eskimo pie" which is dispensed at noon each day. But don't think for a minute that I don't pack the food away when the occasion arises.

We get a great kick out of the pleasure our nurses and civilians are getting from walking around trailed by innumerable second lieutenants. They are of course greatly outnumbered by the men, and are in their glory.

Later

Yesterday was warm and cloudless, with an almost flat sea; just a gentle roll to the ship. Today scattered clouds again, but still very warm and pleasant. Yesterday they distributed booklets on North Africa, so we may assume that is our destination, or we are being fooled.

It is surprising how well the men have acclimated themselves to their crowded living quarters. The first thing they wanted to know was whether the Colonel had to wash and shave in salt water; when they found he did, then they were happy.

It was about 8:00 A.M. a week ago that we cleared ——, so it is safe to assume we are now over half way across. The old ocean is really flat, and has been for some days. One interesting thing happened the other night, though we knew nothing about it until the next day. Seems that shortly after midnight one of the destroyers in the outer screen of the convoy spotted a lighted boat. He approached her, found her to be a Portuguese merchantman. She was boarded, searched, and allowed to proceed, though I suspect it will be unhealthy for her to use her radio for a few days. Seaplanes from escorting vessels cavort around and about most all day. The vessels in the convoy are continuously changing their relative positions, and the group changes its position so often you have no idea except by the weather where we are or where we are going. To stand on deck you'd swear we've been going north-east ever since we left the U.S.

Meals continue to be excellent, and I have been getting to bed very early for several reasons: I am tired; there is nothing else to do; these two-foot-wide bucket-shaped so-called beds require 10 hours for 6 hours' sleep—and if I stay up I'll get hungry again.

This admirably comprehensive letter gives a later picture of the unit as established and in operation:

HEADQUARTERS 6TH GENERAL
HOSPITAL
A. P. O. #668
New York, New York
March 16, 1943

Dear Dr. Faxon:

Administrator ad Administratorissimum, te saluto! The foregoing effusion is due to the fact that for the past three weeks and more I have been a consulting mason, carpenter, electrician and,—say it softly,—plumber! As always, in wartime, the pendulum swings from morbid inaction to hectic action, and we are now in the climactic stage of the latter.

When I last wrote you, we had just arrived. Our first patient was an evacuee from the combat zone via airplane on February 27. He had been in an automobile smashup, had suffered fracture of two dorsal vertebrae, and had been plaster-jacketed in another hospital. He was ambulatory, however, and was evacuated to the States four days later.

During the week of March 1 to 8 we began to admit officer patients. On March 8 we started to draw patients wholesale from a neighboring hospital which was in process of being closed. We set up beds as rapidly as they could be unpacked, drew the necessary supplies for furnishing the wards, made space therefor by shifting equipment, and managed to keep just about one jump ahead of the sheriff. At midnight on the 7th we had 66 patients in 78 beds; 226 patients in 304 beds on the 8th; 340 patients in 394 beds on the 10th, and 499 patients in 571 beds on the 15th.

We have been, and still are, handicapped by incompleteness of supply. The X-Ray department is functioning adequately if in (temporarily) cramped quarters, pending completion of construction of the X-ray building. We have two de-luxe hospital sterilizers, in both of which essential parts were damaged in transit and are now under repair. In the meantime surgery proceeds on a small scale, aided by a borrowed field sterilizer.

All the time construction goes on. The plumbing is French,—need I say more?—but is being modernized as rapidly as facilities available will allow. Electricity from the town current is not reliable, but we have four 30-Kilowatt Diesel-driven generators which are being installed, which will eventually tide us over in emergencies. The marriage of American electric plugs with French sockets can never be consummated, so much plastic reconstruction on the male mate is always necessary.

Everyone is working hard. Our doctors are learning that no one escapes paper work, but they are accepting this hard fate philosophically. The nurses are doing what all nurses have done since Florence Nightingale,—performing adequately and efficiently with limited and often improvised supplies. The men are doing a yeoman job in all branches and departments.

This is but a skimming of our problems, but no one knows their background better than you do. If I were to quote chapter and verse I should talk for three (3) hours without drawing breath. Hence, while I can but hit the high spots, I am in strong hopes that this and subsequent letters will give you at home some shadowy form of our substance.

Sincerely yours,
T. R. GOETHALS,
Colonel, Medical Corps,
Commanding.

THE NEWS

No. 9 | Boston, Mass. | June 1943

Sewell H. Fessenden, President of the Corporation, died at his home in Brookline on Tuesday, April 27, 1943. Elected in 1919, he served as Trustee of the Massachusetts General Hospital for twenty-four years and, in addition, held the office of Vice President from 1940 to 1942 and that of President from February 1942 until his death. He was also Chairman of the General Hospital, Baker Memorial, and Finance Committees, and had served on the building committees for the Baker Memorial, White Building, and the Chapel. He was particularly helpful in guiding and protecting the finances of the Hospital and in directing the investment of the funds. No detail was too small nor any task too great to enlist his time and energy. His wise counsel was appreciated by all who had the privilege of working with him.

In the Trustees' Minutes for April 30, 1943, Bishop Sherrill, Chairman of the Board, has recorded this long and distinguished service. He states in part:

> For many years Mr. Fessenden gave untiringly of himself to the service of the Hospital. . . . It is not too much to say that next to his devotion to his family came his love for the Hospital.
>
> His associates express their gratitude for all he accomplished. They will miss him as Trustee and as Friend. They extend their deep sympathy to Mrs. Fessenden, his children, and grandchildren, and enter in their permanent records this testimony to a great Trustee.

Brief record is here made of the first known casualty among Massachusetts General Hospital graduates and staff in World War II.

On September 9, 1942, Captain Frederick James Cunningham Smith (*NS* 1932 & *ES* 1935) was killed while serving in New Guinea. Captain Smith entered military service in February 1941, at Ardmore, Okla., and was commissioned Lieutenant, MC, AUS. He was stationed at William Beaumont General Hospital, El Paso, Texas, until assigned to foreign service. After receiving promotion to Captain in February 1942, he sailed during May 1942 and reached Australia in June. His last letter was sent from New Guinea.

"GREAT MEN have a way of enjoying deflected and auxiliary immortality. Their work and character, of course, are the primary lasting influence. Statues and shrines, portraits and biographies are the enduring objective memorials. But beyond all that is the diffuse and often curious absorption of the great man's name. He becomes a mountain, a river, a lake, a city, a building, a school, a college, an inn, a product, a machine, a highway, a street, a ship, a beacon, an airfield, a tunnel, a bridge, a park, a Pullman car, a penny, a postage stamp, or any of a hundred other useful and competent, appropriate and inappropriate, things. Like Burns he may humbly turn into a cigar, like Elgin become a watch, or like Frontenac dissolve into an excellent ale. But of all things and objects to which his name may suddenly and posthumously be allied, surely a ship remains one of the happiest and most romantic. . . .

William James, Calship No. 161.
Keel laid: March 4, 1943
Launched: March 31, 1943
California Shipbuilding Corp."

And when men become famous, even famous institutions may stretch a point to claim them. This is the case between William James (1842-1910) Philosopher, Psychologist (and potentially *M* 1868), and the Massachusetts General Hospital.

It is not commonly known that William James had an unfulfilled association with the M.G.H. So, a letter among the administrative papers of the Hospital for the year 1867 gave the Archivist the same start of pleased surprise as did the comment quoted above from a *Harvard Alumni Bulletin.* This is the letter:

> Gentlemen;
>
> I much regret that certain circumstances over which I have no control, and which I could not foresee at the time I sent you my application for the Office of House Pupil, will render it impossible for me to perform its duties during the coming year. I consequently find myself obliged to beg you to accept my resignation.
>
> I am, gentlemen
> Yours respectfully,
> *Wm. James*
>
> To the Trustees
> of the Mass. Gen. Hospital.

So William James was never launched from the Massachusetts General Hospital, but he became a philosopher of such renown that some of you may be interested to see his letter in the Archives Room. It is written on note paper engraved with the monogram "H.P.Q." It may be supposed that this was supplied by Henry Parker Quincy, a Surgical House Pupil of 1866 and Artist of the Hospital from 1871 to 1898. The Archivist still hopes to find an example of Dr. Quincy's work.

Every other Tuesday at 8 A.M. a dental conference will be held in the lower amphitheater of the Out-Patient Department. The first conference took place on May 18, and with suitable ceremony the new surgery department of the Dental Clinic was then officially opened. Dr. C. Sidney Burwell and Dr. A. LeRoy Johnson of the Administrative Committee of the Harvard School of Dental Medicine, of which Dr. Thoma is also a member, attended; Dr. Faxon and Dr. Vernon W. Ryder, a member of the Visiting Committee of the School, also honored the meeting with their presence. Practically the entire dental staff of thirty men was accounted for, as well as the army contingent taking the maxillo-facial course.

The following cases were presented and discussed:

Carcinoma, floor of mouth.
Fracture of mandible—skeletal fixation.
Fracture of ramus—internal wire fixation.
Pseudoarthrosis following fracture of condyle—osteoarthrotomy of T. M. joint.
Osteomyelitis of mandible.
Osteomyelitis of mandible with pathologic fracture.
Ideopathic thromocytopenic purpura.
Swelling of right mandible—question of diagnosis, and discussion.
Adenocarcinoma of maxilla.
T. B. glands in neck, and cyst of mandible.

The discussion of each case was accompanied by a sequence of colored photographs and slides of X-rays showing the progress of treatment; the patient himself was then presented as the end result. The illustrations, which are of exceptional interest, may be seen in the Dental Clinic.

Dr. Tracy B. Mallory, Chief of the Department of Pathology and Bacteriology, and commissioned on April 15 as a Major in the Army Medical Corps, has left the Hospital to take up active military duty. He expects to receive a month's training at Carlisle Barracks, Pa., and to spend two months at the Army Medical Museum in Washington. He will then go to the 15th General Medical Laboratory at Fort Sam Houston, Texas.

At meetings of the Trustees during April the following votes were recorded:

To appoint Dr. Allan M. Butler as a member of the Social Service Advisory Committee.

That leave of absence be granted to Dr. Bradford Cannon and Dr. Saul Hertz with the understanding that they may resume their present positions on the Staff upon completion of their service with the armed forces.

To appoint Fred G. Johnson as a Dental Extern.

The following interns were appointed:

Drs. Russell A. Morissette and Lytt Irvine Gardner; Children's Medical Service, beginning February 1, 1944.

Drs. Catherine Risk and Edwin S. Alston; Pathology, beginning July 1, 1943 and January 1, 1944, respectively.

Future Medical interns were also appointed:

April 1, 1944

Robert L. Berg
Robert A. Broome, Jr.
Harvey S. Collins
G. Watson James, III
Alexander Leaf
Lloyd Mills, Jr.
Edwin W. Peterson
James W. Watson

October 1, 1944

Celia White
Ralph H. Luikart, Jr.
Gardner Middlebrook

Surgical interns are:

January 1, 1944

Cecil F. Baxter
Robert H. Brown
James D. Clement, Jr.
John J. Milford, Jr.
John R. Moreton
William R. Waddell
Chiu-an Wang
Jack A. Cannon
James M. Judd
Robert H. Vaughan
John B. Lloyd
Alfred T. Joseph
Paul B. Metcalf, Jr.
John W. Smillie

April 1, 1944

Sam Y. Garrett
George C. Gibson
John W. Finley
Leon C. Agee
George M. Walker
Walter H. Harper
Boris P. Bushueff

* * *

Dr. Eliot Horton Luther, assistant superintendent of Westfield State Sanatorium died at the Sanatorium on May 2, 1943, aged 47 years. For many years Dr. Luther had suffered from a tuberculous infection that finally caused his death. He fought this affliction with great courage, and mastered it sufficiently to enable him to give years of service in the care of tuberculous patients at the Sanatorium, where he began as Assistant Physician in 1932, and was promoted to Assistant Superintendent in 1936.

A graduate of Brown University, he received his degree from the Harvard Medical School in 1921, and became a resident physician on the Children's Medical Service at this hospital in 1925. In 1927 he was made an Assistant in the department, and later in that year was appointed an Assistant in Medicine. He also served for several years on the Harvard Infantile Paralysis Commission, as diagnostician and field epidemiologist, and was the author of a number of valuable papers which gained for him wide recognition in that field. Those who worked with him will also remember his lovable personal qualities and his capacity for hard work.

OFFICIAL NOTICE

Notice Concerning Routine Electrocardiograms

Because of the shortage of material, time, and workers, it is necessary to reduce the number of records of precordial electrocardiographic leads. Such leads are, as a matter of fact, rarely needed for diagnosis. It is possible in almost all cases to diagnose and identify the position of nyocardial infarction by the routine limb leads (1, 2, and 3). Therefore in the future only Leads 1, 2, and 3 will be taken on all cases, coronary and otherwise, unless inadequate evidence is obtained from them. In such cases of doubtful or incomplete diagnosis, three precordial leads will henceforth be taken, C_2, C_4, and C_5, closely following the newly published report of the Precordial Lead Committee of the American Heart Association.

N. W. Faxon, M.D., Director

At a meeting of the General Executive Committee held on April 28, 1943, it was

VOTED: That the visiting physician or surgeon should be asked to consider the necessity or advisability for daily recordings of T.P.R., and to have these continued when in his judgment medical information would result. That in those cases where he felt such recordings were unnecessary he should be empowered to omit them; that if he felt a single daily recording would be sufficient he should specify the hour at which this should be taken, selecting one of the usual hours for the taking of this data.

For example, it was suggested that in many psychiatric cases, in many Ward 4 cases, and arthritic cases, such recordings could be entirely omitted.

VOTED: To require the reviewing and rewriting of medication orders weekly; that is, no medication should be continued beyond one week's time without the re-writing of the order.

N. W. Faxon, M.D., Director

The Hospital will observe Thursday, June 17, as a legal holiday commemorating the Battle of Bunker Hill.

At a meeting of the President and Fellows of Harvard College on April 5, thirty-one awards were made to officers of instruction or administration in the University in accordance with the provisions of the William F. Milton Fund and the Joseph H. Clark Bequest. Of these awards five have been made to Massachusetts General Hospital members, as follows:

George Hawkins Acheson [*WM* 1939], Associate in Pharmacology; for a neurophysiologic analysis of the central action of benzedrine.

Earl MacArthur Chapman [*a.p.*], Instructor in Medicine; for a study attempting an approach to a rational therapy of persons with a disordered fat metabolism.

Joe Vincent Meigs [*c.Gyn*], Clinical Professor of Gynaecology, and *Maurice Fremont-Smith* [*assoc. p.*], Instructor in Medicine; for a study of vaginal smears as a method of determining early cancer and ovulation.

Robert Hardin Williams [*Res. Fel. M.* 1940], Instructor in Medicine; for a study of the etiology of thyrotoxicosis with special reference to the alterations in the biological oxidations in this disease.

On April 12, 1943, the appointment of Dr. Harry C. Solomon as Professor of Psychiatry was confirmed by the Board of Overseers of Harvard University, without limit of time. Dr. Solomon's first appointment to the Medical School was in 1914 as Assistant in Neuropathology, and he has since held successive appointments, except during 1918 and 1919 when he was in service overseas with the armed forces of World War I. He is a Consulting Psychiatrist at the McLean Hospital as well as an Associate Neurologist at the General Hospital.

The Chamber of Commerce of the U.S. has formed a National Health Advisory Council "to project and carry out a broad program looking to health conservation as one of the most important factors in winning the war." Dr. Paul D. White has been appointed to the present membership of thirty leading medical and health authorities.

The MGH shared in the nation-wide observance of Hospital Day on May 12. Visitors were shown through the Hospital, among them two groups of high school students interested in nursing as a profession. Meanwhile, Miss Sleeper, Assistant Superintendent of Nurses, interviewed a second-year student over station WEEI. The Boston Globe gave front page notice, a picture, and a column to an account of student training as told by an enthusiastic MGH'er who had just finished her eight week's duty in the operating room.

Also, the Hospital was represented among 260 student nurses who, in uniforms and capes red, blue, brown, and grey, marched from the State House to the Parkman Bandstand on Boston Common. In a public ceremony there 52 students from 26 local hospitals were capped by Miss Margaret A. Dieter (*MGH* 1916), chairman of the State Board of Registration in Nursing, and Miss Marjorie B. Davis, chairman of the Massachusetts Nursing Council for War Service. All this was very appropriate to the birthday of Florence Nightingale. But, so far as the weather was concerned, it was just one more rainy day, and at intervals a little extra moist at that—just the usual "unusual" spring(?) weather we've been having!

The School of Nursing hopes to admit a July class of 60 students in addition to the regular September class.

Apologies are due to Lt. Commander Bixby for the omission of his last name from the statement of his service printed last month: Lt. Comdr. H. Irving Bixby (*WS* 1924) was called into active service on January 1, 1943, at the Chelsea Naval Hospital. He was then transferred to a naval base in California, and is now with a construction battalion in the Pacific.

The other interesting job was my assignment to take care of the luggage and baggage of those of our unit assigned to my ship—twenty-four nurses and four officers. Several days before we sailed I left the staging area by motor convoy for the port of embarkation and had the second most interesting day of my Army experience; I saw the ship on which we were to set sail and checked in the officers' and nurses' luggage and then went aboard and inspected the ship. It was a large, clean ship which had made many crossings and our quarters were comfortable. My guide was most amusing because almost at every turn he would pat the ship and tell me how fond he was of her, having been on her four years. . . .

The next interesting and important aspect of the trip is the convoy itself—miles of transports flanked by cargo and tanker ships with protection of all kinds—cruisers, destroyers, planes, blimps, aircraft carriers, etc. Now I understand how the U.S.A. has maintained its record of no loss of life on an American convoy. It's getting rough and difficult for me to write legibly. I wish I could put across to you the thrill of standing on deck and watching this extraordinary mission roll along—beautiful sky, fascinating ocean filled with war boats and so protected that I feel safer than I would crossing the street.

We embarked on Sunday morning before noon—having left the staging area or camp in the wee hours that same day. I never shall forget the task of carrying our own plus as much of the nurses' luggage as possible from train to ferry, and from the ferry up the gangplank to the staterooms. None of us expected to carry our own luggage so it was loaded to capacity! We were dressed in full field uniforms, girdled with gas masks, web belt, canteen, and musette bag which was a load in itself. I remember tugging, puffing, resting a spell, and then going on a few more steps and eventually accomplished the arduous job. We then succeeded in getting a detail of men to help carry aboard the luggage of all the nurses. That done, we unpacked, picked our bunks, changed clothes and made the acquaintances of room mates—nine in our stateroom, Sturgis, Ludwig, Ingalls, myself and three young medical lieutenants recently out of their internships, very pleasant, enthusiastic, refreshing gents. The other two are quiet and shy. That's the roster for Room 40.

Tuesday we were busy running the ship's hospital. I made rounds twice a day and spent much time in the dispensary and hospital quarters. With thousands of men aboard, the sick call was large and interesting. After two days out our hospital admissions began to increase: admitting diagnosis of measles, mumps, upper respiratory infections, boils etc.

On Wednesday Sturgis performed the first operation—incision and drainage of web space infection of the hand of a colored boy. I was dental OD and very busy—saw a raft of patients and it certainly was fun extracting teeth with the minimum anesthesia, not to mention the rock and roll of the ship, for that was the first day the seas were rough and the complexions began to fade. Both Dutch Ludwig and I were slightly green around the gills and, although not sick, felt rather uncomfortable and were glad to get horizontal on the bunk from four to six P.M. After evening chow we made night rounds. The nights were very beautiful, clear bright moon, phosphorescent water and the figures of the other ships in the convoy stealing along silently and mysteriously—all blacked out except for the stars and moon overhead.

Thursday was a warm, sunny day and as we were in the gulf stream the decks were thronged with troops. Everywhere on deck were poker games, chess, bridge, cribbage, and the morale was high and thoughts of danger minimum. This was the afternoon of Lincoln's Birthday—forevermore to be remember by me as the anniversary of probably my most dangerous and exciting experience. I cannot tell you about it now but will carry on from here when I know what we are allowed to write.

...—V...—

Extracts from letters written by Lt. Wooster P. Giddings, MC, AUS (*WS* 1939) bring news of his own unit, the 2d Surgical Group, which went overseas after previous assignment at the Lawson General Hospital, Atlanta, Ga., and of the 6th G.H., in March.

It is a bit difficult to estimate the character of this part of the world under present circumstances; there are so many Americans about that in a way the native scene seem a bit like a stage set. The natives and the French seem to be accustomed to having us about, and I have a feeling that that has changed the aspect of the country. That impression is not lessened by the fact of American military control.

If the weather continues as it has been for the past three days, there will be no one in my acquaintance who will not hear from me! This is the third straight day of heavy rain, and, although we are able to keep reasonably comfortable, the problem of occupying oneself in a tent all day with flaps closed and candles for light is a big one. So writing letters is the order of the time. I suppose we resort to that as a sort of inversion, psychologically, in that writing letters is the nearest thing to receiving them.

We have spent the time since arriving in getting further equipped, and in getting to a campsite where the problem of late has been to get settled. That is fairly well done now. All things considered it is remarkable how completely provision has been made to care for us. Not only are practically all the necessities here, but a fair number of the comforts as well. Comforts not in the sense we know them at home, perhaps, but definitely comforts for the way we are living.

Our chief worry at the moment is keeping the boys happy, and trying to keep them reasonably dry. They are in pup tents, and although they have wooden floors, they are fairly well soaked at the end of three days of constant rain. Fortunately, the evenings have been fair and the boys have been able to get into the back lot and play a bit of baseball. We were furnished five large chests of recreational equipment by the Red Cross, containing a large amount of hard and soft ball material, as well as indoor games, and a radio and victrola. With the latter they furnished a number of transcriptions of old radio programs. Having these things for the enlisted men is a godsend, and will be even more so when we are able to get our large recreation tent erected.

The other day I had the exciting experience of seeing the MGH crowd. They are not in the same place I am, but are not so terribly far away. It did me a lot of good to walk in and see those people; it was almost like getting home. We had a good session, for I had been in the hospital long since they had, and was able to give them a lot of news. In addition to the pleasure of having them here, it is comforting to know that the professional ability of the old Massachusetts is in the same part of the world.

The magnetic qualities of the Massachusetts General Hospital seem still to operate overseas, and word has evidently got about in North Africa that the 6th General Hospital is open for visitors as well as patients. Lt. Col. William A. Reilly (*CM* 1928), chief of the medical service of the 59th Evacuation Hospital, which has been on duty in that area since December 1942, was an April caller:

Receive and read THE NEWS here in No. Africa with a great deal of enjoyment, as it serves not only to keep us in touch with the institution wherein I spent a year comparable to none in my medical training but allows me to read about former associates, many of whom are good friends. It revives old associations and memories highly prized for, as stated, I feel my training at M.G.H. was the most valuable of all my medical training.

The 6th Gen'l is in the same area, so I have had many opportunities to renew old acquaintances. The 6th is busy as can be; the influx and egress of their patients is so rapid and great that they can hardly keep up with the work. Nevertheless, there is plenty of evidence that the staff is getting into the regular M.G.H. stride and, when organized properly, will be carrying on much in the usual M.G.H. tradition. So far Don King and Horatio Rogers are not able to hold formal ward rounds, as the work of disposing of patients has flooded them.

My medical service in the 59th E. H. is a busy one for we have 175-225 sick patients for only five officers. The types of disease run nearly the whole list of official diagnoses."

A letter of the same date to Dr. Allan M. Butler (*c.CM*) gives an account of the work of Colonel Reilly's unit:

Here in N. Africa for four months I have been running a medical service under station hospital operation though the unit is an evacuation hospital. My census nears 200 cases. They cover all varieties of diseases. Many of malaria, meningococcus infection, real dysentery, pneumonias typical and "atypical," gastric ulcers, vascular diseases (a few), measles, mumps, chicken pox; 2 small pox, 1 typhoid, 4 of meningococcemia, 3 meningitis, 2 of BENDS, a good many rheumatic fevers, carditis etc. With only five officers the med. serv. is quite busy. We do a fairly decent type of work-up and can carry out good therapy—only two deaths.

The only endocrine problems have been several goiters, progressive exophthalmos and 2 "gynecomastias". Among the natives I see much typhus, plague, smallpox, some typhoid and rabies.

First-hand news about the 6th General Hospital comes from Major Edward F. Bland (*EM* 1929), who is assistant chief of its medical service. Portions of a letter to Dr. Paul D. White give these details:

About our station—medically speaking it is a key post; the final decision on this side as to the disposition of cases is largely in our hands. We are very busy and have had to provide emergency space for large contingents. Our theoretical capacity has been touched already in spite of the fact that Arab workmen are still hammering away on all sides night and day. Extensive new construction is being pushed to such an extent that it is sometimes hard to find the patients among the timbers, crates, and Arabs. Arab plumbers completed today the tank connections for the electrocardiographic laboratory.

So far the surgeons have had a rather lean time of it professionally. Naturally, most of the emergencies have been treated before the patients get to us, and those who require more definitive and time consuming procedures are sent home. On the medical side we are having a more varied and active experience than even at home—especially with meningitis and pulmonary infection, and some malaria. I have been amazed at the rheumatic fever and valvular disease. We are seeing so much that Marlowe and I are making a special study of certain features of it, and have assembled data on quite a series already. In addition we have had several cases of coronary thrombosis, relatively little serious hypertension, and so far not

A Surgeon's Fight to Rebuild Men: An Autobiography. By Fred H. Albee, M.D., F.A.C.S., F.I.C.S. E. P. Dutton & Co., Inc., 1943, New York.

No one can read this book of nearly 350 pages without being impressed by the pluck, resourcefulness, and sheer force of the man who wrote it.

He was born on April 13, 1876, in the township of Alna, Maine, on a farm of "some hundred acres of stony soil, from which his father wrenched a scanty living for a family of nine." The stock from which he sprang must have been a fine one, for from the age of sixteen Dr. Albee may be said to have been a self-made man working his way successfully through Lincoln Academy, Bowdoin College, and the Harvard Medical School. He was Prosector for Professor Maurice Richardson, and won an internship at the Massachusetts General Hospital. After completing this internship in 1904, he practiced for a few years in Waterbury, Conn., and then settled permanently in New York City. In 1906 he was most happily married to Louella M. Berry.

Two paragraphs in the introductory chapter suggest the ideals and purposes that have controlled Dr. Albee's extremely active and fruitful life: "The doctor is an intellectual gypsy, whether to learn or to teach, he is a born wanderer. . . . His dream is to travel, study, and return to retrieve his errors and be more useful to his fellow men. Intellectual intercourse and spiritual encouragement are as necessary to him as his food." And, "The sick and the crippled are an economic waste. . . . Society itself is sick when large numbers of its people are physically inefficient. The doctor can no longer stop when he has bound up a wound. He cannot stop until he has prepared his patient to take up again a useful place in society."

Dr. Albee has been as devoted to the "strenuous life" as was Theodore Roosevelt. The extent of his travels in Europe and in North and South America, by boat and automobile and in the air, are amazing. He likes to get things done, and is a hard hitter. Prize fights have always been one of his great enthusiasms. He is an organizer of great ability, and has initiated or helped in the formation of several international medical associations, notably the International Society of Orthopaedic Surgery and the Pan-American International College of Surgery. He was responsible for the organization of U. S. General Hospital No. 3 at Colonia, N. J., which earned so creditable a record for the mental and physical rehabilitation of wounded soldiers of World War I. He has been chairman of the New Jersey Rehabilitation Commission for many years.

As an orthopaedic surgeon, Dr. Albee has attained a wide reputation at home and abroad. He speaks of a drawer "crammed with decorations from, it seemed, almost every country under the sun." He is not only a skilful operator, who has added much to the technique of bone grafting, but an inventor of machines and methods applicable to the surgery of the bones and joints.

In this autobiography the capital "I" appears rather frequently, but the reader need not cavil since the story of his life and work makes it quite clear that Dr. Albee possesses another eye, far-seeing, penetrating and kindly, which does him great credit.

The book is well written, interesting and informing. It is already in its second printing.

Dr. Wayland A. Morrison (*WS* 1916) is now acting as Chief Surgeon of the Santa Fé Railroad (lines west of Albuquerque, N. M.), with headquarters in Los Angeles. After organizing Specialists Unit No. 86 for the U.S. Navy, he was assigned to the Railroad Medical Department as an essential service, and could not accept active duty. He holds the rank of Commander, MC, USNR (Ret). During World War I he served with Base Hospital No. 55, and was discharged in 1919 with the rank of Major.

Dr. Gordon S. Myers (*r.p.* 1943) is on service as Medical Officer with the Western Division of Pan American Airways at Brownsville, Texas.

Capt. John C. Angley, MC, AUS, (*a. in M*) is now on foreign duty as head of a Malaria Survey and Control Unit. He was previously stationed at Morrison Field, West Palm Beach, Fla.

Major T. Wiley Hodges, MC, AUS, (*Or.* 1941) is in charge of the orthopaedic service (350 beds and over 100 fractures monthly) at Camp Hood, Texas, a tank training centre. Many casualties result from the strenuous drill required there—and many lives at the front are saved by it. Major Hodges entered the service in July 1941, with the rank of Captain.

Major William F. Hoyt (*WS* 1932) was commissioned on March 27, 1943, and went into active service on April 13 at Wm. Beaumont General Hospital, El Paso, Texas. After a month's training there, he was assigned to Hammond General Hospital, Modesto, Calif.

Capt. Carl E. Horn, MC, AUS, (*Or.* 1940) sent to the War Records an account of his service from the Station Hospital at Camp White, Ore. He was commissioned on August 24, 1942, and went into active service on September 8.

> I was stationed here after a week's stay at Fort Douglas, Utah. In October 1942, I became chief of the orthopedic service, succeeding Major Edward Parnall, also a product of the MGH orthopedic service [1932], who was sent to Managua, Nicaragua, in charge of medical care for workers on a large section of the Pan American Road. The work here reminds me in many ways of the MGH, for I am kept extremely busy.

Capt. John R. McDaniel (*ES* 1940) received this promotion in March 1943. He is with the 3rd Battalion, 36th Engineers Regiment overseas.

After entering the service in October 1941, as Ensign, Lt. Peter T. Brooks, MC-V (G), USNR (*ES* 1943) received this rank on Feb. 28, 1942, and went into active service on April 15, 1943, at the USN Hospital, Newport, R. I.

In March this promotion was received by Comdr. Virgil G. Casten (*N* 1929). He is still at the Chelsea Naval Hospital as an ophthalmologist.

Lt. John B. Millet (*WS* 1943) was commissioned in March 1942, made 1st Lieutenant in June, and called to active service on April 24, 1943. He has reported to Carlisle Barracks, Pa.

Camp Kilmer, N. J.
May 5, 1943

Dear Dr. Faxon:

I have received from Cohasset today echoes of a curious rumor that seems to have emanated from the august portals of the MGH, that I had gone overseas with the 6th General Hospital, and had been invalided home to Walter Reed in Washington. Inasmuch as I have scarcely left the hospitable surroundings of New Jersey in three or four months, aside from occasional expeditions into the jungles of New York City, I thought it advisable to nail the rumor before my death is prematurely announced.

For I am still fighting the battle at Camp Kilmer, safely ensconced in the surgical staff of the Station Hospital. I think it is not a breach of Army regulations now to admit that I spent a very pleasant old home week three months or so ago in the company of Grantley Taylor, Claude Welch, Jim Halstead, Don King, and all the rest of the gang while they were in New Jersey. Claude and Don King were both kind enough to give papers before our staff, and these were much appreciated.

The whole group were lean, brown and obviously very fit. As you know they were positively delighted to be on the move. It was with the greatest difficulty that I refrained at that time from sending to Boston a report of the whole incident, but we are under very strict censorship in such an area as this, and cannot relax vigilance without endangering friends during a crossing. Our work here is intensive, as you may imagine, and brings in a surprising amount of active surgery, so that we have not suffered from the inactivity and boredom that have plagued some of the hospital units.

I will welcome any quiet denials that you may be able to make in case of above-mentioned rumor. There are two true rumors current about me, one that a book of mine called "Prologue to New England" is in the bookstalls, and another that my Majority came through in the same week that the book was published. These are sufficient for one mortal.

Yours sincerely,
Henry F. Howe.

Lt. Col. Thomas B. Jones, MC, AUS, (*3d S* 1924) was commissioned as Major upon his enlistment, and went on active duty May 28, 1942. He is now Chief of the Surgical Service at the Lovell General Hospital, Camp Devens, Mass.

Major Howard G. Weiler, MC, AAF, (*Or.* 1932) is on service at Chanute Field, Ill., Station Hospital, Orthopaedic Service. On July 22, 1942, he was ordered to active duty from the MORC, with Captain's rank dating from September 5, 1938, and was promoted to Major on April 15, 1943.

Major Leslie C. Dodson (*r.p.* 1932), who was recently in charge of the orthopaedic department of the Station Hospital at Shenango Replacement Depot, Pa., is now with the 1st Auxiliary Surgical Group at Fort Sam Houston, Texas.

Capt. Alfred Hurwitz, MC, AUS, a member of the 3d Auxiliary Surgical Group returns his blank to the War Records from England: "I have been on detached service with Mr. Tudor Edwards and Mr. Ronald Belsey, thoracic surgeons, and have had an interesting experience." Captain Hurwitz was formerly a Graduate Assistant, and Dr. Belsey was a Research Fellow in Surgery during 1938.

Upon his return to the fold (comparatively speaking) of the 105th General Hospital, Major George A. Marks (*ES* 1931) sent this admirable account of service in the field—the Buna jungle:

Thank you for the "NEWS" and its reports of the men in the service. It stimulates me to do a little reporting of my own.

A mixed team, evenly divided between the M.G.H. and P.B.B.H. has recently returned from New Guinea, where they constituted a portable hospital during the action in the Buna sector. John Lambert and I tried to represent the M.G.H. while Pete Campbell and Fred Ross contributed constant references to what they called "The Brig." We were supported by a detachment of enlisted men, half of them technicians, surgical, etc. We had our own mess, tentage, and professional equipment, over which we labored and hovered for some time before setting out.

Transport from the advance base to the combat area was by air, and if it hadn't been that our minds were largely filled with possible future contingencies, we could have enjoyed viewing the great green masses of the Owen Stanley range and, incidentally, getting over them so comfortably. Enthusiasm for this was less inhibited on the way back. On landing we trudged forward through fragrant mud and soft golden kunai grass to a point about thirty minutes' litter-carry from the scene of activity. Due to lack of consideration on the part of the Nips, who had taken all the high ground, our White Building arose on soggy ground like that of its original. In fact, a nearby stream had flooded the area a few days previously. The jungle overhead was more appreciated than that underfoot.

We relieved a similar organization so there was no delay in starting work, using some of their installations until ours could be brought up two days later. At that time Campbell, supply officer when not doing neurosurgery, hove into view, barking loudly at some 300 wild-haired and cackling natives carrying the hospital in sacks. His poise was perfect; the best traditions of a combined round were preserved.

There was little of tile or stainless steel in the installations, but we found the airborn roots of the sago palm a satisfactory substitute. Used either whole or split, concave or convex, they turned into table, bench, litter stand or latrine seat before you could say "Pass the C rations." Our instruments were not makeshift, however, and we had a small field autoclave, which was most efficient used over a gasoline heating unit. Medical supplies never failed us completely, since beyond what we carried ourselves, the natives brought in expended items daily. They were very dependable, mixing in a mortar shell or box of grenades only occasionally. On their return trips they evacuated patients, four carrying and four in reserve, in case one or more disappeared into the mud. They insisted on using litters made by themselves, saplings bound together by vines.

The operating during the day was done under tent flies, at night in the standard pyramidal tent, since the latter could be blacked out. We worked in two teams, all parts completely interchangeable. The West Medical service should be notified that John Lambert rapidly metamorphosed into a surgeon, specializing in foreign bodies on which he pounced with all the avidity of a Forty-Niner on a nugget. He soon became incensed because we older men wouldn't turn over the laparotomies to him. Pete Campbell emulated Cushing in a number of instances and even descended into the realm of general surgery frequently, complaining only of the man-sized sponges required in this field. He was very proud of a "portable" suction apparatus which he devised from a double-tipped mortician's syringe before we started. Fred Ross, doubling as enlisted detachment commander and surgeon, proved versatile in all departments, for which both the Children's Hospital and Brigham may take proper credit.

The triad of plasma, sulfanilamide, and pentathol sodium was hard-worked. Many of the more seriously wounded received at least one unit of plasma in the battalion aid station before getting to us. We used it constantly and in large amounts. All wounds received sulfanilamide at the aid station and we re-applied it after debridement, as well as starting the administration by mouth. Pentathol proved to be the answer to any jungle surgeon's prayer, and was used exclusively except in the laparotomies, where spinal was given. The former saved much time and supervision in the induction and recovery periods. Don't tell the Anaesthesia Department, but we taught two of our enlisted men to administer it.

To our surprise and relief, plaster-of-paris hardened without too much difficulty in spite of the intense humidity. It was applied only in the form of a posterior slab or shell. The vagaries of supervision along the complicated chain of evacuation contra-indicated circular casts. Fractures of the femur were held in fixed skin traction in the half-ring army splint with foot piece, the whole apparatus being lashed to the litter. Wounds were not closed or packed. We have had the opportunity of seeing many of our cases back here at the hospital, and the low incidence of massive sepsis is gratifying.

All in all, it was an experience. Shorts and shoes made a comfortable operating ensemble—and there was less to launder after climbing sheepishly out of a fox-hole.

The hospital here has been busy, and the M.G.H. members in it are well occupied. Myles Baker is engrossed in an exhaustive study of one of the more prevalent medical problems and attacking it with his usual vigor and expertness. Jack Newell is not languishing for want of his specialty. Besides running the anesthesia department, he has charge of the administration of the operating rooms. Every one is as happy as can be expected in the service.

With best regards to all those there, and our appreciation of the "NEWS."

Major John L. Newell (*ES* 1932), with the 105th General Hospital, received this promotion on December 24, 1942.

Hospital members continue to report from all quarters of the globe. Lt. John McL. Morris (*ES* 1941) sends news to the War Records from "an Aleutian outpost, where we have had a few brushes with the Japs." He adds: "Facilities are not those of the M.G.H.!"

U. S. Naval Station
Tutuila, American Samoa
April 2, 1943

Dear Dr. Faxon:

Censorship prevents the recounting of my travels, but I am stationed here in Samoa assisting in the care of naval personnel of the station and of visiting ships. News of my promotion on October 1, 1942, to Lieutenant is correct.

It will sound strange to you if I say we have been envious of you this past winter, but, at the time of the severe cold in New England, we were having a tropical summer and the rainy season. Winter will soon be here, but there is little change in temperature here close to the equator. We hope for less rain.

Good luck to all.

Sincerely,
Joseph A. Holmes, Lieut., MC, USNR

Col. Thomas H. Lanman (*ES* 1918) was recently promoted to this rank.

This letter from Major Norman E. Freeman (*r.s.* 1935) to Dr. Faxon brings the known total of MGH members in India up to four. Major Frank B. Cutts (*WM* 1934), with the 48th Evacuation Hospital, was the first to report from there. Major Freeman wrote on April 12:

I am at present with the 20th General Hospital Unit (U. of P.). We were called out at the same time as the MGH unit, and spent seven months down at Camp Claiborne, La. After a journey of about two months we finally landed in India and have reached our permanent destination. We are now functioning as a general hospital in a hospital composed of bamboo bashas without running hot water, and electricity available only in operating theatre and laboratory. Our equipment is gradually coming in, and we hope to be set up more comfortably soon. . . . Two other alumni are in this group, Major Arthur M. Walker (*EM* 1925) and Major Kenneth D. Elsom, who spent only a short time at the M.G.H. as a research fellow with Dr. Means.

In connection with Major Freeman's service in the present war, we mention that in 1934, while a resident surgeon at this hospital, he was awarded the Warren Prize for his paper on the "Physiology of Gangrene."

A first-hand report of the work of the hospital ship, USS "Solace," is quoted here from the statement sent back to the War Records by Lt. Comdr. Dana L. Farnsworth (*WM* 1935):

Since last August we have been quite busy with as varied a practice as one could wish. We frequently see MGH men, and we're very pleased with the part they are playing in this section of the world. I've seen twelve of them in the last three months.

Our ship is equipped to take care of a large number of patients, and has just about every diagnostic and therapeutic device we can think of. In fact, its equipment will match or surpass that of most land hospitals with which I am familiar. Furthermore, a patient who comes on board has a 98.8% chance of leaving the ship alive, and usually much improved.

The censor has permitted Capt. Daniel J. Holland (*a. dn. s.*) to relate only the prelude to the adventure that befell one section of the 6th General Hospital while en route to foreign service:

February 8, 1943

As you know, we left Blanding for a staging area. A staging camp, or area, is one near a port of embarkation where troops are made ready for foreign service. All manner of physical examinations — check-ups, inoculations, vaccinations etc.—clothing and all equipment is checked, rechecked, issued, and the troops put in excellent condition physically and materially. The American soldier is unquestionably the best trained and best fed, paid and equipped soldier in the world—he is given not only sufficient but the *very very* best with which to work. This staging area was not at all attractive, rather bleak and muddy, but we as a unit were on a high priority for foreign service so were processed right through without delay. Everything operates on a seven-day week, twenty-four hours a day. It was here that I was first exposed to Army efficiency and smooth-running machinery. Thousands and thousands of troops were received, and sent out with amazing efficiency, care and speed.

I worked for three days a week in the hospital and in the sixteen days we were there treated seven or eight fractures and once again dipped my hands into the professional bucket which I had for some months given up as lost.

STAFF GROUP OF THE 6TH GENERAL HOSPITAL ON THE STEPS OF THE HEADQUARTERS BUILDING

(Left to right) *Lts. D. A. Ellis, K. B. Lawrence, S. M. Wyman* (rear), *Capts. S. H. Sturgis, S. P. Sarris, T. H. Ingalls, Lt. E. L. Cantlon, Capt. J. R. Frazee, Major H. H. Faxon, Lt. C. E. McGahey, Major L. Parsons, Capt. T. S. Hamilton, Lts. R. M. Bailey, W. E. Arnold, Col. T. R. Goethals, Capt. D. J. Holland* (rear), *Majors J. A. Halstead, W. C. Knott* (exec. officer), *Capt. H. B. F. Seyfarth.*

(Taken in March by Major Herbert P. MacNeal, M.C.)

very much N.C.A. of high degree. On the other hand with the rising tempo in Tunisia, we may see our share of it yet. Up to now, of the disabling medical conditions we have seen peptic ulcer leads the field, asthma probably next, and perhaps rheumatic fever third—omitting of course neuro-psychiatric disturbances which lead by a wide margin.

About the cardiac laboratory—that is my assignment "in addition to my regular duties" and they have given us a very satisfactory room (not in the basement) and have built into it a small darkroom. George [Shallcross] has taken over in good style and was promoted three days ago to corporal. Last week he took 30 electrocardiograms—about one-third of which were patients referred from units in this vicinity.

Almost everyone passes this way at sometime or other. In fact, it is almost like the M.G.H. in that respect. Hardly a day but someone turns up—for example, two from Richmond yesterday. Now and then I have lunch with Staige Blackford (*EM* 1927)—Dr. Perrin Long has been by, Bishop Spellman, and a few of the commanding generals in person for an inspection. Last week I had (via Blackford) an interesting consultation with the physician to the Pasha. Another interesting medical contact here I made through Reilly—namely, to the local pest house. Most interesting was the typhus and smallpox, neither of which I had ever seen before. They occasionally have cases of plague, but we missed that by one day. But enough of the medical side.

Marlowe and I often reminisce and wonder how and what goes on in the Laboratory. Please give my best to all. Dr. Means might be interested to know that his recent letter to Col. Goethals was displayed on the bulletin board, and brought a lump into our throats.

Miss Campbell shares with The News a letter giving welcome details about 6th General Hospital personnel. It comes from "Bill'," former plaster man in the OPD Orthopaedic Clinic, who now writes as Pvt. William J. Murphy, 56th Evacuation Hospital, APO 3784, c/o Postmaster, N. Y.

This is just a note to let you know where I am. I'm somewhere in No. Africa. It isn't permissible to tell just where. It's quite a place, much nicer than we expected. Of course, it's nothing like the U. S. and we do have to rough it a little.

Here is the pay-off. Yesterday I had a little time to myself so I went to visit the M.G.H. unit. Of course I made the surprise dramatic entrance. Drs. Aufranc, Faxon and Miss Wilson were putting on a cast and when they looked up, there I was. Were they ever surprised to see me! Honest it was grand just talking to some one from home. Then I saw Dr. Hamilton. He is a little thinner but looks good. Next I saw Miss Barbour. She looks very well. Then I went to visit the registrar Major Thorndike. Really and truly he looks wonderful. He is a lot thinner, almost streamlined. Others I saw are Miss Boyle, Dr. Short, Dr. Linton, and quite a few more whose names I don't know. They really have a beautiful set-up and are working very hard. Most of them have lost weight.

This will have to do for now. I just couldn't resist letting you have this news. Please say hello to everyone for me and give them my best regards. I miss you all and often think of you.

As ever
"Bill"

Col. Edward D. Churchill (*c. WS*) is in North Africa, and according to the following account, quoted from letters dated March 8 through April 22 to his family, his duties have covered much territory.

We seem to have arrived at the end of the line. The trip was slower than expected, because of several hold-overs due to pressure of traffic, but it all went very smoothly. We passed over a great deal of very interesting country. Tell Freddy I whittled a splinter off the equator for him.

I am now trying to pick up the threads of a very complex and interlocking organization. When one deals with alphabetical language it is almost like a foreign tongue. The British alphabet is also just different enough from ours to add further confusion. Am planning a trip next week with the British Consultant to visit hospitals. . . .

My last tour was to the front, where I actually saw some shooting. I reached the goal I had set on the map while still in Washington.

It is lonesome at the front. Very little to see except an occasional fast-moving vehicle—oftentimes a jeep—scurrying along leaving a cloud of dust behind. Implements are widely dispersed, not lined up in tidy little rows, as more than two things together is sure to draw the attention of some roving Messerschmitt. Foxholes are conveniently situated, and anything that sticks above the desert floor is camouflaged. The soldiers are in lonely groups of two's, or three's, near their bit of machinery whatever it may be. All are busy watching the air and ready to duck.

The medical personnel at the front is doing a swell job in this lonely and barren environment. They are getting back the wounded in excellent time and in good condition. In the numbers I have seen in many hospitals, only one complained of discomfort. It is really remarkable compared with a civilian hospital. Of course, many are comforted by the fact that they have done their job and now it is over with for them, at least temporarily.

There are many interesting and some amusing experiences in the life of a traveling man. Accommodations vary from comfortable beds to cots in cold tents. Usually enough hot water to shave with; and a roadside lunch out of ration cans is not infrequent. The country is beautiful whether in green fertile valleys, barren mountains, or picturesque desert. Usually cold at night in the highlands—even a skim of ice. In the valleys, warm spring with orange blossoms; by the sea, warm in the morning but chilly and dampish in the afternoon. Fortunately the rains seem to have abated. Roman ruins are not infrequent in certain regions. In one city two large and deep Roman baths, fed by warm springs, were full of soldiers. Arabs are everywhere. They seem to be having a good time, busy about the same things that have occupied them for centuries, tending sheep, riding donkeys, watching their camels and going places—where, they themselves only know. . . .

At present I am on tour within the luxuries of civilization, such as they are. Have been visiting my Alma Mater during the past two days. They have a nice set-up on the sea, which assumed its traditional blue again during my stay.

I am finding a great deal to be done, and am seeking methods for accomplishing the things I should like to do. Time, however, is a limiting factor, as events move by so rapidly.

Promotion in rank as of March 12, 1943, should be noted for Colonel Walter Bauer (*r.p. WM* 1927). He continues to supervise the medical service of hospitals in the extensive area (including four states) assigned to the 8th Service Command with headquarters in Dallas, Texas.

THE NEWS

No. 10 Boston, Mass. July 1943

Honorary Fellowships in the Royal College of Surgeons (F.R.C.S.) have been conferred on Dr. Robert B. Osgood (*WS* 1900) and Col. Elliott C. Cutler (*r.s.* 1916).

Another honor for Dr. Osgood was announced on the cover of the May number of the *Archives of Surgery*: It is labelled "Osgood Number," and the title page states that it is dedicated to him "by his former associates on the occasion of his seventieth birthday." We cannot reproduce its fine photograph of Dr. Osgood, or reprint the two pages of excellent biography into which Dr. John G. Kuhns (*Or.* 1926) has compressed an account of Dr. Osgood's training, his constant achievement, his service to surgery, both in Boston hospitals and abroad during World War I, and his honors. Brief quotations must record both the claim and the pride long felt by this hospital in Dr. Osgood:

> He was elected chief of the orthopedic service at the Massachusetts General Hospital in 1919. Here his unusual ability as organizer and head of a clinic was shown. The orthopedic service of the Massachusetts General Hospital under his leadership became an important center for both undergraduate and postgraduate teaching in orthopedic surgery. In 1922 he became professor of orthopedic surgery in the Harvard Medical School and chief of the orthopedic service of the Children's Hospital in Boston. In 1924 he was made John B. and Buckminster Brown professor of orthopedic surgery. It was in the period between 1922 and 1930 that he, with Dr. Nathaniel Allison [*c.Or.* 1923-29] organized a postgraduate teaching service for orthopedic surgery in Boston that became internationally famous and attracted students from all parts of North America. . . .
>
> We who have been his pupils and associates remember him best as a great teacher. He is known in medical councils as an able executive and a wise counselor. In medical research his part has been chiefly that of giving helpful advice and encouragement, seeking no credit for himself. A man of sound scholarship, facile in voice and pen, of the highest ideals both for his personal life and his profession, generous to a fault, speaking evil of no man, he has wielded and continues to wield a great influence for good on the practice of orthopedic surgery in America.

On a later page, Dr. Rodney F. Atsatt (*Or.* 1926) expressed the affectionate respect Dr. Osgood as an individual has inspired in his students and colleagues. A third tribute appears in an article by Dr. George H. Jackson, Jr. (*Or.* 1919):

> A Boston physician once wrote that no one who had spent a year at the Massachusetts General Hospital under Dr. Bigelow "could fail to recognize the effect on his own subsequent career of the time thus spent. The subtle influence over his students was felt the more for being insensibly exerted." All who have been privileged to serve under Dr. Osgood know how truly this expression of regard applies to their own former chief, whose kind sympathy and ready understanding will never be forgotten.

Dr. Jackson concludes his article with a pleasant anecdote telling how Lt. Col. Robert B. Osgood, and Colonels Elliott A. Brackett and Frederic A. Washburn received Sir Anthony Bowlby and Sir Robert Jones on a well-remembered morning at the Massachusetts General Hospital, and all the orthopedic service made the rounds with their distinguished visitors.

* * *

A monograph, "Management of the Cocoanut Grove Burns at the Massachusetts General Hospital," was published as the entire June issue of the *Annals of Surgery*. It will also be brought out separately in a cloth-bound volume by the J. B. Lippincott Company of Philadelphia. The Table of Contents reads as follows:

Foreword—O. Cope
1. The Problems of the Hospital Administration—N. W. Faxon
2. Social Service Activities—Ida M. Cannon
3. Neuropsychiatric Observations—S. Cobb and E. Lindemann
4. Resuscitation and Sedation of Patients with Burns which include the Airway: Some Problems of Immediate Therapy—H. K. Beecher
5. The Pulmonary Complications: A Clinical Description—J. C. Aub, H. Pittman, and A. M. Brues
6. Roentgenologic Report of the Pulmonary Lesions—R. Schatzki
7. Pathology with Special Reference to the Pulmonary Lesions—T. B. Mallory, and W. J. Brickley
8. Treatment of the Surface Burns—O. Cope
9. Problems of Infection and Chemotherapy C. Lyons
10. Procedures in Rehabilitation of the Severely Burned—B. Cannon;
 with A Note on Physical Therapy—A. L. Watkins
11. The Problem of Burn Shock Complicated by Pulmonary Damage—O. Cope and F. W. Rhinelander;
 with A Note on the Blood Bank—L. Soutter;
 and A Note on the Thrombophlebitis Encountered—F. D. Moore
12. Metabolic Observations—O. Cope, I. T. Nathanson, G. M. Rourke and H. Wilson

Dr. Hugo Behm of Santiago, Chile, was a recent visitor in the Department of Surgery. Dr. Gustavo Bernes of Havana, Cuba, and Dr. Carlos Noble and Dr. Carlos Zamarripa, of Mexico City, will spend several months as visitors in the Department. Their special interest is in thoracic surgery.

A course for the clinical training of theological students and ministers, under the direction of Rev. Rollin J. Fairbanks, is being given this summer, for the tenth consecutive year. Mr. Fairbanks was formerly rector of St. James's (Episcopal) Church, Grosse Ile, Mich. On January 1, 1942, he was appointed by the Massachusetts Council of Churches as Protestant chaplain for this hospital, and their director of clinical training for ministers. The course includes orderly service, observation of operations and post mortems, visiting of patients, notewriting, clinical seminars, and lectures by members of the Hospital staff. The training program began on May 24, and will be in two sessions of six weeks each. The course is conducted under the auspices of the Ella Lyman Cabot Trust.

This special training at the Massachusetts General Hospital was first introduced by Dr. Richard C. Cabot (*EM* 1894) and Rev. Russell L. Dicks, who later collaborated on a textbook entitled "The Art of Ministering to the Sick." Mr. Fairbanks did special clinical work here under their direction. In 1936 he took the course, and has had similar training at the Worcester State Hospital. He also served on the special labor mediation commissions appointed by the Governor of Michigan to consider labor disputes at two Detroit hospitals.

The Trustees have granted leaves of absence to Drs. Tracy B. Mallory and Richard Schatzki, "because of military service, with the understanding that they may resume their present positions on the Staff upon completion of this service." They have voted the following promotion and appointments:

Dr. Clayton H. Hale, from Resident Radiologist to Radiologist, beginning June 1, 1943
Dr. Fathollah Keshuar Mostofi, as Second Assistant Pathologist
Dr. Frederic B. Mayo, as temporary Resident on the Neurology Service during July and August, and as Assistant Resident on the Medical Service beginning October 1, 1943
Dr. Edward W. Shannon, as Assistant Resident in Neurosurgery beginning August 1, 1943
Dr. James d'Aumont Roth, as Intern in Medicine beginning October 1, 1944

The General Executive Committee has appointed the following Graduate Assistants:

Dr. Edward W. Miskall, in Medicine with Dr. Paul D. White
Dr. Carl S. Sawyer, in Dermatology beginning July 1, 1943
Dr. John F. Tannheimer, in Medicine until October 1, 1943, when he comes on service as Intern in Medicine
Dr. André A. Weil, in Neurology.

PUBLICATION OF MANUSCRIPTS

Members of the Staff are reminded that all manuscripts should be reviewed by the heads of their departments before being submitted for publication. When pathologic or x-ray reports are included in articles, it is suggested that since these reports, although factual, are not always in a form suitable for publication, the author consult with the Pathology or X-ray Departments before using them.

N. W. Faxon, M.D., Director

By vote of the General Executive Committee on June 2, 1943, the following rules were approved:

RULES GOVERNING ORDERS FOR PATIENTS

Treatment orders shall be written and signed only by doctors, subject to certain exceptions hereinafter noted. All orders for medication must specify method of administration and dosage, preferably by weight. Abbreviations should be avoided. Trade names shall not be used but official abbreviations of chemical names may be used. Orders must be legibly written in ink.

Procedure for Visiting Staff

Orders for routine care, including diets, bed orders, ordinary cathartics, standard intravenous glucose and saline infusion and simple harmless medications may be accepted verbally by a nurse who shall write the orders, the doctor's name and add her own initials. All other orders including other medications and requests for consultation, x-ray, and physical therapy, must be signed by a doctor.

Exceptions to the above may be permitted only when the doctor cannot be present. Under such conditions verbal orders for a *single medication* may be accepted by a nurse who shall write the order, repeat it over the telephone for confirmation, write the doctor's name and add her own initials. The doctor shall be responsible for verifying such orders at his next visit, by initialing them.

Requests for consultation should specify what questions are to be answered.

Requests for x-rays should specify areas to be examined and problem to be considered and, if possible, probable diagnosis.

Requests for physical therapy should specify reason for physical therapy and length of treatment before patient returns for review.

Patients in the Phillips House and Baker Memorial may be discharged on verbal orders, but discharge stamp must be completed in the record and signed by a doctor.

Procedure for Residents and Interns

Members of the House Staff shall write and sign all their own orders. Exceptions to this shall be only for justifiable cause, such as operating, and after 11 P.M. Under such conditions verbal orders may be given for a *single medication*, written by a nurse, who shall repeat it over the telephone for confirmation, write the doctor's name and add her initials. Such orders must be countersigned personally by the doctor when next on the ward.

N. W. Faxon, M.D., Director

DISPENSING OF DRUGS

By vote of the General Executive Committee on June 9, no drugs shall be dispensed by the Pharmacy unless listed in

1. U. S. Pharmacopoeia
2. National Formulary
3. American Medical Association — New and Non-Official Remedies
4. Hospital Formulary

Members of the Visiting or Resident Staff may recommend new drugs to the Pharmacy Committee for addition to the Formulary.

N. W. Faxon, M.D., Director

OFFICIAL NOTICES

LIST OF DRUGS APPROVED FOR ADDITION TO HOSPITAL FORMULARY

Preparation and Dosage Form

- Acetyl-Beta-Methylcholine Chloride (Mecholyl)
  - .025 Gm. ampule
- Adrenal Cortical Extract
  - 10 cc. bottle 50 units per cc.
- Amino Acids—Parenteral solution (Casein Enzym.-Hydrolysate, Mead Johnson)
  - 500 cc. 10%=50 Gm.; 1000 cc. 5% in 5%; dextrose=50 Gm.
- Amino Acids—Parenteral solution (Casein Acid-Hydrolysate, Stearns)
  - 100 cc 15%=15 Gm.
- Amino Acids-Powder, Food Supplement (Arlington)
  - Bulk
- Amino Acids-Powder, Food Supplement (Mead Johnson)
  - Bulk
- Amino Acid Infant Formula (Mead Johnson Nutramigen)
  - Bulk
- Anhydro-hydroxyprogesterone
  - 5 mg., 10 mg. tablet
- Ascorbic Acid (Vitamin C)
  - 0.1 Gm., 0.5 Gm., 1.0 Gm. ampules
- Calcium Caseinate
  - Powder
- Calcium Pantothenate (F. F. Factor)
  - 50 mg. ampule; 1 mg., 10 mg. tablet
- Chlorophyll
  - Ointment
- Choline Chloride
  - Experimental
- Chorionic Gonadotropin (Follutein, A.P.L.)
  - Ampules of 100 or 500 units
- Congo Red
  - 0.1 Gm. ampule
- Desoxycorticosterone Acetate (Doca)
  - 10 cc. ampule=50 mg. in oil
- Diethylstilbesterol (Stilbesterol)
  - 1 cc. ampule=5 mg.; Ampule 1.0 mg., 5.0 mg.; Tablets 1 mg., 0.5 mg.
- Dihydrotachysterol (A.T.10.)
  - Each cc.=1.25 mg.
- Diiodohydroxyquinoline
  - 1½ gr. Vag. tablet
- Diphenylhydantoinsodium (Dilantin sodium)
  - 0.1 Gm. or 1½ gr. capsule
- Enesol
  - 30 mg. ampule
- Ergonovine Maleate (Ergotrate)
  - Tablet 0.4 mg. or 1/150 gr. ampule
- Estradiol benzoate
  - 1 cc. ampule=1.66 mg. in oil; 1 cc. ampule=0.33 mg. in oil
- Estradiol diproprionate
  - 1 cc. ampule=5 mg. in oil; 1 cc. ampule=1 mg. in oil
- Fungus Extract
  - Oidiomycin 1-30; 1-1000 ampules
  - Trichophytin 1-30 ampule
- Glutamic Acid Hydrochloride (Glutan H-C-L)
  - 0.3 Gm. or 5 gr. capsule
- Histaminase
  - 10 U. tablet
- Indigo Carmine
  - 40 mg. tablet
- Lanatoside C. (Cedilanid)
  - Ampules, 2 & 4 cc. each containing 0.2 mg. or 0.8 cat unit
- Liver Extract & Iron
  - Capsule
- a-Lobeline Hydrochloride
  - 3 mg. or 1/20 gr. ampule
- Methyl Testosterone
  - 10 mg. tablet
- Milk Proteins
  - 5 & 25 cc. ampule
- Niacin (Nicotinic acid)
  - 50 mg. ampule
- Niacinamide (Nicotinamide)
  - 100 mg. ampule
- Oil Mellaleuca
  - Bulk
- Penicillin
  - As provided when available
- Progesterone
  - 1 cc. ampule=1 mg. in oil; 1 cc. ampule=5 mg. in oil
- Pyridoxine Hydrochloride (Vitamin B 6)
  - 50 mg. ampule
- Riboflavin
  - 10 cc. ampule-10 mg.
- Snake Venom Solution (Moccasin)
  - 1-3000 ampule
- Sodium Formaldehyde-sulphoxylate
  - 10 Gm. sealed tube
- Sorbitol
  - 25 Gm. ampule
- Succinyl Sulphathiazole (Sulfasuxidine)
  - 0.5 Gm. or 7.7 gr. tablet
- Sulpho-Napthol
  - Solution
- Sulphonated Oil (National Oil Products Co.)
  - Bulk
- Syrup Cocillana Compound
  - Bulk
- Syrup Senna Pods
  - Bulk
- Syrup Vitamin B Complex Conc. M.G.H. (Synthetic)
  - Bulk
- Syrup Vitamin B Complex (Natural-Fortified)
  - Bulk
- Testosterone Proprionate
  - 1 cc. ampule=10 mg.; 1 cc. ampule=25 mg.
- a-Tocopherol (Vitamin E)
  - 25 mg. tablet
- Vaccine Ducrey
  - Ampule
- Vitamin B crystalin complex
  - Ampule: 10 mg. thiamin; 5 mg. riboflavin; 5 mg. pyridoxine; 5 mg. Ca pantothenate; 50 mg. nicotinamide
- Vitamin D concentrate
  - Capsule—50,000 units each
- Vitamin D_3 and A in 95% ethyl alcohol (alba)
  - Each drop contains 50 units D_3 and 500 units A
- Vitamin K—Water Soluble
  - Ampule 5 mg.; Tablet 5 mg.

June 16, 1943

N. W. Faxon, M.D., Director

The following letter began with this statement: "THE NEWS has been an admirable gazette for the M.G.H. intelligence service, and we should like you to know how welcome it is each month." THE NEWS is grateful for this and many similar statements, but in its turn it wishes everyone to recognize that this satisfactory situation has resulted only through the continuous receipt of letters such as Captain Fuldner's and of information sent in by M.G.H. men everywhere. Send pictures, too, if you can.

Our organization is the 39th General Hospital (the whilom Yale Unit), which was activated at Camp Edwards last July and has since come to rest somewhere in the Pacific. I hope you appreciate that "rest" is purely a figure of speech; we do.

Five of us with the 39th General Hospital were once at the M.G.H. Major Edward Ottenheimer [*ES* 1924] is acting chief of the surgical service; Major Merrill Moore [*Gr. a. in N.* 1933] is in charge of the neuropsychiatric section; Captain Luther Strayer [*Or.* 1939] is on the orthopedic service; Miss Elizabeth Russell, who was in the Social Service Department from 1937 to '31, heads our Red Cross; and the undersigned [*Or.* 1939]. Apparently none of our nurses are of M.G.H. origin, but they do well in spite of such handicap. Paul Hansen [*EM* 1939] was briefly attached to our unit while we were at Edwards. Should his eye fall on this, I hope he will let us know of his whereabouts.

Our unit embarked toward the close of last year and was fortunate in an uneventful passage across a certain very large body of water. The transport was crowded but happy, the presence of our many nurses being responsible for both conditions. The junior officers slept sandwich style—one man on top, one on bottom and one between, with thin intervening layers of canvas. Our rations were based on sound dietetics, of which I understand a cardinal principle to be that one should quit the table feeling he might relish just a bit of something else. The ship was quite well stocked, at least at the beginning, and supplied us with part of the setting for the long hours of the blackout. The rest of the setting comprised such varied props as a random quartet, a blanket on deck, and the spangled skies.

Our hospital is in the suburbs of a good-sized city, and comprises a very fine layout in the usual Army style. We are fortunate in a beautiful location and in the kindly welcome extended to us and to all Americans by the people of this country. Our unit arrived while the hospital was building, so we all contributed to the design of buildings and equipment, and think an unusually well-planned installation has resulted. Those of us in orthopedics are especially proud of the operating room, the plaster room (very much like the one in the White Building), and the physical therapy department. One of our patients, who had been serving as a medical officer "up above," was mildly astonished when asked to cover his street shoes before entering our operating room; he said he must have reached civilization at last, as he had been operating in hip boots with mud to his knees.

As orthopedists we are finding our rôle less active than we might wish. Not that we haven't many details to keep us busy; but the patients have received primary definitive treatment by the time they arrive here, and they do not tarry long enough to enter upon the reconstructive phase of treatment. However, we manage to keep some plaster under our fingernails, and derive our satisfaction from the sincere appreciation most of the patients exhibit.

So far as life outside our work is concerned, the movies are a chief source of amusement; they are an efficient antidote to the lethargy that alternates with hard work in the military milieu. Then there are dances, excursions and parties; and people have been exceedingly generous about asking officers and enlisted men to their homes. The country has taken the American soldier to its bosom, in a manner of speaking, and many a soldier will leave fond remembrances behind him, some in rather tangible form. But while we feel exceptionally fortunate in having our post here, our hearts are still at home and we all look forward to the day when we shall recover them again. Meanwhile it's

"Effort and expectation and desire,
And something evermore about to be."

We're not quite sure just what the "something evermore" is that we're all working for, but I guess in simple language it's getting home to the folks with a well-done job behind us.

With greetings from the five of us to all our friends at home and abroad.

For the crowd,
RUSSELL V. FULDNER,

Word has since been received from Lieutenant Hansen that he is with the 15th Evacuation Hospital. His comment for THE NEWS is brief but significant: "The 15th Evacuation Hospital has been on the African front."

Lt. Edward L. Young III, MC, AUS (*WS* 1942) was commissioned on April 17, 1943, and went into active service on May 7. He reports to the War Records:

> Leave here on June 17 for Atlanta, where I join my unit, the 4th Auxiliary Surgical Group at the Lawson General Hospital. Carlisle Barracks has been well termed the West Point of Medicine. Doug Farmer was in this class; Ed Lambert, Brad Millet, Don Baker were ahead of us.

Dr. Vernon P. Thompson (*Or.* 1925), Assistant Clinical Professor of Surgery (Orthopaedic) at the University of Southern California Medical School, was called to active duty as a Major, MC, AUS, on February 19, 1943. He has been assigned to the Ashburn General Hospital at McKinney, Texas, in charge of the orthopaedic section.

A letter of May 15 to Comdr. James C. White gives word that Capt. W. Beecher Scoville, MC, AUS, (*r. NS* 1938) is in service and is stationed at McCaw General Hospital, Walla Walla, Wash. He writes: "I am happy here doing the Army neurosurgery for the Northwest and Alaska casualties. We have one half of the ward filled at all times with ruptured intervertebral discs."

Lt. Albert W. Kitts, MC, USNR, (*CM* 1941), still with the 1st Marine Division, writes to the War Records:

> After almost two years with the Fleet Marine Force—with the same outfit, in fact—I feel like a "gyrene." Have enjoyed the sometime companionship of Sprague, Hunter, Ted Pratt, Johnson, McGinn. We were about to have our group picture made at one time, but suddenly got very busy and missed the opportunity to compete with General Hospital No. 6.

...—V...—

As director of the American Red Cross-Harvard Field Hospital in England, Colonel John E. Gordon (*cons. prev. med.*) saw early service in making preliminary surveys and arrangements for that unit. The hospital, equipped and constructed in 1940-1, under the supervision of Dr. Gerald F. Houser (*asst. dir.*) has since been taken over by the U. S. Army as its central laboratory in Great Britain. Colonel Gordon reports on his present activities:

> Nothing particular has happened to me personally of late except a promotion in early April to the rank of full Colonel. I still have my same work as Chief of the Division of Preventive Medicine in the Office of the Chief Surgeon, ETO. The obligations of that Division continue to expand, the latest development being the addition of a section on Military Occupational Hygiene which deals with the personal comfort and health of the soldier. I see Elliot Cutler from time to time, and there are a goodly number of younger men from the Boston area in this theater of operations.

Capt. Daniel C. Dawes, MC, AUS, wrote during May to the War Records from the 10th Replacement Depot, APO 874, N. Y.: "Have been transferred several times, but hope I do not lose touch with the M.G.H." Captain Dawes, a senior physician at the McLean Hospital, was assigned to the 6th General Hospital upon its activation, as a ward officer in the neuropsychiatric section. Later he was detached for service with the 160th Station Hospital.

Lt. Col. Jack Spencer, MC, AUS (*a vis. R.* 1937-8) reports his promotion from Major, on May 18, 1943. He is with the 67th General Hospital overseas, and writes: "We have an excellent hospital—partly British and partly American equipment." In a letter to Dr. Holmes he gives more technical information and adds: "I had the chance to get to a monthly meeting of the British Institute of Radiology. The English have been extremely nice to us, kind enough to share their fishing in the —— River. Lots of trout. Two of us caught twelve the other afternoon."

During April promotion to Major was received by Capt. Leo B. Burgin (*CM* 1932), executive officer of the 1st Medical Battalion. He wrote, early in May: "Following a bombing episode while at Jafsa, I performed my first bit of pediatrics since leaving the Hospital: wrote a formula for an infant whose mother's milk gave out suddenly as a result of the bombing. Since then, back at my administrative duties. Regards to the Children's Medical Services."

A report in April from Capt. Charles D. Roberts, MC, AUS, (*r.p.* 1938) states: "Keeping busy and happy in North Africa. Thus far have seen no fellow alumni, but hope to."

Dr. Edward B. Benedict (*WS* 1926) is a civilian consultant in endoscopy at the Chelsea Naval Hospital. He makes the following brief comment on his work there: "For about two years I have been examining by gastroscopy some of the Navy personnel for seasickness and so-called 'destroyer stomach.' Results of these observations will later be published. Not long ago I was interested to hear a rumor that a gastroscope might be needed in North Africa to differentiate gastritis from malingering and to determine in this way which patients should be sent home and which returned to duty."

In response to our request for a supplementary report on the work of his department in the Hospital, he provides a short summary. "The Hospital staff now seems to be pretty well aware of the importance of the various endoscopic procedures, as evidenced by the following figures: In 1937, for example, I performed 115 bronchoscopies, 12 esophagoscopies, 94 gastroscopies, and 25 peritoneoscopies, or a total of 246 endoscopies. In 1940 the total figure more than doubled to 592, divided as follows: 244 bronchoscopies, 63 esophagoscopies, 210 gastroscopies, and 75 peritoneoscopies.

"'My day' runs somewhat as follows (taking today as an example): 9 o'clock—bronchoscopy lecture to Army officers taking course here in thoracic surgery; 11 o'clock—gastroscopy at Peter Bent Brigham Hospital for question of gastritis; 2 o'clock—six bronchoscopies, one for bronchial adenoma, one for bronchiectasis (with bronchogram), two for tracheobronchial tuberculosis, one for question of carcinoma, one for lung abscess.

"An interesting phase of the work in peritoneoscopy is observation and biopsy of the liver in the differential diagnosis of carcinoma and cirrhosis, and in the observation of cirrhotic livers before and after medical treatment. This work is being done largely in association with Dr. Chester M. Jones. The consulting work in outlying hospitals is increasing, but in general physicians need education as to the usefulness of the various endoscopic procedures and the ease with which they can be performed.

"I miss the assistance of Captain Lowrey Davenport (now with the M.G.H. Unit) and Dr. Ralph Adams (now at the Lahey Clinic) in bronchoscopy, and of Major Thomas Urmy (now at Camp Chaffee, Arkansas) in gastroscopy. We welcome the assistance of Dr. Robert Brown in bronchoscopy, and occasionally in esophagoscopy and peritoneoscopy."

Dr. A. W. Reggio (*WS* 1914) replied to inquiry about a recent promotion:

> Something new *has* been added! On April 21, 1943, I was sworn in as Senior Surgeon (R) U.S.P.H.S., and am the Regional Medical Officer for O.C.D. Region I, which comprises the six New England States. This means a boost to the equivalent Army rank of Lieutenant Colonel, sporting the silver leaf instead of the gold. . . . I am finding out how lovely the six N. E. states are—and how glad I am at not having to stay in Washington for more than two or three days at a time.

Prologue to New England. By Henry F. Howe [*r.s.* 1934]. Farrar and Rinehart, 1943, New York.

How few of us doctors have interests outside our own profession and how much we lose of life through that lack. If I were to give advice to a physician just starting in practise it would be to cultivate a hobby. It was through the cultivation of a hobby that Henry Howe came to write "Prologue to New England." With a little time on his hands he became interested in collecting Indian relics. As his collection grew his picture of the life of the stone age Indian became a little clearer. He began to read accounts of the earliest explorations of these coasts and was astonished at the number of recorded voyages made to New England in the fifteen and early sixteen hundreds. He began to talk with friends, and was surprised to find how few of them realized that New England had a long and eventful history antedating the fateful voyage of the Mayflower. I am afraid most of us would have stopped at this point. Not so, Henry Howe. He decided to "tell the world," and this book of more than 300 pages is the result. It is a workmanlike job, with reproductions of old maps and copious quotations from original sources. A full bibliography and an index add to its usefulness. It is well worth reading.

But let me give you a sample of the fare. My selection is from the report of a voyage made by an Englishman named Martin Pring in 1603, the year Queen Elizabeth died. As far as is known, Pring was the first to enter and describe Plymouth Harbor where seventeen years later the Pilgrims were to land:—

"'Departing hence we bare into that great Gulfe, which Captain Gosnold over-shot the year before, coasting and finding people on the north side thereof. Not yet satisfied in our expectation, we left them and sailed over and came to anchor on the South side in the latitude of 41 degrees and odde minutes.' The 'great Gulfe' was, of course, Massachusetts Bay and the above note is the first record in the annals of Cape Ann; Gosnold had passed it the year before during the night. . . . 'We went on land in a certain Bay which we called Whitson Bay. . . . this excellent Haven at the entrance whereof we found twentie fathomes water and rode at our ease in seven fathomes being Land-locked, the Haven winding in compasse like the Shell of a Snaile.'

"To anyone familiar with the Massachusetts coast this description leaves little doubt as to the identity of 'Whitson Bay.' The latitude is indeed about half a degree in error, but in most other details the account conforms perfectly with the Plymouth of the Pilgrim Fathers. So here were English vessels riding at ease in Plymouth Harbor—seventeen years before those wanderers set foot on Plymouth Rock! As we later observe, a French vessel of Samuel de Champlain, a ship from Dutch Manhattan, a pinnace of Captain John Smith, a ship of one Thomas Hunt, and the pinnace of Thomas Dermer were also to enter this port before the justly memorable year of 1620."

I could go on and on, but read it for yourself.

DONALD MACOMBER [*SS* 1911]

In THE NEWS for May 1943 a notice of the *Handbook of Health for Overseas Service,* duplicating an announcement issued by the Harvard University Press, stated that its authors are G. C. Shattuck and C. G. Mixter. The title page of the book, just published in its revised second edition, discloses its authors as Dr. George Cheever Shattuck and Dr. William Jason Mixter. THE NEWS wishes to offer apologies to both Drs. Mixter, and to add that the little book is both attractive and strikingly practical. A copy of it has been presented to the Treadwell Library.

During the absence of Major Tracy B. Mallory the Department of Pathology and Bacteriology will be administered by Dr. Benjamin Castleman (*P* 1932).

Major Richard Schatzki, MC, AUS, (r.). was called to active service on June 2. He is now at the Lovell General Hospital at Fort Devens, Mass. Dr. Laurence L. Robbins has been made Radiologist in Charge at the General Hospital, to replace Dr. Schatzki; Dr. William E. Davis, now Assistant at the Baker Memorial, is to be in charge there; Dr. Clayton H. Hale, senior resident in the Department, has been appointed Radiologist and will replace Dr. Davis.

Dr. Champ Lyons (*WS* 1933) left June 1, 1943 for Halloran General Hospital, Staten Island, N. Y., where he will do research work for the Government. Dr. Lyons, a member of the Hospital staff since 1937 and an Assistant Surgeon since 1940, was in charge of surgical bacteriology work for the Department. Dr. John D. Stewart (*ES* 1930), who resigned in 1941 as Assistant Surgeon to become Professor of Surgery at the University of Buffalo Medical School and Surgeon in Chief at the Edward J. Meyer Memorial Hospital, will be associated with Dr. Lyons. M.G.H. co-workers are Miss G. Margaret Rourke, for several years a chemist in the Surgical Research Laboratory, and Mrs. Jane Brooks, secretary to Dr. Lyons.

Major Clark Young, MC, AUS, (*ES* 1923) State Medical Officer for Utah, writes from the Selective Service headquarters in Salt Lake City:

> In my capacity as State Medical Officer—non-adventurous though highly interesting work—I am able to keep abreast of the growth of the Armed Forces and at least can read the Army Medical reports, though I am not exposed to any medical practice. I look with envy on the exploits of the 6th General Hospital in North Africa and the 105th, with my classmate Gus Thorndike commanding.
>
> The "News" is a breath of Charles River air on the alkaline shores of the Great Salt Lake. I am surprised at the number of men mentioned with whom I worked and played—back in 1921-23, when I was East Surgical Pupil. Pete Churchill, Leland S. McKittrick, Charlie Lund, Howard Sprague (in the South Pacific) Tracy Putnam, (than whom there never was a finer chap), Goethals, Resident in O.B. when I was a benightedly ignorant third year man down on "the district," Dr. Kazanjian who graduated in my class of '21 (and many congratulations to him for his fine work). Thanks for remembering those of us far from "The Hub," and best wishes to all.

Another assignment to aviation medicine is reported to the War Records by Dr. William Parson (*c.r.p.* 1942).

> After being rejected by the MGH unit and then by the Army Air Corps, I spent a year at Johns Hopkins and now have got as close to the Army as possible; am working [as medical officer] with the Pan American Airways, Africa-Orient Division (under Army Transport Command) with Olie Pearson.

Col. Elliott C. Cutler recently sent to Dr. Faxon an official communication. It is reprinted here:

Office of the Chief Surgeon
European Theater of Operations
APO 871

Subject: Notes made concerning the meeting held at the 5th General Hospital, U. S. Army, 1 May 1943.

This day was selected since it was a Saturday and almost coincided with the arrival of this unit, originally in Northern Ireland, a year previously. This unit was the first U. S. Army general hospital to reach a theater of operation. It was preceded by only one station hospital. The meeting consisted of the following program:

1030 *Post Inoculation Hepatitis.*
T. L. Badger, Lt. Col., M.C., AUS.
Discussion:
J. McMichael, F.R.C.P., F.R.S.
W. H. Bradley, D.M.
John E. Gordon, Col., M.C., AUS.
1230 Luncheon.
1330 Inspection of hospital and exhibits.
1430 *Traumatic Shock.*
J. McMichael, F.R.C.P., F.R.S.
Discussion:
J. E. Dunphy, Major, M.C., AUS.
R. V. Ebert, Capt., M.C., AUS.
A. N. Drury, M.C., M.R.S., M.A.
1530 *The Crush Syndrome.*
E. G. L. Bywaters, M.B., B.S., M.R.C.P.
Discussion:
A. N. Drury.
1630 Tea.

The Meeting was in every way a great success, and some 250 people attended. . . . At the end of the day promotions came through, and Colonel Keeler and Colonel Cutler pinned the new leaves on those promoted, as follows:

R. M. Zollinger: Major to Lt. Col.
Moses Strock: Major to Lt. Col.
Richard Warren: Capt. to Major.
Thomas Quigley: Capt. to Major.
Emerson: Capt. to Major.
Ebert: Capt. to Major.

* * *

Since leaving the Hospital last August, Col. Walter Bauer (*p. & r.p.* 1927) has returned to his laboratory colleagues here three bulletins describing his work as Medical Consultant and Coördinator of Medical Activities for the 8th Service Command. Because these bulletins, being infrequent, are formidably long and because they contain much specific information, they cannot be quoted here with justice to their content. They give a detailed picture of the provisions for hospitalization in this large command and comment on general problems of military medicine and the personnel necessary to provide such a service.

The first bulletin, received soon after Colonel Bauer's arrival at his headquarters (then in San Antonio, now in Dallas), gives an account of his assignment at the Walter Reed Hospital in Washington and brief visits to several of the large Army hospitals en route. The second bulletin arrived in November, with explanations:

> Time is scarce for a number of reasons: 1. Because we work seven days a week. 2. Because my immediate chief works seven days a week. . . . The job continues to be as interesting as ever, in fact, more so now that I begin to learn the ropes. A tour of duty may last anywhere from five days to three and one-half weeks. The distance covered may vary anywhere from a few hundred miles to two or three thousand miles. I hope the Air Force will deem it necessary for us to have airplanes whenever we need them. This section of the country does not have the railroad system we are accustomed to in the East, and we oftentimes find ourselves dumped out at some little railroad station anywhere between 3:00 and 5:00 a.m. and not infrequently we board the next train between those hours. Nevertheless, it is all good fun and a very rare experience.
>
> On my first trip out I visited the state of Louisiana. My second tour of duty took me to Dallas, Texas. This was most fortunate in that it gave me an opportunity to find a home for my family. My job in Dallas was to visit the recruiting and induction stations.

Colonel Bauer has given specific comments on the type of hospital and the medical service provided at each of the camps he has visited. They cannot be quoted in detail but these more general statements will be read with interest:

> This particular experience merely serves to re-emphasize the belief I have long held, that station hospitals should be sufficiently well organized to furnish educational programs comparable to those that exist in civil teaching hospitals. An abundance of clinical material is always at hand. If these most unusual clinical facilities were used in this manner, it would be possible to institute one of the largest experiments in post-graduate medical education ever undertaken, the direct result of which would be increasingly better professional care for our soldiers and an improved American medical profession. All that is needed to set such a program in motion is a group of experienced teachers of clinical medicine and surgery to act as chiefs of service. If such chiefs of service were protected from heavy administrative load, it would be relatively easy to institute a program. I have wondered if there are not a large number of men between forty-five and sixty years of age who would welcome the opportunity to participate in an army medical, educational and professional service program of this type.
>
> I might next bore you with the details of what I do when I visit each of these station hospitals. I first report to the Commanding Officer of the station hospital. He in turn sees to it that I meet the Commanding Officer of the camp. Once these formalities are over, I am ready to go to work. I next contact the chief of the medical service. In addition to making ward rounds each day, which may take anywhere from four to eight hours, I also make it a point to spend as much time as necessary in the laboratory, x-ray department and dietetic department. It is also my duty to see how they are treating their patients for gonorrhea. . . . On my last trip out, I visited nothing but induction stations. As things are now set up, we have one consultant for each of the three divisions: Internal Medicine, Neuropsychiatry and Surgery. We spend about eighty per cent or so of our time in the field, coming in every few weeks for conferences.

The third bulletin, received early in June, is indeed a document, as it includes Colonel Bauer's summary of his first six months' activities with the 8th Service Command. But it also gives news of Colonel Bauer himself:

> En route back to Dallas, I contracted atypical pneumonia. The disease was mild in nature and only moderately inconvenient. It did afford me an opportunity to spend a week at home. Once I had fully recovered I took to the road again. My first trip took me to the Rio Grande Valley country, which, by the way, is very nice. It is much like Florida in that it has a considerable citrus fruit industry. They also raise immense quantities of cranberries and vegetables, particularly spinach. I wouldn't have thought there were enough people in the world to consume this amount of spinach. On this trip, I did most of my traveling by army plane and visited a total of fourteen institutions. . . .
>
> Fort Sill, as you know, is one of the real homes of the American artillery. After watching them for one afternoon I can attest to the fact that they are damned good. I would much prefer to be attacked by dive bombers than by American artillery if it is always as accurate as it was the afternoon I watched them. . . .
>
> Harmon General Hospital is one of the newer general hospitals, having been activated only a few months ago. None other than Alex Marble is Chief of the Medical Service, and as you can well imagine, he is doing an excellent job. I would be willing to bet that if they furnish him with a sufficiently good medical personnel, he will run as good a general hospital medical service as we have in this Command. Having been on active duty so long, he is well versed in everything that pertains to the Army and to Army Medicine. He goes about his work in the same quiet, unassuming manner we all were accustomed to witness when he was at the General. He is extremely fair in his dealings with his fellow men and commands their respect to the utmost. Every man I talked with considered himself fortunate to be working under Alex Marble. He runs excellent grand rounds, weekly conferences, a good journal club and all the other good things any first-rate institution should have. Again, we can be proud that our M.G.H. alumni can turn out the type of work exhibited by Starr and Marble.

These are but excerpts from many pages of administrative and medical detail. In concluding his third bulletin Colonel Bauer wrote:

> While writing this report, I have been more conscious than ever before of the freedom of thought and action I have been allowed since assuming my duties as medical consultant to the Eighth Service Command. This encourages me to try to do an increasingly better job. The manner in which the consultant service in this Service Command operates is not unlike that found in medical schools. The Chief of the Medical Branch functions much as would the dean, and the consultants as do the heads of their respective departments. The discussions that take place at these miniature faculty meetings are frank, straightforward and always beneficial.

Word has come from Lt. Col. F. Dennette Adams, MC, AUS (*WM* 1918). He and Colonel Bauer hold similar positions in separate geographical commands:

> Since February 15, 1943, I have been assigned to the 5th Service Command as Medical Consultant. The duties consist of visiting the military hospitals in Ohio, West Virginia, Indiana and Kentucky, conducting visits on the medical wards, discussing medical problems with the officers, and attempting to correlate medical activities throughout the Command. It is an altogether interesting experience. I am fortunate in having as traveling companion our Surgical Consultant, Lt. Col. Claude S. Beck, of Cleveland, who is well known to members of the MGH staff.
>
> Since most of the medical installations in the 5th Service Command are officered by men who formerly practiced in this section of the country, I have not had the good fortune to meet many MGH graduates in the course of my travels. But I am constantly being subjected to lesser attacks of nostalgia as I encounter familiar handwriting and signatures on medical records of overseas men returned from the 6th General Hospital, 5th General Hospital, 105th General Hospital and the Naval Hospital in New Caledonia. Questioning of the patients always brings forth enthusiastic replies concerning the care they have received and the kindness of the officers. I have been greatly impressed by the completeness of the records and the thoroughness with which the patients have been studied and treated—under what must be very difficult conditions.

MAY 24, 1943

Monday, May 24, was Volunteer Day. This pleasant interlude was arranged by Mrs. David B. Arnold, chairman of the Ladies' Visiting Committee, and director of the MGH War Service, Miss Eleanor Greenwood, director of the Volunteer Service Bureau, and Miss Lucy G. Moore, Chief of Occupational Therapy, in recognition of the extensive help being given to 24 departments by the various corps of volunteers. To the 970 persons who have given service during the last year, announcements were sent inviting them to picnic in the yard and to witness a small pageant. Officers of the Hospital were their guests.

The day was perfect. Over five hundred people were present, and the yard was full of the pleasant noise and color of the occasion. Dr. Faxon welcomed the gathering, expressed the Hospital's gratitude, and commented on the tradition of volunteer service in the Hospital. Then came the pageant, "Volunteers for Victory: A Dramatic Panorama."

Dr. James H. Means, speaking from the Bulfinch porch, was the narrator, and volunteers in their distinctive uniforms were the cast. On the Bulfinch terrace below, the first Lady Visitor welcomed her early sisters, and saw the volunteer services increase until their representatives filled the Bulfinch steps. The part each service performs in the Hospital was then shown by the arrival of a patient, (Dr. Charles W. Robertson, disguised in red flannel underwear) his admission, treatment, and discharge (all in spite of himself). Musical interludes were agreeably supplied by a piano, strings and trumpet. This brief but excellent performance closed as a final "V" of volunteers, massed on the Bulfinch steps and terrace. As their banner unfurled from the balcony rail, they recited their vow: "I will strive to understand the traditions and uphold the high standards of this institution, with loyalty. I will be cheerful, willing, and faithful in fulfilling my duties. I will be an ambassador for the Hospital among all people, at all times, and in all places."

Word has been received by Mrs. James Keeley that her son, Captain James K. Keeley, MC, AAF, (*NS* 1937) is a prisoner of war under the Japanese Government. This is the first news of Captain Keeley since May 1, 1942. At that time information was received of his promotion. When called to active duty with the Army in September 1941, Captain Keeley was working under a fellowship at the Mayo Clinic. He was for a time in Manila, and on December 11, 1941, was reported in Cagayan, Mindanao. Since that date he had been officially listed as missing in action.

The presence of the 6th General Hospital in North Africa continues to be much appreciated by M.G.H. colleagues. Capt. W. E. Flood, MC, AAF, (*r.p. D,* 1942) writes: "I spent three wonderful hours with the 6th General not long ago. It made me feel quite homesick to see everyone I knew. They have one of the best set-ups I have seen over here."

HEADQUARTERS 6TH GENERAL HOSPITAL

May 2, 1943

Dear Dr. Faxon:

For several weeks after our arrival life here was both busy and complicated but orientation came as we managed to tackle and get on top of problems as they arose. In the last fortnight we have "evened off, steady on the course," and it is my firm belief that all have made the adjustment. It was not easy for many to go from the leisurely, if expectant, tempo of the Blanding days into the heat of what (for a unit of this sort) is the peak of military professional activity. We have set up beds and cared for patients in the midst of physical alterations; we have managed to care adequately for those sent us; our rate of deaths among seriously sick and injured casualties has been satisfactorily low; we have gradually accumulated the critical supplies necessary to function; and now are having a breathing spell.

With everyone perfecting himself in his job, the details which the chiefs of services and departments have had to face and solve are much diminished, and those supposed to guide and execute policy rather than detail have been able to function in the former capacity. I am at long last beginning to make personal contacts among other services and staff branches at Headquarters, to learn the short cuts so necessary to get things done. The only weak spot in the organization is the mess department, which is in process of radical reorganization. All other departments and all the services are excellently handled, and no one could have better support than your correspondent has at his disposal.

Sincerely yours,

TOM GOETHALS.

Sidelights in North Africa were reported soon after arrival:

The National Colors now adorn our headquarters. They stand behind the Colonel's desk in the corner of the room, and are as beautiful as the day they were presented. I notice that the eagle could stand a little "blitz," so I guess I'll get after it. The adjutant's work is never done!

A visit to another hospital:

They had a few prisoner patients there, both Italian and German, and they seemed to be the happiest people I've seen in a long time. The officers told us they are very pleased that the war is over for them,—and they really tie into good American food. From their attitude they know they are on the losing side and are glad to be out of it.

Troop movement:

For the past few days the sirocco has been bringing us clouds of huge grasshoppers from as far away as the Sahara—indeed a strange phenomenon, since they have to cross the Atlas Mountains en route, but one that is welcomed by the Arabs for they eat them with much relish.

It will surprise no one that Lt. Col. Augustus Thorndike (*WS* 1923) can make the following statement about the 105th General Hospital, of which he is in command: "This Unit is really doing its job, and the quality and quantity of work turned out would make anyone most proud."

THE NEWS

No. 11 Boston, Mass. August 1943

ON THE AFTERNOON of June 18 some of the older members of the staff and friends gathered in the Medical Staff room for the unveiling of three new portraits. Dr. Means explained that these portraits had been procured through the generosity of an alumnus of the Medical Service who wishes to remain anonymous.

Mrs. Reginald Fitz unveiled a portrait of her father-in-law, the late Dr. Reginald Heber Fitz, by Margaret Fitzhugh Browne; Mrs. Henry Bryant Bigelow unveiled a portrait of her father, the late Dr. Frederick Cheever Shattuck, by Mrs. David Linn Edsall; and Mrs. Carol Lord Butler unveiled a portrait of her father, the late Dr. Frederick Taylor Lord, by Margaret Fitzhugh Browne.

Dr. and Mrs. George Cheever Shattuck, Dr. and Mrs. Reginald Fitz, and two grandsons of Dr. Frederick Cheever Shattuck, now both medical internes, Drs. Frederick Shattuck Bigelow and Edward Peirson Richardson, Jr., were among this company. Miss Browne was present and received much praise of her work. Mrs. Edsall unfortunately was unable to attend. Dr. and Mrs. Hyman Morrison and Miss Hilda Benson were also among those present. Dr. Morrison is writing a biography of Dr. Fitz, and Miss Benson was secretary to Dr. Lord.

Dr. Faxon accepted the portraits for the Hospital and gave some personal recollections of their subjects.

The Hospital recently received title to No. 23 Parkman Street. The purchase of this unit completes the Hospital's ownership of the entire block situated between Parkman and Fruit, Blossom and North Anderson Streets. When ready for occupancy, No. 23 will house student nurses.

On March 8, 1943 a children's service was opened in the Baker Memorial. At present it provides a two-and a five-bed unit for patients up to twelve years of age, and three single rooms for ages 12-16 years. It is situated at the end of the east wing on the third floor. The entire wing can be made available as need arises and will provide accommodation for 15-20 patients. Movable glass partions and panel doors permit excellent nursing supervision, and the simple decorations, supervised by the Ladies' Visiting Committee, are enjoyed by patients, parents and staff.

Medical and surgical patients, in the classification of all Baker patients and with the exception of those suffering from contagious diseases, are assigned through the Baker Admitting Office. The unit is under direction of the special nursing supervisor of the pediatric service in the General Hospital. A resident from that department is assigned to the unit, and a well-equipped treatment room is provided.

Dr. Allan M. Butler, chief of the Children's Medical Service has given the following brief report on the new section:

> The Children's Unit has been running almost to capacity. This reflects the usefulness of the service to pediatricians on the Staff. Many of them have expressed their appreciation of the equipment, the efficiency of the nurses, and the assistance given by the residents.

At a meeting of the Board of Trustees held on June 25, 1943, it was voted:

To appoint Dr. Herbert J. Barry, Jr., and Dr. Bernard Bandler as Assistants in Psychiatry

To promote Drs. Charles W. Robertson and Rodolfo Herrera from Interns to Assistant Residents in Surgery

At meetings of the General Executive Committee held during June and July the following votes were recorded:

To accept with regret the resignation of Dr. Clement A. Smith from the position of Consultant to the Children's Medical Service

To appoint Drs. Howard A. Hoffman and Campos da Paz as Graduate Assistants in Urology

To appoint Dr. Eda A. Polcari as Graduate Assistant in Medicine, assigned to the Allergy Clinic

To appoint Drs. Mildred E. Merkle, Charles W. Ordman, Amado R. Adorno as Graduate Assistants in Medicine for the term July 1, 1943 to December 31, 1943.

At a meeting of the General Executive Committee held on July 14, 1943 a new position of "Clinical Fellow" was created. Appointments to this position will be for a period of six months, subject to renewal. This is a position similar to that of Graduate Assistant and *will not* appear in the Annual Report. It was further voted:

To appoint Dr. Francisco Garcia-Bengochea of Havana as Clinical Fellow in Medicine and Dr. Emerson Drake, recently appointed Graduate Assistant, as Clinical Fellow in Surgery.

Dr. Henry K. Beecher (*WS* 1934) received the commission of Major, MC, AUS, on July 3, and has reported to Lovell General Hospital at Fort Devens, Mass. Dr. Julia Arrowood is in charge of the Department of Anesthesia during Major Beecher's absence on military duty. Dr. Arrowood was a resident in Anesthesia in 1935-6 and since that time has held the appointment of Assistant Anesthetist.

THE SCHOOL of Medical Illustration graduated its first class on June 30. Miss Annette Conry, Miss Cynthia Foster, and Miss Jane Holbrook have completed the two-year course opened at this hospital by Miss Muriel McLatchie (Medical Artist) and Mr. Wilbour C. Lown (Photographer) on September 15, 1941. Three additional students have completed their first year of training, and the School is again considering applications to replace its recent graduates.

Invitations were issued to an exhibition of their work, held in the small classroom provided for the school off the stairway between floors 3 and 3A in the White Building. Medical drawings and photographs are a revelation to the uninitiated but those shown on this occasion received special approbation from even hardened observers. The startling completeness, accuracy and beauty of the drawings, charts, and photographs attested not only the proficiency of the students and of the training offered by Miss McLatchie and her assistant, Mrs. Betty Foss Strachan, and by Mr. Lown, but they demonstrated also the significance of medical illustration in hospital records and research.

The course in Medical Illustration at Johns Hopkins University under the late Max Brödel became justly famous, and he is known as the Father of Medical Art. Miss McLatchie and Mrs. Strachan graduated under him. Illness interrupted Mr. Lown's medical studies at the University of Wisconsin, and in 1931, after a brief experience at the Worcester City Hospital, he became the Staff Photographer at this hospital. The course now offered at the Massachusetts General Hospital is one of a total of four available in this country.

The training offered includes a year's course in anatomy, as well as delineation techniques (half-tone, pen and ink, water color), operating-room sketching, drawing from gastroscopes, opthalmosopes, etc. In photography, students are taught how to copy their own drawings and charts, make lantern slides, transparencies, how to photograph patients, specimens, hospital interiors, staff groups, etc. Also, each student must prepare a thesis to illustrate some case history and to include X-Ray tracings and photograph, charts of laboratory work, a series of half-tone and pen and ink drawings of the operating-room procedure, drawing of a specimen, and a miscrosopic drawing of the slide taken from the specimen. Applicants for the course must be graduates of an art school or of a college, with special credits in art and science.

Miss Alvira B. Stevens, who has had executive charge of the Phillips House in succession to Miss Dolliver, had a fall on June 26 which resulted in a broken hip. She has met the situation with characteristic calm philosophy. The hip has been nailed by Dr. Smith-Petersen, and she is doing well.

Mrs. Cordelia W. King (*MGH* 1932) has been the efficient Supervisor of the Operating Room for the past seven years. Her ability in that position has been of great assistance to all the operating staff, and her assistance in planning and supervising the installation for the White Building will also be remembered. On June 18, Mrs. King left the Hospital to become Assistant Superintendent of the Memorial Hospital at Syracuse, N. Y.

Speaking for the staff, Dr. Arthur W. Allen says:

> At a meeting of the Surgical Executive Committee held July 13, the opinion of all members was that of sincere appreciation of Mrs. King's valuable service to the Hospital. Everyone expressed the wish that she could have continued her supervision of the operating rooms. We realize all too well the strain and stress of this particular job and know it is unreasonable to expect anyone to live with it indefinitely. We all wish Mrs. King happiness in her new position and hope that eventually she may return to us in some capacity.

Miss Julia Boghosian (*MGH* 1939), who has been Mrs. King's assistant for the past year, is in charge of the Operating Room service.

Mr. Ralph Lowell, a member of the Board of Trustees, has been elected an Overseer of Harvard University.

Honorary membership in the Harvard Chapter of Phi Beta Kappa has been conferred on Dr. Fuller Albright (*WM* 1926).

Dr. Hugh Cabot (*SS* 1899) has been elected to the Royal Society of Medicine in London.

The American Medical Association conferred its Distinguished Service Medal and Award for 1943 on Dr. Elliott P. Joslin (*WM* 1895) in recognition of his contributions to the knowledge of diabetes and his teaching in that field. Dr. Joslin has received many honors for his work as physician and educator, and in his turn has conferred medals, bronze, silver or gold on patients who, through observance of their limitations, have survived diabetes for various periods.

Notice has come from Berwick, Nova Scotia, of the death of Ora M. Lewis on July 14, 1943 after a long illness. Miss Lewis came to the Hospital with Dr. Abner Post and Dr. C. Morton Smith in January 1914, as the social worker for the South Medical Clinic. She made a notable contribution to the care of the syphilis patients. Miss Lewis, especially gifted as an executive and teacher, was a Supervisor in the Social Service Department from 1930 until her retirement in 1937.

OFFICIAL NOTICES

Flaxseed poultices, hot wool packs, stupes, etc. shall not be used except when skin surfaces can be inspected before and after application and when dressings, if there are any, can be kept dry.

By vote of the Surgical Executive Committee on May 11, 1943 it was ruled that flaxseed poultices should be generally discouraged and that they be prohibited from use over clean surgical wounds or for the relief of abdominal distention.

N. W. Faxon, M.D., Director

* * *

Patients with myasthenia gravis who have been accustomed to take their own medicine at home on a definite schedule, sometimes as often as every two hours, may be allowed to do so in the hospital without the necessity of a nurse being present, provided that a doctor write an order to the effect that the patient is competent and is to be allowed to take medicine, specifying the medicine and how it is to be taken.

N. W. Faxon, M.D., Director

BULLETIN NO. 11

Bulletin No. 6 relative to Intramuscular Administration of Drugs, issued July 2, 1941, is hereby revoked and replaced by the following recommendation of the Pharmacy Committee:

The following drugs have been approved for intramuscular administration by a *nurse* on the written order of a physician specifying the amount of drug and the volume of the solution to be given:

Bismuth subsalicylate
Ergonovine maleate
Pitressin
Pituitrin
Prostigmine
Epinephrine in oil
Liver extract
Lanatoside C
Digifolin
Penicillin
Adrenal cortical extract
Desoxycorticosterone acetate
Estradiol benzoate
Estradiol dipropionate
Progesterone
Testosterone proprionate
Chorionic gonadotropin
Ascorbic acid
Thiamine hydrochloride
Niacin
Niacinamide
Calcium pantothenate
Pyridoxine hydrochloride
Riboflavin
Vitamin K—water soluble

The following drugs are approved for intramuscular administration by a *physician* after recording on the record the amount of drug and the volume of the solution to be given:

Paraldehyde
Carbaminoylcholine
Mecholyl
Magnesium sulfate
Mercupurin
Salyrgan with or without theophylline

N. W. Faxon, M.D., Director

* * *

At the meeting of the General Executive Committee, held on July 14, 1943, Dr. Means reported that basal metabolism tests were being done in unnecessarily large numbers. Dr. Holmes felt there was the same abuse in the ordering of x-rays. The Committee voted to publicize these and similar matters in THE NEWS by printing pungent statements in bold type in this paper each month.

Basal metabolic rate determinations are useful in the diagnosis and management of thyroid disorders. They are of very little, if any, use in other conditions. The Metabolism Laboratory has referred to it many patients, the determination of whose BMR cannot be of any great value to their doctors. Obesity, for example, is seldom caused by hypothyroidism, and there is very little indication for ordering such tests in obese patients. It will take an unnecessary load off the Metabolism Laboratory if the Staff will bear this in mind.

J. H. Means, M.D.

USE OF THE BLOOD BANK

1. A definite time should be stated for the administration of blood requisitioned from the Bank. Blood wanted within two or three days after order, should either be used in that time *or a cancellation be sent to the Bank.* We wish to coöperate with the Staff, and realize that uncertainties and emergencies occur, but under the system by which we maintain the Bank, it is necessary to keep the blood in circulation. Frequently blood is ordered and not used. This means that a certain flask is kept on reserve and expires to be put into plasma, when it might have been used as whole blood for another patient. To avoid cancelling what is really needed, the Bank personnel have made many telephone calls each morning. This adds immeasurably to the daily routine. The Bank can no longer call the floors and wards every morning. Blood will hereafter be reserved for 24 *hours* after the time being stated for its use; then, unless otherwise specified, it will be returned to the general circulating stock.

2. When transfusions are required for private patients in the Baker Memorial and Phillips House, the Staff is urged to mention to the patient's family that blood so used may be replaced by sending donors to the Bank, thereby cancelling the expense of transfusions supplied by professional donors. Many such donors are now in the armed forces, and we are glad to have more voluntary donors.

3. As to Rh factor determinations, it should be re-emphasized that any patient who may require several transfusions should *first* have the determination. Otherwise false reactions are reported, and inaccuracy and delay result. Also, material used in this test is costly and scarce, and we wish to conserve it. Requisitions for the determination should be sent to the Baker Laboratory.

4. It is suggested that *plasma* be used, whenever feasible, instead of whole blood. We are anxious to maintain a circulation of our plasma stores. Plasma must be administered with plasma sets only.

Carroll C. Miller, M.D.,
Director of the Blood Bank

The summer class of nurses numbers 50 students; 6 admitted in June through the Bryn Mawr Summer School of Nursing and 44 admitted here on July 6. A larger class will be admitted in September as usual.

Much could be said about the nurse shortage in the Hospital. During the past year over 200 graduate nurses have left the hospital, 127 of these to go into military service. To help balance this shortage 186 students were admitted during the past year.

Miss Betty Dumaine (*MGH* 1926), a Trustee of the Hospital since 1934 under appointment by the Commonwealth, has been accepted for foreign duty in the American Red Cross as an Assistant Club Director. She left for Washington, D. C., where she will receive special instruction and assignment.

...—V...—

In the early days of April, service with the 2nd Auxiliary Surgical Group in North Africa was reported by Lt. Wooster P. Giddings (*WS* 1939):

Our life has become a bit of a day-to-day affair, varying only in the jobs to be done to improve our camp. The latest project is the installation of a generator, with wiring of all tents for electricity. After that little will remain to be done, though other things will undoubtedly come along to bother us. That is not quite the word; these activities keep us busy, if dirty, and that is an important thing.

Professional inactivity, however, gave Lieutenant Giddings an opportunity to view the native scene—to excellent purpose:

Yesterday we had a treat. It was Friday, which is the Moslem Sunday. On that day every week the ruling potentate of this region is escorted from his palace to his mosque—a distance of perhaps a half-mile—in a parade that would make P. T. Barnum feel like a rank amateur. I took every bit of available transportation to town, and in it about 150 of our enlisted men. We arrived just in time to see the palace guards coming up the road to the palace, where they formed to receive the royal persons and whence they escorted them back to the mosque. The entire affair takes place in a vast open space within the palace enclosure. In the distance we saw the approaching guards. First a band, mounted; then three groups of horse guards, each group mounted on matched horses, and about fifty in each group. The horses were black, white, and sorrel. The band wore scarlet uniforms, as did horse and footguards, and the men themselves were all dark, I should think many of them Negroes, but some Arabs. They wore turbans, of course, all of blue and white.

After the third group of horse guards came the foot soldiers, also preceded by a band. The drum major was the hugest and blackest man I have ever seen. Many of the foot guards wore rings in their right ears, which, we were told, is a sign they are personal slaves to the royal family. These men, also in scarlet uniforms and blue and white turbans, were armed with rifles and bayonets; the horsemen carried drawn sabres. I should judge there were about six to eight hundred in the parade.

The bands proceeded to the palace entrance, where the horsemen took positions facing the road at intervals of about fifty feet, and about a hundred yards from the road. All people were then cleared from this space, leaving a wide, safe area for His Majesty's passage. After a short wait the music played, and a loud shout went up from the crowd of natives about the field. The horses, all spirited and of about half-Arab blood, pranced excitedly when they heard it. Then the palace gates opened and a small procession issued forth. The first were mounted on mules, the largest I have ever seen. (These men, seven of them, we afterward learned were the Viziers.) Horses followed these (teachers and attendants). Then, in a carriage heavily encrusted with gold and once belonging to Louis XIV, appeared His Majesty with a couple of other men.

The foot soldiers paraded in single file alongside the procession, spaced about half way from the road to the cordon of horse guards. The personal music of the ruler (in fezzes and red-brown robes not unlike those of monks) formed at the gate of the mosque and played as he entered. The foot guards formed two facing lines across the road from each other. They closed their line by extending their rifles at arms' length and vertically, each man grasping the gun of his neighbor just above the other's hand. That formation was held until the procession had entered the mosque, when they stood at ease. This was oriental display as we have read of it in the "Arabian Nights," but I had never imagined I should see it.

During all this time, there were loud cries of Allah-la-la-la-la-la, or whatever it is they cry, mostly from the women; the la's are uttered very rapidly, and the sound becomes a sort of undulating wail. Behind the lines there were perhaps two thousand people watching, and as soon as the mosque had been entered, the grounds outside the line of horse guards took on the aspect of a great bazaar and reminded me of any good country fair at home. There were native jugglers, bands of musicians and beggars, plus swarms of Arab children. I saw a water vendor with a black hide under his arm. (It looked like a pigskin.) The thing was slung over his shoulder by a strap, and in the mouth of the pig was a brass spout about a foot long. He carried a brass cup, filled it from the spout and sold the contents to one person after another. The youngsters and lower-class Arabs stood about and ate roasted grasshoppers, which are apparently a great delicacy, though I didn't try them. These children are the greatest nuisance—I think the original plague of locusts may well have been Arab children in actuality. They eternally pester you for three things—"bon-bon, choong-gum, gimme smokee." If you turn them down, which is always the wise thing, they may let loose a fine string of American profanity—the sum of their English.

Toward the end of the prayers, a singer appeared on the minaret and intoned a few chants to the East. Soon after a few men issued from the mosque and prostrated themselves three times in the same direction; there was a bit of a stir, and in a moment the royal person came out, mounted a white horse and rode home, escorted as he had been on the way out. It was the greatest pageant I have ever seen.

I was particularly fortunate, in that Tom Ballantine [*WS* 1939] happened to be there, in the company of a French officer who is attached to the palace in capacity of riding master. The officer took us to a point between the horse and the foot guards, so we were the only outsiders allowed in that little outer circle. We stood not far from the door to the mosque, and had really ringside seats for the whole show.

Early in May, Lieutenant Giddings sent a supplement:

Yesterday we had the pleasure of a visit from Dr. Churchill, and it certainly was good to see him. I am sorry he couldn't stay longer. Yesterday noon a small party was made up to go along with him to the Moslem parade held on Fridays. The group included the entire Boston contingent in the 2d. Auxiliary—Tom [Ballantine] and I, Reeve, Glen Gummess [*appointed r.s.U.*], and Wolf Klemperer [*NS* 1940]. Our two commanding officers also went. Through his friend the French Lieutenant, Tom arranged for us to be present at a formal review of the troops, which is held in the stable area before they march onto the field. First we were serenaded by the band playing native marches, and also "The Yanks are Coming." They put on a demonstration of fancy drumming that was superb. After that they passed in review, and we all stood with the French Commandant. It was a real honor to be admitted, and a grand thing to see. Those black troops can certainly put on a good show, and march superbly. The horses, as always, were beautiful. After that we all hurried outside into the open field and viewed the parade to the mosque.

In the evening we had a long session with Dr. Churchill on the surgery he has seen—a great deal of it—and received his valuable comments and suggestions. Never have I been more impressed with his wisdom and equanimity, and never more proud to be able to say that he taught me.

Under date of May 21, this welcome letter came to Dr. Faxon from Col. Edward D. Churchill:

First of all you will want to know about a certain General Hospital. I finally got around to paying them a visit although of course I should have liked to go there immediately. They have a fine establishment and are doing the excellent job that might be expected of them. The spirit is of the best and particularly the intense loyalty that has in the past and will in the future see them through the difficulties of Army life. Only one gripe—and that is endemic—too much paper work. Not because it is too much work but because it seems senseless and takes them away from their patients. . . .

This is a war of dispersion, however, as evidenced by the letters from all corners of the globe that pour into THE NEWS. This theater is full of excellent surgeons who are doing fine work with real enthusiasm. The only thing they have to learn is that they are part of one large organization—the Medical Corps. They must learn to trust the fellow ahead and to realize that there are just as good men to the rear. With the true prima donna instinct of the surgeon they all think the fellow ahead has done a rotten job and that the fellow next in line certainly can't do as good a job—so have to sail in themselves. Of course I am fortunate in getting a bird's eye view of what is a tremendous organization—extended in both space and time. With the Emergency Ward over a thousand miles from the Ward it is a little difficult to secure the coördination required.

As to my own experiences—as you know I am now qualified as an Equatorial Short Snorter. The trip over was uneventful except for the usual moments of terror experienced in air transport. As there was a war going on down in the east, I spent most of my time at the front for the first weeks. The front is a rather ill-defined region where there isn't much to be seen unless one is anxious to be a "Death or Glory" boy—not of much use in modern warfare. The nasty practice of road strafing provides the greatest excitement. Even a stork against the sky line gives one an anxious moment, and it doesn't help to be told the road is known as "Messerschmitt Alley." It is only fair to say that both sides rigorously respect the Medical Installations marked by a Red Cross. No instance has come to my attention of deliberate or even accidental attack on the Red Cross.

There is an unexcelled clinic on trauma running night and day. I am qualifying as an all-round expert and find myself in the strange situation of knowing how everything should be handled *except* wounds of the chest. I am thankful that Smith-Pete isn't around when I give a demonstration on splinting a fractured femur, or that Jason can't overhear my remarks on wounds of the head. However, forward surgery is a specialty in itself and we all start together at scratch. Like a strolling minstrel I pick up words of wisdom here and scatter them there.

If you have not received official notice of what my assignment is, I may say I am Consulting Surgeon of the North African Theater of Operations, known officially as NATOUSA (North African Theater Operations U.S.A.) Now we can get squared away as we have the stage all to ourselves. It has been a bit crowded over toward the east, but that has been corrected.

My best to everyone,

PETE.

Under date of March 16, Dr. George M. Saunders (*ES* 1928) sent to the War Records an account of his timely and important work in South America:

> Dear Mrs. Means:
>
> I have just received your blank concerning "War Records." It must be very interesting to follow the wanderings of the alumni of the Massachusetts General, who, I imagine, are spread all over the world at the present time. I am glad to give you information concerning myself which may be of use for your records.
>
> In August 1941 I was jolted out of my peaceful occupation by a request from Pan American Airways to go to Africa to organize the medical service for air bases being established in connection with the supply route to the Middle East. I was in Africa from September to the end of January in '42. I returned to Washington fully expecting to go back to Africa with the Ferry Command, but General Dunham insisted that I could be of more use in the newly created Division of Health and Sanitation of the Office of the Coördinator of Inter-American Affairs.
>
> Therefore, I started working under General Dunham in February of '42, and together we came to Brasil in April. I have been in Brasil since that time, except for brief visits to Washington, Bolivia, and Paraguay. At present I am Regional Director for Brasil, Bolivia, Paraguay and Peru, where we are carrying out extensive public-health work in coöperation with the governments of those countries. In Brasil, Peru, and Bolivia we are particularly interested in controlling malaria and giving medical attention to rubber laborers in order to stimulate rubber production. We are involved in malaria-control activities elsewhere, including air bases in northeast Brasil. Our program includes the construction of small hospitals and health centers, the training of public-health personnel, and the development of nurses' training courses. These activities, and many more, keep us very busy.
>
> Associated with me in Brasil are many North American personnel, among them several officers in the Army Medical and Sanitary Corps. Working with us are more than 75 Brasilian physicians, as well as several hundred technicians, and so on.

A recent newspaper article concerning "the vast health program which the United States and Brazil is sponsoring in the Amazon Basin" and signed by the chief of the Associated Press Bureau in Rio de Janeiro, begins with these statements:

> American and Brazilian doctors are trying to clean out tropical disease from the population centers of the Amazon valley in probably the greatest single health program ever attempted anywhere. On their success hangs much of the fight to step up Amazon rubber production for America's war needs. The long-range aim is to open the Amazon region to colonization—to make it a fit place for the average man, not conditioned against tropical illness, to live and work.

The complete article may be seen in the Archives Room.

(N.B. When in Brasil, obviously it is "Brasil." But in Boston it will probably be "Brazil" for years to come.)

In answer to a request for news of his service in Nicaragua, Major Edward Parnall (*Or.* 1932) sends his reply from a recent assignment at Fitzsimons General Hospital in Denver, Colo.

> Last November I was abruptly snatched from my busy and peaceful orthopedic section in Oregon, and bundled off to Managua, Nicaragua, to be the Area Medical Director for the Nicaragua-Honduras area of the Pan American Highway, now under construction. They apparently wanted some one who had orthopedic and industrial experience, who could speak a bit of Spanish—and up flipped my card. Turned out to be very little bone and joint surgery to do, so out I got after about four months.
>
> The inhabitants of that land of green mountains and smoking volcanoes are delightful and happy-go-lucky folk, who seem thoroughly to approve of "los Estadounidenses," which translates "United Statesians." The hotel where I first stayed is called the "MacArthur," after our illustrious general, with a large picture of him in the dining room. Contrary to general opinion the Marines were quite popular there, and every now and then in the smaller towns one runs across an ex-Marine who keeps a store and is quite the local nabob.
>
> It was my duty to "ride the line" at intervals, which I did by horseback, airplane, railroad gas-scooter, and even a launch pitching and tossing all night across the Gulf of Fonseca. By the time I left, it was possible to ride most of the access roads by jeeps, although I imagine the present rainy season has raised the devil with them. In flying, the pilot was Jimmy Angel, the famous tropical flyer. I never met a man of finer character or more generous nature. Also, he made exceedingly dangerous country seem safer than a feather bed. Much fun to zoom down a few times on cow pastures in the mountains, to scare off the cattle before landing!
>
> My work dealt chiefly with building a hospital or two, treating malaria and dysentery, and *one* (God save the mark!) compound fracture.
>
> The highway will be another link in the total chain of communications threading the Americas. The future of travel along it is exciting to one who has been a bit in it—and the changes it will bring will be marvelous. A real solidarity is on the way. Once malaria can be brought under control (and I think it can be), Central America is as pleasant a place to live as anywhere I know of: Hot in the lowlands, but in a half hour's drive one sleeps under blankets and actually shivers in the evening without a coat!
>
> Best wishes to M.G.H. friends,
>
> Edward Parnall

WON'T YOU PLEASE see whether you have the following books from the Treadwell Library? They have been missing for some time, and other men are asking for them.

American Journal of Diseases of Children, Vol. 59, 1940
Archives of Internal Medicine, Vol. 67, 1941
Surgery, Gynecology and Obstetrics, Vol. 60, 1945
Lymph Node Metastases, Taylor and Nathanson, 1942
Textbook of Surgery, Christopher, 1939
Surgical Anatomy, Callander, 1933

E. A. Lewis, *Librarian*

"Management of the Cocoanut Grove Burns at the Massachusetts General Hospital," as published by the J. B. Lippincott Co., contains a brief "Prologue" by Col. E. D. Churchill, sent from North Africa too late to appear with the symposium in the June *Annals of Surgery.* The title page names the Staff authors and shows a thumbnail sketch of the Bulfinch Building.

Commander Franklin G. Balch, Jr., (*ES* 1925) received this promotion on April 1, 1943. He is at the US Naval Hospital at Chelsea, Mass.

On May 21, 1943, Commander John H. Fay, (*EM* 1929) received this promotion, as of August 15, 1942. He is assigned to the USN Recruiting Station at Providence, R. I.

Major E. H. Trowbridge, Jr., (*r.p. N* 1940) is chief of the neuropsychiatric service of the Station Hospital, Camp Joseph T. Robinson, Ark. He received promotion in rank on April 12, 1943.

Advancement from the rank of Major, his third promotion, has been received by Lt. Col. Walter M. Bartlett (*CM* 1927), now with the 315th Station Hospital at Camp Bowie, Texas. He gives no further news of himself, but reports:

> Major Richard P. Stetson, PBBH, [*WM* 1928] is one of the few Boston trained men here, he is assistant chief of the medical service at the Station Hospital, and recently presented a paper at our clinical conference on "Post Vaccinal Hepatitis" based on his experience at Lovell General Hospital, his previous station.

Major Wm. Donald Davidson (*Or.* 1933) reports on his present service at Camp Callan, Calif., and gives news of other MGH men:

> I was Chief of the Orthopaedic Section at the North Sector General Hospital until the commanding officer found out that I was having frequent gall-bladder attacks. Was returned to the mainland for surgery and was fortunate enough to have Major George S. Reynolds, a former resident on Third Surgical [1924], perform the cholecystectomy at Hammond General Hospital, Cal. While there I met several other patients who had had treatment by Gus Thorndike and Eddie Cave.
>
> This is my first assignment since I got out of the hospital. I am Assistant Chief of the Surgical Service and Chief of the Orthopaedic Surgery Section at the Station Hospital. Major Richard McGovney (Ortho. about '30) is Assistant Chief of the Orthopaedic Section. As he arrived three weeks before I did, it is obvious there was a mistake some place and that we both were sent to fill the same job; one of us will be moved on sooner or later, I suppose.

Lt. Wayne Hobbs, MC, USNR, (*a. in M*) writes from USN Hospital, Sampson, N. Y.

> I was exceedingly happy and grateful to receive The News. While I am not so far away from home, this place is almost as inaccessible as North Africa and therefore I have heard very little of my former associates.
>
> I entered active service on December 28, 1942, and have been stationed here since that time. The hospital is one of the new hastily-constructed but beautifully equipped institutions the Navy is building all over the country. The service is well handled and extremely active, and I have enjoyed myself.

Word of his service has been received from Comdr. Wayland A. Morrison, MC, USNR (ret.) (*WS* 1916): "Am on temporary retired basis, as I am in charge of the Santa Fé Railroad Medical Department. Hope to go on active service before war ends."

A letter written on April 23 by Lt. Arthur S. Pier, Jr., MC, AUS, (*WM* 1941) to Dr. Robert H. Hepburn (*r.s. U.* 1942) gives many interesting details about medical service in a distant but active war zone. Lieutenant Pier has been with the 105th General Hospital since its assignment to active duty early in 1942.

> Army life is funny in many respects. I am lucky to be in a high-powered medical outfit that has been very busy. The paper work, though, is pretty terrific and in many ways seems to hamper the care of the patients. On the other hand we see an amazing amount of interesting things—malaria is about as common as the common cold in Boston. We were very busy during the New Guinea campaign, then had a lull for a while, and have suddenly become again very busy, as New Guinea seems to have disgorged most of its patients to us. We are seeing a lot of malaria in all stages, a lot of scrub typhus in the convalescent stages, jaundice, peripheral neuritis, hookworm and some dysentry. One patient who has just come in has been in the tropics three months and has run the gamut of dysentery, malaria, scrub typhus and jaundice. He minded the jaundice most because it destroyed his appetite.
>
> The malarial problem is interesting, and the recurrences are maddening. The treatment I cannot mention, but we treat frequently. Scrub typhus I have seen only in the convalescent stage. It is a serious and devastating disease—mortality 10% or so—chills and fever like malaria, severe headache, often a rash, often nausea and diarrhea, delirium and often stupor. The patient is usually very ill for two or three weeks. The one mentioned has the characteristic appearance of the tropical soldier—sallow pallor, weight loss, and cachexia. He is doing well now.
>
> The jaundice is of uncertain etiology—question catarrhal, question due to anti-malarial therapy, and so forth. The peripheral neuritis we have seen here has been of the Guillaume-Barré type: acute neuritis with a very high spinal fluid protein and few or no cells. Their progress is slow, but so far benign.
>
> For two months my work has been on the medical wards, and with all these diseases it has proved very interesting. The neuropsychiatric work was fascinating, too. I had five months of it and learned a lot. I am very pleased that I am now assigned to a portable hospital. The portable hospital has four officers—three surgeons and one medical man and about thirty enlisted men. We will undoubtedly go into action eventually, and I feel the sooner the better. The two portables originally sent by this hospital played a significant rôle in the New Guinea campaign. Both are back here now and I am taking the place of one of the members. My first task is to clear up the athletes' feet of our enlisted men. . . .
>
> I was at an Australian Camp Hospital for nearly seven weeks, really living the Australian way, tea seven times a day, seeing the Aussi soldiers train, being taken over the vast sheep stations and eating with Australian officers and landholders, and treating Aussi troops and attending sick parade at numerous camps. It was a wonderful experience because it taught me what Australia was like. Here at the hospital we are so much an American community that we might as well be in Harvard Square. We make occasional trips to Australian hospitals nearby, and such trips are a wonderful treat. The other day we went to a clinical conference, were welcomed at once into a big room and fed an enormous tea, then after the conference were escorted to a magnificent dinner with quantities to drink, then back to an evening meeting, after which another huge tea, and then a farewell send-off. That is typical of Australian hospitality.
>
> As for food and living conditions, we are really in untold luxury. The food set-up is wonderful, the living quarters excellent. Australia is, I suppose, the garden of the earth at present—food is quietly produced on all sides and life goes on calmly, almost as if there were no storm on the earth. The Australians are calm and courageous and view the war with philosophical judgment. The Aussi fighter is probably unequaled for courage and daring.

Capt. Carter R. Rowe (*Or.* 1939) was appointed chief of the orthopaedic section for the 105th General Hospital on February 20, 1943. The 105th celebrated its first anniversary on March 20. Captain Rowe reports to the War Records office that "everyone is well and working hard."

◆

Early in June, Lt. Comdr. Walter E. Garrey (*ES* 1933) reported his 23rd month of sea duty aboard U.S.S. "American Legion." He adds:

> We are all delighted at the award of the Navy Cross to Ted Pratt. It was mighty well deserved. I have had pleasant encounters with Joe Holmes, Al Duncombe, and Arthur Willetts.

Lt. Hannibal Hamlin (*r.s. NS* 1943) has been promoted to the rank of Lt. Commander. He is now assigned to Advance Base No. 3.

Lt. Comdr. J. Maurice Robinson (*r.p. R* 1936) sends word that he received this promotion on May 1, 1943. He has been in charge of the X-ray department at the Naval Hospital in Farragut, Idaho, since the commissioning of that hospital in January of this year, and his own return from Midway Islands.

Lt. Col. Donald M. Glover (*WS* 1922) was promoted to this rank from Major in November 1942. He has been Chief of Surgical Service with the 4th General Hospital since its activation, and is now on duty with it overseas.

Capt. David R. Weir (*r.p.P.* 1938) is also a member of that unit. He writes: "After sixteen months in this country we begin to yearn for the U.S.A." The country is unnamed, however.

Commander Paul E. Spangler (*WS* 1925) has sent a brief word about the early service of his unit, USN Mobile Hospital No. 2, which was cited for distinguished service during the attack on Pearl Harbor:

> The Mobile Hospital was largely in packing boxes on that date, but by nightfall they had broken out gear and had admitted 110 patients. Although the great majority of casualties went to the Pearl Harbor Hospital the Mobile Hospital did a wonderful job, working under many difficulties.

On that December 7, Commander Spangler, chief of surgery and executive officer of the Mobile Hospital since its organization, was on duty at the Pearl Harbor Naval Hospital. That hospital also received a citation.

Lt. William W. L. Glenn, MC, AUS, (*r.s.* 1941) writes that his station has been changed from the Harvard School of Public Health to the New Station Hospital at Fort Devens, Mass.

The intensity of training and the variety of experience provided in this country are graphically suggested by Capt. Luke Gillespie (*a. obst.*) of the 98th Evacuation Hospital:

> Having maneuvered in cold places during the winter, I am now maneuvering in hot places during the summer—namely the Desert Training Center during June and July. This is the first time foot troops have engaged in desert maneuvers, and there are a fair number of patients coming into the hospital, especially cases of sunstroke, and acute and chronic heat exhaustion.
>
> Daytime temperature in the operating room is 120° plus, so most of the operating work is done late at night or early in the morning. It's almost impossible to give open ether anaesthesia, for the ether evaporates before it can be inhaled by the patient. The heat blew the tops off most of our clinical thermometers (the highest they register is 110°) before we knew enough to keep them in our kerosene-driven refrigerator. There they are kept, to be taken out only when necessary and returned as soon as possible.
>
> This is a small corner of an area described as follows by one of the soldiers: "Going from here to Hell would be like taking a spring vacation!"

Capt. Albert E. Rauh, MC, AUS, (*CM* 1936) was first commissioned in May 1941, and received promotion from Lieutenant in June 1942. He is with the 50th Signal Battalion, and has been on foreign service for over eighteen months.

Capt. Irvin J. Cohen, MC, AUS, (*CM* 1931) is in India, with the 95th Station Hospital. His first assignment was at the O'Reilly General Hospital in Springfield, Mo.

Capt. Allen M. Boyden, MC, AUS, (*WS* 1934), with the 3d Auxiliary Surgical Group and formerly at Fort Sam Houston, Texas, writes to the War Records: "After two enjoyable months in England, I am now located in North Africa."

Major Rafe N. Hatt (*Or.* 1919) writes of the 3d Auxiliary Surgical Group: "A roving unit gathers few promotions, but sees much service and dusts few chairs."

Major Richard Chute (*ES* 1929) wrote briefly on May 30:

> I am with a station hospital somewhere in North Africa. Unfortunately I cannot say much except that I am enjoying my exprience greatly. I have not run across any of my M.G.H. friends—worse luck! It is tremendously hot and dusty, but great fun! This is a great adventure and I'm really sorry for those who have to stay at home to keep the wheels going round, which is extremely necessary.

Lt. Calvin R. Coggins, DS, AUS, appointed a Graduate Assistant in Dentistry in April 1942, was a member of the 6th General Hospital on its activation. He was then transferred to the 160th Station Hospital, and has been serving with this unit overseas. He sends word that he is now assigned to the 7th General Dispensary.

Word came in May from Lt. John L. Ward, MC-V (S), USNR (*EM* 1935) that his address should be changed to U.S. Naval Training School (SK-W), Victoria Hotel, Boston. As the interpretation of SK-W proved to be Storekeeper-Waves, we immediately asked for further details:

July 5, 1943

Dear Editors:

Here are facts and ruminations on which to decide whether congratulations or sympathy are in order.

It was good to get back to Boston in March, for it meant commuting from home instead of the fretting partial isolation of Newport. At that time 300 boys were here training to be yeoman (clerks to you). On April 17 the boys graduated and 527 Waves and Spars came in. The girls are quartered in this old hotel, which accommodated 97 civilians in bygone days. They attend classes at Burdett College and Bryant and Stratton Commercial School, training to be storekeepers. For all the world this is like a private military school and I'm a school doctor with an office, an infirmary, two nurses, three Wave pharmacists' mates and one regular Navy mate to complete our department. Serious cases are sent to hospitals, chiefly Chelsea Naval.

So far the work has been interesting though not very enlightening medically. These first months have pushed me up from semi-intern status as a junior officer at the Newport hospital to boss of a department in a small activity, with lots of administrative problems to think about in relatively uncharted waters. (In other words the present red tape doesn't always fit the Waves.) This first tide of Waves has been a good crowd. They represent true volunteers. Our worst epidemic struck 4% of the students in one day—sunburn. What we chiefly lack is a chiropodist; we have to send such cases to Chelsea where there is a good one.

So duties are not so bad unless you're an inveterate woman hater, or your wife is excessively jealous. Fortunately my wife is satisfied to have me where she can know what I'm up to. Meanwhile like everyone else I can only guess whether I'll still be here tomorrow. After all, women physicians are being accepted, and this is the place for one. I may yet be on a "can" or with "paratroop marines."

Sincerely,
John L. Ward
Lieut. MC-V(S), USNR

U.S. Naval Training School (SK-W)
USS "Victoria", Boston, Mass.

The Hospital may also claim, in a manner of speaking, the Senior Officer of this unit of Waves. She is Lt. Caroline Densmore, who for several years was a technician in Dr. Theodore Terry's laboratory in the Massachusetts Eye and Ear Infirmary. She was one of the first to join this corps.

A brief note from Capt. T. Stewart Hamilton (*a. dir.*), Adjutant of the 6th General Hospital "frantically busy with paper work," comments on "the tremendous physiologic and psychologic importance of Sunday," which apparently does not exist in the Army. He mentions these "dispersions":

We are beginning to see our unit plucked at from one side and another: Parsons has gone to the 52nd Station Hospital, APO 464, Bill Arnold to the 66th Station Hospital, APO 759, and Sullivan (now a Major) up to main headquarters. Sullivan is on detached service; the others transferred.

Colonel Thomas R. Goethals (*ES* 1917) sent another of his interesting letters to Dr. Faxon on May 31:

We are well settled in the present station; construction, save for seemingly interminable odds and ends, is complete, and the function of the hospital as an organization is clicking. We claim no perfection of accomplishment,—yet!—but the team-work among services and departments has made great advances, while the coördination between the hospital, the local general and special staffs, and other medical installations is excellent. Great credit is due to Hamilton and his headquarters staff, and to Thorndike and his assistants in the Registrar's office, for the effectiveness of this liaison.

Details are sufficiently under control to allow me to make a methodical inspection of each service and department every week. Prior to the week of 23 May the services took priority, and the departments got whatever attention I could spare. Now, I manage to reach the Medical Service and Headquarters on Mondays; Surgical Service and Registrar on Tuesdays; Quartermaster, and X-Ray Services on Wednesdays; Dental Service, Neuropsychiatric Service and Medical Supply Department on Thursdays; Nursing Service and the Mess on Fridays; and the Detachment on Saturdays. In one week I have accomplished more in getting all the reins in hand than had been possible in the three preceding months.

The greatest advance has come in the Mess Department. We have acquired a live wire, who has systematized the feeding of patients and duty personnel, increased the palatability of the ration immeasurably, and infused the mess personnel with a totally new spirit. Thanks to Lt. Hatcherian's efforts, the Mess Department has risen well to the top of the league.

The nurses moved to their new quarters, a newly constructed apartment building, four weeks ago. Miss Knights has received a well-deserved promotion to the grade of Captain, ANC, an event gratefully welcomed by us all. She has run her service superbly and has met the slings and arrows of administrative vicissitudes with unfailing intelligence and understanding.

The flow of sick and injured through the hospital has adjusted itself to more or less of a maintenance level. With the cessation of hostilities in Tunisia we can envisage no further undue strain on our services unless, perchance, some epidemic of disease should occur, or until the new European front is opened. We are in the planning stage for our next move, but, of course, without the least inkling as to when it will come or where it will take us.

* * *

Colonel Goethals has mentioned Captain Knights' promotion. Similar recognition was given on April 1 to Capt. Kathleen H. Atto, ANC, (*MGH* 1922) now on leave of absence as Superintendent of Nurses and Principal of the School of Nursing at McLean Hospital. Captain Atto writes from Washington:

I was assigned to duty in the Surgeon General's Office on December 15, 1942. My duties have been many and varied, but perhaps chiefly in the field of public relations. I thought when I left my position at McLean Hospital that I was also leaving psychiatric nursing for a while, but find it is still my concern in the Army. We are at present planning a course for Army nurses at one of our general hospitals. It is the same problem as in civilian hospitals—too few to care for too many.

The Surgeon General's Office is a great place to see old friends from the M.G.H.—General McAfee, Colonel Churchill, Colonel Bauer, and others have dropped in from time to time.

Other promotions are reported from the 6th G.H.: Misses Canning, Coghlan, Kennedy, and Pitman are now 1st Lieutenants.

The American Red Cross has given a new appointment to Miss Josephine Barbour, head of the unit assigned to the 6th General Hospital. She has been made their Hospital Supervisor for North Africa and given responsibility for the Red Cross hospital program in that theater.

THE NEWS

No. 12 Boston, Mass. September 1943

Vol. 1, No. 1 of the *Brigham Bulletin* appeared under date of July 1943. It is edited by Dr. Robert S. Myers, who served here as Acting 1st Assistant Resident for a few weeks during 1941. Its front page announces: "This is the Hospital's way of saying 'Hello' to its members serving with the Armed Forces and keeping them acquainted with what's what and who's who in the months to come. We have made no commitments as to how often we will go to press. Whenever we have enough news, we will pass it along." THE NEWS greets the *Brigham Bulletin* herewith,—and hastens to quote from its initial article, "Harvard Medical School Goes to War."

"At Fort Devens, Massachusetts, on June 25-28, 311 budding medicos were processed and now take their place in the Army Enlisted Reserve called to active duty. A total of 524 men are enrolled in the Harvard Medical School for the current year. Of these, 311 are in the Army on active duty, 143 are Navy men on active duty, and 70 only will be in civilian dress. This latter group includes those in the Army and Navy on inactive duty, aliens, and a few who are not members of the military and deferred by their local draft boards.

"With 454 students in uniform, Harvard Medical School will have a distinctly military flavor. The process goes much deeper than this, however. These boys are being prepared for war and will live the life of soldiers. The Army has appointed a Commanding Officer, Captain Russell N. Fairbanks, who has offices in Building A and quarters in Vanderbilt Hall. These 311 Army enlisted medicos will live in Vanderbilt Hall, of which a part has been converted into a military barracks and embellished with a public address system with speakers on each floor. Devoid of easy chairs, radios, telephones, rugs and curtains, standard equipment for individual rooms will consist of double-decker beds, one desk, one study table, and one bookcase. No personally owned items of room furnishings, with the exception of one table study lamp per enlisted man, will be allowed.

"The daily life of the soldiers has been carefully planned. Reveille will sound at 6.15 A.M., and students must be in their rooms at 10.30 P.M., although there will be no set time for lights out. Five hours weekly of military instruction and six hours weekly of athletics have been prescribed. Retreat will be held in the grassy quadrangle between the marble buildings of the School and marching to classes in military formation has been decreed. Time off from duty will be given to the Army between Saturday at 5.00 P.M. and Sunday at 10.00 P.M. In consideration for their entrance into the Army, the Enlisted Reserve will receive a not inconsiderable remuneration. Tuition, room, board (Vanderbilt Hall dining room has now been converted into a cafeteria), laundry, books, uniforms, and the regular pay of Army privates will fall to each student. As to the trappings of the soldier, the Army Enlisted Reserves are privates, 7th class (Buck privates) and dressed as such.

"The Navy has established slightly different rules for its medicos on active duty at Harvard Medical School. Navy men will receive the same remuneration as the Army but are classed as Cadets and dressed in this fashion. Furthermore, they have a choice of residence in dormitory rooms furnished to their own taste or with their families on maintenance pay. Drill and athletics for the Navy men have not been defined as yet."

At a meeting of the Board of Trustees held on July 23, 1943, it was voted:

That Dr. Harriet L. Hardy, Assistant in Medicine, be granted leave of absence for a period of six months

To promote Drs. Anne M. Hopkins, David Hurwitz and Rulon W. Rawson from the position of Graduate Assistant to that of Assistant in Medicine

To promote Drs. William L. Cosgrove, Harold E. Dyer, Frederick J. Feeney, Charles A. Forbush, Burton J. Gove and George D. Parker from the position of Graduate Assistant to that of Assistant Dental Surgeon.

The following appointments were made:

Dr. Frederick S. Bigelow as Assistant Resident Physician beginning November 1, 1943

Dr. Eleanor J. Herring as Assistant Resident on the Children's Medical Service, beginning February 15, 1944

Dr. James J. McCort as Assistant Resident Radiologist, beginning October 1, 1943

Dr. Kazuo Yanagisawa as Intern on the Orthopedic Service to begin immediately

Dr. Fred G. Johnson, recently appointed Extern on the Dental Service, as Dental Intern to fill the vacancy caused by the resignation of Dr. Robert C. Miner.

WITH the present prominence of the Mediterranean in the war news, and with a preponderance of MGH men serving near that arena, this seems a good time to mention Capt. Gamaliel Bradford's wooden leg! He, too, spent considerable time in the Mediterranean — and at a period when its sea lanes were disputed and dangerous. But he later became a member of the first Board of Trustees of the Massachusetts General Hospital and served from 1813-1823. Likenesses of these first Trustees were collected some time ago by Mrs. Grace W. Myers, who was for many years in charge of the Treadwell Library. These pictures now hang in the Archives Room. But no likeness of Capt. Gamaliel Bradford appears among them, for no picture of him is known to exist. Nevertheless, a means of representing him among his colleagues has been found. A photograph is hung there showing a silver coffee urn made by Paul Revere. The urn has the great beauty and distinction of all Revere's work, but the purpose of the photograph is to show the inscription it bears:

To
Perpetuate
The Gallant Defense
Made by
Capt. Gamaliel Bradford
in the Ship Industry on the 8th July 1800
when Attacked by four French Privateers
in the Straights of Gibraltar.

For that was how Capt. Gamaliel Bradford got his wooden leg. According to family tradition, he was cared for at Gibraltar by Lord Nelson's own surgeon.

Capt. Gamaliel Bradford, the Trustee, was a descendant of William Bradford, Governor of the Plymouth Colony, and was the third in a succession of seven generations to bear that name. At the age of seventeen he was a Lieutenant in the Continental Army; his father served as a Colonel. His son, Dr. Gamaliel Bradford, became the third superintendent (Director) of the Hospital, 1833-39. During his trusteeship Captain Bradford also held the appointment of warden of the Charlestown State Prison. It should be remembered that the granite from which the Bulfinch Building was built was dressed by the prison labor there, as a part of the contribution of the Commonwealth toward the organization of the Hospital.

So here's to Captain Bradford, one of the iron men who sailed the wooden ships —and one who did his last navigating on a wooden leg and helped so stoutly to build this hospital.

Dr. C. MacFie Campbell, who has served since 1930 as a Psychiatrist on the Consulting Staff at McLean Hospital, died on August 7, 1943, at Wyman House, Cambridge Hospital, after a brief illness. For many years Dr. Campbell has been held to be one of the leading psychiatrists of this country. Born in Edinburgh and there educated, he came to the United States in 1904. In 1918 he became a citizen here. At the time of his death he was Medical Director of the Boston Psychopathic Hospital, a post he had held since 1920. In that year he was also appointed Professor of Psychiatry at Harvard University. He had previously been Associate Professor of Psychiatry at Johns Hopkins University. Dr. Campbell had studied at Paris and Heidelberg, and held many degrees.

Notice of the Warren Prize is not news to any M.G.H.'er, but in these crowded times reminders are not amiss. Dr. Horatio C. Wood, of Philadelphia, received the first Warren Prize in 1871 for his paper "Experimental Researches on the Physiological Action of Nitrate of Amyl." The latest award, in 1940, went to Dr. Hebbel E. Hoff and Dr. L. H. Nahum, both of New Haven, for their paper "The Formation of the Electrocardiogram." In the years intervening the Prize has been won by one Irishman, a Bavarian, two Italians, two Scotchmen, an Englishman, a Baltimorean, three other Philadelphians, a New Yorker from Schenectady, nine Bostonians (counting Dr. Henry K. Beecher twice), and a Resident Surgeon who became another Philadelphian. In several years no award was made.

Perhaps the prize for 1943 will go to a U. S. citizen, who will write and mail his paper thousands of miles from home —if he reads this reminder, reprinted from the Annual Report:

Warren Triennial Prize

The Warren Triennial Prize was founded by the late Dr. J. Mason Warren in memory of his father, and his will provides that the accumulated interest of the fund shall be awarded every three years to the best dissertation, considered worthy of a premium, on some subject in Physiology, Surgery, or Pathological Anatomy, the arbitrators being the General Executive Committee of the Massachusetts General Hospital.

Theses submitted for competition for the year 1943 shall be on some special subject in Physiology, Surgery, or Pathology.

Dissertations must be either in the English, French or German language, and MUST BE TYPEWRITTEN AND SUITABLY BOUND SO AS to be easily handled. Work that has been published previously will not be considered in competition.

The amount of the prize for the year 1943 will be $500.

In case no dissertation is considered sufficiently meritorious, no award will be made. Essays will be received until November 15, 1943.

A high value will be placed on original work.

OFFICIAL NOTICES

The Pharmacy Committee has approved the following exceptions to the general ruling that intramuscular injection be limited to physicians:

That Paraldehyde may be injected intramuscularly by nurses on the Psychiatric Service according to the written order of a physician, provided not more than 6 c.c. is ordered at one time and provided a new order be obtained when an injection results in more than 12 c.c. being given in 8 hours.

N. W. Faxon, M.D.,
Director

August 18, 1943

THE CHEMICAL LABORATORY

calls attention to the fact that there were nearly 10,000 determinations done during June and July. This is a 30% increase over the same period for 1942. As you all know, technical help and chemical apparatus and reagents are more than scarce, so we make this direct appeal for your coöperation in reducing the amount of work requested.

We should also like to repeat the statement made earlier that, since the CO_2 content gives a more accurate indication of the patient's condition, it is urged that this be requested in place of the combining power. Blood for the CO_2 content must be taken under oil.

Eunice M. Moore, Ph.D.,
Director, Chemical Laboratory

The General Executive Committee has appointed an Advisory Committee on Chemistry, with Dr. Allan M. Butler as Chairman, and Drs. Fuller Albright, Wyman Richardson, Oliver Cope, William W. Beckman, and Fritz Lipmann.

The National Society for the Prevention of Blindness has announced that the St. Louis Society for the Blind has awarded the Leslie Dana Gold Medal for outstanding achievement in the prevention of blindness and conservation of vision to Dr. Walter B. Lancaster. Dr. Lancaster was a member of the Massachusetts General Hospital staff from 1920-4 as an Ophthalmologist. He served at the Massachusetts Eye and Ear Infirmary from 1897-1903 and from 1913-1923, when he was appointed Consulting Ophthalmic Surgeon. He also holds a similar appointment at the Boston City Hospital, and is an Associate in Ophthalmology (Graduate Courses in Medicine) at the Harvard Medical School. In 1939 Dr. Lancaster received the honorary degree of Doctor of Science from Dartmouth College, and in 1940 was appointed head of the Dartmouth Eye Institute, serving there until recently.

The Massachusetts Eye and Ear Infirmary has recently issued the following bulletin. It gives an admirable report on the wartime problems of its work:

The number of casualties treated at the Massachusetts Eye and Ear Infirmary has sharply increased, commensurate with accelerated industrial activity. There has been an increase not only in the type of casualties commonly seen in peacetime—such as foreign bodies of the eye, corneal abrasions, perforations of the eyeball—but also of injuries rarely or never seen in peacetime. Thus, fiber glass used in the manufacture of parachutes has produced a number of casualties by small particles of the glass insinuating themselves through the cornea and lodging in the anterior chamber of the eye. New solvents used in industrial processes have resulted in a variety of chemical burns of the eye. But of particular concern to our hospital serving as it does workers in several large shipyards, is the condition known as photophthalmia electrica or flash blindness. This condition results from exposure to welding arcs. No permanent damage results ordinarily, but it is an exceedingly painful and fully incapacitating disease for the several days that it lasts. Strange as it may seem, welders themselves are rarely affected, as they are well aware of the potential hazard of exposure and take care to wear protective goggles. It is, rather, the nearby workers or passers-by exposed to the arc.

This condition was thoroughly studied in 1917 by Dr. F. H. Verhoeff of the Infirmary. Since this time, arc welding has become commonplace and photophthalmia electrica is a major cause of disability and of absenteeism in certain war industries, especially ship constructing. The United States Maritime Commission has therefore called upon the Infirmary again, through the Howe Laboratory of Ophthalmology, to study the condition under new methods of welding and to outline requisites for its prevention.

In the present war, constant communication between fellow participants and officers in charge of maneuvers is essential. With the great advances in communication, hearing is playing a greater role than ever before. But there are also increased hazards to hearing. The familiar term "boiler maker's deafness" recognized the cause but not the reason for loss of hearing due to injury produced by sound. To the men in our armed forces, constantly subjected to noises of great intensity and sounds never made by nature, loss of hearing means not only loss in efficient performance of duty but the possibility of life-long deafness.

For three years our laboratory at the Infirmary has been studying the effect of various sounds upon the organ of hearing. We know now the injury that sound will produce, and we are endeavoring to find a sound of such an intensity that the ear will not be damaged.

Thus it is, that our hospital, while carrying out the home-front activities of caring for patients, is also making a direct contribution, in other ways, to the winning of the war.

At the last meeting of the General Executive Committee it was reported by the Baker Committee that it has been necessary to close the sixth floor at the Baker Memorial, for several reasons:—

1. Shortage of nurses and personnel to care for patients.
2. Necessity for cleaning and painting this floor.
3. Necessity for using this floor to house student nurses. The September class of approximately 90, will require additional housing for 40 students. These nurses will be moved from Baker as soon as 23 Parkman Street is ready. This will not be possible before the first of November.

Dr. Lawrence K. Lunt (*WM* 1916) served for four months with the Civil Air Patrol in Delaware. Upon inquiry about this auxiliary branch of defense, he gives an interesting report. Dr. Lunt saw service in World War I as a Major, MC, and was for a time assigned to Base Hospital No. 6.

The Coastal Patrol of the CAP has been functioning since March 1942, flying the shipping lanes just off shore to reduce submarine danger to our coastal shipping. Previous to its inception a big toll was being taken; after the Patrol began regular duty, losses abruptly dropped. But as the Navy instituted convoying to a certain degree at the same time, it cannot be proved yet awhile how effective the air patrol was. However, authoritative persons give a good deal of credit to these civilian planes and pilots and their service. Submarines do not like airplanes, even the small civilian types we fly, as word can be radioed back if a sub is seen, and the Navy and Coast Guard swing into action. It has been published that the CAP Patrols have been credited with spotting a fair number of subs and were instrumental in sinking several. The Army thought enough of the achievement of the CAP to take it under its wing a few months ago as an auxiliary service.

My tour of duty was unhappily cut short by a recurrent type of stomach disorder very familiar to medical men, and I am now, under the orders of Chester Jones, getting back some weight before starting practice again.

The flying was just routine flights each lasting three hours, two ships in each flight and two men to the ship, a pilot and observer. There was also convoy work, the Navy asking us now and again to convoy a vessel through our area. As I understand it, almost the entire Atlantic coast line and the Gulf of Mexico is covered by planes flying from CAP bases, and in the first year each base flew about a million miles. The flying personnel is made up of men who for one reason or another are unable to get into the Services. They are paid merely enough to live on, and have to supply their own uniforms.

The work of the CAP was reported by the *Saturday Evening Post,* and "made" the *Reader's Digest* for August. Every state now has a CAP wing engaged in coastal patrol on inland courier service.

Major Edward J. Ottenheimer (*ES* 1924) received his commission in January 1941 and has been on service with the 39th General Hospital since July 15, 1943. He sends a brief account of that unit:

As you know, the 39th General Hospital is the Yale Unit, and I am the assistant chief of the surgical service. We were mobilized at Camp Edwards and, after a couple months of basic training, went to Camp Stoneham in California for a short time and came out in this area. We have a very fine General Hospital, excellently equipped and ideally situated. We are surrounded by abundant food, an equable climate, and extremely hospitable people. The medical service of the hospital has thus far borne the greater burden, and the amount of actual surgery has been relatively small. However, we always manage to find something interesting and all of us regard our adventure as one not soon to be forgotten.

I have seen Howard Sprague and Charlie Johnson, as they are in a naval hospital not too far away. They, too, are having a very busy time. Both of them look well, and we had a great time reminiscing about old days at the M.G.H.

Permission has been given by Dr. Henry R. Viets (*n.*) to quote a letter written to him by Lt. Burdick G. Clarke, (*EM* 1943) while aboard USS "Dorothea L. Dix."

A month after leaving the General, I was assigned a ship, type unspecifiable. Our work has consisted of about 1½ hours of medical work daily ("sick call") and of standing around for a certain additional time in tin hat and life jacket with a first-aid pouch, waiting for trouble. Fortunately we have a congenial group of doctors and a good bunch of corpsmen; but the rest of our time is spent in an elaborate effort to make inconsequential activities (smoking, playing cards, walking about on deck watching other people work) keep us occupied the rest of the day. Though I recognized at the time that internship was a wonderful experience, I never fully appreciated it until confronted with this continuous round of perpetual inactivity.

From an active post in the Pacific, Lt. John L. Wilson (*ES* 1940), who has been on active service with the Navy since January 1942, writes home to Dr. Arthur W. Allen.

Every so often I get thoroughly homesick for M.G.H. and the East Surgical Service. Then I overflow with a letter to you. I read THE NEWS avidly and pass it on to some male nurses from McLean Hospital, who are here with the Army. We get together and talk about White 6 and White 7, and tickle our palates with familiar names and incidents.

I have moved around considerably in the last few months. Now my duty is with a Carrier Air Group. We are based ashore and operating from an airfield. There is much activity around here and I find it an interesting place to be. I shall be really glad if I can keep my present assignment until the War is over. If later we go aboard a carrier—that will be a distinct novelty for a landlubber like me.

The Navy has recently advocated the bland ointment pressure dressing treatment of burns. I am impressed with the way it works in the field. There have been several pretty bad burns to look after lately and we have no facilities. But we grease up a big piece of gauze with vaseline and put it on under a pressure dressing. It takes only a minute and things are immediately under control in spite of the primitive set-up—then transportation is easy, too. The patients tolerate sulfadiazine well and infections are not serious.

If you look down some day and see someone on hands and knees kissing the floor in the White Building Lobby, that will be me.

Lt. J. Bradford Millet, MC, AUS, (*WS* 1943) sends recent news of himself to the War Records:

This note is to let you all know that I have been assigned to the 244th Station Hospital, Camp Shelby, Miss. We are a 250-bed outfit planned for operation in the communication zone. We are all trained and waiting for orders. As yet I am the only medical officer besides our Colonel. When we get our quota I hope we will have the good luck of having some M.G.H. men and nurses join the outfit, which is in my unprejudiced judgment a crackerjack from the top down.

Lt. Comdr. Herbert D. Adams (*ES* 1932) was commissioned, MC, V(S), USNR, on May 31, 1943 and in July was assigned to the Norfolk Naval Hospital at Portsmouth, Va.

Commander Howard B. Sprague (*EM* 1924) sent to Dr. Faxon on June 30 a brief account of USN Base Hospital No. 4, to say that this unit has again been at an advanced base and details must be "shrouded in mystery." Commander Sprague received his commission, which is "permanent," on January 1, 1942:

All our M.G.H. men are still here and have survived the numerous transfers inevitable in wartime. We have a fine set-up and a considerable experience by now. It is something over eleven months since we left the States, and we now sing a new version of Tipperary, which goes "It's a long way to San Francisco!"

My own job here as Executive Officer lasted for five months. A Regular Navy officer was then sent out, and I am now called Asst. Exec., which office gives most of the perquisites without the headaches. As a matter of fact, my work has been administrative ever since the hospital was commissioned a year ago, and I have instructed the new officers and in general maintained a liaison between the C.O. and the staff. My experience has been helpful to me, at least in the ways of the Navy, and I can see whatever cardiology there is.

I appreciated your congratulations and interest as well as the news from the 6th General, and your remarks about this country. It is quite an amazing land and I think I would rather be here than in North Africa, which I visited in 1932 in the territory of the M.G.H. unit.

Word has just been received that Commander Sprague is now assigned to the USS "Solace."

Lt. Robert M. McMillan, MC, AUS, (*r.p.* 1941) was commissioned on September 22, 1942, and went into active service a month later. He is a medical ward officer with the 10th Station Hospital, APO No. 813, N. Y.

Lt. Philip L. Pillsbury, MC, AUS, (*WM* 1942) has been assigned to the staff and faculty at the Chemical Warfare School, at Edgewood Arsenal, Md.

Lt. Lester Meister, MC, AUS, (*CM* 1937) was commissioned on October 30, 1942 and went into service on December 12. He is attached to the AAF and assigned to the Station Hospital at Randolph Field, Texas. He has just completed a course in Tropical Medicine at the Army Medical School in Washington.

After receiving his commission on April 9, Lt. Henry S. Fuller, MC, AUS (*WM* 1943) was in training at Carlisle Barracks until May 20. He then took the course in tropical medicine under Col. Richard P. Strong (*Hon. Phys.*) at the Army Medical School in Washington. From his present assignment with the 25th Field Hospital at Camp Breckinridge, Ky., he writes:

Thus far I have enjoyed Army life a great deal, and at present I am with a fine group of men. We are busy, and that's about all I can say (because of military secrecy). As the only MGH man in the outfit, I am endeavoring to maintain MGH traditions. I certainly miss my friends back there, and yet THE NEWS brings them all back in an instant.

Management of the Cocoanut Grove Burns at The Massachusetts General Hospital. J. B. Lippincott Co., Philadelphia, 1943, July. Illustrated. Indexed.

This small volume is the compilation of the records of the disaster victims by a group of the hospital staff and personnel whose departments were most intimately responsible for the management of the situation. In spite of the varied angles of viewpoint—all relating to the same subject matter, there is surprisingly little duplication. An effort has been made to record the proceedings in such a manner that the information obtained would be valuable to others.

Shortly after Pearl Harbor, the Administration and Staff of most urban hospitals, including the Massachusetts General Hospital, studied their facilities for the reception and care of large groups of civilian wounded. Much thought had previously been given the subject as a result of the London Blitz. Organization was perfected, supplies put aside, practice raids were staged and all maintained an expectant attitude of preparedness.

Various research projects under the auspices of Government agencies were in progress. Some of these had advanced sufficiently to be safely used in the care of the victims of this disaster. Some of these pre-conceived methods were found valuable; others were not helpful and many important questions for future study were raised.

Readiness made it an easy matter to receive and administer to a large number of emergency casualties. The machinery of the hospital, always in motion, was quickly geared to the influx of these victims. The physical construction of the hospital and the number of injured made it possible to take over a unit (6th floor of the White Building) and make it into an ideal casualty ward. This was near the laboratories and was so equipped that complete isolation of the patients from all sources of contamination except themselves was easily accomplished. The wounded represented primarily surface burns, but these were complicated by burns of the air passages and from noxious gases inhaled. Shock, anoxia, hysteria, fear, worry about friends and relatives—all became important problems.

Already, it had been established in this clinic that surface burns were best treated without debridement and without antiseptics or tanning agents applied locally. Added to this was the knowledge that the blister fluid of a burn carried approximately the same saturation of sulfonamides as the blood serum. Sizing up the situation quickly, having given much thought to such a problem beforehand, it was decided to treat these victims as follows: All were given morphine for pain, and all had intravenous normal saline started. The surface burns were covered with boric ointment on fine mesh cotton cloth, and over this was placed a liberal quantity of sterile gauze followed by lightly applied woven elastic bandages. Extremities were splinted with care as to the best functional position. Plasma was given first on the formula of the area of burned surface and, as soon as laboratory studies could be made, on the basis of the hematocrit. Sulfadiazine was administered intravenously and maintained by this or the oral route. No dressings were changed in the first five days.

The reports from the Psychiatrist, the Anaesthetist, the Roentgenologist, and the Pathologist are all interesting additions to the usual clinical services. Problems involving social service and administration were enormous. One cannot read the chapter by Miss Ida Cannon on the "Social Service Activities" without a feeling of warmth and deep respect for this great humanitarian department.

The book reads well in spite of the numerous authors and will be of interest to many, as well as a valuable record of a type of civilian catastrophe. It is felt that a real contribution has been made to the treatment of burns received in civil life and in military service.

Arthur W. Allen

The Harvard University Press announces the publication in August of "Borderlands of Psychiatry," by Dr. Stanley Cobb (*c. Psychi.*). The Press issues this as Harvard University Monograph in Medicine and Public Health, Number 4. A review of the book will be included in a later issue. A brief quotation from the announcement states:

> Dr. Cobb has taken up certain subjects long neglected because they were neither orthodox medicine, nor psychiatry, nor neurology. . . . The book will be especially useful to practitioners and students of medicine, to social workers, and to persons interested in medical psychology, speech training, and "psychosomatics." It will also be valuable as collateral reading in non-medical courses in psychology and related subjects.

The Table of Contents reads:

Introduction
I. Body and Mind
II. The Parallel Evolution of Speech, Vision, and Intellect
III. Speech and Language Defects
IV. The Function of the Frontal Areas of the Human Brain
V. The Anatomical Basis of the Emotions
VI. Consciousness
VII. Concerning Fits
VIII. Psychoneurosis
IX. Psychosomatics

Dr. Walter B. Cannon (*cons. McLean*) has recently received a Doctorate, *honoris causa,* from the University of Barcelona. This was conferred at the last meeting of the University Senate before the fall of the city in January 1939. He has also been made president of the American-Soviet Medical Society, a group formed to coördinate information about the results and achievements of Soviet Medicine. With Professors E. O. Lawrence and G. N. Lewis, known for their researches in atomic research, Dr. Cannon was made an honorary member of the Academy of Sciences of the U.S.S.R. At a reception given these members on August 12 by the Soviet Embassy in Washington, Dr. Cannon spoke of the membership of Pavlov in our own Academy, and commented on "the fraternity in which the world's great scientists live their lives, not separated by idealogies or languages, but all working for the spread of useful knowledge and the reduction of human misery by the wise application of that knowledge."

A letter from the Surgeon-General's Office to the Harvard Medical School states that it has been decided to discontinue the course in Maxillo-Facial Plastic Surgery and the course in Surgery of the Extremities scheduled at Harvard Medical School during September, October, and November.

...—V...—

We have published many letters from the war fronts, but have received few descriptions from home fronts outside the Hospital. At our request Dr. Donald Macomber (*SS* 1911) allows us to rehearse his day "down on the farm." His report was written to one of his four sons, Lt. David H. Macomber, navigator of one of the big bombers operating out of Australia or New Guinea, who has been in the Army for two and a half years and has seen action in the Pacific for over a year. David's twin, Lt. Donald, Jr., who has also seen two and a half years' service and is in command of a laboratory of a photo-mapping unit station in Colorado, is now receiving special instruction at an Air Intelligence School. William, an ensign, and a year in service, is on duty in the Pacific. Peter, after basic training as an infantry private has been sent back to college (Princeton) under the Army Specialized Training Program. Dr. Macomber himself saw service August 1917 - February 1919 as a Captain, MC, and served with Base Hospital No. 46 in France. One might say he is carrying on—with guns *and* butter!

Tide River Farm
Star Route
Brunswick, Maine

Dear Dave:

You have been getting rather sketchy letters of late but here is a longer one to explain why and to show you how Ma and I manage to keep out of mischief. Our day doesn't begin as early as that of most farmers but by nine o'clock we are through breakfast and I go to work on the "chores" while Ma does the dishes and cleaning. First I feed the goats—they won't give milk till next spring but they have to be fed just the same. Then come the hens—three pens totalling 80 (we get about 4 dozen eggs a day)—and the growing birds, 35 pullets and at present only 15 broilers and young roosters. I have just started another pen of miscellaneous poultry—ducklings, guinea fowl, and turkeys. Meanwhile piggy is clamoring for his share of the eats. He is a cute little devil and I hate to think of his relieving the meat shortage next winter. Finally I check up on the incubator to see that temperature and humidity are OK and to turn the eggs. This year I am running it much later than usual. There is a tremendous demand for baby chicks. People are planning for something to eat next year!

After the "chores" which take the best part of an hour, morning and night, the serious work of the day begins. Just now it consists of cultivating one of our four gardens which total about one acre, or of spraying the apple trees or the potatoes—or, most pressing of all, of haying. We have enough machinery so that haying isn't too much work for Ma and me. The way we do it is this. In the morning I cut with the tractor mowing machine about what I think we can handle when we take it in (if luck is with us) the next afternoon. I find, however, that there's many a slip (machinery is temperamental, not to say fractious), and there may be sudden showers, to mention only a couple of the uncertainties. If all goes well we "ted" the hay the next morning, rake it up with the side delivery rake in the afternoon, and load and put it in the barn.

And so it goes. In the spring, plow and plant; in the fall, harvest and can; and in the winter, prune, cut next winter's wood and make maple sugar. It keeps us busy, but we like it. We have enough to eat and something extra to sell and if we want to we can take a day off to go fishing or hunting. When you come right down to it, it is pretty near being the kind of life we are all fighting for. I'll bet you would choose it if you had a chance. Good luck!

Affectionately,

Dad

* * *

The following ranks and assignments have been received. Further details will be welcome for publication:

Lt. Russel L. Baker, MC, AUS, (*r.p. N* 1943): 7th General Hospital, Carlisle Barracks, Pa.

Capt. Joseph L. Campbell, MC, AUS, (*r.p. An.* 1940), 30th Evacuation Hospital, #403-Annex, Shreveport, La.

Lt. John S. Chase, MC, AUS, (*ES* 1940): Lovell General Hospital, Fort Devens, Mass.

Lt. Stewart Clapp, MC, AAF, (*NS* 1939): Station Hospital, Aviation Cadet Center, San Antonio, Tex.

Lt. Raymond M. P. Donaghy, MC, AUS, (*NS* 1939): 1st Auxiliary Surgical Group, Fort Sam Houston, Tex.

Lt. Comdr. Robert N. Ganz, MC, USNR, (*CM* 1925): Navy Yard, Boston, Mass.

Lt. Frank B. Greene, DC, USNR, (*Gr. Asst. Dn.*): Naval Training Station, Newport, R. I.

Lt. Donald R. Hayes, MC, AAF, (*ES* 1939), Station Hospital, Army Air Base, Lincoln, Neb.

Lt. C. Lawrence Holt, MC, AUS, (*NS* 1938), 67th General Hospital, APO 511, N. Y.

Lt. Frederick H. Kalil, DC, AUS, (*Dn.* 1943): Army Air Field, Walterboro, S. C.

Lt. Robert P. Keiser, MC, AUS, (*Or.* 1942): O'Reilly General Hospital, Springfield, Mo.

Capt. James S. Mansfield, MC, AUS, (*Gr. Asst. M* 1942): 7th General Hospital, Fort Devens, Mass.

Major Robert L. Mason, MC, AUS, (*WS* 1924): Tilton General Hospital, Fort Dix, N. J.

Lt. William S. McCune, MC, AUS, (*WS* 1937): Walter Reed General Hospital, Washington, D. C.

Lt. William V. McDermott, Jr., MC, AUS, (*WS* 1943): 574th AAA-AW Battalion, Camp Edwards, Mass.

Lt. Bruce R. Merrill, MC, USNR (*r. p. Psychi.* 1941), US Naval Hospital, Portsmouth, N. H.

Lt. George Mixter, Jr., MC, USNR, (*WS* 1943): USN Receiving Station, South Boston, Mass.

Lt. Richard V. Riddell, MC, AUS, (*ES* 1934): Carlisle Barracks, Pa.

Lt. Leonard D. Rosenman, MC, AUS, (*ES* 1943): Camp Grant, Ill.

Lt. Henry N. Russell, Jr., MC, AUS, (*CM* 1939): Nichols General Hospital, Louisville, Ky.

Lt. Lamar Soutter, MC, AUS, (*r.s.* 1941): 4th Auxiliary Surgical Group, Lawson General Hospital, Atlanta, Ga.

Lt. S. W. Stanulonis, MC, USNR, (*Gr. Asst. M* 1942): Coast Guard Air Base, Elizabeth City, N. C.

Lt. Marian A. Wenger, MC, USNR (*res. fel. Psychi,* 1942): Maritime Service, Catalina Island. Calif.

Major Norman E. Freeman (*r.s. WS* 1935), whose assignment in India with the 20th General Hospital was mentioned in an earlier issue, has sent to Lt. Comdr. James C. White a most interesting letter describing the local scene—and temperature. (Major Freeman's letter, received by V-Mail, was blurred in portions. He may be amused to know that his figures on temperatures and rainfall — and our deciphering of them—have been confirmed by the weather expert E. B. Rideout, who adds that there are places in India where average rainfall is 44 inches.)

Dear Jim:

We're sweltering today in some of the best that India can give us. Newspapers report temperatures ranging between the 90's and 118°F. in various cities so that we are pretty thankful to be up in the country. We've had an average amount of rain for May, about 22 inches. The next three months bring the celebrated monsoon with the average going up to 27 and 30. Since there are clear spells from time to time, you can see that it really goes to town when it comes down.

I went for a hike this morning and felt what a steaming jungle is really like. The path was steep with great ferns, some 20 feet high, bamboo groves, and innumerable vines matting everything together. I'd hate to have to hack a path through it. Streams running everywhere but the water probably polluted, so we didn't swim and relied on our canteens. After three hours of it you can appreciate our dehydration and why we're still guzzling down salt and water to recoup our losses.

This place is very picturesque and sufficiently away from things so that we have monkeys and jackals right on the grounds, and a panther or a leopard some time back. Snakes abound, though I haven't run into any of them yet. Two cobras dropped out of a tree just back of one of the wards last week. Those and the kraits are the only poisonous ones around, though there are a fair number of others as well. There are supposed to be some good fish around here, too, but except for blasting them, there doesn't seem to be much luck in landing any.

We're quite comfortably settled now with electric lights and cement floors for the officers' quarters. The food is plentiful though monotonous, with cornbeef and sausages out of tins as the chief source of meat. Beer is rationed at 1 bottle (24 oz.) per month and the supply of other potables is non-existent. We've taken to tea drinking and really it's not so bad. We get newspapers from one of the big cities only 24 hours old and get some radio news from Chungking each day—usually a transcribed British program. Reception from the States is too poor. We have our own library of records and a good record player and amplifying system, so that weekly programs of classical music on Sunday nights are a big attraction. There's a tennis club about a mile away with four beautiful grass courts. Even in the rainy season I hear that there are enough clear days to make playing possible. I've been down there half a dozen times for some good games.

Work has consisted mostly of general surgery. There hasn't been too much of it, so I've had time to start a couple of small problems. Do you remember my recommending pressure dressings in the treatment of immersion foot? I've been studying the actual pressure that is exerted on the skin under a pressure dressing and been trying to measure the pressure beneath the skin by Henderson's intramuscular pressure technique. I'm certainly keen about the use of pressure dressings in the treatment of burns and soft tissue trauma, and think more than ever that it would be a swell form of treatment for frostbite and immersion foot. I rather expected to be called to some more northern clime, and was looking forward to some clinical studies on the vasomotor system. With room temps. of 80 and above, there's not much use for my skin temp. apparatus.

Hope everything is going fine with you.

Best regards,

Norman

Maj. N. E. Freeman, M.C.
20th General Hospital
APO 689 NYC

Major Freeman is the author of the sub-chapter on the mechanism of shock, in the manual on "Burns, Shock, Wound Healing and Vascular Injuries," prepared under the auspices of the Committee on Surgery of the Division of Medical Sciences of the National Research Council. Dr. John Homans (*SS* 1904) was chairman and Dr. Arthur W. Allen (*c. ES*) a member of the Committee that jointly prepared the section on vascular injuries. This volume is the fifth in the series of six military surgical manuals planned by the Council.

* * *

Major Richard Schatzki (R.), after a first assignment at Camp Devens, writes that he is on temporary duty at the Induction Center in Wilkes-Barre, Pa.

Major Wilfred Bloomberg (*r.p. N* 1931) was relieved from assignment with the 7th General Hospital as of June 29, 1943, and is now with the 1st Service Command, supervising psychiatric work at the Armed Forces Induction Headquarters in Boston.

Major William F. Hoyt (*WS* 1932), who was assigned to the Hammond General Hospital at Modesto, Calif., in May as Chief of the Section of Thoracic Surgery, has since been made Assistant Chief of the Surgical Service. "This gives me general as well as thoracic surgery, which is just what I wanted. I guess I'm lucky, and I know it."

Captain Harold I. Harvey, MC, AUS, (*res. fel. in Psychi,* 1941) received his first commission on June 6, 1937. He went into active service on October 1, 1941 as a lieutenant and received his present rank as of February 1, 1942. His recent statement to the War Records reports that he is a Flight Surgeon with the Air Corps, attached to the 97th Reconnaissance Group (Fighters) at Camp Campbell, Ky.

Capt. James D. Schuler, MC, AUS, (*CM* 1939) is at Camp Forrest, Tenn. "The 65th Medical Regiment has kept me busy with a variety of duties for nearly two years. We look forward to real active duty in preference to overtraining in fundamentals."

The USA Valley Forge General Hospital was officially opened on February 22, 1943, at Phoenixville, Pa. The name of Lt. Walter C. Graham (*r.s. Or.* 1940) appears on the list of its staff, as a ward officer, orthopaedic section.

COL. BAUER
SIGNAL CORPS U.S. ARMY

From behind this fortification in Dallas, Texas, Col. Walter Bauer (r.WM 1927) supervises the medical service of the 8th Service Command.

Colonel Goethals' letters are of unfailing interest. This one, reporting on the 6th General Hospital between May 31 and July 11, is again compact with detail and allusion:

Various of our officers have taken trips from time to time to the neighboring base section from which most of our patients are received, travelling via hospital train. Early last month Don King and I took the trip, approximately 500 miles each way. We visited one general hospital and two station hospitals while there.

The first of these, at a seaside resort on the Mediterranean, is dispersed among over 100 separate villas, on three levels of ground, and abuts on the sea. You may readily imagine the administrative difficulties of keeping the threads in hand when I tell you the institution is over a mile long from end to end! When the K.O. is inspecting one end of his domain and the Surgeon wants him on the phone for an urgent message, it is a matter of by-guess-and-by-God how long it will take to get on his trail. In addition to the long carry of meals to bed-patients scattered from Dan to Beersheba, there is also the problem of constantly overflowing septic tanks. One tank goes with each villa, and when the population thereof is excessive—which is always—pop goes the septic tank and another flood must be coped with. A tank truck known locally as the "honey-wagon" is constantly on the go, effecting mopping-up operations. The K.O. has a philosophical mien: he is evidently abreast of the situation and a little ahead of it!

We returned with a convoy of sick and injured, about half of them prisoners of war bound to the PW inclosure some 30 miles from here. During the past month we have had a convalescent camp attached to us, with make-shift personnel organized from two ship's hospital platoons. Since the camp is some five miles from us by road I have had to put Colonel Knott out there to lick it into shape, and have therefore been short-handed at Headquarters as a result. Major Zucker will take over as officer in charge tomorrow, when Knott returns to his desk.

Since my last to you we have lost Lang Parsons and Bill Arnold, the former to a station hospital several hundred miles away, the latter to a station hospital nearby. We are sorry to lose them, but Higher Authority ordained it and we had no recourse but to submit. We have acquired two chaplains vice Arnold, and two acceptable young surgeons to replace Parsons and Heyl. Miss Barbour leaves us soon for a higher ARC echelon, and John McKittrick is about to be transferred to an evacuation hospital.

Gene Sullivan has received a well-merited promotion to the grade of Major, but has been absent on special duty for over a month now. Meanwhile Laboratory officer, Major MacMull, has been attached temporarily pending Sullivan's return, to cope with an extra load of laboratory work assigned us after the closing of the Base Medical Laboratory.

Our neuropsychiatric service received 30% of patients admitted during June. That service is also carrying a heavy load, and Major Parker and Captain Drayer, both non-MGH men but both excellent psychiatrists, together with Ludwig, are taking the brunt. Drayer, incidentally, is away on special duty, and Bill Burrage has been loaned by the medical service to the NP.

The invasion of Sicily has just started. We are a long way off, but expect to get the repercussions of it in an increased turnover in a very short time.

The APO number for the 6th General Hospital has recently been changed to #764.

Captain T. Stewart Hamilton (*asst. Dir.*) has been promoted from Adjutant of the unit to Executive Officer.

Colonel Churchill's letter of August 1 to Dr. Faxon reports much in brief compass, and once again brings the kind of news that makes this gazette so gladly read:

Just a note for The News, to record MGH representation in the recent activities in the North African Theater. In the assault forces that caused the downfall of Benito, and are now closing in on what little is left of his big island, were the following: Majors Rafe Hatt, Francis Findlay, Roy Cohn, and Leo Burgin; Captains Allen Boyden, Tom Ballantine, Paul Hansen, and Alfred Yankauer; Lieutenants Floyd Jergesen and Phil Giddings. If I have missed any I am sorry.

The nurses were represented also, but when they do not wear MGH caps or throw their arms around my neck they may get missed on my tours. With no implications as to how recognition took place—I did find Lieutenant Nelson on the island representing the T.S. Lt. John McKittrick moved up from the 6th in time to wave goodbye and be ready to receive returning casualties in his new assignment with the 9th Evacuation. Many of the surgeons had exciting times, but I shall let them tell about it. Most were hard at work in an amazingly short time after the landing and of course are doing superb jobs.

These surgical gypsies in Field Organizations, Surgical Teams, Evacuation Hospitals always want to know whether the next issue of The News has arrived in The Theater. Mail is irregular in the forward areas, and oftentimes a copy gets passed along from one to another.

Don't think that I was in any hurry to get into the fight. After all was safe and quiet, I tagged along as usual.

Dr. Champ Lyons, (*WS* 1933) and Dr. John D. Stewart (*ES* 1930) have received commissions as Major, MC, AUS. They were recently on service at Halloran General Hospital, Staten Island, N. Y.

The Hospital wishes to acknowledge the volunteer help received this summer in various departments—and to call attention to the continued need for such workers:

The abbreviated personnel of the Massachusetts General Hospital has been augmented this summer by fifty-seven members of the War Hospital Service Corps. This group has included college teachers and students, and women from the community at large who have wanted to do a war job. They have done a wide variety of jobs in the nursing and dietary departments. On a full-time basis some have had training that made possible simple bedside nursing techniques. Others have done ward-helper work. On a part-time basis some of the Corps have swept and dusted, washed out bowls on the wards, and have helped in the kitchens.

A large portion of the War Hospital Service Corps are leaving to return to school. THE HOSPITAL NEEDS REPLACEMENT ON THESE JOBS. Women who want to do a war job on a full-time or part-time basis are earnestly asked to come in to the Personnel Office.

THE NEWS

No. 13 Boston, Mass. October 1943

Department of the Navy
Bureau of Medicine and Surgery
Washington, D. C.

19 Aug. 1943

Dear Doctor Faxon:

The Commanding Officer of the Naval Hospital, Chelsea, informs me that during the years 1942 and 1943, the Massachusetts General Hospital Brain Wave Laboratory has been most helpful in assisting the staff of the Naval Hospital in cases of suspected epilepsy and head injuries. Without your assistance the fine work that has gone on in our Institution could not have been carried out. Further, when plans were made for the Electroencephalogram Laboratory at the Naval Hospital, you were kind enough to assist in training the personnel to operate the apparatus.

Will you be good enough to express the appreciation of the Bureau of Medicine and Surgery, to the Board of Trustees of the Massachusetts General Hospital, and extend my personal thanks to them as well.

I want you also to know that we all appreciate very much the courtesies that you personally extended to the staff of the Naval Hospital.

Sincerely yours,
Ross T. McIntire
Rear Admiral (MC), USN
The Surgeon General

The Hospital is pleased to announce the election, on June 25, of Mr. Lloyd D. Brace as a member of the Board of Trustees. Mr. Brace is a vice-president and director of the First National Bank of Boston, and a trustee of the Boston Five Cents Savings Bank. He is one of the founders of Boys' Clubs, Inc., and serves as chairman of its board. Mr. Brace is also a member of the board of trustees of Phillips Andover Academy.

Distant readers may like to know how the first news of the surrender of Italy came to many of us at the Hospital.

The LOUD Speakers, one of which is operated from the "new" Court House extension on the Hill, brought the word to us. The Speakers had been heard, to that date, only at high noon or when broadcasting air-raid signals. But on September 8, by order of the Mayor, the Speakers broke out at 12.35 with the first strains of the National Anthem. Following these came the announcement: "The Italian Government has unconditionally surrenderd to the Allies."

This was repeated over and over, with interruption first by "My Country, 'Tis of Thee," then by "Yankee Doodle," later by the rousing songs of the Service Branches, one by one. And we did not grow tired of listening to it. My, but it sounded GOOD!

John Abbott

By the death of John Abbott, the Hospital has lost its valued adviser in matters of law. Since 1909 Trustees, Treasurers, and administrative officers have turned to John Abbott for advice in legal affairs. His opinions were calmly and judicially made. They were solidly based on his extensive knowledge of the law and his large experience. He was unselfish in his dealing with clients. He did many kindly and helpful acts without thought of payment. A human lovable man he endeared himself to the Hospital officers. They will miss a friend.

John Abbott was graduated from Dartmouth (Phi Beta Kappa) in 1891. He was captain of his college baseball team. He thus early showed the quality of leadership which he maintained through life. A well-rounded creditable career. A distinguished and beloved citizen.

F.A.W.

October 16, 1943 will not be overlooked at the Massachusetts General Hospital as marking another anniversary of Ether Day. The usual luncheon will be omitted because of wartime shortages, both food and personnel, but thanks to War Service volunteers, coffee and doughnuts will be served in the Brick Corridor at 11 A.M. Bishop Sherrill will speak briefly on his recent trip to Alaska. Maps showing the present distribution of staff and graduates, and photographs of persons and places will be exhibited. All members of the Hospital family are invited.

The Bolton Act, a law to provide for the training of nurses for the armed forces and governmental and civilian hospitals, health agencies and industry was passed on June 15, 1943. The training program for student nurses is known as the United States Cadet Nurse Corps.

Schools of nursing that meet required standards of accreditation, admission and instruction, and have accelerated their instruction and essential practice into the first 24-30 months of their programs, are eligible to participate in the Cadet Nurse Corps. This acceleration does not enable the school to graduate a student in less than three years. The advantage of the acceleration lies in the fact that in their last six months students may go to military or other governmental hospitals for supervised practice or may be assigned for supervised practice to replace graduate nurses in civilian hospitals.

The advantages of Cadet Nurse Corps membership to the student are many. Tuition and all fees due on entrance will be paid by the Government. The Government will also pay for the pre-clinical indoor uniform and for a winter and a summer street uniform. In addition the student will receive an allowance of $15 per month for the pre-cadet period (the first 9 months); $20 per month, paid by the Government, for the junior cadet period (the 10th through the 21st month); and $30 per month, paid by the employing institution, for the senior cadet period (the last 6 months).

The M.G.H. School of Nursing was accepted into the Cadet Nurse Corps on September 15. Although enrollment is still only tentative, about 220 students are expected to join. Of the students enrolling, 60 are members of the class that entered September 1943.

The student who elects to join the Cadet Nurse Corps receives the regular 3-year program, the same as that given to the student who is not a cadet. For the financial aid the Cadet student receives, she must pledge to nurse in some *essential* nursing service for the duration of the war. The military and non-military Government hospitals under the U. S. Public Health Service, the Veteran's Administration and Bureau of Indian Affairs, and all civilian hospitals, public health agencies, and industrial nursing service are considered *essential.*

Eighty-five students were admitted to the School of Nursing on September 7, bringing the total admissions for 1943 up to 211. This is the largest class ever admitted.

At a meeting of the Board of Trustees on August 20 it was voted:

To accept the resignation of Dr. Harry C. Solomon and to appoint him to the Board of Consultation.

Dr. Harry C. Solomon has been appointed Medical Director of the Boston Psychopathic Hospital, and succeeds the late Dr. C. Macfie Campbell. Dr. Solomon has been a member of the General Hospital Staff since 1920, and of the McLean Hospital Staff since 1930. In April of this year he was made Professor of Psychology at the Harvard Medical School, upon the retirement of Dr. Campbell as Professor, *Emeritus*. Dr. Solomon's first appointment at the Medical School was in 1916.

The Trustees have also voted:

To accept the resignation of Dr. Oscar F. Cox.

To grant leave of absence because of military service to Dr. Clifford C. Franseen.

The following appointments were made:

Dr. Edwin O. Wheeler as Research Fellow in Medicine.

Dr. John J. D'Urso as Resident in Dermatology and Syphilology, beginning September 1, 1943.

Dr. Leonard B. Greentree as Intern on the Orthopedic Service for the term beginning October 1, 1943.

Dr. Charles H. DuToit as Assistant Resident Physician, beginning October 1, 1943.

The General Executive Committee on September 15, 1943 voted:

To accept the resignation of Mildred E. Merkle from the position of Graduate Assistant in Medicine.

During the month of August the number of hours given by War Service volunteers reached a total of 2295, indicating not only an impressive record of attendance but greater opportunity for service and an ever-increasing interest in the Hospital. Although each worker appreciates her individual responsibility and position of trust, she takes equal pride in the War Service as a whole and in coöperating enthusiastically and intelligently with the earnest effort being made to improve the Service. Toward this end, the Advisory Committee has prepared a manual of instructions concerning Hospital traditions and rules as well as War Service routines and duties. Henceforth every volunteer will be required to pass an examination on the contents of the manual before she is accepted as a worker.

The War Service was organized in January 1942 to relieve nurses during the shortage caused by the war. It is one of the units of the M.G.H. Volunteer Service and is under the direction of Miss Eleanor Greenwood; but it has its own Advisory Committee, which includes the Director, and the Chairman, Mrs. Everett W. Pervere. Each day of the week has a different Captain, Assistant Captain, and group of workers. To maintain uniformity it is the duty of every Captain to report any comment or new instruction to the Advisory Committee, who will inform the other Captains.

Criticism or mistakes should be reported to a Captain or to a member of the Advisory Committee,—for the War Service knows that it is a great privilege to be permitted to serve the Hospital in this way, and wishes to perform its duties with a minimum of error.

Mrs. David B. Arnold
Director of War Service
Volunteer Service Bureau

OFFICIAL NOTICES

In coöperation with the State Department of Health, the Urology Department announces a clinic for women with gonococcus infections. This is a new clinic. It will be held two afternoons a week, and is under the charge of Dr. Joseph Lipton, who was recently appointed a Graduate Assistant in Urology.

The Chemical Laboratory

One of our photoelectric colorimeters is giving trouble, with the result that the N.P.N.'s are running about 10 mgs. % low. We are promised a replacement, so this situation should be remedied in a short time.

It is very difficult for us to get out each day's work unless specimens are received in the Laboratory by 10 A.M. Part of that difficulty, we realize, is with the transportation system; at the same time a good deal may be traced to late ordering. In this connection we shall appreciate the assistance of those responsible for ordering.

Eunice M. Moore, Ph.D.
Director, Chemical Laboratory

THE Dietary Department has endeavored, for several months now, to make a statement for News readers, but food problems and service shortages have been too changeable to be stated clearly.

The Department has had many "bad days," but until recently we have been able to carry on with few restrictions—so far as the casual observer could see. The menus have for months suffered many deletions, of course. Butter has become a thing of the past at most meals. At breakfast in the Nurses' Cafeteria rolls bought from a bakery now replace toast on at least one counter, because service to make the toast cannot be obtained. The East Pay Cafeteria is without bus boys and girls. We now ask patrons to clear their own tables, and are making suggestions as to how best to stack the dishes to expedite work in the dish-washing rooms. As few dishes as possible are used in serving food, and patrons are asked to take only the silver they will actually use. The Cafeteria has discontinued between-meal service and at breakfast is open for doctors only. Service for dinner remains unchanged, as high-school boys and girls are available for employment during those hours.

At this writing the dearth of dishwashers is so crucial that for the past week only the assistance of volunteers and Red Cross Dietitians' Aides has made it possible for us to take care of the noon meal. Since this present situation is likely to continue for the duration of the personnel shortage, groups of volunteers in the community are now being organized to meet our need. Hospital personnel itself may have to be appealed to if the service of the noon meal is to be maintained.

Marion D. Floyd,
Chief Dietitian

Harry Chamberlain Low

1870-1943

Dr. Harry Chamberlain Low was appointed Assistant to Orthopaedic Surgeons to Out-Patients at the Massachusetts General Hospital in 1909 and promoted to Orthopaedic Surgeon to Out-Patients in 1917. From 1921 to 1931 his title was Orthopaedic Surgeon in charge of Poliomyelitis. His continuous active service to the Hospital covered a period of twenty-two years.

Dr. Low was born in Salem, Massachusetts, and graduated from Harvard College in 1893 and from the Harvard Medical School in 1897. An internship at the Children's Hospital was followed by an appointment to the Pathological Department of the Boston City Hospital under the senior Dr. Mallory. He served efficiently in this department for several years.

Early in his medical career he decided to major in orthopaedic surgery and practiced his specialty in Boston for thirty years. In addition to his private and hospital practice he found time to serve gratuitously many useful charitable organizations such as the New England Home for Little Wanderers and the Family Welfare Society, as orthopaedic consultant to the former and as chairman of the weekly conferences of the latter. For two years he held a position in the Department of Tuberculosis of the Massachusetts State Department of Public Health in connection with the tuberculin tests for school children.

In 1917 following an epidemic of infantile paralysis, Dr. Low organized the Children's Sunlight Hospital, situated first at Revere Beach and later at Scituate and Dreamwold. He became director of the institution and, through his excellent Board of Trustees, also its chief financier. Until the summer of 1943 this charitable institution has been open from late spring to early autumn bringing health and happiness to countless needy children.

In 1935 Dr. Low suffered his first attack of cerebral embolism. Partially recovering, he continued his important work with the State Department of Public Health for a year and a half. Recurrences of his illness forced him to give up his medical activities completely in 1937, and he and his family moved to "Lowacres," their summer home at Hanover, Massachusetts. His devoted wife writes that the last eight years, during which she has been able tenderly to care for him, have been the happiest years of her life.

It is a sad commentary on our too busy lives that the nobility of character and great public service of many gentle and self-effacing people are often incompletely recognized during their lifetimes. As we look back on Harry Low's life even those of us who loved him and knew him intimately failed to be fully aware of the greatness of spirit and of accomplishment attained by this "Hidden Servant" who so quietly, unselfishly, and successfully planned his life and went about doing only good.

In one of the obituary tributes to the late Dr. Elliott G. Brackett, former Chief of the Orthopaedic Service and close friend and counsellor of Dr. Low, the remark was made that he lived up to Justice Oliver Wendell Holmes's "ideal of conduct" expressed as follows:

"Life is painting a picture, not doing a sum, to hammer out as compact and solid a piece of work as one can, to try to make it first rate and to leave it unadvertised." Harry Low as well as Dr. Brackett fulfilled this high ideal.

Dr. Low is survived by his wife, his son, Lt. Daniel Low, USNR, at present in Africa (offering his services when he was forty years old), his daughter, Carolyn Low, and his sister, Mrs. Harlan P. Kelsey of East Boxford, Massachusetts.

R.B.O.

In this letter to Dr. Richard B. King (*EM* 1927), a pleasant report of the 160th Station Hospital is given by Capt. John R. Graham (*WM* 1936). It will be remembered that in June 1942 the 6th General Hospital supplied fourteen officers to the complement of the 160th, then at Fort Story, Va., and a few weeks later in active service in England.

> The militarization of the HMS sounds formidable. It will give you some idea of how we feel about the relation between individual initiative and the army regulation. . . . We have been developing better medical and surgical rounds and X-ray conferences in our institution ("The Little MGH") and our interest runs fairly high. We think we have a good *professional* staff, and by and large our results have been good. We are located about X miles from London, on an estate—a lovely place. I am now (and for the past 4-5 months have been) in the medical service, as my being on the surgical service prevented asking for a real surgeon (a necessity in this place) to handle acute air casualties.
>
> I run a ward that contains an average of 15 patients. In addition we all have odd jobs. I happen to have collected the choice bits—namely, gas officer, bomb reconnaissance officer, and assistant plans and training officer. When the bombs that are dropped here do not explode, it is my privilege to investigate. So far we have had no raids but we occasionally get an alert and hear a few planes buzzing in the distance.
>
> A much more impressive phenomenon, these days, is the great roar of the RAF as they go over just at dusk with motors laboring under their terrific load of block-busters,—first a small group and then an hour's parade of heavies droning off to Hamburg or Dusseldorf and other ash heaps in Northwestern Germany. And by day we see the ever-increasing squadrons of our beautiful Flying Fortresses circling into a great final formation which finally flies off as straight as a bee to French, Norwegian, or German targets. Six hours later we hear their drone approaching in the distance, and gaze up to count how many came back.
>
> What is the typical Graham day? At 7:00 A.M. Zeller's alarm clock gets me into my slippers with a start. Shower, shave, teeth brush in the general latrine after fighting my way to a much used basin. Breakfast of cereal, canned milk, prunes, dried egg, bacon, toast, jam and coffee. Sign in on duty at 8 o'clock and read the bulletin board—to see if you are officer of the day or an inspector, or have been court-martialed, etc. To the ward and make rounds for an hour or so. Then an X-ray conference like the old pup days at the MGH where we see all the hospital's plates read by Otto Sahler, who does a very good job. (Very interesting and instructive to see surgical as well as medical plates.) Then admit a new patient, perhaps, or finish rounds, make out discharge slips on patients leaving the next day and get them to Ed Thorp, who is our medical chief.
>
> Lunch at 12:15. Roast pork, mashed potato, peas and carrots, gravy, stuffing, applesauce, tea was today's menu, and very good it was. Then a rush to a medical service meeting with Thorp for 15 minutes, collect the mail and go to a class on identification of aircraft, or sometimes give a lecture yourself to men or officers and nurses. (You do a lot of lecturing in the Army.) If there is not a new patient or two in the late P.M., you may be forced back to your billet for a little nap. Or perhaps knock off a little violin practice. (I am now pretty hot on "Fair Harvard" and a touching lonesome modern piece called "once in a while.")
>
> Supper is at 5:30—a small edition of lunch, and after it several things may happen. Zeller and I may peddle on our bikes five miles to play about six sets of hot tennis with some very rugged English Amazons, arriving home about dusk at 10:30 or 11:00, or I may go over to "The Hall" (our manor house) to have my ration of scotch and soda; or Whiting and Ulfelder and I may go for a bike ride to visit friends in neighboring villages, which are very pretty,—or we may just sit around the fireless stove and discuss what we should like to eat, how long it will take the Germans to crack, how much better we could run the Army than the people who do, etc. Chafee (from Providence, ex-HMS), Zeller, Whiting, Suby and Ulfelder and I are great buddies and do about everything together. Ulfelder is a very good surgeon and a most amusing person.
>
> All in all the days go by pretty quickly, and it scarcely seems true that one year ago today we were steaming out of New York into the unknown. So far it has turned out that what you don't know, won't hurt you. Best of luck to you all. Say hello to anyone I know.

Lt. Comdr. Robert N. Ganz (*CM* 1925) has been transferred from the Boston Navy Yard to duty in Newfoundland.

Lt. Comdr. Channing S. Swan (*WS* 1925) sends his new address as c/o Commander South Pacific Forces. He had been assigned to the USN Air Station at Quonset Point, R. I., since going on active duty in March 1942.

Lt. Comdr. Bernard M. Jacobson (*a.p.*) has been assigned to foreign duty. His first station was at the Boston Navy Yard, where he was Senior Medical Officer in charge of the Dispensary. Detached from that service last May, he was for a time at the US Naval Training Station at Great Lakes, Ill. His present assignment is with a 1000-bed hospital to be set up "beyond the seas."

Lt. Benjamin L. Huntington, MC, AUS, (*WM* 1940) is with a Malarial Control Unit in the Pacific area.

In August, Lt. Comdr. Archibald G. Gauld (*ES* 1934) chalked up his fourteenth month as Senior Medical Officer aboard the USS "———". He writes: "We took part in the invasion of Africa and then travelled halfway around the world for six months' service in and out of the South Pacific combat areas."

North Africa: Letters from Home

Major Alfred Kranes

Major Grantley W. Taylor

Major Sylvester B. Kelley

Lt. Comdr. Francis T. Hunter (*WM* 1926), in a note from Base Hospital No. 4, expands a comment made on the packing-case background of a snapshot of his unit:

> The whiskey in the photo is all right, after you get used to it, and makes a passable Manhattan. It tastes like corn with a soupçon of kerosene, but leaves no headache—merely a tremor for several days that prevents one from drinking coffee except through a glass tube. Made in this region of the world, the natives call it squirrel juice.
>
> No news from here except that Howard Sprague left us a few days ago. My best to the crowd, and hope to be back some time soon.

Lt. Comdr. Theodore C. Pratt (*ES* 1929) is still in the South Pacific. He wrote to Dr. Faxon on August 14 from USN Mobile Hospital No. X:

> As for news, I wish I had some that was particularly interesting, but we seem to be in somewhat of a lull at the moment. I am still at this hospital and enjoying it, having been transferred from the 1st Marine Division in April. Here we are, as you probably know, not far from Base Hospital No. X, where the M. G. H. is well represented by Howard Sprague (until recently), Frank Hunter, Hap Kennard, and Charlie Johnson (Eye and Ear). Surgically we are not as excitingly busy back here as on Guadalcanal last fall, but on the other hand it has its compensations obviously, not the least of which are plenty of food, sleep, and a stable well-running hospital.

Lt. Commander Pratt remains, to present knowledge and date, our first and only medalist of this war.

Lt. Comdr. James B. Graeser (*WM* 1929) has been on active service since December 16, 1941. His first duty was at the USN Hospital at Mare Island. In August 1942 he was transferred to become Chief of Medicine at Advance Base Hospital No. 3 in the South Pacific, and served there until April 1943. He is now attached, again as Chief of Medicine, to the USS "———," an emergency evacuation ship. Word is received that he has been exceedingly busy during these last assignments and reports life as "rugged."

On May 11, 1943, promotion from Lieutenant was received by Captain Lester P. K. Yee, MC, AUS, (*EM* 1939, *WS* 1941), of the 105th General Hospital.

Capt. William M. Jefferies, MC, AAF (*EM* 1942) wrote to the War Records on July 10, giving his address as the Squadron of a Flying Group, APO #446, N. Y.:

> Dear Mrs. Means:
>
> This is to notify you of my change of address from the San Antonio Aviation Cadet Center.
>
> After reading the June issue of "The News" which reached me today, I felt you would be interested in knowing that the known total of MGH alumni in India has now been raised to five. I arrived about two weeks ago on a very interesting assignment and am stationed within a reasonable distance of Xth General Hospital Unit, so I hope to be able to visit them soon and make the acquaintance of Majors Freeman, Walker, and Elsom. . . .
>
> Sincerely,
> Bill Jefferies

Numbers in India are growing. Other MGH men have reported from there since Captain Jefferies' note to Mrs. Means.

Borderlands of Psychiatry. By Stanley Cobb, M.D., Bullard Professor of Neuropathology, Harvard Medical School; Psychiatrist in Chief, Massachusetts General Hospital. Harvard University Press, 1943.

The publishers of the Harvard University Monographs in Medicine and Public Health have chosen wisely in selecting this readable volume to be one of their series of publications. The subjects covered, though of wide and general interest, have been neglected by medicine, psychiatry and neurology, and, as the author puts it, "have fallen between three stools."

The first chapter, "Body and Mind," opens with some well-chosen illustrative case reports which point the theme that "every symptom is both functional and organic." The second and third chapters describe man's ascent from lower forms and, through references to comparative anatomy, show in what way man's development has exceeded that of his ancestors. The growth of parts of the brain primarily involved in the language processes is shown to be the most striking change. There follows an excellent discussion of speech problems with special reference to aphasia and stuttering.

There is an illuminating chapter devoted to a discussion of functions of the frontal lobes, in the light of modern knowledge. Consciousness, fits and the anatomical basis of the emotions are each treated in chapters which admirably summarize present-day concepts and the investigations of numerous and diverse workers.

Psychoneurosis is discussed in a chapter which combines much of the best in the literature with the author's own experience in an active clinic at the Massachusetts General Hospital. A final chapter returns to the opening theme of Body and Mind, this time called "Psychosomatics".

Even such a brief listing of subject matter indicates Dr. Cobb's catholicity of interest. Such an enumeration does not, however, do justice to the author's skillful method of dealing with his varied subject matter. His descriptions of conditions, his references to the literature, and the expression of his own original ideas are stated in clear, understandable terms—a happy deviation from the norm of most psychiatric and indeed much medical literature. The reader is not confused by a barrage of unfamiliar terminology and ambiguous phraseology.

The writer's point of view is broad and unprejudiced. From many divergent sources, he has been able to incorporate the wisdom of others with his own original thinking. Not only facts demonstrated in the laboratory, but also the experience and intuition of the poets is included. By means of a nice ability to simplify, Dr. Cobb makes it possible for the reader to comprehend complex concepts; indeed, complexities which may help the callow physician to recognize his own limitations are thus introduced to the reader. An excellent bibliography at each chapter's end presents further sources of information. Many will find this book both agreeable and informative reading.

Edwin M. Cole

WE find that our account of him last month did not bring Captain Gamaliel Bradford up to date. We must here report that he is again on the high seas!

On December 12th last, at Los Angeles, a destroyer bearing his name was launched. Captain Bradford's encounters with Napoleon's privateers, we are told, are already recorded in Naval annals, but we are glad he can go to sea once more—this time as a 21,000 ton destroyer, christened by a great-great-grandaughter.

Major Robert E. Glendy (*r.p.* 1934), who has been at the Station Hospital at Fort Banks, Mass., since entering the service, is now Chief of Medical Service at the 16th General Hospital, Fort Andrews, Mass. Early in August, however, he reported from Washington:

> Am at present attending a course in tropical medicine at the Army Medical School. M. G. H. is well represented at Walter Reed and the Army Medical Center. Aubrey Hampton is doing his usual good job. Tracy Mallory just took off for Texas, August 1, to join the 15th General Laboratory.

As his entry under "Casualties, Dates and Places" the following appears: "Heat prostration, Wash., D. C., continuously during July and August."

Truax Field,
Madison, Wis.
Aug. 25, 1943

Dear "News":

Just to let you know that Lt.-Col. F. D. Adams spent most of last week at our Station Hospital. Needless to say, he was a most welcome visitor.

I am still Chief of Laboratory Service, but find time in addition to run a ward that houses most of the metabolic problems and to be program chairman for our scientific meetings. We have been fortunate in being able to call on members of the faculty of the University of Wisconsin Medical School for some of our programs. Among the speakers have been Dr. E. L. Sevringhaus and Dr. Ovid O. Meyer.

The Air Corps has been very good to us, medically speaking, and we have been permitted to practice medicine in the manner to which we were accustomed in civilian life. Uncle Sam also was good to me and changed my rank to Major on August 4.

Sincerely,
Frederick S. Coombs

Major Coombs (*r.p.* 1937) has been assigned to the Army Air Corps Technical Training School at Madison since his entrance into the Service, as a Captain, in September 1942.

Lt. Col. F. Dennette Adams (*WM* 1918) reports his recent transfer to the 4th Service Command, with headquarters at Atlanta, Ga. This command includes the Southeast States: the Carolinas, Florida, Alabama, Mississippi, Tennessee, and Georgia. He is to be Medical Consultant for this district, as he has been for the 5th Command and recently for the 6th as well. During July and August, under that additional assignment, he inspected all the medical installations of the 6th Command as well as several prisoner-of-war camps. He also had the opportunity of seeing the military installations protecting the Sault St. Marie, and visited other installations in Illinois, Wisconsin, and Michigan. He has now taken up his duties at Atlanta.

As Medical Consultant for that Command, Lt. Colonel Adams replaces Col. Henry M. Thomas, Jr., (*WM* 1917), who has been appointed Consultant in Medicine in the Southwest Pacific. Colonel Thomas recently received this promotion in rank. He had served in the Medical Corps during the first World War, and re-entered the Army in March 1941. At that time he was on the staff of the Johns Hopkins Hospital and associate professor of medicine in the Medical School.

* * *

Although recent news on Major Tracy B. Mallory (*c. P*) is not at hand, these details of his first Army experiences, as reported to Dr. Faxon, will be enjoyed:

> As you may have noted in the papers, I successfully graduated from Carlisle. I also dropped ten pounds—not from physical exertion, which was minimal, so much as from nervous tension and perhaps the constant heat and humidity. We had just one clear, snappy day in six weeks.
>
> It was an amusing experience to become a student again and to find all the old high school and college reactions reappearing just as strongly at 46 as they ever had at 16-20. We had so many facts poured into us that during the last couple of weeks I began to wonder if my brain had not become a supersaturated solution and whether some day one crystal would be added that would precipitate everything else out of solution simultaneously.
>
> The ten pounds has unquestionably produced a more military figure but gave me some moments of mental torture. I was advised on all sides to have my cotton uniforms cut generously to allow for shrinkage. Unfortunately such shrinkage as did occur was all in the longitudinal rather than the transverse diameter. During our final parade, as we were standing at attention, a bug flew up my nose. An uncontrollable involuntary sneeze tensed the muscles of the abdomen, and the pants started to slip! They caught again, however, and the Hospital was not disgraced.

Major Mallory is now with the 15th Medical General Laboratory—and still has everything under control, we trust.

Capt. Howard C. Coggeshall (*WM* 1935) writes to the War Records from the Station Hospital at Camp Carson, Colorado Springs:

> One year, no chance of change. I am one of the few men left here; many have come and gone but I still remain. I have served in several capacities, the principal one is Chief of the Rheumatic Section. In addition to my other duties I am Registrar.
>
> Dr. Means would be interested to know about the epidemic of acute rheumatic fever we had here this year. Since last November we have had 225 cases. I have had charge of these cases, and hope to write a small article later. Other than this, nothing seems to happen.

Dominic W. Cervizzi, employed for eight years in the Out-Patient Pharmacy, left on March 3, 1941, for military service. After preliminary training at Camp Edwards, he was sent to Australia with the 101st Medical Regiment, 26th Division, as a Pharmacist with rating of Sergeant Technician. With that task force he saw service for eight and a half months in New Caledonia, and later was in action on Guadalcanal. After transfer in April 1943 to the 52nd Field Hospital, he is now assigned to the Officers Candidate School at Camp Barkeley, Texas, for four months' training in the Medical Administration Corps.

Sergeant Cervizzi reports that Cyril Fitzgibbons, also employed in the Pharmacy, has seen an equally long service with infantry in the Solomons and is now in the Fiji Islands.

Capt. William E. Eaton, MC, USN, (*D* 1907) has held this rank since February 1937. His post is the U.S. Naval Hospital at Great Lakes, Illinois:

> I have been Commanding Officer of this hospital, planned and developed it to 3300 beds, since the first of June 1939. I am still here. Several Harvard and Massachusetts General men have passed through en route to the War. Dr. Whitham is still here, as Chief of my Orthopedic Service.

Comdr. Roy H. Whitham (*WS* 1926) was called to active duty at Great Lakes on July 28, 1941 and received this rank on August 20, 1942. He writes:

> Although a long way from salt water, this activity is very busy making and repairing sailors. After over two years I am an old-timer here and very busy as Chief of Orthopedic Service.

Capt. John C. Wilcox, MC, AAF (*CM* 1937) was commissioned on October 16, 1942 and went into service on that date. He received special training in epidemiology at the University of North Carolina, and from February to June of this year was stationed at Bozeman, Montana, where he organized cadet training groups and prepared a manual on the Organization of Hospital Units in Colleges. He is now head of the new Convalescent Hospital at the Santa Ana Army Air Base, Calif.

Lt. William L. Holt, MC, USNR (*r.p. N* 1937) reports on medical matters at a Naval Air Station in Puerto Rico.

> Contrary to Army experience, acute appendicitis here outnumbers ruptured intervertebral discs 20 to 1. Tell Dr. Viets that lymphocytic choriomeningitis is as common on this tropical island as skull fractures, and about as common as malaria and far more so than scarlet fever.
>
> Besides directing the medical service here, I see all neurological and psychiatric problems of the Coast Guard, Marines, and Naval personnel in this fairly large area of coral-rimmed crowded Garden of Eden.

Lt. Wayne Hobbs, MC, USNR, (*Asst. in M.* 1941-2) has been in service since December 1942. He was first stationed at USN Hospital at Sampson, N. Y.

> Four months ago I was sent to Trinidad, B. W. I., where I have since been administering to the minor ills of the Navy. Just as I was despairing of ever again getting my teeth into some good tough medical problems, I was detached to the Naval Hospital at Philadelphia—a most welcome change.

Lt. Comdr. William E. Shedden (*ES* 1920) reports to the War Records on a form of his own devising. It reads:

Promotions, etc.—0; Jan. 6, '42 to date.

Casualties, dates and places—Mislaid Pay Account. Last seen in Nicaragua when departing on leave for the States six weeks ago. If it does not turn up soon, I shall have to go to work.

Present Address—Navy Yard, Boston.

Remarks—My oldest son Dick has received the Army Air Medal "for gallantry" in sinking a submarine. He was first pilot of an Army bomber.

Second son Bob has been recommended for the Distinguished Flying Cross for work in the South Pacific. "I don't know why," he writes.

I, as *pater familias*, bask in the reflected glory from these two. A request for sea duty in the Pacific has brought me shore duty on the Atlantic Coast. Therefore, would a request—etc.?

Promoted to 1st Lieutenant, CWS, AUS, in June 1943, Donald J. Emery (*res.fel. D* 1941) gives interesting news from this branch of military service.

After enlistment, basic training, duty as technician, assignment to officers' candidate school, final commission, and temporary duties in widely separated areas, Lieutenant Emery became Post Chemical Officer at the Air Depot Training School at Albuquerque, N. M. From there he reported: "Extensive chemical defense training is accomplished for all units at this base." He is now Group Chemical Officer with the 66th Service Group at Barkesdale Field, La.:

> The Chemical Warfare Service, with only a few officers and men, is doing a great job in training and educating all units of the Army in defense against chemical attack. The American Army won't be caught unprepared if the Axis nations decide to use gas.

Another notation on his War Records blank is optimistic: "Casualties: Not yet."

A note from Capt. John R. McDaniel, MC, AUS (*ES* 1940) is headed "Somewhere in Sicily" and is dated August 17. He is assigned to a regiment of engineers:

> I am in the Amphibious Forces and up to now have been in on two invasions, North Africa on November 8, and Sicily on July 10. On the trip had the pleasure of the company of Lt. Fred Gevalt, another alumnus. During travels in North Africa I visited the M.G.H. unit soon after its arrival there. A few months later saw Lt. Walter Crandell for a brief chat.

Lieutenant Crandell (*r.s.* PH 1941) joined the 9th Evacuation Hospital and reached Africa late in 1942. Further word of him would be welcome.

Early in 1943, Lt. Frederick C. Gevalt, Jr., MC, USNR, (*r.p.* 1943) reported from the Amphibious Forces training at Norfolk, Va. He has now been overseas for some months, and took part in the first invasion of Sicily. He is at present assigned to duty in North Africa.

The following plain statements were not written for publication. THE NEWS is glad, however, to have them brought to its attention and to publish them here as the frank and pertinent reaction of an M.G.H. nurse on unmistakeably active duty, in mind and heart as well as body:

> August 23, 1943
>
> Having just re-read your letter about the nursing situation at home I try to wonder how it feels to get upset about situations like that. I also just read of the race riots in Detroit. Why can't people at home behave with civilized Christian dignity, at least until these men over here get through the ghastly ordeals they are putting up with. Well, the campaign is over in Sicily; more men are dead and wounded, and the Allies have another mob of hungry people on their hands. What a mad thing this war is!
>
> We arrived in Sicily five days after the invasion. Each time we make a move we are deprived of a few more of the comforts of life. This time we slept on the ground for two weeks, ate cold rations from those awful little cans for days, and generally lived with nothing but our toothbrushes. We came over on small landing boats and waded in on a beach. True to my usual custom of gazing around I got lost from the rest of the outfit with another girl (we were the first girls to arrive in these parts) and by the time seven excited M. P.'s on motorcycles got us located we had a following of some few hundred civilians. I guess they thought the Red Cross brassard on our arms meant that Mrs. Roosevelt's mercy ship was in and that free food would soon be distributed.
>
> Things here are deplorable. I don't know whether they are worse off than the Arabs or whether there are just more of them, but I never would have believed I would "get rough" with hungry children to clear a path for myself. It is really dreadful—but what can we do. Their hospitals are in such condition that if we possibly can we operate on the most seriously injured accidents and send them to their homes after a short time. We can't possibly do as much for them as we did in Africa because they come to us in such crowds that we would have no room for soldiers. While we were waiting for our equipment to be unloaded about a dozen of us were sent up to help a medical battalion which had been acting as an evacuation hospital until we got organized. They had been very busy, but by the time we got there about all I could find to do for the war effort was to donate my sunglasses to a sad little 19-year-old soldier from Tennessee whom I found sitting forlorn under a tree with a bad case of measles.
>
> When our own stuff arrived we promptly started toward the front, and really had a lot of work. The roads are awful. The country is just a mass of steep hills and of course the bridges were all blown out. We saw a little air activity in one place, but when the end of the war came we were nearly across the Island—had moved up completely into three different locations in order to be near the wounded and had taken care of a lot of wounded. I am still amazed at the speed with which we get around. We wake up some morning with a couple of hundred patients; noon finds them all evacuated (except a few non-transportables whom we usually leave with a medical battalion company), the whole hospital loaded on trucks, and night may find us somewhere else—set up again and operating like mad as they pour in from the front. We have good equipment and plenty of it but taking down and putting up all these tents is a lot of work—not to mention all the packing.
>
> Sometimes our location is already covered with soldiers on litters. In that case we go around immediately with morphine—blood pressures and give plasmas where we need to, by tieing the bottles to the trees until we get our tents up. That blood plasma is wonderful stuff. It has saved many a life already. Also the sulfa drugs. An infected wound is a rare thing in spite of the conditions under which they are received and the length of time until they are cleaned up.
>
> All this may give you some idea why petty bickering seems so remote. We all work until the patients stop coming in or else until we almost drop, and then grab a bit of sleep and begin again. I think that is what I like most about this kind of nursing—and one does feel as though one is of some importance, especially as the boys are *so* glad to see us. I wouldn't have believed how much they appreciate the sight of an American girl, and they are so perfectly sure they will recover as soon as they hear nurses are in the vicinity. Right now we are set up at a swell beach and have a lot of malaria and sand fly fever cases but little surgery. It is more like station hospitals in the States in that they aren't so sick and we keep them until they can go back to their outfits. I am on night duty, so spend every afternoon in the water. I am as tanned as an Indian and never felt better in my life. All of which goes to show that one can get along without lace curtains and flush toilets.
>
> It is 3 a.m.—time for coffee—I'll break my neck on a tent peg in the blackout yet, I know. Either that or fall in a fox hole!

At his desk in North Africa: Colonel Thomas R. Goethals, MC, AUS. (ES 1917), Commanding the 6th General Hospital—and guarding the colors presented by Base Hospital No. 6.

Word of the 6th General Hospital comes from Colonel Goethals:

> We held our Hospital Day celebration on the 1st, which makes our observance of same 100 per cent covered in two years. We are nothing if not consistent.

This is supplemented by the receipt from Captain Doris Knights, ANC, in charge of the nurses of the unit, of a letter enclosing a menu from the dinner on that occasion. Only lack of space prevents our reprinting it. But definitely it did not come out of "those little cans." It warrants her description:

> It must seem incredible that we could have such a banquet during wartime and in Africa, but our superior Mess Officer and the dietitians did accomplish what was thought impossible.

A letter from Col. Edward D. Churchill (*WS* 1922), recently received by Dr. Faxon, tells of three weeks spent in the Sicilian Campaign and a ten-day trip to the Middle East. The arrival at the North African Theater of Operations Headquarters of Major John D. Stewart (*ES* 1930) and Major Henry K. Beecher (*WS* 1934) is noted, as well as of Major James H. Townsend (*WM* 1923) and Capt. Somers H. Sturgis (*ES* 1933) from the 6th G.H., and Major Fiorindo A. Simeone (*WS* 1936) from the 5th. Likewise, the advancement of Miss Josephine Barbour to a bigger job with the Red Cross.

Colonel Churchill is concerned not only with his present task of getting good surgery under war conditions but is thinking ahead (as usual) as to how best to meet the need of post-war graduate medical education.

From halfway around the world Betty Dumaine (*MGH* 1926) writes of her present mission as an Assistant Club Director of the American Red Cross.

> Sept. 6, 1943
> Somewhere in India
>
> Dear Dr. Faxon:
>
> Here I am after many long long miles of all kinds of travelling and adventure. The censorship is very strict at present, so I can't tell you much except that since landing I've been most fortunate and have been sent to several of our already established Red Cross places. Consequently I've seen a large part of India and gone to a couple of its most distant corners. I had occasion to visit two U. S. Army Hospitals. Very nice they were, and in one I ran across four M.G.H. nurses. Two were on night duty; the others, Alice Yancey [1941], and Gladys Farren [1934], were well, loved their work and seemed very happy. Their location was too beautiful—on a lake surrounded by lovely tropical trees and flowers.
>
> This part of the world is a curious mixture of ancient Arabian Knight days, worn-out and ragged, with modern Yanks and Tommies in war gear, kidding them along in order to get things done. To really see with my own eyes wild peacocks, monkeys, panthers, tiny deer, cranes as large as ostriches and people in rickshaws seems unreal—then you bump into someone from home and know you are really alive.
>
> The Red Cross is doing a good job. I shall have lots to tell when I get back. I can only say thank Heaven for the wonderful sense of humor our American boys have. They are all good sports but homesick, and it's not an easy life. But so far I love it. I miss you all and think of dear old M.G.H. often and wish a thousand times the Sixth General were near.
>
> I shall be in this present tropical but Swiss Alpine-like scene a few weeks more and then go on to two other Red Cross places before I land back at H. Q. Please forgive this note. One never gets a second to write—so many troops who haven't seen a white woman for 15-17 months find an excuse to come to look at one. Already this note has had three interruptions—so I have to write before breakfast or travelling, and that's no good either.

THE NEWS is one year old. This is the thirteenth number, starting a new year. Twenty-two thousand copies have been distributed. The monthly edition, which has fluctuated from 1500 to 2000, has now settled at 1700. Five hundred of these go to men in service, members of the staff, or graduates scattered all over the world. Five hundred more are distributed to the remaining staff, interns, residents, Ladies' Visiting Committee, and others on the home front. One hundred fifty are listed as complimentary or exchange copies; two hundred fifty are sold each month by the General Store and in the Phillips House, Baker Memorial and Out-Patient Department. The remainder just disappear somehow so that each month sees only a small number left on hand for future reference.

Approximately 415 persons are listed as subscribers. Some have even thought it was worth more than the subscription price of $1.00 and have sent in larger checks, for which THE NEWS is sincerely thankful.

Not only is THE NEWS a year old, but if we can believe the letters which are received almost daily, it is successful and appreciated.

In its history the Massachusetts General Hospital has essayed three publications of this type. The first issued thirty-one numbers and was given up soon after the entrance of the United States in World War I. The second began in May 1928 and died of financial starvation during the depression. Undaunted by these experiences, the Trustees decided in September 1942 to establish a publication which should collect and print news relating to the members of the staff and graduates in the Armed Forces, items of interest about Hospital activities, and also serve as a medium for the distribution of official bulletins on policy and procedure. They authorized the employment of an editor and such assistance as was necessary and appropriated the required funds. They stipulated that THE NEWS should be sent free to all staff and graduates in service but that others should be asked to pay $1.00 per year. Financially THE NEWS has cost less than anticipated, thanks to the generous response of the subscribers. It was not expected to make a profit and it has not; that was not the main objective.

And now THE NEWS looks forward to another year of useful service. The dedication that Bill Nye wrote for one of his books seems appropriate as a motto for THE NEWS:

"Go little booklet go
Bearing an honored name,
'Till everywhere that you have went
They're glad that you have came."

N.W.F.

THE NEWS

No. 14 Boston, Mass. November 1943

THE anniversaries of Ether Day now number ninety-seven. Observance of the occasion this year was again informal, but for many reasons it seemed to be especially enjoyed by the more than 400 persons who heard and saw all or part of the exercises in the Brick Corridor.

It was a Saturday, and the hour of eleven o'clock had been selected for the ceremonies. Those who came early (and all their successors to this date), gathered eagerly around the exhibitions of photographs of Hospital members now in military service. This included many of the 6th General Hospital, kindly lent by the wives of members. These were supplemented by the timely arrival of pictures of Colonel Churchill on a camel, Major Simeone on a donkey, and Lieutenant-Commander Hunter, Colonel Bauer, Major Thorndike, and many others in similarly interesting settings.

An important exhibit was a large world map. On this, many colored pins, tiny ships, and flags for units showed the widespread geographical areas in which MGH men, to the number of over 500, are or have been serving. The research for this information in the War Records, and the placing of the pins, a long and formidable task, was planned and accomplished by Mrs. Faxon.

Mementos of Ether Day were exhibited in the case presented to the Hospital by Dr. J. Collins Warren. Among these was a recent acquisition: A copy of the newly issued "Harper's Thirteenth Edition, Improved and Enlarged: Lexicon Medicum; or Medical Dictionary by Robert Hooper, M. D., F. L. S.", autographed and dated "May 3d, 1845, Dr. W. T. G. Morton", and with his pencilled notations under the entry on "Aether". This book was recently presented to Dr. Washburn by Mrs. William J. Morton; he has presented it to the Archives. It has been called to the attention of the Archives that this book, under this date of purchase, is among those listed by Morton in his statement to the Congress as evidence of his early research on anaesthesia.

Dr. Faxon opened the exercises with the following effective statement of the significance of Ether Day:

> "Ninety-seven years ago today an event took place in this hospital that profoundly affected the entire world. On October 16, 1846, Dr. William T. G. Morton successfully administered ether vapor to produce unconsciousness in order that a surgical operation could be performed without pain. It was witnessed by many competent observers who were impressed—and convinced.
>
> "Seldom has a scientific achievement been so spectacularly demonstrated. Galileo looking through his telescope, Leeuwenhoek through his microscope, Roentgen developing his photographic plate were all individual observers of epoch-making developments. But here was demonstrated, publicly and before a large and probably sceptical audience, one of the greatest discoveries of all time. Let us disregard the matter of priority of discovery; this demonstration marked the acceptance of its usefulness. Is there not something beyond mere chance that this, the first anesthetic, still remains the safest and most universal?
>
> "This event has also profoundly influenced this hospital and those who work within it. It is well that we continue to remember it, and annually, by occasions such as this, recall it and use the remembrance to spur us on toward new conquests of disease."

Beside the "desk" from which Dr. Faxon spoke stood an American and a Hospital flag, new and handsome in glistening silk and gilt standard. The Hospital had, until this date, possessed no flags to be used for indoor ceremonies. This fact became known to the Ladies' Visiting Committee in arranging for Ether Day. The new flags were presented to the Hospital on behalf of the Ladies by Mrs. David B. Arnold, Chairman of the Committee, and were formally accepted by Mr. John R. Macomber.

Dr. Faxon then introduced Bishop Sherrill, who had consented to give Hospital listeners a brief account of his recent trip by air to Alaska and the Aleutian Islands. Those who have heard Bishop Sherrill on any occasion will know that his account was both enjoyable and significant. What he said was of special interest at this time, but he spoke extemporaneously and no record is at hand.

While coffee and doughnuts were circulating, Mr. Lown showed colored movies of the 6th General Hospital and those of the recent 6th G. H. picnic. Later, through the courtesy of Mrs. John B. McKittrick, films showing activities of the 6th General at Camp Blanding were shown in the Ether Dome, and the Day closed there with the Ether Film.

The monthly Medical Staff meetings were resumed on October 18. Dr. Maxwell Finland was the speaker; his subject was virus pneumonia.

Dr. Means has sent to the Staff the following announcement of the meeting to be held on November 15:

> We are planning to hear from Dr. George R. Minot, who will give a historical sketch of his ancestor, Dr. James Jackson. At the same time a portrait of Dr. Jackson, which has just been painted by Dr. Fritz Talbot, will be unveiled and placed upon the walls of the Staff Room.

GENERAL newspaper publicity was given on August 1 to the following announcement of the Massachusetts Blue Cross concerning additional benefits for its 553,000 members:

> We, the undersigned 144 hospitals in Massachusetts, are pleased to announce that, due to the remarkable growth and success of the Blue Cross, increased benefits for subscribers become effective with all hospital admissions on and after August 1, 1943.
>
> We are resolved to make the finest type of hospitalization available to all, on a non-profit voluntary basis, and heartily welcome this broadening of the scope of hospital service at no additional cost to subscribers.
>
> Your membership now provides the following services for 30 *days each admission* instead of 21 days each year—plus 50 per cent of the cost for an additional 90 *days each admission* instead of 60 days each year:—
>
> Room (semi-private or ward).
>
> Meals and Special Dietary Service.
>
> General Nursing Service.
>
> Operating Room.
>
> Anaesthesia—when administered by a salaried employee of the hospital.
>
> All Medications including intravenous Solutions.
>
> All Dressings, including Bender bandages, Casts, Crutches, Slings, etc.
>
> All Drugs.
>
> Oxygen, Oxygen Tent or Face Mask and Helium.
>
> All Serums.
>
> All Laboratory Examinations done in the hospital, including Blood Chemistry and Cultures.
>
> Electrocardiograms and Electroencephalograms done in the hospital.

Enrollment in the Cadet Nurse Corps during October proceeded at a rapid pace. Of students now in the School, 379 were eligible. Of these, 301 (or 79+ per cent) have signed membership blanks, thereby pledging themselves to remain in some essential branch of nursing for the duration of the war. The Massachusetts General Hospital may truly say that it now has a small standing army of its own.

An error in the October notice of the Cadet Nurse Corps, relative to the allowances per month for members, is here corrected:

$15—first 9 months
20—10th through 30th months
30—last 6 months

At the October meetings of the Trustees it was voted:

That the official name of Dr. Aub's Laboratory shall be the Medical Laboratory of the Collis P. Huntington Memorial Hospital.

To release Dr. Robert K. Brown from his position as Assistant in Surgery, effective as of November 1, 1943, for service in the Armed Forces.

To accept the resignation of Dr. Benjamin S. Wood from the position of Assistant in Surgery.

Appointments, effective November 1, 1943, were also made:

Dr. Francis D. Moore, as Assistant in Surgery.

Dr. Oscar de Figueiredo Barretto as Intern in Anesthesia.

Dr. Barretto, a graduate of the Medical School at Rio de Janeiro, comes from Sao Paulo, Brazil, where he held an appointment as an assistant in surgery at the University of Sao Paulo and its hospital. Upon his return he will act as chief anesthetist of the surgical clinic and will teach at the University.

Another graduate of the same medical school, Dr. Paul F. Albuquerque, is a resident on the Urology Service. He worked for two years on the Public Health Service in Rio, and came to this hospital as a research fellow under the Rockefeller Foundation.

The General Executive Committee has appointed the following Graduate Assistants:

Dr. Howard Milton Rogers, in Medicine and Pathology.

Dr. John Lewis Langohr, in Surgery.

Dr. R. Ronald Wyman, in Dental Surgery.

Dr. Charles G. Mixter (*WS* 1907) has been appointed a member of the Administrative Board of the Harvard Medical School for the academic year 1943-4, in place of Dr. Henry K. Beecher (*WS* 1934) now on leave.

Dr. Eunice M. Moore, who has been in charge of the Chemistry Laboratory since November 1939, has taken a position in Chicago as research chemist with the Bauer and Black Company—"to produce more and better sutures and adhesive tapes for the MGH."

On September 24, Mr. Wilbour C. Lown, who has been in charge of the Photography Laboratory since December 1930, received his commission as Lieutenant, MC, H-V(S), USNR. He is to report on November 1 at the National Naval Medical Center at Bethesda, Md., and will do medical movies there in the Audio-Visual Section.

Medical and dental personnel in the U.S. Coast Guard are supplied by the U.S. Public Health Service. Dr. George M. Noss, recently appointed a Graduate Assistant in Dentistry, reports to the War Records that he is an Assistant Dental Surgeon (R), assigned to the District Medical Office, 1st Naval District, US Coast Guard.

OFFICIAL NOTICE

In the interest of increasing the efficiency of the Chemistry Laboratory and the accuracy of analyses requested of it, a revision of several procedures is essential. With the present personnel such an introduction of new methods is possible only by reducing the number of analyses requested daily by the Hospital. In order to accomplish the necessary reduction during this period of revision, the following determinations will be performed only when indispensable to the immediate care of the patient and only after consultation with Dr. Butler, the Staff Member in charge of the Chemistry Laboratory:

Cholesterol
Uric Acid
Vitamin C
Albumin—Globulin Ratio
Prothrombin
CO_2
Van den Bergh
Sodium
Acid Phosphatase

The duration of this period of revision and limited service by the Chemistry Laboratory will be shortened by reducing the requests for other types of determinations. It is, therefore, to the best interest of the hospital services to cut temporarily all requests for chemical determinations to the greatest possible extent.

N. W. Faxon, M.D.,
Director

The rotation of teams of staff members and interns on the Surgical Services, begun about a year ago, continues with success. In giving an earlier schedule for these teams, the following comment was quoted from Dr. Arthur W. Allen to explain the purposes for which this arrangement had been made.

"One-year interns are rotating through the private wards for three months of their service under a tutorial system. They are assigned to various teams, in such order that the work is equally distributed. At the end of six weeks the men are shifted to different teams." To this Dr. Allen now adds:

"Adjustments will be necessary after the new 9-months period of internship becomes effective. It is hoped this tutorial phase of the training can be continued with slight modifications."

The present schedule lists team, intern, and staff members as follows:

1. A. B. Watts: Drs. A. W. Allen, R. H. Wallace, G. A. Donaldson, Phillips House Courtesy Staff
2. A. B. Vial: Drs. J. V. Meigs, E. P. Hayden, F. A. Simmons, F. M. Ingersoll
3. T. E. Lilly: Drs. L. S. McKittrick, V. H. Kazanjian, H. K. Sowles, J. W. Spellman, G. S. Speare, Blood Bank
4. W. S. Kerr: Drs. R. H. Sweet, H. C. Marble, C. C. Miller, C. C. Simmons, R. K. Brown
5. A. C. Guyton: Drs. R. H. Smithwick, C. G. Mixter, S. G. Jones, I. T. Nathanson, E. B. Benedict, Obstetrics.
6. R. D. Bush: Drs. R. R. Linton, R. H. Miller, E. L. Young, E. M. Daland, E. Hamlin.

(Dr. Oliver Cope's patients are to be covered by the House Officers assigned to White 12—Infections.)

It is known to most readers of The NEWS that in February 1942 the Vincent Memorial Hospital moved to the Massachusetts General Hospital and its activities were taken over as a Gynaecological Service here, under Dr. Joe V. Meigs (*ES* 1921) as Chief of Service. They also know that the erection of the new building planned for its occupancy must await the time when hospital building again becomes possible. The service is now accommodated in the White Building.

An extract from the 52nd annual report of the Vincent Memorial Hospital comments on its first year of affiliation here.

> To use a modern expression, the Vincent before its affiliation with the Massachusetts General Hospital had reached a definite "ceiling" in its usefulness. Now with every modern facility at its command for diagnosis, treatment and research, with an out-patient department keeping our beds filled, and with the able leadership of our Chief of Staff, we have passed beyond the limitations of any ceiling. With the continued support of the Vincent Club and other friends, we can look forward confidently to a future unlimited in its possibilities for rendering an ever finer hospital service to women.

The General Store was opened in March 1942, under the auspices of the Ladies' Visiting Committee, to provide an opportunity to purchase "small wares" within the Hospital. It took only days, not weeks or months, to show that the Hospital "family" as well as patients and visitors welcomed this opportunity. The Store is well known, and has always been well patronized, but one fact should be called to the attention of its patrons.

All net profits from the Store are used by the Ladies' Visiting Committee (as are all the funds in their control) for the benefit of the patients and of the Hospital. Every purchase helps the Hospital. But many customers may have thought of the Store as a resource only in an emergency. The Hospital will benefit if all the members of its "family" will bear in mind that the Store can meet many of their regular needs. Its counter is small, but its stock is large.

The General Store Committee is confident that all prices charged are no higher than the prevailing charges outside the Hospital. Nothing is added to the cost to the customer because the Store is run in the service of the Hospital. Although the articles sold there are, for the most part, in the low-priced category, its volume of sales produces a gratifying total, so

PLEASE PATRONIZE THE STORE!

* * *

From his assignment at Camp Beale, Calif., Lieutenant F. Thomas Gephart, MC, AUS (*WS* 1941) has written to THE NEWS the following details about his training. To this is added a paragraph from an earlier letter to Dr. Arrowood:

> After leaving the Hospital, I went to Carlisle Barracks for the usual six-weeks course. Russell Baker and a share of the Boston City Hospital unit were in the class that started two weeks ahead of us. Richard Riddell, James Kreisle and I were in the 32nd Class, and Dexter Richards started two weeks later. There were a good many other Harvard Medical School graduates, but I don't believe any others from the General at the time. We finished at Carlisle on August 12, and I proceeded to my present location. I consider myself fortunate to be assigned to one of the Treatment Platoons of the Medical Battalion. We are equipped to do major surgery (if we get into action) and for the present my time is adequately filled learning "the Army way."—
>
> Are things still as busy as ever? I miss the General and everyone connected with it, but the Army certainly has kept me busy and I'm enjoying it a lot. Please give my regards to everyone—and I want to tell you and them how much I appreciate the knowledge I obtained while working with all of you there.—There is nothing G.I. that can be substituted for it!

Allied Force Headquarters
North African Theater Operations, USA
Medical Section
September 26, 1943

Dear Dr. Faxon:—

I have not for a minute regretted entry into the Army, even during low points such as the time our convoy was attacked by submarine(s) one night at dusk; or in the uncertain period when the ship broke down and our convoy disappeared over the horizon and we sat like a duck on a glassy sea waiting to be picked off. Such understandable hazards produce a reaction curiously less acute than finding your bed full of bedbugs—after you have spent a night in it.

Major John Stewart and I have just come back from a field trip with Colonel Churchill and Major Simeone. Simeone claims to have a photograph of Churchill and Stewart and me, all shaving at the same time in front of one 4-inch mirror hanging on the side of the tent. (I think the existence of any such snap-shot is unlikely, since at the hour we shaved there wasn't enough light for even a poor picture.)

We have had some weeks now both at Headquarters and in the Field. As you can guess, an astonishing number of rumors and counter rumors fill both places. I am not concerned about the political ones, for they can all be disregarded. The medical "rumors", usually called "clinical impressions", are more serious: they are misleading and even though you think you pay no attention to them, it is hard to be sure you haven't been influenced to some extent by them. The hard thing is to get facts—a point that Dr. Churchill has emphasized more than once.

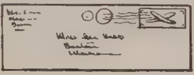
I am very keen to get to the forward areas, for it is there that the problems of shock and resuscitation and anesthesia differ from those encountered in civil life. If I get nothing else from this army experience (certainly not the case), I'll get a lot of material for the chapters on "Resuscitation" and on "Anesthesia in Warfare" in the long book I've been working on for several years.

This letter came from Major Henry K. Beecher (*WS* 1934) at the base named above.

Lt. C. Lawrence Holt, MC, AUS, (*NS* 1938), is in England. He was commissioned in March 1941, and went into active service on September 1, 1942.

> This General Hospital is the original Maine General Hospital Unit, and its medical officers are all from the State of Maine. I am serving with the Neuropsychiatric Service.

Lt. Comdr. Walter E. Garrey is at present assigned to the Naval Hospital in Chelsea. He arrived back in the States last month after two years of ship duty both in the Atlantic and the Pacific. His ship served in two major engagements, on one occasion caring for large numbers of wounded a few hours after one of the night battles. Many of the pins in the map shown on Ether Day were placed with his help, as his ship had been in many ports and he had seen many of the MGH men on duty in the South Pacific, including those in the Harvard unit. For a short time he was on temporary duty with the group under Commander Howard B. Sprague (*EM* 1924). He reports a letter from Lt. Richard E. Alt (*WS* 1933) stating that he is now on duty with a Navy Mobile unit that includes Lt. Comdr. Benjamin Tenney (*WS* 1927), Lt. John T. B. Carmody (*NS* 1934) and Lt. Joseph C. Placak (*WS* 1936).



As "Secretary of the 6th Generalettes", Mrs. James R. Lingley has written to Dr. Faxon, to thank him for the generosity of the Hospital on the occasion of the recent gathering of 6th G. H. wives and children. Mrs. Lingley adds:

Ice Cream and Cake at the Picnic
(John Ulfelder in the Background)

> Last night we had a preview of the movies to be sent to North Africa and also had an opportunity to see the pictures taken by Mr. Lown. They were all excellent and we know how much the men of the 6th will enjoy the complete set which, I understand, the Hospital is sending them as a Christmas gift.
>
> I am enclosing an account of the picnic which may be of interest to you.

Such a pleasant account of such a pleasant occasion interests us all, and it is here quoted in part. The pictures also, were much enjoyed during their exhibition in the Brick Corridor. Two are reproduced here, to suggest the quality of the occasion and Mr. Lown's skill in recording it. The movies destined for North Africa were taken, with the benefit of his advice, by Mrs. Claude E. Welch and Mrs. Alfred Kranes. (The pictures reproduced last month were from the very interesting collection sent home by Major Kranes. We neglected to express our thanks for them in that issue.)

> On October 3, the wives and children of the 6th General Hospital Unit gathered at Ibby Halstead's home for a three-fold purpose: To take movies to be sent to North Africa, make phonograph recordings, and celebrate Charlie Halstead's birthday. Although the sun failed to shine as it should have on such an auspicious occasion, at least we were able to be out-of-doors and, therefore, leave the Halstead home intact on our departure. There were 57 offspring in all. Susan Lawrence, aged 2 months, was the youngest guest; and Sam Rogers at 19 years was entitled to wear the blue ribbon for seniority.
>
> Just before noon a loud squeaking and groaning was heard by all assembled, and into the driveway turned the Ludwig Plymouth, bulging on all sides. The doors flew open and out poured a large part of the Belmont contingent—nine in all. Then from all sides of the car tumbled forth sandwiches, jackets, movie cameras and pickles. Apparently, the OPA had completely sold to Ginger the idea of "Share Your Car".
>
> Men are such rarities in our lives these days, that you can imagine how our eyes sparkled when we saw two—both over 21. One was Major MacNeil, who, with his wife, had very kindly given up one day of his furlough to be with us to explain the colored slides sent over from Africa and answer questions about the 6th, their activities, accommodations *and* behaviour. The other gentleman was Mr. Lown who, together with Mrs. Lown, came out to help us with our photographic difficulties and take some pictures on his own.
>
> From one of the next cars stepped two very snappy Generals—Billy and Dick Frazee. Lest any fond husband become concerned, I add that the Generals Frazee have now reached the ripe age of two years.
>
> When all were finally assembled and the picnic baskets unloaded we went into the back yard, spread our blankets, and attacked the hampers. There were a few casualties, as you can well imagine, such as spilled cocoa and tomatoes drooling from chins. In other words, the freshly-scrubbed children who had arrived but a short time before, now looked disheveled and much more natural.
>
> It really wasn't safe during the picnic hour to go to work too vigorously on any of the food because no sooner were the jaws fixed in a most unbecoming position than you would find yourself confronted by a camera. Had a representative from the Boston Advertiser been present, Phyllis Welch would now be signed on as their star photographer.
>
> No gathering is complete without the rougher element, and this was found when Battling Johnny Welch and Shorty Short were put together in one play yard.

George Adams Leland, Jr. ✓

May 19, 1886 — September 22, 1943

Four of us came together in the dissecting room in 1907, went through Harvard Medical School, then to the MGH on various services, overseas with Base Hospital No. 6, and afterwards produced her history.

It was through these years of association that we were fortunate in knowing Adams. Always an independent thinker, he had his own system of work, which in the medical school was to go to sleep after dinner, and then when every one else was ready to go to bed, he would come to and go to work. He was uncompromisingly thorough, and nothing was ever allowed to interfere with his job. At this time, he and I lived not far apart and often walked out to exams together. We always knew that we couldn't pass—there was so much we didn't know—but we never worried.

Adams and I were on the district together in the days of good old McLean Street, and I shall always remember the scrupulous accuracy of his technique which became so characteristic of his work throughout his life.

After graduation in 1911, he became H.O. on West Surgical at the MGH, and then Resident Surgeon for three years, determined to squeeze every possible bit of knowledge and experience out of it. He never appeared in a hurry, was never impatient, and was always ready to discuss a problem in the greatest detail. His sense of humor often took the form of withering sarcasm, but any one who could give him as good as he got was his friend forever. His devotion to his patients knew no limits, and they responded in kind. He was not only a good surgeon but a sound medical man.

Base Hospital No. 6 settled in Bordeaux and after some early growing pains and reshuffling of personnel, Adams became Company Commander. The men never knew what a good job he did for them, as they didn't understand his sense of humor, but his successor had good reason to recognize and appreciate it. Then when our C. O. and adjutant left us, Adams took over the adjutant's office which he held practically for the duration. It was here that he really shone—and it was he who, with his eternal vigilance and unfailing understanding, held that unit together in the face of shattering influences. Those of us who had a chance to watch him in action during this time, learned to know him as few others ever could. He was at his desk from early morning till late at night. Nothing went on in the hospital that he didn't know about—at least nothing worth reporting. His ability to attend to the most meticulous details was never more apparent. He was untiring and unfailing. There are many tales that could be told of those days, including one of a spittoon which had been removed when he was acting C. O. and later was not where it was expected to be.

Since the war, he had carried on the pattern already set and, in addition to the MGH, did much work at the Collis P. Huntington Hospital, the Palmer Memorial, and in Gloucester. He and Letitia G. Brookins were married on May 6, 1916, and their only child, Letitia Adams, was born on October 31, 1920.

In the last three years of his life, he deliberately chose to carry on normally, rather than as an invalid. To the last moment, he was unsparing of himself.

G. C.

In July 1917, Base Hospital No. 6 landed in Liverpool, made its way to Southampton and boarded the Australian hospital ship "Warilda", in which to cross the Channel. Base Hospital No. 17, the unit of the Harper Hospital in Detroit, crossed on the same ship at the same time. This was a pleasant contact that stands out in the memory of many in both units.

The fact is mentioned now because the Harper Hospital unit of this war, the 17th General Hospital, landed recently in Africa and found itself in the same town as the 6th General Hospital. Their contact there was but temporary, as the 17th General Hospital soon moved on, but word has come that they were happy to find "a friend at port".

The Harper Hospital provides another pleasant comment on an MGH coincidence on this continent. The following paragraphs are quoted from a recent letter to Dr. Plinn F. Morse, Pathologist of that hospital, written to him by Col. William H. Gordon, MC, USA, from Borden General Hospital at Chickasha, Okla., on September 29:

> I am enclosing to you the "Clinico-pathological Conference" sent me from the Eighth Service Command for use at this post. After each case had been presented and discussed, the final diagnosis and discussion made at the Massachusetts General Hospital was presented.
>
> Colonel Walter Bauer, Medical Consultant at the Eighth Service Command, has arranged this further medical education for all the hospitals and physicians in this command. He has secured a grant of money from the Rockefeller Foundation which also pays for visits by professors from different schools to each of the hospitals in this command. Last Friday, Saturday and Sunday, Dr. Chester Jones from Harvard was here.
>
> For your information Colonel Walter Bauer was born in Crystal Falls, Michigan, is a graduate of the University of Michigan Medical School in 1922, and is a professor in the Medical Department of Harvard University.

Major Albert G. Engelbach (*Asst. Dir.* 1929-37), after duty at Fort Devens, Mass., since early in 1943, has assumed his original assignment as Executive Officer of the 7th General Hospital (Boston City Hospital unit) which is now on service at Camp Edwards, Mass.

Major C. Fred Goeringer has been transferred from the Station Hospital at Camp Edwards to the 16th General Hospital at Fort Devens, Mass. In a letter to Dr. Smith-Petersen he writes:

> Luckily, I am to be orthopedic chief, and my C. O. is a regular army man and an orthopedic surgeon, Colonel Charles Davis. For the present I am not doing any surgery, since our program is one of field training. Last week I went through the infiltration course, and have taken a few hikes, the longest of which has been four miles. However, we are to build up to 25 miles. Our organization is well staffed, and we are up to full strength.

Major William M. Huber (*r. D&S* 1937) has been transferred from Fort Jackson, S. C., to the Oliver General Hospital in Augusta, Ga. His promotion was received on May 29.

Lt. Henry N. Russell, Jr., MC, AUS, (*CM* 1939) was commissioned on October 14, 1942, and has been on active service at the Nichols General Hospital, Louisville, Ky., since November 5, 1942.

From his assignment at Westover Field, Mass., Capt. Clarke Staples, MC, AAF, (*Gr. Asst. S* 1941-2) reports to the War Records his promotion and that of Capt. D. Crosby Greene. Captain Staples is at the Station Hospital, "on the surgical service along with Major H. H. Hamilton and Capt. D. Crosby Greene." Major Hamilton (*r.s.* 1933) has been chief of the service there since May 1942.

Capt. Ralph F. Traver, MC, AUS, (*ES* 1930) is chief of the general surgery section and executive officer of the Station Hospital at Camp Adair, Corvallis, Oregon.

In sending his forwarding address, Capt. Richard C. Carter, MC, AUS (*r.p. N* 1942) reveals his promotion to this rank. He is still with the 46th General Hospital.

Similar promotion has been received by Capt. Leon F. Ray, MC, AUS, (*r. D* 1939). He is with the 46th General Hospital, and still at Fort Riley, Kansas.

Lt. Comdr. Parker C. Carson (*r.O* 1940) reports that his promotion dates from May 1, 1943, and that his assignment continues to be Office of Naval Officer Procurement, Boston.

Another promotion, his second, is that of Lt. Comdr. John B. Stanbury, (*WM* 1941) who is now at the Naval Training Station in Newport, R. I.

After a course at the Naval Training School at Harvard University, Lt. George P. Whitelaw (*WS* 1937) was assigned to a unit at Camp Allen, Norfolk, Va.

> This very fine organization has been preparing for bigger events for some time, though when and where we are going is anybody's guess. I am in the Hospital Section. Have had temporary detached duty for one month at Camp Peary, which is a large Sea Bee training camp near Williamsburg.

Capt. Irwin F. Hermann, MC, AAF (*Gr. Asst. M* 1941-2), promoted to this rank on July 23, was assigned during July and August to the School of Aviation Medicine at Randolph Field, Texas, after transfer from Grenier Field, N. H. He is now at the Branch School of Aviation Medicine at Nashville, Tenn.

Lt. Leonard D. Rosenman (*ES* 1943), now of Company A, 30th MT Battalion, writes from Illinois—with "expressions of nostalgia for everything in the MGH."

> Since leaving the Hospital I have been here at Camp Grant. After five weeks of schooling similar to that given at Carlisle Barracks, I have spent my time in a medical training battalion awaiting orders to be sent to a permanent post. Camp Grant is a lovely place and would be very enjoyable but for my precarious day-to-day existence.

Lt. Raymond M. P. Donaghy, MC, AUS, (*NS* 1939) calls the roll at Fort Sam Houston, Texas, where he is on service with the 1st Auxiliary Surgical Group:

> George Emerson is in the Air Corps here, and Charlie Burbank is at Brooks General Hospital; so three of us who were residents at M. G. H. together find ourselves in San Antonio. Other alumni in my group are Major Leslie C. Dodson and Capt. Edwin R. Durno.

...—V...—

Recently Dr. Edward Hamlin (*WS* 1936) received a letter from Lt. Philip Giddings (*WS* 1939). Dr. Hamlin is to be thanked for sharing it. Like other letters from Lieutenant Giddings already printed here, it makes very ready reading.

Sicily,
August 23, 1943

Dear Ed.:

From here and there we all hear the same thing, that we over here are the lucky stiffs. I am sure that envy is only psychological. The theme song here, in addition to "Ain't no promotions this side of the ocean," is "Back to the States." It takes a strong mind to allow the satisfaction of doing the job to compensate for the dust, the heat, the utter impossibility of keeping clean, the lack of all the little refinements including a glass of milk, and the canned food that becomes so monotonous that at times it is impossible to face it. The fellow who said that Army life is made up of weeks of ennui for an hour of excitement was right. And of course the separation from home and family is the worst of all. But somehow we get dulled to all those things, and acquire an amazing ability to occupy days on end with such things as Charlie Chan. Beyond that, if we told the truth, most of us would prefer not to go home until the war is finished; that would be most unsatisfactory. (We'd gladly give a dollar for a coca cola, though).

So much to squelch any statements of envy from you back there. Now I must tell you a bit about our moments of excitement, and how we have capitalized on them so as to make life really quite bearable. After many months of waiting, my first exposure to any professional work in the Army was in a general hospital back in Africa, where I found myself suddenly looking after about 60 patients, all of them 10 days to 3 weeks following injury, and about 25 of them suffering from compound femurs. Of course all of them had been treated elsewhere and were in various stages of infection and healing. By infection I mean superficial suppuration; real sepsis was rare.

Well, we worked about there for awhile, and though it was good to get back to work, we were not quite satisfied, for it seemed that things were backward: we were seeing the end results (or at least something approaching them) without having ever seen the fresh wounds. Once in awhile we heard criticism of the way the cases had been handled—criticisms based on civilian experience, and from people working in a nice, clean building with expert assistance and tiled operating rooms. Subsequently we have come to the definite conclusion that the only qualified critic is the man who has seen the wounds both in the field and later in the rear.

Then came Sicily. We were fortunate enough to hit the beach on the first day of the invasion, and to get our hospital set up soon afterward. The first few days are now only memories, but they still make good evening talk; I am sure I never again want to go through a more exciting or terrifying time; I am also sure that to have experienced it is one of the great prides of my life. But once is enough; sleeping in a foxhole is no fun, especially when fragments of flak are knocking dirt off the walls into your face. Nor is there any real pleasure to receiving the "once over lightly" two or three times a day from the Luftwaffe, in all its forms and with all its refinements.

Our first stand was in a former civilian hospital, which was reasonably satisfactory save for the fleas and mosquitoes that abounded in the place. (Flies are incidental, and life would not be complete without them). There we started getting patients before we were really organized, and for several days had a really hectic time, working almost constantly on every imaginable type of wound. Gowns were a luxury reserved for abdomens and joints. I took out my first appendix clad in O. D. pants, gloves, and mask. We felt cleaner without our shirts, having worn them continually for the better part of a month, and so operated stripped to the waist. So far as we know, the patients' progress in no way reflected the discrepancies, and they did well.

Since those first days, we have done all our work in tents. We find that one of the big ward tents can be made into a good operating room, with the help of a tarpaulin floor, sheets to line the top (they make it cleaner, cooler, and white), and mosquito netting for flyproofing. We usually have two tables—sometimes stretchers on chests—so that if necessary two teams can work at once. On occasion we have had three tables. In one end of the tent is the utilities section, with sterilizer, scrub stand, linen bags, and the like. Here also is space for doing preps. It works out well. You will be interested to know that for scrub basins we use the finest Sicilian enamel edition of bedside pottery. Most satisfactory.

Such delicacies as running water, of course, do not exist, though we do have excellent lighting, and also good X-ray facilities. Instruments are of the first quality, and ample, though now and again a bit of improvising is necessary. We are usually without suction. Plasma is to be had in abundance, and is every bit as valuable as we had hoped it would be. The question as to how much fluid is necessary to cover the plasma a patient receives is decided by the state of the patient's tongue and little else. It seems a perfectly adequate criterion.

We have plenty of all the usual intravenous solutions in the Cutter and Baxter type of package. We always save the flasks for they are most handy in many ways—for storing solutions, and particularly for setting up Wangensteen type of suction and various water seals and what have you for the chest cases. Blood chemistry determinations are usually performed after dark when we are all in bed, utilizing the methods of debate, inductive reasoning, and past experience. Judging again by the patients' progress, the determinations seem to be quite reliable. Once or twice we have had available the luxury of blood-counting apparatus, and did a few white counts on stray appendices. Those were our most refined moments.

With these facilities, what have we done, and what have we learned? The work, of course, has not been steady, but has come in rushes interspersed with periods of quiet. I think the most impressive thing of all has been a growing appreciation of the tremendous amount of punishment that can be sustained by the human body when it is tough and young and in the best physical condition. As contributing factors to this stamina, of course must be added the prompt and excellent medical care and evacuation the soldiers receive. That care, by the way, usually consists of no more than sedation, sulfanilamide dressing, and rest until he gets to the establishment that is to institute definitive treatment. The bad ones get plasma; it all reflects good sense.

We have seen that men with adequate surgical background can do work that might be thought impossible under the circumstances. The lessons of physiology, first learned in the school and later emphasized by the pink slips of the Chem. Lab. in the hospital, have become so ingrained that we can apply some of them now without aid of the lab, and probably do a reasonable job. More than those generalities we are not yet entitled to make, though of course we are full of ideas about the management of certain things. We must first see much more of the fresh trauma, and then have the opportunity to follow them after they leave us.

I am working with Jim Mason, who had 8 years in surgery at Hopkins before he hit the Army, going through the entire residency. He followed Augie Jonas immediately. To be with him is one of the most fortunate and happy associations of my life to date, for neither surgically nor personally could I ask for a better man to be with. He has taught me a great deal already, and adheres rigidly to the principle that we do the cases in rotation as they come, giving us each an equal share in the actual operating although he is the captain of the team. We also have an excellent anesthetist (pentothal and drop ether are the standbys), who has passed his boards and is a good fellow to boot.

But our enlisted men are the prizes—a former steel mill worker, a barkeep, and a mill-hand; all young, all of them educated to the eighth grade. Still they do an amazing job. You should have seen them put us through one case. . . . Two scrubbed, and the third was dirty nurse, and the assistance was as good as you could ask for. The dirty nurse also turned out to be the only one who could fix the generator when the lights went out in the middle of the splenectomy, and I think it took him 43 seconds to get to the yard, do the job, and come back. When the operation was over, one of the boys immediately donated 500 cc of blood to the victim, just to top off with.

This is too long already, but I hope it gives you a picture of what life for me has been like. I know it belies my opening remarks, but there is no getting around it that our work now, when we are busy, is fascinating, even though life is rough. I think of you all often, and have had opportunity to apply, at one time or another, some little lesson from every one. And they have stood me in good stead, you may be sure.

Yours,
PHIL

The following ranks and assignments have been received. Further details will be welcome for publication:

Lt. William B. Ayers, MC, USNR(*WS* 1943): Naval Air Station, Quonset, R. I.

Lt. Henry S. Bennett, MC, USNR, (*res. fel. An.* 1942): 1st Naval District, Boston,

Lt. Donald W. Bickley, MC, AUS, (*WM* 1936): Station Hospital, Camp Howie, Texas.

Lt. Comdr. John D. Camp, MC, USNR (*Asst. R.* 1924-27): U. S. Naval Hospital, Corona, Calif.

Capt. Arnold M. Gordon, MC, AUS (*CM* 1929): 44th Station Hospital, Camp Ord, Calif.

Capt. John S. Hathaway, MC, AAF (*r. EM* 1932): S. A. A. F., Station Hospital, Stuttgart, Ark.

Lt. John Maier, MC, AUS, (*EM* 1940): c/o Surgeon General's Office, Washington.

Lt. Robert E. Mason, MC, AUS (*r. M* 1943): 56th General Hospital, Fort Devens, Mass.

Lt. Comdr. Herbert B. Nelson, MC, USNR, (*a. obst.*): U. S. Naval Hospital, Chelsea.

Lt. John R. Paul, Jr., MC, USNR (*CM* 1943): Navy Yard, Portsmouth, N. H.

Lt. Theodore P. Robie, MC, AUS (*ES* 1943): 35th O. T. B. MFSS, Carlisle Barracks, Pa.

Lt. Arthur A. Wills, Jr., MC, USNR, (*a. Psychi* 1937): American Red Cross Blood Donor Center, 210 Pearl St., Hartford, Conn.

Lt. Comdr. Allen G. Brailey (*EM* 1930) sends this news from the USN Training Station at Sampson, N. Y., to the War Records:

I was transferred to USN Hospital, Chelsea, in the status of patient on May 10, 1943 was given a clean bill of health at last on August 2 and restored to full duty status. I report at Sampson on August 29 for my next tour of duty.

The 6th General Hospital Picnic
Held October 3 at the home of Dr. and Mrs. James A. Halstead

After the more uninteresting part of the luncheon had been eaten, the children formed in line and paraded about Charlie Halstead—and a tremendous birthday cake. There was a *quick* glance at Charlie and a *long* glance at the cake. Their patience was rewarded, however, and cake and ice cream were served to all.

After all were sated with food and innocuous drinks, Mr. Lown requested a gathering of the clan. After much wiggling about, we were presumably in position to be snapped. Then came the time for the recording, with Jim Townsend rendering valuable assistance. As one of the first family groups to stand in front of the mike, I could well understand the rather stereotyped and nonsensical remarks we all made. Perhaps the prize was that of young Ed Bland, who asked at the end of the recording, "Where's Daddy"?

The sidelights of the day were many: Dot Kranes, a haunted look in her eyes, mumbling 3.5 opening, distance 25 feet; Don Rae voluntarily carrying Johnny Welch in the parade; Molly and Tooky Ingalls in mother and daughter dresses; Millie Talbott, well disguised with sumac poisoning; the older children entering so wholeheartedly into the proceedings; Ethel Ulfelder in a never-ending chase after young John; the line in front of the first door on the left; and the hostesses, Ibby Halstead, Pat Frazee, and Barbara Bartlett looking as though they hadn't had a care in the world for the past two weeks.

As a preliminary to his address to the 6th General Hospital on September 1, 1943, Colonel Thomas R. Goethals, its Commanding Officer, made the following remarks:

> This day marks the first anniversary and second celebration of Hospital Day. One year ago we were in training for our mission. Today finds us in our overseas station after more than six months of service in the role for which we were organized. It will be my pleasure to review briefly the record of the year elapsed, to comment upon the work accomplished, to compare our history with that of our ancestor, Base Hospital No. 6, in its initial phases, and to cast a speculative glance toward the future.

Colonel Goethals then drew an interesting comparison between the experiences of the two World War units of the Massachusetts General Hospital: the first arriving at Bordeaux on July 28, 1917 and soon taking over the *Petit Lycée de Talence* just outside the city, to set about adapting and enlarging it to meet military needs; the second acquiring similar school plants at a base in North Africa, upon its arrival there on February 20, 1943, to meet the same requirements.

Both units faced problems so similar that after recounting those of the earlier Base Hospital No. 6 as recorded in Col. F. A. Washburn's words, Colonel Goethals had merely to paraphrase these to describe the experiences of the 6th General Hospital. He then presented facts and figures as to the active operation of the present unit, from the arrival of its first patient on February 27 to their wholesale receipt on March 8, the steady expansion of the Hospital thereafter until the opening of its last ward on April 18, and the later establishment of a Convalescent Camp. We lack space to reprint his address—even as received, with every figure and identification blotted out by the Censor! (None other than the C. O. himself!)

Colonel Goethals completed his account with particulars about the work of the professional and administrative sections of the unit. It will surprise no one that his report for each expressed only commendation, not for the heads of the sections or for individuals but for every section and member of the 6th General Hospital. Nor will anyone doubt that the unit returns a like commendation to its Commanding Officer.

Early in August, Major Champ Lyons (*WS* 1933) sent to Dr. Faxon a report on his assignment at Staten Island:

> The penicillin program here at Halloran General Hospital is going along famously. We have an excellent set-up, and every coöperation and facility have been provided for us. The investigative program is now set up entirely within the confines of the Army, but we have a liaison with the CMR, which is extremely valuable. I believe this is as close a linking of CMR and the military service as has yet been achieved. During the past month the Navy has had two men assigned here on detached service for collaboration in the studies on penicillin. This coöperation between the two services is also heartening.
>
> I have been privileged to see excellent proof that the 6th General Hospital is continuing the traditions of the MGH overseas. Lloyd Hawes, one of our former x-ray residents, is on duty here and is attempting to secure some of the duplicate portions of the records with the signatures of the G.H. #6 men, to send them on to you for the Archives. They would make an interesting record of these times.

Perhaps Lieutenant Hawes (*EM* 1939) will send The News a later report about this.

THE NEWS

No. 15 Boston, Mass. December 1943

"'Twas the night before Christmas,
And all through the ——

The quota assigned to the Massachusetts General Hospital in the United War Fund Drive was $11,650. Not only did the Hospital go over the top for that amount, it did so far ahead of schedule—and is still going! Present contributions make an informal total of $13,325, the highest-ever, and a few small "counties" are not yet included.

Shall we dwell on this gratifying figure for a moment? It speaks for itself, but the fact should also be added that the quota assigned to the Hospital was the same in amount as that of last year—and the persons to meet it were fewer by well over one hundred.

Dr. Houser was chairman of the hospitals section of the Fund, and Dr. Gorrell had charge of the drive within the Massachusetts General Hospital. Every one who worked with them should feel a special pride in the distinguished results. This was the campaign for the 1944 Fund.

The Massachusetts General Hospital wishes to report its second Medalist. A United Press despatch dated "Allied Headquarters, Algiers, October 16," appeared recently in the New York *Times.* It names eight persons who were decorated on that day with the Legion of Merit. Col. Edward D. Churchill, M.C., is one of them. Nothing more of this is known at present, but it is hoped that the citation accompanying the award may in time be drawn from the recipient. This recognition of Colonel Churchill's ability and accomplishment invites no surprise—and most pleasantly suggests a very proper connection between medals and chests!

The recent Medical Staff Meeting is here reported, for the pleasure of all, by an account received from Dr. Means:

> After attending the unveiling of portraits last June, Dr. Fritz B. Talbot, former Chief of our Children's Medical Service, whispered to Dr. Means that he had now reached the stage in his painting where he could do a passable portrait himself. Accordingly the suggestion was made that he paint one for the Medical Staff room. He graciously accepted, and during the summer months from photographs has produced a very beautiful portrait of Dr. James Jackson, the first physician to this hospital.
>
> On November 15, at a regular meeting of the Medical Staff, the portrait was unveiled. The unveiling was done by Dr. George R. Minot [*EM* 1913], a descendant of Dr. Jackson, who also gave a very interesting word portrait of his distinguished ancestor. Dr. Minot among other things mentioned the portrait of Louis, which had hung in the Staff room, and which had been given to the hospital by James Jackson, after having been brought back from France by James Jackson, Jr. Dr. Minot, failing to see the portrait upon the wall, asked what had become of it. Dr. Means informed him that the portait was quite safe; that again owing to Dr. Talbot's kindness in pointing out that it needed restoration, it was in the hands of Miss Katharine Gericke, the daughter of the second Conductor of the Boston Symphony Orchestra, who is an expert in picture restoration, and is rebacking it and putting it in good order.
>
> The meeting closed with thanks from Dr. Means on behalf of the Staff to Dr. Talbot for his beautiful painting, and to Dr. Minot for his interesting remarks.

To supplement the occasion, the Archives Room has put on display letters in Dr. Jackson's hand, photographs of him, and similar memorabilia.

Dr. Herbert B. Howard served as Resident Physician of the Massachusetts General Hospital from 1897 to 1908, and as Administrator of the General Hospital and McLean Hospital from 1904 to 1908. His administration was notable at the General Hospital for the erection of many buildings, including the Domestic Building, the Surgical Amphitheatre, and the Out-Patient Department Building.

More important than the mere physical improvement of the hospital plant was the effect upon this hospital and, in fact, hospitals throughout the United States, of Dr. Howard's conception of hospital administration and the wise application of his dynamic conception. Under his guidance hospital administration passed from a passive to an active direction of hospital affairs.

Through the generosity of his widow, Mrs. Emily P. Howard, the Massachusetts General Hospital has received a copy, by Margaret Fitzhugh Browne, of the portrait of Dr. Howard by John Lavalle, the original of which is in the Peter Bent Brigham Hospital. Simple exercises attended by members of the family and friends and former pupils of Dr. Howard marked the unveiling of this portrait on Friday, November 19, 1943.

A Liberty Ship named in honor of Dr. Harvey Cushing (*SS* 1896) was launched at the St. John's Shipyard in Jacksonville, Florida, on October 31. Names for Liberty Ships are chosen by the Committee on Launchings of the U.S. Maritime Commission, to honor deceased Americans who made distinguished contributions to the progress of our country.

The naming of the U.S. Army Hospital at Framingham, Massachusetts, does similar honor to Dr. Cushing. During the first World War, he organized Base Hospital No. 5, the Harvard Medical School and Peter Bent Brigham Hospital unit. Dr. Cushing held the rank of Colonel, and received the Distinguished Service Medal, was an officer of the Legion of Honor, and Companion of the Bath. The hospital at Framingham is to be called the Cushing General Hospital. The buildings are completed and the hospital is staffed, but no date of formal opening or list of professional personnel has yet been announced.

Like acknowledgment of public service has been given to another Massachusetts General Hospital graduate. On June 16 at Thomasville, Georgia, the Finney General Hospital was formally opened—an 1800-bed hospital of cantonment type. John M. T. Finney was graduated from the West Surgical Service in 1889, being given special leave shortly before his term was up so that he might take up his appointment at Johns Hopkins Hospital. He became one of America's most distinguished surgeons, and the Army honors him as Brigadier General Finney. He was brigade surgeon of the Maryland National Guard from 1898 to 1904, and in 1908 was commissioned in the Medical Reserve Corps. He went abroad in 1917 with Base Hospital No. 18, which he had organized, and while in France was appointed director of surgery for the American Expeditionary Forces. Dr. Finney received many civil honors, was made an officer of the Legion of Honor and of the Belgian Order of the Crown, and was awarded the Distinguished Service Medal for "the organization of surgical teams for the purpose of affording expert surgical aid to the wounded in the immediate vicinity of the battlefield." He was also a founder and first president of the American College of Surgeons.

On the occasion of the British Congress of Ophthalmology, the ETOUSA Society of Ophthalmology came into being. A preliminary meeting was held on May 1 in the London Senior Officers' Mess, and plans for bimonthly meetings and a bimonthly journal were made. The society held its first scientific meeting on July 10 at a general hospital near Oxford. Capt. F. Phinizy Calhoun (*EM* 1938), assigned to that hospital, arranged the program, and the main paper, "War Gas Injuries of the Eyes", was delivered by Lt. Comdr. Edwin B. Dunphy (*c. oph.*). Eight cases were presented, with exhibits of photographs, drawings, and movies—and the nurses gave a dinner-dance.

On November 12, the Board of Trustees made the following promotions:—

Dr. Francis F. Foldes to the position of Assistant in Anesthesia, to begin January 1, 1944;

Dr. Wade Volwiler as Assistant Resident in Medicine, to begin April 1, 1944.

Dr. Foldes, a graduate of the University of Budapest Medical School in 1934, did metabolism research in the Bio-chemical Institute of the University, served a four-year residency, and was later in private practice and did part-time research in applied pharmacology there. His first appointment at the Massachusetts General Hospital was in November 1941 as a research fellow in anesthesia; a year later he was made a resident on that service. During this time he has also taught in the Laboratory Diagnosis course at Harvard Medical School.

The Trustees also appointed the following interns:—

Stephen L. Madey, on the Children's Medical Service beginning January 1, 1944; and Howard B. Hamilton, John D. Crawford, and John C. Coolidge beginning October 1, 1944;

Dr. John H. Tucci, in Anesthesia beginning January 1, 1944;

Dr. Rosemary V. Gorman, as Assistant Resident in Medicine for one year, beginning July 1, 1944.

The General Executive Committee have appointed Dr. Samuel G. Holmes, at present an intern on the Pediatric Service, as Graduate Assistant in Dermatology, to begin January 1, 1944.

Dr. Joe V. Meigs (*ES* 1921) has been appointed surgeon in charge of gynecology at the Palmer Memorial Unit of the New England Deaconess Hospital. Dr. Meigs will also take charge of the gynecologic tumor clinic of the out-patient department at that hospital. In both these positions he succeeds the late Dr. G. Adams Leland, Jr. (*WS* 1912). The clinic had been under the direction of Dr. Leland for many years.

Dr. Fuller Albright (*WM* 1926) has been elected president of the American Society for Clinical Investigation.

Dr. Joseph C. Aub (*EM* 1915) has been made Professor of Research Medicine at the Harvard Medical School. Since 1928 he has held the appointment of Associate Professor of Medicine.

Dr. Francis D. Moore (*WS* 1940) has recently been appointed an Instructor in Surgery at the Harvard Medical School.

At a convocation of the Royal College of Physicians, held on June 10, 1943, Colonel John E. Gordon (*cons. prev. med.*) was made a Fellow of that society. Colonel Gordon's colleagues on this occasion were: "Professor McIntosh of Glasgow University; Montgomery, Chief of the Canadian Army Medical Service; McNeil, President of the Edinburgh College of Physicians." In his letter to Mrs. Gordon, mentioning his election with these companions, he adds: "I ask you to take note of that row of Scotsmen!"

OFFICIAL NOTICES

Attention of members of the Staff and graduates of the Hospital is called to the fact that there is a new outbreak of the old flim-flam game by which men representing themselves as graduates of the Hospital, or collegiate classmates of members of the Staff, call upon friends or relatives in other cities and, after introducing themselves as such, make requests upon the selected victims for advancement of funds for various reasons.

N. W. Faxon, M.D.,
Director

A DENTAL CONFERENCE

will be held on Thursday, December 9, at 8 A.M., in the Out-Patient Department lower amphitheatre. Similar conferences will be held henceforth on alternate Thursdays. The cases to be presented are posted in advance on the bulletin board in the Brick Corridor. M.G.H. members and guests are welcome.

Kurt H. Thoma, D.M.D.,
Chief of Dental Service

The Personnel Department of the Hospital is contributing actively to the war effort—as well as facing the problems created for it by the scarcity of employees outside the war industries. Under arrangement by the Department, a program of Job Relations Training is being given. This instruction is sponsored by the Training Within Industry Service of the War Manpower Commission. A streamlined program for forty of our "supervisors" of employees was opened last week. They are divided into four groups of ten each, who meet for five two-hour periods. "Supervisors" from the Nursing, Social Service, Dietary, Maintenance, and Personnel Departments are attending this first course, and the list of those who wish to be included in later courses now numbers over a hundred. Mrs. Matthew Roberts, formerly a director of the graduate course in Personnel Administration at Radcliffe College, is conducting three of the groups; Mr. John C. Ferguson, whose experience has been in the field of insurance, will conduct the fourth group. The War Manpower Commission offers these programs only to organizations listed as essential industries and activities. The aim of the course is to help establish a body of public opinion about the relationship between supervisor and worker.

✓ Karlton Goodsell Percy, M.D.

On November 15, while returning from a brief hunting trip near his home, Dr. Karlton G. Percy, of Chestnut Hill, Mass., was instantly killed by the accidental discharge of his shotgun as he stumbled over a half-sunken wire.

Dr. Percy was a graduate of Yale, and received the M.D. degree *cum laude* from the Harvard Medical School in 1911. During the following year he served his internship at the Massachusetts General Hospital as a house officer on the East Medical Service. He was a member of the staff of the Children's Hospital for a few years and later served on the services of several suburban hospitals. Dr. Percy had a large practice as a pediatrician, and was well known and highly regarded here.

✓ Edith N. Burleigh

Miss Edith N. Burleigh, one of the first social workers at the Massachusetts General Hospital, died on October 20 at Lebanon, New Hampshire, after a year's illness. Older members of the M.G.H. family will remember her delightful and vivid personality.

Miss Burleigh came to the Hospital in October 1906, as a volunteer in the work with tuberculous patients. In 1907 she was selected by Dr. James J. Putnam to assist him in the Neurology Clinic, and became a pioneer in psychiatric social work. She was also one of the prime movers in the establishment of the Judge Baker Foundation in 1916, and for several years served on its board of managers and on the board of directors of the Massachusetts Society for Mental Hygiene.

After six years' service here, Miss Burleigh became superintendent of probation at the Massachusetts Industrial School for Girls, and later was in charge of social service for the child guidance clinics of the Southern California Society for Mental Hygiene. She retired in 1939.

✓ Edward Field

On October 16, 1943, Mr. Edward Field died at the age of seventy-six years. He had been leather worker in the Orthopaedic Appliance Shop since 1910. In his death the Hospital loses one of its most faithful employees, and his fellow workers the finest of associates. "Ned" Field was known by many orthopaedic surgeons throughout this country, not merely for his ability in fine workmanship but for his coöperation and friendliness.

Mr. Field was a native of Ireland, and learned his trade through apprenticeship with a firm of harness and saddle makers in Cork, well known for their fine products. Some of the pieces he turned out there were made for royalty. After a number of years with that one firm, he decided to come to America. Upon arrival here he worked very briefly for local harness makers, and then came to the Massachusetts General Hospital as leather worker on orthopaedic appliances, to take his place at the bench where he was to work for the next thirty-three years. He brought to his work not only skill but exceptionally fine human qualities.

A series of lectures by Dr. James G. Miller (*EM* 1943) on "The Psychology of Reason and Belief", is announced in the program for this year, the 103d season of the Lowell Institute Lectures. Dr. Miller is now Resident Psychiatrist at the Hospital.

From "Somewhere in India", written on October 25, Dr. Faxon received another letter from our Travelling Trustee. Miss Dumaine reports on her Red Cross assignment there. She comments, also, on the distressing and perplexing condition of the civil population. Her graphic and compassionate description of their plight, as it appears to an eye witness, makes sober reading:

I expect to go on a new assignment as a Field Representative—which means I'll see more of India. I'm the first assigned out to do this, and I am excited and anxious to get started as communications are slow in this country and our distant spots need first-hand information and help. So this is a trial. The mountain area, which I wrote you from last, was closed on account of approaching winter. It's so hot in this city one can hardly believe it can get cold or snowy anywhere in India.

I was thrilled to read Peg Nelson's letter from Sicily. No doubt you've read about the famine and epidemics here. That's all true, too, but for different reasons—and the sentiments that pass through one as you see hundreds of starving, ragged, sick people on the streets, and stumble over the sleeping and the dead, are indescribable. The papers tell us that 50-80 people a day die here from hunger. So far, the cholera and malarial epidemics haven't hit this city as hard as the surrounding towns.

But there is so much behind all this to explain. You wonder there isn't more sickness, after you see the crowds of beggars living on the side walks, the open sewers, and the filth and stench. I don't wholly understand it. Who does! I've travelled a great deal all over this country, and there are miles and miles of fertile deserted fields—no one working the rice paddies. There are city blocks of long lines of bony, naked, starving, hungry people outside the rice-dispensing depots. Some reports say they get rice once a day, but I see them there mostly twice a day.

What makes you unsympathetic (which is hard to believe in yourself) is that the upper and middle-class Indians just pass by these people, or curse and kick them aside. These better-class, more-educated Indians are well fed, and they blame the British. The British say, some of them, that the Indians are hoarding the rice and making prices impossible. There is no doubt about this, and the whole thing is an awful mess.

The papers are making a tremendous howl about it at last, and it seems more is actually being done. Meanwhile there is this angle to the whole picture, which differs from that in any other country. These people who are starving are of such a caste and hold such belief in ancient religious customs that they won't eat anything but rice, tea, and fish. Well, there's a shortage of rice! There are other foods—wheat, corn, etc. Even here from my window I can see the garbage cans full of tidbits. These people dive into the cans, take out only what their religion says they may eat, and throw the rest on the ground. Then a huge flock of vultures descend and eat it up. The cooks try to separate the food, but the poor hungry beggars still seek through the other garbage cans and throw good bits aside.

There is another sight that gets you down. Our office is near the stock exchange of this city. There the white-cloth-draped "Wall Streeters" of this country barter and yell all day; and right outside on the street corner are 50-100 beggars, too weak to stand. Never once have I seen these rich, well-fed, hard-boiled business men give them anything. I even watched some pass by a mother with a dead two-year-old in her arms.

Another time, as we watched from our dormitory window, we saw a little beggar girl, perhaps ten years old, get run over by a trolley car. Her foot was severed to a string of skin. Hundreds of beggars and well-to-do middle-class people just looked on while the child screamed. No one moved to do first aid, or anything; they just chattered in high-pitched, excited voices. One of our girls ran down and tried to find out why they didn't call a doctor or ambulance. She herself put on a tourniquet and took the child to a hospital. The by-standers kept saying, "But who'll pay for it! Who'll pay for it!"

It's hard to believe unless you see it with your own eyes, that people, hundreds and thousands of them, will let themselves and their children starve because their religion says they may not eat other foods. Then, too, as I said before, little is done for them by their own people. Right now there is so much newspaper talk, perhaps something constructive will be done. We girls, and the American and English troops give all the change we have in our purses each day to the worst-looking beggars. But you can't go on foreever that way; and besides, it's not only not the solution to the problem but there are so many professional beggars you can't tell which are in real distress.

In the evening, however, you do know which are hungry—you can never escape the sound of the cry of children and babies who are really hungry. Sometimes (rarely) we can buy a little rice, and have it cooked and sent out to them. (Only those of us who live in apartments can do this.) But once you do it, they sleep outside your window all night and start wailing and chanting for more before daylight. You look out, and all their friends and cousins have joined them. So it goes. The brass hats are all here, as no doubt you see by the paper, and we are all hoping for more action soon. . . .

Though we do not doubt that the war will be a long one, all troops are anxious to get started and get it over with. And *all* officers and men are very homesick in this bewildering part of the world.

Miss Charlotte M. Rantoul, recently in Boston, gave a report on her war activities. Eighteen months ago she left her position here as secretary in the Surgical Service to join the Office of Strategic Services in Washington, as office manager of one of the departments. In February last she joined the Red Cross and, after training in Washington, was sent to the West Coast and eventually to Cairo to work in a Mobile Canteen unit. Comfort supplies were taken out to the men on the desert — music, books, writing paper, matches, soap, and in some districts water. The unit also conducted trips for groups of men on leave to points of interest on the Nile.

Red Cross workers act as liaison between the men on service and their homes. Personal worries relating to their families are relayed through headquarters in Washington to local chapters, and frequently problems are dealt with within five days. Miss Rantoul reports that the Red Cross has stations for enlisted men in sixteen territories throughout the world. In each of these it provides clubs, rest homes, hospital recreation, as well as the mobile canteen service. It coöperates with the Army to solve problems—not of sickness but of recreation and welfare.

Although it took Miss Rantoul two months to reach Cairo, she returned to her home in Maine in 33 hours flying-time. After special assignment here she will leave for a new destination.

This note to Dr. Meigs, here quoted in part, came from Major Langdon Parsons at the time of his transfer from the 6th General Hospital several months ago:—

Suddenly and without warning a note appeared out of the blue, suggesting as only the Army can that it would be nice if I would repair to the 52nd Station Hospital there to become the Chief of the Surgical Services. Well, here I am in a small but active 250-bed hospital. It is like living in the Emergency Ward except that the cases are a touch more violent in nature. My general staff is not exactly extensive for we total five. Seems funny not to have some one to fall back on in making decisions. There is something about the old MGH that was always very comforting: there was always some one to offer advice. I miss my friends at home—and abroad. Reserve a place for me in the annual work-horse parade.

On October 13, Colonel Goethals wrote to Dr. Faxon as to matters medical, military, and mundane with the Unit. His letter is quoted in part:

The 6th General Hospital baseball team, otherwise known as the Yankees, after winning the base section championship and a series against the league leaders in the neighboring base section, went to Algiers some ten days ago and annexed the North African championship in two straight games. The team received a trophy, suitably inscribed, and each player a baseball autographed by the Commanding General. Major Parker and I were granted a short period of detached service to accompany the team and, with Miss Knights, who was in Algiers for a conference of nurses, formed a small but enthusiastic rooting section.

During the trip I saw Churchill, John Stewart and Simeone, while Miss Knights saw Henry Beecher for a short time. We also saw Holland and Sturgis, who have been making the rounds of forward installations to investigate maxillo-facial surgery. Townsend returned to duty last month after about nine weeks' investigation of the problems of convalescence in forward areas. Ludwig is on temporary detached service at a station hospital designated for the reception and treatment of neuropsychiatric cases.

During the past two months promotions have come through for Captains Cantlon, Ellis, Burrage, Harrison, McGahey, Lawrence, and Bailey, and for 1st Lieutenants Cogswell, Hollister, and Smith of the Nursing Service. We learn also that John McKittrick, transferred from us in June, has received his Captaincy.

Housekeeping for the hospital family has become well stabilized. Despite shortages in certain items of supply, we continue in a healthy state of equipment—and our hospital mess is second to none. Gradually the weather has cooled, and the temperature now is about like that of our ideal New England September. Rains are due the end of this month, and necessary plans are being carried out for roof repairs and interior heating to combat both wet and cold.

We remain in a state of more or less suspended animation, but all professional services remain comfortably busy, despite the slack tide of admissions and dispositions. We have accumulated a sizable backlog of patients ready for the Zone of the Interior, for whom the prolonged period of waiting for transportation to the States has been very trying.

That's about the overall picture of our most recent doings. I doubt that any of us are imbued with the War-over-before-Christmas delusion, for there's still a long way to go. However, in one small way we are doing our part along with the rest of the crowd, and are not worried as to the final outcome.

Several announcements of recently published books by M.G.H. authors have appeared in the medical journals:—

Convulsive Seizures: How to Deal with Them. A Manual for Patients, Their Families and Friends. By Tracy J. Putnam, M.D. [*ES* 1923], Professor of Neurology and Neurosurgery, College of Physicians and Surgeons, Columbia University, New York. Pp. 168; 12 illustrations. J. B. Lippincott Company.

This is described as a manual written for the layman, particularly the patient afflicted with epilepsy.

Cancer Control: The What, Whither, How. Edited by Channing C. Simmons, M.D. [*ES* 1900]. Pp. 86. Massachusetts Department of Public Health, Division of Adult Hygiene.

This pamphlet has been prepared by the Department in close collaboration with the Massachusetts Medical Society. A brief description of it reads: "It deals with the cancer control program in the State, with special attention to health education and its possible contribution to the solution of the cancer problem."

Gout. By John H. Talbott, M.D. [*a.p.*], Associate in Medicine, Harvard University. Edited by Henry A. Christian, A.M., M.D., LL.D., Clinical Professor of Medicine, Tufts College Medical School, Boston. Pp. 55; 56 illustrations. Oxford University Press.

This book is a reprint from the Oxford Loose-Leaf Medicine, and retains those page numbers. The comment on it calls it "one of the best monographs on this poorly understood condition." Dr. Talbott, now Lieutenant Colonel Talbott, is readily identified by the usual parenthesis. To state Dr. Christian's association with the M.G.H., a paragraph, withheld to date for lack of space, is issued as it was originally prepared:—

The Henry Asbury Christian Prize of $100, given yearly by the Harvard Medical School to "the man who has displayed diligence and notable scholarship in his studies and offers promise for the future", was awarded this year to Dr. Allan I. Fiedlich, Jr. Dr. Friedlich recently began his service here as a medical house officer. Dr. Christian was associated with the Massachusetts General Hospital during the two academic years of 1906-7. Under the direction of Dr. Reginald H. Fitz, he instituted the system of student clinical clerking on the wards. The Johns Hopkins Hospital already had an analogous system, but this was its first development elsewhere in the United States.

From Dr. Cope's office come further facts about the recognition with which the Cocoanut Grove Monograph is meeting:—

We have heard from the publishers that the Cocoanut Grove Monograph has gone into a second printing. By the end of September 7,150 copies, including the June issue of the Annals of Surgery, have been sold. The Josiah Macy, Jr. Foundation, at the request of the Surgeon General's Office, has distributed more than 1,000 copies to various army posts in this country and abroad, and 100 copies to the Navy. The copies of the second printing forwarded to the Army contain the following acknowledgment: "This special printing is made available with the compliments of the Josiah Macy, Jr. Foundation."

So, the benefit of the Hospital's contribution to the victims of the disaster continues to spread—and early copies of this publication may even become collectors' items. The Archives hopes that its copy will eventually contain the autographs of all the authors, and those now in the Hospital are asked to come in and "sign the book".

Report on the publications of M.G.H. men cannot, it appears, confine itself to the medical field. An article by Captain Henry L. Heyl (r. *NS* 1940) brings the Hospital representation in *belles lettres,* as well. In its November issue, the *Atlantic Monthly* opens its informal department, "Accent on Living", with a sketch by Captain Heyl, entitled "Bottle Hunt in North Africa". The bottles concerned were never encountered on laboratory service—and somewhere Captain Heyl has developed a high degree of literary skill. The experience he relates was met with while on service (slightly auxiliary) with the 6th General Hospital. It is too long to reprint, unfortunately; and no retelling could convey its distinction and bouquet. In short, it is completely delightful—and thoroughly masculine. In fact, a gem. The pleasure of reading it should be achieved by every MGH-er, whatever his taste in essay or fiction—or just bottles.

"Borderlands of Psychiatry," by Dr. Stanley Cobb (*c. Psychi.*) was published two months ago by the Harvard University Press as Number 4 in its series of Harvard University Monographs in Medicine and Public Health. The volume has received an additional honor. The Scientific Book of the Month Club made it their selection for July.

Dr. Henry R. Viets (*n.*) has sent word of a pleasant M.G.H. encounter in San Francisco during the first week of October. A convention had brought together there Dr. O. H. Pearson (*WM* 1941), now medical director of the Pan-American Airways System, and Drs. Gordon E. Jones(*ES* 1939), Leonard P. Eliel (*EM* 1943), Gordon S. Myers (*WM* 1942) and J. Wister Meigs (*r.p.* 1943), all now attached to the Airways. Two other graduates, who are also working with Pan American, were unable to be present. Dr. William Parson (*r.p.* 1943) is assigned to Miami, and Dr. Robert Tucker (*WS* 1939) is in Brazil, after spending a year in Africa on malaria control work.

Major Frank L. Bauer (*P* 1941) has been transferred from Ashford General Hospital at White Sulphur Springs to the 110th Mobile Evacuation Hospital, which will be activated at Camp Swift, Texas. He received this promotion in rank, his second, on September 11.

Major Robert A. Gregory (*r. N* 1933) is serving with the Canadian Army. In September 1939 he was commissioned as Captain, and received promotion in November 1940. He is now assigned to Military Headquarters at St. John, New Brunswick, as Consulting Neuropsychiatrist for Military District No. 7.

The following word concerning Capt. Pembroke N. MacDermot (*CM* 1930) has been sent to the War Records: "Dr. MacDermot enlisted in the Canadian Army Medical Corps in October 1941 and saw service in Canada until February 1943, when he went to England. He is now working at a Canadian General Hospital there."

Major John W. Ewell (*WM* 1937) reported to the War Records from the 28th General Hospital at Camp Rucker, Ala., and discloses the dates of his promotions. He went on active duty on August 1, 1941, was made Captain six months later, and on July 1, 1943, received his present rank.

During October, Commander John H. Fay (*EM* 1929) sent word from the Naval Hospital at Norfolk, Va., of his coming assignment to Mobile Hospital No. 11.

Major Clifford C. Franseen (*WS* 1932) was commissioned on August 13 and reported at Carlisle Barracks, Pa., with later assignment to the Stark General Hospital, Charleston, S. C.

Lt. Douglas A. Farmer, MC, AUS, (*WS* 1943) reported to the War Records from Station Hospital, AAFTTC, in Chicago:

Am in the Air Force and stationed temporarily in Chicago. Recently finished a six-weeks' course (excellent) at the Medical Field Service School in Carlisle. At present I'm working on the Surgical Service, which is a stroke of luck I hadn't anticipated.

Capt. Harold E. Gregory (*CM* 1942), promoted in July, then attended the Army Medical School course in tropical medicine, following transfer from the Lovell General Hospital to the 16th General "along with Major Glendy and others."

Dr. Benjamin H. Alton (*WS* 1916) is a member of the Board of Appeals #2, and of the Procurement and Assignment Committee for Worcester and Worcester County.

In response to its request for information, Lt. Robert F. Watson, MC, USNR (*WM* 1936) recently sent THE NEWS a statement about his work:

Prior to the entry of the U.S. in World War II, a USN Research Unit was organized at the Hospital of the Rockefeller Institute. Since the spring of 1942 the Hospital has been turned over practically entirely to the Navy, and our patients are Naval personnel. My commission as Lieutenant (j.g.) dates from June 19, 1941. I was ordered to report for active duty at the Hospital on March 2, 1942, and was promoted to Lieutenant on June 15, 1942.

Of course I continue to do research, although some of my time is taken up with administrative work as executive officer for the unit. My work is very interesting, and I have been fortunate in being able to continue along the same general line as before the war.

Comdr. Charles I. Johnson (*assoc. s. Oto-Lar.*) recently sent to Dr. Faxon a pleasant report of Who-Is-Where in the South Seas:—

Our original Naval unit so kindly adopted by you all, through the efforts of Howard Sprague and because of six MGM members, has dissolved. F. Hunter and I are newcomers to this beautiful-south-seas-island, Base Hospital No. O, where we have joined Chan Swan. "Hap" Kennard is a few hundred miles above us, and Carmody a few hundred below. Syl McGinn is still in the land of milk and eggs, where we thrived for fourteen months, but he will probably get orders soon. Howard, as you know, is Chief of Medicine on the "S——".

All the boys have done excellent work, but to me Kennard's handling of burn cases has been outstanding and he has saved many boys permanent crippling by his beautiful skin grafting. He has done excellent MGH surgery wherever indicated.

I saw young Charlie Mixter and had a swim with him on October 17 in front of Ben Tenney's hospital. He and Ben are well and doing fine work, the former as air evacuation officer for casualties USA, and the latter as Chief of Surgery USN. On arrival here I was made Boarding Officer, and will board all ships and acquaint them with our facilities etc., and am told that I will be Chief of Surgery here.

If Hollywood or the travel agencies went to work on this island it might run Bali some competition. We are on a hill 500-600 ft. above sea level overlooking a beautiful harbor a few miles away, and in the distance cocoanut groves have the appearance of waving fields of corn. There are lemons, oranges, tangerines, vegetables, horses and cattle, wild boar, wild chickens and pigeons to shoot, and plenty of fishing and swimming and tennis. The work and heat prevent much participation in the sports.

Kindest regards to you and your staff.

In a letter to Dr. Paul D. White about other matters, Comdr. Howard B. Sprague (*EM* 1924) includes a few details about his recent assignment as Chief of Medicine aboard a well-known hospital ship in the South Pacific:

With only 24 hours' notice I was detached from Base Hospital No. 0, given a high travel priority, and sent off to join the USS "————". Our old outfit was beginning to be broken up anyway, and I have always requested hospital ship duty whenever I submitted the required choice of sea duty. Right now everything is quiet, but I am nearer the center of things than I have been recently.

This ship is beautifully equipped, and serves partly as a consultation center. It is probably fair to say that, so far as active overseas duty is concerned, this job is medically the most desirable in the fleet. Of course there are a lot of young fellows who want to be out on the combat ships, but I can pass up that glamour. Here I shall be back again in clinical work, and it is quite a relief.

In returning his blank, Major Charles G. Mixter, Jr. (*WS* 1940) responded also to Mrs. Means's request on behalf of the War Records for news of his service:

Dear Mrs. Means:

I reported for active duty as First Lieutenant at Rome Air Depot, N. Y., on April 23, 1942. In August I went to the School of Aviation Medicine at Randolph Field, Texas, and since graduation there have been rated as a Flight Surgeon. I reported to Bowman Field at Louisville, Ky., on November 1, 1942, and was attached to an Air Evacuation Unit.

After a flight by air I arrived at my present post on an island in the South Pacific on January 3, 1943. In February I was promoted to Captain, and have just received another promotion to Major. Since June I have been Commanding Officer of the —st Medical Air Evacuation Unit, and still hold that position. Have received no citations, decorations or wounds, but have seen a good bit of the activity in this area, having flown over 60,000 miles since I left the U. S. A.

I have been exceedingly lucky in meeting a great many of the MGH graduates, and hardly a month goes by that I don't run into another. The MGH can certainly be proud of its representation in this area, both in quantity and quality.

My work, in a new and hitherto untried field, has been extremely interesting. We have an excellent unit with many fine nurses and doctors, and through their efforts many lives have been saved and many an individual's convalescence and recovery assured. I wish I could give you more details, but censorship out here is strict. One of our doctors and one of our nurses have been decorated for outstanding acts of heroism.

I look forward with eager anticipation for each month's Bulletin, which always gives one quite a boost. It is a grand idea and serves well to keep those of us who are away posted on what is happening at Fruit Street, as well as following the careers of our many friends who are scattered all over the world.

With very best wishes to everyone at the MGH.

Sincerely,
CHARLES G. MIXTER, JR.

The News includes Major Mixter's kind remarks about this journal in order to emphasize once more that what gives interest to our pages is the news that comes from YOU.

Dr. Means transmits portions of a letter from Lt. Oglesby Paul, MC, USNR (*WM* 1943) to give word of another graduate on distant duty:

Two weeks after leaving the MGH I was detailed to duty at the Naval Receiving Station in South Boston, where I stayed for some six weeks leading a life of medical leisure with bankers' hours. Then suddenly, just four days after getting married, I was whisked off by plane to my present berth as medical officer on a destroyer.

We have been active in both the Atlantic and the Pacific, and are now situated in the latter ocean. I am very fortunate in being attached to a fine new ship, with an excellent and congenial group of officers. The medical problems are hardly overwhelming in number, but interesting cases turn up from time to time and there is a constant run of minor ailments to cope with. Additional duties such as decoding, censoring, and being mess treasurer serve to pretty well fill up my time.

There are several Harvard Medical School graduates at our present advanced base, with whom I have thoroughly enjoyed "chewing the rag", but no MGH men have turned up as yet. The News comes regularly and is one of the things I look forward to seeing most in m mail. Many thanks for sending it—it makes a lot of difference.

Lt. Frederick Sanborn, MC, USNR (*NS* 1939) has seen 18 months of foreign duty, first with a mobile unit aboard the "Fulcrum", then at a base in the South Pacific, and now with Advanced Base Hospital No. 3 where, as reported from his home, he finds at least one officer with whom he worked at the General.

Capt. Paul S. Hansen, MC, AUS (*EM* 1939), promoted to that rank on September 5, reports details of pre-war experience and present service:—

After a fellowship under Dr. O. H. Perry Pepper at the University of Pennsylvania Hospital in 1940-1, I started practicing internal medicine in Essex, Conn., a small town not far from New Haven, full of refugees from the hurley-burley of New York and ardent sailing enthusiasts. I also had an appointment as Clinical Instructor in Medicine at Yale. (I approached Yale with something of a chip on my shoulder, but rapidly learned to be most enthusiastic about it. Among the MGH men there were Russ Fuldner and Hugh Tatlock.

In June 1942, I entered the Army as a 1st Lieutenant in the Yale Unit, the 39th General Hospital. We were activated at Camp Edwards. As Russ Fuldner has written you, the MGH was well represented in the Unit. When the order came that broke down the large General Hospitals, fourteen of us were scattered to the winds. One other officer and I were transferred to the 15th Evacuation Hospital.

The 15th stayed at Fort Meade until February, when we sailed for North Africa. From October 18 to December 21, I attended the course in Tropical Medicine at the Army Medical School in Washington. Like most others, I consider it worth having spent a year in the Army for. Dan Ellis was there, and Jack Snyder, about to take off for Russia. Others seen at Walter Reed were Aubrey O. Hampton, F. Dennette Adams, and Lloyd Hawes.

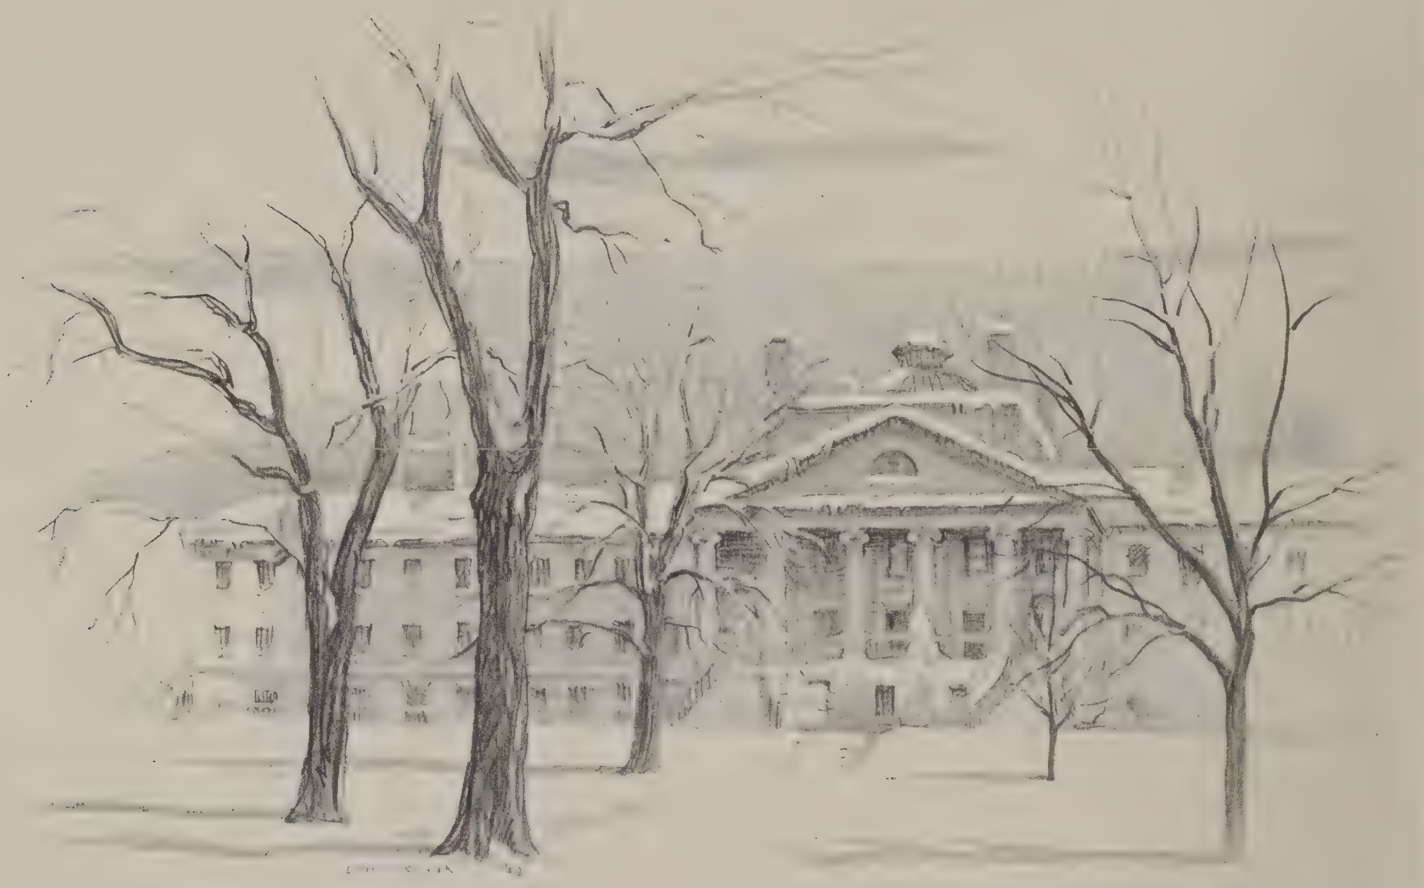
Arriving in North Africa on a cold, rainy, muddy night we spent two months in bivouac on a bare, miserable hillside near Oran. Then we went into action in the Tunisian campaign, setting up successively in Sbeitla, Beja, and Mateur. I think we still have the distinction of being set up closer to the front lines (at Beja, behind Hill 609) than any other 000-bed hospital before or since. (At Sbeitla I was suddenly transformed into a laboratory man and made chief of that service. In Tunisia there was relatively little for me to do, as our patients were almost entirely surgical.)

Four days after the invasion of Sicily we landed there, wading to the beach. Shortly afterward we set up and, with time out for a couple of moves, have been in very active operation ever since.

The big problem has been malaria. We do from 100-150 smears daily. One important subject not covered at the Army Medical School was the technique of thick preparations. So we had to learn the hard way. Fortunately, I am blessed with an excellent staff of enlisted men who have learned rapidly and been willing to work 20 hours out of 24.

I have also learned not to be dogmatic about malaria. Contrary to what the books say, the parasite may be exceedingly difficult to find, even in acute cases. I wonder if the administration of suppressive doses of atabrine contributes to our difficulty, but rather doubt it—for Italian prisoners of war, who have not received atabrine, present the same difficulties. For what it is worth, I pass on the information that examination of the sternal marrow has proved a great disappointment in the detection of parasites. Out of many tries I have found parasites only once in the sternal marrow when I could not find them in the thick smears of peripheral blood taken at the same time. Post-adrenalin smears have been far more helpful. (I don't know how this stacks up with others' experience, for so far as I know I'm the only man east of Norfolk, Va., who is doing sternal punctures. I brought my own needle with me.)

Much of the time here we have had the privilege of having attached to us Major Francis M. Findlay, who is in charge of an auxiliary surgical team. I have also run into Phil Giddings, and just missed Tom Ballantine. And of course Dr. Churchill is Surgical Consultant to the North African Forces and has visited us on several occasions.



This year the Bulfinch Building saw its first snow, on November 15 — and remained as unruffled as when Louis Novak, a Boston artist, made this and other pencil sketches of the Hospital last year.

For its exhibition on "Boston: Its Life and Its People from the Founding to the Great Fire and the New Metropolis, 1630-1872", the Hospital has lent to the Art Museum the Gilbert Stuart portrait of Hon. William Phillips, first president of the Corporation, and a Willard ("banjo") clock, the decoration on which is a painting of the Bulfinch Building. (The Archives files contain the bill for the Phillips portrait, signed by Stuart, and that for its carved frame, which was made by John Doggett, a well-known artificer of the time. The Hospital also has a second Willard clock showing the Bulfinch Building, several other presumably Willard clocks in plainer cases, and a bill signed by Simon Willard.)

The exhibition at the Museum also includes the silver coffee urn commissioned from Paul Revere for presentation to Capt. Gamaliel Bradford, a member of the first Board of Trustees, several medals presented to Dr. William T. G. Morton for his work in anesthesia—and the bronze Indian made by Deacon Drowne, which adorned the Province House when that property was granted in 1811 to the proposed Massachusetts General Hospital.

"Merry Chrismas to all,
And to all ——

...—V...—

In an attempt to hasten that victory, THE NEWS enthusiastically reprinted a sizable error as to the destroyer named for Capt. Gamaliel Bradford, our early trustee. We stand corrected (very gently) by Comdr. Paul E. Spangler (*WS* 1925). He writes:—

> Can't help but poke a little fun in connection with that super 21,000-ton destroyer USS "Bradford". I am sure Hirohito would like to know more about them. Really a lot of fuss to make over one small cipher.

Commander Spangler's Navy experience is not only pre-Pearl-Harbor but includes duty there with a mobile hospital cited for distinguished service during the attack. He writes that this unit, of which he has been chief of surgery and executive officer since its organization, is being decommissioned to become USN Base Hospital No. 8 "on this same rock" and that he hopes to be "in time to share in any excitement that may develop".

Recognition of two former Massachusetts General Hospital authors was given in the Reader's Digest for October. This magazine of the moment began one of its sections with a quotation from the late Dr. George L. Walton and closed it with one from Dr. Oliver Wendell Holmes. Dr. Walton was a member of the Neurology Staff of the Hospital from 1883 to 1907, when that service was known as the Department of Diseases of the Nervous System, and of the Board of Consultation from 1907 to 1941. Dr. Holmes served as Consulting Surgeon from 1840 to 1845, and as Visiting Physician from 1846 to 1849. They were cited as "Doctors who know human nature".

Let the General Store help you solve your Christmas list! Besides its supplies of Christmas cards and wrappings and tags for gifts, there are colognes, stationery, hosiery, pocket-size books, cigarettes, candy, etc. The Store will also fill orders for flowers to be delivered as Christmas gifts, and arrange for subscriptions for magazines—including this one, THE NEWS.

THE NEWS

No. 16 Boston, Mass. January, 1944

Captain Robert S. Hormell (*Or.* 1942), who is attached to the 27th Station Hospital in the South Pacific area, has been officially commended by Major General R. G. Breene, as follows:—

> Your performance of outstanding services has been noted by me, and the following commendation is extended in official recognition thereof:
>
> Commendation: First Lieutenant Robert S. Hormell . . . for outstanding conduct in the performance of duty. By denying himself sleep and rest did, during the month of April, save the life of a colored soldier who was severely burned and injured in a gasoline explosion on April 4, 1943. For the first 48 hours following the accident, this officer remained constantly at the side of the injured soldier, and, as a result of his personal knowledge and skill and through his perseverance when the rest of the staff despaired, this soldier's life was saved.

In Christmas week the Brick Corridor once again filled with beds and patients, and sheltered two Hospital gatherings—the grown-ups to see some "real imported" magic, the children to see Santa Claus (by proxy, House Officer Flynn), and a solid bank of all of us to see their pleasure. The gatherings disappeared, but the beautiful tree remained. Its long silver streamers, vibrant in the well-known draft, made its branches seem to stir and whisper—and it was Christmas once more, for all of us.

O.T.'s greeting card gave the week's full program, although, at the time of printing, the menu had to be made up of "Roast expectations 'n gravy," etc. Besides the usual carol groups there noted, the "M.G.H. Bell Ringers" added a new and much appreciated feature throughout the wards.

The Brick Corridor now shows a few of the photographs of individuals and groups of the 6th General Hospital, taken in North Africa by Mr. Martin Sheridan, of the *Boston Globe,* who a year ago was a patient here following the Cocoanut Grove Disaster. Water colors of the North African scene by Major Grantley W. Taylor, of the Unit, are also on display there. In the Moseley notice case are V-Mail Christmas cards received from there, from Iceland, from elsewhere.

The Massachusetts Eye and Ear Infirmary also displayed the Christmas spirit. The notice board, the entrances to the wards, and the partitions between the children's beds, through the generous expenditure of time and talent by Dr. Burton E. Lovesey (*a.s. Oto-Lar.*) proclaimed the season with angels, snowmen, Santas, and such, done in whitewash and tints.

Harry Fairbanks Hartwell

Dr. Harry F. Hartwell died on December 7, 1943, after a long illness. He graduated from Harvard College with the Class of 1895, and received his M.D. degree *cum laude* from the Harvard Medical School in 1898. During the following year he served as House Officer on the South Surgical Service at the Massachusetts General Hospital. In 1904 he was appointed Assistant Orthopedic Surgeon and in 1911 Assistant Surgical Pathologist, becoming Surgical Pathologist in 1916. He served overseas in 1915 with the first Harvard Unit, under the late Dr. E. H. Nichols.

Upon his retirement in 1938, after twenty-seven years of service in the Laboratory, Dr. Hartwell was appointed to the Board of Consultation.

As a young man in college, Harry Hartwell played enthusiastically on the varsity football squad. He never made the first team, but cheerfully took many a hard knock in developing it. In after life, for many years at the Hospital, he enthusiastically played an important though an inconspicuous part in the teamwork of the organization. His painstaking, thorough, and sound work in the Surgical Laboratory was the basis for many a successful operation. He applauded the success of others; he asked little for himself.

A fine, steadfast character, a loyal son of Harvard and the M.G.H.

L.D.

A second meeting of the Committee on Post-War Medical Service was held in Washington on October 15. Dr. Alan Gregg (*WM* 1917), Director of Medical Sciences in the Rockefeller Foundation, who acted as chairman of the first meeting, was made secretary of the committee and his brief report of its plans was published in the *Journal of the A.M.A.* for October 30. Other M.G.H. members of the committee are: Dr. Roger I. Lee, Chairman (*EM* 1907), Dr. Arthur W. Allen (*WS* 1915), Dr. Fred A. Coller (*WS* 1914), and Dr. Walter W. Palmer (*EM* 1911).

The Physical Therapy Department was reorganized in 1940 under the direction of Dr. Arthur L. Watkins (*r.p.N.* 1938). Since that time it has provided not only for the care of patients but for the training of technicians in this specialty. Dr. Watkins gives the following facts about this service:—

"The Physical Therapy Department at the M.G.H. has been functioning in the treatment of patients and the training of technicians for three years. Students taking the physical therapy courses at Boston University-Sargent College of Physical Education, Bouvé-Boston School of Physical Education, and Harvard Medical School Courses for Graduates all receive clinical training in our department under the supervision of Miss Mary E. Nesbitt, the technical director, and our staff of registered technicians. Didactic lectures are also given by Dr. Watkins and Miss Nesbitt. Graduates of these courses are eligible to take the examinations required by the American Registry of Physical Therapy Technicians.

"Because of the urgent need for physical therapy technicians in the Armed Services, the regular nine-months' training programs have been enlarged and six-months' emergency courses have been added. Graduates of these war courses serve six-months' civilian apprenticeships in Army hospitals before becoming members of the Medical Corps. Entrance requirements are being maintained on the same high level, *i.e.* at least two years of college work including courses in basic sciences. Only graduates from schools approved by the American Medical Association are accepted by the Army—or as members of our staff.

"Under the accelerated program the number of students receiving training here has been increased each year two to three times the usual number. To date the total of graduates numbers 231, including 69 this year. Of these 23 are serving in Army hospitals overseas and 46 in this country. Two are in Naval hospitals, and the remainder are in civilian hospitals—where, also, there is shortage of technicians both for giving treatments and for teaching. Physical therapy aides are commissioned in the Army on the same basis as nurses and wear the same uniforms, with PT on the caduceus instead of N.

"Of our former staff of six technicians, four are in Army hospitals. 1st Lt. Priscilla Chandler, former assistant to Miss Nesbitt, is in charge of the Physical Therapy Department of the 6th General Hospital, Lt. Louise Hills is with the 314th Station Hospital, 1st Lt. Elizabeth Dolan is in charge of the department in the Boston City Hospital unit, the 7th General Hospital. Lt. Jean Platt is attached to the Army Air Force in this country. Fortunately for our civilian patients and for our training courses, we have found replacements for three of our former staff.

"In further increasing the number of student technicians, the greatest handicap is in providing sufficient hospital instruction. Maintaining or enlarging our M.G.H. department is essential to this important training program."

Through an oversight, the votes and appointments made at the Trustees' meeting of October 29 were omitted. It was voted:—

That Dr. Francis D. Moore be given the privilege of an office on the Surgical Floor for the instruction of medical students and, further, that he be granted the privilege of seeing a limited number of private patients;

To grant leave of absence to Mr. Lown, the Hospital Photographer, because of military service, it being understood that he may resume his present position upon completion of such service.

The appointments recorded were:—

Dr. David G. Freiman as Assistant in Pathology, to begin January 1, 1944;
Dr. Norris B. Flanagan as Temporary Assistant in Psychiatry on leave of absence;
Dr. Frank J. Bacevicz as Dental Intern for the term beginning January 1, 1944.

On November 26 and December 10, the Trustees made the three following promotions, and other appointments:—

Dr. Catherine Risk Michie, to Resident in Pathology, for six months beginning January 1, 1944;
Dr. Richard H. Evans, to Assistant Resident in Pathology, January 1, 1944;
Dr. Edward P. Richardson, Jr., to Assistant Resident in Psychiatry, for nine months beginning January 1, 1944;
Dr. George Constantine Cotzias as Medical Intern, January 1, 1944;
Nicholas Cascario, Jr., D.M.D., as Intern on the Dental Service, for the term November 24, 1943 to March 5, 1944; and John Earl Goodman, March 4, 1944;
Reginald Devereux Kernan as Intern in Pathology, October 1, 1944.

On those dates the Trustees voted:—

To accept the resignation of F. George Johnson, D.M.D., as Intern on the Dental Service because of his entering the Armed Forces;

To appoint the following men as Interns in Medicine and Surgery for nine months, beginning October 1, 1944:

Medicine

Ronald C. Bishop
Harry A. Bliss
Edward A. Doisy, Jr.
Joseph A. Elliott, Jr.
Joseph W. Gardella
Richard W. Greene
Richmond Holder
Henry J. Kowalski
Homer D. Peabody, Jr.

Surgery

Benjamin A. Barnes
Francis G. Barnum, Jr.
Wallace C. Bedell
Sheridan S. Evans
George L. Nardi
William R. Richardson
Murray W. Scott, Jr.
Blair V. Thatcher
William C. Wigglesworth
Earle W. Wilkins, Jr.
John C. Wilson, Jr.
Philip D. Wilson, Jr.
Masao Yatsuhashi

Dr. Ellen B. Foot (*An.* 1940) has been made Chief of Anesthesia at the New York Hospital of the Cornell Medical Center. After completing her internship here, Dr. Foot served as resident and then as Visiting Anesthetist at the Presbyterian Hospital in New York.

Dr. Juan J. Salamanca (*An.* 1943) returned to his home in Bogotá, Colombia, in January last, after completing an internship here as an international exchange student. Dr. Salamanca is now Chief of the Anesthesia Department in the Hospital de San Juan de Dios and in the Clinica Quirigica del Dr. Pompilio Martinez. He also lectures on Anesthesia to the medical students, and has directed their work on graduate theses. Dr. Salamanca was appointed to his internship here by Dr. Henry K. Beecher in 1941, when Dr. Beecher was in Bogotá as exchange lecturer to the National University of Colombia.

OFFICIAL NOTICE

Upon recommendation of the Pharmacy Committee, Meperidine Hydrochloride (Demerol) has been placed in the Hospital Pharmacy.

This is a synthetic analgesic and antispasmodic. Adult dose is 50-100 mgm. parenterally every four hours (p.r.n.) to control pain. Oral administration is less satisfactory.

N. W. Faxon, M.D.
Director.

Dr. Allen and the Surgical Department recently had a distinguished visitor. Major General William Henage Ogilvie, on leave after three years as consultant surgeon to the British Forces in the Middle East and on his way home to London, visited the Hospital. Dr. Allen provides some interesting facts about General Ogilvie:—

General Ogilvie is one of the senior surgeons at Guy's Hospital in London, and has written much about abdominal surgery, and is an Honorary Fellow of the American College of Surgeons. He consulted with the American as well as the Canadian Research Council regarding his experiences in Mobile Warfare, and was empowered by the Royal College of Surgeons, of which he is a Councilor, to confer Honorary Fellowships on Dr. Evarts Graham, of St. Louis, and Dr. Robert B. Osgood, of Boston. This ceremony took place at the British Embassy in Washington.

General Ogilvie addressed the Boston Surgical Society on Mobile Warfare, and his address was very enthusiastically received. He was particularly interested in coming to Boston to get firsthand information on our experience with the Cocoanut Grove burns, and to discuss with the investigators of Government contracts under the Office of Scientific Research and Development the results of their study on shock, infections, and burns. Just before leaving for New York, he contributed a pint of blood at the Red Cross Blood Donor Center.

Among the lectures arranged under the auspices of the Wartime Graduate Medical Meetings are included "Amputations, Upper and Lower Extremities", by Dr. James T. Tucker (*Or.* 1930) at Camp Lee, Va., and "Treatment of Fractures (Demonstrated with X-Rays)", by Dr. Custis Lee Hall (*Or.* 1915) at Norfolk Naval Hospital, Portsmouth, Va. Dr. Frederick A. Coller is national consultant for the schedule on trauma to the abdomen.

Dr. Reginald Fitz (*EM* 1911) received the honorary degree of Doctor of Science at the celebration on October 27 of the centennial of the School of Medicine at Western Reserve University.

A special board of officers has been appointed by the Surgeon General to study the clinical treatment of malaria, and beds have been set aside for this study in Army general hospitals. Lt. Col. Francis R. Dieuaide (*p.*), who has been on duty since early in 1943 as a Consultant to the Surgeon General's Office, is one of the six members of this board.

Under Brig. Gen. Larry B. McAfee as its Commanding General, the Bruns General Hospital in Santa Fé, N. M., planned as a 1500-bed general hospital of cantonment type, was formally dedicated on September 22. General McAfee, then holding the rank of Captain, M.C., was the Regular Army officer assigned as Adjutant to Base Hospital No. 6 in 1917. He accompanied the unit overseas. Later, as Colonel, M.C., he became Surgeon, Paris District. Previous to his present assignment he was Executive Officer to Surgeon General McGee. General McAfee is well known to the personnel of Veteran Base Hospital No. 6, and universally liked and respected.

Dr. Joseph Stokes, Jr., (*WM* 1921) has been working with the Medical Committee of the Office of Foreign Relief and Rehabilitation Operations. The work of this committee is to be absorbed by the UNRRA organization of the United Nations. Dr. Stokes, who is also a Consultant to the Surgeon General, will continue his association with the Board of Investigation and Control of Influenza and other Epidemic Diseases in the Army, on its Commissions on Measles and Mumps and on Cross-Infections in Army Hospitals, and is working on certain studies with the Commission on Neurotropic Virus Diseases.

DURING July last, Col. Elliott C. Cutler (*r.s.* 1916) was a member of the British mission that paid a three weeks' visit to Soviet Russia. This mission was sponsored jointly by the British Council and the Medical Research Council, and Colonel Cutler and Lt. Col. Loyal Davis were appointed as its American representatives. The mission visited hospitals in Moscow and at the Vyazma front. Its commendation of Russian methods and personnel has been reported in British and American journals.

During the visit, the two American members, under authorization of the Board of Regents of the American College of Surgeons, conferred honorary fellowships in that society upon two distinguished Russian surgeons: Dr. Nicolai N. Burdenko, Director of the Operative Surgery Institute, Moscow University, and Surgeon General of the Russian Army; and Dr. Sergei S. Yudin, Surgeon in Chief, Surgical Clinic of the Institute Sklifassovski, Central Emergency Hospital, Moscow, and Director of the Surgical Clinic, Postgraduate Medical School.

Before reaching his destination in Russia, Colonel Cutler visited Egypt and parts of the Near East, making the journey by air and covering 15,000 miles. Unfortunately, the extremely interesting letter sent back by him after his trip must be withheld from publication for the present.

War Savings Stamps in denominations of 10c and 25c may be purchased at the Cashier's Office in the White Building. A total of $230 has been sold to date.

gainsaying that we left a steady trail of oil, together with debris washed from the hold.

I worked a good part of the afternoon on redistributing ambulatory casualties to a suite on C deck, and arranging for their evacuation in case of further emergency. The line officers made it very clear that, although the nurses should be sent up first, all healthy troops should come next. If the wounded were slowly sent up first, dozens of able-bodied might be sacrificed at their expense.

So the day passed, with good weather and speed holding, and at five o'clock we sat down to our [holiday] dinner, the menu printed in peace-time elaborateness, and a snow-white tablecloth. No greater contrast than that civilized meal, including all the unessential niceties, and the stark contest that morning. Our appetites were good and our spirits up. Sleep when it came was untroubled, for everyone in our cabin, at least, was dog-tired. The immediate emergency seemed over and the submarine menace obviously less. We had well over 24 hours at good speed to our credit, worth goodness knows how many days in a lifeboat. Likewise the continued seaworthiness of the ship seemed a good omen.

Rounds in the morning found Sturgis absent, looking over a soldier with a straightforward story of appendicitis. As the surgery was nonexistent, a steel-walled room on C deck was scrubbed down with Lysol and equipped with makeshift equipment that had been salvaged. Even the overhead lamps were reclaimed from a scrapheap. An uneventful appendectomy was performed. The moderate swell merely lent a nautical flavor and interfered not a bit. Patient's course was afebrile and uncomplicated.

The following day, Sunday, started auspiciously enough—a grey breezy day with wind from the South so that the great gash in our side was to leeward. Toward noon, however, the wind increased, to 63 m.p.h. I'm told. Though great waves thundered at her (thank goodness) undamaged side, she rode well and never slackened speed. At 3:00 P.M. I went down to the men's mess hall, which was also "church", along with perhaps 500 others. This was announced as a thanksgiving service. "For Those in Peril on the Sea" was among the hymns, and I smiled at the times I'd sung them as music rather than words. Also it was a weird and humbling sight to see such a stable institution as a church undergo a steady roll and feel the whole thing give out from under you as the ship yawed.

I suddenly noticed her list correct itself; in fact, she overshot the vertical before coming back to the upright position. I'm no nautical man but I didn't like that. Even a landlubber could notice her heavy lumbering. With each dip her bow held down a pathologically long while, and the water in her hold all went piling forward, heaped up with an audible rumbling and was slowly thrown back as though with great effort, only to repeat the process in the opposite direction. The constant battering, together with the loose contents of the hold (including a freight elevator that acted like a gigantic pendulum, I was later told) had broken through all but the last bulkhead between sea and engines. We were uninformed throughout of all details pertaining to our plight, but the ship's officers seemed conspicuously busy, with a quiet reserve, and one could figure things out clearly enough. I went on deck to inspect the jagged hole below. There was fresh oil fouling the spume regurgitated from the ship.

It was lugubrious to add up the naked facts and survey the result against the heavy seas, cold gusty wind and somber dirty sky. At supper we stuffed down what would otherwise have been a palatable meal, with smiles slightly forced and a good-natured "old college try" to appear casual, conversational, and confident. Ship and weather were both worse, and it had been necessary to cut our speed.

By the time dinner was over the storm had definitely died away. It had not been much as real storms go, but enough to cripple us severely. One thought a lot, tried not to talk too much. There were many rumors going around. One glance at the map showed the situation for a waterlogged ship, and it was obvious that if port was to the South instead of due East, the hole in our side would be in for one big lambasting when the time came to make the turn. As a last discouraging thought, the ship would undoubtedly settle fairly rapidly. We should be faced with the problem of effectively helping all the occupants of the sick bay to decks and lifeboats, to begin what would for most prove a losing game. With Major Albert, I did what little I could to organize an evacuation procedure under the guise of boat drill.

After supper the ship partially regained her list, no doubt through manipulation of the oil, and rode quite comfortably, if disturbingly deep, at her reduced speed. I played a game of chess with Sturgis in the library and, after making my rounds in the sick bay, turned in early, being more adjusted to the proposition that if things were going badly, at least there was nothing to be done about it. Once one had become more fatalistic, there was one thing he could do more comfortably than at any preceding time during the trip—lie on his bunk, for our slow speed and high water reduced roll to a minimum.

Morning found us in the same mood, controlled if not confident. The weather was still cold and windy and altogether uninviting for bathing. However, there were two thoroughly cheerful items for contemplation: a second destroyer, bringing added protection and tangible evidence of another port; and things had not worsened appreciably during the night, so far as one could make out. Breakfast was palatable, if not relished, and one patiently settled into routine duties. All the casualties were doing as well as could possibly be hoped for. No one was hovering between life and death, so to speak.

"Attention all personnel—it is expected that we will sight land by noon." Most of us were in our stateroom at 12 minutes past 10 (I looked at my watch) when the loudspeaker made this terse announcement. A spontaneous shout went up from a lot of us. We've cheered louder, but not for a closer margin of victory or over a game fought in such dead earnest. In a few minutes the Chaplain's service of thanksgiving was coming out over the loudspeaker and, after a short prayer, the "Hallelujah Chorus" came tumbling joyously over the wires to really meet one's need for expression. "America" sounded as good, and the words meant something new.

The water changed to a welcome light-greeny blue, the sun came out in full between billowy clouds, and long before noon the promontory of St. David's head rose out of the sea. Dry land may look as good again; it can never look better. By mid-afternoon we had been piloted into anchorage, and were prepared promptly to evacuate the sick bay, a duty pleasant for all concerned. This was accomplished by lighters from shore, and while the patients were being transferred to ambulances that would carry them direct to the hospitals, we slipped in along with the sick for a moment's step on dry land.

* * *

Upon request, Lt. Col. Lewis W. Hill (*WM* 1915) sends details about his assignment:—

> I entered the service in August 1942, and for four months was Chief of the Respiratory and Contagious Section at the Station Hospital, Camp Edwards, Mass. In January 1943, I was made Chief of the Medical Service and in March was promoted to Lieutenant Colonel.
>
> We have a big hospital here (2200 beds), and last winter were very busy with contagious and respiratory diseases, having had a large number of cases of measles, scarlet fever, mumps, and over a hundred of meningitis. It looks as though we might now have a quiet winter, as our hospital census at present is much below what it was last year at this time.

In a brief account of his military service, included by Lt. Col. Ralph F. MacDonald (*ES* 1922) in a recent note to Dr. Faxon, he says, "Personally, I haven't much to report." But this is it:—

> It may sound most unusual to you, but I'm commanding a Field Artillery Battalion. After a few months in the desert we moved to the Hawaiian Islands, where we are now and from which we hope to move again westward closer to the Japs. I may apply for transfer some day to the M.C.

Lt. Colonel MacDonald was inducted into the service on March 5, 1941.

Information about his activities to date came from Major Edward A. Gall (*r.p. P.* 1937) late in November, in response to request:—

> Present assignment: Chief of Laboratory Service at the Mayo General Hospital, Galesburg, Ill. Capacity, 1700 plus; structure, brick. No information as to character of patients. We're some 6 to 8 weeks away from them, I should guess.
>
> Last incumbency: Chief of Laboratory at the Station Hospital, Camp McCoy, Wisconsin—also from its inception. Cantonment-type construction; same bed capacity as this one.
>
> Pre-Army life having been concerned strictly with histopathology, I find myself now (as have so many of us) equally well versed in such exotic fields as pipe-laying, steam-fitting, and house-painting, not to speak of the various specialties germane to clinical pathology.
>
> No other Mass. General products evident in the Galesburg horizon at this writing.

Major Clifford C. Franseen (*WS* 1932), after training at Carlisle Barracks, Pa., and assignment to Stark General Hospital in Charleston, S.C., is now with the 161st Station Hospital.

Lt. James E. Conley (*WS* 1941) wrote in October:—

> During the past six months I have been assigned to a Naval hospital in the North Atlantic Area. Most of our patients are from vessels afloat, although naval personnel, Sea Bees and civilian workers at the base increase the scope of our medical service. I have been one of the four surgical men on the staff, and we are sufficiently active to keep well occupied.
>
> Best wishes to the beloved institution. I hope to return some day to roam the M.G.H. corridors again in quest of knowledge, after we get this war business settled.

A recent letter to Dr. Faxon from Major William T. S. Thorndike (*WS* 1919) describes his duties as Registrar of the 6th General Hospital in North Africa:—

> When we first arrived everything was a mad scramble and the volume of work was overwhelming, especially for my office which had previously seen only theoretical action. But gradually things straightened out and by spring were going smoothly.
>
> Besides the Registrar's Office I am in charge of the Receiving and Disposition Office and that of the Detachment of Patients, and have two officers and 25 enlisted men to do the work. We were told that the records and reports required in this theatre would be fewer and more simplified than at home, but local ground rules necessitate many not called for in the Zone of Interior.
>
> Perhaps the most interesting contribution of the Registrar's Office has been the working out of our present procedure on the admission and evacuation of large groups of patients. Due to our location and our position in the chain of evacuation we have handled such groups in numbers to the high hundreds.

A letter from Major Charles G. Mixter, Jr., (*WS* 1940) was printed recently, giving details of his training and stating his present duty as Commanding Officer of a Medical Air Evacuation Unit in the South Pacific. Some paragraphs from a later letter to his father, Dr. Charles G. Mixter (*WS* 1907), through whose permission they are quoted here, give expression to what service with the Armed Forces is and requires:—

> But seriously, Dad, I think one of the best things that could be done for the younger men in the medical profession would be to make them realize that the Army doesn't want specialists. They have enough, in fact are overloaded with them. What the Army wants is a man who can tell and treat hook worm, war neurosis, malaria, urethritis, appendicitis, and war wounds; one who can inspect a mess, see that latrines are properly built, guard against epidemics; one who can be a politician and statesman, a pencil pusher and an officer; and one who can be diplomatic, make quick decisions, and improvise on the spot, doing a good job with often a minimum of things to work with. That, to my mind, is the medical officer who is the most benefit to the Army.
>
> It's all well and good and darned important to have men in well-equipped hospitals far behind the lines, doing reconstructive work, but if there are none of the fellows I've described above farther up they won't get the work to do . . . and more important the Army, too, won't function properly. In all the destruction and real work going on today I don't think there's a man who deserves more credit than the medical department enlisted man, armed only with a red cross (and damned little good it does him out there—frankly, wearing one you're a marked man), who crawls out under fire to put on a tourniquet, splint a leg and give some M3 and then bring his wounded buddy back. These men have the respect of every one out here, but I feel the public at home are lost in the shuffle.
>
> If I were to talk to a bunch of young doctors my age, just going into the Army, those are the things I'd tell them—and above all, as the Navy says, care of the wounded is damned important but the main purpose of the medical department is "to keep as many men at as many guns, as many days of the year as possible". If they realized this, they'd be in for fewer disappointments and be of more use to the Army. Why I should sermonize this way I don't know, but, as you see, I feel very strongly about it.
>
> To turn to another subject, I feel our unit is doing a grand job and justly deserves the commendation it receives from many sources. The nurses in particular are doing a grand job and standing up under the strain well. They have flown many hours, to many places; they have been right in the thick of things and brought out many patients. They have often been in tight places, with motors on fire, cutting out, bad weather, one in a crash landing, and we've not heard one word of complaint other than that they are not doing enough. I am surprised they have stood it so well. The morale of the unit is excellent, and I am a lucky person to have command of such an outfit.

Although he feels that his activities do not merit mention, Dr. Charles G. Mixter, Sr., is Surgical Consultant to the Office of Civilian Defense in Washington and a member of the Surgical Committee of the Medical Division of the National Research Council.

Major Louis A. Goldstein (*r.s.O* 1937) is with the 19th General Hospital. Early in October, from "Somewhere in England", he wrote: "Our unit is now experiencing the rather severe growing pains of getting organized. What a task!"

From Colonel Churchill and others, word has come of Major Francis M. Findlay (*ES* 1924) in the Mediterranean theatre. The return of his War Records blank in August revealed that he was commissioned on September 27, 1942, and went on active service two weeks later. He was then with the 3d Auxiliary Surgical Group: "Am head of a surgical team. Have had nine months overseas and served in forward units in Tunisian and Sicilian campaigns. See M.G.H. people frequently." In September 1943 he wrote from Sicily: "At present attached to an Evacuation Hospital, with duty in this island. Have seen Colonel Churchill frequently on his rounds of North Africa and Sicily. Last time he was hot on the trail of gas bacillus infections."

Lt. Philip P. Thompson, Jr., (*WM* 1942) added a few details when returning his War Records form in September. His assignment then was with the 454th C.A. Battalion, A.A., "after a change of unit and five changes in A.P.O. number."

> I have been over here since May, but as for actual warfare, have seen very little of it except the bombing of a convoy. My unit captured five German aviators shot down in a raid not far away. They needed some medical attention, and I have been running an international clinic, treating British soldiers, French soldiers and sailors, and many Arabs. Like other theatres we see mostly malaria, dysentery, sand-fly fever, and some infectious jaundice.

Capt. Lemuel Bowden (*ES* 1940) has received this promotion in rank. He is with the Signal Aircraft Warning service.

◆

The October issue of the *Harvard Medical Alumni Bulletin* has provided the following information about the 7th General Hospital and its M.G.H. members. This unit was sponsored by the Boston City Hospital on March 15, 1940, and the officer personnel for a 1000-bed hospital was then selected. Although the unit was not activated until June 19, 1943, training for its officers and nursing corps was carried on both at the hospital and through the assignment of individuals to various military camps. After activation, the unit was assigned to Fort Devens and later transferred to Camp Edwards, Mass. Its M.G.H. members include:—

Lt. Col. Laurence B. Ellis (*EM* 1928): Chief of Medical Service
Major Richard P. Stetson (*WM* 1928): Asst. Chief
Major Albert G. Engelbach (*past a.dir.*): Executive Officer
Major Wilfred Bloomberg (*r.p. N* 1931): Chief of Neuro-psychiatry
Capt. Phillip H. Gates (*McLean*): Ward Officer
Lt. Russel L. Baker (*r.p. N* 1943): Ward Officer
Lt. George E. Heels (*a.ob.*): Mess Officer

Major Engelbach is now "somewhere in England," and in a note just received Lieutenant Heels writes:—

> At this time I am allowed to say only that I am somewhere in England. "Al" Engelbach greeted us in his usual style when we arrived.

Although this report to Dr. Faxon from Lt. Col. Augustus Thorndike, (*WS* 1923) Commanding the 105th General Hospital, was written in September, it indicates the traditional business of carrying on, war or no, Boston or Australia:—

> Where we are stationed, work continues in great volume; every one is busy and fully occupied all the time.
>
> It might interest you to know that we hold Clinical Staff Meetings twice a week (one Surgical and one Medical), and that once a month we cover some major topic. For instance, tonight Jim Borland gave a complete review of the important facts from our experience here of dysentery as found in troops at war. Last month George Marks gave a spirited talk, with statistics, on his surgical experiences in the Buna campaign. Occasionally we hold joint staff meetings with staff members from other U.S. Army units as well as United Nation Army units, particularly that one which is providing us with our location.
>
> I can personally assure you that all the members of this organization whom your hospital provided are doing their jobs excellently.

Capt. Irvin J. Cohen (*CM* 1931) finds that not only do these pages help to keep him in touch but that "One encounters an M.G.H. man more often in the C.B.I. Theatre than formerly, and then an exchange of news and ideas is always in order." He adds an interesting comment on his new area of assignment. "After these many long months in India and the heat, China is delightful. Not only is the climate refreshing but the people impress us much more than it is possible to explain."

In a note to Dr. O'Neil, Lt. Comdr. Channing S. Swan (*WS* 1925) reports from the South Pacific:—

> Am now settled as head of urology in a naval base hospital. We have an interesting service, with more major diagnostic and operative urology than I'd dared hope for; so professionally I'm very content at the moment, but I don't like being so far from my family. Others you know here include Frank Hunter, Charlie Johnson, and Ted Pratt.

Major Milton S. Thompson is in charge of the orthopaedic section of the Maine General Hospital Unit, and has been for nearly a year in England. From a day's holiday at the celebrated caves in Cheddar last summer he returned some interesting speculations on an early fracture case:

> The skeleton of the Paleolithic Man is supposed to be 12,000 years old. It was found near the entrance of the cave, which gets flooded every few years—last time in 1933, when the water flowed out the entrance and down the street. How the Prehistoric Man managed to stay there so long I can't figure out.
>
> He is said to have been found with missing finger bones inside his skull. There is a hole in the skull. Also, there is what appears to be a compression fracture of his 12th dorsal and 1st lumbar vertebrae, partly healed. If you can imagine a cave man with such a bad fracture and no treatment and probably paralyzed from the waist down, you could make up quite a story. How was he injured? By a fall while exploring the cave? By battle with a mammoth? (Some rhinoceros bones were found in the same cave.) Who took care of him and fed him during the six months or so it must have taken for that degree of healing, and what did he eat? What did he die of? Not his injury, if he lived six months after it!

•••—V•••—

Nearly a year after the event, the censor has permitted Capt. Theodore H. Ingalls (*r.p. CM* 1938) to send an account of the misadventure by sea that befell four officers and twenty-four nurses of the 6th General Hospital. An account of the first days of their journey to Africa, printed here some months ago as reported by Capt. Daniel J. Holland (*Dn.* 1938), concluded with: "Will carry on from here when I know what we are allowed to write." Later Capt. Somers H. Sturgis (*ES* 1933) added to his War Records blank a sentence that implied much but said only: "In March spent a brief, enjoyable two weeks on a beautiful island." From Capt. Alfred O. Ludwig (*EM* 1932) we have had no word.

Within our restricted space we cannot publish Captain Ingall's letter complete, and have had to take liberties in condensing it. Many incidents, equally graphic and interesting, have been omitted—to be read after "the real armistice, let's say SURRENDER DAY", to quote Captain Ingalls.

Sound asleep at 1:45 A.M., four and a half days out in the middle of the Atlantic. Suddenly a penetrating crash in the lower decks forward, accompanied by a shudder sidewise. This latter reeling, and the realization that the sound came from below rather than the gun decks, rendered me instantaneously wide awake and without the slightest doubt that we had been torpedoed. I shot out of my top berth reflexly. ("Gentlemen, this is no humbug.") Every one hit the floor at nearly the same moment. The lights were working and there proceeded an orderly, disorderly attempt to dress—warmly, as for a sea voyage in an open boat. No very careful buttoning-up, you can be sure.

Sturgis and Ludwig finished first and headed straight for the infirmary; were blocked by soldiers coming up from below, retraced their steps to the rear companionway, by which they descended and then made their way forward. By the time I was dressed both companionways were blocked, so I reached the boat deck via the emergency stairway for our portion of the ship. I found the two nurses assigned to the same boat already there.

There was no panic, no general alarm, no broadcast by the P.A. system—just the silence of a great ship "knocked out" as it were by a huge fist. The only sounds were the hustle of the exodus upwards, and on deck the subdued voices of people trying to take stock of their situation. As there was nothing further to be learned, I made my way below by a stairway from the crew quarters, and got forward to the sick bay. The first thing that met my eyes was a great hole in the ship's side—where the surgery had been. It never occurred to me that this did not represent a torpedo hit, and it was not common knowledge for at least an hour afterward that we had been rammed, not torpedoed.

The transport surgeon, Major Albert, stood outside the dispensary and I placed myself at his disposal. He handed over two wounded men just coming up from below and directed me to get them to the lifeboats. They were clad only in shorts with blankets around their shoulders. One was cut and bruised about the face, groggy from shock and cracked ribs, and needed help and support; the other, merely bruised and confused, just trailed. We stopped at the first open stateroom, to plunder an officer's wardrobe for clothing. The owner came in and accepted the trespass in good part. I led the two up without further delay, left the nurses to finish the clothing job, and went back below to B deck and the infirmary.

Its entrance was blocked by collapsed partitions and debris. Ludwig and Sturgis had already been through and made a search of the forward end, but the Major felt there might still be men trapped aft. I unhooked my flashlight and started to scramble up. The chaplain appeared at this moment and pointed out that light in the hole would offer an ideal target for submarines. The light in the companionway was a far more brilliant illumination, fully visible at sea, and we considered breaking it. As it had been shining at least fifteen minutes, and as they (if it were a sub) had already scored a perfect hit without any lights showing, we concluded one more search was in order, and I went on over.

A great crater extended straight down to the waterline. A twenty-foot strip down the ship's side was completely gone, and one could see well out to sea and hear the waves breaking against the jagged steel below. Here and there running water from broken pipes trickled down through the wreckage. There was no fog and I could see very well except for places from which steam was escaping. Careful flashlight inspection revealed only debris, so I crawled back and jumped down in the companionway just as Ludwig appeared, looking for a splint. I handed him a long strip from the wreckage.

There followed an hour of first aid to the wounded still coming up from the hold, and further attention to others collected in scattered areas throughout the ship, high up and as near the lifeboats as possible. The nurses had bunked seven men next to their quarters. These I had seen in a hurried consultation by Sturgis, the only surgeon in our group. While he went back to the infirmary, I supervised their installation in the crew quarters on the boat deck. This required several details of stretcher bearers, and a great deal of manoeuvering through narrow passageways, up narrow stairways and into narrower rooms. The tiers of bunks were so close that to move a man off a stretcher required thought and planning.

This accomplished, I learned that the library above A deck had been turned into the ship's hospital. It had been decided to centralize the care of all seriously wounded in that one room, which was large enough for this purpose and in satisfactory proximity to the lifeboats. Bookcases were hurriedly cleaned out and filled with medical supplies of all sorts. Impractical furniture was summarily dumped in the companionway. A bridge table, the site two hours before of a boisterous poker game, now covered with a clean sheet became the repository for surgical instruments. An ornate side table was insulated with papers and set up as a sterilizing unit, with an ordinary hot plate as the source of heat. Stretchers made acceptable beds; lounge chairs were available for those who could or had to sit up.

When the ground work was underway, we were able to turn our full attention to the injured. Those most seriously injured were reexamined and treated by Sturgis and Ludwig. I devoted my attention to sorting wheat from chaff, so to speak. It was as imperative to clear the library of anyone who could take adequate care of himself as it was to take care of anyone who couldn't. In all this activity the nurses played an important role, shouldering responsibilities for treatment ordinarily undertaken by a doctor. As the Troop Commander pointed out later, there was no living patient in want of medical attendance at any time during this period.

One soldier with a broken jaw provided quite a poser for Holland. Confronted with the necessity of wiring it together, he discovered that dental wire was among the casualties—much medical equipment was completely demolished in the crash, including the whole surgery, laboratory, and their contents. There was nothing to do but to scramble into the wreckage and break off a suitable length from an installation. This was done, the wire boiled up, and the jaw repaired in due time. The wire was heavy enough to staple a bale of cotton, and I'm told doctors at the hospital to which the patient was finally sent had to work like plumbers to remove it. They probably thought it had been applied by a machinist's mate!

It is unfair to single out any nurses who did more than others; they worked as a team rather than a group of individuals. Among the doctors, Sturgis must be singled out, for he was the most experienced surgeon on board and about the busiest man on the ship, with perhaps the exception of Major Albert who, as the ranking M.O. permanently assigned to the ship, was everywhere an example of coolness and dispassionate planning.

Inside a couple of hours the library was established as a functioning hospital and filled by all patients in need of hospitalization, including those who had caused us so much labor and trouble in getting them into the crew quarters on the boat deck.

The whole business had its tragic, its interesting, and its humorous sides. It was tragic for the few who were killed outright. Of the eight patients in one of my wards, none was seriously injured. The sickest, with influenza, got off with a face that looked as though a cat had tried to exercise its claws on it. He had to spend the rest of that night and the next on deck. I finally tracked him down and got him into protected quarters, but he never would have tried to get any special consideration for himself, though he still had rales in his chest and must have been plenty miserable. That's the way those boys were, stoical, uncomplaining and just plain brave. By and large, one was deeply impressed by the orderliness, discipline, and individual resourcefulness of men and officers throughout the ship. I know of no instance of cowardice, panic, or desertion of duty.

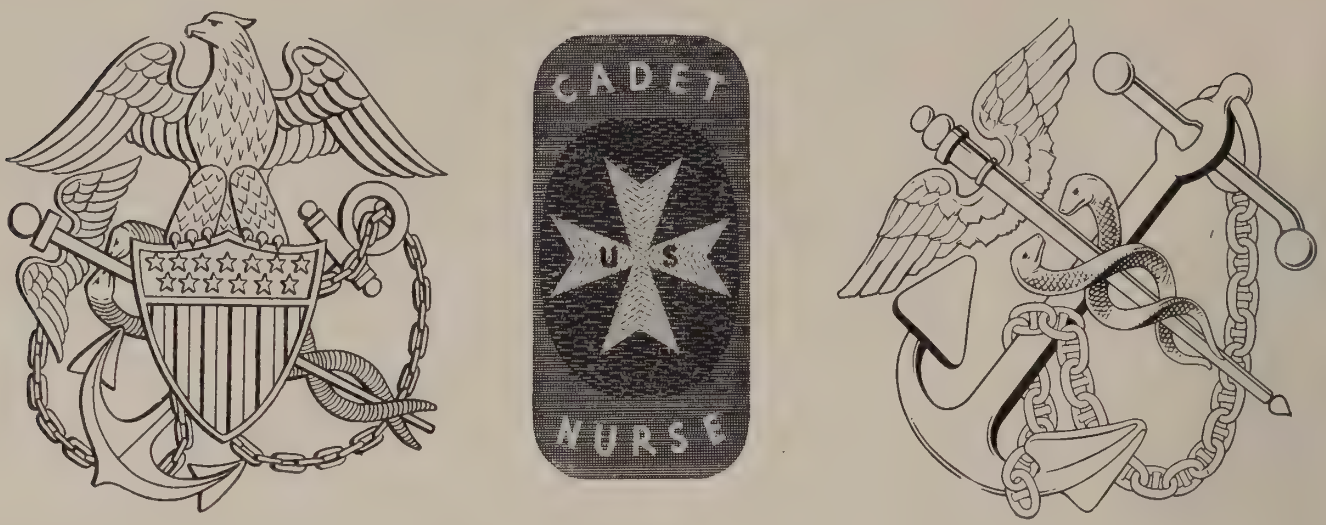
As for the ship itself, for perhaps ten minutes after the accident it held its course with the convoy. Then those on deck saw the other ships vanish in the night while the order was given to slow the engines and shift the oil enough to give a 5° list and bring the bottom of the jagged hole slightly above the waterline. The engines were intact. Here we were, then, on the broad Atlantic almost half way between the two continents, crippled but not mortally wounded, as yet anyway. Those on deck describe how the North Star slowly revolved from port to starboard after it was decided to turn about and head West, a judgment later proved excellent as we were barely seaworthy enough to crawl to the nearest port.

Until 6:00 A.M., we were busy in the library giving medications and canned plasma. We tightened old bandages, applied new ones, and finally just gave over and let everybody get a few hours of much needed rest.

In retrospect, it would have helped, if it had been planned that, in event of emergency, a hospital be established at once high up near the lifeboats (in this case, the library) to relieve the already crowded sick bay. Also, I for one missed the authoritative and informing voice of the loud speaker, although I'm told it announced—perhaps ten minutes after the crash—that we had been struck, not torpedoed. That announcement, together with general directions would have been worth disseminating (interspersed even with music!), for in our situation it was important to evacuate certain holds at once and without unnecessary crowding of passageways, although this was worked out with reasonable dispatch by officers working without centralized directions.

Also, it was not clear whether we were confronted with an emergency or an abandon-ship situation, and the two programs tended to be carried out together. I doubt whether any one knew at first what our actual plight was. An hour or more later the loud speaker did take over. Those in command were concerned with more important matters, especially the Captain and crew, to whose accurate judgment and effective action we undoubtedly owe our lives. This became increasingly evident as time went on.

It was apparent that we had survived our first trial. The weather was calm and cheerfully bright. With the slight list we shipped no more water and maintained a brisk speed comforting to contemplate. One had time to go on deck and enjoy the sun and turn his head toward the pleasant sight of our accompanying destroyer on the alert for subs. There was no



Insignia of the U. S. Cadet Nurse Corps

In brief, let us take an instance of the imminent arrival of a hospital train. To speed up the admission and minimize the discomfort of such a large group of patients, we send a team of officers and enlisted men a couple of hundred miles up the line by motor. This team boards the train; assigns the patients to available beds on the proper wards; gathers the information required for complete initiation of the necessary records; picks up Funds and Valuables; and tags each patient with name and ward number. Consequently, when the train arrives the patients are directly transported each to his proper ward and immediately put to bed and fed. On the way a complete breakdown of diagnoses and the estimated time of arrival of the train are phoned to the hospital. It is not unusual to transfer an entire trainload, litter cases and all, from station to ward bed in an hour and a quarter. The evacuation of a similar group to train or ship is much simpler except there is far more paper work in the making up of passenger list, cutting of orders, completion of records, changing of money, tagging of patients and baggage, etc.

It's been interesting to see the changes since our arrival. Many of the stores were closed then, and there was very little to buy in the ones that were open. Now there is more business activity. At first there were few people on the streets, and most of them U.S.A. Now the streets swarm with French military and civilians, and the proportion of our soldiers is at least proportionally diminished.

The city, though dirty underfoot and dusty in summer, is modern and rather beautiful and enjoys the best climate I've ever seen. It's not nearly as hot here in summer as it is in Boston. The winter is cold only because it's a damp cold and there is no central heating in the houses and little fuel for stoves and fireplaces that do exist.

Our living conditions are those of comparative luxury. My quarters consist of a good-sized room in what would be a third-class hotel at home, with hot running water, and the only disadvantage the occasional visitation of the wily bedbug.

For recreation we go to the movies; have a small officers' club where there are bridge tournaments, open-house parties, where one can get light lunches, and hold occasional officers' and nurses' dances.

We are all in good health and reasonably good spirits except for homesickness. We feel we've been here a long, long time and would give our eye teeth to get a glimpse of Boston and M.G.H. Please give my regards to all my M.G.H. friends, and accept my best wishes to you and them for as Merry a Christmas as is possible in these grim times and for a far happier New Year.

The illustration above is reproduced through the courtesy of *The Journal of the American Medical Association,* which describes them as follows:—

The official insignia of the U.S. Public Health Service will be worn by the U.S. Cadet Nurse Corps. The cap device consists of the fouled anchor (denoting distress) of the Navy Medical Corps and the caduceus of the Army Medical Corps, crossed behind the American shield and surmounted by a spread eagle. Buttons and lapel ornaments carry the crossed anchor and caduceus. These insignia were first adopted in 1798. The Maltese cross will be worn on the upper left sleeve of the uniform. The Maltese cross, historically associated with the profession of nursing since it was worn by the Knights Hospitalers in the First Crusade, is silver against a dark red background.

No uniforms have yet been received. *The Journal* states that their basic color is a soft dark grey.

As Secretary, Mrs. Lingley has kindly provided a few minutes on the latest meeting of the 6th G.H. wives:—

"Voted: To have a Christmas party at Mary Short's on December 14; *each member to bring a gift and appropriate jingle.*

From the resolution came one of the merriest meetings yet held by the 6th Generalettes. Because of the illness of one of the Short children, Mrs. Goethals entertained us. Molly McKittrick and Mary Short helped to prepare the delicious buffet supper.

"Although lacking the portly figure—and minus the flowing white beard—Mrs. King, in her bright red dress and with "dimples so merry", pinch-hitted very successfully for good old St. Nick.

Sing a song of Truro, the hub of old Cape Cod,
Where Hamiltons speak to Washburns and Washburns speak to God.
Be it Eastertime or Christmas, there Amy'd like to be,
On the lookout for her Stewart, as he flies across the sea.
There's a rumor in the Army, and we think it's prob'bly true,
That they've made a special parachute and issued it to Stew;
So when he sights the U.S., he can land on sacred sod,
And kiss his little Amy first on a sand dune on Cape Cod."

Thus spoke Santa as he presented Amy Hamilton with a package, very attractive but odoriferous of overripe codfish.

"Since it was Colonel Goethal's birthday, we think it proper to present, also, the verse tied to his wife's package:

There once was a wife—Mary Goethals;
Her husband wears steel-rimmed bi-focals.
Though his chin is a sin,
And his stomach's not thin,
His wife is a joy to us locals.

These will give you the idea.

"The evening ended as the group sang 'Happy Birthday to Tom,'—a bit familiar, perhaps, but the spirit was right."

In a recent letter an alumnus on duty in the South Pacific gave complete summary of the service of a classmate and his unit. He wrote: "I hear they did a swell job in Sicily." This brief sentence leaves nothing unsaid. So THE NEWS repeats: "We hear they did a swell job in ———" and sends its best wishes for the New Year to M.G.H. men everywhere.

THE NEWS

No. 17 Boston, Mass. February, 1944

NEARLY fifty years ago—on May 4, 1894, to be specific—a young man, Joseph Godsoe by name, began work at the Massachusetts General Hospital as a porter in the Apothecary Department. At that time Walter Dodd was the Assistant Apothecary (and Photographer). Three thousand miles away, in Germany, an event that took place the following year markedly affected the lives of these two men. Both became interested in the new miracle of X-ray and each played a part in its development.

After taking a medical degree, Dodd forsook pharmacy and went on to become one of the famous pioneer radiologists, not only of Boston but of the United States. Godsoe was forced to forego his ambition to become a doctor. After a leave granted by the Hospital for study at the Hinds Electrical Company, of Lowell, to master the technicalities of induction coils and other apparatus then used for the production of X-rays, he returned to play an important part in the development of the Radiology Department at the M.G.H. Before the dangers of exposure were understood, both Dodd and Godsoe suffered extensive X-ray burns.

In 1909, Godsoe was appointed Apothecary. He served in this position until December 1, 1943, when ill health forced his retirement. His service as Apothecary covers thirty-four years; his service with the Hospital is but five months short of fifty years. He has seen the M.G.H. grow from a small hospital of about 250 beds to a great institution, with over 900 beds and with extensive chemical and research laboratories. He has seen the erection of all its major buildings, with the exception of the Bulfinch Building. He has seen and played his part in the development of X-rays, the electrocardiogram, and electro-encephalogram; in the use of the arsenicals and bismuth; the sulfonamides; the multitude of synthetic sedatives; insulin and liver extracts; vitamin preparations; the packaging of drugs in ampules, sterile and ready for parenteral use; and many other changes.

It has all come about so gradually—one miracle at a time. Unless we stop and look back we do not comprehend what vast changes have taken place during the span of one person's association with the Hospital.

During all this time Godsoe quietly and competently attended to doing his part in the teamwork of the Hospital organization. To see always that needed drugs were on hand; that they were carefully prepared and properly labelled and dispensed; that necessary records were kept; that there was economy in purchasing as well as in use. His knowledge of the good points, as well as the weaknesses of pharmaceutical manufacturers, his careful purchasing by maintaining competition, his farsightedness in anticipating drug shortages—all have redounded to his credit as an able apothecary and to the advantage of the Hospital, both financially and in its care of patients.

He hands on the torch to one whom he has trained for many years—John T. Murphy—and so can rest assured that the structure he has built so faithfully will be carried onward and upward as he would have done. Now he may relax, review the glories of the past, enjoy the progress of the present, give sage advice gleaned from a vast experience, assist whenever possible, and rejoice in the knowledge of a good fight well fought.

Well done, thou good and faithful servant. May the Massachusetts General Hospital always be blessed with such as you, and may you enjoy now and for many years to come, health and happiness well earned.

N.W.F.

The Archives Room and the exhibition case in the Moseley Rotunda display early X-ray photographs and equipment, and records relating to the Hospital pharmacy from 1821 to 1900.

At the meetings of the Board of Trustees on December 24 and January 9, it was voted:

To appoint Dr. Marion Winford Mathews as a Research Fellow in Medicine;

To promote Dr. William P. Chapman from the position of Graduate Assistant and Research Fellow in Medicine to that of Assistant in Medicine.

IN fulfilling its function as a teaching hospital, the Massachusetts General Hospital has made the training of students possible in many departments. By accepting its first student dietitian in 1910, it was among the first to acknowledge nutrition as a science and dietitians as professional workers.

The 1943-44 class of student dietitians numbers twenty-two, and its members are graduates of colleges in seventeen states. Appointments to the course are highly competitive. The colleges encourage only selected students to apply here, and the training is post-graduate work, but there are always many more applicants than can be appointed. The degree of Bachelor of Science from a recognized college or university, with major study in foods and nutrition, is a requirement. Since 1927, hospitals offering student training have been investigated by the American Dietetic Association. Only if they meet certain standards are they placed on the approved list for such post-graduate training—and only dietitians who have graduated from these approved courses are eligible for membership in the American Dietetic Association. Such membership is required by most hospitals and for army or government appointments.

The Massachusetts General Hospital was one of the first to train dietitians, and since 1910 approximately 315 students have completed the course, at least 160 of these within the last ten years. Graduates of this hospital have become leaders in their profession. At first the course was relatively brief and indeterminate; later it became specifically six, then nine months in length, and since 1934 a full year has been required. Classes have increased from a few students to groups of twenty. To meet the present war emergency, the program at this and many other hospitals has been accelerated to release students after nine months' training and to award certificates after three months' successful experience in a staff appointment. The demand for graduates far exceeds the supply, and the present need for dietitians in civilian hospitals, in industry, the Army, and municipal work is acute.

Many hospitals must arrange for affiliated teaching and experience outside their own organizations. The Massachusetts General Hospital offers all phases of experience. Students observe and participate in the great variety of nutrition problems presented by assignments on the General Hospital wards, on the Baker Memorial floors, in the Massachusetts Eye and Ear Infirmary, in the Out-Patient Food Clinic, and on the research ward. Our three kitchens, in the White Building, the Baker Memorial, and the Infirmary, are distinct in character and administration, as are the six dining rooms, pay and non-pay, for nurses and personnel. The food store is also under the management of the Dietary Department, and in their training there the students receive excellent experience in cost accounting and the receipt and distribution of food stuffs.

The student dietitian may be identified by her white uniform, with sleeve device of a blue and white triangle lettered "M.G.H. Dietitian", and the "Student" bar beneath.

Dr. Faxon and Dr. James W. Manary, Director of the Boston City Hospital, have been asked by the First Naval District Manpower Survey Committee to assist in their review of the manpower situation as relating to hospitals.

The long brown book with the gold-lettered inscription, "Massachusetts General Hospital—House Pupils", has seen service since April 1900 as the Hospital's register for interns. But in that long term of duty it has never seen such active service as it did on December 30 and 31, 1943, and January 1, 1944. On those three days 28 men signed it as new House Officers.

The smaller but equally important volume, labelled "Residents' and House Officers' Register", saw even more use on those days. Thirty-four men signed out, and "Termination of Service" was written so often that at last it became merely "T. of S." In the following column, under the heading "Because of ——", the entries, except for three instances, read consistently "U.S. Army", "U.S. Navy", with the frequent addition, "date uncertain".

For many this date became imminent, and the new interns met most of their predecessors already resplendent in the uniforms and insignia of the Armed Forces. This show of regalia was not premature. Although their training here officially terminated on January 1, they had not expected to be called within weeks, possibly months. Some had planned to give further time at the Hospital. Instead, they received orders to proceed to assignments. Their five-day schedule for such departure involved not only preparations and reservations for journeys—but, in one case at least, included matrimony.

The Hospital's schedule has not, as yet, been reduced to a matter of days, but to reduce it to nine-months' internships has required considerable optimism. This side of the record is presented in statements from Dr. Arthur W. Allen and Dr. James H. Means. Dr. Allen states:—

> By order of the Procurement and Assignment Bureau, the service at the Hospital has been reduced from 85 to 64 interns and residents for all departments.
>
> On the Surgical Service, this allows 13 interns appointed for nine months, and 12 junior and 7 senior residents—a total of 32. One-third of the interns may be given an additional nine months of training, and one-sixth of the original number may have a total of 27 months of hospital service before going into military duty. These men with advanced experience assume the role of junior residents during their second nine-months, and senior residents during their third nine-months.
>
> This reduction in the total number, added to the relative lack of experience of the house staff, has brought about problems hitherto only imagined in assuring the proper treatment of patients. Every effort is being made to keep the standards of instruction to the resident staff, as well as the care of the sick, at the highest possible level. More supervision by the remnant of visiting staff still available is obviously necessary. Clinical judgment will frequently be relied on instead of laboratory and X-ray data.
>
> The interns will rotate through all phases of the general surgical service as well as through all the special surgical services. This will give them about six weeks on each shift. By so doing, they will have a little training in all fields of surgery, thus making them of more value to the Armed Forces, and also allowing them to round out their ideas as to the specialty they may eventually wish to pursue.
>
> By complete cooperation with all departments of the Hospital and the Medical School, this scheme will undoubtedly work out as well as can be expected under the circumstances. We believe that the interns will receive as much training as is possible in this short period, that the more likely ones can be retained to advantage for longer periods of training, and that the patients will still receive good care. We have no fear, however, that the Hospital will wish to continue with this reduced number of house staff any longer than is absolutely necessary.

OFFICIAL NOTICE

After February 1, *iso-propyl alcohol* will be substituted for *ethyl alcohol* in all preparations listed in the M.G.H. Formulary for external use.

N. W. Faxon, M.D.
Director

Dr. Means states the adjustment on the Medical Service:—

> On the medical side the quota allowed by Procurement and Assigment is now 12 interns and 4 residents, all starting January 1 and serving for 9 months. This is a drop from the peacetime quota of 16 interns and 6 residents. The curriculum designed to meet these restrictions calls for six months' service on the medical wards, during which time two mornings a week are spent in the Out-patient Department by each intern, and three months in two periods of one and one-half months each in two of three possible rotations, Baker Memorial, Neurology or Dermatology. It was necessary to cancel the rotation through the Haynes Memorial.
>
> We shall probably manage to get by with such a personnel, but obviously it is far below that necessary for optimum service to patients. The need for all interns to begin and end at once makes it impossible for them to hand on any of their experience to their successors. Also, half of them have to begin on the wards with no previous experience other than what they have had in three calendar years in the Medical School. To compensate for this situation Visiting Physicians have been asked to devote more time to instructing interns and overseeing their work in detail, particularly their orders for therapy.
>
> The four assistant residents are assigned one to each of the four medical wards, and in addition share between them such duties as Baker Memorial, care of sick nurses, medical out-patient, etc.

Invitations have been sent out for the graduation exercises of the School of Nursing on Wednesday, February 9, at 8.30 P.M. in the Rotunda. The speaker will be Dr. William Allan Neilson, President Emeritus of Smith College. Baccalaureate services will be held at 7.30 on Sunday evening, February 6, at St. Paul's Cathedral.

The graduating class numbers 83. On February 1, a class of 85 students is to be admitted.

The Ladies of the School of Nursing Committee will serve tea on February 1 to the entering class and their parents, and on February 9 to the graduating class and their families. Both teas will be in Walcott House.

The NEWS wishes to make a correction and an addition to its report on the Post-War Medical Service. Dr. Roger I. Lee (*EM* 1907) has been Chairman of the Committee since its organization; at its second meeting, Dr. Alan Gregg (*WM* 1917) was appointed Secretary. Also, to the M.G.H. members then mentioned—Dr. Arthur W. Allen (*WS* 1915), Dr. Frederick A. Coller (*WS* 1914), and Dr. Walter W. Palmer (*EM* 1911)—should be added the name of Dr. William B. Breed (*EM* 1919).

William Pearce Coues, M.D.

Dr. William P. Coues died in Brookline on January 14, at the age of 71 years.

Dr. Coues was former examining physician for Boston schools, and for 25 years served as examiner for the State Industrial Board. He was a graduate of the Harvard Medical School in 1894, and taught there during 1918-22 and at Tufts Medical School from 1924-32. Dr. Coues served his internship at the Massachusetts General Hospital in 1895 on the West Surgical Service, and his first appointment here was as an Assistant in Surgery during 1906. He returned in 1917-19 as a Temporary Assistant Surgeon in the Out-Patient Department, but continued his service from that date—after 1925 with appointment as Surgeon to Out-Patients—until his retirement in 1934.

Dr. Coues was born in Gloucester, the son of Rear Admiral Samuel F. Coues, Medical Director, U.S.N. During World War I, he held a commission as a Captain in the Army Medical Corps.

Last summer *Time* and *Life* mentioned the process by which sea water may be made safe for drinking. But THE NEWS became aware only recently that the Hospital might associate itself with the development of this aid to the shipwrecked. Upon its request, Lt. William V. Consolazio, H-V(S), USNR, mentions his share in the development of the process, and outlines his military service to date. Previous to his commission he had worked, since 1933, in the Medical Laboratory here, under Dr. [Lt. Col.] John H. Talbott (*a.p.*) on metabolic studies.

> I was commissioned as a Junior Grade Lieutenant in May of 1941, and was assigned to the Naval Medical Supply Depot in Brooklyn as Chief Chemist. In August I was transferred to the U.S. Naval Medical School in Washington. It was there that I designed and equipped the Naval Medical Research Institute at Bethesda, Md. The Institute was commissioned in October of 1942, and due to lack of competition I was honored with the position of Chief of the Division of Chemistry and Coördinator of Research for the Department of Aero-physiology. In June of 1942, I was selected for promotion to the rank of Senior Lieutenant.
>
> In conjunction with Lieutenant Spealman, I developed a two-step chemical method for demineralizing sea water. This method was later adapted to a new single-step chemical which at present has been adopted by both the Army and Navy, as well as Civil Air lines, as the method for supplying drinking water to survivors on life rafts.
>
> Am now back to my first love—acid-base balance.

Major Foster M. Matchett, in a note to Dr. Faxon, identifies himself and describes his present assignment:—

I am one of the Orthopedic Boys who was privileged to spend 8 months of my 16 months' orthopedic service at M.G.H. I was there from July 1, 1933, to February 1, 1934. Smith-Petersen, Philip Wilson, Armin Klein, and George Van Gorder and others did their best to teach me a few of the fundamentals.

On September 1, 1942 our (—) General Hospital from the University of Colorado School of Medicine was activated at Fort Meade. We were not too busy there, but always working up until we headed west and south. On November 2, 1943, we left the Golden Gate, and after a beautiful cruise of (—) days we set up as a general hospital and were in operation on December 1. Most of our nurses and doctors are from Denver and Colorado.

To date, with only 700 patients, I have 85 on the orthopedic service, of which I am Chief of Section. . . . We have no malaria on this beautiful big island in the South Pacific.

A letter has come from Capt. Lloyd S. Saltus (*CM* 1938), who was with the 662nd Clearing Company (sep.) at Camp Forrest, Tenn.

As we expected, we find ourselves "among friends" as we get acquainted with our English neighbors, and I have lately run into two old M.G.H. interns. The first was Major Woody Ewell [*WM* 1937], the receiving officer playing a benevolent St. Peter at the gates of the —— Station Hospital, which has taken root in a group of good buildings and is taking good care of some of our men. Next day I ran into Capt. F. Phinizy Calhoun [*EM* 1938] at the 2d ——, who is practically a permanent resident by this time but still has a southern accent.

He adds: "Most of what is interesting we cannot report, while we revert to the inevitable training."

In a letter to Dr. Means, Lt. Oglesby Paul, MC, USNR, (*WM* 1943) tells of his experiences as a medical officer on active sea duty:—

Starting out in the North Atlantic, our destroyer has journeyed along a devious course which has included all the principal zones in the Pacific. I am now in the South Pacific, getting my first acquaintance with tropical disease, the rainy season, and—perhaps most important of all—with the Japs. My personal contact with malaria, dysentery, etc., have fortunately been very limited so far on board ship, but I have seen a number of cases in a nearby shore dispensary, and shall see others shortly. As regards the weather, I shall take what Boston has to offer at its worst, over this moist heat. It makes one sleepy and languid much of the time.

We have had a brisk encounter with the Japs, and I had the experience of watching dive-bombers attack our ship in considerable force. I am glad to say we came through unscathed, and succeeded in shooting down two of the attacking planes, which was an excellent score under the conditions that prevailed. We now have a Japanese flag with two "hash marks" beneath it painted on our bridge.

My sick bay has on occasion been very busy with traumatic cases, but much of my time is spent in treating minor ailments of the type one meets in a boys' camp. I confess to looking forward to the time when I shall be able to take part in clinical medicine again, and sometimes think ruefully of all the things I learned at the Hospital which are slipping away one by one. I am profiting by another type of experience, however, and if I could have my choice would stick with what I am doing right now.

The first number of the Brigham Bulletin included a picture of Major Fiorindo A. Simeone (WS 1936) sitting in his office in Ireland, flanked by a bathtub. The picture here reproduced shows him "in his foxhole near Bizerte." In sending it home, Capt. Somers H. Sturgis (ES 1933) says: "As a matter of fact, that's a pine cone in his hand, and not a grenade; and his helmet is on backward to look like a Jerry." The News makes its own observation that in both pictures the smile is still the same.

Lt. Raymond M.P. Donaghy, MC, AUS, (*NS* 1939) sent to Dr. J. C. White a brief review of his military service to date:—

After leaving Boston I spent six months beneath the Texas sun, learning something about army routine but very little about medical problems. While there I saw Tracy Mallory with his unit.

I am now with Major John Scarff at the —— General Hospital. We have a very active service, though not too varied at the moment. I have not had opportunity yet to visit any of the English clinics, but have been invited to see Prof. Geoffrey Jefferson's work and expect to take advantage of that when I can.

In a note to Dr. Means, Capt. Henry H. Brewster (*WM* 1940), of the 5th General Hospital, sends word of himself and of Major John C. Snyder (*WM* 1939):—

Since last writing I have moved up in rank, as you can see from the letterhead.

Jack Snyder blew in a month ago for two hours—here, for a moment, from the Middle East. He has found much material there and has developed an effective method, I gather, to prevent the wily vector from reaching its host.

The U.S.A. Typhus Commission has been operating abroad, particularly in the Middle East, since early in 1943. As one of its members, Major Snyder has been overseas since that time.

* * *

Capt. Howard Ulfelder (*ES* 1939) went overseas with the Hospital's sub-unit eighteen months ago. He wrote to Dr. Meigs on October 15 an informing account of the unit and of his own experience of service with the Army:—

Two weeks ago we changed stations again and are now in a 750-bed hospital in the lovely Welsh foothills. We are near one large town but in general feel fairly isolated. The camp is the best we have seen, brick construction and well planned and built. In general the interiors and equipment are just as we had at L——, simple but good, and we know by now what alterations we need to run things. We found this spot more nearly finished than the last hospital we opened, and we are at present cleaning buildings and grounds, cataloguing supplies and setting up wards. There are a few essential items lacking; when they arrive we'll be ready to open up shop on much the same plan we used before.

Of course, as a 250-bed staff we know we'll not stay here permanently, but presumably will carry on until the census starts rising above our capacity. Then a larger unit will take over. You may well believe we find it disgruntling to keep moving on. Opening up hospitals for other groups to run is no amusement. However, from the Army's point of view it is good sense, and the more we open the better we do it. Moreover, we had a fine stay at L—— and have no complaint, as we've been caring for patients a larger per cent of the time we've spent in the Army than almost any other group we know.

For over three months now I've been Chief of the Surgical Service. It's been a fine job and the administrative experience well worthwhile whereas, in a group this small, I've kept my hand in the clinical side without trouble. Have had various men on my service. Lost Suby to the 5th to replace Simeone. At the moment since we are not handling patients, my service is reduced practically to myself, the anesthetist, eye and ear man, and X-ray. Sullivan was transferred to Colonel Lanman's hospital last spring. Dawes left us then, and recently Chafee went to headquarters for an administrative job. We have left now: Thorp, Zeller, Graham, Whiting, Sahler, and myself. This still gives us the professional nucleus, of course.

Our C.O. was transferred some weeks ago, and the new one is Humphreys [Major Storer P. Humphreys], who had orthopaedics and neurosurgery at the M.G.H. about 1937, came over here in 1939 with Penfield's Canadian Neurosurgical Unit and has been in our forces since we entered the war.

To give you an idea of our tenure at L——: Last May, after we'd been running a couple of months, I was fortunate in wangling a seat in the course on fractures given by Mr. Watson-Jones. It was a solidly-packed week of lectures and demonstrations and presented, in the lucid style so natural to the British, the current methods of handling orthopaedic trauma with particular reference to war injuries. I have the notes I took, and hope to find time to edit and type them and bring them home as a summary of British fracture treatment.

Immediately after the course I went to the —— General Hospital (U. of Cal.) and spent six weeks running an active orthopaedic ward under Soto-Hall as Chief of Orthopaedics and Rhodes as Chief of Surgery. This gave me a good taste of general hospital work and fixed in my mind the principles I learned at the course, with the modifications used by Soto-Hall. I met a new group of thoroughly able and likeable men, and reaped the chief advantage of establishing firm rapport with the general hospital to which we evacuated from L——, something I found repeatedly useful later on.

Late in June I returned to L——, to find my former Chief of Surgery replaced by Snow, a Harvard man who had been practicing in Salt Lake City, and both capable and pleasant. However, after an attack of pneumonitis, he was transferred to a hospital and later home. So I found myself almost at once running the service, at just about the time the 8th Air Force really got going. For three months we ran a hospital with the daily run-of-the-mill cases, plus recurrent flurries of casualties in groups as the bombers made their sorties to France and Germany. Though the majority were lesser wounds, we had a sprinkling of sucking chest wounds, penetrating thoracic and abdominals, and compound fractures.

I have learned much, probably more than I yet realize. In fact, my chief lesson was how to handle efficiently casualties in groups with the small surgical staff at my disposal. The

On December 18, 1943, the 50th Anniversary of the Army Medical School at the Walter Reed General Hospital in Washington was marked by the award of certificates to the 16th class in military and tropical medicine to be graduated there since August 1941. The certificates were presented to the 124 graduates by Col. Richard P. Strong (*Hon. Phys.*), director of tropical medicine at the School. The group included officers of the A.U.S., the Canadian and Peruvian armies, and officers of state health departments.

On October 29, Captain William E. Eaton, MC, USN, (*D* 1907) was detached as Medical Officer in Command of the Naval Hospital, Great Lakes, Ill., where he had been on duty for over four years. Captain Eaton has reported in the Bureau of Medicine and Surgery, Office of the Surgeon General of the Navy, at Washington. His duties are those of chairman of the Post-War Planning Board and head of the Washington office of the Materiel Division. These are newly created branches of the Bureau.

In a letter to Dr. Means, Lt. Comdr. Allen G. Brailey (*EM* 1930) has stated the pleasure expressed by so many upon receiving the greeting card sent to them by the Staff at Christmas, and tells of his duty "inland": —

U.S.N.T.S.
Sampson, N. Y.

Dear Doctor Means:—

I wish I could take time to send a personal acknowledgment and my good wishes to each of the MGH home-fronters who signed the Hospital Christmas card. Since I can't do that, and since the message so obviously bore the marks of your thoughtfulness and handicraft, I will ask you to share my greeting with the rest.

It has been great to read of the doings of MGH men in THE NEWS. In comparison with the accounts therein of life in all the odd corners of the globe, the naval activity of this little inland lake must appear pallid. However, I am extremely grateful to be able to contribute my two cents' worth, whether here or elsewhere.

I feel that I have again been very fortunate in my present assignment. I have charge of the so-called Medical Holdover Unit here, through which are filtered all those recruits found to have some disability that may be disqualifying. This does not involve much care of the sick for there is no sick bay in this building, but amazingly interesting diagnostic problems do present themselves. At present we have a case of hematomyelia, a retinitis pigmentosa, a boy with situs inversus,—not to mention all possible variations of rheumatic heart disease, asthma, peptic ulcer, etc. We have often had boys with thyrotoxicosis, and have had one acromegalic. Reg Smithwick would have a field day here. I could present him with a dozen young hypertensives any week. We are able here only to establish their diagnosis, discharge them by medical survey and advise them to find someone who has something of Reg's interest and ability.

Sincerely yours,
Allen Brailey,
Lt. Comdr. (MC) USNR

Dr. Russell T. Congdon (*WS* 1909) reports two sons in the service: "Gordon Congdon is Flight Surgeon, now situated in England, and Russell Congdon in training at Carlisle Barracks."

Lt. Comdr. John P. Monks (*WM* 1931), upon request, lists the varied events of his Naval assignments:—

1. Went on active duty, December 20, 1941 at the U.S. Naval Training Station, Newport, and lived in a house with Sprague, Johnson, and Barr.
2. Due to the purely chance appearance of one Mr. Haessler, who directed "The Advent of Anaesthesia" [better known as the Ether Film], in which I had a part [that of Dr. Morton], I was assigned to him in making a March of Time film on First Aid and Personal Hygiene for the Navy. I lured Joe Barr into it as a consultant, and we both eventually reached Washington. The Personal Hygiene film was shelved, but Joe continued on with First Aid, making other movies.
3. Just as I was about to move my family down to Newport, I was ordered back to help open the giant new Receiving Station at South Boston in March 1942.
4. In August 1942, I was detached and assigned to the Office of Naval Officer Procurement at Boston, under Cob Palmer. George Sturgis and "Kit" Carson (Ortho.) also there. Since August 1943, I have been Senior Medical Officer.
5. ????

From his present assignment in Boston, Lt. John L. Ward, MC, USNR, (*EM* 1935) reports:—

About August 1 was transferred from duty caring for Storekeeper-Waves to the course in venereal disease control at Johns Hopkins. Two months spent there were well worth while with clinical, laboratory, sociological, statistical, and public health studies.

On October 1 reported for duty as "Venereal Disease Control Officer attached to 1st Naval District Medical Office." It's mostly administrative and liaison work with some lectures, etc., thrown in. Also, I'm here to help station medical officers with problems in venereal disease education or up-to-date information on diagnosis, treatment, and regulations.

...—V...—

Major Milton L. Miller, MC, AAF, (*EM* 1932), formerly at the Army Air Base in Santa Ana, Cal., is now assigned to Headquarters, Army Air Forces Redistribution Station No. 1 at Atlantic City:—

Have been made Chief of Psychiatry of the Medical Section of this new project. All air force officers and enlisted men returning from overseas receive a complete physical and psychiatric exam. A program of rest camps, convalescent centers, etc., has been set up as adjuvants in treatment. The work is of great interest, since one sees "flying fatigue", "battle reactions", etc. New assignments to duty are made after re-evaluation of the men.

In reporting his promotion on November 22 to this rank, Major George B. Beaman (*a. psychi.*) writes from Jefferson Barracks, Mo.:—

Since January 1, 1943, I have been Chief of Neuropsychiatric Service at the Station Hospital. This is one of the largest station hospitals in the A.A.F., and through this Service has passed a cross section of some of the worst psychopathology cases in the country. The battle of St. Louis, therefore, has had no dull moments.

Lt. Comdr. John B. Stanbury (*WM* 1941) has been transferred from Newport to the U.S. Naval Training Station, Epidemiology Unit No. 67, at Bainbridge, Md.

From 1935, Comdr. E. Ross Mintz (*P* 1930, *r.s. U* 1932) held a commission as a Lieutenant (s.g.) in the Naval Reserve. He went on active service in November 1939, and was made a Lt. Commander in September 1940. In August 1942 he received promotion to his present rank. He has been stationed at the U.S. Naval Hospital in Portsmouth, N. H., since March 1943, and is Chief of the Urology Service there. His previous assignments were at the Boston Navy Yard, the Chelsea Naval Hospital, and the Marine Recruiting Station at Augusta, Me.

We have had few MGH men at this station. Dr. Tenney [Lt. Comdr. (*WS* 1927)] was transferred a few days before I arrived. Dick Dwight [Lt. Comdr. (*WS* 1931)] was here for six months or so and was transferred to the Southwest Pacific. Dr. Bruce Merrill [Lt. (*r.p. Psychi.* 1941)] is head of the psychiatric department at the hospital and is doing excellent work.

Recently two former house pupils have arrived for indoctrination: Sidney Ellery '43 [Lt.] and J. Robert Spencer '43 [Lt.]. Miss Barbara Monroe, a former MGH nurse is doing a fine job. She is liked by all.

Major Robert L. Mason (*WS* 1924) is Chief of Surgery at the new Cushing General Hospital in Framingham, Mass. Major Mason went on active service in October 1942. After training at Carlisle Barracks, he was assigned to the station hospital at Indiantown Gap, Pa., spent a short time at the Lovell General Hospital at Camp Devens, Mass., and then proceeded to his present assignment.

Capt. William J. Tobin (*Or.* 1939) has recently been transferred to the Cushing General Hospital from Fort Benning, Ga.

"The 244th Station Hospital has been changed to a General Hospital, the 129th. Also, I have been promoted to Captain." This from Capt. John B. Millet (*WS* 1943) at Camp Shelby, Miss.

Dr. G. Douglas Krumbhaar (*a. obst.*) has been commissioned Lt. Commander, MC, USNR, and reports for active duty on January 31. His former partner, Dr. Donald Macomber (*SS* 1911) is returning to take over the practice. Dr. Macomber served during World War I, in France with Base Hospital No. 46, as a Captain, MC.

Comdr. Charles L. Swan (*WS* 1929) recently sent in a "Memo: Subject, Report to the War Records":—

Called to active duty May 21, 1941 serving as Ward Medical Officer in Surgery, at U.S. Naval Hospital, Chelsea. Detached August 1, 1942.

Reported for duty as Senior Medical Officer on board U.S.S. "Ancon", taking part in amphibious operations in Northwest Africa (Fedala, Casablanca), November 7-15, 1942.

Detached from U.S.S. "Ancon", May 1943.

Received promotion as Commander in January 1943, to rank as of August 1, 1942.

Reported in June 1943 to Station Hospital at Camp Peary, Williamsburg, Va., as Chief of Surgery. Busy making and repairing Sea Bees.

In its issue of November 6, the Journal of the A.M.A. published a brief but most interesting account of the 4th Ferrying Group Base Hospital at Memphis, Tenn. This is a new 150-bed military hospital at the Municipal Airport there. "It was activated without the usual ceremony on February 16 and has since been quietly administering to the medical needs of the air force, ferrying group, and other military personnel." The list of medical officers of the hospital includes the name of Capt. David W. Wallwork (*ES* 1932) as Chief of Surgery. He is also Venereal Disease Control officer. Captain Wallwork had previously been Surgeon of the 8th Ferrying Group, North Atlantic Wing, Air Transport Command. Recently, as Major Wallwork (with promotion on December 17), he has sent comments on his earlier assignments:

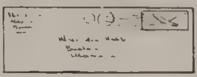
> I entered the medical side of the Air Corps, and then was shunted into the Air Transport Command, where combat service is non-existent and where overseas service is reserved for younger bloods than I—for just what reason nobody seems either to know or care.
>
> To Morrison Field the first day and then to the Medical Field Service School at Carlisle Barracks, by air that same night. Back to Morrison for two weeks, and then to Presque Isle Army Air Base in Maine for two weeks before going back to the Medical Inspectors School at Carlisle. Then back to Presque Isle to freeze and do little else until April, when finally I arrived at my present station—for the hottest summer the community has known for some time!

Capt. Victor G. Balboni (*WM* 1942) reports on his new post:—

> In October, after 16 months of duty with the (—) Station Hospital in Greenland, I received my present assignment at the Station Hospital, Fort Jay, Governor's Island, N. Y. Here we have a very active and interesting medical service headed by Harold Draper Warren, formerly of Boston and the Brigham. We care not only for the post on Governor's Island but also for various units in New York City and for all transient military personnel there. Among the latter we run into occasional patients treated at the 6th General Hospital, from whom it is grand to get first-hand information of the General unit.
>
> Nothing else of news, but you can imagine what a delightful contrast a busy medical service and New York City is to arctic Greenland.

From his new station ashore, Comdr. Howard B. Sprague (*EM* 1924) replies to a request for details on his recent assignments: —

> Sorry to have been so late in reporting formally to The News my return to the United States. The hospital ship to which I was attached was ordered to evacuate patients at sea from the transports not far from Tarawa during the final stages of the battle for the Gilbert Islands. This was an interesting and stimulating experience, as we received the most severely wounded, fresh from the action. I was detached from the ship shortly thereafter, and flew back to Boston for Christmas, a piece of good fortune I had not expected.
>
> On January 2, I reported to U.S.N. Hospital, St. Albans (12), New York, where I have been given the title of Professional Assistant to the Commanding Officer. This is a clinical executive job for which two years of active duty, almost completely surrounded with paper work, has probably trained me. As this is the second largest U.S. Naval Hospital in the world and as big as a small town, you can imagine the turmoil. I feel fortunate in my assignment, even though a Long Island winter does not resemble those in the South Pacific.



Capt. Joseph L. Campbell (*r.p. An.* 1940) went on active service in August, 1942. In September of this year he wrote to Dr. Arrowood from an Evacuation Hospital:—

> At present I am on an island "somewhere in the Southern Pacific Theatre of Operations", squatting in a tent in "Quagmire Acres" and trying to keep out of the mud. Our unit is encamped in one of Mr. Lever Brothers' cocoanut plantations. This is handy, for when we want a cocoanut to eat or to drink milk from, as a change from chlorinated water, all we have to do is get a native to climb a palm. The usual fee is two cigarettes, but one man in the outfit has a better means of paying. He removes his dentures and shows them to the Fuzzy-Wuzzies. They would give him almost anything for a sight of those store teeth. If I had an artificial leg I could buy the whole miserable island.
>
> They are interesting little people, about the size of a 12- or 14-year-old American boy but quite muscular and well built. They wear only a skirt of very dirty trade cotton, though some do with a postage stamp fore and aft. The women wear only a grass skirt,—and I wish here to dispel any illusions got from pictures of the Isle of Bali about their charms. They are about as attractive as a female chimpanzee. I can't see much incentive for a man to "go native".
>
> Most of the natives are employed by either the Australian or U.S. governments at tasks for which they are fitted, such as building native houses for the use of our troops. All they need is a good lush jungle and a machete; in a couple of days they have a very practical and attractive thatched house. God supplies the jungle, and Uncle Sam supplies the machete, and wages at about $20 a year. Whenever I get the chance I like to watch them; in fact they usually draw a gang of soldiers that would put to shame a crowd watching a steam shovel. They tie the timbers of the house together with long withes or vines, and when finished it is as strong as though nailed. They're a jolly gang, and while working sing their native tunes in a sing-song nasal voice that is curiously weak and boyish.
>
> Many of them bleach their hair with lime and, I understand, would sell their souls for a bottle of peroxide. It interests me that so many of our "civilized" customs have their counterpart among primitive peoples, or perhaps we are only trying to ape them. And as their bleached hair usually turns out a sickly orange—about like one that has become rotten and mouldy—I can assure you it gives them almost as lewd and ludicrous an appearance as our own women who obviously bleach their hair.
>
> But what I really marvel at is their use of a machete. They use one for everything from building a house, cutting down a tree or carving a toothpick. I have seen great surgeons work and have admired their technical skill, but I'm sure that if Fuzzie-Wuzzie could be taught neuro-anatomy and physiology he could do a brain operation with a yard-long machete that would put Harvey Cushing to shame. Many of them are Mission-trained and speak fair English.
>
> Had a perfectly lousy trip over here. Was on the boat a long time—censorable, of course, and a troop transport is *not* a pleasure cruise. An obliging whale would come up occasionally and spout for our amusement, or a school of flying fish go slittering across the surface. But we were so uncomfortable on the transport that even this Hell-hole is a relief and will probably continue to be so for another few days at least. We take so much atabrine we all look jaundiced. Rather a horrid sight to see dozens of one's friends get a common duct stone overnight!
>
> Best of regards to you and all my M.G.H. friends.

"World cruise" used to be synonymous with "luxury". Those made in this war will have other memories for many, among them Lt. F. Thomas Gephart, MC, AUS, (*WS* 1941), who sent these comments to Dr. Donald N. Sweeny, Jr.

> We are making a swift, uneventful trip through the Pacific, destination still unknown. Though crowded, the ship is fairly comfortable —but no luxury liner. After 7 P.M. there are no lights bright enough to read by, and no one is allowed on deck. It's getting pretty hot to sleep in our compartment: only 18 men, all their luggage, 18 lockers, and 3 wash basins and a table in a room 15′ x 15′ with no portholes. I've never sweated so much in my life! However, life's bearable and we really are living a life of ease. Sitting on the deck (and I mean deck—no chairs or cushions), reading, playing bridge, washing clothes, and taking showers constitute our only activities aside from eating—and just doing nothing but trying to keep cool.
>
> Am no longer a "filthy, slimy, detestable pollywog", but am a "shellback", and have a beautiful diploma to prove it. However, it was not bestowed without certain initiatory rites.

In former days trips to a famous opera house in a famous Italian city were not made under the conditions described by Capt. H. Thomas Ballantine, Jr., (*WS* 1939), of an auxiliary surgical group, which has seen much of the Sicilian and Italian campaigns:—

> The past couple of days have been such a contrast that I thought you might enjoy hearing about them. Sunday, having worked most of the night, Charlie Westerfield and I got up about 10 A.M., waded ankle deep in mud out to the jeep, and set off for the big city.
>
> We had lunch in one of the cafés, and then went to the Opera House for a symphony concert. We had seats in the 3d tier of boxes and listened to a most enjoyable program. Then we drove (blackout) back toward the flashes of the big guns, to the hospital.
>
> We worked until about 6 A.M. and slept until noon. The P.M. was lovely and bright for a change—and out of the sun came a Jerry plane, back from a strafing mission behind us. He flew so low over the hospital, to escape the ack-ack, that we could see the pilot clearly.
>
> That evening, while waiting to go on duty we rested a while in one of my wards, which is empty. There were a number of enlisted men sleeping there and, by the light of an oil lantern, we listened to one of them—a concert violinist from New York—play for a couple of hours. War is unreality.

Word has been received concerning Commander Harrison E. Kennard (*WS* 1934), noting his promotion in rank and stating that Commander Kennard is now Chief of Surgery at U.S.N. Base Hospital No. x in the South Pacific.

In sending a change of A.P.O. for the 2nd Auxiliary Surgical Group, Capt. Floyd H. Jergesen (*Or.* 1942) reveals his promotion in rank.

A second promotion, received last November, is reported for Major Frederick K. Poulin (*Dn.* 1942). Originally a member of the 6th General Hospital and then of the 160th Station Hospital, Major Poulin was transferred last summer to assignment (as a Captain) with an Air Force unit—first with the Surgical Section and now with the Medical Section—and has seen service over a wide geographical area.

MEMBERS OF AN AUXILIARY SURGICAL GROUP

(Right to left: Capt. Thomas Ballantine (WS 1939), Capt. Philip Giddings (WS 1939), Capt. Floyd Jergesen (Or. 1942), Major James M. Mason, III, of Johns Hopkins, and (unidentified).

system eventually evolved was so satisfactory that I have written it up in a short paper and sent it to Colonel Cutler for whatever use it might be to other units with the same problem.

We were lucky and lost no battle casualties while there. They were usually 2-4 hours old on arrival. We used plasma, blood, and oxygen freely, and found sepsis so rare we never even let it hasten our decision as to when a man was sufficiently restored to withstand operation. We used crystalline sulfanilamide in wounds and diazene by mouth or intravenously later. Foreign bodies we completely ignore, except to remove those encountered during debridement. Most wounds were packed widely open and put in plaster and the patients comfortable. Those we closed, we closed tight and none went septic. Routine tetanus toxoid and no cases of gas gangrene.

Aside from casualties we had the expected steady run of bumps and cuts, minor fractures (scaphoid and head of radius are a dime a dozen), accidental amputations, with a sprinkling of hemorrhoids and other minor electives, occasional hernias, appendices and, of course, a ruptured spleen, perforated ulcer, etc. No better group of patients than air corps personnel could be found. We enjoyed their company, visited their fields, went riding in their planes, and made many friends. In all, we spent eight pleasant and instructive months that I am sure will be remembered as the war's high spot for us.

Things gradually got busier, as you can imagine, and finally our place was taken by a 750-bed station hospital fresh from the States. They seemed able on short acquaintance, but will have to learn a lot to make the change from home to here; and it was a peculiar feeling for us to see each of our jobs taken over by anywhere from three to five of them. However, as they expand to capacity, they will need all they have.

We have no expectations that our stay here will be anything like the above. We plan to open this up and run it for a while, but what our permanent job will be, or whether we'll ever have a permanent job, cannot be surmised. Of course, our real hope is that not many more months will be needed to finish the business in this theatre, and then we want to go home. We'll stay in the Army until it's over, without doubt, but we should like to see home again before too much longer.

Our two weeks since we came here have been more of a rest than otherwise without night calls, ward work, etc. We keep plugging at setting up as we get new batches of supplies, but I've found time to get some sleep, take my bicycle completely apart and rebuild it, go hunting for walnuts or climbing the hills around us. Rather welcomed the rest and change. The weather now is quite cold at night but warms up somewhat by day.

I look forward to comparing notes with our far-flung colleagues after this is over. You can bet we'll all have some ideas. Fracture rounds of the past will seem like love feasts by comparison.

* * *

Expressions of thanks for the Christmas card have been many: typically, "It seemed so good to see all those very familiar signatures once again." In fact, receipt of it stirred many, hitherto silent, not only to write their thanks to Dr. Faxon and the Hospital but inadvertently to provide bits of news for The News:—

The M.G.H. Christmas card was greatly appreciated. It was a kind and warmhearted message to send, and what a host of pleasant memories and friendships the signatures brought back. I am sure the card carried good cheer literally all over the world.

We are very busy and there has been slow but steady progress in our working conditions since we opened. Pete Churchill's visits are always most welcome and profitable occasions. I know you realize what great work he is doing over here.

With kindest regards and best wishes for the New Year to yourself and all my old friends on the Staff, I am,

Yours sincerely,
Monroe McIver [*r.p.* 1922]

Major McIver (*r.p.* 1922) trained with the 33d General Hospital at Fort Eustis, Va., and Fort Jackson, S. C.

Lt. Col. Robert G. Rae (*dn. s.*) sent to the Staff of the Dental Clinic his Christmas greetings and an account of this Service with the 6th:—

Dear Fellow Yanks:—

Was very happy to receive the Xmas card with a cheery greeting from each member of the Staff, also the two boxes full of many useful articles. We sure appreciate the thoughtful friends back in the States.

Dan Holland and Sturgis put in for detached duty to investigate the care of maxillo-facial injuries in this part of the world. They asked for ten days, but their trip extended for seven weeks. They visited French, English, and our own hospitals all over Northern Africa, making their hops by air. Valuable statistics were collected on all maxillo-facial injuries including those caused by accidents and by battle casualties, elapsed time from injury to definitive treatment, days in hospital, and percentages of those returned to duty or sent to the Zone of the Interior.

The dental clinic is always busy, as soldiers coming back to hospitals always need some dentistry done. Our prosthetic department has been doing a very fine job, but lack of some materials, right now, is interfering with the work. Since the first of March I have had only three half-days away from the clinic, but am now enjoying, or rather trying to enjoy, a week's rest at a hotel some 300 miles from the hospital. The war can't end any too soon to suit me.

Another contact made by a member of the Hospital's unit was mentioned briefly in September by Capt. S. R. Sarris (*WS* 1939): "Have gone native. I gave two lectures in French to nurses and doctors at the French civilian hospital."

A very welcome letter, mailed from the Hospital's unit abroad, was received by The News last month:—

Dear Friends;—

Enclosed are some pictures taken on Armistice Day here. Thirty of our nurses marched, and at the risk of sounding too boastful, I must say that they looked very well and received much applause.

The other snaps will give you a little idea of what beautiful horses the native troops have. Many of them looked like circus performers and kept step to the music in just the same way.

Last week there was a request for a narrative report of the nursing service since we have been in North Africa. No doubt some of it is old news, but there may be points of interest you have not heard before, and on that chance I am enclosing a copy.

Let me express again our appreciation of The News, and how much we enjoy hearing about the folks at home, as well as our friends with other organizations overseas.

Sincerely yours,
Doris Knight
Capt. A.N.C.

The nurses do look very well indeed, and the report on the Unit's nursing service gives many details of interest. The News hopes to publish both next month.

Bruno Mickeleit, whose long service in the Surgical Laboratory and whose abilities as a medical photographer are known to so many M.G.H. men, has been called for military duty. He is to report at Fort Devens, Mass.

The Hospital will observe February 22, as a holiday in honor of George Washington.

THE NEWS

No. 18 Boston, Mass. March, 1944

THE present-day medical student, as he arrives at the Hospital, is a relatively impressive military figure, even though he may be carrying a G.I. lunch box under his arm. Here is how his medical and military life combine—according to the second issue of the *Brigham Bulletin*:—

> At first the married soldiers objected strenuously to regulations requiring them to spend six nights a week in barracks; frequent blaring of the public address system interfered with studying; and weekend confinement to quarters for minor infractions of rules caused general malaise of some degree. However, these minor difficulties have now been adjusted. . . .
>
> The daily schedule of the Harvard Army medics has been revised and stabilized. Reveille sounds at 6:45 A.M. with formation by 7. This latter, which includes exercises and dismounted drill, is over by 7:30. After breakfast, Sick Call is held at 8:15. It is of interest that, under Army routine, the soldiers are gaining weight and the rate of minor illness seems to be definitely lower than in previous years. Medico-military classes are held at hours that do not interfere with regular medical work—late afternoons, evenings, and Saturday afternoon.
>
> As for time off and passes, members of the Harvard Military have all the privileges that go with a Class "A" pass and, for distances greater than fifty miles, passes are granted on weekends. Bed check is at 11 P.M. at Vanderbilt, but married men may live at home.
>
> Cold weather has brought changes in the soldier's dress. Woolen suits, wind-breakers, and overcoats have made their appearance. The Navy has finally clothed its members in Ensign uniforms, which make every fledgling sailor look like an Admiral.
>
> Scholastically, the work remains at the high pre-war levels. The men are intent on becoming Medical Officers and are rapidly acquiring the proper military background.

The recent issue of the *Harvard Medical Alumni Bulletin* contains an excellent article on "The School at War"—which supplies these lesser details:—

> The new parking lot to the northwest of Vanderbilt Hall serves as a drill field. Each Friday, to the strains of martial music amplified by a portable phonograph, the ever-inspiring spectacle of retreat is performed on the lawn in front of the School. Once desecrated by marching feet, this sacred area soon became a touch football field, a purpose for which it is ideally suited. . . .
>
> A striking change has been for the School to find a large proportion of its student body transformed from impecuniousness to relative opulence. The accelerated program, which reduced time for outside work but increased the frequency of term bills, had forced an increasing number of students to undertake remunerative work and to lean heavily on scholarship and loan funds. On becoming active members of the Army and Navy these men suddenly found themselves on Uncle Sam's payroll, with a regular income and no living expenses. By order of both services, outside work is prohibited. Although this is a hardship to our affiliated hospitals, in the way of blood donors and volunteer assistants, it is a boon to the students. Many are now able to devote full time to their studies for the first time since entering the School.

The tragedy of the Cocoanut Grove is over a year passed. News of it reached around the world and, fortunately, its corroboration of new procedures in the treatment of burns has had equally wide notice. Also, it focussed attention on the need for organized preparation, in both hospital and community, to meet similar emergencies, civil or military.

In November, Dr. Faxon and Dr. Churchill received a letter from Mr. F. F. Griffith, Treasurer of the Medical Council of the British and American Communities of Buenos Aires:—

> There appeared in the December 26, 1942, issue of the *Journal of the American Medical Association,* a special article on the Cocoanut Grove Disaster in Boston. The writer would like your authorization to print this article in pamphlet form, giving due credit to all of you. This pamphlet would be circulated here in the Argentine among members of the Medical Council of the British and American Communities, without cost.
>
> You may possibly be interested to know something about the Council.
>
> Some time back there was a naval battle between British cruisers and the Graf Spee off the Uraguayan coast. After this battle, owing to lack of preparations there was much confusion here in taking care of the wounded. British sailors could not be landed in the Argentine because Great Britain was not considered non-belligerent here. Therefore, when our country went into war, our American Naval Attaché, Captain William Brereton, recalling this disaster, presented the suggestion that preparations should be made to care for wounded in case of a repetition of such an affair. With this in mind, the Council was formed. It is composed of four British and four American doctors, Mr. H. C. Wheaton and the writer, as shown on the letterhead. [Drs. R. E. Halahan, W. B. Giles, Trevor Ap-Iwan, E. C. B. Brewer, L. W. Hackett, E. Herzfeld, M. J. Petty, F. L. Vassallo.]
>
> Dr. R. M. Taylor, of the Rockefeller Foundation, was made Chairman of this organization. However, as he has since been transferred to Brazil, Dr. R. E. Halahan, Dean of the British-Argentine Medical Association, was made President.
>
> We have made all preparations to care for 200 wounded. Plans have been completed for their hospitalization, transportation, medical and surgical attention. All this has been drawn up in a somewhat crude form, but nevertheless we have tried to cover every phase of any emergency that might arise here. We have made arrangements with the British Hospital in Buenos Aires for hospitalization and actually worked out plans whereby we know just where the additional beds will be placed.
>
> We have lined up a hospital train composed of five stretcher coaches, one sleeping car for doctors and nurses, one dining car, and two day-coaches, in case wounded should be landed in our southern ports, such as Mar del Plata. We have a large quantity of medicaments, bandages, blankets, etc., in store and available to move immediately. Special emergency kits are lined up for each stretcher coach. Apart from this we have worked out first-aid kits of material on the attached list. These are packed in waterproof containers with parachutes attached, and can be flown to any distressed vessel unable to reach port. We have arranged for transportation, such as ambulances, and special cars and trucks in case sufficient ambulances are not available. We have also built up a blood bank. In fact, the writer feels we are sufficiently organized to take care of an emergency should it arise.
>
> The article covering the Cocoanut Grove disaster shows that the situation was so marvellously handled that we felt every one in our organization or connected with it should have an opportunity to read the details. The writer would therefore appreciate it greatly if we could have your authorization to reprint and distribute this article.

Needless to state, permission was given to reprint the article, and a copy of the Cocoanut Grove Monograph has been sent to Mr. Griffith for the Council.

The annual meeting of the Corporation was held at the Hospital on February 1. Mr. John R. Macomber was elected to the office of President, and Mr. Phillips Ketchum to that of Vice-President. Mr. Reginald Gray was re-elected Secretary.

Mr. Macomber first became a Trustee of the Hospital in 1919, and was made Vice-President of the Corporation in 1942. Mr. Ketchum was elected a Trustee in 1928, and was also made Treasurer at that time. He resigned from the latter post in 1938. Mr. Henry R. Guild, Treasurer, with the other elected members of the Board of Trustees—Rt. Rev. Henry K. Sherrill, Chairman, Mr. Francis C. Gray, Dr. Lincoln Davis, Mr. Ralph Lowell, and Mr. Lloyd D. Brace—will continue in office.

Of the four Trustees annually appointed by the Governor of the Commonwealth, Rt. Rev. Robert P. Barry, Mr. Eben S. Draper, and Mr. Michael A. Fredo have again been reappointed by Governor Saltonstall. Mrs. Robert Homans has been named by him to replace Miss Betty Dumaine, a Trustee since 1934 and now in India on duty with the American Red Cross.

Mrs. Homans has been since 1925 a member of the Advisory Committee of the School of Nursing. It might be added that Mr. Homans was an elected Trustee, and an especially valued member of the Board from 1920 until his death in 1934 — and that Mrs. Homans' great-great-grandfather, the Honorable John Adams, presided at the first meeting of the Corporation, and that he and his son, John Quincy Adams, were among those named as the incorporators of the Massachusetts General Hospital in 1811.

At their meetings on January 21 and February 2, the Board of Trustees granted the following leaves of absence:

To Dr. Robert K. Brown, because of military service, with the understanding that he may resume his present position on the Staff upon completion of such service;
To Ferdinand Brigham, D.M.D., for a period of three months.

They voted the following promotion and appointments:

Dr. John T. Quinby from Graduate Assistant to Assistant in Medicine;
Dr. James Hitchcock as Assistant in Medicine;
Dr. Arthur J. Linenthal as Assistant in Medicine, effective January 17, 1944;
Dr. Walter Igersheimer as Research Fellow in Neuropathology;
Dr. Alfred Pope as Research Fellow to work with Dr. Aub on his OSRD contract;
Dr. Wade Volwiler as Assistant Resident in Medicine, with term advanced from April 1, 1944 to January 17, 1944;
Dr. Howard A. Hoffman as Assistant Resident Surgeon on the Urology Service for the term October 1, 1944 to July 1, 1945;
Dr. Avery D. Weisman as Assistant Resident on the Psychiatry Service from August 1 to October 1, 1944, and as Resident from October 1, 1944 to July 1, 1945;
Dr. John F. Tannheimer as Assistant Resident in Pathology for the period January 16 to October 1, 1944.

Dr. Gerardo M. Balboni (*Bd. of Cons.*) has been appointed a member of the State Board of Registration in Medicine.

The *Saturday Evening Post* for January 8, 1944, contained an article, "How We Screen Out Psychological 4-F's" by Dr. Carl A. L. Binger (*EM* 1915). Dr. Binger went abroad in 1917 with Base Hospital No. 6 as a Lieutenant.

Dr. Walter B. Cannon (*Cons. Physiol. McLean*) is to serve as Visiting Professor of Physiology at the New York University College of Medicine during January-March.

Dr. William B. Breed (EM 1919) is Secretary - Treasurer of the War - Time Graduate Medical Meetings. Many other M.G.H. men are serving on the National Faculty for these postgraduate courses, and the following are named among the National Consultants: Dr. Tracy J. Putnam (*ES* 1923), Neurology and Neurosurgery; Dr. John B. Youmans (*EM* 1921), Nutrition; and Dr. Frederick A. Coller (*WS* 1914), Traumatic Surgery of the Abdomen.

Major John L. Newell (*ES* 1932) went overseas with the SWPA Harvard Unit as chief of section of anesthesia and operating rooms. In September 1943 he was invalided home and put on inactive status. He received his honorable discharge from the Armed Forces on February 8, 1944, and has announced the reopening of his office at 330 Dartmouth Street, Boston. Dr. Newell will resume his position on the Hospital Staff as an Assistant Obstetrician.

OFFICIAL NOTICE

LOST AND FOUND

All articles found in the Hospital should be turned in at the Information Desk in the White Building. All inquiries should be made there.

Lost articles should, likewise, be reported to the same Information Desk in the White Building.

N. W. Faxon, M.D.,
Director.

Edward Peirson Richardson, M.D.

Dr. Edward P. Richardson, Honorary Surgeon of the Massachusetts General Hospital, died on January 26, 1944, at the age of sixty-two.

Dr. Richardson received his A.B. degree from Harvard in 1902, and his M.D., *cum laude,* from the Harvard Medical School in 1906. He served as East Surgical House Officer at this hospital during 1906 and 1907. After his internship he assisted his father, Dr. Maurice H. Richardson, master surgeon of his day, in private practice until the latter's death in 1912. In 1911 he had been appointed an Out-Patient Surgeon at this hospital.

During World War I, Dr. Richardson went overseas with the first Harvard Unit, and in July 1918 was commissioned Captain in the U. S. Army Medical Corps. He served in evacuation hospitals in France and Germany, with promotion to Major in September 1918. After his return from military duty he was appointed, in October 1919, as Assistant Visiting Surgeon here.

In 1922, when the Hospital established a full-time surgical teaching and research service, known as the Third Surgical Service, Dr. Richardson was made its Chief and at the same time received the appointment of John Homans Professor of Surgery at the Harvard Medical School. This special Third Service was merged in 1925 with the West Surgical Service, Dr. Richardson continuing as its Chief until 1930 when suddenly, at the height of his powers, he was stricken with an untimely and crippling illness that forced his retirement from active duty. He was appointed to the Honorary Staff.

Dr. Richardson was particularly successful in attracting to his service a group of talented young surgeons, who devoted their full time to teaching, and to investigative and clinical work at the Hospital. This group originally comprised Drs. Monroe A. McIver, Edward D. Churchill, James C. White, and Robert R. Linton. The service was soundly organized and wisely administered, and soon began to produce results. The Chief's foresight in the choice of his personnel provided an able successor who has since brilliantly carried on the work so wisely planned.

Edward Richardson was a quiet, pleasant, modest gentleman of sound judgment and deep intellect. He was a skillful and experienced general surgeon who made real contributions to surgery, especially in the fields of the thyroid and parathyroid glands.

His great contribution to the M. G. H. was undoubtedly made when he courageously broke away from the established standards of the successful surgeon of an earlier day, gave up the emoluments of the itinerant operator and devoted himself to the advancement of a full-time service of research, teaching, and clinical work at a single hospital. He founded here an organization that has flourished like the proverbial bay tree.

For fourteen years after his retirement Edward Richardson lived on, severely disabled, prevented from following the profession he loved, but calmly happy and cheerful in his restricted family life, with the occasional fishing and boating excursions of which he was so fond. On rare occasions he appeared at medical meetings and social gatherings. At such times it was a pleasure to see his face light up when old friends, of whom there were so many, greeted him.

His great interest was in his three fine sons, who bid fair to uphold the family tradition of community service set so high by their distinguished grandfathers and father.

L. D.

The new Harvard School of Dental Medicine is also coöperating in the military training program. It opened its January term with eight Navy men under the V-12 program, and two civilians. Upon graduation these present midshipmen will be commissioned in the Navy Dental Corps, with the rank of Lieutenant (jg).

The new School is under the Faculty of Medicine, and its executive head is Dr. A. LeRoy Johnson, Professor of Clinical Medicine.

A letter from Col. Elliott C. Cutler (*r. WS* 1916) to THE NEWS revives past associations fondly remembered, mentions present activities, and expresses hope for the future:—

> Busy as we are, I wish to send a line *re* Adams Leland, having just read the good note by G. C. I do this because I was WS Resident during Adams's last year as ES Resident. We shared the commodious apartment across the corridor from X-ray.
>
> Adams was in the best sense a "strong, silent man". He knew what he wanted, worked steadily, devoted himself to his patients, and was the kind of person one was happy to live with. My recollections are only those of great satisfaction that I had been privileged to be with and near him. Later, with School responsibilities, our paths crossed again. It should be noted he never let any one down, student, patient, or colleague. We are better for his having been with us.
>
> My recent visit to "Pete" was magnificent. I saw many old friends, amongst them Phil Giddings. I found the casualties unchanged from 1917-18, and I learned much that may hopefully benefit our men in the times ahead.

The following letters came to Dr. Faxon and to Dr. Castleman in the autumn, but what Major Tracy B. Mallory (*c. P.*) says has lost nothing in quality through delayed publication. Major Mallory is assigned to a Medical General Laboratory as Pathologist.

It is about two weeks since we arrived in Africa. The unit has been in bivouac since arrival, but I have been living in luxury as a patient in a general hospital staffed by Northwestern. Nothing serious—an apical tooth abscess—but transportation problems made it necessary to hospitalize me. Dick Capps turned out to be one of the staff, and I have been treated as guest rather than patient.

We do not know our permanent assignment, meanwhile I have had a delightful week in a villa overlooking the Mediterranean, with lovely gardens in the foreground and mountains in the background. The swimming is excellent, the weather has been gorgeous, and the hospitality is generous in the extreme. This afternoon I go back to a floorless tent in the midst of a field of stubble and dust, which with today's rain will undoubtedly turn into ankle deep mud. Here is hoping we move on soon.

But complications arose, and three weeks later Major Mallory wrote to Dr. Faxon:

We are actually in one spot, but by all the Army records we are in another, some 200 miles away. How a solution can be found I do not know since records are, of course, inviolate. Perhaps the entire unit will be found AWOL for the last six weeks.

Personally I am having a very good time—the most complete vacation in many years. We are camped in tents in the grounds of a convalescent hospital set up in a series of summer villas perched upon a cliff overlooking the Mediterranean. The weather is ideal, just beginning to get a little chilly at night, and ranging from 70–80 in the daytime.

This town is, for a Bostonian, the crossroads of the universe. Not a day passes without meeting a former student, a resident from one of the Boston hospitals, or some one from the MGH. Capps, Ludwig, Sturgis, Beecher, Clark have recently been through, and John Stewart is due in a day or two. I see little hope as yet of wangling a trip to Casablanca, but I do hope to get to Algiers if the local authorities can only rediscover us on paper.

In the neighborhood are General Hospitals staffed by Northwestern, Washington University and Emory—all extremely cordial. I visit around, looking at the three or four interesting specimens each of them has a week, occasionally go on ward-rounds and sometimes take part in a CPC. It is all at a very leisurely tempo. For instance Friday I drive 40 miles down to —— (taking along a towel because the hospital is built over a hot-spring and possesses the only hot tub bath in North Africa). The CPC will be from 3 to 4 P.M., which would not permit us to get back for mess, so we will spend the night and come back Saturday.

They really have some interesting material, since most of the prisoners of war who need hospitalization are sent there. The American Army is, from a pathologic point of view, distressingly healthy. The only type of pathologist badly needed here is a medical examiner.

You would find many interesting problems in hospital administration in the area. One unit occupies some 60 villas scattered up and down a half mile of cliff. Each villa has its garden, usually luxuriant. French horticulture is simple and fool-proof; all the drainage from the house runs out through the garden. The French theory in compounding perfume is that delicate scents can only be brought out by basing them upon a relatively unpleasant base such as musk or ambergris. I suppose it should be possible therefore to find just the spot in each garden where the scent of the flowers just predominates over the basic effluvia and the true acme of the perfume can be appreciated. I have been unsuccessful in locating the spot.

News of promotions to the ranks indicated has come from various sources.

Capt. Edwin C. Albright (*WM* 1942), General Hospital, South Pacific
Capt. Henry H. Brewster (*WM* 1940), General Hospital, England
Capt. Charles H. Burnett (*r.p.* 1942), Evacuation Hospital, Italy
Capt. William W. L. Glenn (*r.s.* 1941), 184th General Hospital, Fort Devens, Mass.
Comdr. Ashton Graybiel (*EM* 1932), Naval Air Station, Pensacola, Fla.
Capt. John Homans, Jr., (*WM* 1942), Station Hospital, Randolph Field, Tex.
Comdr. Francis T. Hunter (*WM* 1926), Base Hospital, South Pacific
Major Alfred Hurwitz (*gr. asst. S* 1942), Auxiliary Surgical Group, England
Lt. Col. Edward J. Ottenheimer (*ES* 1924), General Hospital, South Pacific
Major Arie C. van Ravenswaay (*P* 1934), Office of the Air Surgeon Hq. AAF, Pentagon Bldg., Washington, D. C.
Capt. Howard B. Sprague (*EM* 1924), USN Hospital, St. Albans, N. Y.
Major Howard Ulfelder (*ES* 1939), Station Hospital, England
Lt. Col. Thomas V. Urmy (*EM* 1928) Station Hospital, Camp Chaffee, Ark.
Capt. Walter E. Vest (*gr. asst. M* 1942), Station Hospital, Camp Chaffee, Ark.
Capt. James C. White (*WS* 1925), Chelsea Naval Hospital and MGH.

...—V...—

Although Capt. W. Philip Giddings (*WS* 1939) is a bit concerned about his appearance in THE NEWS, this journal asks only the opportunity to include his excellent letters as often as they may be had. Dr Edward Hamlin, Jr., (*ES* 1936) rightly felt that this one, written to him in December, should not be withheld from other MGH-ers. Captain Giddings is still with the —— Auxiliary Surgical Group. He received promotion to Captain in December.

The other day when I received myself in print in THE NEWS, I wondered how I ever had the temerity to say so much, or the rashness to put out such a composition. I shall not repudiate it at all; but we have learned and done much more now and are getting more humble by the day, as our patients develop subphrenics, or mediastinitis, or even don't pull through. For the past few weeks we have been doing nothing but the most severely wounded men; and a patient who is not in shock, so as to require a liter of blood and plasma at least, is so much gravy. Things are at times disheartening under these conditions, but never for long, and the successes are the most gratifying I have known.

The old institution is more than holding up its end here. We see the Chief [Colonel Churchill] fairly frequently—on his last visit he had [Colonel Cutler] with him, fresh from Russia, and we had quite a session. In addition we have seen Harry Beecher, John Stewart (who spent the night in our tent last week), Simmie [Major Simeone], Tom [Captain Ballantine], and Floyd Jergesen. Harry is our anesthesia consultant, John sort of consultant on abdominal surgery in Dr. Churchill's office, Jergy orthopedic consultant here in Italy, and Simmie a kind of importation to work with Jergesen on the gas gangrene problem. Simmie is working on the peripheral vascular aspect of the thing, and on that subject in general, and he and Jergensen should turn out a first-class piece of work. Jergy and Tom and I are all in this outfit, though I haven't seen Tom for a couple of months.

In addition to these, I have seen John McDaniel [*ES* 1940] who is a battalion surgeon with some engineers, getting shot at all the time. We are trying to get him out of that stuff and in with us, for he is just the kind of man we need. Stewart Seigle [*EM* 1942] is a front-line Navy surgeon, with a shore battalion. He just goes from invasion to invasion, always in the wee small hours of D-day, and has done a grand job. I bumped plumb into him on the beach at Gela, and again on the one here at Salerno. He has really seen the war.

Our team has had the particularly fortunate experience of a stay of some two months with a British Casualty Clearing Station, corresponding in the line of evacuation to our Evacuation Hospital, but smaller and less fixed. There we did a large amount of operating, and in addition had as delightful a time as one could ask. We were fortunate in landing in an outfit that is seasoned and experienced, and staffed by as fine a group of men as we have seen. We pulled up some deep roots when we left, and we still miss them.

In a note to Dr. Faxon, Captain Giddings expressed again the thanks that has come from so many—and the common pride in the institution on Fruit Street:—

I must tell you how pleased I was with the Hospital's Christmas Card, and how proudly I showed it (with full explanation) to my associates on the team. One of them is from Hopkins, and was duly impressed.

There is quite an MGH gathering hereabouts now, and we are proud of the positions our old friends and teachers hold. . . . These men are all in consultant capacities, and their help and guidance are invaluable.

A letter to his family touches upon other points:—

Christmas has come and gone, marked by a certain superficial gaiety, perhaps real good cheer for some of those here. There were little parties with wine and cake and singing, turkey dinner, and a brief but distinguished guest. The meal, I guess, was the high point, for food such as we had is more than scarce.

I wish you could have an idea of how we live here. We are in a truly beautiful valley, with a flat floor and rugged mountains all around. The towns are picturesque, and not unlike those in Sicily. There is snow on the more distant peaks, and some of the sunrises and sunsets have been gorgeous. But it requires effort to realize these things and appreciate them, for lovely though the valley is, its fields were never meant for living. You cannot know how thankful one should be for things taken entirely for granted—pavements, floors, and things like that are just as much part of the trappings of a town as are his pants to a man.

You have been told that there are rain and mud in Italy, but to know what it means one has literally to "get down to earth". We carry water to the tent in 5-gallon cans across a field—about 200 yards, and in spots up to the tops of our arctics in mud. And it is such slimy and sticky stuff—just about impossible to get off. I can't decide which is worse, the mud of winter or the dust of summer—or, for that matter, the cold or the heat. But the amazing thing is that it is so much a part of the landscape and of our existence, that although we cuss the stuff all day long, the cussing is automatic and we hardly consider it really unless we stop to think about it.

It is no longer unexpected to receive word of the assignment of MGH men to some new corner of the globe. A January letter from Capt. T. Stewart Hamilton (*a. dir.*) tells how the Hospital's unit is spreading throughout its own theatre:—

Things with us are fine. We are, at the moment, busy and most of us happy. Pete Churchill is in town today, so the surgical boys are gathering round to give him a dinner. After his last visit we lost McKittrick, Cant-

Capt. W. Beecher Scoville, MC, AUS (*r. NS* 1938) prepared "Life in an Army General Hospital on the Home Front" for the Journal of the Connecticut State Medical Society several months ago. He reports, in part:—

Most of us continue to be envious of those lucky guys expecting to winter in Southern Italy and summer in the Bavarian Alps, or those others exploring the charms of a South Sea Island. Here am I, in Walla Walla—not India, Saudi Arabia, nor Turkestan — just Walla Walla, Wash.

Few certified army neurosurgeons have been sent overseas, and all of them have gone with university hospital units. They are probably doing less operating than we, but will have more to tell their grandchildren. The rest of us are assigned to General Hospitals in this country rated as neurosurgical centers, to do that elective major surgery and reconstructive work not permitted in station or overseas hospitals. (Sad to relate, these last-mentioned hospitals think up good excuses why all surgery should be made emergency and sent to us for convalescence rather than operation.)

I have been stationed at two such hospitals, and have visited six others. They differ from civilian hospitals in these respects. (1) There are far fewer emergency and acute cases in proportion to the total census. (2) Surgery is rarely done on a lesion or disease incurred prior to induction. (3) There is a vast amount of necessary administrative and paper work. (4) Many non-combat admissions to date have had a large functional component, making surgery a procedure to be done with the greatest caution. (5) Overseas casualties are on the increase, and the combat injury cases are a fine lot, full of patience and courage.

Casualties in this hospital have been chiefly from the Northwest and North Pacific theatre of operations. Our dramatic ones, all from a single island campaign. One time we had an entire ward filled with frozen immersion foot. Due to constant shelling, the men were unable to take off their shoes and socks for six days—in slush and snow. Wholesale amputations appeared in order, but due to the painstaking care of Capt. Albert Lesser from N.Y.C., all the feet and 75% of the toes were saved. Out of 30 patients only two needed later sympathectomies because of continuing cold, blue, painful feet.

On the other hand I have done a great number of sympathectomies for Berger's Disease. I am convinced that the cold, damp northern climate brings out latent cases in men never previously above the Mason and Dixon Line. Many cases have been rapidly progressive and showed little vasospasm by skin temperature tests following a sympathetic block. Nevertheless, sympathectomy has given brilliant results, with a rise in the temperature of the involved foot to within one or two degrees centigrade of the non-involved foot. Every patient has been pleased with the result. This is in line with Smithwick's conclusions that sympathectomy is the treatment of choice in every case below the age of 45, provided there is a good femoral pulse.

For a while we had a 30-bed ward filled with real or suspect cases. They differ from civilian cases in the following: (1) Operation is less successful because of frequent functional overlay. (2) I have seen more postoperative low-back spasm. (3) Here 85% have been lumbo-sacral, 15% fourth lumbar disks, as compared to a 50-50 civilian proportion. (4) The majority of lumbo-sacral cases here give only slight asymmetry of the root sheath and no dural defect in myelogram studies, making the clinical examination of greater value. (5) Pantopaque is used instead of lipiodal. (6) I use an incision one inch lateral to the midline and strip the muscle extra periosteally.

Peripheral nerve repairs now constitute a large proportion of all neurosurgical procedures in the Army. I grow more radical in exploring all cases as early as possible but more conservative in sectioning the nerves. If at all possible I perform a lysis only. The Army now utilizes a very thin "tantalum" foil for wrapping the nerve to prevent adhesions; tantalum wire, the thickness of horsehair, for suturing the nerves; tantalum plates for covering skull defects.

* * *

Lt. William B. Ayers, MC, USNR (*WS* 1943), who went on active duty last July at the Naval Air Station at Quonset, R. I., is now assigned to sea duty aboard a destroyer.

After his training at Carlisle Barracks, Lt. Robert K. Brown (*WS* 1939) expects to be assigned to Fitzsimons General Hospital at Denver, Colo.

Capt. William S. McCune (*WS* 1937) gives his military experience to date: —

On March 27, 1943, I was commissioned as 1st Lieutenant and ordered to Walter Reed General Hospital, where I remained for three weeks in the pool, assigned to the Neurosurgical Service. From there I was sent to Columbia University Neurological Institute for a course in neuroanatomy and neurosurgery under Dr. Tracy Putnam [*ES* 1923].

Returning to Walter Reed General, I was for three months on the Neurosurgical Service under Lt. Col. R. G. Spurling, with transfer on September 1 to Woodrow Wilson General [Staunton, Va.]. There I did the neurosurgery, chiefly peripheral nerve sutures, subdural hematomas, etc. On January 12, I was promoted to Captain, and again transferred to the Walter Reed as permanent duty officer on the Neurosurgical Service. We see a good variety of problems here, there is plenty of surgery, and we are kept busy all the time.

By the way, while at Woodrow Wilson General I took a course in penicillin therapy at Halloran General for a month, and was fortunate enough to learn about penicillin from none other than Champ Lyons. There were many MGH friends there, among them Lieutenant Hawes of the X-ray Department, Captain Croce of the Surgical Service, Capt. Don Forester, Asst. Chief of the Medical Department and others. Dr. Cope came down one day for a visit.

Donald Giberson, who came to the Hospital in February 1934 as an orderly and later served as plaster man on the orthopaedic wards, recently reported in person as to his Army service. He was inducted into the Infantry in April 1942, received his basic training at Fort McClellan, Ala., and was then sent to Fort Dix, N. J., where he was assigned for a time to MP duty and then transferred to the Medical Detachment at the Tilton General Hospital. In February 1943 he was sent to Camp McCain, Miss., and on manoeuvres in Tennessee for further training as a company aide man in an infantry unit. He is now assigned to the 347th Infantry at Fort Jackson, S. C. His rating is that of Technician/5, and he wears the Army Sharpshooter Medal with bars for rifle and bayonet, also a medal for scoring third in target practice in a unit of 250.

Lt. Peter T. Brooks, MC, USNR, (*ES* 1943) wrote to Dr. Allen from the USS "——", at sea:—

How far away those wonderfully full Thursdays seem now, with all the various rounds, operating and conferences, and then the scramble in the afternoon to get caught up on the wards! Today is a typical Thursday at sea, or any one of the seven days that drag themselves through the week. Rounds consisted of viewing one case of healed epidermo-phytosis, two healing circumcisions and a dorsal slit, and one sulfonamide-fast G.C.; surgery none. Every time I stop to think of those mornings on White 3, my mouth waters.

I ran into Dr. Beecher one night, and he gave me the most recent news from home. Dr. Churchill was expected within a day or two, but as we pulled out on one of our numerous "trips", I missed seeing him. [Lt.] Burdick Clarke [*EM* 1943] came over in the same convoy with us in June, and has been back there several times since. The General Unit has been a bit too far away for me to visit, but from the numerous medical units we have carried, news of them is all most excellent, and it sounds as though they are quite busy most of the time, and happy.

My own experience so far has been extremely limited. The "——" is an attack transport of the Amphibious Command, with the task of transporting men and equipment on the various invasion landings. We were at Sicily on July—, and at Salerno on September—, and in our off moments have been either training troops or acting as a regular transport. The actual fighting in which we participated has been confined to the two assault landings mentioned; the first quite uneventful and the second quite the opposite, although we managed to get out of both encounters without any damage to the ship.

After landing our troops and cargo we took on a load of fresh casualties, and for a few days were quite busy. We are most fortunate in having a New York surgeon, St. Luke's trained, as Senior Medical Officer, and, under his guidance, I was most pleased to get some interesting surgery and excellent instruction. We were extremely conservative in all our treatment of the men, leaving perforating wounds of the abdomen and chest to the mercies of sulfonamides and rest—evidently, as shown by those cases we were able to follow, to their benefit, as they all recovered but one who had such overwhelming injuries that he died at sea. Operating was limited to hunting shrapnel that was either giving pain or causing serious functional disturbance. This work fell to me, and I soon became impressed with its ability to travel in weird and unexpected paths! We had one instance of a piece severing the brachial artery in the axilla, and the exploration, ligation, and subsequent improvement of that arm was most interesting.

Infection was extremely rare. All the cases we saw had been treated the same on the beach before being evacuated to us. They all had sulfonamide powder dusted over the surface of their wounds and a D.S.O. applied. In spite of large amounts of dirt, grease, and clothing in these wounds, if they were left alone and dressed infrequently, they did remarkably well, with their local plus p.o. drug.

In the field of medicine, we are learning quite a bit about the therapy involved in malaria and venereal disease. It is not as simple as it sounded in the text books!

And so it goes. We live in the constant hope that some day our bow will point west; and in the meantime we study some, and hope some more!

In addition to his duties as Chief of the Medical Service of the 5th General Hospital, Lt. Col. Theodore L. Badger (*EM* 1928) is Senior Consultant in Tuberculosis for the European Theatre of Operation.

To a full-quota and absorbed audience in the Bigelow Amphitheatre on February 9, at noon, Col. Augustus Thorndike (*WS* 1923), Commanding Officer of the Harvard Unit in Australia, outlined some of the problems of administration and some of the medical experiences of a General Hospital in that area. Only the 6th itself could have listened with more flattering interest. Unfortunately, the details of his remarks cannot be quoted for its benefit, but the following letter gives a brief history of this Harvard unit and of the present assignment of its former Executive Officer, Lt. Col. Charles P. Sheldon (*ES* 1931):—

Although there was a certain amount of "staging" and delay when the first Harvard Unit was activated, and although there was a certain amount of confusion and disappointment when the unit was split, we of the Pacific section were rather quickly mobilized and on our way overseas in the early stages of the war. The officer personnel for a 1000-bed General Hospital was made up at Walter Reed Hospital. The enlisted cadre joined the unit at Fort Lewis, Wash. Nurses were about equally divided between the East and West Coasts.

When the unit sailed, I was given the job of Medical Supply Officer. Being a lowly Captain at that time, I was constantly harassed by senior officers who wanted their particular pet tool, which was of course stored in the last box to be opened of the six thousand on hand. However, through great coöperation by the enlisted men and after many hours of hard work, we finally got all supplies sorted, warehoused and inventoried. Practically all the favorite tools eventually turned up, so everyone was happy and settled down to run a hospital.

About six months later I became Adjutant, and in November 1942 was promoted to Major. As Adjutant, I had an interesting experience in hospital administration which, as some of you know, is quite *something* in the Army. Further experience was gained after I was appointed Executive Officer in January 1943.

Gus Thorndike became Commanding Officer in February 1943, when Col. Raymond O. Dart, formerly of the Letterman General Hospital, moved on to Base Headquarters. Gus did a fine job in the ensuing months as the hospital grew into one of the most beautiful installations in the South West Pacific Area. It was established in a former school which had extensive lawns and gardens, with many unusual trees and shrubs, including several varieties of palms. We worked hard and cared for a large number of sick and wounded, and I consider my 16 months with the Unit an outstanding epoch in my Army and my medical career.

In September last, my promotion to Lieutenant Colonel came through, and in October I was transferred to Headquarters of the Advanced Section, USA, SOS. Again I was associated with our old Chief, Colonel Dart, and was given charge of hospitalization in the Advanced Bases. Most of my time was spent traveling to the various areas to coördinate and supervise hospitalization in them. I saw practically all the SWPA including several of the islands.

The outstanding thing on these trips was the ingenuity of American doctors in constructing and operating their hospitals in the face of great adversity. Although building materials were not always readily available, many substitutes such as native hut construction were found, and one was constantly amazed at the type of medical care given. To see all these units and appreciate their spirit, enthusiasm, and determination made me realize more than ever before how wonderful it is to be an American.

On December third I was given the opportunity to command the —th Station Hospital, which is a 500-bed unit that was activated at Fort Leonard Wood, Mo., and came overseas about six months ago. This was the type of work I had been trained for, so I quickly accepted the command, much to my pleasure and satisfaction in the short time I have been here. We are permitted to say that we are "Somewhere in New Guinea", which is not nearly the terrible place so many press accounts and letters would have you believe. Our hospital is in a lovely valley with surrounding green-clad mountains through which the ocean can be seen in the distance. The days are usually quite warm but the nights are invariably cool. Flies and mosquitoes are not serious pests, and sickness in this location is not a great problem. There is a great spirit and enthusiasm in this unit, and I know the coming months will be worthwhile for all of us.

Lt. Colonel Sheldon does not, however, hope for permanent assignment in New Guinea. He began his letter to Dr. Faxon:—

I have just received the MGH Christmas card signed by the members of the staff, and it gives me the feeling that Christmas greetings have come from each of you personally. It definitely gives one a lift to know that all the "old friends" back home do not forget, no matter how long you may be away. It seems, when I seriously think back over the past two years, that I have been away from home and friends an awful long time. However, I have fortunately had an active army career, which has helped make the months pass faster.

* * *

Promotion in rank is disclosed for Lt. Col. Harold H. Hamilton (*r.s. PH* 1933) in his reply to a request for news of his post, the Station Hospital at Westover Field, Mass., where he is Chief of Surgical Service:—

What used to be called the "War of Westover" is now more chronic in its phase—better named "The Siege of Holyoke".

Capt. Thomas Warthin [*a.M.*] is Flight Surgeon here. He recently graduated from the School of Aviation Medicine at Randolph Field, Tex.

Capt. Daniel Crosby Greene [*CM* 1940] is Squadron Surgeon of a Fighter Squadron. He left Westover on this tactical mission about three months ago, and when last heard from was on Long Island.

Capt. Clarke Staples [*gr. asst. S* 1942] is Chief of Surgical Service at Selfridge Field, Mich. He left Westover to assume this position about three months ago.

We were honored recently by a visit from Drs. Horace Sowles and Robert Brown from M.G.H., giving us an instructive afternoon and evening on "Penetrating and Non-Penetrating Wounds of the Chest and Abdomen".

Lt. Comdr. George E. Gardner (*CM* 1939) received his commission on October 22, 1943. He has been assigned as Psychiatrist at the Naval Prison and Brig, Navy Yard, Philadelphia, Pa. Previous to his internship at the General Hospital, Lt. Commander Gardner was Senior Psychiatrist at the McLean Hospital. For the past two years he has been Director of the Judge Baker Guidance Center, and an Assistant in Pediatrics at the Harvard Medical School.

First news comes from Comdr. William K. Livingston, MC, USNR, (*WS* 1922), giving his station as the U.S. Naval Hospital, Oak Knoll, Cal.

After getting his commission on April 9, 1943, Lt. Henry S. Fuller, MC, AUS (*WM* 1943) received training at Carlisle Barracks, took the course in tropical medicine in Washington, and was assigned to a field hospital in training at Camp Breckenridge, Ky., for service overseas. On New Year's Day he wrote to Dr. Means from India:—

I was very pleased and deeply touched to receive the Christmas "J.H.M." and the greetings signed by the staff members and all my other friends on the MGH home front. Such things are real morale builders.

In writing home, I can tell only of the little things that vary our everyday life, as other things are *out*. But I can tell you of our Christmas activities. Our nurses threw a party for our enlisted men on Christmas Day, and then night before last they gave the officers a party. It was a miracle of ingenuity on their part. They decorated a warehouse with fan-leafed palms and long fluffy-topped grasses tied with red ribbons. They had mounds of delicious chicken sandwiches, deviled eggs, cashews, "et al." In one corner of the room they set up a bar. They had saved all their beer ration, and had acquired some local "Fighter Brand" whiskey and gin. (These products really are fire water!) A wood fire was burning in the center of the cement floor, and each of us brought his kerosene lantern for lighting. A record player was borrowed for the occasion, and we danced, and sang Christmas carols. They also had a grab bag, from which I pulled two pairs of woolen socks. These will be put to use immediately, as we nearly freeze at night while we roast during the daytime. So in all, some Yankees in a certain obscure portion of India had a glorious Christmas celebration, and we hope to have the next one *at home*.

Fortunately I have had several opportunities to see some of the tropical diseases in which, as you may recall, I am interested. As yet I have not been able to study them from their inception to their ultimate end, but I go on ward rounds every time I have a chance. My most recent experience was with a variant of tsutsugamushi. I believe I have seen more cases than anyone else at MGH! Also, I am seeing the common things, such as amebic and bacillary dysentery, all varieties of malaria, and certain worm infections. I saw a beautiful case of destruction of the nose, dactylitis, and deformed bones of the forearm—textbook picture. So in all, this is a clinician's paradise. I hope that when this war is over, I may be able to fit into some niche at the old MGH, because I loved every minute of my stay there, and I hope to return to it. Please give my very best to all my friends.

Major Ralph F. Traver (*ES* 1930) is Commanding Officer of a Portable Surgical Hospital stationed somewhere in the South Pacific. When last reported, several months ago, he was a Captain, and Surgical Chief and Executive Officer of the Station Hospital at Camp Adair, Oregon.

Lt. Comdr. Robert S. Schwab (*r. s. N* 1935) was detached from service at the Chelsea Naval Hospital and the Brain Wave Laboratory here on November 1, 1943. He is now Neuropsychiatrist with a Naval Mobile Hospital in New Zealand. This is a new unit which recently arrived overseas. Among others from Boston he has met Lt. Comdr. John Carmody (*NS* 1934), who was on his way back to the U. S. Major Merrill Moore is at a nearby Army Hospital.

Nurses of the Hospital Unit on parade, Armistice Day in North Africa, 1943
Led by Lt. Helen J. Coughlan

Others who may be identified are: Lieutenants Wilcox, Fraser, Hewit, Brandon, MacNeill, Plant, Johnsen, Anderson, Rogers, Corcoran, Ayer

lon, and later Taylor and Townsend, so Heaven knows the result of this one. As you no doubt know from the C.O., Ludwig has gone to a N.P. hospital, and Sullivan [and Gundersen] on detached service.

It tickles me that, as these fellows get their orders, they put on the long face and pass the tale of how they've been kicked out, etc., etc. Otto Aufranc interrupted one the other day with: "Now, tell me honestly, You asked to be transferred, didn't you?" "Well, yes."

Many lament the going of these men. So do I, for the loss of the friendly contacts, yet I see the good done the Medical Corps and the Army by putting well-trained and experienced men where they can act as leavening for the smaller units. It is at times hard to believe, but I think I'm right in saying the Army doesn't revolve around the 6th —— ——! If by splitting up we can speed final Victory and can render better medical aid to our men, I'm all for it.

Shermie is doing his customary good job and running his all-important department smoothly and well. He is his usual delightful self, without a mean thought or a harsh word for a soul. Claude Welch is a major, as of a couple of months. Champ Lyons passed through a couple of days (or was it weeks?) ago, chanting the praise of penicillin. It was good to see him.

To complete the report on the Hospital's unit, we add a paragraph from Colonel Goethals' letter, of like date:—

Our environment, both internal and external, is good. We are often complimented on our mess, and on the celerity and dispatch with which we receive and evacuate convoys. Only — per cent of all the thousands of patients passing through our hands in 1943 died. While this low figure is due to a multiplicity of causes it shows at least that our admissions have been accorded care by the services of which the MGH need not be ashamed.

The following narrative report of the Nursing Service of the Hospital's Unit in North Africa was prepared by its Chief Nurse, Capt. Doris Knights, A.N.C.:—

1. The Nursing Service of the Unit started with the opening of the Officers' Ward on 3 March 1943. Seven nurses with one nurse in charge were assigned to this ward, and one nurse for night duty. The nurses, assisted by the corpsmen, made the College dormitory suitable for the adequate care of patients. Other nurses were assigned to duty daily, as the hospital took form and was made ready for further reception of patients.

2. The Contagious Ward opened. The nurses assigned there, where the facilities were quite inadequate, made preparations to take care of precaution cases. By trial and error they worked out a satisfactory system and trained the corpsmen how to practice precautions with the setup as it was.

3. When the Moroccan Ward was opened, to accommodate approximately 450 patients, it presented many problems; how to store supplies; what to do with patients' small personal belongings; how to keep beds dry under a leaky roof, and last but not least, how to supervise such a vast area. Nurses assigned there did an excellent piece of organization, improving gradually in detail until they had an unusually satisfactory arrangement. The Moroccan Ward eventually became one of the better run departments. Many of the wards were opened under almost impossible circumstances. For weeks the workmen were still finishing construction, and noise and confusion were rife.

4. The Operating Rooms were unfinished when the operating schedule went into effect. The nurse in charge, with twelve others, made supplies and transported them to another unit for sterilizing until our own sterilizers were set up. For eight months this department has functioned smoothly, and nurses have been trained both in operating-room technique and also in anesthesia. One nurse, with no previous experience in anesthesia, was given a comprehensive preparation and has recently been transferred to another unit for the express purpose of administering anesthesia. The Chief Nurse, with fifteen years' experience giving and teaching anesthesia in civilian life and formerly in charge of the nurse anesthetists at this hospital, has also been transferred to an organization wthout sufficient anesthetists.

5. The Nursing Service in Psychiatry has been in charge of a nurse, recently promoted to 1st Lieutenant, who had some experience in Neuro-psychiatry at an Army post in the United States. She has had only three nurses with previous experience. The others have been instructed by her, and the service they have performed has been commended by the officer in charge of that section.

6. In the Eye, Ear, Nose and Throat Clinics one nurse is kept busy all the time assisting the officers there, making visits with them on the wards, and preparing sterile supplies.

7. Approximately 15 nurses are assigned to night duty, with one acting as supervisor.

8. All seven Chief Nurses were promoted to 1st Lieutenants since arrival in North Africa; one has been transferred. Our present permanent strength is 100 nurses, with one nurse from another hospital on temporary duty to attend a refresher course in anesthesia.

9. Since the Unit has been in this Theater of Operation our patient census has fluctuated considerably. At times we have been very busy, but even when the number of patients was reduced we have had sufficient work to keep all the nurses occupied and enthusiastic.

THE NEWS

No. 19 Boston, Mass. April, 1944

THE MONTREAL GENERAL HOSPITAL
FOUNDED IN 1821
PRESENTS THIS PLAQUE
THROUGH ITS GYNAECOLOGICAL SERVICE
IN APPRECIATION OF THE SIGNAL ADVANCES
IN THE ART AND SCIENCES OF MEDICINE
MADE BY THE
MASSACHUSETTS GENERAL HOSPITAL
SINCE ITS FOUNDING IN 1811
ON ITS ESTABLISHING A DEPARTMENT
OF GYNAECOLOGY IN THE
VINCENT MEMORIAL HOSPITAL
FEBRUARY 1942

This is the inscription on the bronze plaque received on the first anniversary of the Gynaecology Department established here to take over the former activities of the Vincent Memorial Hospital.

On February 15, 1944, at an informal ceremony in the Trustees' Room, this memorial was presented to the Hospital by Dr. Archibald Campbell, Associate Professor of Gynaecology and Obstetrics at McGill University and Chief of the Gynaecology Service at the Montreal General Hospital. It was accepted by Mr. Henry C. Everett, as President of the Vincent Memorial Hospital, and by Dr. Faxon as Director of the Massachusetts General Hospital. Dr. Campbell, noted in his field, has been for many years a personal and professional friend of Dr. Joe V. Meigs (*ES* 1921), head of the service established here.

The Trustees of the Vincent Memorial Hospital and of the Massachusetts General Hospital, members of the Obstetrical Staff, and other guests were present on this occasion. The plaque will eventually be placed in the new building planned for the Gynaecology and Children's Medical Services, to be constructed here on the Hospital grounds when conditions permit. It is engraved with the seal of the Montreal General Hospital and at each corner shows the Canadian emblem of the maple leaf.

Only brief portions of Dr. Campbell's speech can be quoted here. In presenting the plaque, he said:—

> On behalf of the Montreal General Hospital, let me thank you for the privilege of meeting the Trustees of this—another M.G.H. They were the first hospitals, and for years the only hospitals, in their respective seaport cities. Now, mellow with age, enriched by the experience of a century, they are steeped in similar traditions. . . .
>
> In this new building I can envisage a new epoch in our special branch of medicine. The present incumbents will see to it that new laurels are added to this great institution, in the corridors of which one is conscious of noble traditions, of high purpose, and great achievement. . . .
>
> When this war ceases, we must not forget the ideals we are today protecting. If we are to keep faith with those who built our traditions, and with those who today have gone forth as crusaders in their defence, a stout link must be forged between all worthy institutions. It is a propitious time to plant the roots of peace by mutual understanding and good will. It is, therefore, my unique privilege to ask the Massachusetts General Hospital to accept this plaque from the Montreal General Hospital as a token of friendship and unity.

* * *

Announcement has been made of the award of the Warren Prize for 1943. Eleven essays were submitted, and the votes concerning the award, recorded at the meeting of the General Executive Committee on March 1, are as follows:—

To award the Warren Triennial Prize to Dr. David G. Cogan and his associates, V. Everett Kinsey, Ph.D., and Erwin O. Hirsch, B.A., of the Howe Laboratory of Ophthalmology, Massachusetts Eye and Ear Infirmary, for their essay entitled "Physiological Studies on the Cornea".

To make Honorable Mention of the essay, "Studies on Traumatic Shock", by Everett I. Evans, M.D., Medical College Hospital, Richmond, Va.

Dr. Cogan is Associate Professor of Ophthalmology, Harvard Medical School. He has been associated with the Eye and Ear Infirmary since his interneship there in 1933-35. Dr. Kinsey has been Instructor in Ophthalmic Research, Harvard Medical School, since he joined the staff in 1940. Previously he was engaged in Ophthalmic Research as Fellow in Physiologic Chemistry at the University of Pittsburgh. Mr. Erwin O. Hirsch was temporarily associated with the Howe Laboratory prior to his entrance into the Harvard Medical School where he is studying at present.

Dr. Cogan comments on the subject of the thesis, as follows:

> This is the report of studies carried on at the Mass. Eye and Ear Infirmary during the past few years, dealing with physiologic and clinical mechanisms of the cornea. It is shown that the membranes on the anterior and posterior surfaces of the cornea act effectively as semi-permeable membranes and, in conjunction with hypertonic tears and aqueous humor, enable a continuous abstraction of fluid out of the cornea. This maintained state of deturgescence, which is unique for the cornea, is essential for its optical properties.

Dr. Evans, whose essay received Honorable Mention, now holds an appointment as Assistant in Surgery at the Medical College of Virginia. During 1940-41, as a Rockefeller Foundation Fellow and with appointment as a Graduate Assistant, he did research in surgery and anesthesia, working with Dr. Henry K. Beecher and Dr. Hamlin, at the Surgical Laboratory of the Harvard Medical School at the Massachusetts General Hospital.

At the meeting of the Trustees next following the annual meeting of the Corporation of the Hospital, it is their custom to appoint the members of the Visiting Staff for the current year and to announce changes in the Staff lists. At their meeting on February 18, 1944, the Trustees announced the retirement of Dr. Margaret V. Grogan, Assistant Physician, of Dr. Carlisle Reed, Assistant in Medicine, and of Dr. Henry E. Gallup, Associate Physician to the Children's Medical Service. Dr. Grogan has been a member of the Staff since 1920. Dr. Reed has served since 1929. Dr. Gallup was appointed in 1942.

The Trustees appointed to the Board of Consultation, Dr. John S. Hodgson, Visiting Neurosurgeon, and Dr. J. Herbert Young, Physician to the Children's Medical Service. Dr. Stewart H. Clifford, Associate Physician to the Children's Medical Service, was made Consultant to that department. Dr. Harold E. Dyer, Assistant Dental Surgeon, was granted leave of absence because of military service.

The Trustees announced the promotion of Dr. Marian W. Ropes from Assistant Physician to Associate Physician, and the appointment of Frederick Wyatt, Ph.D., as Assistant Psychologist. Dr. Benjamin Schneider was made Assistant Resident in the Radiology Department for one year, beginning February 15, 1944, and Dr. Eli Robins was appointed Assistant Resident on the Psychiatry Service for the term October 1, 1944 to July 1, 1945.

Dr. Thomas A. Devan, who has served as an Assistant Director since July 1, 1942, has been granted leave of absence, effective February 4, 1944. The Trustees have appointed Dr. Charles L. Clay and Dr. Ferdinand Haase, Jr., as Assistant Directors.

Dr. Clay assumed his duties at the Hospital on the date of his appointment, February 18, 1944. He is a graduate of Dartmouth College and of the Columbia University Medical School, and served his internship at the Lawrence (Mass.) General Hospital during 1921-2. Since that time he has held appointments as Physician at Danvers State Hospital, as Assistant Superintendent at the Peter Bent Brigham Hospital, Medical Director at the Long Island Hospital in Boston, Superintendent of the Jackson Memorial in Miami, Fla., and as School Physician with the Dade County Health Unit in Miami.

Dr. Ferdinand Haase will take up his duties here on April 1. He is now acting as Resident at the Children's Hospital in Buffalo, N. Y. Dr. Haase received his M.D. degree from the Harvard Medical School in 1942, and served as House Officer at the Children's Hospital in Boston. He is a graduate of Yale College.

The appointment of Allen H. Mathewson as Purchasing Agent of the Hospital was made by the Trustees at this meeting. Mr. Mathewson has been Assistant Purchasing Agent since 1940. He came to the Hospital from New Haven, where he was Assistant Dirctor of the New Haven Hospital and of the William Wirt Winchester Hospital in West Haven.

The General Executive Committee announces the resignation of Dr. A. Walter Ciani as a Graduate Assistant in Orthopaedics, and the appointment of Dr. Roy W. Layton as a Graduate Assistant in Surgery. The appointment of Dr. Marian W. Mathews was changed from that of Research Fellow to Clinical Fellow in Medicine.

GILES WALDO THOMAS

Giles Waldo Thomas whose untimely death from a type of lymphoma occurred on January 12th, 1944, was an East Medical House Officer in 1929-30, and Assistant Resident in Medicine 1930-31. Thomas was of the Harvard College class of 1924 and received his M.D. from Harvard in 1928.

Early in his medical career he developed an interest in psychiatry. After finishing his residency in 1931 he went to the Department of Nervous and Mental Diseases of the Pennsylvania Hospital in Philadelphia, where for three years he obtained training in psychiatric methods.

In October of 1934 he moved to New York and joined the psychiatric staff of the Presbyterian Hospital. For several years also he worked in the Research Division of the Metropolitan Hospital at Welfare Island psychoanalyzing patients with rheumatoid arthritis. His work in this field is probably his most important contribution to medicine. One of the staff of the Presbyterian Hospital is reported to have said that they had learned more about arthritis from Thomas than anyone else.

Thomas went on active duty as Captain in the Medical Corps of the Army on June 22, 1942 and was assigned to Fort Devens. He spent a month in the winter of 1943 at the School for Army Psychiatrists at the Lawson Hospital in Atlanta, Georgia. In May of 1943 he was transferred to Camp Sibert, Alabama, to head up a psychiatric unit and was recommended for promotion. It was en route to this duty that the disease which proved fatal first became manifest. Under x-ray treatment he made a temporary improvement. But on August 10, 1943 he was honorably discharged from the Army for physical disability. He, therefore, took up again his work at the Presbyterian Hospital and private practice in New York. Not for long, however, for toward the end of November he had to give up work and failed rapidly from that time.

Giles Thomas will be greatly missed. His training and experience in psychiatry, combined with native ability of a high order made him the kind of physician which is greatly needed in the military service and which will be even more important in the post-war era.

J.H.M.

OFFICIAL NOTICES

The Blood Bank is anxious to have additional volunteer donors for Tuesday afternoon appointments. Call the Blood Bank—Cap. 4300, Line 261—and make it Tuesday, if possible, between one and four o'clock.

The Hospital will observe April 19 as a holiday, in commemoration of the Battle of Lexington and Concord.

Under the heading, "Wartime Emergency Diabetic Coma Service", *The New England Journal of Medicine* printed the following notice in its issue of December 30, 1943. The name of Dr. Elliott P. Joslin (*WM* 1895) is universally known in connection with the treatment of diabetic patients, and this is another of the many contributions he has made to their well-being:—

> Early diagnosis and prompt treatment of diabetic coma lessen mortality and shorten the period of recovery. With this in mind, the Emergency Diabetic Coma Service has been created at the New England Deaconess Hospital.
>
> Through the co-operation of the hospital, a corps of diabetic nurses, a chemical technician and the medical staff, blood and urine analyses, as well as medical treatment and special nursing, will always be available, day and night, Sundays and holidays. Such a service would be desirable for all hospitals, but unfortunately on account of war conditions this is not feasible.
>
> Any doctor who has a case of diabetic coma in or outside a hospital and cannot secure the laboratory and medical assistance that he believes indicated can feel at liberty to call on the Emergency Diabetic Coma Service at the New England Deaconess Hospital for consultation regarding treatment or admission of the patient.
>

> New England Deaconess Hospital
> Deaconess Road
> Boston

The building at No. 23 Parkman Street, to which the Hospital received title last summer, has been remodeled and is now occupied as a nurses' residence. On February 1, thirty-three student nurses took up quarters there.

The Hospital now owns the entire block fronting on Parkman Street between Blossom and North Anderson Streets. Lowell House, at No. 35 North Anderson Street, is at present occupied by various members of the Hospital personnel. No. 27 Parkman Street is a dormitory for housemen employees, and No. 25 is assigned to house officers. No. 23 Parkman Street and the four houses previously acquired east of it, with connecting passages between the units, now form a dormitory for nurses. At present it is occupied chiefly by student nurses, but a small proportion of graduates are also housed there.

In listing the MGH members of the Committee on Post War Medical Service, the name of Capt. William E. Eaton, MC, USN (*D* 1907) should have been included. The total MGH representation on the Committee now appears to be eight.

The Editors,—

This is to inform you of my whereabouts. After a week at Camp Devens (mostly on K.P. and "Dive Bombing Missions", Army slang for picking up matches and cigarettes in the company area), I was shipped to Camp Grant for my basic training.

This camp is training medical soldiers. After a period of seventeen weeks we are attached to the various fighting forces of the Army: Infantry, Artillery, Air Force, Paratroopers, Armored Force, etc. Our training is therefore as rigorous as any of the above mentioned units. My long association with the M.G.H. (14 years) comes in handy. Even though I expect to be attached to the Army Medical Museum in Washington as a photographer, this training will be to my advantage, both physically and mentally.

Our training consists of body toughening and knowledge to give emergency medical treatment to wounded soldiers at the front. We are not armed except when in the Pacific theatre of war against the Japanese. Since they were not signatories of the Geneva Red Cross pact, they therefore do not distinguish between armed and medical personnel. I'll be glad to send you more information later.

Very truly yours,

"Bruno"

The Army will, let us hope, find even half as many uses for Pvt. Bruno Mickeleit (31428529), 2d Platoon, Comp. D, 29th M.T.B., as did the Surgical Department for the accomplished fellow they knew by the signature above.

Monday, Tuesday, Wednesday, Thursday — four mornings each week, from nine until one o'clock. This is the schedule of the War Service Workroom in the solarium on the eighth floor of the White Building. Here the Workroom members perform valuable services. Rubber gloves, after careful mending, become whole again; arm boards are covered; various and complicated bandages are made; from old X-ray film, chart and medicine card cases are cut and stapled. And these are not the only tasks, by any means. The activities of the Workroom vary according to the needs of the Hospital, as determined by the Nursing Staff.

Under the expert supervision of Mrs. Paul D. White, Miss Nathalie McLean, and Mrs. Richard F. O'Neil, a group of faithful and able volunteers is giving approximately twenty-eight hours each morning. The War Service Workroom, like many other services in the Hospital, carries out its duties so efficiently and unobtrusively that the extent of its achievements may not be generally known. Its consistent service is greatly appreciated, however, by the many departments whose needs it helps to meet.

The News will be very glad to receive word from recent graduates now assigned to active duty, to supplement the list below:—

- Lt. Donald V. Baker, Jr., MC, AUS, (*ES* 1943), 18th Bombardment Maintenance Squadron, Pratt Army Air Field, Kan.
- Lt. William R. Eyler, MC, AUS (*CM* 1943), School for Medical Officers, Camp Barkeley, Tex.
- Lt. Oscar W. Hills, MC, AUS (*M* 1943), MRTC School for Medical Officers, Co. 1, Camp Barkeley, Tex.
- Lt. Terry E. Lilly, Jr., MC, USNR (*ES* 1943), Tampa Ship Bldg. Co., USS Sierra Detail, Tampa, Fla.
- Lt. Duane H. Mitchel, MC, AUS (*M* 1943), Schick General Hospital, Clinton, Iowa
- Lt. Cornelius J. Shea, MC, USNR (*ES* 1943), Amphibious Training Command, N.O.B., Norfolk, Va.

From his post as Executive Officer of the Boston City Hospital unit, now in England, Major Albert G. Engelbach (*a.dir.* 1929-37) adds a few details to our recent account of this group.

Former members who have been detached include Major Richard P. Stetson (*WM* 1928), now Chief of Medicine at the Thayer General Hospital in Nashville, Tenn.; and Lt. Col. Wilfred Bloomberg (*r.p. N* 1931) who is Psychiatrist for the 1st Service Command.

Of interest, also, is the fact that two members of the 6th Base Hospital in the last war are with us: William H. Lee, now a Captain in the Medical Administrative Corps, and Michael Gaddis, a non-commissioned officer.

We are most fortunate. A new hospital, which is as yet not fully completed (as you know hospitals never are) and still operating to care for the patients assigned to us. It is fun to watch developments and to use things to the best advantage possible.

Major R. Nelson Hatt (*Or.* 1919) sends from Britain his appreciation of the Christmas card and makes this request of Dr. Smith-Peterson: "Tell them how very pleased and grateful I am to be so well remembered in the season of renewed faith and pledges."

The Auxiliary Surgical Service has taken us into fields not usually available to the older orthopaedic surgeon, and, while I doubt the value of my presence there, it was a grand adventure. Physically I was able to slug it out with the younger fellows, and aside from a mild case of malaria in Sicily the wear*age* and tear*age* has not been great. However, forward-area surgery cannot be too involved, and the only possible excuse for placing an orthopaedic surgeon in this sector of the evacuation line would be in the capacity of consultant, to be called upon in cases of questionable amputations and to check unsatisfactory plaster technique. (Surprising how many well-trained and competent general surgeons have little ability or pride of accomplishment in plaster work!) A considerable number of evacuation hospitals have competent, well-trained young orthopaedic surgeons, while station hospitals appear to make the service one of election or appointment without respect to qualifications. The scope of surgery in the latter is fortunately limited by directive. The general hospitals (where *real* definitive surgery really begins) seem pretty well off in the matter of personnel, and I have met several of our younger friends who are doing excellent work. I still hope to make a worthwhile contribution in the rehabilitation of crippled "G. I. Joe".

Major George A. Marks (*ES* 1931) is one of the Assistant Surgical Consultants in the New Guinea area. Recent letters indicate that he has been on an inspection trip on New Britain.

•••—V•••—

Lt. Charles C. Derrick (*WM* 1942) wrote to Dr. Means from his assignment with a Naval Mobile Hospital in the South Pacific. As his companion for the preceding seven months, he reported Lt. James T. Heyl (*WM* 1939), whose first service in the War was as a member of the American Hospital in Britain under Dr. Philip D. Wilson (*ES* 1914).

I am now rounding out my ninth month here on this "beautiful tropical isle". At this moment it is raining—enough said.

To give you a rough idea on the amount of work we have had since this hospital opened I would like to quote a few figures but— . . . Our bed capacity is larger than all the General group combined and is still growing, though we are nearing the end of construction. The cases have been well diversified.

Until about a month ago I had a general medical ward. At that time Jim and I were put in charge of the malaria wards, and since then we have had quite a time. Our first assumption was that we should try out different types of treatment and see what we could find out. As a result we are using quinine, atabrine, and plasmochin in about four different combinations. It is too early to arrive at any conclusion, but we think that at least we have found out a few interesting facts. The unfortunate part is that our follow-up is not going to be very good because the men move around so fast.

We use a 72-bed ward for our more acute cases and then move them to another, when under control, to have room for the incoming cases. My own feeling is that atabrine is not working out quite as well as we had hoped. Plasmochin has given us a small number of toxic reactions, and we have a great deal of respect for it and tend to use it as sparingly as we can. Using quinine in conjunction with atabrine seems to be the choice, though the number of hospital days is a little more than when using large doses of atabrine alone.

We have had one group of cases that might interest you. They have been designated as Pneumonia, Primary Atypical, Etiology Unknown, for want of a better term as far as Navy nomenclature is concerned. They are characterized by general malaise, temp. up to 105, sometimes pain in the chest, cough, and hemoptysis. On physical finding there is anything from a clear chest to one filled with diffuse moist rales and scattered areas of dullness. An X-ray may show a small patch of diffuse mottling and patchy areas of consolidation, to the advanced picture of miliary tuberculosis. The remarkable thing is that the X-ray finding in the milder cases does not conform with physical findings, and the whole chest may clear up in 48 hours.

A few cases showed no findings either by physical examination or X-ray, and had considerable hemoptysis. The mortality rate is very low, and I know of only one death in close to 100 cases in the past month or so. At autopsy that case showed almost the same picture of lung involvement as did a series of cases of Influenzal Pneumonia I saw in Boston around 1940–1. However on section there is hemorrhagic fluid in the alveoli and that is all. No involvement of the alveolar tissue was noted.

We have used sulfonamids, penicillin, and both together, and have come to the conclusion that the ones we leave alone, and give only supportive treatment to, do just as well, if not a little better. The strange thing is the difference between how they look and feel, and the physical and X-ray findings. Cases with minimal findings will feel sick, look sick, cough a lot, have large amounts of hemoptysis, and high temperatures; and some cases with widespread findings will feel fairly well, have moderate temperatures, some cough, and a moderate amount of hemoptysis. They recover quite rapidly and feel well, and in about a week are asking to go back up and start chasing Japs again.

To report on one other former member of the Medical House Staff: Herb Moffitt was in to see me about six weeks ago. He has had a world-wide experience since he left Boston, and after an episode in our area was headed for more civilized climes. He had hopes of seeing the bridge that arches the gate but was not sure. We all dream of that chance, and as a rule need only a slight glimmer of hope to make our thoughts go berserk.

Hannibal Hamlin, who has been hereabouts for many months, is due to join our group in the very near future. Arthur Willetts is back from a very exciting time.

Lt. Herbert C. Moffitt (*EM* 1942) is the son of Dr. H. C. Moffitt (*EM* 1895). He has been serving aboard a destroyer. Lt. Comdr. Hannibal Hamlin (*r. NS* 1942) was for some time aboard a well-known hospital ship and later assigned to an Advance Base.

Lt. Arthur T. Willetts (*r.U* 1941) has been for well over a year with a Marine unit in the South Pacific. The latest word about him comes from reports in Pittsburgh newspapers about his work in charge of the dressing station on Cape Torokina at Bougainville during the first day of the battle:—

Lieutenant Willetts took the whole matter lightly. "I haven't done anything," he was quoted as saying when asked about his work. "We just landed, got shot at, and drove 'em out. . . . I never saw spirit like these boys have. . . . The credit goes to the hospital corpsmen who braved the front line fire to give first aid."

But the *Pittsburgh Press* also quotes a sergeant of Marines:

When we landed under fire on Cape Torokina the doctor worked like a Trojan to treat the wounded, see they were properly identified and returned to the safety of the transports as quickly as possible. I recall one case where his prompt treatment of a severe abdominal wound probably saved the kid's life. And the doctor was under fire all the time, too. You just can't get him away from his outfit. He stays with them in the lines when he doesn't have to.

A note from the office of his father, Dr. Ernest W. Willetts, says: "Until these notices came out in our local papers we did not know just where Dr. Willetts was. We learn from one or two men who have been invalided home, that he has been in the very hottest of the fighting; where the losses have been heaviest."

Lt. Irad B. Hardy, Jr. (*ES* 1939) has been in service since September 1942 and is Surgeon with a Marine battalion that was assigned to action in the Pacific early this year. In a family letter he gives an outline of his experience during the initial American attacks in the Marshall Islands:—

I'll tell you briefly what happened. On our way in to the beach three of our amphibious tractors tipped over in the surf. I was in one of them. I helped get the men ashore. Good gosh, the waves were 20 feet high at least. I lost all my gear I had with me, but am thankful to be alive.

Lieutenant Hardy later wrote that he is sending home his waterproof watch, which "went bad"— after three hours in the water!

Lest some readers get the impression that worms, not spirochetes, were responsible, THE NEWS hastens to state that a sentence was inadvertently left out of Lt. Henry S. Fuller's letter in the last number. It should have read:—

. . . I am seeing the common things, such as amebic and bacillary dysentery, all varieties of malaria, and certain worm infections. *So it goes. One sees tertiary manifestations of lues in any bazaar.* Yesterday I saw a beautiful case of destruction of the nose, dactylitis, and deformed bones of the forearm—textbook picture. . . .

The first list of Hospital members in military service included the name of Lt. Comdr. Harold C. Bean (*WS* 1918). A later address disclosed his assignment at Guantanamo. Request for news from that area now brings from Comdr. H. C. Bean, MC, USNR (Ret) an account of his military and medical career in the year intervening:—

Not being an imaginative soul, I have never been able to visualize anything of particular interest in my 17 months on a remote station away from War's excitement. Plenty of routine and fighting of boredom was about all I could muster.

In November 1942 I had a coronary attack and was flown out to Florida in December. Finally dunked into Chelsea five days before the record cold weather of last year, and nearly died all over again. Those super experts at the Naval Hospital in Chelsea couldn't find any excuse for retiring me, so I was assigned to duty there. After three weeks they had me shifted to Newport, and I was placed in charge of the Orthopedic Service at the Hospital. After three weeks there I had another coronary attack, and was finally relegated to the backwoods of New Hampshire to recover.

While at Lake Winnipesaukee I built over my camp, inside and out, and otherwise took care of myself with the result that once more the super experts could find nothing wrong. But the Navy retired me as of January 1, 1944, though I have been retained on active duty and HERE I AM, in Cambridge in charge of the Medical Department of the Naval Trainin~ Schools here at Harvard. Feel just as good as I ever did, but have been given a back seat in this fight, and I have many regrets on that score.

That's my story. Nothing exciting or interesting. [!] Besides doing my bit for the Navy, my greatest thrill now is to see how many years I'll be able to live on this borrowed time.

Commander Bean's service with the Navy began in World War I, when he served as a Lieutenant in the Reserve Force. Later, as an officer of the U. S. Navy, he was on special duty as Orthopedist at the Chelsea Naval Hospital from 1922-29. He then resigned, but again joined the Reserve in 1934, was commissioned a Lt. Commander, received the rank of Commander on July 1, 1940, and went on active duty April 21, 1941.

Lt. John W. Norcross, MC, USNR, (*EM* 1937) reported on January 3 at the US Naval Hospital in Chelsea, Mass., as his first assignment. He is in the Medical Department, under Comdr. Walter S. Burrage (*EM* 1927).

Lt. Charles A. Wheeler, MC, AUS, (*NS* 1935) was recently commissioned, and is to train at Carlisle Barracks.

Major John J. Sampson (*WM* 1923) replies to our request for a report on his military service:—

I was commissioned on April 3, 1943, leaving my home in San Francisco for Carlisle. That course is one of the finest examples of teaching technique I've ever encountered. My assignment was Chief Medical Service at the Station Hospital at Lowry Field near Denver, and my wife and three children joined me there in June. This is a large field, devoted to training in several schools under the Technical Training Command of the Air Forces.

There was a capable medical staff and a highly intelligent Post Surgeon, who assured me on arrival that the function of his medical officers was the best possible care of the sick soldier and that administrative and military duties were important but of secondary consequence. The majority of medical cases were acute infectious diseases, but the remarkable experience obtained at this hospital through the spring and summer was the care of a great mass of acute rheumatic fever patients. This epidemic followed a major epidemic of streptococcal respiratory tract diseases.

The life in Denver was active and interesting, and our social life very pleasant, with occasional trips into the nearby high Rockies. Our staff meetings and those of the neighboring air fields and Fitzsimons General Hospital maintained some academic atmosphere, and I was fortunate enough to be invited to participate in the Post-Graduate War-Time Medical Meetings at Denver, Albuquerque, and Tucson.

In mid-December I was assigned to the Regional Station Hospital No. 1, AAF, formerly the Biltmore Hotel, at Coral Gables, Fla., as Assistant to the Chief of Medicine. This is the largest and best equipped hospital in the Air Forces, and administratively is directly under the Air Surgeon's Office in Washington. It has a distinguished staff, who are doing a good piece of work in the care of trainees at Miami Beach, and the returnees. Rehabilitation of the latter is one of their chief projects here.

Major Sampson was granted leave from his teaching appointment as Associate Clinical Professor of Medicine at the University of California and as Chief of the Medical Service of Mt. Zion Hospital in San Francisco to join the service.

Capt. R. Gordon Brown (*P* 1942) writes: "Since leaving M.G.H., I have been an Army pathologist, and am now serving as assistant chief of service in the laboratory of Bruns General Hospital at Santa Fé, N. M. Although there are no alumni here, several of the medical men have had other Boston contacts and are glad to hear about their friends through THE NEWS."

Capt. Guy R. Sweeney, MC, AUS, (*gr. asst. M* 1942-3) has returned his War Records blank with details of his military service. He was commissioned in December 1942 and called to active service in January 1943. His promotion to Captain dates from October 20, 1943, and he is now with the 77th Division at Camp Pickett, Va.

Major Maurice M. Pike (*Or.* 1929) is at the Dibble General Hospital, Menlo Park, Cal.

From Camp Joseph T. Robinson, Ark., Major Ellsworth H. Trowbridge (*r.p. N* 1940) reports a busy year for its Neuropsychiatric Service, of which he is Chief:

Colonel Bauer visited our hospital several times. He made a number of suggestions to improve the medical service; and the Admission Ward, recommended by him, has been a big success. He has instituted a CPC in the medical program for the Eighth Service Command, and we have one or more cases each week. This new part of the educational program has been very interesting.

Lt. Eugene Wiege, formerly a graduate assistant on the Surgical Service at the General, is now assigned here.

Capt. Bradford Cannon, MC, AUS (*a.s.*) reported for active duty on April 26, 1943, as a Lieutenant, and received this promotion in rank on January 12, 1944. He writes from Valley Forge General Hospital, in answer to our inquiry:—

There is little to say about life in the Army except that I am very fortunate to have my family here in Phoenixville, Pa., in an attractive farmhouse near the hospital, and that I am associated with one of the best plastic surgeons in the country. Between us we have developed a service to which patients are referred from all over this country and from many hospitals overseas. The large number of burn cases coming to us is reminiscent of the early months of 1943 at the M.G.H. However, these are only a small fraction of the many cases that come under our care.

Dr. LeMoyne White (*EM* 1942) is a "Flight Surgeon with Contract Carrier under Army Air Transport Command". After a year with Transcontinental and Western Air Lines, Intercontinental Division, he writes:—

Everything more or less the same as last year. Interesting work, but one hankers to get out onto what appears to be more active fronts. We do have the opportunity to fly on trips from time to time. This is very gratifying, and brings us into much closer contact with the men and both their and our own problems.

Miss the M.G.H. as much as if I were 12,000 miles away instead of being based in Washington.

Major William F. Hoyt (*WS* 1932) has been transferred from the Hammond General Hospital at Modesto, Cal., where he was Assistant Chief of the Surgical Service, to new duty at the Glennan General Hospital at Okmulgee, Okla.

I have been located at this new General Hospital of 1725 beds since October 2, 1943, when I set up and organized this Surgical Service. I was made Chief of the Surgical Service shortly after I arrived.

Major Thomas W. Hodges [*Or.* 1941] is my Orthopedic Section Chief, and I was more than delighted to have another MGH man here.

We began to receive patients about December 1, and are now quite busy. I had a letter from Colonel Bauer recently, and he expects to visit here soon.

The Glennan General Hospital is of permanent construction, and was planned as a Veterans' facility after the War.

Major Ernest J. Radcliffe (*Or.* 1925), of the 310th Station Hospital sends a pleasant message to THE NEWS "Just an excited squib to say I'm being returned to the U. S. after 18 months. Don't know how long the home stay will be."

These excerpts from family letters present many phases of military life on a lively assignment. In reporting his activities over one fortnight, Lt. George Mixter, Jr., MC USNR (*WS* 1943), who is with a Marine battalion now in training, suggests the purposes and efficiency of that training. He describes his share in its routine and in treating the occasional inevitable casualty—multiplication of which the training manoeuvres are designed to prevent:—

Afraid I've been remiss lately about writing, but "these are stirrin' times!" Our C.O. has orders to another outfit overseas and is shoving off this week. He is a really great leader and a fine man, whom we shall miss. I shall in particular. Our Senior Medical Officer is leaving the same day. He has worked hard and done a lot for the Battalion, has been a good S.M.O. and a real friend. *Pro tem* I am to be Battalion Surgeon—"cook, and the captain bold, and the mate of the Nancy Brig"—until the replacement arrives. Meantime, we have two sick bays on the beach, three or four miles (no road) apart, and one in Tent Camp (25 miles away). Local law requires the Surgeon to be on deck for all firing, as well as for A.M. and P.M. sick call. If you can figure out how one man can do it, you're good! However, will work it out. . . .

Busy as the dickens, so only a short letter today. I am buzzing madly about trying to do two men's work, since we have had no replacement. Asked the Captain about it the other day, and he said," "You're the Bull Surgeon of the outfit, and I can't get another man for you for quite a while. Make out as best you can, and I have confidence you'll carry on satisfactorily."

So here I am, with 450 men in two camps at the beach 25 miles away, and some 800 men at Tent Camp. Monday they start firing and I have to be present at all firing, so will be cruising back and forth, sleeping at the beach whenever there is night firing. . . . The ward here is full, the dentist is on leave, and it is raining "cats and dogs". Just pray that an epidemic doesn't fetch loose! Have already quelled a strep throat outbreak by vigorous measures—I hope! . . .

As expected, life has become very busy and a bit complex. I take sick call at Tent Camp from 8 to 9, sign papers, etc., and drive the 25 miles to the beach for first firing at 10. Chow at 12, then over 4 miles of beach and dunes to the Special Weapons camp. Back to the 90 mm. line for afternoon firing till 5, then sick call and back for night firing, with searchlights, trackers, and gun crews all working. We generally secure the guns by 9, and I shove off in the "recon" (ambulance on a 1½ ton truck frame) for home. A full day, even when we don't have any casualties.

Yesterday we had a big landing mock-up on the beach: Special Weapons came in, 175 men. You should have seen them coming in, in two waves of eight LC-T's, LC-V's and LC-P's, firing *en route*. The beach was heavily mined with dynamite, both above and below water, hooked up to a central switchboard on the beach. I had an ambulance with stretcher and equipment back of the dunes, with two corpsmen stationed in the dunes, between mines. I was in the second row of dunes with 12 lbs. of dynamite 10 feet away buried in the sand on the right, and completely surrounded by smaller charges. Had a camera and first aid pouch.

Well, they hit the beach and the dynamite started going off. It was a shambles—water and sand and smoke flying everywhere, a racket like all the devils in hell let loose, and those poor guys struggling up the beach through it. . . . All but one *through* it, that is. That boy went *into* it. I saw him go, and lit out. Got blown onto my face by the big charge, scrambled up and got to him.

He had a badly compounded fracture of both bones of the lower leg, in addition to other things, and had most of the skin blown off his face. Splinted him while the men and guns went on up the beach past us and the dynamite kept going off all around. Got him by stretcher to the recon, and so back across the dunes (no roads), up the beach and to Naval Hospital 22 miles away. Doggone recon will go almost 70 mph. I find. He was rolling up to the operating room just 52 minutes after he was blown up. Saw him today. He's doing fine. But he won't go out with our outfit. A shame, as we so seldom have these accidents.

Our erstwhile Exec. is now the Battalion C.O., and the officer who was in charge of the Seacoast, is now Exec. All runs smoothly as before, but we miss the officers we lost. The C.O. of the 90 mm. group, with whom I spend most of my time now has a good camp out there, 400 men in tents, quite comfortable. . . . The Colonel is building a slick lash-up for his outfit and they'll start firing next week. Nice gents, all. Firing schedules go right on, Saturday and Sunday, too. But it is interesting, both the bivouacking and the firing. The AA techniques are complicated and fascinating, and I am learning something about all of it. . . .

Tonight I got home for supper—because the Special Weapons Group didn't fire tonight, and the Seacoast only moved out today and aren't ready to fire. What with the usual run of injuries and minor epidemics, administrative detail, supply accounts, preparations for embarkation, and the sanitary arrangements for 5 bivouac areas scattered over some 25 miles of sand, I am running around "quite some". Tonight we are killing the fatted calf and having T-bone steaks. Since I so often eat with the Battalion, we have plenty of points. The house is filled with the most delicious odor.

Housekeeping proceeds along its usual smooth course. We are covering boxes with material, to make a radio table and stool, and our book-ends are half-bricks covered with the same. Our curtains are lovely, being halves of bedspreads bought at a sale, green, with an "Arizona" design. . . .

Next week I plan to start firing 20 mm. AA. I know the gun fairly well, and have been watching the fire very closely the last few days. In fact, I am official observer of tracer fire for the group, and am beginning to catch on to the general idea of "shooting from the hip" with the 20's. Taking an interest in these various weapons isn't hard, when you have to be on the firing line anyway, and especially when the officers are such a swell bunch of gents. I am amazed at their youth, but pleased in that we are for the most part very congenial.

I haven't forgotten Medicine. When this is over I will start again. Meantime, hopes of learning anything useful in Medicine are small; learning about people, about administration, etc., excellent.

In returning his War Records form, Surgeon Lt. Comdr. William G. Breckenridge, RCNRV (*Or.* 1941) comments on his original assignment aboard one of the traded U. S. destroyers, and brings his record up to date in an accompanying note to Mrs. Means:—

Your "old destroyers" are admittedly something apart in their motion, etc., but have done a job of work.

I received a draft ashore early in 1943, and it required nine months of coaxing and making a nuisance of myself to secure another seagoing appointment. They gave me another "4-stacker", namely HMCS "——", formerly the USS "Mackenzie". But my recent promotion to Acting Lt. Commander will doubtless cancel any further opportunities at sea, unless perchance I could wangle one of our new cruisers now building!

Lt. Adney K. Sutphin, MC, AUS, (*WM* 1943) after expressing a reluctance that The News considers strictly subversive to its interests, sends a good account of his experiences to January 1, 1944. He is assigned to the Medical Section of a Replacement Depot.

After reading so many vivid and exciting accounts in The News from MGH alumni, I felt that my experiences were rather drab and inconsequential—therefore I resolved to wait until I felt that at last I was "doing my part". Am rather doubtful if any of us ever get the satisfaction of feeling that we're doing our best—anyhow I've now been in the Army seven months and I'm optimistic enough to think that before many more months things will clear up, at least in this theatre (ETO).

I entered the Army in May '43, and reported to Camp Pickett, Va. Ed Lambert, Brad Millet joined me there, and we attended the Officers' School together. We were soon scattered, however, Lambert going to Oklahoma, and Millet to Louisiana—I overseas. As I look back, I'm confident that I was the least-heroic-feeling individual who ever left the States. The trip, however, proved a never-to-be-forgotten pleasure. The ship's officers were grand, and the crew leaned over backward to show how glad they were to have a doctor aboard. The poor fellows had been at sea for weeks at a time without any type of medical care.

Since being in England my work has been cut out for me—though the hours are long the work is interesting, my associates the finest, and enlisted men the best. For a short while I was fortunate enough to be associated with Capt. Daniel Dawes, senior physician at the McLean Hospital and originally with the MGH unit. Many evenings were spent in reminiscence of the Hospital, you may be sure.

Lt. Col. Walter M. Bartlett (*CM* 1927) has held his present rank since last June, when he was with the 315th Station Hospital at Camp Bowie, Texas. He writes from England:—

Would like to thank the staff of M.G.H. for their thoughtful contribution to our Christmas and for the publication which brings news of our former associations that were so pleasant at M.G.H. in days gone by. Our far-flung alumni meet in the queerest places these days, and you never can tell when you will unexpectedly run into old-time M.G.H. men—and they are always doing important jobs and doing them well. The same goes for our nurses, whom I meet when I least expect it in visiting hospitals here and about.

Your Christmas greeting brings back memories of consultation blanks of yesteryear, when Walter Bauer and Fuller Albright and I were House Officers getting into trouble in the internes' quarters, while Munro was making his first inroads into the study of Geriatrics (probably stimulated by disgust with our childish behavior). We have been introduced to an allied science quite popular over here, called Geatrics—which consists of chair acrobatics but not the old rocking-chair kind. It is a combination of commando tactics and tumbling that should not be attempted by those over forty.

Commander John T. B. Carmody (*NS* 1934) has assumed his new duties in charge of neurosurgery at the US Naval Hospital at Shoemaker, Cal. He was on furlough here during February, and spoke to the Neurology Staff Meeting on his experiences in New Zealand and other South Pacific assignments. He went overseas in the summer of 1942, with five other MGH officers, attached to USN Mobile Hospital No. 6.

Capt. Somers H. Sturgis (ES 1933), *Major John D. Stewart* (ES 1930), *Major Henry K. Beecher* (WS 1934), *Col. Edward D. Churchill* (WS 1922), *Major Fiorindo A. Simeone* (WS 1936), *Capt. Daniel J. Holland* (Dn. 1938)

According to Major Simeone: The Chief calls us his Brain Trust! Others call us "CHURCHILL'S TRAVELLING MEDICINE SHOW"

Boston newspapers and the *Harvard Alumni Bulletin* provide supplementary details indicating that Lieutenant Hardy was instrumental in rescuing many men from other craft capsized in attempting to land through the heavy seas and under strafing from land and air. After swimming from his own capsized boat to an LCI, stranded on the reefs, Hardy and the other officers aboard organized a plan of rescue and saved many from drowning. After carrying one line through the surf and making it fast, he helped exhausted men to reach it. Later, with the aid of three other men, this line had to be extended and held in place, and Hardy repeatedly swam through the rollers to make further rescues. Fifty patients were cared for aboard the LCI during the two days it remained fast on the reef.

Information has come about another MGH man who has been in action and, unfortunately, been severely wounded by shell fire — Capt. W. Philip Giddings (*WS* 1939). He, with other MGH men, is a member of an Auxiliary Surgical Group which, after service in the Tunisian Campaign, landed with the first troops in Sicily last July, also with the first troops at Salerno, and presumably at Anzio. Captain Giddings' wounds, though severe, should not prove permanently incapacitating. So far as is known he is still in Italy at a General Hospital.

The following quotations are from family letters received from Major Grantley W. Taylor (*WS* 1924), who was working in the same area. They were written before the occasion on which Captain Giddings was injured, and indicate the circumstances under which the unit was carrying on:—

Still safe and sound. Terrific raids very common, and bomb fragments and flak dropping all around. Should say whizzing, because they go at terrific speed. One through my tent just over my head yesterday A.M., another through the operating tent and struck an instrument table while I was operating. Some rivalry as to whose tent has been struck most times.

Loads of operating, and some of the worst wounds I have ever seen. Have got several cases well who looked as if they were gonners, and of course lost some that were tragic. Running several operating teams. Most of the work done at night, but really 24 hour shift, and we sleep when and as we can. Last bath (in my helmet) about 2 weeks ago, but hope to get another soon. Only one raid so far today, so hope things may be letting up. We may try to move to a quieter spot but hard, because we have many non-transportables. . . .

Cold and windy here the last few days, and snow on the mountains where the poor soldiers are jockeying for positions. Renewed and very severe air attacks the last day or two. We jumped from the frying pan into the fire when we changed station—not near the port any more but the airport instead. Lots of casualties but none yet among our own at this place, for which I am very glad.

Happy with my new outfit and the feeling I am doing useful work. Filled up with patients at once, just as we had our first patients about 24 hours after the original landing. All set to go again within 30 hours after our last patient left at the former site.

We live very comfortably, the tents keep warm with a stove, and dry. We eat regular meals and sleep when we can, in periods of comparative quiet. Have been running about 6 operating teams right along. . . .

You may have encountered disquieting reports about our hospital in the newspapers. Don't know what I can tell you about our episode because of the censor. We have done a lot of reorganizing today and may be sent soon to a rest area where we can complete, re-equip and reorganize. This spot has been plenty hot, and we are not really combat troops, so it's not surprising that many are jittery and need a respite to recuperate in. . . .

Here we are camped in a flat and muddy cornfield. Still too close to bombs and shelling, and we have suffered heavy casualties considering we are a non-combat unit. We all have our foxholes to jump into when it gets bad, but can't of course when we're operating or caring for patients. Tough on the patients' nerves too, to have to go through it all again.

You ask where are Evac. Hosps. set up. We seem to be set up between the lines; i.e., they shell each other over our heads, bombing raids all the time, and dog fights in the air overhead, and the inevitable flak raining down, not to mention bombs and shells that just miss their objective and fall in our area. Wish you could see some of our tents, riddled with flak holes. We're in a group, 3 evacs. and 1 field hosp. all together. Nerves O.K. and appetite good and can sleep at any opportunity. . . .

In a letter written two weeks later to Dr. Means, Major Taylor gives a brief summary of these experiences and mentions many MGH members in Italy:—

I had no sooner joined this outfit than we were embarked on our latest amphibious adventure to the beachhead where we had a stormy and active time till we were bombed out of commission and withdrew to the south to lick our wounds, re-equip and recruit to strength.

This front medically is MGH, with lots of hospitals. Saw Pete C. on my way up here originally, traveled with Townsend, and saw Lang Parsons. Since our return from the beachhead here in this valley have seen Stewart, Townsend, Champ Lyons, Simeone, Jergesen, Bland and Gundersen (both on D.S. from VI G.H.), Dick Clark, Staples, Ludwig, Burnett, Beecher, Tom Ballantine, Phil Giddings, and Dick Chute. McDaniel was at the beachhead party with us, but I didn't see him. Jack McKittrick, Blackford (also Clement), are in this vicinity but I haven't seen them yet.

Our present location is beautiful, snow-capped peaks and magnificent valleys where spring is trying to struggle through the mud. No foxholes, no iron hats, no blackout, no C rations, a fly over the latrine — in fact all the luxuries you could ask for. We're already open for business again, but still a little crippled as to personnel and equipment.

The ranks named below indicate promotions recently received. THE NEWS hopes omissions and additions will be called promptly to its attention:—

Lt. Col. David W. Barrow, MC, AUS (*ES* 1937), Eglin Field, Fla.

Comdr. Edwin B. Dunphy, MC, USNR (*c. Oph.*), Navy 100, Fleet Post Office, New York

Comdr. Richard W. Dwight, MC, USNR (*WS* 1931), overseas

Major T. Stewart Hamilton, MC, AUS (*Asst. Dir.*), 6th General Hospital, overseas

Capt. Donald R. Hayes, MC, AUS (*ES* 1939), Lincoln Field, Neb.

Comdr. George E. May, MC, USNR (*a. obst.*), Receiving Station, Boston

Comdr. John P. Monks, MC, USNR (*WM* 1931), Office of Naval Officer Procurement, Boston

Capt. Eugene E. Record, MC, AUS (*NS* 1937), 4th Auxiliary Surgical Group, Lawson General Hospital, Atlanta, Ga.

Comdr. Robert S. Schwab, MC, USNR (*r.p. N* 1935), USN Base Hospital #6, overseas

Capt. Lamar Soutter, MC, AUS (*r.s.* 1941), 4th Auxiliary Surgical Group, Lawson General Hospital, Atlanta, Ga.

Capt. Paul E. Spangler, MC, USNR (*WS* 1925), USN Base Hospital #8, overseas

Major Alexander M. Waldron, MC, AUS (*EM* 1938), 166th Station Hospital, overseas

THE NEWS

No. 20 Boston, Mass. May, 1944

Lt. Arthur T. Willetts, USMC, (*r.U.* 1941) wears the ribbon of the Silver Star Medal, awarded to him for gallantry in attending wounded under fire while accompanying the Marine invaders of Bougainville. The official citation, as given in the *Journal of the American Medical Association* reads: "Lieutenant Willetts on last November 1, finding the beach strewn with injured men, established an aid station under cover of jungle growth and stuck to his station despite six enemy machine gun attacks." The citation, presented by Major General A. H. Turnage, is signed by Admiral W. F. Halsey.

A newspaper release recently announced the award to Major Charles G. Mixter, Jr. (*WS* 1940) of "the Air Medal and two Bronze Oak Leaf Clusters for meritorious achievement and outstanding service as Flight Surgeon in sustained combat operational missions from January 11, 1943 to November 14, 1943." The announcement came from the Headquarters of Major General Hubert R. Harmon, Commanding General of the 13th AAF operating in the South Pacific and Commander of Air of the Solomons.

A report on the use of penicillin in bacterial infections was prepared by Major Champ Lyons (*WS* 1933) for an Allied Medical Congress held on February 23 at the University of Algiers. Major Lyons is assigned as Medical Consultant to the North Africa Theatre of Operations. His paper was read by Col. Perrin H. Long, of Baltimore.

Since February 1, crude penicillin has been produced in the Bacteriology Laboratory of the Massachusetts Eye and Ear Infirmary. In connection with the meeting of the New England Oto-Laryngology Society on May 10, an exhibit showing the various stages of growth of the mold will be shown. The Hospital personnel is welcome.

So far as can be learned, this laboratory is the only one in Boston now making penicillin. The drug as made here is adaptable only for local application. The strain used is one of the original Fleming strains, and was supplied by the National Type Culture Collection in Washington.

This work is being carried on by Miss Anita Mangiaracine, formerly with Dr. Lyons in the Surgical Research Laboratory and, since April 1943, in charge of bacteriology work at the Infirmary.

INDEX TO
HISTORY OF MASSACHUSETTS GENERAL HOSPITAL
BY
NATHANIEL I. BOWDITCH
WITH CONTINUATION
BY
THE REV. GEORGE E. ELLIS
COMPILED BY
GRACE WHITING MYERS
LIBRARIAN EMERITUS
OF THE
TREADWELL LIBRARY
1943

This is the title page of a small pamphlet recently prepared by Mrs. Myers to provide a permanent guide to the interesting pages of this history of the Hospital's earliest years, 1811 to 1871. Both editions of what is known as the "Bowditch History" were printed, in the fashion of the day, with only general summaries at the chapter heads. In 1899, Mr. Francis Blake, a Trustee, prepared a small booklet entitled "Extracts from the History of the Massachusetts General Hospital," but this again provided only a general outline of the contents.

It has remained for Mrs. Myers to produce a real index covering every specific item, and to present her work in a most practical form. The Hospital is indebted to her for one more contribution, to add to those already made during her term as Treadwell Librarian, from 1896 to 1926, and since her retirement. Her continuation of the Bowditch-Ellis history, which brought the story of the Hospital up to 1900, was published in 1929—and included a complete index.

Mrs. Myers's index to the Bowditch History is contained in a small pamphlet of 12 pages. It has been printed on thin paper of a size to conform to the History itself. A gummed strip has been applied at the edge of the front page, and the pamphlet may thereby be fastened into the original Bowditch bindings. Persons who own copies of the Bowditch History and would like to complete its usefulness by adding this index may apply to the Director's Office for this pamphlet.

A report on the possibility of the return of red blood cells to plasma donors was recently made by the New York University College of Medicine and the laboratories of the U.S. Public Health Service at Sheepshead Bay, N. Y. Among the authors of the report appears the name of Dr. Frederick C. Bartter. Dr. Bartter was attached to the research group of Dr. Fuller Albright's laboratory at this hospital during 1941 and has recently been associated with its studies on wound healing and convalescence. He presented his work on blood plasma before the group at its last meeting.

A malaria unit, under the supervision of Dr. Allan M. Butler, Chief of the Children's Medical Service and Staff Member in Charge of the Chemistry Laboratory, has recently been undertaken at the Hospital.

In connection with this new unit, many will recall that from 1915 until 1928 the Hospital had a Sub-Department of Tropical Medicine under Dr. Richard P. Strong, with the late Dr. Andrew W. Sellards as an Assistant. Since the closing of that special clinic, Dr. Strong and Dr. George C. Shattuck (*EM* 1906) have continued as Consultants in Tropical Medicine. It should be remembered also that the important discovery of the parasite causing oriental sore (*Leishmania tropica*) was made at the Massachusetts General Hospital by Dr. J. Homer Wright, Pathologist of the Hospital from 1896 to 1926 and Consultant until his death in 1928.

The work of the new unit is outlined as follows:—

> In December 1943 the Office of Scientific Research and Development requested the Massachusetts General Hospital to establish a malaria unit for the clinical study of new antimalarial drugs. The investigation embraces the study of the metabolism of these drugs in normal human subjects and their antimalarial activity in patients suffering from an initial attack of malaria. . . .
>
> Dr. Butler was appointed responsible investigator of the malaria unit, and it was decided that the most effective way to pursue these studies would be to establish a unit using both the facilities of the M.G.H. and the Boston Psychopathic Hospital. Metabolic studies on normal subjects could then be conducted at this hospital, and studies on acute malarial patients could be made at the Boston Psychopathic Hospital. . . .
>
> Twenty individuals from the Civilian Public Service Camps who volunteered for these experiments have been assigned to the M.G.H. malarial unit of Camp No. 115. They are now in residence on Ward I.
>
> The metabolic studies at the Massachusetts General Hospital, the pharmacological toxicity studies at the Harvard Medical School, and the studies of the antimalarial effectiveness of new drugs in initial attacks of malaria at the Boston Psychopathic Hospital are all under way.

Participating in the work at the Boston Psychopathic Hospital are Dr. Augustus S. Rose (*EM* 1934), and Dr. Laurence D. Trevett (*r.p. N* 1934). Dr. Arthur J. Linenthal (*r.p.* 1944) is assigned to the project here.

At the annual meeting of the American Society of Tropical Medicine, Dr. Wilbur A. Sawyer (*WM* 1908) was inducted as president. In addition to his appointments under the Rockefeller Foundation, Dr. Sawyer is a member of the Committee on Tropical Diseases of the National Research Council, Consultant to the Navy, and Director of the Army Commission on Tropical Diseases.

Dr. John R. Mote (*WM* 1937), as a Director of the British Ministry of Supply Mission, holds a most important position in war service. His work in the Mission concerns primarily problems of supply and production, but when these are considered on a combined basis between the United States and Great Britain, more general interests between the two countries require consideration.

Subsequent to his graduation at this hospital, Dr. Mote was an Associate in Research at the House of the Good Samaritan and Assistant in Preventive Medicine and Epidemiology at the Harvard Medical School. He began his war work in 1940 when, at brief notice, he was selected by Dr. (now Col.) John E. Gordon (*Cons. prev. med.*) to accompany him to England and undertake the preliminary surveys and arrangements for what eventually became the American Red Cross-Harvard Field Hospital Unit. This unit, pre-fabricated and equipped in the U. S., was transported to England. There it was erected during 1941 by British workmen assigned by the British Ministry of Health, with Dr. Gerald F. Houser (*Asst. Dir.*) as Superintendent, to provide a hospital for the study and treatment of communicable diseases under wartime conditions.

Dr. Mote made his journey by sea, and reached London on the evening of the first blitz. He was in England for over nine months at that time. Since his return in April 1941, he has been associated with the British Government in Washington. His work has required frequent trips to London, as well as one trip to Africa and the Middle East, and on to Iran. He has been a Director of the British Ministry of Supply Mission since 1943.

In addition to his work with the Mission, Dr. Mote serves as British member of the Medical Committee of the Combined Production Resources Board, as Medical Advisor to the British side of the Combined Raw Materials Board, as British Member of the Medical Sub-Committee of the Munitions Assignments Committee, and as British Medical Representative to the Combined Agency for Middle East Supplies. He is also British Representative on the Standing Technical Committee on Health of UNRRA.

The American Journal of Nursing for February states that Major Kathleen Atto (*MGH* 1922) is one of the first three reserve nurses of the A.N.C. to be promoted to that rank. Major Atto, who has been consultant to Col. Florence A. Blanchfield on psychiatric nursing and public informant on nurse procurement, is now transferred to the 2nd Service Command, with headquarters at Governor's Island, N. Y.

At their meetings during March the Trustees voted:

That Dr. A. William Reggio be granted an extended leave of absence because of service in the U.S. Public Health Service, assigned to the UNRRA;

To appoint Dr. Henry C. Marble to the Social Service Advisory Committee in place of Dr. Reggio who has resigned;

To appoint Dr. Donald Macomber as Assistant Obstetrician;

To promote Dr. Dorothea Loofbourow from the position of Graduate Assistant to that of Assistant in Medicine;

To appoint Dr. Robert E. Carroll as Resident Surgeon on the Orthopedic Service, beginning April 1, 1944;

That Dr. Gertrud C. Reyersbach be reappointed to the Children's Medical Service for the term October 1, 1944 to June 30, 1945, and that the appointment of Dr. Eleanor J. Herring on this service be extended from June 30 to September 30, 1944.

The General Executive Committee appointed Dr. Volta Ross Hall, Jr., of the Ring Sanitarium, as a Graduate Assistant in Psychiatry.

The Dental Conferences, which were formerly scheduled for the 1st and 3rd Thursday mornings of the month, will be held on the 2nd Tuesday of each month at 8 P.M. in the lower OPD Amphitheatre. All Staff members are welcome, and each is privileged to bring one guest.

In the midst of a blizzard on March 20th, the Ladies' Visiting Committee celebrated its 75th Anniversary by giving a small tea in the Medical Staff Room in the Bulfinch Building. Past and present members of the Committee were joined by the Trustees, clinical heads, and others of the Hospital family with whom the L.V.C. has been associated.

In 1869 a committee was appointed by the Trustees to consider the question of "appointing female visitors to the female wards". In such manner the L.V.C. came into being. The scope of its work has grown tremendously and, although the primary interest of its members is in visiting the patients, there are now many activities under their supervision.

At this anniversary tea a paper written by Mrs. Arthur D. Hill and Mrs. Richard Hale was read by the latter, giving the history and personal reminiscences of the work of the Committee. Both Mrs. Hale and Mrs. Hill have been members for forty years.

Mention of this celebration would be incomplete without speaking of the cake with its 75 lighted candles, which was made by Mr. Becker, the Hospital baker. On it was a remarkable sepia painting of the Bulfinch Building—done in cocoa! Mrs. Lown, of the Photography Laboratory, took candid pictures of the gathering which will serve as a permanent record of the occasion.

Bishop Sherrill made a few timely remarks in conclusion—and the L.V.C. starts toward completion of a full century of service.

RALPH AUGUSTUS HATCH

May 10, 1881 - April 1, 1944

Most of us at the Massachusetts General Hospital never had a chance to know Ralph very well, he was so quiet and unassuming; but a few who were with Base Hospital No. 6 during the past war saw him in action and learned to appreciate his personality and ability.

Ralph was born in Bath, Maine and, after the death of his parents, came to Ipswich, Massachusetts, to live with his uncle who was the principal of the high school from which he graduated too young to go to college. Here his love of ships and the sea came to the front and he went for a year on the training ship "Enterprise" before going to Harvard, graduating from the Medical School in 1906. He interned at the Boston City Hospital, but general work did not appeal to him. What he required was a highly specialized field to which he could devote not only his ingenuity but his fingers. So 1908 found him at the Eye and Ear Infirmary as Ophthalmological Clinical Assistant.

In the early days of automobiles he loved to tinker with the works. He was a clever mechanic and got more fun doing fine work with his hands, as for instance making ship models, than any one else I have ever known. His work was always meticulously accurate, so his eye work fitted in perfectly with what he chose to do for fun.

When Base Hospital No. 6 was organized in 1916 he was elected and, during the 20 months or so that the unit was stationed outside Bordeaux, Ralph was one of the group who could not be spared, so that he had much less chance than many of us to go joy riding. But as time went on some of our French neighbors learned that at least one American was unlike what they had always considered the typical American, and Ralph became very much in demand at their Sunday afternoon teas and simple entertainments. His shy quiet humor completely won them. His French was unique and inimitable.

Occasionally, to celebrate some special event, the unit would have a dinner in Bordeaux, and with a few glasses of French wine under our belts, Ralph could always be counted on for some of the best stories of the evening, notably "Switch her on the mag, Bill", which became a classic.

After the war some of us, who had learned the quality of his work, became his patients, and took our families, and sent our patients, so that by 1929, due to pressure of outside work, he resigned from the Infirmary and the Hospital. But in 1942 he went back as a volunteer to cover for some of the younger men who had gone into Service.

In 1905 he married Alberta Bamfard, and had two sons, Albert Marston, now doing research for the General Electric, and Ralph Augustus, Jr., who is in the Army.

G.C.

April 5, 1944

M.G.H. News;—

Yes, it is true that Dr. T. Duckett Jones [*a.p.*], Dr. Samuel Levine, and I are scheduled to fly to Mexico on the 15th, if our priorities are any good. Leaving here in the afternoon we should arrive in time for lunch in Mexico on Sunday, the 16th.

The opening of the Cardiological Institute, with the unveiling of murals by Diego Rivera depicting the history of cardiology from the earliest days to the present, is scheduled for the 18th. Then there will be papers presented by the invited guests during the next few days. There are, I believe, some 25 or 30 physicians invited from both North and South America, half of whom are from the U.S.A. A number of us hope to present our brief communications in Spanish.

We shall be gone only about ten days, returning also by plane. We shall be guests of the Mexican Government. Professor Ignacio Chavez is to be master of ceremonies, and the President of Mexico will attend the dedication.

Sincerely yours,

PAUL D. WHITE [*WM* 1913]

Lt. Col. Henry A. Kind (*CM* 1935) has been in charge of the 4th Auxiliary Surgical Group at the Lawson General Hospital since June 1943. Other MGH men associated with this group are Capt. Eugene E. Record (*NS* 1937), Capt. Lamar Soutter (*r.s.* 1941), and Capt. Edward L. Young, III (*WS* 1942).

Lt. Comdr. G. Douglas Krumbhaar (*a. obst.*) is Health Officer for 600 V-12 Navy students at Holy Cross College. He reports that his daily routine covers such items as ice-box inspection, the recognition and care of measles, meningitis, rheumatic fever, and all the various ills to which such a body of young men is heir.

Lt. Comdr. Jesse T. Nicholson (*r.s. Or.* 1933) recently sent his address as the USN Hospital at Oakland, Cal. On an earlier assignment he had charge of orthopaedics aboard the hospital ship "Solace".

Lt. Harold E. Elrick, MC, USNR (*M* 1944) has been assigned to duty at the Boston Navy Yard.

Lt. Marcus E. Farrell, MC, USNR (*CM* 1934) is now at the Naval Medical School at Bethesda, Md.

Lt. John W. Raker, MC V(G), USNR (*ES* 1942), after training with the Amphibious Forces at Norfolk, Va., is now assigned to an LST in Pacific service.

Lt. Cornelius J. Shea, MC, USNR (*ES* 1943) wrote from the Naval Operating Base at Norfolk, Va.: "Am with the Atlantic Fleet Amphibious Force, awaiting transfer. We are taking a course in supplies, accounting, and property—which is quite a change. From here we expect to be sent to another base for training."

After assignment to Carlisle Barracks and later to maneuvres with the Infantry, Lt. Theodore P. Robie, MC, AUS (*ES* 1943) is now with Co. "A", 322nd Medical Battalion, at Fort Leonard Wood, Mo.

> This outfit is a part of an Infantry Division, which was founded on the National Guard, "New England" Division. We are in our pre-combat training, having finished the War of Louisiana (no decision on the victor), which has lasted for three months past.
>
> No MGH men in the vicinity, I am afraid.

In September 1943, Lt. John P. Gens, MC, AAF (*r.s.U.* 1943) left for training at Carlisle Barracks. He was then assigned to a camp in Mississippi, and is now at the Station Hospital at Hammer Field, Fresno, Cal., assigned to Detachment M of the 50th Base Headquarters and Air Base Squadron.

Lt. Don W. Fawcett, MC, AUS (*WS* 1943), after training at Carlisle Barracks and assignment at Fort Bliss, Tex, is now with the Medical Detachment of the 126th AAA Battalion.

After assignment to the School for Medical Officers at Camp Barkeley, Texas, and to the William Beaumont General Hospital at El Paso, Lt. Henry F. Allen, MC, AUS (*WS* 1943) is now stationed at Camp Davis as Battalion Surgeon to the 446th AAA-AW Battalion.

> 5th General Hospital
> 6 March 1944
>
> Dear "News":—
>
> I received your appeal for some account of myself. It is easier said than done, as the censor has a way of cutting the core out of interesting news. But I'll do the best I can for you.
>
> My promotion to captaincy was dated 1 December 1943. You note my method of recording the date. It is a British method, now a U.S. Army method, and a very useful trick as it leaves no room for confusion. But this does *not* mean that any of us have become Anglophiles from our life in England. Quite the contrary, we have come to worship American ways with an enthusiasm we never knew was in us. You could have no idea what central heating, a banana, a Martini, a pair of elastic garters, a fresh egg, lots of sunshine will mean to us, unless you had lived here two years. We have all grown more sentimental: a good American movie, or a Bob Hope program, or even the national anthem under given circumstances can provoke feelings that never used to exist. And this means that thoughts of home are very nostalgic these days, because although time has passed quickly there is no doubt in anyone's mind that we have been away a *long* time.
>
> As for me, I have been doing neurology and psychiatry for 18 months with Roy Swank. We have had plenty of clinical material, and have been particularly busy with a special assignment in relation to Air Corps patients. This has brought Roy and me close to some of the problems of plastering Germany from the air, as the 8th Air Force and RAF are now doing.
>
> The physiognomy of the 5th General has changed a good deal in two years. Tom Lanman and Harry Pratt are now Commanding Officers of station hospitals. When Simeone left us, Howard Suby took his place. Terry Saunders is now with the 16th Station Hospital. Rich Warren is now Assistant Chief, and Bert Dunphy Chief of the Surgical Service. Tom Cavanaugh, our ophthalmologist, became a Major on 1 January 1944. We are all pretty well agreed that there is only one really indispensable man in our unit, and he is not a Harvard man!—That is, Colonel Keeler, our Commanding Officer.
>
> Sincerely yours,
> HENRY H. BREWSTER, Capt., MC

•••— V •••—

On March 15, Lt. William B. Ayers, MC, USNR (*WS* 1943) reported from his active assignment:—

> After leaving Quonset last September, I joined the USS "———", and since then have seen quite a bit of the world in her company. The ship is a destroyer, and as such qualifies superbly as an "accident looking for somewhere to happen". We've been in the Pacific for quite a while now, and have taken part in the making of a good share of the news. More than that I am not, of course, permitted to say.
>
> Bob Hurlbut [*ES* 1939] is serving as medical officer on our sister ship and I see him fairly frequently. Also Bill Baker, my former "running mate" at the Hospital is somewhere in these regions with a Marine outfit. No others from the MGH have so far shown up, but then, the Pacific is a big place.
>
> Medical duties on board a destroyer are, for the most part, very simple and easily handled. One finds it difficult not to fall into "sloppy" habits, for the approach to ideals as taught at the M.G.H. is difficult, even impossible. Consequently, as little surgery as possible is done on board, if for nothing else than for the sake of the patient. Emergency work is another matter, of course, and it's surprising "what you can do when you have to".

Capt. Charles I. Johnson, MC, USNR (*assoc. s. Oto-Lar.*), Comdr. Francis T. Hunter (*WM* 1926), and Comdr. Harrison E. Kennard (*WS* 1934), original members of USN Mobile Hospital No. 6 who recently returned from two years in the Southwest Pacific, are now assigned to the Chelsea Naval Hospital. Capt. James M. Faulkner (*WM* 1925) has been transferred from that hospital to a Naval Hospital in England, and Comdr. Walter S. Burrage (*EM* 1927), Chief of Medicine at the Chelsea Naval Hospital, was detached from service there on March 29 and assigned to a USN Mobile Hospital for overseas duty.

In addition to the promotions given above, that of Lt. Comdr. Richard E. Alt (*WS* 1933) should be noted. A letter from Commander Kennard before his return stated: "I have heard several first-hand accounts of Dick Alt's very excellent work 'on the first ripple of the first wave' in a recent battle in the Solomons." His report of Lt. Comdr. Theodore C. Pratt (*ES* 1929) was: "Chief of surgery at a base hospital, and Chan Swan [*WS* 1925] is on his staff."

Other promotions and assignments are:

Capt. Edward C. Lambert, MC, AUS (*EM* 1943), APO 9494, New York
Major Ward I. Gregg, MC, AUS (*WS* 1935), Evacuation Hospital, overseas
Capt. Donald W. Bickley, MC, AUS (*WM* 1936), Station Hospital, Camp Barkeley, Texas
Capt. Robert S. Palmer, MC, USNR (*WM* 1927), Navy 168, FPO, San Francisco
Comdr. Robert L. Thomas, MC, USNR (*NS* 1933), on sea duty

The name of Major Harry C. Hughes (*Or.* 1937) was included in the list of MGH men in military service published in the first issue of THE NEWS. He then held the rank of Captain. A recent letter from him gives, as requested, a few details of his service:—

> My organization is an affiliated unit, sponsored by the Denver General Hospital, of whose staff I was a member. I know of no other MGH alumnus near me, at least no contemporary. We are situated on an island in the New Hebrides group, and since we have been here only a few months, the censor would probably disapprove of any details as to what we have been doing.
>
> I happen to be the chief of the orthopedic section, which section is army designation for a branch of traumatic surgery, I find. Nothing fearful or dangerous has happened to me so far, a fact which elicits no complaints, you may be sure.
>
> I have really appreciated receiving THE NEWS regularly, and hearing much of those I knew well, slightly, and by reputation in my comparatively short stay at M.G.H. The Christmas card of facsimile autographs will be a permanent keepsake.

Major Alexander M. Waldron (*EM* 1938) wrote late in January from his post, a Station Hospital in New Guinea:—

> While on leave in Sydney three weeks ago I saw Dick Cosby and Al Coombs, who were on leave, too. Also, I just had a letter from a prominent Air Corps officer whom I had advised to turn in at the 105th General Hospital. He says: "Major Myles Baker looked after me, and impressed me as being a very nice guy aside from being an excellent doctor."

Lymph Node Metastases. By Grantley W. Taylor, M.D. [*WS* 1924], and Ira T. Nathanson, M.D. [*a. Surg*]. Foreword by Shields Warren, M.D. Pp. 498; 61 illustrations and 117 tables. London: Oxford University Press, 1942.

Although this book was published some time ago, notice of it as an important contribution by MGH authors is here given in a review by Dr. Ernest M. Daland (*WS* 1918):—

> In the first book of its type ever to be published, the authors have assembled a vast amount of material on metastasizing cancer and its treatment. The material has been collected from the Massachusetts General Hospital, the Pondville Hospital (Massachusetts Department of Public Health), and the Collis P. Huntington Hospital. The authors have made detailed studies at operation of the exact position of the lymph nodes and the best operative incisions for their removal, and they have recorded them by excellent drawings of the dissections. Careful end-result studies back up the statements they have made. The reviewer insists that this is one of the most important cancer books published in a decade.
>
> Part I deals with the Anatomy of the Lymphatic Drainage Areas. Each type of cancer metastasizes along a definite lymphatic route. If the lymph nodes to which these malignant cells will spread can be identified and removed, such removal is as much a part of the operative treatment as the removal of the primary focus. Conversely, if malignant cells are found in a lymph node, it is usually possible to trace back to the primary focus. The authors have studied and described the nodes in groups as the occipital nodes, the axillary nodes, etc., and excellent diagrammatic sketches show the relationship of these nodes to the important anatomical structures.
>
> In Part II the management of these regional lymph nodes is discussed. An analysis of 5481 cases of cancer has been made, and of this group metastases were found in 48 per cent. Wherever a block dissection can be done with removal of the primary tumor and its regional nodes at the same time, this is preferable. In other cases a two-stage operation should be carried out, the regional dissection not being done until the primary lesion has been treated and the wound healed.
>
> It is not demonstrated from this study that preoperative radiation of lymph nodes is of value, but it does delay healing if surgery is to be carried out later. The writers are not convinced that postoperative radiation prevents recurrences if adequate surgery has been done. Radiation should be reserved for the time when actual recurrences are present, and then they should be treated with adequate doses.
>
> Operations on lymph node areas are described in Part III. No regional dissection should be carried out unless the primary lesion has been or can be cured. Fixation of nodes or widespread involvement are contraindications to operation. Supraomohyoid dissections are advocated for metastases from lesions of the lip, buccal mucosa and skin of the central third of the face. The operative mortality in 601 dissections at the three hospitals mentioned was 1.5 per cent. Radical neck dissections are done for curable lesions of the tongue, floor of mouth, and the parotid gland. Such dissections call for removal of all fat and nodes from the jaw to the clavicle, together with the sternomastoid muscle and the internal jugular vein. The operative mortality for 112 such dissections was 3.6 per cent.
>
> Operative mortality from axillary dissections for cancer of the breast was 2.3 per cent in 1153 operations. In inguinal dissections the mortality in 262 operations was 5 per cent. This mortality was due to poor judgment in doing bilateral dissections at one sitting, or to combining dissection with the removal of the primary lesion.
>
> E.M.D.

Mention should be made of the long service of Dr. Richard H. Miller (*ES* 1911) with the National Guard, now federalized and taken into the A.U.S., and with the State Guard organized to replace it locally. Dr. Miller, after serving as Commander of the Medical Battalion, Custodian of the Commonwealth Armory, and Division Surgeon of the Massachusetts State Guard, has been retired as Colonel, Massachusetts National Guard. Major Robert L. Goodale (*assoc. s. Oto-Lar.*) has been appointed Division Surgeon to replace Dr. Miller. Others active in the present organization, with rank as indicated, are Major Paul R. Hinchey (*a. in Surg.*), Capt. Edward Hamlin (*WS* 1936), and Lt. Col. Francis C. Gray and Col. Eben S. Draper, of the Board of Trustees. Colonel Draper is on duty as Assistant Intelligence Officer, State Staff, in the Adjutant General's Department.

A recent issue of the *Harvard Medical Alumni Bulletin* includes the following MGH graduates in a list naming officers of the US Public Health Service. Comparable ranks in the Army are indicated:

Asst. Surgeon (R) (1st Lt.) Burnet M. Davis (*r.s.* 1942)
Asst. Surgeon (R) (1st Lt.) Robert S. Grier (*EM* 1942)
Surgeon (R) (Major) Fred A. Simmons, Jr. (*WS* 1935)
Senior Surgeon (Lt. Col.) Milton V. Veldee (*EM* 1920)

The name of Senior Surgeon (R) (Lt. Col.) A. William Reggio (*WS* 1914) should be added, and word of any other omissions will be gladly received by THE NEWS.

Since November 1943 the US Public Health Service has been a branch of the Armed Forces. USPHS officers will administer the "Health Program" of the UNRRA, and the Service at present numbers 900 "Regular" officers and 1600 "Reserve" officers. Of the MGH members named above, Dr. Davis is at the National Institute of Health in Bethesda, Md.; Dr. Grier, first stationed at the Marine Hospital in Brighton, is now assigned to sea duty with the U.S. Coast Guard; Dr. Simmons was recently commissioned; and Dr. Veldee has been a member of the Service since 1921.

Dr. Reggio, recently assigned to an appointment in Washington, has been, since June 1942, first Deputy Chief then State Chief (Massachusetts) of Emergency Medical Service, and finally Regional (New England States) Medical Officer, OCD. His new position is that of "Head of Medical Care, Compensation and Medical Supplies" for UNRRA at its Headquarters. He lists his duties:

> To supervise medical supplies to be sent to regional offices in Europe, Asia, Africa, Near East and Far East, when these countries are liberated from the Axis. Some 4300 "items" in these supplies.
>
> Have responsibility of medical care of any employee of UNRRA, foreign or domestic, at home or in the field. Have to adjudicate compensation claims in case of injury of employee.
>
> Have to make short trips "into the field"—to become acquainted with requirements abroad. Am definitely looking forward to such trips as then I will run into some of our MGH "boys".
>
> This will probably be a 5-year job, as we have to clean up a terrible mess when the Axis is kicked out!

Lt. Col. R. Earle Glendy (*r.p.* 1934), after a year's service at Fort Banks, Mass., was assigned about eight months ago to a General Hospital at Fort Andrews as Chief of Medical Service. Early in February he was "Somewhere in England". His present rank dates from January 15, 1944.

> Our hospital is not yet in operation. In the meantime we are familiarizing ourselves with methods and policies in this theatre of operations. Needless to say we have encountered numerous *confrères*. Have had recent word from Ted Badger, Larry Ellis, Bob Zollinger, Ed Thorp, Garrett Sullivan, and others. Gil Hyatt is chief of our surgical service.

Lt. Col. Thomas B. Jones (*3d* S 1924) wrote to Dr. Faxon from Fort Sam Houston, Texas, after transfer from the Lovell General Hospital at Camp Devens, Mass.:—

> This assignment seems to be in the nature of advancement but entirely different from my former job as Chief of Surgical Service in a General Hospital. It carries the title of Surgical Consultant to the Third Army, Hqs. Staff—and I must say it sounds fancy. But since my arrival on January 20, haven't seen anything faintly resembling surgery, so possibly the whole thing is a snare and a delusion. However, 22 months as Chief in a General Hospital was pleasantly spent midst all the surgical material one could want, so I consider I have had an unusual and profitable Army experience to date. One approaches the future with considerable anticipation and interest, to say the least.

Carl E. Dexter, Frederick G. Munn, Walter Wood, and Arthur Decker, former employees in the Maintenance Department are now in military service with the Sea Bees. Munn was first assigned to Newfoundland, Wood has been in North Africa and Sicily, and is now in England. Dexter is in the Pacific area, and Decker is in Alaska. Dwight F. Hennessey, of the Machine Shop, holds the rating of Aviation Machinist's Mate 3/c, USNR, and is with a carrier aircraft service unit. Cpl. George Ryan, employed here in the Power House, is in Iceland with a battery of an AAA gunnery battalion. Sgt. Harry Munroe went with the Hospital's unit to Camp Blanding and North Africa. Malcolm V. McLean, known as "Red", is in the Navy. He is an Electrician's Mate 2/c, and was last met in North Africa. Simeon Gagne, a painter, is in training with a signal battalion at Camp Crowder, Mo.

Bureau of Medicine and Surgery
Navy Department, Washington, D. C.

The Editors,

In the ordinary course of events there is much "random geographic scatter" of MGH graduates. Since December 7, '41, the process has taken on an accelerated, almost explosive character. Here in brief is my dossier, as you requested.

1935—Commissioned Lt. Comdr., MC-V(S), USNR, as orthopedic surgeon to a Mobile Hospital Unit numbering among its members C. Johnson, H. Sprague, Henry Hudson (Children's Hospital) and others. Remained in inactive duty status till—

December 1941—Ordered to active duty at USN Training Station, Newport, R. I. Lived in comparative luxury in a house with Sprague, Johnson, and J. Monks.

January 1942—Assigned as technical supervisor of a First Aid film being made by March of Time for the Navy. See J. Monks for details of the experience [THE NEWS, No. 17]. This was to be a two-weeks' temporary additional duty chore—it required three months to complete it.

May 1942—Assigned to supervise the production of a series of training films in color on Battle Station First Aid. I was stationed at Third Naval District Headquarters, New York, but was "on location" most of the time—chiefly at Norfolk, Va., and Portland, Maine. When the films were complete, I was assigned (February 1943) to the USN Hospital at St. Albans, L. I., where at long last I resumed clinical work in orthopedic surgery. This lasted almost three weeks, and was a clinician's paradise—all kinds of orthopedic work, including many casualties from overseas. The first operative case at St. Albans fell into my hands.

March 1943—Transferred to Washington, where I've been ever since as Officer-in Charge, Audio-Visual Section, Division of Preventive Medicine, Bureau of Medicine and Surgery. The Navy has instituted an extensive program of training all personnel in medical matters by the use of motion pictures, slide films, posters, pamphlets, etc. So I have projects on subjects as varied as amputations, malaria, and venereal disease. Mr. Lown, now Lt. Lown, H-V(S), stationed at the National Naval Medical Center, Bethesda, Md., is producing some of our films. There can be no doubt that teaching films will play a role of increasing importance in medical education in the post-war world.

Numerous incidental duties make life here anything but monotonous. About one-fourth of my time is spent travelling—though so far I haven't been outside the Western Hemisphere. Also, in January, to my amazement, I found a promotion in rank headed my way. Two promotions in one war seem almost too much!

Yours sincerely,
JOSEPH S. BARR [Or. 1929]
Captain, MC-V(S), USNR

Lt. Col. David W. Barrow (*ES* 1937) entered service as a Captain. Early in February he sent word from Eglin Field, Fla., of his experiences to date:—

I have been stationed at the Proving Ground Command since May 1942, and have had a fascinating time watching new developments in air corps equipment and have had a small finger in the testing of medical items of supply. One can scarcely realize how much support the human body needs to operate modern aircraft, until one begins to test oxygen equipment, anti "G" devices, on through urinals for use on prolonged flights.

As Chief of the Surgical Service, I have seen a good many patients with the military big four—hernia, hemorrhoids, pilonidal cysts, and appendicitis. More advanced surgery apparently must wait for return to civilian practice. I am certain many of us would like a chance to brush up in the M.G.H., and plan a visit as soon as we can finish this particular job.

Lt. Col. John H. Talbott (a.p.) was a member of the 6th General Hospital at the time of its organization, and went into training with the unit at Camp Blanding, Fla. On the eve of its departure for North Africa, Lt. Colonel Talbott, with this promotion in rank, was assigned to the Climatic Research Laboratory at Lawrence, Mass., as its Commanding Officer. The following statement outlines the work of the Laboratory:—

The Climatic Research Laboratory at Lawrence, Mass., is an activity of the War Department, under direct control of the Quartermaster General. It tests items of clothing, equipage, and subsistence to be issued to soldiers in combat or training for combat. The test program provides for the three climatic ranges in which our soldiers may be expected to fight. In the large Cold Room temperatures as low as 80° F. below zero can be reached and maintained. Snow can be made there any day of the year, and, with the help of a large electric fan, an arctic blizzard is possible even in the warmest days of summer.

There is a Jungle Chamber of equal size, where temperatures as high as 140° F. above zero can be maintained. Here the relative humidity can be kept at a low level to simulate desert conditions, or if less severe temperatures are desired, as in the jungle, the relative humidity is raised to 85 or 90 per cent. In the Comfort Temperature Room, items designed for use in temperate climates are tested.

The test chambers can accommodate as many as twenty men, eating, sleeping, and living in rigorous climatic extremes. Essentially all the Quartermaster items used by the soldier are tested physiologically before they are procured and sent overseas for use.

In addition to the test chambers, there are rooms for special studies in chemistry, physiology, physics, and photography, as well as a library, work shop, and other units necessary for independent operation. As the Laboratory is not in a camp or station, a complete military installation is required.

Lt. Col. John H. Talbott is Commanding Officer of the Laboratory and Director of Research, and the M.G.H. is represented by other members of the personnel. Lt. William R. Christensen (*M* 1943) is assigned as Medical Research Officer. The Laboratory artist is Miss Cynthia Foster, a graduate of the MGH School of Medical Illustration; and Miss Miriam Gorfinkle, a graduate of the Dietary Department and a former Assistant on that staff, is Dietitian. Fifty-five enlisted men act as subjects and, when not participating in experiments, serve as technical assistants.

Capt. Robert P. Keiser, MC, AUS (*Or.* 1942) received his promotion as of November 17, 1943. Early in February he wrote:—

Since entering the Army and spending a brief period in the Air Corps, I have been stationed at O'Reilly General Hospital, in the "Heart of the Ozarks." Am second man on an orthopedic service of about 800 patients. These are received from the smaller hospitals in the Service Command and numerous casualty convoys from Eastern and Western Theaters. Equipment and facilities leave very little to be desired. We never manage to catch up. The non-combatant orthopedic cases seen in a General Hospital are exactly those seen in a civilian hospital, with the female and *"malum coxal senilis"* excluded — reconsidering, the former not completely excluded. Treatment is modified to a certain extent by the return to "Army life" as contrasted to "civilian life", which is quite different in orthopedic disabilities.

Comdr. Charles L. Swan (*WS* 1929) was detached from the Station Hospital NCTC, Camp Peary, Va., and on February 28 reported for duty on board a recently commissioned hospital ship. He is Chief of Surgical Activities and Chief of Surgery.

At the time of Pearl Harbor, Captain Paul E. Spangler, MC, USNR (*WS* 1925) held the rank of Lt. Commander and, from the time of its organization, had been Chief of Surgery and Executive Officer of a Mobile Hospital later cited for distinguished service during the attack there. That unit became USN Base Hospital No. 8, with Captain Spangler assigned to the same responsibilities.

We are now in our fine new hospital, if you can call one in Quonset huts a fine hospital. It is bigger than the M.G.H. in bed capacity, but I'm afraid it couldn't measure up in other respects. However, we do feel we are the best hospital on the rock as far as taking care of the patients is concerned. We are busy and active now with the boys from the fracas out this way recently. It is nice to be a hospital again, instead of planning and building one as we have been for the past several months. We have one MGH man here, Lt. Comdr. Parker C. Carson (*r.s. Or.* 1940) in orthopedics, and two MGH nurses, Miss Pentecost (*MGH* 1940) and Miss Donahue (*MGH* 1941). They are all a credit to the M.G.H.

You will note by the heading that fortune has fallen on me again and that I have been promoted to Captain, to rank as of May 15, 1943. Maybe all my hard work planning this hospital and exec-ing was not in vain. Guess it will be many a cold winter in this area before I need start worrying about another promotion. They make few Admirals in the Navy Medical Corps, and I guess never a Reserve. That is one thing that will be off my mind.

I had orders back to the States, but my skipper was very suddenly detached because of his wife's fatal illness, so my orders were revoked and I will continue as Exec. of this place until some time later. Not a bad spot to be in, though I would welcome a little active combat duty.

Comdr. John T. B. Carmody (*NS* 1934) replied in March to a request for word of his promotion and of the USN Hospital at Shoemaker, Cal., his present assignment after nearly two years of active duty in the Southwest Pacific:—

The promotion came through March 1, antedated in the usual mysterious fashion to November 1942. The suspense is always interesting because of the several hundred shoved up at that time. Undoubtedly some are already admirals—but don't know it.

The hospital at Shoemaker is a large one—around 3000 beds now—and rapidly expanding. It is a new institution and therefore not yet thoroughly equipped—especially in the surgical specialties. I have the neurosurgical assignment, and it has been a busy one. The service consists of 44 beds in a beautifully designed ward. The ward is decidedly different than that encountered overseas. There it was almost exclusively traumatic in character—gunshot wounds of the brain, spinal cord, and peripheral nerves. Here the cases approach the type encountered in civilian practice—tumors, old peripheral nerve injuries, and the usual variety of fractured skulls. The paper work is tremendous, and with no interns available at this stage it is impossible to keep one's head above the tide of forms.

Lt. Comdr. "Al" Duncombe [*EM* 1934] is the only other MGH man assigned permanently to the hospital. Comdr. "Chappie" Fay [*EM* 1929] is here on a temporary-duty basis, awaiting transportation elsewhere. He lives perched on a seabag.

"Sunny Italy"

Dr. Faxon apologizes to Lt. Col. Edwin E. Cave (*ES* 1926) for having mislaid his letter and therefore having delayed publication of this interesting account of the 105th General Hospital. Lt. Colonel Cave has been Chief of the Surgical Services of this unit since its organization and is now its Commanding Officer as well. He succeeds Col. Augustus Thorndike (*WS* 1923), who returned to this country early in the year and is now assigned to the Surgeon General's Office in Washington.

14th December, 1943

Dear Dr. Faxon:—

I am afraid the 105th General Hospital has been remiss in sending letters to "The News". We shall, however, try to do better in future. As a matter of fact, only during the past few weeks has there been any lull in our routine hospital work, and since last December [1942] we have had a rapid turnover of patients every month. Our staff, which has been considerably depleted by calls from other organizations, has been hard pressed at times. We have again furnished personnel for two Portable Hospitals, now carrying on the good work in the forward areas which the others did last year. Several of the MGH men in the Unit have left us to join these and other organizations, and they have, without exception, moved up to more important positions.

The Unit is, as you know, made up largely of men from the Brigham and the M.G.H., with a generous sprinkling of officers from other hospitals, largely from Boston. The administrative side, efficiently started by Col. Raymond O. Dart, is being ably carried on by Gus Thorndike, Commanding Officer, who is now a full Colonel, and we believe the professional work of the staff has stood up well. At the same time we have not neglected the military, in that we have frequent inspections and occasional reviews, which I believe, would come up to the standards required by Dr. Washburn in the last war.

We have been away from the U.S. more than a year and a half, and naturally we are curious to know how things go at home. Our wives and friends, however, keep us fairly well posted about many things at the hospitals, and we have recently been given a great lift by seeing a movie reel of our families, brought to us by a thoughtful Naval Officer. We read "The News" with great interest, and note that more and more of the staff are going overseas, which of course means that things are moving in the right direction.

From time to time we see MGH graduates and others connected with the Medical School, and are always delighted to have them drop in on us. Undoubtedly there are many in this area, but distances are great and travel is not always easily arranged.

We have been fortunate indeed in the locality of our hospital, which is the same as when we arrived, in that the climate is almost ideal. Our quarters and food are all right. Rumors fly about the possibility of our moving, but we have no idea as to when that might come about.

With his letter Lt. Colonel Cave enclosed a copy of a 3-day clinical meeting arranged at the 1st Australian Orthopaedic Hospital and the 42nd and 105th American General Hospitals. The program at the 105th was as follows:—

Opening Remarks: Colonel Thorndike
Fractures and dislocations of the carpus: Capt. E. R. Sanderson
Bone grafts for delayed and non-union: Lt. Col. E. R. Cave
Operative treatment for unreduced ankle fractures: Major G. F. Wilkins
Operative approach for recurrent posterior dislocation of shoulder: Capt. Lester Yee
Penicillin, its properties and uses: Major C. C. Branch
Salmonella infections: Lt. Col. E. C. Eppinger
Problem of urinary calculi in the Armed Forces: Major J. H. Harrison
Pneumarthrograms, a diagnostic aid in internal derangement of the knee: Major W. H. McGaw (4th Gen. Hosp.)
100 consecutive knee arthrotomies, differential diagnosis and results: Major C. R. Rowe, Capt. Lester Yee.

Major Arthur A. Holbrook (*CM* 1933) has been in service since early in 1942. He is affiliated with a General Hospital formed at the University of Wisconsin, activated at Fort Sill, Okla., and now in the Pacific area.

The one good feature of this war, as far as I can see, is the comradeship engendered among men serving together and the extraordinary interest in one's friends serving elsewhere. On reading the various letters it seems to me everyone else is having a most glamorous experience. On the other hand, our hospital has yet to arrive at its very own area, and with one exception our travels have been uninterrupted. We remain unshot-at and unbombed, thank goodness! For over two months we have been active professionally in this base and for five weeks have functioned as a General Hospital. So our eye teeth are well cut, and now for the grinders.

A note from Major Milton S. Thompson (*Or.* 1934), received in February gave his present assignment as G-3 Section, ETO Headquarters:—

I was assigned to this headquarters last week after 14 months in England with the Maine General Hospital Unit. We had six active orthopedic wards there, and I am grateful for the experience. This new job has to do with training, particularly rehabilitation. As everyone knows, extensive programs have been under way for some time in this country as well as at home.

I have seen Richard Collins [*ES* 1933], who is a Lt. Colonel in the General Staff Corps and assigned to the Supreme Headquarters of the Allied Expeditionary Force.

Major John L. Shaw (*r. U* 1937), who has been with the Vanderbilt University Unit since its activation, writes: "There are numerous MGH people about here. Most of them have been our guests from time to time. Frequent visitors are Colonel Churchill, Majors Lyons, Beecher, Stewart, Simeone, Parsons, Taylor, Chute, and several others.

In a letter of March 13 to Dr. Faxon, Major Henry K. Beecher (*WS* 1934) includes many interesting bits disclosing his present activities—and reveals also what the Chief of a Department thinks about even when he is overseas:—

Without reading unwarranted things into the present situation, I believe I can see several advantages coming out of the war that will work to the good of medicine as a whole . . . benefits to be gained by anesthesia in general and our department at the M.G.H. in particular. It is much easier than when present there to see the defects, the needs, and the necessary trends for the department to take. . . . It has been a matter of some satisfaction to learn how widely and favorably the department is known by this "cross-section-of-the-practice-of-medicine-in-the-U.S.A.", and I have encountered a number of outstanding men who would like to come to the M.G.H. for training in anesthesia. . . .

The mayor of the nearby village says it's bound to warm up by the end of the month (March). We hope this is not just one more rumor. The ground has been freezing very hard at night, and sometimes one's tin plate is frozen to the table top in the morning. . . . Sunny Italy!

A few weeks ago we had a good view from the hospital grounds, where we were then living, of the bombing of an historic building. . . . The hospital where I am now living (and sharing a tent with Charlie Burnett [*r.p* 1942]) is in an olive grove. By half shutting your eyes you can imagine you are in an apple orchard in Vermont. The grass is turning green under the trees, and the air has the smell if not the feel of spring. It is very quiet. . . . But the fine looking lad just brought in with a shell fragment through his left eye, perhaps into his brain, another fragment into his mediastinum and a third into his thigh is a reminder of a job to be done. . . .

In its recent issue the *Harvard Medical Alumni Bulletin* reports a letter from the mother of Captain James K. Keeley, MC, AAF (*NS* 1937):—

James arrived in Manila during November 1941, and later was sent to Cagayan on Mindanao. He was reported as missing in 1942, later as captured by the Japanese and located in Military Prison Camp No. 2, which I am informed is located at Davao on Mindanao.

I received two prisoner's cards in December 1943, saying, "I am well. Have received no mail since December 1941."

THE NEWS

No. 21 Boston, Mass. June, 1944

Word has just been received of the death of Lt. Comdr. Sidney C. Graves (*ES* 1931) on May 14, while on duty with the Pacific Fleet. Lt. Commander Graves had been in service since the autumn of 1942. He was stationed at the Chelsea Naval Hospital for two years, and received his orders for overseas duty in March.

During April three groups of postgraduate courses of the College of Physicians were presented—at the University of Michigan and Ohio State University Medical Schools, and at the Massachusetts General Hospital. An account of the program here is provided by Dr. James H. Means:—

A Graduate Course in Medicine under the auspices of the American College of Physicians was held at the Hospital during the week of April 24 through 29. This course was offered at the request of the College, which felt that many physicians are in need of such training at the present time, there having been few opportunities of the sort in the last two years. The plan of the course was to present to the physicians enrolled an intimate view of the clinical investigation being conducted in the Hospital and its practical implications. A number of guest instructors from other institutions in Boston likewise took part. Sixty-seven physicians, chiefly Fellows and Associates of the College, were enrolled in this course. Dr. Means acted as Director for the whole course, but subdivided the program into a series of special topics, each under the chairmanship of some special authority in the field covered.

The various sessions were as follows: April 24—The Thyroid and Its Diseases; Dr. Means, Chairman. April 25, Morning—Stones and Bones; Dr. Albright, Chairman. Afternoon—Cancer; Dr. Aub, Chairman. April 26—Sex Hormones; Dr. Albright, Chairman. April 27—Gastro-enterology; Dr. Jones, Chairman. April 28—Heart Disease, Dr. White, Chairman. April 29, Morning—Joint Diseases; Dr. Ropes, Chairman.

In the evening of April 24 both physicians taking the course, and instructors giving it, met together for dinner at the Harvard Club. Dr. Keefer spoke on penicillin. Dr. Fremont-Smith played the piano. Dr. Paul V. Ledbetter of Houston and Dr. Alpheus F. Jennings of Detroit made entertaining speeches. In the evening of April 25, Dr. Castleman conducted a Clinico-Pathological Conference. Drs. Richardson, Keefer and Burwell were put on the diagnostic spot. (See *New England Journal* for results.)

At the Friday morning session, Dr. Jennings asked to have the floor, made a short speech in which he stated that the members of the course were very satisfied with it and liked particularly the method of approach, namely that of basing clinical practice on a sound scientific foundation. He also said that they appreciated not being "talked down to". He thereupon handed Dr. Means an envelope, which he said contained concrete evidence of appreciation and which the members of the course desired to be used for some purpose of investigation at the Massachusetts General. Dr. Means later found that the envelope contained over $300, which the members of the course had donated. For this graceful and generous act those giving the course at the Hospital are deeply grateful. It is planned to add this money to the balance of the tuition fees and set it aside as a fund to be known as the A.C.P. Fund which will be used to help young investigators get some experience that otherwise would be impossible.

Awards for 1944-45, made by Harvard College from the William F. Milton Fund and the Joseph H. Clark Bequest, include two grants for research by MGH Staff members. These awards are made to officers of instruction and administration in various departments of the University. The grant to Dr. Otto Krayer (*Cons. in Pharm.*), Associate Professor of Comparative Pharmacology, is "for an investigation of the fate of the veratrum alkaloids in the mammalian organism." A grant "to investigate the effects of simulated high altitudes on the activity rates and electro-encephalograms of control subjects and psychoneurotic patients" has been made to the following group, of which the first four named are members of the Psychiatry Staff of the Hospital: Stanley Cobb, Bullard Professor of Neuropathology; Jacob Ellis Finesinger, Assistant Professor of Psychiatry; Erich Lindemann, Associate in Psychiatry; Mary A.B. Brazier; and Eliot Dismore Chapple, Research Fellow in Psychology.

Dr. Arthur E. Strauss (*EM* 1916) has recently received promotion to the appointment of Assistant Professor of Clinical Medicine at the Washington University Medical School in St. Louis, Mo.

The Staff Bibliography (or "Publications from the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary: July 1942 through June 1943") is now in print. There are 303 entries for articles, and 5 for books. The section headed "Laboratory Sciences" has been re-instated, and a new one, "Maxillo-Facial and Oral Surgery," has been added, as well as that of "War Medicine and Surgery." The articles in the Symposium on the Cocoanut Grove Burns are also listed.

Dr. Faxon has been elected chairman of the Blue Cross Affairs Committee of the New England Hospital Assembly.

Announcements in the April number of the *Harvard Medical Alumni Bulletin* are reprinted in part, because of their application to the Hospital's routine and their possible interest to members now in military service:—

The Damocles' sword hanging over the HMS student has been removed by word from the top to the effect that the medical phase of the Army Specialized Training Program will go on unchanged, as will the premedical college phase. The one issue that remains somewhat clouded is the detailed *modus operandi* by which a college youth of, say, sixteen or seventeen, will shift over from the general to the premedical category in the ASTP.

The Navy Program will continue unchanged.

* * *

The Departments of Medicine, Surgery, and Neurology have jointly recommended that, at least for the present, they give over one month of their fourth year students' time to a clinical clerkship in Psychiatry. This will be available instead of the elective "Third Month" in either Medicine or Surgery.

Professor Solomon plans that this work will be done at the Massachusetts General (on Dr. Cobb's service), at the Boston Psychopathic, the Metropolitan State Hospital in Mattapan, the McLean Hospital, and possibly at the Danvers State Hospital.

* * *

A change in the same direction, of modifying clinical training to fit wartime needs, has recently been instituted at the M.G.H., where the fourth-year surgical students are given "Ten Nights in the Emergency Ward."

* * *

The first concrete step in the direction of specific plans for the further education of returning Army and Navy Medical officers consists in the establishment of 36 fellowships for a year of study in the Basic Sciences or in the Clinical Research Departments for men who on their return wish to further their training with a full-time academic position in mind. These fellowships will provide stipends of $1500 to $2500 a year and have as their source the ungranted fellowships that have lain fallow in the war years. . . .

The next step—not yet achieved—is the establishment of opportunities for those who on their return wish more clinical training with the objective of resuming practice.

For over a year, on Sunday evenings at seven o'clock, a brief concert of organ music and an informal hymn sing have been a regular occurrence in the Chapel. Mrs. Helen Cushing, hostess at the Baker Desk, has acted as organist. During the past two months, through the use of the radio-phonograph, additional programs of recorded classical and religious music have been presented on Monday and Thursday evenings from 7 to 8 o'clock. The weekday programs are under the direction of the C.P.S. Malaria Unit.

At their April meetings the Trustees voted to promote the following interns now on the Medical Service:—

Dr. William N. Mundy, 3rd, to Assistant Resident, for July, August, and September 1944;
Dr. Robert L. Berg and Dr. Harvey S. Collins, to Assistant Resident, for the term October 1, 1944 to July 1, 1945;
Dr. Wade Volwiler, to continue as Assistant Resident, from October 1, 1944 to July 1, 1945;
Dr. Ralph H. Luikart, Jr., to Resident on the Dermatology Service, beginning October 1, 1944;
Dr. George C. Cotzias, to Resident on the Neurology Service, for the term October 1, 1944 to July 1, 1945.

Promotions on the Pathology Service are:—

Dr. John F. Tannheimer, from Assistant Resident to Resident, for the term October 1, 1944 to July 1, 1945;
Dr. Edwin F. Alston, to Assistant Resident, for the same term.

The General Executive Committee voted the following appointments as Graduate Assistants:—

Dr. Arthur M. Jackson and Dr. Frank Mirabelle, in Surgery in the Out-Patient Department;
Dr. Toufic H. Kalil, in Radiology;
Dr. H. Milton Rogers, in Pathology.

The Committee also announced the following vote:—

To appoint Dr. Ting-Nong as a Clinical Fellow in Medicine, with the understanding that he would enroll as a post-graduate student at the Harvard Medical School.

A note supplementing this vote reads: "Dr. Ting-Nong is now a Resident in Medicine at the Chengtu General Hospital, Chengtu, China, and it is indefinite when he will reach the United States."

During the last year a new department, the Reconditioning Department, was created under the Office of the Surgeon General. The director of this department is Col. Augustus Thorndike (*WS* 1923). The *Harvard Alumni Bulletin* recently stated that Colonel Thorndike will direct the entire program of the department both for the group of wounded who can be restored to full health and return to active duty, and for those whose physical handicaps will prevent such return.

Clinical training for theological students and clergy, in the field of pastoral care with special reference to ministering to the sick, is in its tenth year at the Massachusetts General Hospital. Two sessions of six weeks each—May 22-June 30, July 3-August 11—now represent an enrollment of thirty men from eleven states and eight religious groups. This training is sponsored by the Institute of Pastoral Care, of which Dr. James H. Means is the Hospital's representative on the Board of Governors. Rev. Rollin J. Fairbanks, Protestant Chaplain assigned by the Massachusetts Council of Churches to the Hospital, is again in charge of the course.

OFFICIAL NOTICES

The increased production of penicillin now makes this drug available for limited distribution to civilian hospitals. The Massachusetts General Hospital is one of eleven hospitals in Greater Boston designated to receive supplies.

The General Executive Committee has approved a plan for the distribution of penicillin in the Hospital. Detailed information regarding its use and issuance is being sent to all members of the Active and Resident Staffs. Dr. Arthur J. Linenthal has been appointed the Staff member in charge of distribution, and all requests should be directed to him.

N. W. Faxon, M.D.,
Director

* * *

THE BLOOD BANK

1. Attention of the Staff is again called to the desirable procedure on Rh factor determinations. If multiple transfusions are contemplated for any patient, such determination should be done *before* the first transfusion is given. This assures receipt of the report in ample time and avoids making the test an emergency procedure.

2. Rh factor determination and blood grouping for any obstetrical patient of the Staff who has an appointment for admission to the Phillips House or Baker Memorial may be had by calling the Baker Laboratory and making a definite appointment. The total charge for both tests is $3.00. The Blood Bank will keep the record under the patient's name in a special file easily accessible when the patient is admitted to the Hospital. The House Officer assigned to the Obstetrical Service can procure the record if the Bank is closed. A duplicate report will be sent to the physician who refers the patient.

3. Obstetricians on the Staff, and members of the House Staff who have to do with obstetrical patients, are earnestly urged to report to the Blood Bank any cases of *erythroblastosis fetalis* that may be seen in the Hospital. They should also report cases in which there is a history of repeated miscarriage not due to positive serology. The Blood Grouping Laboratory of the Children's Hospital, with which the M.G.H. is affiliated, is carrying on a vigorous campaign to track down these cases, study their blood, and obtain as much anti-Rh serum as possible. This work is vitally important, and the coöperation of all concerned will be greatly appreciated.

Carroll C. Miller, M.D.,
Director of the Blood Bank

A board of officers has been named to consider all categories of classified technical medical and research reports and, when change of classification is desirable, to make recommendations to appropriate authority, through the Surgeon General, for the declassification of such reports. Lt. Col. Francis R. Dieuaide (*p.*) has been named to the board.

At the annual meeting of the American Medical Society ETO, held at HQ, 8th Air Force, Lt. Col. Theodore L. Badger (*EM* 1928) was elected secretary-treasurer.

The Medical Records Department will be sorry to learn that the death of Lt. Dale V. Grimes has been confirmed by the War Department. The official report reads: "Lieutenant Grimes died on 27 December 1942, in the Southwest Pacific Area, as the result of drowning."

Lieutenant Grimes was the first evening clerk employed when it was arranged to keep the Record Room open all night. He worked there during his two years of study at Boston University, and in 1936 became a permanent member of the Records staff, working on the Name File. In October 1940 he left the Hospital to join the Air Force, and was later graduated from one of the training schools. A recent letter from his father gives these details:—

> Dale got his commission on July 4, 1942, and was assigned as a navigator on a Flying Fortress. He left the U.S.A. in October, navigated a number of planes to Australia, went into action, and was in battle over the Bismarck Sea. In returning, his plane struck a storm. Two of its engines had been shot out. They ran out of gas, and bailed out at 2000 feet in the air. Three of the crew were killed in the crash.
>
> Two of the men went one way, and found civilization in 15 days. Four went the other. Of these two died in 2 months, one went 141 days and was found 300 miles from the plane. Dale went 21 days, living on snakes and bugs. He was drowned swimming a stream to get something to eat. His body was found and is buried in Australia.

Lieutenant Grimes was an excellent worker and well liked. The Hospital wishes to do him and his parents this small honor of remembrance. His father's letter closes with the brief statement: "I have lost three boys in the war—all in the Air Corps." Lieutenant Grimes was the son of Forrest B. Grimes, and his home was in Melrose, Iowa.

Miss Gula R. Boyce (*MGH* 1928), who has been for four years in charge of one of the Orthopaedic Wards, has been commissioned a 2d Lieutenant, ANC, and has left for training at Fort Devens, Mass. Miss Hendricka A. Vanderschurr (*MGH* 1934), Supervisor of the Emergency Ward since Lt. Blanche B. Haley (*MGH* 1930) left to join the Hospital's unit, is now a teaching supervisor at Baker Memorial. Mrs. Rita Rand Conroy (*MGH* 1940) has taken Miss Vanderschurr's place. Miss Nelma R. Soule (*MGH* 1938) has been made a Baker Memorial supervisor. She has been head nurse on White 8 for the past three years, and is replaced there by Miss Rose Scalora (*MGH* 1942). Miss Dorothea P. Bailey (*MGH* 1935), Medical head nurse since 1936 and head nurse on Baker 3 since May 1940, has resigned to do private duty. Miss Edith Miles (*MGH* 1941) replaces Miss Bailey.

A Bio-Bibliography of Andreas Vesalius. By Harvey Cushing [*SS* 1896]. Pp. xxxviii, 299; 89 illustrations. New York; Schuman's, 1943.

This handsome and interesting book, presented in an edition limited to 800 copies, is Publication No. 6 of the Historical Library of the Yale Medical Library. Dr. Cushing's Vesalius collection is well known, and this book was planned by him as the culmination of his long interest in this special field and as his contribution to the commemoration in 1943 of the 400th anniversary of the *Fabrica.* During the last year of his life, Dr. Cushing assembled the material and prepared the introduction and the first five of the ten chapters planned. The completed work is now presented under the editorship of Dr. John F. Fulton, who in a brief preface names other collaborators. In addition to biographical comment, the book gives full bibliographic description, index, and chronology of the many accepted editions of the writings of Vesalius, identifies others, and lists Vesaliana. It is a notable contribution to medical literature.

On its cover for April 22, the *Saturday Evening Post* announced an article, "Now We Can Lick Typhus," by Allen Raymond. This article, sent from Naples, is an account of "watching a handful of American Army physicians defeat one of the greatest scourges known throughout the history of war-tormented man." Its author makes this recommendation: "Chalk it up, then, to the credit of the United States Army, Navy, Public Health Service, and the scientists of the Rockefeller Foundation that when our military forces collided with the first serious outbreak of typhus in an operation zone during this war, we had men, materials, and organization sufficient to protect the health and life of every boy in uniform."

In mentioning the measures taken against an epidemic, and those responsible for their planning, Mr. Raymond stated: "Major John Snyder [*WM* 1939], formerly of the Rockefeller Foundation, and Comdr. Andrew Yeomans, of the United States Navy, both members of the Typhus Commission, flew in from Cairo, diagnosed the situation and flew back to report."

In short, an MGH representative is carrying on the tradition of contribution to typhus research and suppression made during the First World War by the late Col. Hans Zinsser, and by Col. Richard P. Strong and Major George C. Shattuck, who are continuing their work in this war. Major Snyder, as a staff member of the International Health Division of the Rockefeller Foundation, was in Europe as early as February 1941.

(*Excerpts above were reprinted by special permission of The Saturday Evening Post, copyright* 1944 *by The Curtis Publishing Company.*)

Last month a brief account was given of experimental work being done under the Office of the Quartermaster General by Lt. Col. John H. Talbott (*a.p.*) at the Climatic Laboratory in Lawrence, Mass. Similar work should be reported also for Dr. Arlie V. Bock (*WM* 1917) at the Fatigue Laboratory of the Harvard School of Business Administration, and for Lt. Col. David B. Dill, AAF (*res. fel. M.* 1925-7), now in Washington.

During the absence of Lt. Colonel Dill, who since February 1941 has been on leave as Professor of Industrial Physiology and Consulting Physiologist to the Grant Study, the Laboratory is again under the direction of Dr. Bock. Work is being conducted there for the Office of Scientific Research and Development and for the Quartermaster Corps of the Army. Dr. Bock also continues his duties in charge of the Hygiene Department. What that involves is suggested in a statement in the December *Brigham Bulletin*:—

> Dr. Bock has master-minded a frequently bewildered staff through the various Army regulations designed to standardize the care of soldiers. Such innovations as sick call at 7.30 A.M. daily, the signing of the Army sick book, the dispensing of standard medicaments from the Clinic to the soldiers—these and many others are now routine procedures. The Department now cares for approximately 5,400 men, of whom 2,600 are in the Army. Stillman Infirmary serves as a hospital for minor ills and convalescents, and the various Boston hospitals are employed as formerly, for major illnesses.
>
> Sixteen men have left the staff of the Department since the war began: Austen, Cass, Crone, Dunphy, Eppinger, Fish, Harwood, Huntington, Kranes, Kimball, Kennard, Lingley, McDaniel, Monks, Quigley, and Thorndike. Needless to say, their departure has been keenly felt. The present organization is composed of Drs. Bock, Blanchard, Cohen, Contratto, Flynn, Myers, Simmons, Tansey, and Fleming.

Lt. Colonel Dill was first commissioned in the Air Force and assigned in charge of the physiological branch of the Aero Medical Research Laboratory at Wright Field, Ohio. Of his present duties with the Quartermaster Corps, he wrote recently:—

> I appreciate the honor of being a sort of affiliate of the MGH alumni. As to my activities: I am officially entitled "Assistant for Product Analysis", and for a year now have been in the Military Planning Division of the OQMG. I have responsibility for three Sections: "Observation", "Test", and "Environmental Protection". It is our job to study the performance of QM items. Several of our officers act as overseas observers, and in the early winter it was my privilege to spend five weeks in Africa, Sardinia, and Italy.

Dr. Bock and Dr. Dill were associated in early work in the Medical Research Laboratory at the M.G.H. on fatigue problems. Dr. Dill was one of the first group here to hold the title of Research Fellow, an appointment created by the Trustees on January 8, 1926.

Appointments in the US Public Health Service were mentioned in last month's issue. Several names should be added to that list. Dr. George D. Cutler (*ES* 1912) was commissioned as Surgeon (R) in July 1943. In February 1944, Dr. Horace Binney (*SS* 1902) was appointed Surgeon (R), Emergency Medical Section, to serve with Goddard Hospital Unit. Dr. Lewis M. Hurxthal (*WM* 1925) has been made Senior Surgeon (R) in that service, and is Chief of Medicine in the unit organized at the Lahey Clinic.

Dr. Burnet M. Davis (*r.s.* 1942), P.A. Surgeon, US Public Health Service (R), is at present on detail to the San Francisco office of the Federal Public Housing Authority. "My work is concerned with problems of medical care and public health in war housing projects built or operated by the FPHA."

Lt. Col. Thomas V. Urmy (*EM* 1928) replied early in April from his long-time assignment at Camp Chaffee, Ark.

> I am still Chief of Medical Service at this Station Hospital. There is nothing unique about the types of diseases encountered, nor are the local environs so foreign that description of them would be interesting reading. I am enjoying my work and find my associates very congenial.
>
> There are no other MGH men here, with the exception of Captain Vest [*Gr. Asst.* 1942]. Colonel Bauer, our Service Command Consultant, visited us about a month ago, along with Dr. John B. Youmans [*EM* 1921]. That gave us our greatest concentration of MGH graduates to date.
>
> During a recent trip, I visited the Thayer General Hospital in Nashville, where Lt. Col. Richard P. Stetson, WM '28, is Chief of Medical Service. He is, as might be expected, doing an excellent job there. One of the men on his staff was Lt. Robinson L. Bidwell, who recently completed an abbreviated service at M.G.H. One other bit of news, probably already known to you, is that Capt. Thomas A. Warthin [*a. in M.*] has been promoted to Major.

Lieutenant Bidwell has since been transferred to the Stark General Hospital at Charleston, S. C.

Pvt. Walter A. Ryan, formerly messenger at the Baker desk, has been "for some months" with a bomb group in England.

Cpl. Malcolm A. Conner, the former efficient newsboy at the Hospital, trained with the Hq. Detachment of a Medical Group and is now with them "Somewhere in England":—

> After a few weeks of higher arithmetic, in order to lay down the correct amount for a glass of "bitters", and finding out the exact time for tea, I am slowly becoming adjusted to English life. The driving on the left of the road is still confusing, though. Have seen some of the English countryside, and it is very beautiful at this time of year. Haven't met anyone as yet from M.G.H., but perhaps one of these days I'll be lucky enough to run across someone I know.

A request for some account of his long service—and of his promotion—brought word from Col. Alexander Marble (*r. WM* 1930):—

I came on active duty in January 1941, and for the first two years was assigned to the Station Hospital at Camp Edwards, Mass., as Chief of Medical Service. In January 1943, I was sent to Harmon General Hospital at Longview, Texas, in a similar capacity, and have remained here since. My promotion came on 4 January 1944.

The work at this large general hospital is varied and interesting. We look forward to periodic visits from Col. Walter Bauer, Medical Consultant for this command, and it is with great interest that frequently I see the signatures of MGH friends on records of patients evacuated to us from various parts of the world.

Major George F. Sutherland (*a. Psychi.* 1940-42) has received promotion to this rank, and is now at the Crile General Hospital at Cleveland, Ohio.

Lt. Comdr. Philip Solomon (*Psychi.* 1936-7) has been assigned to Area One Dispensary, Camp Lejeune, New River, N. C.

Lt. George P. Whitelaw, MC, USNR (*WS* 1937) has recently been transferred from Norfolk, Va., to the USN Pre-Flight School at Chapel Hill, N. C. He writes: "There is a small new Hospital here, very well equipped, and occasionally some interesting surgical problems, mostly from athletic injuries."

Lt. Charles A. Wheeler, MC, AUS (*NS* 1935) has been assigned to the Station Hospital at Camp Blanding, Fla.

Lt. F. George Johnson, DC, AUS (*Dn.* 1943) is at the Harmon General Hospital, Longview, Texas.

Lt. John E. Goodman, Dental Intern, has received his orders to report for duty in the US Navy on June 1, 1944.

A promotion, received in February, is disclosed in a letter from Capt. Lloyd E. Hawes, MC, AUS (*EM* 1939):—

I have been most fortunate since leaving the General, in that I have practised Radiology since activation in October 1942. My first stop was at Walter Reed Hospital, with Col. [Aubrey O.] Hampton [*c.R*] and Capt. [George M.] Wyatt [*a.R*]. Then I transferred to the Halloran General Hospital, being the sixth doctor to arrive and remaining over a year. Work with patients fresh from the transports gave us close contact with hospitals near the battle fronts. Hundreds of cases were received *via* the MGH Unit, with interpretations signed by Colonel Lingley and Captain Wyman. The films themselves arrived in excellent condition and showed careful technique and preservation. Rarely was a film missing.

At Christmas I was shifted to the Rhoads General in Utica, a large cantonment-type hospital, as officer in charge. We have facilities for any type of X-ray examinations necessary, and well-trained soldier technicians. It is remarkable the quality and uniformity of films put out by young men who, only a few months previous, were bookkeepers, drugstore managers, and even a former Coney Island sidewalk cameraman. None of them were nurses, or had former medical experience.

Comdr. Theodore C. Pratt (*ES* 1929) has received this promotion and been assigned to the US Naval Hospital at Chelsea, where he first served in 1941, prior to duty with the Marines and at hospitals in the Pacific area.

Comdr. John P. Monks (*WM* 1931) has assumed duty as Chief of Medical Service at the USN Hospital at Chelsea, Mass.

Lt. Comdr. Thornton Scott (*r.p.* 1939) has received this promotion in rank, and is now assigned to duty aboard a battleship.

* * *

23 March 1944
Somewhere in India

Dear Editors:—

I've been delighted to continue receiving the "News" and to read of friends at all points of the compass doing all types of work—in particular a letter by Charlie Mixter, Jr., to his father, describing his variegated duties. I suddenly realized that it came close to home.

I have been having some very interesting experiences and doing some very tedious work—i.e., there are times when the paper work reaches the proportion of a brief of a Senate Committee. I certainly was misled when I took for granted the information that once overseas the paper work would be at a minimum.

I have been fortunate to see quite a bit of MacMahon of East Surgical Service 1938, even gave him some tricky tendon suturing to do. He was in seventh heaven. Parasitology was interesting in books in school, now we are seeing the practical side and for once are putting into practice emetine hydrochloride, chiniofon, sulfaguanidine, atabrine. I've actually seen the cholera vibrio in the worm stage. The anopheles witch causes me no little worry, minimus type in this country—primarily P. vivax although we've had an occasional P. falciparum. You notice I blithely jot these terms down—seven months ago I would have had to run for Stitt or S.G.O. No. 33. One most interesting day was spent with an elderly Baptist missionary in a leper colony. Once under Pop Oliver I saw a case of leprosy; now I've seen all stages and all types of disfigurement and deformity—hardly an authority, but at least leprosy-minded.

The Indian General Hospital in the vicinity has proved a gold mine. All types of skin diseases and a syphilologist's paradise. By the way, the Indian Neisserian infection doesn't act like our mild U.S. type—frequent recurrences and frequent complications. Lues more virulent, earlier incubation but responds rapidly to 28 week treatment. Occasionally have some traumatic surgery and at times extensive first-aid procedures before evacuation. In all it's a very varied life with lots of routine—latter consisting of supervising an eye lane for 64 examination (flight physical), a dental section, a pharmacy, and a large medical supply section. Added to this, have a fair sized sickbay requiring supervision. So you see the days are busy, and at times the nights are even busier.

Oh, yes! We are in the midst of learning about smallpox, Indian and Chinese—and have learned that the Edinburgh Strain (vaccine) probably is the best for protection. As yet not too much data, but plenty of food for thought.

Very sincerely,

William H. Lowell, Jr.
Major, MC
[*r.p.* 1940]

P. S. Promoted February 1, 1944

Major Robert A. Gregory (*r.p. N* 1933) is assigned to the 3d Divisional H.Q. of the Canadian Army Overseas as Consultant in Neuropsychiatry for that Division.

With promotion in rank as of March 14, Major I. Paley Rak (*a. Psychi.*) is Chief of Neuropsychiatry in a general hospital in England. "Have met many of our MGH men here. It's a touch of home to see them."

Capt. Henry L. George, MC, AUS (*CM* 1929) sent his latest address from England, and mentions earlier stations:—

My assignments in the Army so far have not been too exciting. In August 1942, I proceeded to a medical pool at Billings General Hospital. In November I was assigned to Halloran G.H., where I was Chief of Communicable Diseases and in charge of the male respiratory ward, as well as being the post pediatrician. My family lived with me on the post, which made it very pleasant.

In February 1944, I was assigned to the 000th General Hospital. Temporarily am in charge of communicable diseases. We had a nice trip over here.

Capt. Thorolf E. Gundersen, MC, AUS (*r.p. N* 1941) is with an Infantry Battalion now in training overseas.

Concerning my own exploits since entering active service 14 months ago, there is little out of the ordinary.

While in the Zone of the Interior, the entire period was spent with the mountain troops at Camp Hale, first as a member of a Medical Battalion and subsequently by transfer at my own request to my present job as Infantry battalion surgeon—a far cry from a residency in Neurology.

Capt. James M. Faulkner, MC, USNR (*EM* 1925) is now Chief of Medicine at a Naval Base Hospital in Southern England: "I count myself fortunate in having the erudite Lt. Comdr. Maurice M. Tolman (*a.d.*) in charge of Dermatology and Syphilology."

Comdr. Edwin B. Dunphy, MC, USNR (*c. Oph.*) explains the fact that The News has usually found him reported in Army company:—

Although I hold a commission in the Navy, most of my work has been with the British Army, along experimental lines. Since January I have been back with the USN forces in a training program along medical lines, but still carry on some liaison work with the British services.

A letter to Dr. Faxon gives further information about his activities:—

I have promised the American Journal of Ophthalmology, which elected me to its Editorial Board in March, that I'd editorialize on the differences between American and British Ophthalmic residences. But it's difficult to find time to study the situation, as I travel so much. From last May to January I was doing research work of more or less secret nature, but since the first of the year I've been on a training program with constant lecturing. The job is almost completed now, and I hope my efforts have done some good.

Spring over here comes earlier than at home, and it is very lovely. The winter is never as severe as ours, but there's a penetrating dampness to it which, coupled with the lack of central heating, is ———. Most Americans shiver from December 1 to March 1.

Major Henry F. Howe (*r.s. PH* 1934) recently announced: "I am now a Transport Surgeon, working out of an Eastern port. Needless to say I am delighted with the assignment, after 20 months of fighting the Battle of New Jersey!"

Lt. Terry E. Lilly, MC, USNR (*ES* 1943) described the vessel to which he is assigned as "destroyer, fleet repair ship—a floating field hospital for ships as well as man." He wrote: "It is a beautiful new ship, equipped to perfection. The sick bay is a 'small M.G.H.' "

In a letter written early in April to Dr. Lincoln Davis, Lt. Col. James E. Fish (*ES* 1930) gave some details about his long service in Hawaii:—

At the moment I am on a five-day vacation at the Army's rest camp in the mountains, where it is cool and invigorating and opportunity affords to relax and catch up on little things I've been too busy to do for several years —such as letter writing.

Following a promotion about 16 months ago, I have been Chief of Surgery at a very large General Hospital built around an old established institution. It has been hard work —prior to this vacation I had been away from the hospital one night—but I can look back on those months with some degree of satisfaction. Interesting cases would cover pages, and will keep for later telling.

The Hospital Commander, an old timer in the Medical Department in the last war, thinks I am a "lucky surgeon" as he puts it. He is probably right, but I think much of the "luck" is in reality merely the application of sound basic principles learned at the M.G.H., with full advantage taken of those modern miracles plasma, sulfanilamide, and penicillin.

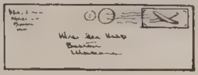
I've seen Herbert Adams, Roy Mabrey, and Virgil Casten several times but otherwise meet people from Boston infrequently.

Lt. Harry M. Spence, MC, USNR (*WS* 1932) is at an Advance Base in the Pacific area. These details of his service are taken from a letter written early in April to Capt. James C. White:—

I went on active duty in May 1942, spending three months at the hospital at Naval Air Station, Corpus Christi. While there I was for a time on the G.U. service, but soon got a chance to transfer to general surgery, where I did considerable work. The service in general was very light, however, so I put in for assignment either to a M.O.B. Hospital or to sea duty, preferably the latter. The answer was an assignment to a hospital that was to be an advance base unit in the South Pacific.

This assignment consisted of spending seven months at Moffett Field, Cal., doing absolutely no medical and little other work while we waited for orders. Finally left the country just over a year ago, and went to the Fiji Islands where we spent three pleasant months running a small hospital.

We then came to Navy #250, just as it was "secured", and set up our Base Hospital. This proved very interesting duty. The Hospital was nominally built by a C.B. outfit, but actually corpsmen and medical officers did the bulk of the planning and physical work. As a result we have a superb set-up—Quonset huts, canvas, and frame structures—which has won the praise of all who have seen it. We have taken care of a great number of Navy and Marine personnel, including casualties. My duties have been doing the Urology (a surprising incidence of urethral stones) and being second man of the General Surgical Service, where I have done a lot of major stuff.



The address of a letter to Dr. Faxon discloses promotion for Capt. F. Thomas Gephart, MC, AUS (*WS* 1941):—

During my travels have run into John Maier, Robert Hormell, Charles Deckert, and Jim Heyl, and just missed Hannibal Hamlin, Arthur Willetts, and John Raker.

I consider myself fortunate in being with a Field Hospital, although we no sooner seem to get a reasonably comfortable niche hacked in the jungle than we are moved to a new spot. You have had more vivid descriptions than I can give of life in the South Pacific. I haven't noticed anyone describe the length of the rainy season, though. Apparently it runs from December to November.

Our unit spent a few weeks in New Zealand, and I was fortunate in making the acquaintance of several of the doctors. I also visited one of the large hospitals, and was a little surprised to see how much it was like a large hospital in the States. I certainly envy the men in the European Theatre because of their chance to have occasional visits from Dr. Churchill and others of the MGH staff. Most of us are so widely separated out here that our encounters are mostly accidental and, of necessity, brief. I came overseas on the same ship with Dr. [Comdr.] Robert Schwab.

Comdr. Rodney F. Atsatt (*Or.* 1926) has been transferred from a Section Base in California to a Naval Operating Base in the Pacific area:

There are 25 doctors here in the various activities. The island is a lonesome spot with none of the fair sex, but we struggle along! I am now Senior Medical Officer. This is a very active spot, directly connected with the war effort. We hear many interesting tales from the men who base here.

Lt. John L. Wilson, MC, USNR (*ES* 1940) is with an Air Center Command in the Pacific. The Hospital's Christmas card reached him after 5½ months' travel to previous aviation assignments there.

Lt. H. Stanley Bennett, MC, USNR (*res. fel. An.* 1942) sent his change of address late in January, and gave details of his service to that date. He is assigned to Headquarters, First Marine Amphibious Corps, in the Southwest Pacific.

I was ordered from the First Naval District to Pensacola Naval Air Station last June. After about a month at Pensacola, working on aviation medicine research—where I saw Lt. Comdr. Ashton Graybiel [*EM* 1932]—I was transferred to the Fleet Marine Force and ordered to Camp Elliott, San Diego, for training at the Marine Medical Field Service School there. Left the States late in August, and have been in the South Pacific ever since. I spent about six weeks as a patient in a Naval Mobile Base Hospital out here last fall. At present I am assigned to the Corps intelligence section, and have no medical duties. My work is combat intelligence work. I am busy, learning a lot, and enjoy my job.

I saw Lt. James Heyl some weeks ago. He is at a Navy Mobile Hospital on an island in this area, and has charge of the malaria and penicillin work at his hospital. I was impressed by the excellent work being done there—particularly on burns, where lessons learned at the M.G.H. on the occasion of the Cocoanut Grove disaster are applied successfully.

Comdr. Channing S. Swan (*WS* 1925) received this promotion in February 1944, to rank from October 1942.

A few comments on the 105th G.H. supplement a longer letter from Lt. Col. Edwin F. Cave (*ES* 1926), published last month:—

In this theater we feel very encouraged, but realise we have a considerable way to go. We are tremendously impressed with the team work of the Army, Navy, and the Air Force, and the despatch with which they carry out their jobs.

We have lost more than twenty of our original members, but the nucleus of the outfit is essentially the same, and we continue to function as a unit with a good spirit. The Portable Hospitals have done well, and we will soon be sending surgical teams for short runs, an extremely valuable experience for the men fortunate enough to go.

As I wrote, we had a very successful surgical meeting here in December, well attended by Australian and American surgeons in this theater. We are now planning a psychiatric conference for early in May. Our winter weather is beginning! Our stoves and fireplaces are going at full blast, particularly early in the day, and most of us are using sleeping bags. There is a wide fluctuation, however, between the temperature of early morning and that of midday, from 30° to 40°, so that the midday sun is delightful.

Major Frederic W. Ilfeld (*Or.* 1937) has recently been transferred to the 5th General Hospital.

Capt. Daniel C. Dawes, MC, AUS, a Senior Physician at McLean Hospital and an original member of the Hospital's Unit, is now assigned to the 96th General Hospital.

A letter written in January to the Dental Staff gives a few details about Major Frederick K. Poulin, DC, AUS (*Dn.* 1942):—

At times it seems hardly possible that nearly two years have passed since leaving the M.G.H.; and at other times, I must confess, the M.G.H. and home are places I knew about a thousand years ago. From the United Kingdom to Africa to Italy I've followed fairly closely the scenes of action—sometimes a little too closely! But so far with the best of luck.

At present am in charge of a small but excellently equipped clinic: Operative Dept (5 officers), Prosthetics Dept. (2 officers), 10-bed ward (2 nurses!), and it is rumored the WAC's will be moving up soon and that we are to have two. Dental officers in the field, in the surrounding area, keep us well supplied with impactions, roots in the antrum, etc.

Major Poulin has since been working with the 12th Air Force.

On April 26, Miss Betty Dumaine wrote from her Red Cross post: "This is to wish you greetings from India. My, it's a long way from M.G.H. and all my friends! We had a huge fire recently in one of our big cities here. I certainly thought of all of you." This message was addressed to Mr. Frankson to express her concern about his recent illness. All those absent from the Hospital will be glad to know that, after a four months' rest, Mr. Frankson is back in the Store.

HMS '43—Camp Barkeley, Texas—February 16, 1944

Top Row: *Allan L. Friedlich* (*M* 1943), *Henry F. Allen* (*ES* 1943), *Logan O. Jones*, *Richard A. Betts*, *Ernest Craige* (*M* 1943), *Harold Brown*;
Bottom Row: *Charles A. Kane*, *H. Waldo Bird*, *William C. Flinn*, *Rafe Banks* (*ES* 1943), *Dante Campagna-Pinto* (*M* 1943).

The cut above appears here through the courtesy of the *Harvard Medical Alumni Bulletin,* but a print of it reached THE NEWS with the accompanying letter:—

117th Evacuation Hospital
Fort Bragg, N. C.
26 April 1944

Dear Sirs;—

Enclosed you will find a picture of a group of old [!] HMS '43 graduates. Five of this group finished interning at the old MGH on January 1, 1944; the remainder are well known to members of the MGH staff. This picture was taken February 16 at Camp Barkeley, where we were undergoing an indoctrination course for medical officers.

Since our graduation there on February 19, we have been scattered all over the United States. We all spent six weeks in General Hospitals, and then were assigned to various units. I was lucky enough to be assigned to an Evacuation Hospital where I hope I shall be able to continue with the surgical training I had started on the East Service.

Sincerely yours,
RAFE BANKS

Capt. David H. Clement is not an MGH graduate, but he is known to many members of the Hospital for his work here while a third-year student at the Harvard Medical School in 1934 and in later years. Late last year he startled THE NEWS considerably by subscribing to it "for 1943, 1944, and 1945". This certainly includes him within the ranks of MGH enthusiasts—and optimists in general. At that time he wrote:—

Presumably the request for "news of your personal activities" does not apply to one with such casual association with the old Massachusetts. I shall have to inform you, however, that I am "somewhere in Italy" where I have been for some time. During the invasion I had some very interesting experiences serving as a ship's surgeon aboard an LST (Landing Ship Tank) in the Gulf of Salerno, making five trips to Italy, the first on the morning of historic September 9 or D Day."

Captain Clement was then with a General Hospital. Late in February Major Grantley W. Taylor numbered him among the many MGH-ers met in Naples.

Col. Thomas H. Lanman (*ES* 1918) has been made a Consultant in Surgery to the 12th Hospital Center in the European theatre.

In a letter written late in April to Dr. Allen, Major Claude E. Welch (*ES* 1934) sent news of the Unit personnel:—

About a month ago Horatio Rogers, Marshall Bartlett and I, along with several of the medics, went up to Algiers to a medical conference. We had a long talk with Colonel Churchill, but the others were all off in Italy. Colonel Churchill, and the other members of the office, have started a North African Medical Bulletin, of which four issues have now been published. The last contained an article by him on battle wounds of the abdomen that was excellent. He has been in a position to study many of the records and has seen many of the more seriously wounded patients at several spots along the evacuation line.

We are slowly but surely losing a great number of our officers. Dan Ellis has left for Italy for duty as a battalion surgeon right at the front line. Ed Cantlon has just been assigned to a very active surgical group, working in a team near the front lines. This is the same group Phil Giddings was in. Phil, he said, is recovering in good style, has had his colostomy closed and a secondary suture done on other wounds. He expects to get back to duty shortly.

As we lose these men, we get an occasional replacement who is, of course, far inferior in training. That is even more true of the enlisted men, who also move frequently. Hence there is a certain amount of training that goes on continually. The hospital itself now does its duties in a remarkably smooth and efficient manner,—a great change from a year ago when we really had plenty of difficulties. Colonel Goethals deserves a lot of credit for developing such a smoothly running organization.

On May 9, Colonel Goethals sent word of the Hospital's Unit as it finds itself after a year's service in North Africa:—

We have had our annual general inspection and have come off with a rating considerably better than satisfactory. The acceptance by all of us of the technic of administrative procedure (possibly "red tape" is a more succinct term) has contributed in great measure to this happy result. A year ago, in the breaking-in period, we were a bit ataxic: this year we are well coördinated.

During the past two months we have been visited by the Surgeons of the two echelons which are above us: in each case they expressed themselves as satisfied with what they saw. Our relations with the local command and staff have remained healthy, and I think it fair to say that if it was once proper to call Base Hospital No. 6 a "veteran", we can now adopt for ourselves that title and push our predecessors up the scale to "senior".

During the past two months we have had several changes in the status of our staff, as follows: Seyfarth and Ellis have been transferred. Lt. McCann of our dental service has been promoted to Captain. The Nurses Charman, Haley, Lyons, Madden, MacKinnon and Simeneau have exchanged gold for silver bars. Five other nurses should soon do the same. Sullivan, who has been chronically on detached service since early in January, paid us a visit for a few days last week, evidently thriving on his assigned job of blood work. In like manner Gundersen has been away for a good part of the past several months organizing the opthalmological picture in the theater. He is back for keeps,—at least temporarily. McGahey is now on detached service, also.

Another cheery word has come from Pvt. William J. Murphy. He is with an evacuation hospital, and his letter of March 30, addressed to the Telephone Operators at the Hospital, was sent from the Anzio Beachhead:—

Hello Girls! Suppose none of you will remember me. Anyhow, I'm the fellow who used to say "Orthopedic, Bill," when the phone rang. Since last seeing you folks a little over a year ago, a lot has happened and I've done a lot of travelling. All the way across Africa and part way up the boot of Italy to this darn beachhead, where it always seems to be open season on evac. hospitals. Visited Casablanca, Constantine, Carthage, Tunis, Bizerte, and several other cities in Africa. The Arabs can have it all.

In Italy I have seen some of the cities, Pompeii, and of course Vesuvius, Naples, and for a while wasn't far from Cassino. Those places are all fine, but to me right now Chelsea on the day they collect the ashes would be a heavenly sight. One day I climbed about 7 or 8 miles straight up the side of a mountain to see a monastery.

From time to time I run into some of the MGH boys. Major Simeone and his Colonel. Heard a lot about Captain Jergesen and his work. Was very close to him several times and didn't know it was he. Major Grantley Taylor visited with us not long ago. Wasn't too far from Captain Giddings when he was hit, and helped put him on the O.P. table.

I'm still Pvt. last class, and it looks like that is to be my rank for the duration. Do almost the same work as at home, only more of it. When our loud speaker pages the different doctors, I often think of you people. Hope you are all well.

Sincerely,
"Bill"

In last month's NEWS the address as published for Capt. Robert S. Palmer, MC, USNR (*WM* 1927) read: "Navy 168, FPO, San Francisco." It should have read: "FPO, New York."

THE NEWS

No. 22 Boston, Mass. July, 1944

All successful publications presuppose competent editorial direction. Only great editors produce great newspapers. The M.G.H. NEWS has been fortunate, during the first twenty-one months of its existence, in having Helen Boyer as its editor. Certainly a large part of its success is due to her ability to collect, arrange, and present in an attractive form the many local and foreign items that have made THE NEWS a periodical eagerly awaited and avidly read both at home and abroad. In some way she managed to transfer to its pages the spirit of the M.G.H.—an accomplishment which bespeaks ability approaching genius.

Miss Boyer's relationship with the M.G.H. began some six or seven years ago when she assisted Dr. Frederic A. Washburn in writing the history and development of the Hospital from 1900 to 1935. Her intensive study of the original records gave her an extensive knowledge and background of the past and present history of the Hospital.

Soon after the publication of Dr. Washburn's history in 1939, the Trustees established the Archives Department — supported in part by the M.G.H. House Pupils Alumni Association—and Miss Boyer was appointed Archivist. The former Trustees' Room and Director's Office in the Moseley Building were set aside for the Archives, and there is now on display there a most interesting collection of maps, plans, photographs, manuscripts, old desks, chests, mugs, and other memorabilia of former days. Miss Boyer has shown great skill in assembling and displaying interesting exhibits.

With the establishment of THE NEWS in October 1942 she was appointed Editor, while continuing to serve as Archivist. Without its being intentionally planned, these two positions have gradually merged.

Because of her conscientious acceptance of family duty she felt obliged to tender her resignation, which became effective June fifteenth. Fortunately for THE NEWS, she has builded solidly and well, and has so planned that she leaves it in the care of her capable assistant Miss Cora F. Holbrook who, on Miss Boyer's departure, became the Editor and Archivist.

There is nothing to do, it would seem, but to regretfully accept her resignation, to commend her devotion, to wish her many happy years with her father, and to hope that she will always remember with pleasure her association with the M.G.H.

BULFINCH BUILDING

The leaves dance here in play, if dance it be,
This sombre gusty swirl of leaves, as dry
As our dust, Lucretius wrote, gone whistling
Down the wind, when we are back to atoms.
This autumnal afternoon, the sun shines off the halls,
Aslant the sward, marks off the chill pursuing shade.
A terraced lawn, nurture of many hands,
And long years' slow care, a precious space
Spared from the crowded tenements.
Mark ye, against the wracks of pain, disease,
Agonized death, how well the architect drew
White pillar and pediment, balanced fine,
A temple firm to health, where hope is life,
Where soul to body still miraculously clings!

JULIUS VEXLER,
November, 1943

A note from Mr. Vexler accompanied his lines on the Bulfinch Building. It said, in part:—

> Several months ago, while visiting your hospital, I first came in touch with its fine spirit and first saw closely the Bulfinch Building. Scattered thoughts occurred to me then, which have since been put into this sonnet. I thought you might like to read it.

* * *

At the annual meeting of the Vincent Club on May 11, 1944 it was voted to send $18,000 again this year to the Vincent Memorial Hospital.

At the last meeting of the Board of Managers of the Vincent Memorial Hospital the following resolution was passed:—

> It was with the deepest regret that the Board of Managers of the Vincent Memorial Hospital heard of the death of Miss Jean Cameron Fraser on February 28, 1944, at the home of her niece in Camden, New York.
>
> Miss Fraser became a nurse in the hospital in the early days when it was still situated in Chambers Street, and served as the greatly beloved matron from 1907 until her resignation in 1942 when the Vincent Memorial Hospital joined with the Massachusetts General Hospital.
>
> During these many years Miss Fraser's interest in and devotion to the patients, combined with her high standards of nursing care, were outstanding, and were a great factor in the success of the hospital.
>
> All those who came in contact with her will long remember her unfailing kindness and gallant spirit.

Far too little has been said about what the men volunteers have been doing to relieve the serious labor shortage in the Hospital. We are all familiar with the indispensable work of our women volunteers, but insufficient recognition has been given the men.

Covering a period of two years, several groups of men have been trained evenings in various kinds of work at the Hospital. Recently a class of twenty business and professional men completed a course of eight lectures, given by Mrs. John B. Hazard, Supervisor of Volunteers under Nursing Service, to prepare them for volunteer work on the wards and for other essential duties in the Hospital. This new group increases the number to approximately fifty volunteer orderlies at Massachusetts General and Baker Memorial. Most of these men will give one evening a week, after their day's work at their offices, stores, or factories. Four hours a week is the amount of time each was asked to volunteer; but the men are most enthusiastic, and several have already requested the privilege of contributing more time.

Resignations from the work seldom occur, except for very legitimate reasons. For instance, several of our men have recently been called into military service, and a few have moved their homes too far away to make its possible to reach the Hospital.

More men are still required, and a new class will be started as soon as another group can be assembled. Several applications have already been received, but the need for many more is urgent.

Another group of men volunteers comes in to clean—among whom, also, are men prominent in the professions and in business. We have reason to believe that this group will soon be augmented, for these men realize that cleaning is a vital problem at this time when it is almost impossible to find paid workers, and they are making every effort to gather in additional volunteers.

This account would not be complete without a special tribute to Mr. Osborne Perry who has assumed the responsibility of directing these men. No greater single contribution of personal service has been given at M.G.H.

Miss Greenwood or Mr. Perry, of the Volunteer Service, will be glad to hear from any man who will come to help. The telephone number is Capitol 4300, Extension 257.

Are you a man with 4 hours a week to spare?

At their meetings during May the Trustees voted:—

To appoint Lillian F. Bennett, M.D., as intern on the Children's Medical Service beginning July 1, 1945;

To appoint Frederic M. Blodgett and James P. Whittemore as interns on the Children's Medical Service for nine months beginning July 1, 1945;

To appoint H. Dunster Howe, D.M.D., as intern on the Dental Service from May 26 to August 31, 1944;

To accept the resignation of Ferdinand Brigham, D.M.D., as Dental Surgeon.

On May 31 the General Executive Committee appointed Phillipus J. Kloppers as Graduate Assistant in Medicine.

North End Diet Kitchen

It has long been known that diet plays an important part in the treatment of many diseases. Our own North End Diet Kitchen, originally a philanthropic organization in the neighborhood, was brought into the Hospital in 1923 when it was decided to maintain a Diet Clinic in the Out-Patient Department.

The purpose of the Clinic has always been to aid in the dietary treatment of the ambulatory patient by interpreting to him the doctor's prescription in terms of his environmental situation. Patients are referred to the Clinic from other clinics and upon discharge from the House. The referrals have been largely for diabetic, gastric, and overweight conditions. It would seem that referrals should be encouraged from many clinics—as, for instance, the Dental, Eye, Pulmonary, and others. Many patients seen by the dentists doubtless exhibit mouth conditions indicating particularly poor choice of food, just as patients having eye examinations might show abnormal conditions due to vitamin deficiencies. Fifteen per cent of the patients seen last year came to the Clinic for instruction in adequate normal diet, the importance of which cannot be overemphasized. Such instruction is preferable to expensive vitamin concentrate prescriptions; but if these are indicated, it should certainly accompany them.

Two trained dietitians, with the help of student dietitions and student nurses, are prepared to give individual instruction to all patients. Wax food models and actual foods are used for demonstration, together with household measuring aids; and the preparation of certain advised foods is shown. Nationality, living conditions, and financial limitations, as well as marketing problems and ration points, are taken into consideration. Budgets often must be figured around these factors.

The services of the Clinic are available to all patients who can be helped by our teaching of good nutrition. Doctors are urged to refer their patients when such need is indicated.

A Gynecological Clinic, under the direction of Dr. Joe V. Meigs (*ES* 1921), is to be opened in the Out-Patient Department on June 26, 1944.

OFFICIAL NOTICE

The Blood Bank is now successfully using an *appointment system* for its donors. They are thus spared a tiresome indefinite wait and the Bank Staff avoids the embarrassing accumulation of many donors at one time. Members of the Visiting Staff are requested to instruct possible donors to telephone or visit the Bank in order to make a definite appointment to have their blood taken. The time required of the donor for preliminary registration, laboratory tests, examination, taking of the blood, and resting afterward, is between forty-five minutes and one hour.

In order to expedite the establishment of credit in the Blood Bank for a patient who is to have transfusions, and to avoid last minute delay before operation while donors are being procured, it is suggested that members of the Visiting Staff mention to their patients before admission to the Hospital that donors may be necessary. This will prepare the way for subsequent steps after admission. A pamphlet is being prepared for distribution to patients who may require transfusion, and to their families and friends, and this will present information about the Blood Bank and instructions for donors. *The Bank cannot function efficiently unless a positive credit is established for the patients who are to use it.*

Carroll C. Miller, M.D.,
Director of the Blood Bank

The latest in the Hospital Bulletins is No. 12, on penicillin. This bulletin outlines the plan for the release and distribution of penicillin, as approved by the General Executive Committee of the Hospital. Dr. Arthur J. Linenthal (*r.p.* 1944) has been appointed the Staff member in charge of distribution. Physicians requesting penicillin will be required to submit specified information, and the hospital pharmacy is given directions governing its release. A list of diseases for which penicillin is indicated and for which it is ineffective, as far as can be determined up to the present time, has been drawn up by Dr. Chester S. Keefer. Since penicillin still remains scarce, the Committee has amended the indications somewhat to clarify relative priority ratings, and has assigned a priority rating to each disease and its complications. A list of the diseases, with the priority number assigned to each, is attached to the bulletin.

Dr. Keefer is Professor of Medicine at Boston University, Director of Evans Memorial of the Massachusetts Memorial Hospital, and, for about a year, has had charge of the small emergency distribution of penicillin for civilians in the United States.

The following notice has been posted by Dr. Kurt H. Thoma (*c. Dn.*):—

> Dental conferences are omitted for the summer months, beginning in June. Notifications will be mailed to the members when these conferences will be resumed.

A well-deserved honor has come to Miss Ruth Sleeper, Assistant Superintendent of Nurses and Assistant Principal of the School of Nursing. At the recent annual meeting of the National League of Nursing Education, in Buffalo, Miss Sleeper was elected president of this national organization. This honor culminates several other League positions she has held, as capable chairman of important committees.

Miss Hazel Halladay (*MGH* 1930) was recently appointed the first Director of the first Neuropsychiatric School for Army Nurses in the 1st Corps Area. The school is located at Camp Edwards, Massachusetts.

In 1942 Miss Halladay volunteered for military service and was assigned to the 9th General Hospital at Camp Devens. From there she was sent to Camp Edwards, where she was placed in charge of the psychiatric ward.

Miss Halladay will be remembered here at M.G.H. as Head Nurse, in 1930, on Neurological Wards 22 and 26, and as a former Head Nurse at the Eye and Ear.

At the end of May four young physicians from South America, who had been working in the Cardiac Clinics and Laboratory during the past year, left for home. They were an excellent group and had been very helpful, both in routine and investigative work. They were Dr. Eduardo J. Canabal from Montevideo, Uruguay, and Dr. Amado Adorno of Asuncion, Paraguay — Graduate Assistants; and Dr. Francisco Rojas of Santiago, Chile, and Dr. Antonio Juca of Fortaleza, Brazil —Guest Physicians. They are representative of the groups and individuals who have been coming up to us from South America during the last decade or more, and it has been a source of great satisfaction and pleasure to have had contact with so many fine young Latin Americans. Their names have been associated with those of the permanent Staff in many published papers.

Dr. Edward Miskall of Liverpool, Ohio, who has given invaluable aid to the Cardiac Clinics and Laboratory as Graduate Assistant during the past two years, is also leaving now. He will be greatly missed.

From winter sports to summer pastimes! The Hospital sidewalk snowplow has been converted into a power lawn mower—and is performing equally efficient yeoman service! It hums a delightful tune as it works, too.

SIDNEY CHASE GRAVES

Lieutenant Commander Sidney Chase Graves, MC, USNR (*ES* 1931) died in the service of his country on May 14, 1944. He enlisted in the Navy in 1942 and was stationed at Chelsea Naval Hospital until he received his overseas orders in March 1944. The details of his death have not been received, except that he died while on duty with the Pacific Fleet.

He was the son of the late Dr. William P. Graves, and Alice Chase Graves. He is survived by his wife (formerly Alice Driver Brown of Philadelphia), their three children, his mother, a brother, and a sister.

Sidney Graves graduated from Harvard College in 1924 and from Harvard Medical School in 1929. He was following in the footsteps of his father who went to Harvard Medical School, was a House Pupil at the Massachusetts General Hospital in 1900, and became Chief Surgeon of the Free Hospital for Women in 1908 and William H. Baker Professor of Gynecology at the Medical School. Sidney also graduated from the Massachusetts General Hospital, was Resident Surgeon at the Free Hospital for Women for a year, and then became an Assistant Visiting Surgeon in 1932 and Assistant in Gynecology at the Medical School. He joined his father in practice but suffered a severe loss when his father died in 1933.

Sidney was an able surgeon—conservative, very careful, and rather slow to make up his mind, but tenacious of his ideas once he had made a decision. He always appeared shy at a first meeting, but was a most kind and genial man once he accepted a friendship. His home life was ideal, for he adored his wife and children, as they did him.

His colleagues, especially the Free Hospital for Women Staff, miss him terribly. His kindly smile and quiet, helpful attitude toward his patients will always be remembered. F. A. P.

FARRAR COBB

Dr. Farrar Cobb (*ES* 1893) died at the Cape Cod Hospital, May 29. He was born in Schoharie, N. Y., in 1867, was graduated from Harvard Medical School, and served as house officer at the Massachusetts General Hospital. During the Spanish American War he was a medical reserve officer in "Teddy" Roosevelt's famous Rough Riders.

While Dr. Cobb was serving as visiting surgeon at the M.G.H., he won international fame for his writings and technic in cancer surgery and as a pioneer in the medical study of that disease.

Dr. Cobb also served on the staffs of the Eye and Ear Infirmary, the Carney Hospital, and St. Joseph's Hospital in Nashua, N. H., and was a lecturer in surgery at Harvard Medical School. He had been a consulting surgeon at the Cape Cod Hospital for twenty-five years.

Elements of Medical Mycology. By Jacob Hyams Swartz, M.D. [*d.*], Assistant Professor of Dermatology, Harvard Medical School and Postgraduate School, Boston. Introduction by Fred D. Weidman, M.D., Professor of Dermatological Research, University of Pennsylvania. Pp. 179; 78 illustrations. New York: Grune & Stratton, 1943.

In this small volume, dedicated to C. Guy Lane, M.D., Dr. Swartz has brought together in condensed form a vast amount of information which is most valuable, especially to the beginner in mycology.

The clinical appearance of a mycotic infection with its microscopic findings and cultural characteristics is discussed, while the abundant clinical- and microphotographs illustrate the text so freely that much can be learned from these alone. Suggestions as to treatment and prophylaxis are outlined.

Procedures in laboratory technique are given, together with formulae for media and stains best adapted to the growth and identification of the imperfect fungi.

Following the chapters on the microsporums, the epidermophytons, and the trichophytons, which compose the greater part of the book, attention is given to those mycotic infections less frequently seen, such as blastomycosis, actinomycosis, sporotrichosis, coccidioides immitis, and the chromoblastomycetic fungi.

A brief chapter is devoted to "Common Contaminants and Probable Pathogens".

One of the outstanding features is the outline of The Pathogenic Fungi in tabulated form. This shows at a glance the clinical picture and the mycological findings with schematic drawings characteristic of the pathogens discussed in the text.

A worth-while book.

E. M. R.

Stitt's Diagnosis, Prevention and Treatment of Tropical Diseases. By Richard P. Strong, M.D., Sc.D., D.S.M., C.B., Professor of Tropical Medicine, Emeritus, Harvard University; Consultant in Tropical Medicine to the Massachusetts General Hospital and the Boston City Hospital; Colonel, M.C., Army of the United States; Director of Tropical Medicine, Army Medical School, Washington, D. C. Sixth edition. Vol. 1, 817 pp., 197 illustrations; Vol. 2, 876 pp., 199 illustrations. The Blakiston Company.

The demand for this work, as published in 1942, exhausted that issue. A reprinting is now available. The early editions were written by Dr. E. R. Stitt. This sixth edition was entirely rewritten by Dr. Strong, with the assistance of the faculty of the Harvard Medical School and other authorities.

The *Harvard Alumni Bulletin* of May 13 carried a notice of an AP dispatch which summarized the results of a thirst study made at the Harvard Medical School by Dr. James L. Gamble (*WM* 1912), Professor of Pediatrics, and Dr. Allan M. Butler (*c. C.M.*), Associate Professor of Pediatrics and director of the special research. Dr. Gamble told the American Philosophical Society, the dispatch said, that glucose may now be substituted partly for water to save castaways and downed aviators from dying of thirst in their life-rafts.

> This sugar [it appears] serves as both food and drink, by saving some of the body's water which otherwise would have been excreted. The metabolic riddle which glucose solves is this: Normally the kidneys use quite a bit of water to wash away from the body a number of different acids, including acids called ketones. Glucose prevents the formation of these ketone acids. The saving is so large that for 100 grams of glucose eaten the body is saved the loss of 140 grams of water.

The April 22 issue of the *Journal of the American Medical Association* published an article by Major Henry K. Beecher (*WS* 1934) entitled "Delayed morphine poisoning in battle casualties". The surgeon, North African Theater of Operations, U. S. Army, and the surgeon, Fifth Army, gave Major Beecher the opportunity to observe and report these findings, therefore his observations are the result of direct war experience. Factors leading to delayed toxic effects, the clinical implications, and treatment of the problem are outlined. Major Beecher closes his article with the following summary:—

> When the peripheral circulation is sluggish or inactive, as it may be in patients who are chilled or who have low blood pressure, subcutaneous injections of drugs are poorly absorbed. This was frequently observed to be the case in the Italian campaign. Subcutaneous injection of morphine under such circumstances fails to relieve the pain of wounded men. Repeated injections, sometimes over a period of many hours, are not absorbed until finally by shock therapy and warmth the circulation is reestablished in the skin and subcutaneous regions. The unabsorbed deposits of morphine, often totaling a grain or a grain and a half, are then taken up by the active circulation so rapidly that signs of morphine poisoning previously not present then appear, as shock is overcome.
>
> It is usually stated that wounded men require large doses of morphine, doses that may be dangerously large. It is probable that this clinical tradition had at least part of its basis in poor absorption of the morphine in cases such as these. Although the intravenous use of morphine is desirable and would eliminate the problem, such use is not ordinarily practicable under field conditions. In this case, intramuscular injection followed by massage is the choice.

Major Beecher is Consultant in Anesthesia and Resusitation, North African Theater of Operations; Professor of Anesthesia, Harvard Medical School, on leave; and, of course, our own MGH Chief Anesthetist, on leave.

MASSACHUSETTS EYE & EAR INFIRMARY SECTION

HEAR YE! HEAR YE!

All Eye & Ear Staff now in Military Service

TAKE NOTICE

and

Send your letters to The News for an Eye & Ear Section
Likewise, those on the Home Front may contribute any items of interest

The above broadside is in prompt response to an appeal sent to Dr. Faxon, from England, by Major Thomas Cavanaugh, MC:—

> Henry Brewster regularly gives the MGH News to me, and I have noticed that items about Eye & Ear graduates are indeed rare. Knowing how closely interwoven the activities of the General and the Infirmary are, may I suggest that you consult with Miss Robinson or Mrs. Ware, so that a column devoted to the service activities of Eye & Ear men may be published in The News. By so doing, I am sure that many of us could be brought "up to date" on our brethren.

The one hundred sixty-third anniversary of the Massachusetts Medical Society was held in Boston, May 22-24.

The annual oration was delivered by Dr. Joseph C. Aub (*EM* 1915), Director of the Medical Laboratory of the Huntington Hospital. His subject was "Toxic factors in traumatic shock".

There were exhibits from the U. S. Naval Hospital, Chelsea, including one by Capt. James C. White (*WS* 1925) entitled "New methods of suturing severed peripheral nerves with tantalum sutures and protective tubes of tantalum foil". This exhibit showed how the experimental work on this new type of anastomosis by Professor Paul Weiss of the University of Chicago (represented by photomicrographs of his subjects) has been applied to Naval patients with war injuries to nerves of the arm and leg. Illustrations in the form of samples of tantalum foil, tubes, and wire, as well as drawings of the operative method and X-rays showing the tubes and sutures in place, were included.

Dr. White has been in charge of neurosurgery at the Naval Hospital in Chelsea since December 1941, in addition to which he still conducts his classes here at the Hospital.

Dr. Roger I. Lee (*EM* 1907) has been chosen president elect of the American Medical Association. He will take office one year from now.

On June 5, 1944 the President and Fellows of Harvard College appointed Rev. Rollin J. Fairbanks "Lecturer in Practical Theology". Mr. Fairbanks, Protestant Chaplain assigned to the Hospital by the Massachusetts Council of Churches, is also Executive Director of the Institute of Pastoral Care.

The Army has announced the appointment of nineteen medical specialists as civilian consultants to the Office of the Surgeon General. They will work on a part-time basis with the medical department's chief consultant in medicine. The list includes three members of the MGH Staff: Dr. Chester M. Jones, gastro-enterology; Dr. Francis M. Rackemann, allergy; and Dr. Paul D. White, heart disease.

The job is that of advisor in any problem within the consultant's special field concerning which the Surgeon General's Office wishes advice. The work is mainly concerned with the examination of registrants for military service, and also with illness that may arise among the military personnel on active duty. Such appointments allow more rapid action than can sometimes be obtained through committees or groups of individuals.

It is also understood that Dr. W. Jason Mixter will act in a similar capacity in neurosurgery.

Dr. Faxon was guest speaker at the Hospital Group of the Retail Credit Grantors of New England at their Annual Conference in Swampscott on June 8. That hospitals have just as important post-war problems as commercial houses was borne out by M. R. Neifeld, Ph.D., of Newark, N. J., in his presentation of "Relationship of Hospital Credit to the General Economic Picture". Walter Morrison, Credit Manager of the Stetson Shoe Company, in his very capable discussion of "Survey of a Small Local Hospital", pointed out many weak spots in hospital credit departments and prescribed some stringent remedies. Judge Frank S. Deland, Vice-President and Trustee of the Faulkner Hospital, presided at the meeting; and Frances Hernan, our Chief Accountant, who is a director of the Retail Credit Association of Boston, was chairman of the Hospital Group meeting.

The following changes of address have been received:—

Lt. Henry F. Allen, MC, AUS (*ES* 1943), 446th AAA-AW Bn., Indiantown Gap, Pa.
Lt. Donald V. Baker, Jr., MC, AUS (*ES* 1943), School of Aviation Medicine, Randolph Field, Tex.
Lt. John F. Bell, MC, AUS (*Or.* 1941), OTB 55, Carlisle Barracks, Carlisle, Pa.
Lt. Robert K. Brown, MC, AUS (*WS* 1939), Torney General Hospital, Palm Springs, Cal.
Capt. Daniel Cahoon, MC, AUS (*WS* 1942), School of Aviation Medicine, Randolph Field, Tex.
Lt. Harold E. Elrick, MC, USNR (*M* 1944), 30th Battalion, ABD—Camp Thomas, Davisville, R. I.
Lt. Allan L. Friedlich, Jr., MC, AUS (*M* 1943), School of Aviation Medicine, Randolph Field, Tex.
Capt. Luke Gillespie, MC, AUS (*a. obst.*), APO 322, c/o Postmaster, San Francisco, Cal.
Capt. Henry C. Thacher, MC, AUS (*CM* 1942), School of Aviation Medicine, Randolph Field, Tex.
Lt. Robert P. Tucker, MC, USNR (*WS* 1940), c/o Dispensary, Klamath Falls Marine Barracks, Klamath Falls, Oregon.

There are several of you from whom The News has received nary a word since you went into military service. Your friends are just as eager to hear where you are and what you are doing as you are pleased to learn about them. Even though it is reasonable to suppose that many of you may be busier than heretofore—all the more reason why you should let us know what you are allowed to tell about your activities. So sit you down and write us anything that might make News material. Besides, it's a very crafty way to write several letters at the same time, you know—for The News goes everywhere!

If you find The News enjoyable, please help us in this way to keep it so.

Lt. James G. Miller (*EM* 1943) is to report for duty July 8, at Carlisle Barracks, Pa.

Lt. John M. Morris, MC, USNR (*ES* 1942) has recently returned after a year and a half in the Aleutians. He says:—

> It was interesting for the first year when the Japs were there. After we drove them out, the monotonous bleakness of the country and the persistent foul weather were almost unbearable. Nothing but rocks and a little tundra grass. No trees. No care-free natives! Only five days on which the sun shone. Constant fog, and winds recorded regularly from 60 knots up.

Lieutenant Morris is now assigned to the Reserve Midshipman's Training School, Columbia University.

Dr. Harry M. Lowd, Jr. (*CM* 1941) was commissioned as Lieutenant, MC, USNR, and served aboard a destroyer from the autumn of 1941 until December 8, 1942, when he received his honorable discharge due to injury. During his service, this destroyer was engaged in anti-submarine warfare in northern waters of the North Atlantic. Dr. Lowd has resumed practice at 366 Essex Street, Salem, Mass.

Another recent alumnus to be heard from is Lt. Alexander B. Vial, MC, AUS (*ES* 1943):—

> I received my commission in January 1943, after an ROTC course at the University of Michigan Medical School. I went on active duty January 28, 1944, starting my hitch at Carlisle Barracks. There I met several good friends from M.G.H.—R. K. Brown [*WS* 1939], Don Sweeny [*WS* 1943]—my former resident, droll Walt Kerr [*WS* 1943], smiling Dick Bush [*WS* 1943], and Irish Joe Holihan [*ES* 1943]—alias Happy Hooligan.
>
> From Carlisle I went down to O'Reilly General Hospital at Springfield, Mo., where I met many friends from Michigan, and Major [Hilbert S.] Sabin [*r.s.U.* 1941], Chief of G.U. there, an old-timer from M.G.H.
>
> Now I am at Camp McCain, Miss, assigned to the clearing company of this division. There are no MGH men here, to the best of my knowledge. It's a good outfit, rather proud of its record to date.

Lt. Frank J. Bacevicz, DC, USNR (*Dn.* 1944) has received orders to report for military service at the Naval Training Station, Great Lakes, Ill.

Lt. Donald N. Sweeny, Jr., MC, AUS (*WS* 1943) writes from the Station Hospital, Camp Phillips, Kansas:—

> My new address finds me in the middle of the wheat belt of the United States—and everywhere there isn't wheat. There's oil! I am on the Surgical Service here and have three very busy wards. I also happen to be the local Orthopedic consultant.

In a letter to Dr. Means, Lt. Leonard P. Eliel, MC, USNR (*EM* 1942) tells of his recent appointment:—

> After many months of uncertainty I am finally on active duty in the Navy, and have just reported here to the Medical Department, Marine Barracks, Klamath Falls, Oregon.
>
> The unit I have just joined will investigate malaria and filariasis from the therapeutic angle. We are occupying temporary quarters in a hospital which is nearing completion; however, work has already started in with a bang and promises to continue at a fast pace. Dr. (Commander) L. T. Coggeshall is the senior medical officer. Lt. Bob Tucker [*WS* 1940] and Lt. Bob Heskett, a classmate of mine at Medical School, are also here. It promises to be a lively and congenial outfit.

In reply to an inquiry regarding his status and whereabouts, Lt. Walter S. Kerr, Jr., MC, AUS (*WS* 1943) wrote from Barnes General Hospital, Vancouver, Wash.:—

> In February I reported to Carlisle Barracks for a 6-weeks' officers' training course, and was pleased to find Joe Holihan [*ES* 1943] and Grant Holmes [*CM* 1943] in my platoon. When the course was completed Joe and I drove here, where we have both been assigned to the surgical service. Joe is on the orthopedic, while I am Ward Officer on the urological. Holihan has received orders, effective May 20, to report at Camp Ord, Cal.

Lieutenant Kerr has since been transferred to the 725th F.A. Bn., 70th Division, Camp Adair, Oregon.

Lt. Col. Henry M. Thomas, Jr., MC (*WM* 1917) has been transferred to the Office of the Chief Surgeon, Hq. U.S.A., S.O.S., APO 501, c/o Postmaster, San Francisco, Cal.

•••—V•••—

The last issue of THE NEWS contained a letter from Pvt. William J. Murphy. We learned later that Private Murphy had been wounded and had received the Purple Heart. This is what he himself has to say about it, in a letter to a friend:—

> Some time ago I was hit very slightly on the leg. Really not much more than a scratch. For this I received the Purple Heart. Wouldn't even mention this but for the fact the government may eventually notify my folks and it would alarm them.

After 15 months of service as Medical Officer on a destroyer, Lt. Herbert C. Moffitt, Jr., MC, USNR (*EM* 1942) has been assigned to U. S. Naval Drydocks, Hunters Point, San Francisco.

In a letter written in May to Dr. Faxon, Comdr. Richard W. Dwight, MC (*WS* 1931) has this to say about his work in the Pacific:—

> I received my promotion in February; but, due to the vagaries of the mail out here, it was late in April before I put on the silver leaf.
>
> I gather from THE NEWS that MGH men practically outnumber the natives in the Mediterranean area. There seem to be very few of them out here. Aside from a brief glimpse of Dr. Thorndike and his unit last July, I have seen only one in the year and a half I have been on this ship. He is Dr. Oglesby Paul [*WM* 1943], whom I enjoy seeing from time to time when his ship comes along side.
>
> The work the junior medical officer and I do is characterized more by its variety than its volume, though lately we have been quite busy. He does the medical side and tonsillectomies; I do the surgery and psychiatry. The surgery has consisted mostly of appendices, a few hernias, and quite a lot of traumatic work. I had two bad burns a while ago that responded well to the treatment outlined in the Cocoanut Grove Monograph. One of them had almost 70% of his body involved, largely second degree. The dressings were quite a problem in this climate, as they got soaked through so quickly.
>
> I have had a continuous series of pilonidal sinuses. The Rogers technic works very well on a ship. The patients spend a day or two in Sick Bay, then carry on their work as usual, coming in every morning for a dressing. A number of them had had operations before and had been closed up tight, which makes me increasingly convinced of the rightness of our method. The heat does not slow the healing unduly.
>
> In the medical line we have malaria, dengue, and quite a number of cases of dysentery—apparently bacillary, though we had no method of proving it. They responded well to sulfathiazole. We see all kinds of skin diseases, mostly varieties of fungus, which recur again and again, and many of them have to be sent away from here.
>
> Life on a ship is pleasant on the whole, and distinctly more comfortable than on shore in this area, for we are free of insects, mud, and dust. It is monotonous at times, and I feel the lack of exercise, but one would not take much here, anyhow. We have movies every evening—sometimes two different shows when we are near an Army exchange. At times we are where we can explore tropical rivers by boat. The country is beautiful, but forbidding.

We have just heard that Lt. John Maier, MC, AUS (*EM* 1940) is with the 3rd Medical Laboratory. His APO number is c/o Postmaster, San Francisco, Cal.

Although this letter from Major Tracy B. Mallory, MC (*c.P.*) reached Dr. Ronald C. Sniffin some time ago, we publish it now, to obviate the danger of its being sacrificed in the interest of more up-to-the-minute reports we hope may come to us from Major Mallory:—

> Just imagine me trying to run a laboratory without Miss Parris's or, in fact, any female aid. I have seven "technicians", the sum-total of whose experience in histologic technique in one year in the army is about as many weeks of actual practical experience. Of course none of them type with more than two fingers, and all medical vocabulary and orthography is still a completely closed book. Minor difficulties are some non-melting paraffin, no razor-blade holders, a hone for the microtome knives just five inches in length, no horizontal staining dishes, no needles or camel's hair brushes, no automatic water bath for floating paraffin sections, practically no glassware of appropriate shapes or sizes and a room temperature until four days ago of a very constant 48°. We now have a stove constructed from a German parachute bomb and are at least comfortable, but at the moment I would cheerfully trade the 1,000 lbs. of masculine brawn at my command for 100 of just average female efficiency.
>
> We are now officially open and in operation. We really have a most impressive laboratory from the visual point of view. One department is splendidly equipped—serology. The Army really understands about that! At the moment we have three officers and eight enlisted men struggling with an average of seventy Kahns and Wassermanns a day.
>
> We are good on the big equipment but the little things got overlooked. The bacteriologists (4 officers, 10 "technicians") have only three microscopes, three burners, and four platinum wires. The virus laboratory has a refrigerated centrifuge with a high-speed head but no Berkfeld filters and no celluloid centrifuge tubes, without which the centrifuge is useless, since glass cannot be used. The chemists have a vacuum-oven but neither a photo-electric colorimeter nor a spectroscope. We were given a blood-bank specialist but no bleeding bottles or donor sets. Slowly, however, most of these things are straightening out. We collect the tin cans and the jam pots, we make anaerobic jars out of shell-cases, and we beg, borrow—and, I am afraid, sometimes steal.
>
> We are quartered in a "villa", once the residence of the keeper of the zoo. Among its accoutrements—almost unique, I fancy, in officers' quarters, are six cages for anthropoids. There is also an autopsy table of massive proportions on which horses were once butchered to feed to the lions. Next door is the hippopotamus cage and pool, in case we should want to experiment with any of the larger mammals. We have made some minor improvements such as a hot-water boiler, showers, and a few toilets; and we have been forced to put in a generator of our own, since on the native juice a 60 watt bulb emitted only ½ candle power.
>
> Our officers are truly heterogeneous. Two are of Italian parentage and, most fortunately, speak the language. One is Dutch, one is Chinese. Two have worked up to their commissions through the ranks and know the army inside-out. Only six of the twenty-five are medical corps, two are vets, several are Ph.D.'s in bacteriology, one in parasitology, and one in entomology. One is four feet eleven inches tall and one is six feet five. We hail from Boston, New York, Baltimore, Tennessee, Texas, Oklahoma, Idaho, Oregon, California, Toronto, Rotterdam, and Peiping.

Lieutenant Colonel John H. Talbott, MC (*a.p.*), Commanding Officer of the Laboratory and Director of Research, Climatic Research Laboratory, Lawrence, Massachusetts

Lt. Leonard D. Rosenman, MC, AUS (*ES* 1943) is with the Medical Detachment, 307th Infantry Regiment, somewhere in the Pacific.

Lt. Comdr. H. Stanley Bennett, MC (*res. fel. An.* 1942), whom we succeeded in getting nicely located last month, has been shifted to Hq. Co., H. & S. Bn., III Amphibious Corps—still in the Pacific Theater.

In a letter to Dr. Edward Hamlin, written on March 2 from "our little jungle camp in New Guinea", Capt. Arthur S. Pier, Jr., MC, AUS (*WM* 1941) expresses a delightful concern with hardships in Boston:—

> I imagine that living is quite a complex problem at home now, and it must be pretty hard. I hope the winter isn't dragging out into a dreary one like last year. I can't imagine anything worse than being marooned in the snow without transportation, and without food or heat.

Any hardships of his own life in a Portable Surgical Hospital are incidental to his thanks for a thoughtful gift:—

> It was a tremendous treat after our C-ration stew and bully beef of the past month or so. I can tolerate bully beef, but I find dehydrated potato about the last straw! Actually we are pretty badly spoilt over here, and haven't begun to know what war is really like. The Australians, who have been through nearly five years of it, are a real example. Their whole tenor of life is different from ours, and their patience and casual acceptance of things as they are give them staying power.
>
> We have been fortunate in being set up near an Australian Casualty Clearing Station that has been caring for a huge number of Aussi infantry troops. Many of the doctors and men have been in the Middle East. Some haven't seen their families for four years, except for a brief leave en route. They are excellent medical men, and have been a great help to us in our initiation to tropical disease. During a spell when we were having a lull and they were very rushed, I ran several of their ward tents for about a month. One of my patients was a Victoria Cross and bar man, very modest and unconcerned about it all, and very anxious to get back to duty.
>
> We are surrounded by both American and Australian fliers. They are a very steady bunch. Day after day they go off on missions, yet they seem to be under less tension than the ordinary man. One small Aussi squadron goes up almost to a man nearly every day. The squadron leader dropped in on us the other night. He had been on a very rough mission all day and was to set out on another, first thing in the morning. He brought us a bottle of rum, but drank little himself, and of course left quite early. It struck me as very touching that between two hard combat missions he should call on us, bring a bottle of rum, and talk interestingly about American and Australian politics, etc. But that attitude is typical of the Australians. It gives me a weird feeling to realize they are going out practically every day. I think I am more on edge about it than they are.
>
> As for our work, we were very busy when we first came. We were the only hospital anywhere near, and the place was pretty much wild and untouched jungle and Kunai grass. We were run pretty ragged for about two months, chiefly with malaria, dysentery, dengue, and a certain amount of scrub typhus. The malaria packs an awful wallop up here, and it is mostly the malignant variety. We have had some darn sick cases, and quite a few cerebral malarias. The latter are dramatic and very grim, a real medical emergency. Fortunately we have had enough intravenous quinine on hand to pull them all through. There has also been a certain amount of traumatic surgery that has come in fairly steadily.
>
> This area is getting pretty well developed. They moved in several much bigger and more stationary hospitals, which have stolen a lot of our thunder. We are anxious to move on, therefore, but at present there doesn't seem any other place to put us.
>
> I spent Christmas on leave at a General Hospital. It was good to get back there for a little while, and something like coming home. Seeing the huge fields and distant views, after being hemmed in by mountains and jungle, was like stepping from a dark cellar out of doors. I thought their spirit very high. The hospital grounds looked swell. They all missed Jack Newell very much. I should think he would find the rigors of private practice these days a good deal tougher than Army life.

After a "two-year Pacific tour", Lt. Comdr. Hannibal Hamlin, MC (*r.s. NS* 1942) is now attached to the U. S. Naval Hospital, Newport, R. I.

Comdr. Jesse T. Nicholson, MC (*r.s. Or.* 1933) sends word of his promotion in rank, and a running account of his experiences since his service with the Medical Specialist Unit of the University of Pennsylvania and a brief induction period at Philadelphia Naval Hospital:—

> It took us two months to catch up with our hospital ship which had been progressively moving further south in the Pacific. We boarded her in Tongatabu in time to care for some of the Coral Sea casualties. After some months we moved to New Caledonia and received casualties from the Savo Sea battle. A great proportion of these were brought to us by Walt Garrey who was surgeon on a troop transport. We evacuated our casualties to New Zealand. For the remainder of the Solomons Campaign we received our casualties in the New Hebrides. They were flown or brought to base hospitals and loaded aboard our ship as soon as we arrived. Bob Legge was orthopedist at one of these base hospitals.
>
> Except for occasional trips to the Fiji Islands, we called rather regularly at Auckland or Wellington. In the latter city we renewed friendships with Hap Kennard, Charlie Johnson, Frankie Hunter, and Howard Sprague. The summer of 1943 we spent as a harbor hospital in Noumea. It was here that Howard Sprague became our Chief of Medicine. On the beach, at the mobile hospital, were Jack Carmody, Ben Tenney, Joe Placak and, for a short time, Dick Alt. In October I left the ship in the New Hebrides and flew back to the States.
>
> My new assignment is at the U. S. Naval Hospital in Oakland, where I am head of an orthopedic service which has more than 400 patients. Here it has been my pleasure to welcome back and speed on their way a number of old friends from M.G.H.

A note from Capt. James D. Schuler, MC, AUS (*CM* 1939) reports that he is with a Medical Clearance Company "somewhere in Northern Ireland".

Lt. Donald J. Emery, CWS, AUS (*res. fel.D* 1941) is with a Station Comp. Sq. "somewhere in England".

Capt. Guy R. Sweeney, MC, AUS (*gr. asst. M.* 1942-3) writes:—

> Have been overseas several months, serving with a medical detachment, and am now with anti-aircraft. Since arriving in England, I have visited London and Liverpool, where I renewed old acquaintances and made comparisons with recollections of these places in peacetime.
>
> Please extend my very best wishes to all in the M.O.P.

In a letter which gives a new address not only for himself but for Captains Talmadge and Soutter, Lt. Edward L. Young, III, MC, AUS (*WS* 1942) wrote that they are with an Auxiliary Surgical Group "somewhere in England, doing nothing exciting except—getting ready."

THE NEWS

No. 23 Boston, Mass. August, 1944

Included in the War and Navy Department casualty lists of July 14 is the name of Lt. Frederick C. Gevalt, Jr., MC, USNR (*r.p.* 1943). Lieutenant Gevalt was wounded in action while storming the Normandy beaches with his amphibious unit. He had already participated in two previous invasions—North Africa and Sicily.

This copy of a letter to Colonel Goethals, from Mr. Albert E. Hunter, President of the Talence Club, speaks for itself:—

> Dear Colonel Goethals:
>
> In behalf of the Talence Club, I enclose a check for twenty-five dollars ($25.00) to be expended as you may think advisable for the benefit of the enlisted personnel of U.S. 6th General Hospital. The Talence Club, formerly The Enlisted Men's Club of Base Hospital Number Six, was organized twenty-seven years ago during our service at Talence, Bordeaux, France, under the command of Colonel Washburn. The club at one time numbered well over three hundred members and our annual reunions are well attended.
>
> The members of the club are very much interested in our successor unit and should be glad to have any information which you may be in a position to furnish regarding the activities and work being carried on by the hospital unit.
>
> On behalf of the club, I extend our most cordial greetings and best wishes to the doctors and nurses and enlisted personnel of the 6th General Hospital.
>
> Sincerely,
> Albert E. Hunter,
> *Talence Club President*

At their meetings on June 28 and July 5 and 12, the General Executive Committee voted:

To appoint Dr. Juan Reforzo-Membrives as Research Fellow in Medicine, to work in the Metabolism Laboratory for six months;

To appoint Dr. Earl J. Waddington as Graduate Assistant in the Dental Clinic;

To accept the resignation of Dr. Howard M. Rogers from the position of Graduate Assistant in Medicine and Pathology.

On June 30 the Hospital Committee of the Trustees voted to recommend to the Trustees the appointments of:

Dr. Ricardo S. Mora as Intern in Anesthesia for one year beginning October 1;

Dr. Tetsuo Sugiyama as Junior Resident in Surgery for one year beginning July 1.

Miss Florence Kempf, Assistant Principal and Supervisor of Instruction in the Sciences at M.G.H., is conducting classes in the Principles of Teaching at the summer school of Teachers College, Columbia University, Department of Nursing Education.

Three graduate nurses came to the Hospital July 1 for postgraduate work in orthopedic nursing. Their program is sponsored by Joint Orthopedic Nursing Advisory Service, which is made up of consultants from the National League of Nursing Education and the National Organization for Public Health Nursing. Their theoretical work was completed at Columbia University, and their nursing experience is divided between the Children's Hospital in Boston and the M.G.H.

The promotion has been announced of Kathleen Atto (*MGH* 1922) to the rank of Lieutenant Colonel, Army Nurse Corps. Colonel Atto is Chief, Nursing Service, 2d Service Command, with headquarters at Governors Island, New York.

Miss Elizabeth Hall, Supervisor of the pediatric wards, has recently returned from a Washington conference sponsored by the Children's Bureau. Miss Hall was the one nurse representative among a group of pediatricians, social workers, and nursery school directors. The conference was called to discuss plans for care of children under two years of age whose mothers are working in industry.

* * *

The following changes of address have been received:—

Lt. Robinson L. Bidwell, MC, AUS (*ES* 1943), Lawson General Hospital, c/o Postmaster, Atlanta, Ga.

Major William M. Huber, MC (*r.p. D* 1937), Army Service Forces Convalescent Hospital, SCU 1493, Daytona Beach, Fla.

Major Edward Parnall, MC (*Or.* 1932), Battey General Hospital, Rome, Ga.

Lt. Comdr. John B. Stanbury, MC (*WM* 1941), US NATTC, Dispensary 34, Norman, Okla.

Lt. Karl Riemer, MC, USNR (*Oph.* 1943) is stationed at the training center in Darien, Conn.

The appearance of the pages and the usual arrangement of the material have been forfeited in this issue in order that several pictures of Volunteer Day might be included.

Oral Diagnosis with Suggestions for Treatment. By Kurt H. Thoma, D.M.D., [*c. Dn.*]. With contributions by Fred Trevor, D.M.D., Henry Goldman, D.M.D., and David Weisberger, D.M.D. Second edition, revised. 495 pp., with 666 illustrations (63 in colors). Philadelphia and London: W. B. Saunders Company, 1943.

The first edition of this book, published in 1936, was called *Oral Diagnosis and Treatment Planning.* This second edition has been revised and several new chapters have been added. The book is recommended to both the dental student and the practitioner.

W. W. Norton & Company has established a new literary award to be known as the Norton Award, to consist of $3,500 "offered to encourage the writing of books on medicine and the medical profession for the layman". The publishers feel that scientific workers generally write for one another. In announcing this award they have in view the need for books on medical science, written by professional workers in the medical field in a way to interest the general reading public. Complete information and entry blank may be obtained from the Norton Award, W. W. Norton & Company, Inc., 70 Fifth Avenue, New York 11, N. Y. Final date for delivery of manuscripts is December 31, 1944.

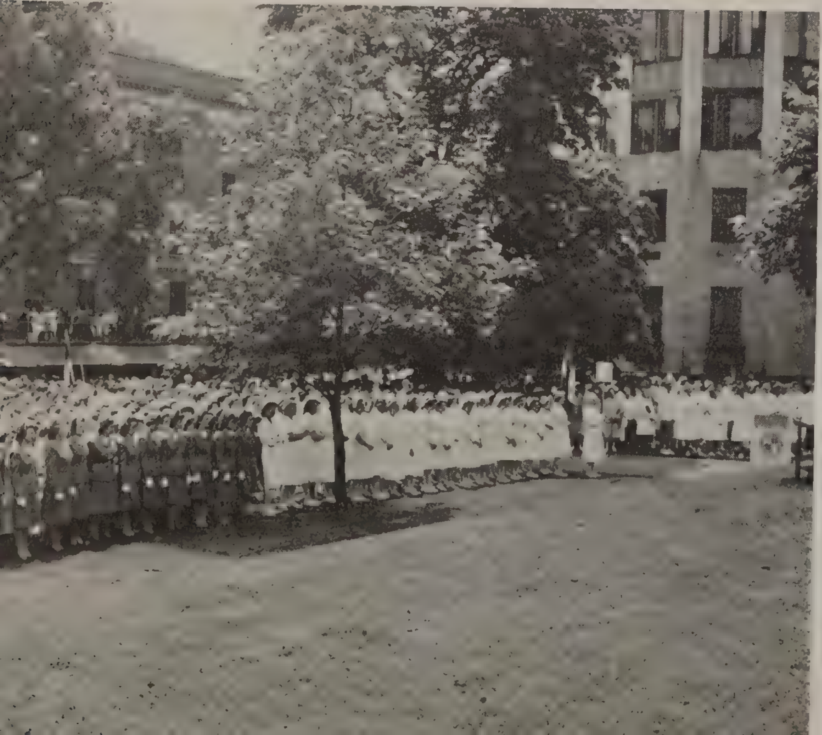
Time for June 26 contained an article about the outstanding contributions to medical science made by two of our Staff —Dr. Reginald Smithwick (*ES* 1927), who has perfected the technique of radical splanchnicectomy, and Dr. Arthur Wilburn Allen (*WS* 1915), whose method for reducing deaths from embolism following operations is being used successfully on hundreds of cases a year.

The *Harvard Alumni Bulletin* of May 27 contained the following article:—

> A recent release from Camp Joseph H. Pendleton, Cal., read as follows: "When Marines of this artillery unit hit the field, one of the busiest officers in the outfit will be Navy Lieutenant Commander H. Bristol Nelson, Medical Corps surgeon [*a. obst.*]. His concern is the health and welfare of the members of this command. He may be inspecting field sanitation measures, or administering blood plasma, purifying water for drinking purposes, or extracting shrapnel from a wounded Marine—they're all in the line of his duties."

Besides serving on our Staff at M.G.H., Commander Nelson was an instructor in obstretrics in the Harvard Medical School when he entered the Navy in 1942.

STAFF
DIRECTORS



Volunteer Day

Revealing the spirit of close cooperation that exists between the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary, almost the entire personnel of these two Hospitals took part in a program entitled "M.G.H. on Review" in observation of Volunteer Day, Thursday, June 22.

The purpose of this unprecented celebration was threefold: to emphasize the importance of the part each worker plays in helping maintain the high standards of the Hospital—particularly during these difficult times; to present a graphic picture of the great number of people whose efforts are necessary to make this possible; and to impress upon the volunteers that they, too, are valued members of the Hospital family, who must endeavor earnestly and unceasingly to repay trust with proficiency, and never allow the keen realization of their professional limitations to cause them to consider themselves "outsiders".

Since rain would have prevented the carrying out of the program, weather was a matter of deep concern. We had been bogged down for days in one of our New England north-easters. The morning dawned gray and misty. But Dr. Faxon—with the faith of true genius—pronounced that, despite the weather forecast of "clear by late afternoon", it would be clear by noon. And clear it was—the first perfect June day in more than a week of rain.

Sandwiches, coffee, and punch were served in the Bulfinch Yard to more than 1000 guests, while the United States Port of Boston Coast Guard Band, under the direction of Warrant Officer John A. Jacobson, lived up to its established reputation and gave an excellent concert.

At 12:45 Mr. John R. Macomber, President of the Massachusetts General Hospital Board of Trustees, cordially welcomed the volunteers and guests.

When he had finished speaking, Dr. James Howard Means stepped to the front of the Bulfinch balcony and, in his usual able manner, explained the Review that was to follow. He then raised his hand in signal to the band—and the procession began. To the strains of martial music and the reading of the script by Dr. Means, on and on and on came the double column of marchers—department after department—for nearly half an hour—until more than 1500 persons had come out from the buildings and were standing in the center of the Yard—a solid mass symbolic of unity.

When the last marcher had joined the others, Dr. Faxon gave a brief but moving address in which he expressed the sincere appreciation of the Hospital to all those who are serving her, both here and abroad. He then introduced His Excellency Leverett Saltonstall, Governor of the Commonwealth of Massachusetts, who stressed the importance of a "healthy and happy people" and paid high tribute to the invaluable service the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary are giving to help reach this goal.

The program ended with the group singing of our national anthem, after which the solid mass of people began to stir, broke up into groups, and gradually disappeared through the various entrances into the buildings. The Yard was again quiet and empty. The second Massachusetts General Hospital Volunteer Day had come to a close.

Although nearly a month has passed since that impressive scene, I am still deeply moved whenever I recall it to mind. To realize that such a group exists, and that one is privileged to be a part of it, fills the heart with both overwhelming pride and profound humility.

An account of the celebration would be incomplete without mentioning the help given by Mr. Francis Hart, and the poem written by Mr. Francis W. Hatch which expressed in verse the devotion of all of us toward the Hospital.

A volunteer

MASSACHUSETTS EYE & EAR INFIRMARY

Mrs. Margaret MacDonald, our bookkeeper, resigned on June 16. In recognition of her loyal and efficient service to the Infirmary since June 7, 1922 a tea-party was given in her honor. She was presented with a very lovely silver sandwich plate, and a Wedgwood plate and cup and saucer bearing a design of the Infirmary of the old days. We all wish her many years of well-earned happiness in her home.

Miss Helen K. Wade, Director of Occupational Therapy, after a three months' leave of absence spent in Florida, resigned on May 15, to work with the Connecticut Society for Crippled Children, Inc., Hartford, Conn. Miss Wade started the department of Occupational Therapy in 1925. Under her direction it has grown from one small room in the Nurses' Home into a very active department which includes the patients' library and requires the services of two full-time therapists. We wish her success in her new work.

Mrs. Anne M. Olsen succeeds Miss Wade as Director. Mrs. Olsen is now very busy moving into her new quarters on the roof of the Infirmary.

We learned from Mrs. Charles F. Hollabaugh, who called recently at the Infirmary, that her husband, Dr. Hollabaugh (*Oph.* 1932) is a Major in the AUS, serving with the Vanderbilt Clinic Unit.

Lt. Edwina N. Hussey (*MGH* 1937), who resigned as Head Nurse in the Eye Clinic, January 1942, to go overseas with the Peter Bent Brigham Unit (the 5th General Hospital), writes from "somewhere in England" that she is enjoying the beautiful countryside—but expects to be very busy, now that D-day has come.

Capt. Edward F. Lawlor, MC, AUS (*Oto-Lar.* 1941) is serving with an air force in China.

A letter has been received from Capt. Sumner D. Liebman, MC, AUS (*Oph.* 1943) who is with an evacuation hospital. He writes:—

> I recently received a marvelous letter from Trygve Gundersen. Bob Mattis is now somewhere near me and I am going to try to see him as soon as possible.
>
> The professor of ophthalmology at Liverpool invited me to come to his clinic, and I went on a pass. He was very nice and I spent a most enjoyable day. The building is one hundred years old, but looks very much like the Infirmary.
>
> Did I tell you I had a note from Tom Cavanaugh? He is too far away for us to get together at present, but I hope to see him eventually.

Lt. Comdr. David P. Cordray, MC, USNR (*Oto-Lar.* 1940) has returned after thirteen months' service at a submarine base in the South Pacific. At present he is assigned to duty at the U.S. Navy Hospital, Newport, R. I.

In a letter to Dr. Schall, written May 20, Capt. John E. McKeigue, MC, AUS (*grad. asst.* 1943) gives an interesting outline of his army experiences:—

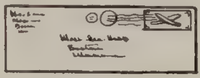
> Upon leaving Boston in July 1943 I went to Carlisle where I stayed for six weeks and learned the set-up of the Medical Corps. From there I joined an infantry division at Camp Swift, Texas. My stay in Texas was short, for we moved to Louisiana where we had nearly four months of maneuvers. I am glad I had that opportunity, for no doubt it will be of value. We really roughed it, and it gave me the chance to get in some practical experience. From the swamps of the south the division went to Fort Leonard Wood in Missouri, and it was heaven to have a real bed and be able to take a shower whenever I felt like it. I was just beginning to live like a king when I got orders to report to another infantry division at Camp Butner, North Carolina. Upon arriving there I was informed that the outfit was what they call "hot", and after a month we moved out. From there on it is secret. I can say that we went to a camp on the east coast, were completely processed, and shortly after found ourselves boarding a ship. It has been a great experience for me—especially in the past few weeks.
>
> I received my promotion just before I left the States. My present duty is that of an Assistant Battalion Surgeon, which means I am the medic in the battalion aid station just in the rear of the front lines. I have done very little in the line of medicine since joining the service, but expect to get plenty of real experience before too long.
>
> I have often read of troop transports, but now I am actually a part of one. I am living in a stateroom with five other officers, and, while it is crowded, we manage to get along. We have a steward to take care of the room, and all linen is supplied. We wear a life-jacket at all times, to which is attached a small light which can be turned on in case we are adrift in the water. The food is of the best, which is the main morale factor in most cases. Each afternoon there are boxing and wrestling matches on deck. We also have a well equipped library, so we are well taken care of. Each morning the latest news is announced over an amplifying system to keep us in constant touch with the world outside.

At a meeting of the American Broncho-Esophageal Association Dr. LeRoy A. Schall was elected to the Council.

At the meeting of the American Laryngological Association in New York in June, Dr. Harris P. Mosher (*past c. Oto-Lar.*) presented a paper entitled "On becoming Emeritus Professor". Dr. LeRoy A. Schall's subject was "The pathology of the nasal mucous membrane and suggestions as to treatment".

Dr. Charles T. Porter (*Oph.* 1914; *Aural* 1915) has been chosen president elect of the American Laryngological, Rhinological and Otological Society.

Dr. Moses H. Lurie (*s. Oto-Lar.*) gave a talk recently before the American Otological Society entitled "Acoustic trauma of the organ of Corti of the guinea pig", and Dr. Ruth Guilder (*res. fel. Oto-Lar.*) and Dr. LeRoy A. Schall (*c. Oto-Lar.*) spoke on the "Rehabilitation of the deaf child".



Lt. Daniel H. Hindman, MC, USNR (*a. obst.*) writes from the U.S. Naval Air Station, Norfolk, Va.:—

> Have just arrived back in the country after completing eighteen months in the South Pacific, starting out with U.S.N. Mobile Hospital No. 7 and concluding with the more vigorous and roving motor torpedo boats in the Solomons.
>
> It was grand to set foot again in the "Old Country" and find it not strikingly altered. Am now attached to the surgical service of the hospital—the largest and most luxurious station at which I have yet served. Needless to say, I'm intent on employing fully each of the many luxuries hereabouts.
>
> One of my supernumerary duties is acting as Doc to some 1000 Waves and nurses. I hope to give them my undivided attention.

Capt. Ralph Gordon Brown, MC, AUS (*P* 1942) is with the 18th Medical General Laboratory.

In a letter to Dr. Faxon he said:—

> After almost two years at Bruns General Hospital in Santa Fé I succeeded in getting a grand job in pathology with this top-notch organization. It is a small, highly specialized group encompassing all branches of laboratory medicine, and is similar to Dr. Mallory's unit.
>
> My training at Fort Sam Houston has been very valuable. There are always a few MGH men around: Colonel Bauer, Charles Burbank, and Henry Thatcher—the latter a new arrival at the School of Aviation Medicine at Randolph Field, after considerable experience overseas.

Lt. Frederic Tudor, MC, USNR (*a. M*) sends us an outline of his military itinerary to date:—

> From October 5, 1942 to April 1, 1943 I was stationed at the Naval Hospital, Chelsea, Mass., with one month of special duty at the Army's Edgewood Arsenal in Maryland for training in chemical warfare. The next nine months were spent with the Marines at Camp Lejeune, New River, N. C. Then back to Boston again in December 1943 for four months' duty as Medical Officer in the sick bay of the *USS Somerset*. The bridal suite of the hotel has been converted to this purpose for the duration. The French cuisine stays on. Two more months—April and May, 1944—at Chelsea. Now I have completed training at the Amphibious Training Command, Norfolk, Va., and am awaiting assignment to a landing ship.

Capt. Louis Nathan, MC, AUS (*Or.* 1930) is at Veterans Hospital, Aspinwall, Pa. He writes that he hopes for a change of station in the near future.

The first direct information about Lt. Col. Donald M. Glover, MC (*WS* 1922) came in a letter from him, dated June 12, 1944:—

> I have intended for a long time to give you some fragments of information about myself, but we have fortunately been so busy ever since we left the States in January 1942 that it has been extremely difficult to find time for letters—especially with the volume of writing that is constantly required in an Army hospital.
>
> As you may or may not know, this was the first general hospital to leave the United States and the first to be set up on foreign soil—both in this war and the last. Our operation as a hospital in this war dates from 3 March 1942. It has been a long job as Chief of the Surgical Service, but has had a few bright spots and a good many interesting and possibly fruitful experiences. We spent almost two years in a metropolitan area of Australia, in a physical set-up which compared favorably with some of our best civilian hospitals at home. There we were fortunate enough to be close to a medical school and for a number of months, before we became too busy, some of us were able to do some teaching there. Since we had to give that up, the lack of regular teaching contacts has been one of the most unpleasant features of the assignment to many of us. The character of work done there was not far different from what we have done in large general hospitals at home, except for the much greater volume and need for flexibility which at times required doubling bed capacity over night. I believe the quality of work compared favorably, however.
>
> Several months ago we were transplanted to the jungle setting we now occupy on a forward island, again being the first general to be put so far forward—in this theatre, at least. The problems of transmutation were [*censored*], but fortunately our officers, nurses, and enlisted personnel had worked together so long that the move was made with relatively little difficulty. If you visualize moving the M.G.H., complete with personnel and equipment, several thousand miles via a combination of antiquated rail system and congested ships, some of the problems can be imagined. We were set up and operating in the new site, in a combination of prefabricated buildings and tents, within a week after we landed; and reached our rated capacity within six weeks. Naturally, we have been very busy here, with much more acute surgical material than we had down below.
>
> We have had many pleasant and fruitful contacts with the Harvard group and can attest to the thoroughly excellent job they are doing.
>
> My very best to all the old MGH crowd. Major Clifford C. Franseen [*WS* 1932] is with a neighboring outfit and often makes rounds with me, which association I have enjoyed.

A recent letter from Lt. Henry S. Fuller, MC, AUS (*WM* 1943), written from Burma, supplements a previous one sent to Dr. Means:—

> For the past few months I have had a great variety of experiences. From a clinical standpoint, it has been very rich, with emphasis on tropical diseases. I have been fortunate enough to follow them from their inception to their ultimate conclusion—recovery or death, as the case might be—although deaths have been in the minority. Also, I have had some of the peculiar adventures that occur in the course of jungle warfare. It is very pleasing to receive THE NEWS, to keep up with affairs at the Hospital, and to read about what my friends are doing.

Capt. Benjamin L. Huntington, MC, AUS (*WM* 1940) is with a Malaria Control Unit somewhere in the Pacific. This letter from him, written June 13, is a rare combination of wit and something almost akin to downright nostalgia:—

Your latest number reached me today in the record time of ten days—taking into account the phenomenon of the date-line. My perusal of it caused me to be late for chow—very unusual for me, though I would swap the best meal turned out here for a crack at the counter in White basement.

My promotion finally came on April Fool's Day, after seventeen months with the A.U.S.

From time to time I see Major Charles G. Mixter, Jr. [*WS* 1940], and Lt. James T. Heyl [*WM* 1939]. My job, which has some of the aspects of a traveling salesman's and a few of a city collector's, makes me listen rather hungrily to their erudite discussion of really medical affairs. In spite of this feeling, I have to admit that my duties have a novel interest which, unfortunately, I cannot mention.

This is the second base to which I have been assigned in the Pacific area, and all I can say about it is that I heartily look forward to the future which will perhaps move me to a third.

I read with a good deal of interest the remarks on training facilities at the hospital for the returning medicos. Many, I know, will back me in urging a program for the returning medical officer who needs refreshing—and more—in clinical medicine. However difficult it will be to organize, there is no doubt in my mind that most of us will need it sorely.

Many thanks again for the effort and time spent in preparing THE NEWS. You have heard from others how much it is appreciated, but let me add my nickel's worth.

Perhaps it is a very significant quality of the Massachusetts General Hospital that its absent members never expect to find it anywhere but here! It is and represents "home", and they never doubt that when they return they will find Hospital and Staff still the familiar and indissoluble spirit that "home" always represents.

From the South Pacific, Lt. John L. Wilson, MC, USNR, (*ES* 1940) acknowledges some reprints sent to him by Dr. Allen:—

It is next to impossible to keep up with medical literature out here. As long as I can read some of the things you all at M.G.H. are writing, then I feel I'm making some progress.

I can hardly believe it is almost two years since I left Boston. I do hope things back there won't change too much. I am sure you are extremely busy—and having to do things, perhaps, that the House Staff looked after formerly. But it can't last *too* much longer.

I enjoy my work in aviation as much as ever. There is a fair amount of flying to do nowadays, but the medicine is pretty routine—malaria and skin diseases with the usual traumatic items that we have to evacuate to big hospitals. And, incidentally you would be surprised at the *beautiful* equipment that goes into some of the Navy's advance hospitals. I can just see you leading the ward rounds from tent to tent beneath the cocoanut trees. Wish you could pay us a visit and stimulate our minds!

I guess the MGH unit is having an interesting time over there in the big league. There surely are two kinds of war going on. I've often wondered which I prefer. I think our war here is best. I always liked the "personal" touch, and we get it. Masses of men and tanks and planes are so confusing—and, besides, the Japs are so easy to despise.

In a letter of May 31 to Dr. Faxon, Col. John E. Gordon, MC (*cons. prev. med.*) gives a most enthusiastic account of his work:—

In February I had a change of station, but my duties remain the same—Chief of the Division of Preventive Medicine on the staff of the Chief Surgeon, ETOUSA.

I have received notification of my reappointment as consultant in preventive medicine at M.G.H., which I appreciate greatly. That is an association I have always enjoyed, and it is good to think that we can some day take up where we left off. I wonder when that will be?

As the time approaches when all that has been planned these many months finally gets under way, there is a general appreciation of the seriousness of the venture. From a health standpoint the situation is good. I doubt if better facilities for medical care have ever been provided an army. Non-effective rates are low, there has been an absence of serious epidemic diseases, and the venereal disease rate has shown a continuous downward trend, to reach a level lower than I had believed possible in a theatre of operations.

Next month I shall be starting my fifth year over here. Admitting a long range point of view in those days of 1940 when you and I talked over plans for the Harvard Unit, I will admit that this was beyond my calculations. Nevertheless, I am enjoying the work, and the experience is unparalleled. I wouldn't be in any other place in the world that I could name just now, and that includes Boston. These are stirring days.

Lt. Comdr. Richard D. Nies, MC (*An.* 1941) is with a Com. Air Center, somewhere in the Pacific area.

Lt. A. Allison Wills, Jr., MC, USNR (*a. Psychiat.* 1937) is on duty in the Pacific. He finds his work very interesting, but is not allowed, at present, to disclose the nature of the work his ship is doing.

Capt. Luke Gillespie, MC, AUS (*a. obst.*) writes that he is "somewhere in New Guinea, doing some air evacuation of patients".

Lt. Duane H. Mitchel, MC, AUS (*M* 1943) is with the Colorado University Hospital Unit in New Caledonia.

Capt. Charles B. Burbank, MC, AUS (*WS* 1939) is with the 5th Auxiliary Surgical Group.

Major Edgar M. Burns, MC (*r.p. Psychiat.* 1935), Capt. Richard R. Carter, MC, AUS (*r.p. N* 1942), and Capt. Leon F. Ray, MC, AUS (*r.p. D* 1939) are with the 46th General Hospital.

Capt. Robert H. Talkov, MC, AUS (*res. fel. M* 1942) has been transferred to the 161st General Hospital.

The first military address we have received for Lt. Robert J. Tracy, MC, AUS (*ES* 1943) is 110th Evacuation Hospital.

On July 9 Major Ian Paley Rak, MC (*a. Psychiat.*) wrote from England:—

In addition to my present duties as Chief Neuropsychiatrist of a general hospital over here, I have recently been appointed Chief Neuropsychiatric Consultant to the 15th Hospital Centre. Colonel Stanley, the Surgeon of the Centre, was formerly Surgeon of the 1st Service Command in Boston. He knows so many of our men who pitched in and helped when help was needed in those pre-Pearl Harbor days in Boston.

Recently visited the Harvard House in Stratford-on-Avon. Tip for Harvard men: You save 6 pence, because admission is free to you. Yale men are threatening to visit the Yale House in Wales!

Somewhere in France
Saturday, July 1, 1944

Dear Dr. Faxon, THE NEWS, *et al*:

Just a line from sunny France (which has not been so sunny these past few days) to let you know that I got in on the invasion. Even if I were permitted to write all that I have seen and experienced these past few weeks, I doubt if I could find words to do it justice. Suffice it to say that I am among the more fortunate and have so much to be thankful for. At present I have my aid station set up in a room of a German barracks which was hastily vacated on D-day. There is much to be done and there have been many casualties among the natives who were caught in the onslaught. We have been helping with their care as well as administering to our own men.

At first we found the French rather bewildered. They had been fed so much propaganda, and had been through so much suffering and privation they trusted no one. They constantly feared that *les Boches* would return. They now seem assured that we are here to stay, and begin to regard us as their true liberators and friends.

Here, the doctor is idealized much as he used to be in America years ago. Next to the clergy, he is tops in the community. I have helped one young doctor here with many of his cases. I marveled at the results he obtained with his injured civilians, considering how handicapped he had been for supplies. He had been a prisoner in Germany for seven months and was released prior to the invasion to return to his community practice.

The people here have had no new clothing or shoes for three years. It is surprising how many boys and girls can be seen wearing G.I. socks and boots. This demonstrates the principle of brotherly love and kindness which seems to be inherent in most Americans.

Please give my best regards to all in the Medical Out-Patient. Along with millions of others, I am constantly praying for the war's end and our return home.

Sincerely,
[Capt.] Guy R. Sweeney, MC, AUS
[*gr. asst.* 1942-3]

Much is said in few words in two brief letters recently received from Lt. Sidney W. Ellery, MC, USNR (*ES* 1943) and Lt. Ben Eiseman, MC, USNR (*ES* 1943). Lieutenant Ellery writes:—

Ben Eiseman and I have been aboard LST's during the invasion of France, and have had some fairly exciting times. These ships have been set up to handle casualties for evacuation from the beach and are equipped with a small operating room which, while serviceable, does not approach the magnificence of the third floor of M.G.H. We have seen and done a good deal of traumatic surgery, although hampered at times by lack of time to pay as much attention to any one patient as we would like.

And Lieutenant Eiseman says:—

I am Medical Officer on board this "floating bathtub". Was with Ellery on another LST for a time, but we were sent to different ships after two very pleasant months. Haven't seen him since the invasion, but hear he is safe.

Early in May Major Fiorindo A. Simeone, MC (*WS* 1936) wrote Dr. Faxon from North Africa:—

I just returned to Headquarters after six months with Fifth Army and was delighted to find the last two numbers of THE NEWS waiting for me. That journal is almost as good as a visit back to the M.G.H.—though not quite.

As for information about my doings—the early activities of the Fifth General Hospital are now pretty well known to readers of THE NEWS.

In Ireland I had the pleasant experience of serving as "exchange" battalion surgeon for an Infantry Unit. During that time I was an L.M.D. for the Station Hospital in which were Zeller, Suby, Graham, Whiting, Ulfelder, Sahler, and others I had known back home. About two months ago I visited my old battalion. There were only two men left from the medical detachment I had worked with. Although it rains in Ulster at the slightest provocation or with no provocation at all, the beautiful shades of green and the flowers more than make up for the rains. We made many friends in Ulster.

When the hospital moved to its present location I went by jeep. It was a cold ride, but a lot of fun. I wore a huge six-shooter (I had had no experience with firearms before). The people we met in Scotland were among the kindest I have ever seen.

We were less busy professionally in England. Richard Warren began keeping bees and I became his first-assistant. I was stung only once. The summer's yield was 18 pounds of honey.

Our first experience with battle casualties came in the early Spring of 1943 when some arrived from Africa. It was both instructive and exciting to take care of them. The soldiers found eager listeners for their many tales, among all ranks. They had fascinating stories to tell about A-rabs, B-rabs, and C-rabs. Up to that time our work had been very much like that of a civilian hospital with a bit more emphasis on the Surgery of Trauma (accidents). My own work had been limited to some General Surgery, G.U. Surgery, Sympathetic Surgery, and Thoracic Surgery. We had several cases of tuberculosis. Some of them had phrenicotomies done; one had a pneumolysis (through an operating cystoscope). Roy Swank and I made some observations on the "Scalenus anticus syndrome". We found two cases of epidermolysis bulbosa simplex localisata (familial) and treated them by sympathectomy, with some improvement, I think, but no cure. A most interesting case was one of retrocaval ureter which we nicknamed "barber-pole ureter" from the way the ureter wound around the vena cava. I believe it was the second case ever diagnosed pre-operatively.

While in the U.K. I spent a month with Mr. A. Tudor-Edwards in Thoracic Surgery. He is a stimulating man and found time to entertain us even though he was so very busy. It made me very happy to learn the respect and admiration that British thoracic surgeons have for Dr. Churchill. I saw Ronald Belsey in England, who wanted to be remembered to the M.G.H.

In July 1943 Bob Zollinger whispered a secret class A rumor in my ear—that I was going to Africa to work with Colonel Churchill. I had mixed feelings about leaving the unit I had been with for so long. Several had left already—Henry Carney, Harry Pratt, Tom Lanman, Lee Kendall, Jerry Saunders. Tom Cavanaugh (Eye & Ear), Rich Warren, Strock, and Henry Brewster are now left to represent the M.G.H. in the Harvard Unit. I hated to part with my bicycle and the bees, too! Yet it was very exciting to have a chance to be a little closer to action and to work with Colonel Churchill.

The overnight trip to Africa is something I'll never forget, because of the indescribable beauty of the African sunrise as seen from above the clouds over the blue Atlantic. It was so nice to see Colonel Churchill—cheerful as ever and never looking tired, in spite of his tremendous amount of work. A few days after, Stewart and Beecher arrived. Except for a few encounters with bedbugs they have had little trouble settling down. We've made many trips together since then. In Bizerte, I shared a tent with Sturgis and Holland.

The hottest place I've ever been in was a plane which had been standing in the African sunshine for some time. I don't know what the actual temperature was, but the sudomotor mechanism was certainly overtaxed!

I have spent the past six months with Fifth Army in Italy. My principal mission was to study gas gangrene and vascular injuries. But there were many secondary missions. Floyd Jergesen and I worked together on gas gangrene. He did a great deal of work and deserves most of the credit for what we've learned about the disease. It was a pleasure to work with him. There was a lot of reminiscing about the M.G.H.

One meets MGH men in Italy every day. Stewart, Beecher, and Lyons are there now and doing a fine job. It was nice to talk with Grantley Taylor, Parsons, and Townsend. I'm sorry I missed Tryg Gundersen but I've heard of his splendid work everywhere I've been. I saw John McKittrick one day. He had quite recovered from his illness. Staples and Clark are doing a fine job in a Fifth Army Convalescent Hospital. Tom Ballantine has been very busy most of the time and every one has nice things to say about him. We were all very upset when Phil Giddings was wounded, but are delighted that he has done very well indeed. Dick Chute was having a fine time as Chief of a Surgical Service when I last saw him. Leadbetter and Shaw were in General Hospitals and not very busy at the time, but must have had a lot to do since I saw them.

One of the pleasantest parts of our work on gas gangrene has been the privilege of discussing things with Tracy Mallory. We've taken advantage of every opportunity to talk things over with him. He is very busy and is assembling some very interesting information. Gene Sullivan has been doing a lot of work on the transfusion problem. He is as much fun as ever.

I was much impressed with Italy. The people are surprisingly happy, but there is so much poverty—particularly in the cities. The farmers are much more fortunate in that they can raise their own food. People in the towns appear much healthier than those in cities. Some of the towns are represented now by a few heaps of rubble and nothing more. Yet, people seem to live among the ruins, somehow. In some towns, especially those in the mountains, people still wear colorful native costumes which must not have changed for hundreds of years. They do their own spinning, weaving, and dyeing. Southern Italy is a land of contrasts — beautiful palaces surrounded by poverty-stricken people living in huts. The countryside is beautiful with its hills and valleys—but not good for fighting in. On a recent tour, John Stewart and I investigated an interesting method of irrigation. Water is brought up from a deep well in cans attached to an endless chain. The cans empty into a trough leading into a concrete cistern from which the water is allowed out as needed. The motive power is a jackass or mule attached to a turnstile, going round and round all day. The animal is blindfolded while at work. We asked the farmer the purpose of the blindfold. He said that if not so protected, the animal would fall to the ground sick—from vertigo.

It's a little embarrassing that our friends at home feel we are going through all sorts of difficulties, because we really are quite comfortable—even up at the front. After all, helmets do make pretty good washbasins. The only real hardship is our being away from our families, but we have hopes that it won't be for very much longer. Meanwhile, it's a lot of fun to meet MGH men and women throughout the theater and to read about others in THE NEWS.

A new address for Major Henry K. Beecher, MC (*WS* 1934), our Chief Anesthetist, on leave, is: Allied Force Headquarters, Medical Section American, APO 512, c/o Postmaster, New York, N. Y.

Major T. Stewart Hamilton, MC (*asst. Dir.*) has this to say about his new quarters:—

We have arrived at our "permanent" station —at least, the one where we'll set up. The C.O., I think, would have preferred a prefabricated hut-and-tent hospital; but we have been given a big and unbelievably symmetrically complicated four-to-six story (nothing over 4th floor is usable) A-shaped building of brick, built around a central chapel, with limitless rooms, courts, spires, towers—in fact, everything but latrines. By the looks of the place when we landed here, that hadn't bothered the previous occupants. Jerry had used it as a hospital; and, belying his reputation for order and cleanliness, it was a filthy mess. Our men have pitched to, and it is already shaping up well. We are living in tents.

Capt. Edwin L. Cantlon, MC, AUS (*ES* 1938) wrote from Italy on July 7:—

Back along I was transferred to a field hospital which was acting as a station hospital for our liberators in southern Italy. Managed to arrive just in time to get in on a raid—my "baptism under fire". Luckily I was not on a ship, but I watched it from a 4-story roof about a mile away. The loss of all my belongings made me miss the old 6th even more acutely. However, we were quickly re-equipped by air, and in two weeks our hospital was taking patients. We did a lot of flying on the side and made many good friends among the pilots and other Air Corps personnel. In January I was lucky enough to fly back to Casa to see all the people there. That was a real treat. Surgery was slow, but we had several interesting problems to keep us busy.

In March I was transferred to this group and was given a General Surgical team consisting of an assistant surgeon, an anesthetist, a scrub nurse, and two enlisted men. We worked on another front for two weeks, then went to Anzio. I think that place has been adequately described by many. We had an MGH reunion there, with Burnett, Ballantine, Crandell, Klemperer, McDaniel, Ellis, and a few others.

When the forces broke through, our team worked with field hospital platoons—the best assignment one can have—for you operate on all non-transportable cases. Dr. Churchill was by, and we had a nice visit with him. Saw the Boston crowd, and the pope, and then went on ahead, getting almost to Leghorn.

The 6th has a fine set-up and all seemed happy—even about living in tents.

Right now we're "getting in shape". McDaniel and Crandell are due; Tom Ballantine is out working at present.

My very best regards to all at M.G.H.

We are glad to be able to report that Capt. W. Philip Giddings, MC, AUS (*WS* 1939) has completely recovered from his wounds. He left hospital in May, had a week of recuperation at Capri, and has been at work ever since. He is in a rear hospital where the only patients are German prisoners. He finds the work interesting, but rather dull in comparison with what has gone before.

THE NEWS

No. 24 Boston, Mass. September, 1944

Any one who comes in through the front door of the White Building needs only to raise his eyes to see the story, in brief, of the extent of our participation in the war. For there, on the north wall, mounted upon a background of walnut which bears appropriate decorations of beauty and dignity, are the names of 117 of our nurses, 140 members of our staff, and 149 of our employees, who are now in military service. Our Honor Roll is, indeed, an impressive one.

The *New England Journal of Medicine* for May 4 announced the publication of a new journal devoted to neurosurgery. "Neurological surgery developed largely in this country as the result of the stimulus given to it by Harvey Cushing [*SS* 1896], who began publishing papers on the subject as early as 1900 and continued up to the time of his death in 1939. A society of neurosurgeons named in his honor has now established a journal. . . ."

In the first number is a description of some of Dr. Cushing's contributions to neurosurgery, and an article dealing with "fibrin foams as hemostatic agents and with fibrin films in the repair of dural defects and in the prevention of meningocerebral adhesions." There are excellent illustrations, many of them in color.

At their meeting on July 21, the Board of Trustees voted the following appointments:—

Fred R. Blumenthal, D.M.D. as Dental Surgeon;
Dr. Samuel C. Capps as Intern in Pathology for nine months, beginning July 1, 1945;
Stanley E. Keller as Dental Intern, to begin on or about October 1, 1944;
Dr. Ricardo S. Mora as Extern and Intern in Anesthesia, beginning October 1, 1944;
Dr. Tetsuo Sugiyama as Junior Resident in Surgery, to begin July 1, 1944;
Dr. Charles L. Sullivan as Assistant Obstetrician.

The Trustees also voted:—

That the appointment of Dr. H. Dunster Howe as Dental Intern be extended from August 31, 1944 to February 28, 1945, subject to the approval of Procurement and Assignment Service;
That Dr. Frederic W. Rhinelander be granted leave of absence because of military service.

The General Executive Committee, on July 19 and August 9, voted:—

To appoint Dr. John L. Jacobs as Graduate Assistant in Medicine, to serve in the Allergy Clinic and the Out-Patient Department;
To appoint Dr. Hubert Wallau of Brazil, who has been recently at the Boston City Hospital, as Graduate Assistant in Surgery for six months.

OFFICIAL NOTICES

ETHER DAY

The General Executive Committee is anxious to collect as many photographs as possible showing the work of members of the staff, graduates of the Hospital, and nurses, in the Armed Services, for exhibition on Ether Day, October 16, 1944.

The Committee would appreciate it if the families or friends of staff members and graduates would send copies of such photographs or interesting souvenirs of these men or women. We should like these sent to Dr. Benjamin Castleman, Massachusetts General Hospital, as Dr. Castleman is in charge of the program for this year. It would add to the understanding and enjoyment of pictures if explanations of scenes or identifications of persons were given.

All photographs and material will be returned to the sender, if desired. Be sure to include your name and address if you wish your souvenirs returned.

The attention of the senior and resident staff is called to the fact that pre-operative diagnoses are often too vague to be of any value. For example, pre-operative diagnosis of "menorrhagia", "metrorrhagia", "vaginal bleeding", "post-menopausal bleeding", "amenorrhea", are merely statements of the patient's symptoms.

Also, the diagnosis of "tumor of the breast" gives no inkling as to whether the surgeon believes the lesion is a cyst, fibroma, or carcinoma. Although the exact classification of a tumor will be made by the pathologist, some attempt should be made pre-operatively to call a lesion something more than a "tumor", at least to indicate whether it is benign or malignant. Diagnoses such as "abdominal tumor", "tumor of the back" or "buttock" are merely physical findings.

In order to correct this situation the Anesthesia Department has been requested to obtain definite pre-operative diagnosis, to be written on the anesthesia sheet.

Members of the staff are asked to coöperate by making as specific a diagnosis as possible.

A similar attempt should be made to avoid vague clinical diagnosis when a patient is discharged home or to Allen Street. For example, diagnoses of "jaundice", "uremia", "splenomegaly", "hepatomegaly", etc., should be further amplified.

GENERAL EXECUTIVE COMMITTEE
N. W. Faxon, M.D.,
Director

Among our many anniversary days, not the least important is August 20, for on that date, in 1810, a circular letter was issued by Dr. James Jackson, our first physician, and Dr. John C. Warren, our first surgeon, asking for subscriptions for a hospital for "lunatics and other sick persons".

Nathaniel I. Bowditch, in his *History of the Massachusetts General Hospital*, says:—

> At the beginning of the present century [meaning the 19th], Massachusetts had no Hospital or Insane Asylum, though such institutions had been for many years established in the States of New York and Pennsylvania. There were various indications, however, that the want of such establishments was beginning to be felt in our community. Thomas Hancock gave a sum to the Town between 1760-1770. Rev. Frederick T. Gray shewed [sic] me a letter stating newspaper reports on the subject. Thomas Boylston, Esq., by will dated Nov. 12, 1798 . . . made the town of Boston his residuary devisee in trust, among other objects, to erect a small-pox hospital and a lunatic hospital. . . . Hon. William Phillips, by a codicil dated April 18, 1797 . . . bequeathed the sum of five thousand dollars [for such a hospital]. In August, 1810, a circular letter was prepared by Drs. James Jackson and John C. Warren, addressed to several of our wealthiest and most influential citizens, for the purpose of awakening in their minds an interest in the subject. This circular letter may be regarded as the corner-stone of our institution.

The circular letter is well worth reading. Should there be no copy of Bowditch's History available to you, come to the Archives room. There, on a table, you will find the book, opened to page 3, where you may read not only a copy of the letter, but the story, interestingly told, of the obtaining of the charter, the incorporation, the plan for a Board of Visitors and a Board of Trustees, the grant of the Province House estate, and other facts dealing with the earliest history of the Hospital.

Dr. Rupert A. Chittick, of the McLean Hospital staff, has been appointed superintendent of the Vermont State Hospital at Waterbury and professor of psychiatry at the University of Vermont Medical School. Dr. Chittick assumed his duties in August.

After all the usual vicissitudes—plus a few extra ones—the Annual Report has finally arrived and is being sent out.

MASSACHUSETTS EYE & EAR INFIRMARY

MARY F. HAYDEN, R.N.

It is with deep regret that we record the death, on August 8, of Miss Mary F. Hayden.

Miss Hayden served as Army Nurse in World War I, assigned to the hospital in Bordeaux. She came to the Infirmary as Head Nurse in the Ear Clinic on April 1, 1921 and continued in this position until November 21, 1943, when she was granted a leave of absence. She died at Massachusetts General Hospital following an illness of one week.

We shall remember her as a loyal, conscientious worker and a friend to all.

Miss Mary McLaughlin, formerly of the Massachusetts Eye and Ear Infirmary staff, is in charge of a Red Cross unit in an overseas hospital. Before going to her present destination she spent a few days at the 6th General. She reports having seen several doctors from both the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary.

From Capt. Joseph Lentine, MC, AUS (*Oto-Lar.* 1936), Station Hospital, Tonapah, Nevada, comes the following letter:—

It seems to me that each time I address a letter to you a change in post is announced. After remaining in California for five months as chief of ENT and curing venereal disease with penicillin, the present post reminds me of the Eye and Ear, in that a ward has been set aside for nose and throat cases. Again I am chief of service, but this time genuine cases of ear and nose disease are seen. The supply of penicillin has become quite ample at station hospitals, allowing me to use it in deserving cases. From my limited experience, I find it is not a cure-all in oto-laryngology. In cases of meningitis the cure is dramatic. In three cases of chronic sinusitis no benefit was had with 200,000 units. In one peritonsillar abscess the symptoms and swelling subsided in 24 hours. Its use locally has been disappointing. If the drug is being used at the Infirmary, your opinion regarding its use and efficacy would be appreciated. I am far remote from civilization, with little exchange of ideas except those I read in current literature.

Recently I had an interesting case—a compound fracture of the frontal sinus, linear fracture of the posterior plate of bone, but no air in the cranial cavity. After much debating whether to do radical surgery, I decided to do simple repair of the frontal wall, and, with the use of sulfathiazole, the patient has done excellently.

Nevada is one part of the country which was really forgotten by the Maker. A desolate barren desert, with one square mile per capita. Blinding sandstorms and windstorms are not infrequent. In fact, the gritty sensation of sand in the teeth and food is accepted as seasoning. A recent visit to Yosemite more than compensated for the time which has been spent in the desert. The contrasting beauty of the Park and the desert is marked, making one wonder how nature could have been so liberal to one and covetous to the other. The drive over the Tioga Pass, just cleared of snow, was hair-raising! The war has given many of us a grand opportunity to see much of this beautiful country.

Please remember me to the staff.

This travelogue from Capt. Richard Goldcamp, MC, AUS (*r. Oto-Lar.* 1943) to Dr. Schall, written July 12, sounds very much as if Captain Goldcamp were, veritably, boxing the compass. It makes us wonder in what direction he may be headed now.

Spent my first six weeks in the Army at Carlisle Barracks—school again—classes from 8 A.M. to 6 P.M. Boy, it was hot there! And we did a lot of fancy cussing because it seemed to us they were trying to treat us like a bunch of kids. But we all came through looking a little more like soldiers after it was over. Saw Johnny McKeigue before I left and we had time for one good party.

Early in September 1943 I reported to the commanding general of the "fightin' 95th" at Camp Polk, La., and was assigned to an infantry regiment as assistant battalion surgeon. Camp Polk was even hotter than Carlisle! The division there had just completed Texas and Louisiana maneuvers and there were a thousand jigger bites to treat. Also, some of the boys developed a tick fever and had to be hospitalized. Most of the other complaints were of an orthopedic nature—sore feet and low-back pain. My other duties consisted of inspecting latrines and messes. I kept telling the divisional surgeon I was an E.N.T. man, but it didn't do a bit of good. I got so tired looking at feet and backs I could have yelled for help!

October 27 we left Polk, headed for California, were given a Los Angeles APO, and every one figured, "Boy, this is it!" We ended up in the Great American Desert—Camp Coxcomb, Cal.—ninety-eight miles from the nearest town. Maneuvers started almost immediately, and we had four months of it. It wasn't too bad. The hardest part for me was the 24-hour endurance march over mountains and sand. I made it—don't know how—and then spent three more hours treating blisters. Finally had to take some barbital to get to sleep. But the desert was a good place during the winter months, and we whipped into shape in a hurry. I dropped from 183 lbs. to 162. We had a 30-hour pass every two weeks and made our headquarters in Palm Springs. In February I was promoted to captain.

February 28 we moved east, and again morale hit a new high. Every one could feel the roll of the boat and smell that salt air! But it turned out that Indiantown Gap, Penn. wasn't a P.O.E. or a staging area, but just another garrison. We prepared a 6-months' training schedule and started from the beginning again. Garrison life was sure a luxury after that desert. We ate A rations again instead of C. Replacements started to roll in, so there was plenty of work to do training the new men.

Last month we shipped out of Indiantown for the hills of West Virginia for two weeks of maneuvers. It was the hardest two weeks our outfit has ever gone through. Rained every day, and we marched in mud up to our knees. The mountain climbing was hard, but fun. I did things I thought impossible at first.

In all this time in the Army I've had little or no medicine. We can't even remove cysts. It's a great life! I still do a little cussing once in a while—then they pacify me by telling me a good soldier should beef.

Stan Myers's last letter took four months to reach me. He is home again now—stationed in Austin, N. Y.

Comdr. Edwin B. Dunphy, Chief of the Department of Ophthalmology at the Massachusetts Eye and Ear Infirmary, has been elected an editor of the *American Journal of Ophthalmology.* Commander Dunphy has been overseas since last summer.

Lt. Comdr. Herman J. Sternstein, MC (*clin. asst. Oto-Lar.*) spent a leave in Boston after serving for two years at the Naval Base in Jacksonville, Florida. He is on his way west—where, he does not know.

In a letter written July 10, Major Garrett L. Sullivan, MC (*Oph.* 1938) brings his military record up to date:—

I have been transferred to a general hospital and, for the first time since coming overseas, have an opportunity to apply my professional training in more than a small way. It was a pleasant surprise to find Major Richard Warren Chief of the Surgical Service, ably assisted by Capt. Dean Tanner.

Comdr. Edwin B. Dunphy [*Oph.* 1923] has visited the hospital twice, and I hope to see more of him as he is not very far away. He is looking very fit. Have seen Major Tom Cavanaugh recently—also looking very well. As it happens, I am running a clinic formerly conducted by him—meaning the physical set-up.

I received my promotion last September, at a time when Col. Tom Lanman was my C.O.

Among our patients are casualties. I'm sorry I can't go into detail, but that will have to await a later date.

Major Thomas Cavanaugh, MC (*Oph.* 1940), who is largely responsible for this Eye and Ear section, wrote to Lt. Comdr. S. Forrest Martin, MC (*Oph.* 1938) on July 17.

We have been in France for some time. My last Saturday night in England was spent with Sully [Garrett L. Sullivan] and Ed Dunphy. Sully is now doing eye work at my old hospital. He is with a good group and I think he will be very happy there.

Have had the opportunity to roam all over the American sector and have seen practically everything there is to see. Am agreeing with Sherman, but our Army is doing a great job with the casualties. The nurses are doing terrific duty—and getting away with it, too.

Please say hello for me to all my friends at the E&E.

And in a letter to his family Major Cavanaugh says:—

Our third spring overseas was greeted by a severe conditioning course which lasted until our arrival in France. The only difference in our living arrangements now consists of mosquito netting and fox holes. My fox holes are purely utility ones, but some of the boys dig nice roomy ones.

Our days and nights are very active and interesting. I get the biggest thrill from seeing so many field and evacuation hospitals in action. All the work is done under canvas and the locations are close to the front lines. This means our casualties are being treated *very shortly* after injury. The morale of the corpsmen and nurses and doctors is great, but cannot compare with that of the wounded, for they always feel that the fellow lying next is more seriously hurt and insist upon his being taken care of first. The courage and spirit shown by the G.I. Joes is worth all the sacrifices that can be made for them.

At present the entire personnel of the hospital is on detached service while awaiting the building of the general hospital on the continent. Lt. Col. John Beach Hazard, Lt. Dean [Edwina N.] Hussey, Capt. Howard Suby, Capt. Henry Brewster, and Lt. Col. Moses Strock are all here in France, making themselves extremely useful. Major Richard Warren was left in England to take charge of a "green outfit" which took over the old hospital.

As to our present location—although I could now give you names of towns, it is easier to tell you to look at a map of the peninsula. We've been in all those places indicated.

Capt. John M. Converse, MC, AUS (*Oto-Lar.* 1938), after four years' military experience—including work at the American Hospital in Britain and an assignment as major with the Free French—has effected his transfer to the American Army.

Pvt. Margaret J. Preble, WAC, was recently in Boston on a furlough. Private Preble worked in the Massachusetts General Hospital Social Service Department some time ago, and had been employed for several years at the Massachusetts Eye and Ear Infirmary when she joined the WAC's in October 1943. Private Preble is now stationed at the Mason General Hospital, Brentwood, N. Y., in the Neuropsychiatric Department.

When even radio reports are running as much as twelve hours behind the actual events during these days of rapid military advances, what was "hot copy" when it left you may seem cooled off and quite stale—to you who wrote it—by the time your letter comes back to you on the printed page of THE NEWS. But *do* keep your letters a-coming just the same, for what you have to tell is still "hot copy" to your friends on the other side of the world or at home. Even though you may now be miles ahead of the address given, and days or weeks ahead in events, we are all still interested in reading about what you *have* done, and want to follow along behind you. Descriptions of personal experiences, and references to other MGH-ers you have seen, always make exciting reading for the rest of us.

The following changes of address have been received:—

Lt. Comdr. Mark M. Exley, MC (*r.s. U* 1938), Public Health Dept., U.S. Marine Hospital, Hampton Blvd., Norfolk, Va.

Lt. Marcus E. Farrell, MC, USNR (*CM* 1934), Epidemiology Unit No. 12, N.T.C., Sampson, N. Y.

Lt. Comdr. A. Gordon Gauld, MC (*ES* 1934), Quarters "O", U.S. Naval Air Station, Quonset Point, R. I.

Major James Greenough, MC (*WS* 1920), Regional Hospital, Fort Monmouth, N. J.

Lt. Walter S. Kerr, Jr., MC, AUS (*WS* 1943), 725th F.A. Bn., 70th Division, Fort Leonard Wood, Mo.

Lt. George R. Livermore, Jr., MC, AUS (*WS* 1943), Hq. ASFTC, Training Ward, Camp Barkeley, Tex.

Lt. James G. Miller, MC, AUS (*EM* 1943), Box #2605, Washington, D. C.

Lt. Robert P. Smith, MC, AUS (*M* 1943), A.G.F. Replacement Depot #1, Fort George G. Meade, Md.

Comdr. Richard W. Dwight, MC (*WS* 1931), whose interesting letter from the southwest Pacific was published in our July issue, has returned home. He left his ship July 8 and flew back to San Francisco. His new assignment is at the Naval Construction Training Center, Davisville, R. I.

Lt. Anne Ryan, ANC (*MGH* 1933) is on duty at Camp Seibert, Alabama.

From the General Dispensary, Camp Ellis, Ill., came this letter from Lt. Richard D. Bush, MC, AUS (*WS* 1943), written July 17:—

> I should like to pass along a few words on the whereabouts and activities of myself and some of the others who have recently left M.G.H.
>
> On January 14 I arrived at Carlisle Barracks, and during the next six weeks I acquired a great deal of admiration for the fine teaching job the Army is doing—particularly in the fullest use of demonstrations of medical installations in operation under simulated combat conditions. Burgess Vial, George Carter, Bob Brown, and Don Sweeny were all enjoying themselves, although the last time I saw Don he was perched on his bed nursing a pair of overtaxed feet after a tramp through the mountains.
>
> Since leaving Carlisle I have been stationed at Percy Jones General Hospital and at Camp McCoy Station Hospital. For the past month I have been here. We are a field unit equipped to serve as a dispensary in an occupied city overseas. Although our unit is small, I am delighted to be here, for there are prospects of seeing some action eventually.

A brief message from Lt. Col. William F. Hoyt, MC (*WS* 1932) says he has been Chief of Surgical Service at Glennan General Hospital, Okmulgee, Okla., since November 5, 1943. His promotion in rank was effective July 11.

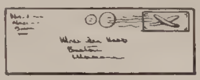
Dr. George M. Saunders (*ES* 1928), who has been in Brazil since April 1942, acting as medical director for a rubber project in the Amazon Valley, under the Division of Health and Sanitation of the Office of the Coördinator of Inter-American Affairs, has returned to the States. His address is 709 South Skinker Road, St. Louis, Mo.

THE NEWS has received its first letter from Lt. Frederick S. Bigelow, MC, AUS (*EM* 1943), written July 30 from Goldwater Memorial Hospital, Welfare Island, New York, N. Y.

> I wish to thank you for THE NEWS, which, though I am in no distant region, serves as a tie with the General.
>
> My army career started at Carlisle Barracks and led thence to Camp Blanding, where I remained about four months as a dispensary officer. Since then I have been involved in a research project here in New York—a distinct "plum" as far as Army medicine is concerned.
>
> Peirson Richardson [*EM* 1943] was also in New York recentlv, but the only other MGH man I have seen is Bill Christensen [*WM* 1943] at the Climatic Research Lab. in Lawrence, Mass.

Major John C. Angley, MC (*a. M*) received his promotion last March. He is malariologist with an AAFSC/MTO. (Perhaps Major Angley will tell us what these letters mean. We have made a guess, but would like to be sure).

One of our house officers brought us word that in a letter to one of our visiting staff was the report that Capt. John P. Gens, MC, AAF (*r.s.U* 1943) has been promoted to this rank. By what roundabout ways do items such as this reach us!



Our appeal, in the July issue, for letlets from you silent ones has already been rewarded, but there are many more of you who should still be nudged into taking that pen in hand.

This letter from Lt. Col. Frank B. Cutts, MC (*WM* 1934), written July 19, was one of the first fruits of our campaign—and good it was to hear from him.

> Your request for news prodded me out of my monsoon lethargy. (I can report that it's in this part of India the phrase "It isn't the heat, it's the humidity" must have originated).
>
> Our hospital is thoroughly busy looking after large numbers of Chinese patients. As a result, some of our medical problems are rather exotic. Malaria of all kinds and varieties leads the list. These lads have little or no natural immunity to this disease as do the Indians. Other conditions we see include relapsing fever, louse-borne typhus, mite typhus, kalaazar, bacillary and amebic dysentery, gummas most anywhere, etc. In addition we run across more familiar items such as rheumatic heart disease, pneumonia, tuberculosis, and a little rheumatoid arthritis. Ova and other things found in these patients' stools are rather reminiscent of a bargain basement, as regards numbers and variety.
>
> No one can predict what these lads will do next. A while ago, during a soft-ball game between teams of our enlisted men, one of them swiped third base to use as a cushion.
>
> We're quite near the 20th General Hospital where Norman Freeman [*r.s. WS* 1935] is working. They're an exceptionally fine group of doctors and we consider ourselves fortunate to be near their stimulating influence.
>
> I certainly enjoyed Tracy Mallory's description (in the July NEWS) of his laboratory, equipped to do about one-half of each test and procedure. Hope he has no hypertensive tendencies.

Capt. Arthur S. Pier, Jr., MC, AUS (*WM* 1941) is with a portable surgical hospital. In this letter to his father, dated July 11, Captain Pier convinces us that the Pacific is really a big ocean. He says, in part:—

> We have very little idea of what is going on in Europe—or over here, for that matter. The place is now buzzing with constructive activity, as is always the case when the Americans move in. You have no idea of the power of our Army and its efficiency until you see it take over a place from the beginning. This wilderness of coral and jungle is entirely losing its identity and becoming a vast community. The Japs seem to have deteriorated completely, so far as I can make out.
>
> We shall probably take in patients within a few days.

This interesting letter from Lt. Henry S. Fuller, MC, AUS (*WM* 1943) was written to Dr. Chester M. Jones last May. It has been withheld until now, awaiting sufficient space to publish it in its entirety.

For the past several months I have been in the jungles of Burma. Our outfit is working with Chinese troops. When one is with these Chinese soldiers constantly, he comes to know them better and really to appreciate them. They are fine fellows and are doing a grand job here. My hat is off to them, and I believe every one else here is of the same opinion. They have an incorrigible sense of humor—irrepressible would be a more descriptive term, perhaps—one of their characteristics which especially appeals to me. In the face of great danger they laugh, joke, and play pranks; and in battle they are absolutely fearless. As a rule the wounded are loath to admit they are in pain. They feel that to admit pain is to "lose face". In this weird jungle, with a minimum of help, the Chinese have done what was called "impossible". After seeing them do it, I agree with the person who said the only difference between the possible and the impossible is that the impossible takes longer to accomplish. An inspiring factor is the remarkable personal leadership of General Stilwell. He has the well-earned respect of everybody here. He is always popping up in the strangest places, and many of us have seen and talked with him on the trail and elsewhere.

Fortunately, I am having a rich and varied clinical experience. My ward and my laboratory are my delights. The ward is typical of a jungle hospital—the Chinese built it themselves. I have four excellent medical technicians who take real interest in their work. They accompany me on rounds, and are reading about the various diseases we see. Naturally, the endemic tropical diseases make up a large proportion of the medical cases. But, surprisingly enough, one sees a fair amount of respiratory disease, including acid-fast infection, atypical pneumonia, good old-fashioned lobar pneumonia, and bronchitis. One peculiar thing about lobar pneumonia is that it does not always present the clinical picture with which one is familiar in the temperate zone. Any or almost all of the classical symptoms and/or signs may be absent at first and may only appear late in the disease. Resolution seems to be a long-drawn-out affair. But the sulfonamides work just as well as they do in any other country in pneumococcus pneumonia. One naturally has to maintain fluid intake at higher levels during chemotherapy, owing to increased fluid and salt loss under tropical conditions.

You would be able to conduct an endless clinic here on the subject of avitaminoses. I recently had a patient who entered because of lobar pneumonia, but who also complained of painful numb extremities, and who showed bilateral ankle edema, smooth tongue, and cardiac findings suggestive of beriberi heart disease. On massive doses of yeast his symptoms and signs cleared completely and he returned to duty. One frequently hears the complaint of night-blindness in the dispensary, and examination usually reveals characteristic ectodermal changes seen in cases of vitamin A deficiency. One could go on multiplying these cases endlessly.

In the field of infectious diseases of the gastro-intestinal tract, one is always busy. The dysenteries provide us with plenty of clinical material, and, as one would expect, the patients often show signs of deficiency, especially of the B complex. Our laboratory does innumerable stool examinations and we feel that we must have missed something if we do not pick up amoebae at least once during the day. I have developed a high index of suspicion for amoebiasis, for which I have been rewarded by turning up quite a few cases. I had seen neither amoebic hepatitis nor liver abscess before I came to this part of the world. Because of the enlarged tender spleen and liver, and the fever, I confused my first case of amoebic hepatitis with malaria on clinical grounds, until the blood smear came back negative and the stool showed abundant motile amoebae. We have seen instances of diarrhea following a course of emetine, and they are very confusing when they occur. However, emetine is one drug I would not part with as part of my armamentarium.

Ascariasis, ankylostomiasis, and whipworm infection are very common and they conspire to confuse clinical pictures of other diseases. Abdominal complaints are often difficult to evaluate, because of the presence of nematodes. Ascaris frequently indulges in its pastime of wandering into places where it has no business, such as the oesophagus and abdominal wounds. I have had several cases of bronchitis in which the differential blood smear showed marked eosinophilia and the stool contained ova of Ascaris or hookworm or both parasites. Specific anthelmintic therapy was followed by prompt relief of bronchitis.

With the exception of one case each of infection with Schistosoma japonica and Heterophyes heterophyes, I have not recognized many diseases caused by flukes.

Malaria is probably the most interesting disease I have met thus far in the tropics. Rather than play around with original schemes of my own, I have followed the plans of treatment outlined by the Army. These have given gratifying immediate results, although I have no personal data concerning recurrences in cases so treated. I have seen Plasmodium falciparum do weird things.

Cerebral malaria is without doubt the most fascinating disease I have encountered. When such a case is admitted, every one is just as enthusiastic about treating and following the patient as at M.G.H. when a patient enters in diabetic coma. If there is one thing that can save the patient, it is intravenous quinine dihydrochloride in adequate doses, with emphasis on the word adequate. The results are often dramatic. The following is a case in point:—The patient was brought to the hospital in semicoma and history was lacking. After he had recovered sufficiently to speak, it was learned that he had experienced fever and chills for several days before entry, but he had amnesia for events surrounding the onset of pernicious symptoms. Examination revealed a well developed, well nourished man, very weak and drowsy, unable to speak, grimacing, very irritable and very restless. All reflexes were hyperactive. He nodded slightly when asked if he had headache. The other essential findings were: temperature 103.2 by mouth, Cheyne-Stokes breathing with apneic periods lasting ten to twelve seconds, an easily palpable spleen two fingers below the costal margin, and marked tenderness with reflex spasm in the right lower quadrant, palpation in that region causing the patient to double up. A smear taken on entry showed a moderate number of ring forms of P. falciparum. Within one-half hour after entry the patient was receiving twelve grains of quinine dihydrochloride in one thousand cc. normal saline. Three hours later he was able to speak, demanding rice and water. What is more, he was breathing perfectly normally. Four hours after entry he was sitting up in bed, talking quite rationally, but still complaining of right lower quadrant pain and tenderness. He passed a liquid stool containing whipworm eggs, but no blood, pus, or amoebae. Subsequent stool examinations were also negative for amoebae. Seven hours after entry he was given another dose of quinine dihydrochloride, similar to the first dose. The next morning he was acting even more like a normal person, although still grimacing slightly. His right lower quadrant pain had subsided completely. He was started on oral atabrine therapy and received a full course. His fever subsided gradually, and after the second day he had an uneventful convalescence, playing cards and enjoying life in general. Cases like this are very instructive and raise a multitude of questions—some of which I hope will be answered by men who have facilities for their study.

Cases of malaria are frequently complicated by pneumonia, and in such cases I do not hesitate to give sulfadiazine in full doses, together with antimalarial therapy. Amoebic dysentery and malaria often occur together, and here the problem of which to treat first, and how, or whether to treat both at once, is one of judgment. I doubt that a general rule can be laid down, and I have treated each case individually —in general avoiding the administration of atabrine and carbarsone at the same time.

We have had some experience with a disease apparently caused by Rickettsia orientalis. The clinical picture is similar in many respects to that described in the Harvard symposium. It was in treating a case of this disease that my Chinese ward boys learned the value of fluids. They had been rather casual about getting water for the patients. The water must be boiled and kept quite hot, otherwise the patients refuse to drink it. Naturally, this makes more work for all concerned. I concentrated on this patient, who had been running a fever of 104 to 105 daily for ten days, insisting that he must have at least four quarts of water daily. My boys had given him up, but they supplied the water, anyway, and finally he pulled through. This impressed them greatly, and now *they* insist on forcing fluids on all febrile patients!

I have been struck by the stamina and tenacity of life of the Chinese. They recover their strength and are anxious to leave the hospital much sooner than an American with a similar ailment. Of course we see malingerers, too, and hysteria is by no means unheard of amongst the Chinese.

In addition to other duties, I am in charge of the laboratory. I have two excellent technicians who learned their parasitology and hematology in the field. The other day they turned up a double infection of P. vivax and P. falciparum. They are also very capable in the microscopic diagnosis of stool specimens. What pleases me most is that they have developed the critical attitude in regard to their own work, and you can depend upon their diagnoses.

I have been making summaries of my interesting cases, in hopes they may be useful in the future.

I have found time to ride my hobbies, and have been learning some of the local birds. Thus far I have identified sixty-one species. I have collected a few ticks and other parasites. Any extensive collecting is out of the question, owing to the difficulty of transporting such material when we move. I spend my evenings working with patients, reading, or writing letters. I am sick of detective literature, and believe I have read every mystery story in the outfit. Recently I received a "box of wonders", mailed to me in January. In it was Dr. Stanley Cobb's book, *Borderlands of psychiatry*. I have just finished it. Every one in the medical profession should read it. It is deep and it provides plenty of food for thought. I understand that *Burma surgeon* has taken the States by storm. My copy was autographed by Colonel Seagrave and his head nurse. I have been on rounds with the gentleman several times. He is, indeed, a remarkable man, and full of useful information on the diseases of this region, which he is glad to share with those who express interest.

I have no grim tales of narrow escapes from tigers, elephants, and snakes. I believe there is nothing like the jungle to make a liar of a man, and I have resolved not to return with any tall stories!

At present I am living in a tent with Captain Dowd. He is a surgeon from Kalamazoo, who was born in Assam of medical missionary parents. Our tentmates are our two Chinese interpreters, with whom we are very congenial, and from whom we have learned a great deal. I am fortunate in being associated with a fine group of officers who have excellent professional backgrounds. We are very proud of our enlisted men. They have taken to jungle life remarkably well, and only a few have been sick. We receive mail every week or ten days, and when it arrives the camp is a madhouse. As always, THE NEWS is a most welcome item.

Please give my warmest regards to every member of the MGH family. I hope to see you *all* before too long.

A much appreciated letter from a "busy man" has just arrived. It was written in July, by Major C. Fred Goeringer, MC (*Or.* 1940). No one is going to begrudge Major Goeringer his use of the term "busy" after reading this:—

> Our hospital is set up, with plenty of work, on a small island as close to Tojo as any one in the southwest Pacific. We are currently in the headlines. The weather is hot, the flies bad, but mosquitoes not too troublesome —although we do have some malaria. We have seen many Jap prisoners—Formosans. Also, many Jap planes destroyed on the ground. Much booty—like trucks—have been put to good use. There are all kinds of Jap souvenirs—swords and what not.
>
> I am doing the orthopedics, so you must have an idea of the busy man I am. I have done procedures I will not do in private practice, for such severe injuries do not occur in cities.
>
> I have had to hit the fox hole several times when Japs dropped bombs at night. The experience is exciting, but I wouldn't miss it for the world.

Lt. John W. Raker, MC, USNR (*ES* 1942) has notified us of a change of address. Lieutenant Raker is still somewhere in the Pacific area. His letter, written July 30, contained the following postscript:—

> Thanks for the Christmas card—it arrived about a week ago!

Lt. Comdr. J. Maurice Robinson, MC (*r.p. R* 1936) writes that both he and Lt. Ralph W. Hunter, MC, USNR (*r.p. N* 1939) are on duty with Base Hospital No. 1.

* * *

Lt. Col. Fiorindo A. Simeone, MC (*WS* 1936) has received this promotion in rank. He is still in Italy.

A letter from Lt. Col. John D. Stewart, *MC* (ES 1930) announces his promotion to this rank. Colonel Stewart is at Hq. American Airforce S.C.-M.T.O., Medical Section.

If there's one person left in the world who still harbors doubts as to the kind of medical and surgical treatment our boys are getting—and their chances for recovery—let him read this paragraph from a letter written in July by Capt. Edwin L. Cantlon, MC, AUS (*ES* 1938) to Dr. Francis M. Ingersoll:—

> Recently I operated on a "dead one"—R.P. 50/7, thoracoabdominal, hole through right lung, diaphram practically torn off, liver, kidney, and small bowels also injured. With 9 pints of blood and an operation he made it! You really feel you're helping the boys.

As to that last sentence, may we ask if the English have all rights reserved on the use of the understatement?

Word has reached us that Lt. Col. Henry K. Beecher, MC (*WS* 1934) has received this promotion in rank.

In a letter to Dr. Faxon written July 9, Lt. Col. Tracy B. Mallory, MC (*c. P.*) announces his promotion.

> I am pleased to be able finally to report that I have joined the ranks of the MGH chicken-colonels. The date of appointment was June 27. I can now meet Parsons, Stewart, Simeone, and Taylor on even terms.
>
> I continue to be extremely busy—a great deal of the work purely routine, but with a sufficient leaven of interesting cases to keep me from being bored. The best test is that the time seems to fly. I have been promised assistance, but such things come very slowly in the Army. We are very well set up here, our quarters are comfortable, and the weather is surprisingly mild, so I am not anxious to move for a while.

Colonel Mallory is with a medical general laboratory.

* * *

This account of how a hospital got moved reads like a modern version of the twelve tasks of Hercules—all rolled into one gigantic undertaking. It is contained in a letter from Major T. Stewart Hamilton, MC [*a. dir.*] to his family:—

> This is a belated attempt to give you the story of our Odessey from Casablanca to "Somewhere in Italy". For months we had expected to move, as the battle lines had left us further and further behind. There was still work to be done where we were, however, so we stayed on. Knowing what it would be like to move a hospital of our size, and despite the fact that Casablanca was such an agreeable city, with the finest climate I have ever known, we were still anxious to see some of the real theatre of war.
>
> During the months of regular work we laid our plans. With what wood we could get we constructed box-sides and ends. These were used as ward-closets until the very last, when they were knocked together and filled with supplies. By the middle of April we had some pretty definite ideas and began to pack. By the end of the month we were at it for fair. We kept the hospital open till the last gasp, and even turned some patients over to the succeeding hospital as they moved in, and we out. I wrestled with tonnages and cubages until I couldn't sleep. I kept a notebook and pen by my bed so I could jot down ideas during the night. I learned the intricacies of box-cars (40 & 8's), gondolas (flat-cars), and Riddells (slat-sided box-cars). On May 1 we got word we were to move on Tuesday, the 16th. We had closed our famed "Moroccan ward"—a furniture warehouse housing up to 500 patients at one time—together with a mess hall, showers, latrine, and baggage room, and had our stuff piled in there as it was made ready to go. On Saturday A.M. our men started loading. For professionals—let alone amateurs—they went ahead with incredible speed and efficiency, and completed the tremendous task by Sunday evening. On Monday they set out our train for passengers—second-class coaches for officers and nurses, and 40 & 8's for the men. We had all sorts of things to arrange for—drinking water, food, medical care, and what-not. We set up a dispensary in the end of one of the passenger cars. At 6 P.M. we gathered at the siding, and since every one was assigned a car the loading went along very well.
>
> We pulled out at 8:30 and rolled along quietly on the electrified line until the next morning when we arrived at Fez. A mobile kitchen was there to serve us our breakfast, and it was wonderful. I had been at the yards all the day before, and after a supper of a sandwich and cold C-rations I was plenty hungry. We were under steam after Fez, our power being the Gipsy Rose Lee, or stripped-down American engine. That day was perfectly beautiful. We saw the snowcapped mountains that morning, and all day long kept puffing up hill, around mountainsides, through innumerable tunnels, and across bridges. We passed through Taza, Guercif, and Oujda. We stopped at every station, for the track is single, and at each stop we had to be sure the track was clear ahead and that the next station knew we were coming. Often we were going so slowly that native children would run along uphill beside the track calling for candy, C-rations, or whatever else they could get. Just at dusk we stopped at one town, whose name I forget, and were besieged with Arabs of all sizes and shapes, trying to sell us knives and other trinkets—and, incidentally, offering as high as $6 for a carton of cigarettes. We passed through Tlemcen that day—noted mainly for the fact that the T is pronounced, making the rest of the name an acrobatic feat. I took some colored pictures of the many breath-taking views which presented themselves wherever one looked. By afternoon our dispensary was working overtime caring for several folks with the G.I.'s—mostly those who had saved spam sandwiches over till the next day. During that day we had to drop one of our box-cars because of a hot-box.
>
> At Oujda (pronounced Ooj-da), where we arrived at 1:30 A.M., we had a minor crisis, though a routine one. Here we had reached the highest point of our journey and were to start downhill. The French cars are all hand-braked—I suppose because labor is so cheap there. Our passenger cars and some American 40 & 8's had to be hooked all together right behind the engine to give braking power on the downhill run. Well, this snarled our car arrangement of the men for a fare-thee-well. We had all the cars numbered, and the men on by roster; after the shift the numbers ran something like 20, 19, 3, 16, 17, 10, 9, 7, 8, and so on. We also dropped a couple of freights here, due to hot-boxes or something. After interminable shifting about of cars we finally got straightened around and off we went.
>
> The rest of the trip was pleasant, but the scenery wasn't so exciting. We arrived at Oran at 7, to be met by our advance party, which had had a regular Boy Scout camping trip coming up in motor convoy. Our nurses went to Ain-el-Turck—a magnificent resort on the beach west of the city—and we went to Goat Hill to the east. The goats had left, and after a day I knew why. It was a God-forsaken spot if ever I have seen one. I stayed at the siding with the unloading detail and didn't get out till way late. When I awoke the next morning I looked out on a forest of pyramidal tents, all furled round their center-poles, looking for all the world like shell-smashed palms on Tarawa. There was a constant wind, reminiscent of the March blows on the Cape; and though the rainy season was over, we were treated to 24 hours of the hardest rain I have ever seen. Water ran in rivers through our tent. Tent-pegs had been consumed for fuel by our predecessors last winter, and rocks were a pitiful substitute. The water was so hard you couldn't wash and many had their heads shaved out of desperation. We went to Ain-el-Turck almost every other day for a swim in the Med, and it was wonderful. I didn't spent much time in town, which is built on a mountainside and is beautiful from a distance, but crowded and dirty. We spent 10 days there, and visited several hospitals. These were most instructive and interesting. Our baseball team raised particular hell with the local champions, and we left Africa with a hard- and soft-ball record of 103 won, 7 lost, and 2 tied.
>
> The plan was for the officers and men to go on one ship and the nurses to follow. Five days before we left we sent our advance convoy with our equipment. They got in 5 days after we did, and survived a raid *en route*. One noon we were told to be ready by 3 P.M., and at 2 P.M. this was changed to 6 A.M. the next day. At that time we piled onto the trucks and began the jaunt into the city. We got to the harbor area at 8:30 and, to our delight, saw

"Over there"

Front row: Lt. Col. Moses S. Strock (*oral s.*), Major Frederic W. Ilfeld (*Or.* 1937), Major Thomas Cavanaugh (*Oph.* 1940)

Back row: Capt. Henry H. Brewster (*WM* 1940), Mary E. Finn (*MGH* 1939), Capt. Howard Suby (*a.u.*), Edwina N. Hussey (*MGH* 1937), Mary Dwyer (*MGH* 1942), Lt. Col. Neil L. Crone (*WM* 1933)

a hospital ship. Loading was completed in half an hour, and a half-hour after that we were off. It was beautifully timed. As soon as we were settled I headed for a shower. I had worn my outer clothing for three weeks and I really needed a change. The water was not only hot, it was *soft!* I can't remember when I have so enjoyed anything in my life. I got a complete change of clothing—not what I had "washed" at Goat Hill, for those things still were brown from the terrible dust storms that alternated with the rain.

The trip was unbelievable. The Med is even bluer than I had been led to imagine. The ship was comfortable and happy, accommodations (wards) excellent, food superb. Our men—who remembered with horror the transport trip across the Atlantic when they couldn't get enough to eat and could hardly eat what they did get, and were cramped uncomfortably but necessarily in the tightest of quarters—couldn't believe there were only two decks of cots, with springs, mattresses, sheets, and all the wonderful food they wanted. When we first got on and were organizing details — before they knew about the food—we even had a couple of staff sergeants volunteer for KP in the hope of getting better meals. We could be out on deck till 11:30, lights blazing, together with Red Crosses. When it became dark, movies were shown on the open deck. It was very calm all the way, but the third day, as we lazed along in the Tyrrhenian Sea, there wasn't even a cat's paw to disturb the glassy calm. We docked at noon of the fourth day and went out of town to our staging area.

The first couple of days were pretty tough, but then an engineer outfit moved out and we took over their site—a regular Scout-camp. Most of our officers and men were put at once on detached service to help out at the several hospitals that were swamped by the push which was at that time just about getting to Rome. Our nurses, who came on the next hospital ship, had a bit of rough weather and were farmed out to hospitals direct from the ship. Those of us who were left visited friends, climbed mountains, and saw the sights.

We had a couple of weeks of this not unpleasant life, when one day the colonel got a chance to ride over to take a look at our new site. We weren't supposed to leave for a week or 10 days, so off he went. About an hour later we got a call that we were to go that night. I beat it into headquarters and found that while that wasn't true, they did want to move us in two days. And that with all our equipment scattered around the hillside and our personnel scattered from hell-to-breakfast! We pulled all our enlisted men in the next day and made plans. One hundred of them were to go with the officers and nurses in the L.C.I., the rest to ride the trucks with the luggage. Thus we would have men for loading and unloading. We left the officers and nurses where they were, for we had no place for them. Then the rains came, and it poured! The C.O. got in one afternoon and left with the advance party, in a downpour, at 3:30 A.M. At 9 A.M. the trucks began to come—and they came, in increments of 20 or 30 for the next three days, until all the equipment was transferred. The weather would moderate from time to time, but you could always tell when another bunch of trucks was coming because the downpour would start anew. The second day our turn came to go in and pick up our L.C.I. It was my birthday, and I am sure it was the worst (except, perhaps, the very first) I have ever spent. We had the worry of whether we had notified all the officers (we had had a false alarm the day before when the men—the 100—left. We were supposed to go, too, but they called it off so late that, with bad phone connections from out in the country, some had gone on to the staging area); worry, also, since they were coming largely by conveyances from the hospitals where they were working, whether they would all get there, and on time. The trucks for those of us in camp and in the nearby hospitals arrived almost an hour late—in the rain, of course, filthy dirty and with no tops. Then we had trouble collecting every one, though they had all been ready on time. I asked the lead driver if he knew the way into the place, and he said he did. But he took us 10 miles out of our way, was stopped by a train, stopped for gas, got into traffic jams, and don't know what else. I was sitting on a suitcase in the back of the last truck, and soon the rain drove right through my old field jacket and soaked me to the skin. My watch was in my pocket to protect it so I couldn't tell what time it was, but I knew we were plenty late before we ever got to town. We arrived at the area, in the pouring rain, of course—it never stopped. Every one was present, and we went aboard. Later we came back to a mobile Red Cross canteen right by the ship, which served an ambrosia they called coffee, and doughnuts. Nothing ever tasted so good. By some miracle it stopped raining and we went to a nearby Navy Officers' club for our first American beer since we left the States.

We pulled out after dark, and after I had dried myself and my field jacket by a deck-exhaust I stayed out until about 11:30 when it began to sprinkle. By this time I was ready to take shelter from that damned rain, so I went below to bed.

The little fellow bounced around a bit that night, but I have yet to get seasick and didn't mind it a bit. Early the next morning we came to shore and were met by our trucks. From there we took a 2-hour jaunt past wrecked tanks, guns, piles of land-mines, and plenty of souvenirs which no one had seemed interested in picking up. Helmets and rifles have a curious way of exploding these days. Then things smoothed out and before long we arrived at our new home. What we found there is another story.

Col. Thomas R. Goethals, MC (*ES* 1917) sent his version of the foregoing experience in a letter to Dr. Faxon. He has this to say about the hasty exit of the enemy:—

They pulled out, leaving tons of German and Italian medical supplies and literature. In fact, there was still food on (unwashed) dishes in the more distant wards.

He concludes his letter in this lighter vein:—

Thorndike, Welch, McGahey, Short, Aufranc, and Worthy have returned to us after tours of detached service elsewhere. Seyfarth has been reassigned. In addition, we have one new administrative officer. Singer has been at the Special Service School at Lexington, Va., since May 24, but we expect him back within a fortnight—by which time the Yankee Stadium, complete with Coogan's Bluff, should be bulldozed into an adequate baseball field. We have expanded our nurse population, with still a few more due.

The Boston *Globe* of June 11 credited me with smoking 16 to 20 cigars a day. This was a mild exaggeration, as the actual score is only 15 to 19.

THE NEWS

No. 25 Boston, Mass. October 1944

MEDICAL SERVICE AFFAIRS

It has come to us that those of you in the military forces would like more news of MGH home affairs, so here goes for a little on the Medical Services.

At the present writing, September 1944, forty-two physicians of the visiting staff of ninety-four are on active duty. The house staff, by official order, has been reduced from sixteen interns to twelve, and the residents from six to four. In spite of these reductions, however, we have carried on with a modicum of success, and patients coming to the Hospital for care have got it in some measure, but of course the service rendered is not of as high a quality as in the golden days of peace.

Since 1942 we have conducted the visiting on the medical wards making the ward the unit instead of the service. This means that four visiting physicians are constantly on duty instead of two as before the war. The ward has really become the unit instead of the service, although the terms "East" and "West" are retained for sentimental and administrative purposes. The visiting physicians, that is to say, all who are now taking part in ward work, have luncheons once a month to discuss Medical Services' affairs, and at a recent one of these the unanimous opinion emerged that the present visiting schedule was preferable in many ways to its predecessor and should be retained permanently. It has two advantages: (1) that a more leisurely and therefore more interesting visit can be made, and (2) that it gives an opportunity to offer ward experience to a larger number of the staff. This last advantage will be particularly important when demobilization begins. Of course, through the war years we have only been able to supply twice as many visiting physicians for the wards while having a reduced total number of them, by making all hands serve many more months of the year than they used to do. At the present time the assignments run from two months a year up to eight months a year, the most usual number being four months. By such contrivances we have managed to cover things adequately, but assuredly we will welcome help when we can get it.

On the intern side we are working at present with a nine months' medical rotating horizontal curriculum; twelve interns begin every nine months and twelve finish. Their work is divided into six rotations of six months each. Four of these rotations are in straight medical ward work, and out-patient and emergency ward; and the other two rotations are through two of the following subjects: Neurology, Dermatology and Syphilology, or Baker Memorial. Of course, such a system is unsatisfactory but it has really worked far better than anticipated. It is amazing how fast interns gain experience when put to work on a ward with responsibilities to shoulder. Probably the greatest disadvantage of the present system, aside from its undue brevity, is the lack of any overlap. The opportunity for interns to teach their successors in the old days was a very important feature in our system. Unfortunately, now that is lost. The residents and visiting physicians at present constitute the only connecting link, and at times of change of house staff, the chief of service is always a little fearful that some catastrophe may happen on the wards, but so far none has.

We are now giving thought to the internship of the future. Some fine day we will again be permitted to keep interns longer and have more of them. What should we do then? It is felt that although the old system was very good, opportunity now presents to devise a still better program, utilizing the good features of the old peacetime curriculum and certain ones of the present wartime curriculum. Study is being given to this problem.

Teaching of students has continued on the Medical Services much as in peacetime, except that the teachers, having more continuous work, are probably getting somewhat stale, and we have no doubt the students will be very happy when someone returns with a fresh point of view.

Research has gone on apace, a goodly portion of it being on projects having to do with the military effort under contract with the Government. However, the lamp of pure science is still burning in the shape of fundamental studies of one sort or another. In this regard we were interested in a report from Russia that a distinguished Russian scientist had recently made the remark that the most practical thing is good fundamental research. We uphold this philosophy heartily.

We are yearning for the return of our absent brethren.

J. H. Means, M.D.,
Chief of Medical Services

When our men who have returned from military service call at the office of THE NEWS, they are asked for suggestions as to how the paper may be made more satisfactory. The response has very often been to this effect:—"Of course I enjoy reading *every word* about the men overseas. But, do you know, I've really been downright hungry for more information about M.G.H." And so—to satisfy what may be a quite general yearning (no pun intended) we hope to include in each issue, from now on, a column devoted to some one particular department here at the Hospital. Dr. Means has started us off well with his "Medical Service affairs". More "affairs" will follow.

* * *

A flier, carrying the following notice, was enclosed with copies of the last issue of THE NEWS which were mailed to Massachusetts addresses. It is repeated here in case others may have gifts to donate.

HERRICK HOUSE

Number 27 Commonwealth Avenue, the gift of Mr. Robert F. Herrick, has been renovated and is now occupied by twenty student dietitians. The upper floors serving as bed rooms have been adequately furnished. The rooms on the first floor are to be used as living and reception rooms.

At this time, because of war shortages, it is difficult to purchase furniture suitable for these rooms. We have attempted to purchase at auction and from dealers but have found prices beyond our means.

Consequently, an appeal is made to friends of the hospital who may have extra chairs, couches, tables, rugs, etc. which would be suitable for this house. A grand or square piano is greatly desired.

Miss Floyd, Chief Dietitian, will be glad to explain our needs and to inspect intended gifts.

* * *

Countless requests have been made for copies of the poem which was read as an epilogue to the assembly on Massachusetts General Hospital Volunteer Day, June 22. In response to those requests we are very glad to publish the poem here.

Within your hands you hold the power to heal;
Within your hearts the tenderness to give
The blessed gift of hope, when hope alone
Will keep aglow the flame by which men live.

In countenance you shed the light to cheer;
In speech you lend the courage to endure;
In gentleness the touch to soften pain;
In science, blessed by faith, the power to cure.

Peace be to this house and all who herein dwell,
To those who serve the Master in His cause;
May all our hearts unite in lasting fellowship
On this fair day, as reverently we pause.

FRANCIS WHITING HATCH

WILLIAM BRADLEY BREED

William Bradley Breed died of extensive malignancy at the Phillips House on August 21, 1944. At the end of April 1944, he had an operation with resection of the tumor. He had only had symptoms for a few days before the operation. He made a splendid recovery and was seemingly in the best of health when he resumed practice early in July, but symptoms reappeared in August. He entered the hospital and he died in about a week after the operation that disclosed a completely hopeless condition.

Dr. Breed was born just over fifty years ago in Syracuse, N. Y. He was graduated from Harvard College in 1915 and from the Harvard Medical School in 1919. He was an East Medical Intern, graduating in 1919. He became Assistant Physician to Out-Patients in 1920, Physician to Out-Patients in 1923, Associate Physician in 1927 and Physician in 1936 until his death. At the time of his death, he was a member of the General Executive Committee of the Hospital. He gave service to the Hospital practically continuously for twenty-five years. For a time, he was connected with the House of the Good Samaritan and he had various other hospital connections. He was an Associate in Medicine in the Harvard Medical School and a member of the Harvard Medical School Faculty. Dr. Breed was devoted to the American College of Physicians in which he became a Fellow in 1928. For the past ten years, he was Governor from Massachusetts and more recently as President of the Board of Governors of the American College of Physicians, he became a Regent of the College. He was Secretary-Treasurer of a Joint Committee of the American Medical Association, American College of Physicians and American College of Surgeons on War Time Graduate Medical Meetings. This is a committee of three which has done a very notable service to the Medical Officers of the Army and Navy, particularly those in decentralized units. Dr. Breed was also on important committees of the Massachusetts Medical Society, of the American College of Physicians and of the Massachusetts General Hospital.

Dr. Breed was primarily a clinician. He liked people and people liked him; consequently, he had a very large private and consultation practice in internal medicine. He was particularly interested in "debunking" pompous didactic pronouncements. He was quite mischievous in showing the variability of electrocardiographic tracings. He was delighted to run a parallel series of injections of distilled water and the injections of a highly "tooted" drug for hypertension and to find that the two series did equally well. He also carried out some very important observations on continuous temperature curves.

"Bill Breed", as he was always called, was a beloved character at the M.G.H. There was no "side" to Bill. Bill had an enormous capacity for friendship. He had a wealth of friends. He had friends for every corner of his many activities. He had medical friends, lay friends, musical friends, College of Physicians friends, and so on.

In the last three years, Mrs. Breed has been helping the Hospital as a volunteer and as a visitor. Besides his wife, Dr. Breed leaves three children—two girls and a boy—aged nineteen to twelve.

R. I. L.

STAFF MEMORIAL FUND

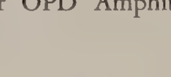
With the passing of Dr. William B. Breed, for many years a member of the General Executive Committee, his associates on this Committee felt they would like to pay tribute to his memory by a donation to the Hospital. Knowing that other members of the staff, friends, or patients of Dr. Breed might wish to do likewise, the General Executive Committee has voted to establish a Staff Memorial Fund to which contributions may be made in honor of the memory of any staff member. The use of this fund will be directed by the General Executive Committee. Contributions should be made payable to the Massachusetts General Hospital.

* * *

Mr. Frank W. Kimball of Dedham has just established the "Isobel Collins Special Fund" for the library of McLean Hospital, the income to be devoted to the purchase of books, music, and other articles appropriate to the building up of a musical alcove for the library.

Dr. James Solomon completed his service as Resident on the Neurological Service August 31. He has an appointment at the Compton Sanitarium, Compton, Cal.

The regular dental meetings were resumed on September 12. They will be held every second Tuesday of each month, in the lower OPD Amphitheatre, at 8 P.M.



At the meeting of the Board of Trustees, held on August 18, it was voted:—

To promote Drs. Arthur M. Jackson, George A. Moore, Frank Mirabello, and Roy W. Layton from the position of Graduate Assistant to that of Assistant in Surgery, in recognition of their services to the Hospital.

The General Executive Committee, on August 23, voted:—

To appoint Dr. Russell C. Henry as Graduate Assistant in Pathology for six months, beginning January 1, 1945;

To appoint Dr. Harriet M. G. Higgin, of the State Division of Child Guardianship, as Graduate Assistant in the Children's Medical Department for the term October 1 to December 31, 1944;

To appoint Dr. Marian W. Perry, of the State Department of Public Health, as Graduate Assistant in Medicine, assigned to the Pulmonary Clinic.

As you may already know, the ninety-eighth anniversary of Ether Day will be observed at the Hospital on October 16. Included on the program will be the showing of the colored moving picture taken on Volunteer Day.

Our September issue of THE NEWS asked all families and friends of staff members and graduates of M.G.H. who are in the armed services to lend pictures or interesting souvenirs of these men and women for our exhibition. If you have not yet sent your articles to Dr. Benjamin Castleman, Massachusetts General Hospital, please do so as soon as you can.

In the Archives department there is a sizable collection of material concerning the first public demonstration of the use of ether, the widespread interest that was aroused, and the heated controversies that ensued. Included in this memorabilia is a letter which, in the interest of diversion from the more familiar side of the subject, is transcribed for you here—entirely unedited. It was written, as you see, a little less than two months after that first much-discussed operation was performed in the Bulfinch Dome. The letter is as follows:—

> Findlay Hancock Co. Ohio Dec. 12th 1846
>
> Gentlemen I have been reading in the publick prints some important opperations by stupyfying the patient by taking drugs as I am one of these unfortuneate subjects by accident I have concluded to write you relative to my case I have hardly means to come so fur to get relief but would if you think I am a fit subject my case is this on the 8 of June last while in the Rocky Mountains 900 miles from Medical aid my mule throwed me and Broke my arm which is now well & dislocated my shoulder by throwing the socket bone out which now lays between my neck & point of shoulder from the point of my shoulder my arm has fell down rendering my arm useless I can not ease it nor have any use of it from my Elbow up I am 35 years of age of ordernary nerves please address me as above whether you could stupyfy me and set my shoulder without pain on recept of this
>
> Respectfully [signature]
>
> Drs Bigelow & Morton

The paper is folded to form the envelope, as was the general custom at that time. The superscription, in itself quite as interesting as the body of the letter, reads:—

> 4 Corners 0 Paid 10
> Dec 12th
> Dr. Bigelow or Morton
> of the Massachusetts Hospital
> Boston
> P M will please forward this to where the Hospital is if not located in Boston

The original letter is now on display in the Archives room, along with other mementos of Ether Day.

Anticipating the query that would surely be put to us, we are very disappointed to have to report that there is no record of Mr. S——'s having journeyed to M.G.H. for that operation under "stupification".

The youngest of the family. By Joseph Garland, M.D. [*CM* 1919 & *EM* 1921], Physician to Children's Medical Department, Massachusetts General Hospital; Consulting Pediatrician, Massachusetts Eye and Ear Infirmary; Instructor in Pediatrics, Harvard Medical School. Revised edition. Pp. 182; 11 illustrations. Cambridge, Massachusetts: Harvard University Press.

"At a time when we are trying to refit the world for future generations we must remember that one future generation is in our hands, and must itself be fitted for life in whatever type of world awaits it. We must try to make it a sturdy generation, conscious of the true values in life, and above all adaptable to the environmental changes it will surely meet." With these words, Dr. Joseph Garland prefaces the revised edition of his manual on infant care.

With the expressed purpose "to make as clear as possible the foundations on which health and normal development are based" Dr. Garland covers the growth and development, care and training, and feeding of infants with such clarity that the scientific and historic background is easily comprehensible to a lay person. Immunization procedures, simple first aid remedies, and contagious disease quarantine periods are discussed, as well as mental hygiene principles.

The content of this slim volume varies from a scientific and abstract discussion of the chemical properties of human milk and cow's milk, to a practical illustration of how to make an infant's sleeping bag. Literary allusions to Greek mythology, and quotations from English and German pediatricians of the pre-Lister era add the unusual quality characteristic of Dr. Garland's writings.

E. G. A.

* * *

The Institute of Pastoral Care, which has assumed the responsibility for the clinical training of theological students and clergy at Massachusetts General Hospital, reports a successful Summer School. A total of thirty-four men were in attendance, representing ten denominations as well as thirteen States and Canada.

In coöperation with the Psychiatric Service, the Institute is now sponsoring a seminar in psychiatry. Lectures will be given by members of the psychiatric staff, and those attending the seminar will serve as part-time orderlies on the psychiatric wards. The course is open to parish clergy as well as to seminarians.

It may be of interest to the physicians, nurses, and other members of the staff of the Hospital to know that most of the work of the Institute has been made possible through an annual grant assigned to the Reverend Rollin J. Fairbanks, Executive Director of the Institute, by the Ella Lyman Cabot Trust, a fund dedicated by Dr. Richard C. Cabot, in memory of his wife, for aid to individuals who give promise or actual proof of important contributions to humanity in any walk of life.

MASSACHUSETTS EYE & EAR INFIRMARY

The American Board of Otolaryngology held an examination in Chicago, October 4-7. Dr. Harris P. Mosher (*ES* 1897) has been President of the Board since its organization. Our staff was also represented by Dr. LeRoy A. Schall (*c. Oto-Lar.*) and Dr. Werner Mueller (*Oto-Lar.* 1933).

The forty-ninth annual convention of the American Academy of Ophthalmology and Otolaryngology was held in Chicago, October 8-12. Dr. Moses H. Lurie (*s. Oto-Lar.*) read a paper on deafness. Drs. Mosher, Meltzer (*Aural* 1919), and Mueller took part in the instruction courses. Dr. Schall presented an exhibit on "Cancer of the larynx" and Dr. Kazanjian one on "Plastic surgery".

Major Waldemir Salem of the Medical Corps of the Brazilian Air Force has spent the last two months observing our methods and techniques at the Infirmary.

Every one was delighted to see Comdr. Edwin B. Dunphy, MC (*Oph.* 1923) back again. He was on leave from his duties which have kept him in England and thereabouts for the past year and a half. We understand he is to be assigned to the U.S. Naval Hospital at Chelsea, Mass., and we are hoping he will soon be back with us at the Infirmary. Commander Dunphy is Chief of the Department of Ophthalmology, on leave.

Lt. Comdr. Frederick Stephens, MC (*Oph.* 1939) came in to see us the other day. He has been in the South Pacific with the Marines for two years, and is now attached to the U. S. Naval Air Station at Quonset Point, Rhode Island.

It is rather interesting to note that men from Syria, Brazil, and Ecuador have applied for residencies at the Infirmary. Dr. John J. Ayash, from Lebanon, Syria, is now serving as Resident on the Oto-Laryngological Service. Dr. Ayash, before coming to this country, held the rank of Captain in the British Army Medical Corps and served in the African Campaign.

Dr. João C. Guimarães, from Rio de Janeiro, Brazil, has received an appointment as Resident on the Oto-Laryngological Service and is to report for duty November 15.

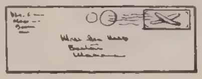
Dr. Enrique (Moreira) Ortega, from Guayaquil, Ecuador, sponsored by the Pan-American Congress of Ophthalmology—W. H. Kellogg Foundation, is an Accessory Resident in Ophthalmology.

It may interest the former House Officers at the Infirmary to know that the length of the resident service is now back to two years. In September 1942, at the request of the Procurement and Assignment Service and the Army and Navy, the residency was shortened to one year. This did not work out very well, and it was decided to return to the two-year service and to appoint only women or men who are ineligible for service in the armed forces.

Comdr. Virgil G. Casten, MC (*Oph.* 1931) is now stationed at the U. S. Naval Hospital, Pearl Harbor, Honolulu, Hawaii.

Miss Johnson, Miss Sleeper (as chairman), and Mrs. Andrews have been appointed on the Advisory Committee to the Division of Nursing Education at Boston University School of Education.

A new class of eighty-three pre-clinical students entered the school on September 6, 1944. This group, combined with the July class, made one hundred thirty-seven students in the blue pre-clinical uniform on that date.



All News material that goes to press—and this includes pictures—is first cleared for publication by the local Public Relations Department of the Army or Navy. In addition, everything of a personal nature which, in the opinion of the editor, was not intended for public consumption is deleted. The office of The News is in close touch with the constantly changing censors' lists of place names that *may* be mentioned and those which may *not.* Also, you will notice that when the name or number of an overseas unit is given, the location is omitted, or *vice versa.* Often information is withheld which is not only allowable but is quite generally known. We'd rather lean toward the safe side than be sorry.

The following new addresses have been received:—

Lt. Comdr. Harold E. Dyer, DC (*a. dn. s.*), Dental Dispensary, D. North, U. S. Naval Training Station, Sampson, N. Y.
Capt. James M. Faulkner, MC, USNR (*EM* 1925); U. S. Naval Hospital, Newport, R. I.
Major Edward A. Gall, MC (*r.p.P* 1937), Valley Forge General Hospital, Phoenixville, Penn.
Lt. Walter S. Kerr, Jr., MC, AUS (*WS* 1943), 658 Clearing Co., Camp Rucker, Ala.
Lt. Comdr. Hugh Montgomery, MC (*EM* 1932), U. S. Naval Hospital, Corona, Cal.
Lt. Comdr. Richard D. Nies, MC (*An.* 1941), U. S. Naval Air Station, Daytona Beach, Fla.
Major William A. Perkins, MC, (*ES* 1917), Station Hospital, Fort Missoula, Mont.

We have received word from Lt. Lester Meister, MC, AAF (*CM* 1937) that he is no longer in military service, having been retired for medical reasons. His present address is Southern Permanente Hospital, Fontana, Cal.

Col. Walter Bauer, MC (*r.p. WM* 1927) is still at 8th Service Command Headquarters, Dallas, Texas, when he is "at home"—which doesn't appear to be very often, according to this letter to Dr. Faxon, written in July:—

Yours truly continues to function in much the same manner. I am, as you know, peripatetic professor, visiting physician and consultant, or, as the S.G.O. puts it, Medical Consultant to the 8th Service Command. I still devote practically my entire time to visiting army and air force hospitals scattered throughout the five states in this service command. The large number of hospitals and the distances one has to travel prevent me from visiting each installation as often as I should like. It would be highly desirable for consultants to visit each institution at least every three months. When you have approximately 150 hospitals located in the states of Texas, Louisiana, New Mexico, Arkansas, and Oklahoma, this becomes extremely difficult—if not impossible—to do in a three-month period because of the scarcity of railroads. However, by resorting to busses, army cars, army planes, and by guess and by God, one gets there.

When visiting a hospital I devote almost my entire time making ward rounds. These begin at 8:00 A.M. and continue throughout the day—and into the evening. However, we do take time out to eat. It is my job to demonstrate by example what constitutes the practice of good medicine. During the past year I have been greatly aided in this regard by having nationally known men visit with me two or three weeks out of each month.

The educational program financed by the Rockefeller Foundation has proved most successful. To date we have been able to institute the following: weekly clinicopathological conferences made possible by the generosity of the Massachusetts General Hospital; the supplying of additional books for medical libraries; the reviewing of the autopsy protocol of each soldier dying in the 8th Service Command and the recording of pertinent notes on same before returning them to the hospital; and invitations to nationally known internists, surgeons, orthopedists, and neuropsychiatrists to visit our command each month with the respective consultants. The clinicopathological conferences have been most enthusiastically received. The medical officers like them because they always come away with a final answer to the case under discussion. Furthermore, they keep us in touch with certain types of clinical problems which are very infrequently —if ever—encountered in army installations. Needless to say, I have profited considerably from this experience. It has made possible contacts with thousands of doctors from various sections of the country, and this gives one an excellent opportunity to judge the many shortcomings of American medical education. In addition, it furnishes me with many very unusual clinical experiences. I presume I have profited most from my work with infectious diseases. I do so hope that after the war we can put into effect the measures which will correct, at least in part, some of the past errors of American medical education.

I have made it a practice to work days and travel nights. This, as you might suspect, frequently results in many long days. Upon returning from a three- or four-week trip one is reasonably tired. When on the road, I work seven days a week. When at headquarters, I do the same—except that occasionally we do take Sunday afternoon off. My time at headquarters is kept at a minimum because I am of much more use to the service command when in the field. At headquarters, most of my time is devoted to writing reports. Life would be much easier if I could dispense with them, but the Army says "No".

I am glad to report that the Rockefeller Foundation continued our grant for the year July 1, 1944 to July 1, 1945.

Alan Gregg [*WM* 1917] visited our command for a few weeks, a month or so ago, and seemed very enthusiastic concerning the post-graduate medical educational possibilities that exist in a service command like this. Needless to say, we profited greatly from various suggestions made by him.

When we had just about come to the conclusion we never would be able to catch up with Lt. Col. W. Wallace McKay, ED, RCAMC (*CM* 1921), a letter came from him, dated September 12. He says:—

My new address is R. R. #1 Aylmer Road, Hull, Quebec. For your records I may state that I organized a casualty clearing station in 1939, and returned from overseas September 1942. In April 1943 I was transferred to the Department of Pensions and National Health, Health Division.

A letter from Lt. Col. James S. Stillman, MC, AAF (*a. M*) announces a change of address and rank. Colonel Stillman is now stationed at Pasadena ASF Regional Hospital, Pasadena 2, Cal., and his promotion is as of March 2. His letter goes on to say:—

After serving for three years as Regimental Surgeon for an anti-aircraft regiment, I was assigned to this hospital as Chief of the Medical Service, and have been here slightly over a year. The hospital is beautifully situated in what was formerly the Vista del Arroyo Hotel, is well equipped and staffed, and the work is very interesting.

A week or so ago I met Lt. Comdr. Montgomery [*EM* 1932], but otherwise I have seen very few people from Boston in the past few years. This makes THE NEWS very valuable to me in keeping up with my friends and associates.

Lt. Col. Harold H. Hamilton, MC (*r.s. PH* 1933) has been transferred from "The Siege of Holyoke", as he recently styled his assignment at Westover Field, Mass. On August 24 he wrote:—

This is to notify you that my address has at long last been changed to the 113th Evacuation Hospital, Camp Gordon, Ga.—a more or less nomadic tribe of men and tents, just now in bivouac "Somewhere in Gnat-Flats, Georgia".

My job with this outfit is, on paper, the same as I had at Westover for over two years —running the Surgical Service (or *vice versa*). Actually, it is a far cry from anything I've ever seen before in this world, and stating that our present work is exciting and stimulating would be gross understatement.

Our present C.O., Colonel Blank, is an old campaigner out of New Guinea, and he makes many flattering remarks about the work of George Marks [*ES* 1931] and "Gus" Thorndike [*WS* 1923] down in that section.

I would be grateful to receive an "S.O.P." from some veteran of the surgical side of an evacuation hospital, either through the columns of THE NEWS or by direct communication. Such individuals do not seem to be very prolific in their literary efforts so far in this war. I believe I can guess some of the reasons why. Probably these fellows are saving it all up for a two-volume post-war treatise on the subject—the first one and three-quarters being devoted to the grass-chigger, the gnat, and the Georgia climate in August; and the final chapter on the gentle pastime of jeep-riding in the rear of a motor convoy under black-out conditions on red-clay roads.

Beloved Editor, please rally our voters to the polls this fall, and have an amendment inserted on the ballot to give Georgia back to the Huguenots and the Seminoles.

Capt. George F. Emerson, MC, AAF (*ES* 1939) called at THE NEWS office one day in August. He was on his way back to San Antonio, Texas.

Lt. Comdr. Mark M. Exley, MC (*r.s. U* 1938) is with the Public Health Department, U. S. Marine Hospital, Hampton Blvd., Norfolk, Va.

Lt. Cornelius J. Shea, MC, USNR (*ES* 1943) wrote from a west coast Navy Yard in August:—

My June copy of THE NEWS had traveled to three or four major cities before I received it. I am now waiting to go to the South Pacific.

Frederick G. Munn, SF 3/c, one of our past employees, now a CB, paid us a very pleasant call at the office of THE NEWS one day in August. He has spent nine months in Newfoundland, returned last January, and is now with a Naval Construction Battalion, Camp Endicott, Davisville, R. I. (In case you might like that "SF" de-coded—as we did—it means Ship Fitter).

Donald Giberson, a former plaster man on the orthopedic wards, appeared the other day at the office of THE NEWS to report his transfer to the paratroopers. He has finished a four-weeks' basic training course at Fort Benning, Ga., during which he made four day-jumps and one night-drop. He has returned to Benning for his advanced training which he hopes to finish within four weeks. After that he expects overseas duty.

Many will remember Patricia Gilbert, ARC, as an efficient clerk at the information desk at the front door of the White Building. This letter from her was written August 23.

Here I am in Iceland! My idea of Iceland was a place bleak with snow and ice and Eskimos. That is not true. We have had a beautiful summer, with warm weather and bright flowers, but no trees.

My title is Staff Assistant, and my work is in a Red Cross Club in a city—perhaps you might call it a leave area. The men come into town when given passes, and the Red Cross is the only place where they can go. The Icelanders have not accepted the boys even now —after two years—but the feeling is somewhat warmer.

My best wishes to all my friends at the General.

Lt. Col. Donald T. Chamberlin, MC (*P* 1931 & *NS* 1931) was Chief of the Medical Service in a 750-bed station hospital in England since last November. He received his promotion in March. On August 12 he wrote:—

Tuesday I leave this place to take up my new duties as Chief of the Medical Service of a general hospital which has just come over.

Back in June Miss Betty Dumaine wrote a letter to her father which we had hoped to publish before this. Miss Dumaine is Assistant Club Director of the American Red Cross. Her letter says, in part:—

As I write, this paper is stuck up by my hand. Am dripping wet! I don't know what the temperature is today, but it has been 129°.

Have to go on a long trip today to straighten out a colored troops club. People running it not doing a good enough job. It's near the ocean, so I'll be cooler for a few days, at least. Hope I can get a swim.

Lots going on and we are busy. So many girls want and need leave, yet all installations must carry on and we have no substitutes in this heat.

We go to the office now at 6:30 A.M., and sleep out-of-doors nights. There is a breeze then and it's slightly cooler. Peacocks and parrots wake me up at 6 (so I'm never late) and eat the bread and toast I throw at them while I'm having my tea. They are getting tame, but "foolish". The big boy doesn't come down off the roof and balcony. I guess he knows how handsome he is posed up there.

So many lovely letters from home! I don't know when I'll ever be able to answer them all.

The following letter somehow seems to say quite as much between the lines as in the wording itself. Its date line is Guam, August 15, and it came from Lt. Leonard D. Rosenman, MC, AUS (*ES* 1943).

The July News was delivered to me on the lines. It was a helpful medicine. Now that the battle is over, I must write my thanks for it and for all the past issues.

My job is Battalion Surgeon, and I have been busy. The present quiet is almost unnerving. The noise of our artillery and small arms is really quite as cheering to us as it is fearful to the Nips.

I have been well, and have no scars from this battle, other than those of fatigue and from a little bacillary dysentery.

I know I can expect The News to keep coming—wherever I may be.

The first direct report to reach us from Lt. Comdr. H. Bristol Nelson, MC(V)S (*a. obst.*) came in a recent letter to Dr. Henry R. Viets. Commander Nelson is Reg. Surgeon, attached to a division of Marines in the Southwest Pacific.

Although I can't state my location now, I am at liberty to say that the recent experiences I had on Saipan and Tinian were more than thrilling. Irad Hardy [*ES* 1939] is one of my Battalion Surgeons and, as might be expected, has been excellent. We often talk of the Massachusetts General and, naturally, would love once again to set foot within her doors; but how long we will be out here is hard to say. However, this rugged life has done us no harm, and the experience has been excellent.

Capt. James D. Schuler, MC, AUS (*CM* 1939) is now with an auxiliary surgical group. An all too brief note from him, written August 20, says:—

Dear Alumni:

Since joining this auxiliary, August 2, 1944, I have had an interesting and active time near the front lines in France. This is a real treat after the previous dull time spent in training. The results of treating the very seriously wounded are gratifying.

I recently had an interesting chat with Capt. Eugene Record [*NS* 1937 & *Or.* 1941] who is a member of this group.

Over a year since we heard from Major Leo B. Burgin, MC (*CM* 1932) until a recent letter, written August 30. Major Burgin is still with a Medical Battalion, now in France.

If I have not written earlier it is, be assured, not a matter of "out of sight out of mind", but rather one of modesty. Nothing extraordinary has happened to me. I am now in my fourth year with the same unit—some sort of a record, in view of the frequent transfers experienced by some of my colleagues. I "bump" into old MGH-ers much too infrequently, but hope to make up for all this when the war is over.

I was pleasantly awakened recently from my "medical lethargy" by being asked to see a French youngster who was ill with a typical textbook case of diphtheria. I was amazed to think one could remember a textbook after devoting the last few years to Army field manuals on "How to lure flies to their death", "K rations—a substitute for eating", etc.

I'll leave descriptions of the country to my literary friends. I'd welcome a sight of Fruit Street and the Charles in preference to the Champ Elysées and the Seine!!

My best to Dr. Faxon, Dr. Butler, and all my friends.

P.S. I have a complete file of The News.

Major Ward I. Gregg, MC (*WS* 1935) wrote in August from an evacuation hospital overseas:—

The News is so much appreciated by all of us who have insufficient time to keep in touch with the rest of the crowd, we do not want to miss a single issue.

We are at present in cool rolling country—most pleasant after the cold and wet of Normandy and the dry heat of deep Brittany. Our adventures have been varied and interesting, but we spear-headed only one attack—or so it seemed. Professionally we had an opportunity to compare our present methods with those of the last war, as we evacuated and cared for a large German prisoner-of-war hospital. Every wound was inspected and all treatment was a makeshift Carrel-Dakin method. That, combined with lack of supply, made our problem interesting; and it was truly amazing to see what penicillin, sulfadiazine, and lots of good food and nursing did for these Americans, English and Canadians who had been there for some time.

My best to all the crowd.

Dr. Arthur W. Allen has received a letter from Capt. Theodore P. Robie, MC, AUS (*ES* 1943) which carries the heading "Somewhere in France, August 12."

Our surgery in the front line consists largely of first aid. The most important aspect of the work is not ours, but that of the litter-bearers who bring the boys in from the ditches and fields. Upon their courage and speed have depended many lives. All we can do is to give plasma, and apply splints and snug bandages. Only one bleeder have we tied. Chest wounds of the sucking type have been few and have responded well to simple sealing. We have lost only two patients in our station—one a brain injury who had bone spicules all through his head and who wouldn't continue breathing despite a tank of captive German oxygen, and the other an old abdominal injury in a German prisoner whose bowels lay all over the stretcher. Thanks to plasma, we have lost none on the trip through collecting to clearing, either. One's professional mind lags a bit doing such procedures, as you might expect.

After visiting collecting and clearing companies of the division I don't envy them professionally, either. It is purely a problem of transportation after we get through with casualties until they reach the evacuation hospital and an X-ray tube. And, luckily, our road-net and transportation service has been good.

Our hardest tasks are among the neglected sick and wounded French peasants who hide away as the front passes over them, and then dribble in to the Red Cross flag. One little girl of five—with gas gangrene resulting from a small shrapnel puncture of the buttock—was saved with diazine, quick transportation, and excision of a muscle or two. Gall bladder disease and its complications seems to be the most frequent civilian female complaint, along with amenorrhea. Fifteen children in one house had impetigo superposed on scabies. "Fever of unknown origin" has been conspicuous by its absence, and typhus, malaria, and the various other continental exotic fevers have not shown up yet. I hope I can drop that "yet".

MGH men are hard to find—perhaps because we stick pretty close to our stations, without the chance to visit. Harvard graduates are more abundant, and they all devour the MGH News as a light from home.

We have just received another letter from Cpl. Malcolm A. Conner, our past efficient Hospital newsboy. He is still with the Hq. Detachment of a medical group, and is helping make good newspaper copy himself, these days. This last letter was written August 10.

I arrived in France nine days after the invasion. Needless to say, the trip across the channel was an experience long to be remembered—especially when you were under fire for the first time. I spent my first night in Normandy, in a ditch beside a hedgerow; and the terrific barrage from artillery and anti-aircraft guns, along with the constant bellowing of cattle in the nearby fields, made sleep impossible. By the time morning arrived, even an issue of canned rations looked good. From then on it was a fight to keep dry from the almost constant rain, and there was always a foxhole to be dug whenever you moved into a new area. You never hesitated about digging it deep and tunneling out one side to roll under, in order to avoid the falling pieces of flak from anti-aircraft guns and an occasional shell from a German 88 which might happen to come your way.

I was able to be in Cherbourg less than twenty-four hours after it was captured. Snipers were still active and mines were going off with pretty much regularity. The railroad station was a shambles—rails, switch-points, signal towers, and cars torn to pieces. I passed through a large square which was covered with wrecked German equipment, and in the middle of the whole mess lay a dead German soldier. He was all through promoting any world plans for the "master race".

One of the greatest experiences I have had was seeing the mass bombing of the German lines. For several hours the sky was black with planes. As they came in to bomb their objective you could see black bursts of anti-aircraft fire strike up at them. The ground under my feet shook from the concussion, and after it was over it looked as if a storm had suddenly come up in the sky.

Have seen Valognes, Montebourg, Ste. Mère Église, Carentan, Isigny, Tessy sur Vire, and St. Lo. Of all these towns I believe St. Lo comes the nearest to symbolizing all that modern warfare means in death and destruction. There is one part of the city which will always stand out in my memory as a classic picture of the war. Descending a rather steep hill, you can look down over the side—about a hundred feet—into a huge pool of dirty black water, filled with the wreckage of smashed houses and burned out motor vehicles. Here and there are patches of thick green slime floating on top. It's hard to tell how many bodies may be lying at the bottom, and I suppose no one will know until the water is drained off.

In spite of these sights, I have seen some very beautiful French countryside; and for the past few weeks there has even been a let-up in the rain!

Lieutenant Colonel Richard Warren (*WS* 1936)—and friends

In connection with the picture shown in this issue, there is a story—a thrilling one—that should be told about that rank of Lieutenant Colonel.

Dr. John L. Newell telephoned The News office one day in late August to say he had received a letter from Lt. Col. John E. Dunphy, a Peter Bent Brigham man who is with the 5th General Hospital. In his letter Colonel Dunphy stated that Richard Warren is Chief of the Surgical Service in a hospital in England. The Surgeon General went there to make rounds one day, and was so impressed with Major (as he was then) Warren's work that he gave him a "battlefield promotion" to the rank of Lieutenant Colonel.

From Lt. Mary E. Wilson, MC (*MGH* 1935), to a member of the Orthopedic Service, to us! A roundabout way to receive word of the promotion of Major Otto E. Aufranc, MC (*Or.* 1938). Lieutenant Wilson's letter was written August 20.

> This is to tell you that Otto E. Aufranc is a Major. I know, at the rate he writes letters, he will never get around to tell any one himself, and I thought you would all like to know it.
>
> We're spending a lazy Sunday afternoon in the Officers' Club, with half the people asleep in their chairs, Sunday papers (of June vintage) spread all over the floor, and all the awake people drinking beer. It must sound like quite a war, but it isn't often like this, so we're making the most of it.
>
> We went on a delightful picnic with Major Gundersen yesterday. He is the picnickingest person I've ever known. He has a barracks bag full of picnic equipment—sugar, coffee, salt and pepper, dishes, etc. And he also has a "different" kind of transportation to get us to the lake and back. So we swam and drank beer and ate grilled hot dogs and tomatoes and tuna fish and fried onions and canned lobster and toast and cantaloupes and blackberries that we picked at the expense of our hands which were a mass of scratches. We fished—without luck, and listened to a portable radio. Good fun.

Lt. Col. George S. Reynolds, MC (*Thd. S* 1924) is with the 128th General Hospital, overseas.

Dr. George A. Moore received a letter from Major John C. Angley, MC, AAF (*a. M*), written June 17. Dr. Moore has given us permission to publish the sections that will be of interest to Major Angley's friends.

> My job is really one of a traveling minstrel, as I continually make the rounds of the entire area, wherever there are air fields. I am Malariologist for the Air Forces in the entire Mediterranean theatre. East Italy was mine alone, in addition to the others, until additional personnel arrived. Now I have a Malariologist with each of the separate components, so the work has eased up greatly. It is my job to make the over-all plans and coördinate them, as well as to keep the supplies going. The first thing was education, so the first two months were spent almost entirely in conducting schools [teaching British medical officers]. Have had grand coöperation and think we're going to have a record we won't be ashamed of.
>
> The continuous traveling becomes quite tiring. Air travel is fine; but the trouble with it is, that you don't have ground transportation when you get to the destination.
>
> Met Freddie Kranes, Charles Short, Claude Welch, and many others last week. John Stewart holds the job of Surgical Consultant for the Air Forces, so we share the same offices, scattered throughout the theatre, and the same apartment in one place. He is a fine fellow and does a grand job.
>
> The front has moved so rapidly we are way behind now. It has required many changes of location in the fighter side of the outfit, and I am now about to leave for a tour of the new area, which will be a change and should be interesting.

Dr. Moore deciphered those letters for us (AAFSC/MTO) which appeared last month in the short article about Major Angley. The solution is always so obvious when you're told what the garbled alphabet stands for, you're embarrassed you couldn't have guessed. But we *did* ask, and the answer is: Army Air Force Service Command, Mediterranean Theatre of Operations—just in case there's some one else who didn't know.

Major O. Sherwin Staples, MC (*Or.* 1938) reports a recent transfer to the 95th Evacuation Hospital where Lt. Col. Grantley W. Taylor, MC (*WS* 1924) is Chief of the Surgical Service.

Lt. William R. Eyler, MC, AUS (*CM* 1943) is with the 115th General Hospital.

A new overseas address has arrived for Capt. John B. Millet, MC, AUS (*WS* 1943). He is now attached to the 129th General Hospital.

In our last issue Major T. Stewart Hamilton, MC (*a. dir.*) carried us through the ordeal of moving a large hospital from Africa to its present location in Italy. He concluded his account with: "What we found there is another story." The next instalment came to Major Hamilton's family in a letter dated July 17.

> We are still going to beat the band. The professional services haven't cried "Uncle" yet, but they are looking a bit haggard. They are working like Trojans and doing a fine job.
>
> We have our building well cleaned out, and it now looks like a hospital. More and more of our plumbing has been put into shape, but it is still taxed.
>
> We have been too busy to make our tents very comfortable, but we are there so little it doesn't matter. Some of the folks have put in brick floors, but only a few. Ants are a problem, but our insect powder works pretty well. There's a little fellow over here which bites like anything.
>
> We are located out of town, which has both good and bad points. The distance from an adequate source of supply makes things difficult. We have no officers' Post Exchange, as such, but draw rations and distribute them at the hospital. It makes it a little tough for us who need to buy our own things, but we get along.
>
> I had occasion, the other day, to go to a Canadian general hospital, and met a really delightful group of officers. They are from all over, but several had been to Hopkins and one knew [Capt.] Gene Record very well at McGill. I've also been to a local French hospital and met a most pleasant group.

The News begins its third year with this October issue. We need not dwell upon its success. That is self-evident. Our subscription list has increased by over three hundred during the past year.

One of the two predecessors of The News was discontinued at the beginning of the War of 1917-1918 from motives of economy—a "penny-wise and pound-foolish" policy. What a pleasure it would have been to the members of M.G.H. in the service then! What a valuable source of information to the hospital historian!

As this war with Germany and Japan approaches its successful end, and our personnel begins to return, we shall hope that lips which have been sealed will open and give us the individual stories, many of which will be of great interest. They should be preserved for posterity. The News stands ready to receive and perpetuate them.

F. A. W.

THE NEWS

No. 26 Boston, Mass. November 1944

DERMATOLOGIC SERVICE AFFAIRS

The Dermatology Service has continued to be a busy service. With the reduced staff it was fortunate that the total number of visits to the O.P.D. Clinic decreased in 1942 and 1943. There has been a definite increase in the total number of visits in the first six months of 1944 so that the clinic will probably have a total of 18,000 visits for the year. Admissions to Ward G have remained about the same and there has usually been a waiting list most of the time. Part of the decrease for the past two years can be explained by the fact that more patients are at work and can afford to consult private physicians, and that they cannot, perhaps, obtain time off to make visits during the daytime hours. Some of the decrease can also be explained by the need for limiting the attendance at the clinic because of the somewhat decreased staff. With the appointment system and with the coöperation of the Admitting Office, it has seemed advisable to curtail both the new admissions and the total number of patients to be seen at the clinic, although it has limited the material available for teaching.

We have lost Dr. Tolman to the Navy and Dr. Freedberg to the Army; and Dr. Hill, because of Dr. Dieuaide's absence in military service, has had to give up the Dermatologic Service in the Out-Patient and supervise the South Medical Clinic. There is now only one resident and one house officer on the service. In the Out-Patient Clinic the one resident serves for five days a week, and the house officer is present only three days during the week because of the amount of work to be done for the ward patients. The resident is permitted only a nine months' service, and the internship period is only a six weeks' term in the Out-Patient and on the Ward. This is, of course, not satisfactory from the point of view of these men, or from the service standpoint, but it is the best that can be done at present.

Teaching has continued throughout the year for third-year students, with a vacation of one month at the end of a nine months' term. This means, of course, that each member of the staff has more teaching than formerly, and during the year he has been having only one month off from teaching and hospital work. The fourth-year teaching has practically disappeared because of the fact that there are very few opportunities for electives to be chosen by the fourth-year students. Very few graduates are coming for study at the present time, but it is expected that as demobilization begins there will be a demand for further teaching in this field. It is expected that the department will be able to return to a two-resident system and possibly a three-resident system with the former number of house officers when the emergency is over.

A mimeographed monthly bulletin has been distributed, announcing the department staff meetings, together with a report of the ~~previous meeting~~ and various items of interest about the staff and the department.

Staff meetings have been held at monthly intervals from October to June each year. Interesting cases which have appeared during the previous month have been demonstrated, and frequently there has been a talk on some subject of particular interest to this group.

Ward rounds have been conducted at 8:30 Wednesday mornings and interesting cases on the Ward are reviewed, as well as the records of patients discharged during the week.

The staff conferences, except for dermatopathology, which had been developed particularly as an aid to the second-year residents and graduate assistants, have had to be called off for the duration, but it is planned to resume them at the earliest practical moment.

Every one has been so busy with hospital work, teaching, and practice that research projects have suffered; but it is of interest that plans are being made for an enlargement of the work of Dr. I. H. Blank, research fellow in the department.

C. Guy Lane, M.D.,
Chief of Service

* * *

The metric system for all measurements, except temperature, is now being used throughout the Hospital. Nurses are still "forever giving hypos", but now they use 11.0 mgs of a drug instead of 1/6.

* * *

The Medical Staff Meetings were resumed on Monday, October 2, at 5 P.M., when Dr. P. J. Kloppers of Johannesburg, South Africa, gave a talk on "Bronchiectasis". Dr. Kloppers has been visiting the Hospital since last May, and he had many very interesting things to say on the title given. "Bronchiectasis" was the subject of his thesis for his medical degree in South Africa, and he has given the subject a great deal of study. All who attended the meeting felt well repaid.

Tea was served in the Medical Staff Room before the meeting.

Our United War Fund drive for 1945 is on at the Hospital!

We couldn't even wait for the official opening date and started off on our campaign October 23. On the afternoon of the 24th a mass meeting of the personnel of both the Massachusetts General and the Eye and Ear Infirmary was held in the Moseley Rotunda. Speakers stressed in sincere and convincing manner the necessity for digging deeper into our wallets this year and the responsibility that rests upon each one of us who has good health and a job to do just that. The United War Fund film "Red feather magic" and the moving picture of Volunteer Day were shown.

The Hospital is fairly bristling with red feathers and posters of a most original character. But it is our 1945 "thermometer" that warrants detailed description. We are all familiar with the campaign thermometers that have been used in years past. Our unique thermometer this year is such as never was! Seen through its graduated tube is an illuminated replica of a vertical section of the White Building, from ground to roof. Up, floor by floor, till we reach the top, will our dollars drive the simulated fluid.

Last year the quota for Massachusetts General was $11,650; we raised $12,820. The 1944 quota for the Eye and Ear Infirmary was $1,480; $1,801 was raised. This year's quota for the General has been increased to $12,000, and for the Infirmary to $1,500.

If each new member of the Hospital family gives just as much as he can afford, and all of us who contributed last year should make it possible to give a dollar more this time—or even fifty cents—we'd find our thermometer pushing up through the White Building roof and looking round for a flag-pole up which to climb higher.

* * *

One of the American Red Cross committees is that which charts its medical and health program. Included in this committee's membership are the following:—Dr. Alan Gregg (*WM* 1917), Director of Division of Medical Sciences, Rockefeller Foundation, New York, N. Y.; Dr. Roger I. Lee (*EM* 1907), Boston, Mass., President of the American Medical Association; and Dr. Henry R. Viets (n.), Boston, Mass., Secretary of the committee, Lecturer on Neurology, Harvard University Medical School.

THEODORE PARKS ROBIE

With real tragedy comes word of the loss of Captain "Ted" Robie, in France, on September nineteenth. He graduated from the Hospital only a year ago, had been advanced from the rank of First Lieutenancy, and at the time of his death was serving in an advance evacuation hospital in Northern France. Something of his typical buoyancy, enthusiasm, and optimism for the future can be found in a recent letter from him published in this bulletin last month.

Theodore Parks Robie was born at Copper Cliff, Ontario, Canada, on August 15, 1917. Most of his youth was spent in Riverdale, New York. He was graduated from Harvard College *cum laude* in 1938, and four years later from Harvard Medical School. In August 1943 he completed a one-year internship on the Surgical Service and immediately thereafter entered active military duty as a First Lieutenant in the Army Medical Corps. He had spent only a few months overseas before his untimely death.

His life was marked by industry and hard work. Summers were spent tutoring and teaching. He excelled at sail-boating and instructed in sailing, both on Long Island Sound and at Marthas Vineyard. He made his first appearance at the M.G.H. as an undergraduate student House Officer in the Baker Memorial. Later he became interested in the Norfolk Community House Centre and was one of the more energetic members of that group. He and his wife, Mrs. Natalie Attwill Robie, were living there at the time of his departure overseas.

All who knew him will agree that he was an extrovert of the first order. In Medicine he was tenacious, resourceful, and critical. This last characteristic was sometimes carried so far as to irk, but there was always a ready smile and an evident eagerness to learn. He was conspicuous as an Intern, and it was obvious from the start that he would make an excellent physician in the broadest sense of the word.

He had a short life—but, all in all, a very pleasantly full one.

A.W.A. and G.A.D.

⁂

Miss Gertrude Dowling, head nurse on White 5AC, is to be granted a scholarship from the Joint Orthopedic Advisory Service. She is now on leave of absence, attending Teachers College at Columbia University, where she is taking the advanced course in Orthopedic Nursing.

⁂

Major George A. Marks, MC (*ES* 1931) has returned after twenty-eight months in the Southwest Pacific. He has been Surgical Consultant for advance bases in New Guinea, under Col. Barkley Parsons, Chief Surgical Consultant for the Southwest Pacific.

OFFICIAL NOTICES

Owing to the shortage of graduate nurses, the departure of graduate students to the Army, Navy, and to home hospitals, and the necessity of granting vacations to students, it became apparent there would be a period of approximately two months' duration during which the number of nurses available for general duty would be so low that it would be necessary to reduce the number of beds in the Hospital. Therefore, on October 1, 1944 White-9, the male West Surgical floor, was closed and White-6 and the male East Surgical floor was divided between the two Services. On the same date Baker-10 was also closed.

These two floors will be reopened not later than December 1, 1944.

Beginning September 25, 1944 Hinton and Wassermann tests from the General Hospital, Baker Memorial, Phillips House, Eye and Ear Infirmary and the Staff, Nerve and South Medical Clinics will be performed by the City of Boston Health Department. The Hinton tests for the Out-Patient Department except for the above mentioned clinics will continue to go to the State Laboratory.

The following notice applies to blood specimens to be sent to the City Health Department:

Tubes are to be deposited, as is now being done, in the refrigerator on the third floor of the Pathology Laboratory. Special test tubes to which have already been attached the white City Laboratory forms are to be used. In order to help in the separation of the serum, test tubes containing the freshly drawn blood should be slanted for at least 15 minutes before being placed in the vertical position.

Results of the tests on individual cards will be sent directly from the City Health Department to the Record Room and will then be distributed to the various wards and floors. A special rubber stamp to transfer the report to the record will be provided.

In order that the report reach the patient's record without delay, it is important that *name, unit number, division of hospital,* and *ward* be filled in clearly on the form.

N. W. Faxon, M.D.,
Director

Dr. Gilbert L. Adamson (*r.p. N* 1930) is now Consultant Neuropsychiatrist to the R.C.A.F. for the U.K., with headquarters in Ottawa, Ontario. His rank is that of Wing Commander. Late in July he went overseas, where his duties include inspection of all hospitals of all services—British, American, and Canadian. A letter written in September said he was off to France, after which he expected to return to Canada.

This information came to us in a recent letter from Mrs. Adamson.

At their meetings on September 15 and 29, the Board of Trustees voted to appoint:

Dr. Elizabeth Conrad as Assistant Resident Physician on the Children's Medical Service, to begin October 5, 1944;
Dr. George C. Cotzias as Assistant Resident in Medicine beginning July 1, 1945;
Dr. Toufic Kalil as Resident in the Radiological Department from October 1, 1944 through June 30, 1945;
Dr. Janet W. McArthur as Assistant in Medicine;
Martin Wenig, D.M.D., as Intern on the Dental Service beginning on or about October 23, 1944.

The Trustees voted to grant leaves of absence to:

Dr. Austin M. Brues, effective November 1, 1944, because of important defense work, it being understood he may resume his present position on the Staff upon completion of this assignment;
Dr. Fathollah K. Mostofi, effective October 1, 1944, because of military service.

The Trustees also voted:

That the names of Drs. Burnet M. Davis and Robert S. Grier, who are now on duty with the U.S. Public Health Service, be included in the Honor Roll;
That Dr. Francis F. Foldes be promoted to the position of Assistant Anesthetist, effective October 1, 1944.

The General Executive Committee, at their meetings on September 14 and October 4, voted to appoint:

Drs. Rodolfo E. Herrera and Richard C. Webster, Jr. as Clinical Fellows in Surgery, effective October 1, 1944;
Dr. Bernard W. Robinson as Research Fellow in Surgery from October 1 to December 15, 1944;
Dr. Tetsuo Sugiyama as Graduate Assistant in Surgery, assigned to the Urological Out-Patient Clinic, pending the approval of Procurement and Assignment Service that we be granted an additional Assistant Resident on the Urological Service.

⁂

Dr. Austin M. Brues (*EM* 1932), who was granted leave of absence by the Board of Trustees at their September 15 meeting, notifies us that after October 31 his address will be P.O. Box 5207, Chicago 80, Illinois.

⁂

Every one should read this letter. It came from Caroline Perry, 39 South Russell St., Boston, addressed to the Superintendent of Nurses, Massachusetts General Hospital. Comments seem out of order.

Oct. 1, 1944

Dear nurse,

I am only ten but I am writing you about being a nurse. A nurse's aid has some training. But it doesn't take some training to take some linen to a nurse or tell a story to a patient in the Children's ward or even to give a temperature glass to a nurse. It seems to me, though I'm only ten, I could surely do these few little jobs and many more like them, after school and on Saturday. It's a wish I've always prayed for, and to me it's very possible. Of course to you it might seem impossible but it seems to me a group my age could easily do this and give a nurse or nurse's aid a chance to do more important work. I have to be saying goodbye now.

Due to war conditions, the 98th anniversary of Ether Day was celebrated very informally. The high light of this year's festivities was a large array of snapshots of almost all of the staff members, and many of the graduates, now in military service. These were obtained, from the men's wives or from the men themselves, by Dr. Benjamin Castleman, who was in charge of the exhibit.

The entire outside wall of the Brick Corridor was lined with large red, white, and blue placards covered with photographs—red for the Pacific Theatre of War, white for the men still in the United States, and blue for the European and Mediterranean Theatres. Outstanding were pictures of the 6th and 105th General Hospitals, George Marks's experiences during the Buna Campaign, Prime Minister Fraser and Admiral Halsey visiting McGinn's and Carmody's wards in New Zealand, Tracy Mallory flanked by a pyramid and sphinx in Egypt, Colonel Churchill and John McKittrick near a volcano in Italy, Irad Hardy at Saipan and Tinian, and John Talbott's Climatic Research Laboratory in Lawrence.

On the opposite wall was an excellent display of water colors painted by Grantley Taylor while he was in North Africa and Italy.

In the corner, near the door leading into the Yard, was a section labelled "CAPTURED BOOTY". This included a Nazi flag, taken by Leo Burgin while going through France with the 1st Division; a Japanese flag, brought back by Sylvester McGinn; a set of Japanese surgical instruments, picked up by Theodore Pratt while in Guadalcanal; a copy of a farewell address from a Japanese general to his men at Saipan before committing hara-kiri, sent in by Mrs. Robert Barker; and two German helmets, from Mrs. Ludwig.

Colored moving pictures of the 6th General Hospital, taken in Africa and Italy, and of Volunteer Day here at M.G.H. were shown in the Bulfinch Dome.

Punch and cookies were served in the Brick Corridor.

So many people are continuing to show interest in the Brick Corridor exhibit that it has been decided to allow the pictures to remain on display for a while longer as a part of the campaign material for our United War Fund drive.

Appreciation for the attractive appearance of the exhibition is extended to Miss McLatchie and her staff in the Medical Illustration Department, and to the Photographic Department.

* * *

Lt. Col. John C. Snyder, MC, AUS (*WM* 1939) has received promotion to this rank. He is now with the Medical Section at Headquarters of USAFIME.

About a month ago Miss Holbrook, archivist, showed to me a silver pitcher which was inscribed the "Sir Cuthbert Wallace Inter-Hospital Tennis Trophy No. 2, presented by Dr. Harvey Cushing". On it were inscriptions which showed that the Peter Bent Brigham Hospital had won this trophy twice and that the Massachusetts General Hospital had won it three times, the last being in 1929.

In the Spring of 1922 Sir Cuthbert Wallace of London gave a cup in order to give impetus to friendly inter-hospital tennis rivalry. To own the cup, a given hospital team should win it on three occasions. The hospitals originally included in the contest for the cup were the Peter Bent Brigham, the Massachusetts General, the Homeopathic, the Children's, the Psychopathic, and the Boston City Hospital. The tournament created much amusement. The Brigham Hospital won the cup in 1922, 1923, and 1924, thus holding it forever. Dr. Cushing, in 1925, offered the "Sir Cuthbert Wallace Inter-Hospital Tennis Trophy No. 2", to be played for until it could bear no more inscriptions.

Inquiry as to why this trophy has not been played for since 1929 has brought forth a multitude of conflicting statements, from which emerges only the certainty that there is no official record that it has been played for since then.

It seemed unfortunate that the friendly rivalry in sports between the hospitals, encouraged by reason of this trophy, should not be continued; and, consequently, the Brigham was asked if they desired to challenge for the trophy—a request which met with their hearty approval. Matches were arranged to be played on Sunday, September 24, 1944, on the Brigham grounds. The result was that the Brigham won three out of the four single matches and both of the doubles.

It is hoped that these annual tennis matches may be continued.

N. W. Faxon, M.D.

* * *

Last month we reported that Lt. Lester Meister, MC, AAF (*CM* 1937) had been retired from military service for medical reasons. On September 27 Dr. Meister sent us an interesting outline of his activities since his return to civilian life.

> After leaving military service I worked for some months as an epidemiologist in the Communicable Disease Division of the Massachusetts State Health Department. Following this, I became the internist at the Southern Permanente Hospital, Fontana, Cal., which serves primarily the employees of the Kaiser Steel Mill here and their families. The Steel Mill, as you may know, is a pioneer adventure in California heavy industry. It has great prospects of becoming, in the post-war era, the nucleus of heavy industry in the far West, without, however, seriously affecting the agricultural aspect of the region. I think you will hear more and more of this place as time goes on.

Lt. Comdr. Hannibal Hamlin, MC (*r.s. NS* 1942) has been transferred to the U.S. Naval Hospital, Chelsea, Mass.

MASSACHUSETTS EYE & EAR INFIRMARY

There may be some of the House Officers who do not know that Dr. and Mrs. LeRoy A. Schall gave the Infirmary our service flag. It is hung over the door which leads from the rotunda on the first floor to the Out-Patient Eye Clinic. Each member of the medical staff, nurses, orderlies, attendants, technicians, social service workers, and kitchen men who have left for duty with the armed forces is represented by a blue star. We have just added three new stars, and there are now 72 on the flag. It is a good showing for the Infirmary, and we are proud of those who represent us.

Major Earl S. Seale, MC (*Oph.* 1940) dropped in at the Infirmary the other day for a friendly chat. He commented upon the fact that there were very few people here whom he knew. Well, there are a few of us "old timers" who are trying our best to keep things going on an even keel, although there are days when we wonder if we will weather the blow.

Major Seale is on furlough from the Regional Hospital, Camp Shelby, Mississippi, where he has charge of the Eye Service.

Lt. Comdr. S. Forrest Martin, MC (*Oph.* 1938) gives us the following excerpt from a recent letter from Major Thomas Cavanaugh, MC (*Oph.* 1940):—

> France, 18 Sept., 1944
>
> We are having a "breather", and the rest is good for all of us. We have had the chance to do a lot of work here and we got in early enough to see practically everything since the original invasion. It is good to watch real history unfold before you. Here is the war scene pictured to me this morning by a German officer (prisoner of war):—"The American Army—too much material; the Russian Army—the Russian soldier has no fear; the American Air Corps—too many and too fast; the German Army—no gas!"—to which I said, "C'est bon!"

Dr. David G. Cogan (*Oph.* 1935) has passed on to us a letter he received from Capt. Sumner D. Liebman, MC, AUS (*Oph.* 1943). It is dated September 26.

> A lot has happened since my last letter. We are all pretty seasoned campaigners now. Perhaps "experienced" is better than "seasoned", for the latter implies that we have made an adjustment to the Army, war, and being overseas—which is anything but true. But we have had quite a wide variety of experiences, both medical and otherwise. In Normandy we had a few close calls when we were situated near military objectives. At one time I was operating on an ankle when the bombs began to drop. Automatically I dropped to the ground, lying on my back, with hands in the air holding a scalpel and tissue forceps, in an effort to keep "sterile". When I realized what I had done, I looked around the O.R. floor—at first shamefacedly; but the panorama revealed every other surgeon and nurse in the place in a similar attitude. There was a lot of strafing going on, too, but luckily everything was aimed at and hit the fields on the opposite side of the road.
>
> We have several large ward tents joined together in such a way that patients are brought into a pre-op ward, are examined

> quickly, taken into the adjoining X-ray tent, then back to the pre-op to await surgery. The shock ward, surgical supply, pre-op, and X-ray are all under one canvas roof. This summer the work came in gigantic spurts, during which we would receive as many as 125 patients — all requiring surgery — within 24 hours. Our organization was in the process of formation, and we were swamped. We were given some help from auxiliary surgical teams and various clearing and collecting companies. Dr. Stanley Cobb's son worked on a medical ward for a short time. Zollinger visited us once but I didn't see him.
>
> We have had the widest possible variety of cases, and, of course, most of them have multiple wounds. The percentage of eye cases has been very low — under the 8% figure of the African campaign. When the eyes are hit they are usually ruptured, requiring enucleation. I have done only four conjunctival flaps with iridectomy, and about twenty-five enucleations. A few patients had multiple corneal F.B.'s. Often these are tiny particles of sand, and very difficult to see without a slit lamp. There have been a few intraocular F.B.'s, but I have no magnet of any kind. Often precious time is lost in evacuating these patients to the rear, since their other wounds must be treated and time allowed for recovery from the anesthetic.
>
> Many of the more severe eye injuries involve the sinuses, facial bones, skull, and brain. My first enucleation was followed by the unexpected presentation of cerebral tissue. I am supposed to be the ENT man, also, and have had to deal with the injuries of the sinuses and mastoid in a most amateurish manner; but thus far have had no complaints from the rear. Often three teams will operate on one patient, in relays or simultaneously if possible. We usually do the brain first, then the wounds of the face are debrided and cleaned up, then I remove the eye, and the maxillo-facial team does the plastic work on the face. They do just the opposite to Kazanjian's teaching. Instead of irrigating and hot-packing wounds for 24-48 hours, they prefer to operate on the wounds as early as possible. All our cases get penicillin, and we have seen *no* post-op infection. I also do a few refractions each day and take care of the EENT Clinic.
>
> Right now our major problem is the mud. It is ankle deep, sticky, and soupy—and the rain is incessant. However, we have electricity and little stoves scattered about which greatly add to our comfort. Our food is fair—much better than it used to be in England or in Oregon. We have frequent dinners made from fresh meat captured from the Germans.
>
> Our patients were largely German prisoners; at other times Russian, Ukrainian, French (FFI and civilians); and—when the going got hard—Americans.
>
> When I visited San Diego on leave, I met Hugo Lucic who collaborated on the article in the *American Journal of Ophthalmology* for July or August. Last January Lucic told me he thought that foreo-macular retinitis was caused by exposure to U-V light. I saw some of the cases, too. I referred him to Elek, and suggested that Würdeman's case was the only one on record in which a retinal lesion was found after exposure to U-V light. I notice that the author, Cordes, summed up that possible etiology in exact accordance with what I had learned from my Dad and from Elek.
>
> Haven't seen [Capt.] Bob Mattis [MC, AUS (*Oph.* 1942)] since the day we landed on the Normandy beach together, but he is never far away.

A very lovely tribute has been paid to the memory of the late Mary Hayden. It is a folder containing a recollection of her many fine qualities as a nurse and as a woman. In conclusion, Miss Hayden is given the title, "The Mother of Mosher's Men"; and the signatures of Dr. Ralph J. Frackelton and Dr. Burton E. Lovesey reveal the authorship.

Lt. John F. Bell, MC, AUS (*Or.* 1941) wrote from "Somewhere in Texas" on October 12:—

> Since entering the service I have had so many changes of address that the front of the envelopes containing my copies of The News no longer have space for another correction. Ulysses, Pa. is where my family will probably be living until after the war, so could you please change my address to read that way.
>
> I certainly have enjoyed getting the publication. I feel that the material is definitely worth while and that The News should continue functioning after the war is over.

Not since the November 1942 issue has the name of Capt. Samuel B. Beaser, MC, AUS appeared on our pages. A brief letter, written October 15, says only:—

> I am now situated close to "home base" at the Waltham Regional Hospital, where I am Cardiac Consultant for the First Service Command. No matter how close, though, I always look forward with interest to reading each edition of The News.

Captain Beaser was Graduate Assistant in Diabetes at M.G.H. before he entered military service. Wonder where he's been during all this time?

Capt. Clarke Staples, MC, AAF (*gr. asst. S* 1942) is now with a Field Hospital.

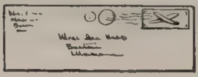
Lt. James E. Conley, MC-V(S), USNR (*WS* 1941) returned last January from his post in a Naval hospital in the North Atlantic Area. He was recently assigned to a ship, and stopped in at M.G.H. for a visit before starting off on his second tour of foreign duty.

Our August issue contained the report that Lt. Frederick C. Gevalt, Jr., MC, USNR (*r.p.* 1943) had been wounded during the invasion of Normandy. Lieutenant Gevalt has somewhat specialized in invasions, having made the complete circuit from North Africa to France.

He appeared at the office of The News the other day, and sat down for what proved to be a most interesting visit. During the conversation we inquired about the seriousness of his injuries and received the reply we might have expected: — "Very slight, very slight." And that's all there was to *that* particular subject.

Due to one story Lieutenant Gevalt told, we now wonder—as never before—under what possible situations each copy of The News, sent overseas, may be read. He said, in effect:—"I have read The News under almost as many different conditions as there have been issues. The last one I received over there I read, from cover to cover, curled up in a fox-hole. My nearest neighbor had dashed out of his hole to get the mail for both of us. He came running back to me, holding high above his head a letter and The News. That's how I read that one."

Since his return Lieutenant Gevalt was in North Carolina for a short while, and is now transferred to Chelsea Naval Hospital.



All material of a military nature in this and every issue of The News is first cleared for publication by the local Public Relations Department of the Army or Navy.

The following new addresses have been received:—

Lt. Donald V. Baker, Jr., MC, AAF (*ES* 1943), Sec M, 223rd B.U., Dyersburg AAF, Tenn.
Lt. Dante Campagna-Pinto, MC, AUS (*M* 1943), 109th General Hospital, Fort Bragg, N. C.
Lt. Stephen L. Madey, MC, AUS (*CM* 1944), Cushing General Hospital, Framingham, Mass.
Comdr. John P. Monks, MC (*WM* 1931), Corps Evacuation Hospital #2, Camp Pendleton, Oceanside. Cal.
Lt. Fathollah K. Mostofi, MC, AUS (*a. P*), Tilton General Hospital, Fort Dix, N. J.
Capt. Frederic W. Rhinelander, II, MC, AUS (*ES* 1937 & *Or.* 1938), DeWitt General Hospital, Auburn, Cal.
Lt. Thomas S. Risley, MC, AUS (*ES* 1942), 6th Service Command, Veterans Administration, Hines, Ill.
Lt. Royal S. Schaaf, MC, AUS (*WM* 1943), Station Hospital, Randolph Field, Tex.
Major Richard Schatzki, MC (*r.*), McGuire General Hospital, Richmond 19, Va.

We are sorry to learn that Major Henry H. Faxon, MC (*ES* 1927) is a patient at Fitzsimons General Hospital, Denver, Colorado. Major Faxon has been with the 6th General Hospital Unit since its earliest days at Camp Blanding.

A letter from Lt. Col. David B. Dill, QMC (*res. fel. M* 1925-27), written October 5, contains, in its last paragraph, a question for all of you to answer. It will be interesting to have, from Colonel Dill, a report as to the number of responses.

> I spent 1941, 1942, and part of 1943 at the Aero-Medical Laboratory, Wright Field, in charge of physiological research in problems of military aviation. Since then I have been in the Office of the Quartermaster General, and am now Assistant for Product Analysis. Here in the Military Planning Division (Col. Georges F. Doriot, Harvard School of Business Administration, Director), we are concerned with all the soldier's individual equipment and are responsible for research and development on clothing, footgear, handgear, rations, stoves, and mildewcides. We set up laboratory and field tests, send observers to theatres of operation, determine mosquito protective qualities of clothing in Florida, the nutritional adequacy of our rations in Colorado, and the performance of new combat clothing in Italy.
>
> It was my privilege to spend several weeks in North Africa and Italy as a Quartermaster observer during November and December 1943.
>
> May I add a "military request" to this note? I would appreciate hearing from any medical officer who receives your most informative and well-read News and who has any constructive criticism to make of Quartermaster equipment. For example, we are now being told that mosquito protection in clothing is no longer an important military characteristic. What do your readers say?

Colonel Dill's address is Office of the Quartermaster General, Washington 25, D. C.

Capt. J. Wallace Zeller, MC, AUS (*WM* 1935) is with the 140th Station Hospital.

Capt. Sedgwick Mead, MC, AUS (*EM* 1940 & *P* 1941) has been promoted to this rank.

A search for the whereabouts of Comdr. Robert F. Legge, MC (*Or.* 1935), after his August News was returned to us, brought forth a letter from Mrs. Legge. She wrote, on October 15:—

> Dr. Legge was promoted to the rank of Commander in October 1943. He went on active duty at Mare Island Naval Hospital, San Francisco, Cal., on December 17, 1941, was transferred in July 1942 to a base hospital in the New Hebrides, and later had temporary duty on Guadalcanal. His entire medical unit received a Presidential Citation for services during this period.
>
> In May 1943 he was transferred to a seaplane tender, where he became senior Medical Officer in December 1943. His tender was at Tarawa and Kwajalein. In May 1944 he was detached and assigned as Chief of Orthopedic Service at Treasure Island Naval Hospital, San Francisco. After three months' service there he was sent to the U.S. Naval Air Station Dispensary, San Diego, Cal. He is still there, in charge of the Orthopedic Service.

Capt. Luke Gillespie, MC, AUS (*a. obst.*) writes from an advance New Guinea base:—

> Have landed in enemy territory, and the more I actually see of this war the better I like it. It seems incredible that you can sun bathe on a beautiful South Sea Island beach, and watch our side strafe, bomb, and shell hell out of Jap positions only a few miles away.
>
> Have changed from pidgin English—relatively easy—to the Malay language—rather difficult. The natives here are quite intelligent and very friendly, but take up a lot of time and effort by their constant saluting—men, women, children, and even some of the babies that the women carry on their backs. Not to return their greetings would hurt their feelings.
>
> The following story, said to be true, gives a good picture of the fighting out here: A Jap prisoner, questioned as to the jungle-fighting ability of the various armies, replied, "Australians the best, then native infantry, then the English." The American examiner, rather upset, asked about the Americans. The answer was, "Americans come, jungle go."

We have a letter from Lt. Comdr. Bernard M. Jacobson, MC (*a.p.*)—the first since he was assigned to a station "beyond the seas". It was written September 24.

> This is a hospital on a tiny island in the middle Solomons. Since March 20, when we opened for patients, we've been extremely busy, serving a vast area in this expanse of water. A continual stream of casualties from unpublicized events arrive here from as far north as the Admiralties, and the recent battles of Saipan and Guam have contributed their share.
>
> MGH sons (and daughters) are scarce out here. Tom Gephart [*WS* 1941] was on this island until recently, after having seen action further north. And one of our finest nurses is Mary Staats, who graduated in '37, and who shares with me the periodic lift to our spirits brought by The News.

Lt. Comdr. Harry M. Spence, MC (*WS* 1932) is still at an Advance Base in the Southwest Pacific. In a letter to Mrs. Means, which announces his promotion, he writes:—

> Just completing my sixteenth month on the "Coconut Circuit", doing general surgery and a surprising amount of urology. Also run a native yaws clinic on the side.

Dr. Henry R. Viets received a letter from Comdr. Robert S. Schwab, MC (*r.s. N* 1935), written in September. Dr. Viets has sent it on to us. Commander Schwab, now with an LCT Flotilla, writes:—

> I have finally got some sea duty that is most interesting to me. It is really a good change to get away from shore hospitals for a while.
>
> You might tell Dr. Faxon I have recently seen [Comdr.] Casten [*N* 1929 & *Oph.* 1931] and [Comdr.] Channing Swan [*WS* 1925], and they are looking fine. Also, that the MGH News is most interesting to get, even if it takes so long in coming.
>
> I hope the Brain Wave job got a renewal from the Polio Foundation. [It did. *Editor.*]
>
> I still have not seen a single case of myasthenia since I have been out here, nor have I heard of any.
>
> I still have an interest in seasickness, and see cases even in the placid Pacific.

On August 21 Capt. William V. McDermott, Jr., MC, AUS (*WS* 1943) wrote his first letter to The News.

> Due to my own failure to inform you of my change of address, The News did not follow me into or across France. News from home is always at a premium over here, and your paper is one of the few contacts with friends from the M.G.H., both at home and abroad. From reading some of the letters in the past issues, it is unnecessary to try to emphasize any further how much we all miss the pleasant days at the M.G.H., and how much we look forward to and enjoy The News. So far, the mail seems to be able to travel as fast as the Army, so I have hopes my copies will catch up with me before long.
>
> Regards to every one back at the General.

Another "silent one" heard from! Lt. John H. Peters, MC, USNR (*WM* 1943) is with an LCT Flotilla Staff. His letter is dated France, October 5.

> After a short period of indoctrination at the Naval Training Station, Newport, Rhode Island, I was ordered to the amphibious force and assigned as medical officer to this outfit. After some time spent in Norfolk, we came overseas in February. Prior to D-day I left the outfit for other duty, and have spent most of my time in or near France since, having returned to my original outfit some time ago.
>
> I have seen no MGH people over here, although I have missed Lt. Ben Eiseman [MC, USNR (*ES* 1943)], Capt. Robert S. Palmer [MC, USNR (*WM* 1927)], and Lieutenant Commander Tolman by narrow margins, at various times. At the moment all present are watching the news closely and dreaming of Christmas in the States. May it come true!

An undated letter, together with some snapshots, came to Dr. Faxon from Lt. Col. Moses S. Strock, MC (*oral s.*). Colonel Strock is included in the "Over there" group pictured in our September issue. This interesting letter from him reads:—

> The reasons for my seeming neglect about writing are many and varied—but underlying them all is the inertia that gradually takes hold of us. I remember that at first I could think of letters about our peaceful existence in England that would interest you. Then our anticipation of D-day made me want to wait until we'd at least reached France. Our first few months in France were so full there was little time for writing. Now we think of Christmas coming up—the third abroad—and get apathetic about writing.
>
> Yet I know there is much here that folks at home would like to hear about — and I wish I were able to describe some of the daily scenes. If I could but draw the high lights in this study of contrasts, it would, I think, give you a paragraph or two. It is the notice in The News about a photographic exhibition that finally gets me down to writing. I'm afraid these snaps won't reach you for October 16, but they may, so I'll tell you about them.
>
> In the bathing scene our men are enjoying their first bath in France. These portable installations, set up by the Q.M., by the side of a small stream, were like manna from heaven. It is impossible to describe the sensation of a *warm* shower after about four weeks of trying to wash out of a helmet. Most of us had the feeling that no Army except ours would plan ahead to set these up so early in the game. It's too bad the picture doesn't show the sport that went on under these showers.
>
> The "clear of mines" picture shows our earliest French neighbors trying to describe a mine accident. For weeks after the Front moved away from us our worst casualties were French civilians, mostly children and old people. The wounds of these children beggar all description. Schrapnel in a soldier is one thing. But to see six or eight children all brought in at once, injured by a single mine, is another. Usually sisters and brothers, the havoc is increased when one sees the picture *in toto*. The father, a prisoner in Germany; the mother, frail and war-worn and unable to understand English, comes with most of her family, all felled by this sudden blow. They had been evacuated. They returned to their battered home to find, after a week or so, that some of their possessions could be salvaged. Then, as though planned by the Devil himself, concealed near the cider barrel or in an abandoned outhouse or shed, this diabolic thing!
>
> The snapshot of German prisoners at work shows two of them carrying planks to form seats for an improvised Jewish high holiday service. These two prisoners work in the dental clinic. Efforts to understand the true feelings of these prisoners were of no avail. One said he was a Chek, born in Prague and forced into the Germany Army. The other made no pretense about not being German. But after two months we learned to trust neither one. Particularly after the arrival of the wounded from Brest, the arrogance of most of them was very trying. To see these haughty so-and-so's, walking by the wards where the French kids lay, was to set most of the French visitors on fire. And I couldn't blame them at all.
>
> Lt. Col. Earle Glendy [*r.p.* 1934] visited us several times, but I haven't seen him for three or four weeks—probably moved up.
>
> The picture which you printed in the September News shows nearly all of the MGHers who were with the 5th. It didn't include [Lt. Col.] Ted Badger [*EM* 1928] who was then Chief of the Medical Service. Ted is now in England, Consultant in Medicine to a group of hospitals. The picture included [Lt. Col.] Neal Crone [*WM* 1933] who is Consultant in Medicine to the 1st Army and who was visiting us that day. [Lt. Col.] Rich Warren [*WS* 1936] was not in the picture, either. He also has left us to be Chief of the Surgical Service of the 158th General. Other than these changes the group is intact, [Capt.] Henry Brewster [*WM* 1940] having rejoined us after recovering in England as our first casualty in France.
>
> Life in October in a tent in France is not exactly what it has been cracked up to be—and this letter has exhausted the kerosene in my lamp.
>
> Please give my best regards to all my old friends.

Major Champ Lyons, MC (*WS* 1933) receiving the congratulations of Major General Morrison C. Stayer, the Surgeon, NATOUSA, who has just presented him with the Legion of Merit for his work in initiating and guiding the use of penicillin in the Mediterranean Theatre of War.

Lt. Irad B. Hardy, Jr., MC, USNR (*ES* 1939) receiving the Navy and Marine Corps Medal "for extraordinary heroism while serving against enemy Japanese forces on Kwajalein atoll, Marshall Islands, January 31, 1944".

Capt. A Merton Bassett, MC, AUS is now at Headquarters of the 8th Air Force. Captain Bassett was Research Fellow in Medicine here in 1941-42.

Notice of a promotion and a new address has arrived for Capt. John S. Chase, MC, AUS (*ES* 1940). He is now with the 21st General Hospital.

Capt. Lewis K. Dahl, MC, AUS (*r.p. WM* 1942) has been transferred to the 105th General Hospital.

Capt. Daniel S. Ellis, MC, AUS (*EM* 1941) is at Headquarters of the 133d Field Artillery Battalion.

We have received word that Major Merrill Moore, MC has been transferred to the 21st Evacuation Hospital. Major Moore was Graduate Assistant in Neurology in 1933-34.

Lt. Harold E. Elrick, MC, USNR (*M* 1944) is now on a DE boat.

Dr. Faxon has received a long letter from Col. Thomas R. Goethals, MC (*ES* 1917), written on September 22. Here are the sections of general interest (pun intended, this time):—

> We had a relatively quiet August, but with recent activities north of Florence we have begun to pick up again. The rains have started and have converted our camp site into a respectable quagmire. We had considered moving the nurses into the building, but they seem to prefer tent life to being packed into dormatories. Perhaps they are right. A rash of matrimonial intentions has broken out among them and I have spent more than a little time, like the Lord Chancellor, considering whether or not evidence of a long engagement or courtship entitles them to special consideration.
>
> With reorganization under the revised Table of Organization we have lost Burrage, Goldstein, and Long. The last two were with us for ten and six weeks respectively; but Burrage, you will recall, was one of the original contemptibles. We, too, are short of nurses, since very few nurse replacements are coming to this theatre. How we shall fare if NATOUSA and ETOUSA combine remains to be seen.
>
> Organization Day was celebrated on the 1st of the month. My speech this year was a résumé of progress from 1943 to 1944 and is hardly worth repeating here. In the evening the men of the detachment staged a really excellent show, burlesquing some of the foibles of the officers and nurses. At present the hospital baseball team is either the champion or the runner up in the Base Section playoffs. This afternoon's game will settle the point.
>
> Sherman Thorndike's job with us has, after a year of uncertainty, been finally washed out. He has been assigned to the medical section of the headquarters of the Rome Allied Area Command. We hate to see him go and he dislikes the idea, too; but since he has been rendered excess with us by the impersonal effects of a change in Tables of Organization, I think he is finally convinced that the move has not been in any way a reflection on his capability. His present job is a good one, if not too arduous, and there is some ground for belief that he may achieve command of a station hospital. I hope so, for it will definitely "fix" him in a job where he'll be his own boss, in so far as any one in the service can be.

THE NEWS

No. 27 Boston, Mass. December 1944

NEUROLOGICAL SERVICE AFFAIRS

The Neurological Staff entered the World War with a group of mature men, and therefore has lost rather less than most services. Three are over the retiring age, but are retained "for the duration". We like to think that, like the fifty over-age destroyers, these three over-age men are helping to win our war.

Dr. Schwab was early in military service, at first stationed at Charlestown with the privilege, for more than a year, to continue his work here. During this period electroencephalography for the Navy was one of our contributions. For two years he has been in the Pacific, and letters state that he is busy and still interested in the seasickness problem.

Dr. Caner has recently gone to Washington on undeclared business, presumably for four months.

Needless to say, our Staff has been well represented on the draft board. Dr. Cole has collaborated with Dr. Denny-Brown on some work for the national research council, and Dr. Viets has traveled extensively on missions for the same body.

Our resident staff has of necessity been halved, and periods of service shortened. We now have one resident for 9 months, and one house officer in rotation on the medical service for 6 weeks. Naturally, this arrangement is inadequate and makes it essential that both remain in perfect health. It is hoped that the government will be more generous in the near future in the staffing of civilian hospitals.

Teaching has altered somewhat. The 3rd year groups in neurology are now eight men instead of four; but individual teaching is still possible by dividing the groups between O.P.D. and wards, thus saving the number of instructors and maintaining the personal contact of student and patient. Fourth year teaching has almost ceased, as the new prescribed month in psychiatry leaves almost no possibility of elective.

Laboratories intimately associated with neurology continue to function with little change and no loss in efficiency, thanks to the excellent technical help which has been built up over the past years. E.E.G. under Dr. Abbott and E.M.G. under Dr. Brazier are doing more and more work. Coöperation with Dr. Watkins and Dr. Finesinger in the clinical fields has been especially effective.

The spinal fluid laboratory continues to function as usual; and Dr. Kubik's neuropathological laboratory runs smoothly and yields its quota of cases for C.P.C. conferences. His study of sub-dural empyema may be singled out as of especial significance.

Two special sub-clinics, begun before the war, continue without interruption. Dr. Viets' clinic for myasthenia and certain other muscle disorders shows a gradual increase in patients, so that this group now consists of well over 100, a large number for a rare disease. Evaluation of thymectomy in myasthenia is one treatment under present discussion. Thus far Dr. Viets has been noncommittal on the success of surgery. Dr. Cole has not only continued his clinic for speech and language disorders, but has installed one of his associates on White 11 to carry out comprehensive tests of cerebral function in a more complete manner than normally performed for the estimation of intelligence quotient.

Histamine Therapy in multiple sclerosis was recently suggested by Horton of the Mayo Clinic. It has been capitalized by the lay press to a disturbing extent. We have used it in a number of cases, and will continue to do so until proof of its value is established. To date a fair estimate seems to be as follows: acute symptoms and signs *may* resolve more quickly than with no treatment; chronic symptoms seem to be unaffected. We have seen no ill effects from this form of treatment which is somewhat arduous, requiring daily prolonged intravenous injections of histamine for a period of five weeks.

The efficient hospital program of the government absorbs all war wounded, so that this type of neurology and neurosurgery, too, is similar to peace time. This fact precludes our staff from having any significant opinion as to war neurology.

We are now looking forward to the future and the return of our missing staff members. We hope, also, for one or two men of experience to study our ever-increasing problems. The patients and the facilities are still here and we are hopeful that those who return will find the opportunities as wide and generous as they have always been at the Massachusetts General Hospital.

James B. Ayer, M.D.,
Chief of Service

♣ ♣ ♣

MUSIC IN THE CHAPEL

In these times of stress, many people have found that the little Chapel at M.G.H., where they may get away from the workaday world and into a devotional atmosphere, has added much to their peace of mind and helped renew their spiritual strength. Because of the thoughtfulness of the founders of the Chapel two fine musical instruments were included—an organ and an automatic radio-phonograph; and in an effort to utilize the Chapel to its best advantage, programs of religious and other great music have been presented for some time.

On Wednesday and Sunday evenings at seven o'clock, members of the hospital staff, patients, and occasional visitors gather for a service of singing. Some come, perhaps, because their hospital duties have kept them from church, and others because they simply enjoy getting together and singing their favorite hymns, which can be requested. At some of the services there have been as many as nine beds and several wheel chairs in the Chapel.

On Monday and Thursday evenings from seven to eight, the recorded concerts of great classical and devotional music are being continued from last Spring. There is usually a major work —such as a symphony, concerto, or chorale—and one or two shorter pieces. The Hospital already has a small collection of records which it plans to enlarge, and several members of the staff have been generous in their loans of records for these concerts. The program selections have been made to include not only classic favorites—such as Beethoven and Tschaikovsky symphonies, negro spirituals and other religious music—but to present some of the finer works of lesser known composers. Any suggestions for these programs are most welcome.

As time goes on, it is expected that "Music in the Chapel" will grow in its scope and in its function of bringing greater devotional opportunities.

G. H. H.

War Service has moved into bigger and better quarters and is anticipating a very active winter. Our goal will be reached when we can do *all* the errands (with no errors) asked of us by the nursing service. To accomplish this we can use at least thirty workers daily. It is with pride we can say we have hit a high of 130 hours combined total for *one day*, and we are still growing.

In order that the quality of our work may be stepped up, a new system of checking on the old workers, and of more thorough training of new workers, is being used.

As volunteers we recognize the fact that we are inexperienced in hospital life, and suggestions for improvement of the War Service are always welcome. We thank the hospital personnel for their patience and help.

THEODORE PARKS ROBIE

With real tragedy comes word of the loss of Captain "Ted" Robie, in France, on September nineteenth. He graduated from the Hospital only a year ago, had been advanced from the rank of First Lieutenancy, and at the time of his death was serving in an advance evacuation hospital in Northern France. Something of his typical buoyancy, enthusiasm, and optimism for the future can be found in a recent letter from him published in this bulletin last month.

Theodore Parks Robie was born at Copper Cliff, Ontario, Canada, on August 15, 1917. Most of his youth was spent in Riverdale, New York. He was graduated from Harvard College *cum laude* in 1938, and four years later from Harvard Medical School. In August 1943 he completed a one-year internship on the Surgical Service and immediately thereafter entered active military duty as a First Lieutenant in the Army Medical Corps. He had spent only a few months overseas before his untimely death.

His life was marked by industry and hard work. Summers were spent tutoring and teaching. He excelled at sail-boating and instructed in sailing, both on Long Island Sound and at Marthas Vineyard. He made his first appearance at the M.G.H. as an undergraduate student House Officer in the Baker Memorial. Later he became interested in the Norfolk Community House Centre and was one of the more energetic members of that group. He and his wife, Mrs. Natalie Attwill Robie, were living there at the time of his departure overseas.

All who knew him will agree that he was an extrovert of the first order. In Medicine he was tenacious, resourceful, and critical. This last characteristic was sometimes carried so far as to irk, but there was always a ready smile and an evident eagerness to learn. He was conspicuous as an Intern, and it was obvious from the start that he would make an excellent physician in the broadest sense of the word.

He had a short life—but, all in all, a very pleasantly full one.

A.W.A. and G.A.D.

* * *

Miss Gertrude Dowling, head nurse on White 5AC, is to be granted a scholarship from the Joint Orthopedic Advisory Service. She is now on leave of absence, attending Teachers College at Columbia University, where she is taking the advanced course in Orthopedic Nursing.

* * *

Major George A. Marks, MC (*ES* 1931) has returned after twenty-eight months in the Southwest Pacific. He has been Surgical Consultant for advance bases in New Guinea, under Col. Barkley Parsons, Chief Surgical Consultant for the Southwest Pacific.

OFFICIAL NOTICES

Owing to the shortage of graduate nurses, the departure of graduate students to the Army, Navy, and to home hospitals, and the necessity of granting vacations to students, it became apparent there would be a period of approximately two months' duration during which the number of nurses available for general duty would be so low that it would be necessary to reduce the number of beds in the Hospital. Therefore, on October 1, 1944 White-9, the male West Surgical floor, was closed and White-6 and the male East Surgical floor was divided between the two Services. On the same date Baker-10 was also closed.

These two floors will be reopened not later than December 1, 1944.

Beginning September 25, 1944 Hinton and Wassermann tests from the General Hospital, Baker Memorial, Phillips House, Eye and Ear Infirmary and the Staff, Nerve and South Medical Clinics will be performed by the City of Boston Health Department. The Hinton tests for the Out-Patient Department except for the above mentioned clinics will continue to go to the State Laboratory.

The following notice applies to blood specimens to be sent to the City Health Department:

Tubes are to be deposited, as is now being done, in the refrigerator on the third floor of the Pathology Laboratory. Special test tubes to which have already been attached the white City Laboratory forms are to be used. In order to help in the separation of the serum, test tubes containing the freshly drawn blood should be slanted for at least 15 minutes before being placed in the vertical position.

Results of the tests on individual cards will be sent directly from the City Health Department to the Record Room and will then be distributed to the various wards and floors. A special rubber stamp to transfer the report to the record will be provided.

In order that the report reach the patient's record without delay, it is important that *name, unit number, division of hospital,* and *ward* be filled in clearly on the form.

N. W. Faxon, M.D.,
Director

Dr. Gilbert L. Adamson (*r.p. N* 1930) is now Consultant Neuropsychiatrist to the R.C.A.F. for the U.K., with headquarters in Ottawa, Ontario. His rank is that of Wing Commander. Late in July he went overseas, where his duties include inspection of all hospitals of all services—British, American, and Canadian. A letter written in September said he was off to France, after which he expected to return to Canada.

This information came to us in a recent letter from Mrs. Adamson.

At their meetings on September 15 and 29, the Board of Trustees voted to appoint:

- Dr. Elizabeth Conrad as Assistant Resident Physician on the Children's Medical Service, to begin October 5, 1944;
- Dr. George C. Cotzias as Assistant Resident in Medicine beginning July 1, 1945;
- Dr. Toufic Kalil as Resident in the Radiological Department from October 1, 1944 through June 30, 1945;
- Dr. Janet W. McArthur as Assistant in Medicine;
- Martin Wenig, D.M.D., as Intern on the Dental Service beginning on or about October 23, 1944.

The Trustees voted to grant leaves of absence to:

- Dr. Austin M. Brues, effective November 1, 1944, because of important defense work, it being understood he may resume his present position on the Staff upon completion of this assignment;
- Dr. Fathollah K. Mostofi, effective October 1, 1944, because of military service.

The Trustees also voted:

- That the names of Drs. Burnet M. Davis and Robert S. Grier, who are now on duty with the U.S. Public Health Service, be included in the Honor Roll;
- That Dr. Francis F. Foldes be promoted to the position of Assistant Anesthetist, effective October 1, 1944.

The General Executive Committee, at their meetings on September 14 and October 4, voted to appoint:

- Drs. Rodolfo E. Herrera and Richard C. Webster, Jr. as Clinical Fellows in Surgery, effective October 1, 1944;
- Dr. Bernard W. Robinson as Research Fellow in Surgery from October 1 to December 15, 1944;
- Dr. Tetsuo Sugiyama as Graduate Assistant in Surgery, assigned to the Urological Out-Patient Clinic, pending the approval of Procurement and Assignment Service that we be granted an additional Assistant Resident on the Urological Service.

* * *

Dr. Austin M. Brues (*EM* 1932), who was granted leave of absence by the Board of Trustees at their September 15 meeting, notifies us that after October 31 his address will be P.O. Box 5207, Chicago 80, Illinois.

* * *

Every one should read this letter. It came from Caroline Perry, 39 South Russell St., Boston, addressed to the Superintendent of Nurses, Massachusetts General Hospital. Comments seem out of order.

Oct. 1, 1944

Dear nurse,

I am only ten but I am writing you about being a nurse. A nurse's aid has some training. But it doesn't take some training to take some linen to a nurse or tell a story to a patient in the Children's ward or even to give a temperature glass to a nurse. It seems to me, though I'm only ten, I could surely do these few little jobs and many more like them, after school and on Saturday. It's a wish I've always prayed for, and to me it's very possible. Of course to you it might seem impossible but it seems to me a group my age could easily do this and give a nurse or nurse's aid a chance to do more important work. I have to be saying goodbye now.

Due to war conditions, the 98th anniversary of Ether Day was celebrated very informally. The high light of this year's festivities was a large array of snapshots of almost all of the staff members, and many of the graduates, now in military service. These were obtained, from the men's wives or from the men themselves, by Dr. Benjamin Castleman, who was in charge of the exhibit.

The entire outside wall of the Brick Corridor was lined with large red, white, and blue placards covered with photographs—red for the Pacific Theatre of War, white for the men still in the United States, and blue for the European and Mediterranean Theatres. Outstanding were pictures of the 6th and 105th General Hospitals, George Marks's experiences during the Buna Campaign, Prime Minister Fraser and Admiral Halsey visiting McGinn's and Carmody's wards in New Zealand, Tracy Mallory flanked by a pyramid and sphinx in Egypt, Colonel Churchill and John McKittrick near a volcano in Italy, Irad Hardy at Saipan and Tinian, and John Talbott's Climatic Research Laboratory in Lawrence.

On the opposite wall was an excellent display of water colors painted by Grantley Taylor while he was in North Africa and Italy.

In the corner, near the door leading into the Yard, was a section labelled "CAPTURED BOOTY". This included a Nazi flag, taken by Leo Burgin while going through France with the 1st Division; a Japanese flag, brought back by Sylvester McGinn; a set of Japanese surgical instruments, picked up by Theodore Pratt while in Guadalcanal; a copy of a farewell address from a Japanese general to his men at Saipan before committing hara-kiri, sent in by Mrs. Robert Barker; and two German helmets, from Mrs. Ludwig.

Colored moving pictures of the 6th General Hospital, taken in Africa and Italy, and of Volunteer Day here at M.G.H. were shown in the Bulfinch Dome.

Punch and cookies were served in the Brick Corridor.

So many people are continuing to show interest in the Brick Corridor exhibit that it has been decided to allow the pictures to remain on display for a while longer as a part of the campaign material for our United War Fund drive.

Appreciation for the attractive appearance of the exhibition is extended to Miss McLatchie and her staff in the Medical Illustration Department, and to the Photographic Department.

* * *

Lt. Col. John C. Snyder, MC, AUS (*WM* 1939) has received promotion to this rank. He is now with the Medical Section at Headquarters of USAFIME.

About a month ago Miss Holbrook, archivist, showed to me a silver pitcher which was inscribed the "Sir Cuthbert Wallace Inter-Hospital Tennis Trophy No. 2, presented by Dr. Harvey Cushing". On it were inscriptions which showed that the Peter Bent Brigham Hospital had won this trophy twice and that the Massachusetts General Hospital had won it three times, the last being in 1929.

In the Spring of 1922 Sir Cuthbert Wallace of London gave a cup in order to give impetus to friendly inter-hospital tennis rivalry. To own the cup, a given hospital team should win it on three occasions. The hospitals originally included in the contest for the cup were the Peter Bent Brigham, the Massachusetts General, the Homeopathic, the Children's, the Psychopathic, and the Boston City Hospital. The tournament created much amusement. The Brigham Hospital won the cup in 1922, 1923, and 1924, thus holding it forever. Dr. Cushing, in 1925, offered the "Sir Cuthbert Wallace Inter-Hospital Tennis Trophy No. 2", to be played for until it could bear no more inscriptions.

Inquiry as to why this trophy has not been played for since 1929 has brought forth a multitude of conflicting statements, from which emerges only the certainty that there is no official record that it has been played for since then.

It seemed unfortunate that the friendly rivalry in sports between the hospitals, encouraged by reason of this trophy, should not be continued; and, consequently, the Brigham was asked if they desired to challenge for the trophy—a request which met with their hearty approval. Matches were arranged to be played on Sunday, September 24, 1944, on the Brigham grounds. The result was that the Brigham won three out of the four single matches and both of the doubles.

It is hoped that these annual tennis matches may be continued.

N. W. Faxon, M.D.

* * *

Last month we reported that Lt. Lester Meister, MC, AAF (*CM* 1937) had been retired from military service for medical reasons. On September 27 Dr. Meister sent us an interesting outline of his activities since his return to civilian life.

> After leaving military service I worked for some months as an epidemiologist in the Communicable Disease Division of the Massachusetts State Health Department. Following this, I became the internist at the Southern Permanente Hospital, Fontana, Cal., which serves primarily the employees of the Kaiser Steel Mill here and their families. The Steel Mill, as you may know, is a pioneer adventure in California heavy industry. It has great prospects of becoming, in the post-war era, the nucleus of heavy industry in the far West, without, however, seriouslv affecting the agricultural aspect of the region. I think you will hear more and more of this place as time goes on.

Lt. Comdr. Hannibal Hamlin, MC (*r.s. NS* 1942) has been transferred to the U.S. Naval Hospital, Chelsea, Mass.

MASSACHUSETTS EYE & EAR INFIRMARY

There may be some of the House Officers who do not know that Dr. and Mrs. LeRoy A. Schall gave the Infirmary our service flag. It is hung over the door which leads from the rotunda on the first floor to the Out-Patient Eye Clinic. Each member of the medical staff, nurses, orderlies, attendants, technicians, social service workers, and kitchen men who have left for duty with the armed forces is represented by a blue star. We have just added three new stars, and there are now 72 on the flag. It is a good showing for the Infirmary, and we are proud of those who represent us.

Major Earl S. Seale, MC (*Oph.* 1940) dropped in at the Infirmary the other day for a friendly chat. He commented upon the fact that there were very few people here whom he knew. Well, there are a few of us "old timers" who are trying our best to keep things going on an even keel, although there are days when we wonder if we will weather the blow.

Major Seale is on furlough from the Regional Hospital, Camp Shelby, Mississippi, where he has charge of the Eye Service.

Lt. Comdr. S. Forrest Martin, MC (*Oph.* 1938) gives us the following excerpt from a recent letter from Major Thomas Cavanaugh, MC (*Oph.* 1940):—

> France, 18 Sept., 1944
>
> We are having a "breather", and the rest is good for all of us. We have had the chance to do a lot of work here and we got in early enough to see practically everything since the original invasion. It is good to watch real history unfold before you. Here is the war scene pictured to me this morning by a German officer (prisoner of war):—"The American Army—too much material; the Russian Army—the Russian soldier has no fear; the American Air Corps—too many and too fast; the German Army—no gas!"—to which I said, "C'est bon!"

Dr. David G. Cogan (*Oph.* 1935) has passed on to us a letter he received from Capt. Sumner D. Liebman, MC, AUS (*Oph.* 1943). It is dated September 26.

> A lot has happened since my last letter. We are all pretty seasoned campaigners now. Perhaps "experienced" is better than "seasoned", for the latter implies that we have made an adjustment to the Army, war, and being overseas—which is anything but true. But we have had quite a wide variety of experiences, both medical and otherwise. In Normandy we had a few close calls when we were situated near military objectives. At one time I was operating on an ankle when the bombs began to drop. Automatically I dropped to the ground, lying on my back, with hands in the air holding a scalpel and tissue forceps, in an effort to keep "sterile". When I realized what I had done, I looked around the O.R. floor—at first shamefacedly; but the panorama revealed every other surgeon and nurse in the place in a similar attitude. There was a lot of strafing going on, too, but luckily everything was aimed at and hit the fields on the opposite side of the road.
>
> We have several large ward tents joined together in such a way that patients are brought into a pre-op ward, are examined

> quickly, taken into the adjoining X-ray tent, then back to the pre-op to await surgery. The shock ward, surgical supply, pre-op, and X-ray are all under one canvas roof. This summer the work came in gigantic spurts, during which we would receive as many as 125 patients — all requiring surgery — within 24 hours. Our organization was in the process of formation, and we were swamped. We were given some help from auxiliary surgical teams and various clearing and collecting companies. Dr. Stanley Cobb's son worked on a medical ward for a short time. Zollinger visited us once but I didn't see him.
>
> We have had the widest possible variety of cases, and, of course, most of them have multiple wounds. The percentage of eye cases has been very low — under the 8% figure of the African campaign. When the eyes are hit they are usually ruptured, requiring enucleation. I have done only four conjunctival flaps with iridectomy, and about twenty-five enucleations. A few patients had multiple corneal F.B.'s. Often these are tiny particles of sand, and very difficult to see without a slit lamp. There have been a few intraocular F.B.'s, but I have no magnet of any kind. Often precious time is lost in evacuating these patients to the rear, since their other wounds must be treated and time allowed for recovery from the anesthetic.
>
> Many of the more severe eye injuries involve the sinuses, facial bones, skull, and brain. My first enucleation was followed by the unexpected presentation of cerebral tissue. I am supposed to be the ENT man, also, and have had to deal with the injuries of the sinuses and mastoid in a most amateurish manner; but thus far have had no complaints from the rear. Often three teams will operate on one patient, in relays or simultaneously if possible. We usually do the brain first, then the wounds of the face are debrided and cleaned up, then I remove the eye, and the maxillo-facial team does the plastic work on the face. They do just the opposite to Kazanjian's teaching. Instead of irrigating and hot-packing wounds for 24-48 hours, they prefer to operate on the wounds as early as possible. All our cases get penicillin, and we have seen *no* post-op infection. I also do a few refractions each day and take care of the EENT Clinic.
>
> Right now our major problem is the mud. It is ankle deep, sticky, and soupy—and the rain is incessant. However, we have electricity and little stoves scattered about which greatly add to our comfort. Our food is fair —much better than it used to be in England or in Oregon. We have frequent dinners made from fresh meat captured from the Germans.
>
> Our patients were largely German prisoners; at other times Russian, Ukrainian, French (FFI and civilians); and—when the going got hard—Americans.
>
> When I visited San Diego on leave, I met Hugo Lucic who collaborated on the article in the *American Journal of Ophthalmology* for July or August. Last January Lucic told me he thought that foreo-macular retinitis was caused by exposure to U-V light. I saw some of the cases, too. I referred him to Elek, and suggested that Würdeman's case was the only one on record in which a retinal lesion was found after exposure to U-V light. I notice that the author, Cordes, summed up that possible etiology in exact accordance with what I had learned from my Dad and from Elek.
>
> Haven't seen [Capt.] Bob Mattis [MC, AUS (*Oph.* 1942)] since the day we landed on the Normandy beach together, but he is never far away.

A very lovely tribute has been paid to the memory of the late Mary Hayden. It is a folder containing a recollection of her many fine qualities as a nurse and as a woman. In conclusion, Miss Hayden is given the title, "The Mother of Mosher's Men"; and the signatures of Dr. Ralph J. Frackelton and Dr. Burton E. Lovesey reveal the authorship.

Lt. John F. Bell, MC, AUS (*Or.* 1941) wrote from "Somewhere in Texas" on October 12:—

> Since entering the service I have had so many changes of address that the front of the envelopes containing my copies of The News no longer have space for another correction. Ulysses, Pa. is where my family will probably be living until after the war, so could you please change my address to read that way.
>
> I certainly have enjoyed getting the publication. I feel that the material is definitely worth while and that The News should continue functioning after the war is over.

Not since the November 1942 issue has the name of Capt. Samuel B. Beaser, MC, AUS appeared on our pages. A brief letter, written October 15, says only:—

> I am now situated close to "home base" at the Waltham Regional Hospital, where I am Cardiac Consultant for the First Service Command. No matter how close, though, I always look forward with interest to reading each edition of The News.

Captain Beaser was Graduate Assistant in Diabetes at M.G.H. before he entered military service. Wonder where he's been during all this time?

Capt. Clarke Staples, MC, AAF (*gr. asst. S* 1942) is now with a Field Hospital.

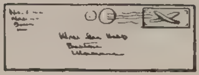
Lt. James E. Conley, MC-V(S), USNR (*WS* 1941) returned last January from his post in a Naval hospital in the North Atlantic Area. He was recently assigned to a ship, and stopped in at M.G.H. for a visit before starting off on his second tour of foreign duty.

Our August issue contained the report that Lt. Frederick C. Gevalt, Jr., MC, USNR (*r.p.* 1943) had been wounded during the invasion of Normandy. Lieutenant Gevalt has somewhat specialized in invasions, having made the complete circuit from North Africa to France.

He appeared at the office of The News the other day, and sat down for what proved to be a most interesting visit. During the conversation we inquired about the seriousness of his injuries and received the reply we might have expected: — "Very slight, very slight." And that's all there was to *that* particular subject.

Due to one story Lieutenant Gevalt told, we now wonder—as never before —under what possible situations each copy of The News, sent overseas, may be read. He said, in effect:—"I have read The News under almost as many different conditions as there have been issues. The last one I received over there I read, from cover to cover, curled up in a fox-hole. My nearest neighbor had dashed out of his hole to get the mail for both of us. He came running back to me, holding high above his head a letter and The News. That's how I read that one."

Since his return Lieutenant Gevalt was in North Carolina for a short while, and is now transferred to Chelsea Naval Hospital.



All material of a military nature in this and every issue of The News is first cleared for publication by the local Public Relations Department of the Army or Navy.

The following new addresses have been received:—

Lt. Donald V. Baker, Jr., MC, AAF (*ES* 1943), Sec M, 223rd B.U., Dyersburg AAF, Tenn.
Lt. Dante Campagna-Pinto, MC, AUS (*M* 1943), 109th General Hospital, Fort Bragg, N. C.
Lt. Stephen L. Madey, MC, AUS (*CM* 1944), Cushing General Hospital, Framingham, Mass.
Comdr. John P. Monks, MC (*WM* 1931), Corps Evacuation Hospital #2, Camp Pendleton, Oceanside. Cal.
Lt. Fathollah K. Mostofi, MC, AUS (*a. P*), Tilton General Hospital, Fort Dix, N. J.
Capt. Frederic W. Rhinelander, II, MC, AUS (*ES* 1937 & *Or.* 1938), DeWitt General Hospital, Auburn, Cal.
Lt. Thomas S. Risley, MC, AUS (*ES* 1942), 6th Service Command, Veterans Administration, Hines, Ill.
Lt. Royal S. Schaaf, MC, AUS (*WM* 1943), Station Hospital, Randolph Field, Tex.
Major Richard Schatzki, MC (*r.*), McGuire General Hospital, Richmond 19, Va.

We are sorry to learn that Major Henry H. Faxon, MC (*ES* 1927) is a patient at Fitzsimons General Hospital, Denver, Colorado. Major Faxon has been with the 6th General Hospital Unit since its earliest days at Camp Blanding.

A letter from Lt. Col. David B. Dill, QMC (*res. fel. M* 1925-27), written October 5, contains, in its last paragraph, a question for all of you to answer. It will be interesting to have, from Colonel Dill, a report as to the number of responses.

> I spent 1941, 1942, and part of 1943 at the Aero-Medical Laboratory, Wright Field, in charge of physiological research in problems of military aviation. Since then I have been in the Office of the Quartermaster General, and am now Assistant for Product Analysis. Here in the Military Planning Division (Col. Georges F. Doriot, Harvard School of Business Administration, Director), we are concerned with all the soldier's individual equipment and are responsible for research and development on clothing, footgear, handgear, rations, stoves, and mildewcides. We set up laboratory and field tests, send observers to theatres of operation, determine mosquito protective qualities of clothing in Florida, the nutritional adequacy of our rations in Colorado, and the performance of new combat clothing in Italy.
>
> It was my privilege to spend several weeks in North Africa and Italy as a Quartermaster observer during November and December 1943.
>
> May I add a "military request" to this note? I would appreciate hearing from any medical officer who receives your most informative and well-read News and who has any constructive criticism to make of Quartermaster equipment. For example, we are now being told that mosquito protection in clothing is no longer an important military characteristic. What do your readers say?

Colonel Dill's address is Office of the Quartermaster General, Washington 25, D. C.

Capt. J. Wallace Zeller, MC, AUS (*WM* 1935) is with the 140th Station Hospital.

Capt. Sedgwick Mead, MC, AUS (*EM* 1940 & *P* 1941) has been promoted to this rank.

A search for the whereabouts of Comdr. Robert F. Legge, MC (*Or.* 1935), after his August NEWS was returned to us, brought forth a letter from Mrs. Legge. She wrote, on October 15:—

> Dr. Legge was promoted to the rank of Commander in October 1943. He went on active duty at Mare Island Naval Hospital, San Francisco, Cal., on December 17, 1941, was transferred in July 1942 to a base hospital in the New Hebrides, and later had temporary duty on Guadalcanal. His entire medical unit received a Presidential Citation for services during this period.
>
> In May 1943 he was transferred to a seaplane tender, where he became senior Medical Officer in December 1943. His tender was at Tarawa and Kwajalein. In May 1944 he was detached and assigned as Chief of Orthopedic Service at Treasure Island Naval Hospital, San Francisco. After three months' service there he was sent to the U.S. Naval Air Station Dispensary, San Diego, Cal. He is still there, in charge of the Orthopedic Service.

Capt. Luke Gillespie, MC, AUS (*a. obst.*) writes from an advance New Guinea base:—

> Have landed in enemy territory, and the more I actually see of this war the better I like it. It seems incredible that you can sun bathe on a beautiful South Sea Island beach, and watch our side strafe, bomb, and shell hell out of Jap positions only a few miles away.
>
> Have changed from pidgin English—relatively easy—to the Malay language—rather difficult. The natives here are quite intelligent and very friendly, but take up a lot of time and effort by their constant saluting—men, women, children, and even some of the babies that the women carry on their backs. Not to return their greetings would hurt their feelings.
>
> The following story, said to be true, gives a good picture of the fighting out here: A Jap prisoner, questioned as to the jungle-fighting ability of the various armies, replied, "Australians the best, then native infantry, then the English." The American examiner, rather upset, asked about the Americans. The answer was, "Americans come, jungle go."

We have a letter from Lt. Comdr. Bernard M. Jacobson, MC (*a.p.*)—the first since he was assigned to a station "beyond the seas". It was written September 24.

> This is a hospital on a tiny island in the middle Solomons. Since March 20, when we opened for patients, we've been extremely busy, serving a vast area in this expanse of water. A continual stream of casualties from unpublicized events arrive here from as far north as the Admiralties, and the recent battles of Saipan and Guam have contributed their share.
>
> MGH sons (and daughters) are scarce out here. Tom Gephart [*WS* 1941] was on this island until recently, after having seen action further north. And one of our finest nurses is Mary Staats, who graduated in '37, and who shares with me the periodic lift to our spirits brought by THE NEWS.

Lt. Comdr. Harry M. Spence, MC (*WS* 1932) is still at an Advance Base in the Southwest Pacific. In a letter to Mrs. Means, which announces his promotion, he writes:—

> Just completing my sixteenth month on the "Coconut Circuit", doing general surgery and a surprising amount of urology. Also run a native yaws clinic on the side.

Dr. Henry R. Viets received a letter from Comdr. Robert S. Schwab, MC (*r.s. N* 1935), written in September. Dr. Viets has sent it on to us. Commander Schwab, now with an LCT Flotilla, writes:—

> I have finally got some sea duty that is most interesting to me. It is really a good change to get away from shore hospitals for a while.
>
> You might tell Dr. Faxon I have recently seen [Comdr.] Casten [*N* 1929 & *Oph.* 1931] and [Comdr.] Channing Swan [*WS* 1925], and they are looking fine. Also, that the MGH NEWS is most interesting to get, even if it takes so long in coming.
>
> I hope the Brain Wave job got a renewal from the Polio Foundation. [It did. *Editor.*]
>
> I still have not seen a single case of myasthenia since I have been out here, nor have I heard of any.
>
> I still have an interest in seasickness, and see cases even in the placid Pacific.

On August 21 Capt. William V. McDermott, Jr., MC, AUS (*WS* 1943) wrote his first letter to THE NEWS.

> Due to my own failure to inform you of my change of address, THE NEWS did not follow me into or across France. News from home is always at a premium over here, and your paper is one of the few contacts with friends from the M.G.H., both at home and abroad. From reading some of the letters in the past issues, it is unnecessary to try to emphasize any further how much we all miss the pleasant days at the M.G.H., and how much we look forward to and enjoy THE NEWS. So far, the mail seems to be able to travel as fast as the Army, so I have hopes my copies will catch up with me before long.
>
> Regards to every one back at the General.

Another "silent one" heard from! Lt. John H. Peters, MC, USNR (*WM* 1943) is with an LCT Flotilla Staff. His letter is dated France, October 5.

> After a short period of indoctrination at the Naval Training Station, Newport, Rhode Island, I was ordered to the amphibious force and assigned as medical officer to this outfit. After some time spent in Norfolk, we came overseas in February. Prior to D-day I left the outfit for other duty, and have spent most of my time in or near France since, having returned to my original outfit some time ago.
>
> I have seen no MGH people over here, although I have missed Lt. Ben Eiseman [MC, USNR (*ES* 1943)], Capt. Robert S. Palmer [MC, USNR (*WM* 1927)], and Lieutenant Commander Tolman by narrow margins, at various times. At the moment all present are watching the news closely and dreaming of Christmas in the States. May it come true!

An undated letter, together with some snapshots, came to Dr. Faxon from Lt. Col. Moses S. Strock, MC (*oral s.*). Colonel Strock is included in the "Over there" group pictured in our September issue. This interesting letter from him reads:—

> The reasons for my seeming neglect about writing are many and varied—but underlying them all is the inertia that gradually takes hold of us. I remember that at first I could think of letters about our peaceful existence in England that would interest you. Then our anticipation of D-day made me want to wait until we'd at least reached France. Our first few months in France were so full there was little time for writing. Now we think of Christmas coming up—the third abroad—and get apathetic about writing.
>
> Yet I know there is much here that folks at home would like to hear about — and I wish I were able to describe some of the daily scenes. If I could but draw the high lights in this study of contrasts, it would, I think, give you a paragraph or two. It is the notice in THE NEWS about a photographic exhibition that finally gets me down to writing. I'm afraid these snaps won't reach you for October 16, but they may, so I'll tell you about them.
>
> In the bathing scene our men are enjoying their first bath in France. These portable installations, set up by the Q.M., by the side of a small stream, were like manna from heaven. It is impossible to describe the sensation of a *warm* shower after about four weeks of trying to wash out of a helmet. Most of us had the feeling that no Army except ours would plan ahead to set these up so early in the game. It's too bad the picture doesn't show the sport that went on under these showers.
>
> The "clear of mines" picture shows our earliest French neighbors trying to describe a mine accident. For weeks after the Front moved away from us our worst casualties were French civilians, mostly children and old people. The wounds of these children beggar all description. Schrapnel in a soldier is one thing. But to see six or eight children all brought in at once, injured by a single mine, is another. Usually sisters and brothers, the havoc is increased when one sees the picture *in toto*. The father, a prisoner in Germany; the mother, frail and war-worn and unable to understand English, comes with most of her family, all felled by this sudden blow. They had been evacuated. They returned to their battered home to find, after a week or so, that some of their possessions could be salvaged. Then, as though planned by the Devil himself, concealed near the cider barrel or in an abandoned outhouse or shed, this diabolic thing!
>
> The snapshot of German prisoners at work shows two of them carrying planks to form seats for an improvised Jewish high holiday service. These two prisoners work in the dental clinic. Efforts to understand the true feelings of these prisoners were of no avail. One said he was a Chek, born in Prague and forced into the Germany Army. The other made no pretense about not being German. But after two months we learned to trust neither one. Particularly after the arrival of the wounded from Brest, the arrogance of most of them was very trying. To see these haughty so-and-so's, walking by the wards where the French kids lay, was to set most of the French visitors on fire. And I couldn't blame them at all.
>
> Lt. Col. Earle Glendy [*r.p.* 1934] visited us several times, but I haven't seen him for three or four weeks—probably moved up.
>
> The picture which you printed in the September NEWS shows nearly all of the MGHers who were with the 5th. It didn't include [Lt. Col.] Ted Badger [*EM* 1928] who was then Chief of the Medical Service. Ted is now in England, Consultant in Medicine to a group of hospitals. The picture included [Lt. Col.] Neal Crone [*WM* 1933] who is Consultant in Medicine to the 1st Army and who was visiting us that day. [Lt. Col.] Rich Warren [*WS* 1936] was not in the picture, either. He also has left us to be Chief of the Surgical Service of the 158th General. Other than these changes the group is intact, [Capt.] Henry Brewster [*WM* 1940] having rejoined us after recovering in England as our first casualty in France.
>
> Life in October in a tent in France is not exactly what it has been cracked up to be—and this letter has exhausted the kerosene in my lamp.
>
> Please give my best regards to all my old friends.

Major Champ Lyons, MC (*WS* 1933) receiving the congratulations of Major General Morrison C. Stayer, the Surgeon, NATOUSA, who has just presented him with the Legion of Merit for his work in initiating and guiding the use of penicillin in the Mediterranean Theatre of War.

Lt. Irad B. Hardy, Jr., MC, USNR (*ES* 1939) receiving the Navy and Marine Corps Medal "for extraordinary heroism while serving against enemy Japanese forces on Kwajalein atoll, Marshall Islands, January 31, 1944".

Capt. A Merton Bassett, MC, AUS is now at Headquarters of the 8th Air Force. Captain Bassett was Research Fellow in Medicine here in 1941-42.

Notice of a promotion and a new address has arrived for Capt. John S. Chase, MC, AUS (*ES* 1940). He is now with the 21st General Hospital.

Capt. Lewis K. Dahl, MC, AUS (*r.p. WM* 1942) has been transferred to the 105th General Hospital.

Capt. Daniel S. Ellis, MC, AUS (*EM* 1941) is at Headquarters of the 133d Field Artillery Battalion.

We have received word that Major Merrill Moore, MC has been transferred to the 21st Evacuation Hospital, Major Moore was Graduate Assistant in Neurology in 1933-34.

Lt. Harold E. Elrick, MC, USNR (*M* 1944) is now on a DE boat.

Dr. Faxon has received a long letter from Col. Thomas R. Goethals, MC (*ES* 1917), written on September 22. Here are the sections of general interest (pun intended, this time):—

> We had a relatively quiet August, but with recent activities north of Florence we have begun to pick up again. The rains have started and have converted our camp site into a respectable quagmire. We had considered moving the nurses into the building, but they seem to prefer tent life to being packed into dormatories. Perhaps they are right. A rash of matrimonial intentions has broken out among them and I have spent more than a little time, like the Lord Chancellor, considering whether or not evidence of a long engagement or courtship entitles them to special consideration.
>
> With reorganization under the revised Table of Organization we have lost Burrage, Goldstein, and Long. The last two were with us for ten and six weeks respectively; but Burrage, you will recall, was one of the original contemptibles. We, too, are short of nurses, since very few nurse replacements are coming to this theatre. How we shall fare if NATOUSA and ETOUSA combine remains to be seen.
>
> Organization Day was celebrated on the 1st of the month. My speech this year was a résumé of progress from 1943 to 1944 and is hardly worth repeating here. In the evening the men of the detachment staged a really excellent show, burlesquing some of the foibles of the officers and nurses. At present the hospital baseball team is either the champion or the runner up in the Base Section playoffs. This afternoon's game will settle the point.
>
> Sherman Thorndike's job with us has, after a year of uncertainty, been finally washed out. He has been assigned to the medical section of the headquarters of the Rome Allied Area Command. We hate to see him go and he dislikes the idea, too; but since he has been rendered excess with us by the impersonal effects of a change in Tables of Organization, I think he is finally convinced that the move has not been in any way a reflection on his capability. His present job is a good one, if not too arduous, and there is some ground for belief that he may achieve command of a station hospital. I hope so, for it will definitely "fix" him in a job where he'll be his own boss, in so far as any one in the service can be.

THE NEWS

No. 27 Boston, Mass. December 1944

NEUROLOGICAL SERVICE AFFAIRS

The Neurological Staff entered the World War with a group of mature men, and therefore has lost rather less than most services. Three are over the retiring age, but are retained "for the duration". We like to think that, like the fifty over-age destroyers, these three over-age men are helping to win our war.

Dr. Schwab was early in military service, at first stationed at Charlestown with the privilege, for more than a year, to continue his work here. During this period electroencephalography for the Navy was one of our contributions. For two years he has been in the Pacific, and letters state that he is busy and still interested in the seasickness problem.

Dr. Caner has recently gone to Washington on undeclared business, presumably for four months.

Needless to say, our Staff has been well represented on the draft board. Dr. Cole has collaborated with Dr. Denny-Brown on some work for the national research council, and Dr. Viets has traveled extensively on missions for the same body.

Our resident staff has of necessity been halved, and periods of service shortened. We now have one resident for 9 months, and one house officer in rotation on the medical service for 6 weeks. Naturally, this arrangement is inadequate and makes it essential that both remain in perfect health. It is hoped that the government will be more generous in the near future in the staffing of civilian hospitals.

Teaching has altered somewhat. The 3rd year groups in neurology are now eight men instead of four; but individual teaching is still possible by dividing the groups between O.P.D. and wards, thus saving the number of instructors and maintaining the personal contact of student and patient. Fourth year teaching has almost ceased, as the new prescribed month in psychiatry leaves almost no possibility of elective.

Laboratories intimately associated with neurology continue to function with little change and no loss in efficiency, thanks to the excellent technical help which has been built up over the past years. E.E.G. under Dr. Abbott and E.M.G. under Dr. Brazier are doing more and more work. Coöperation with Dr. Watkins and Dr. Finesinger in the clinical fields has been especially effective.

The spinal fluid laboratory continues to function as usual; and Dr. Kubik's neuropathological laboratory runs smoothly and yields its quota of cases for C.P.C. conferences. His study of sub-dural empyema may be singled out as of especial significance.

Two special sub-clinics, begun before the war, continue without interruption. Dr. Viets' clinic for myasthenia and certain other muscle disorders shows a gradual increase in patients, so that this group now consists of well over 100, a large number for a rare disease. Evaluation of thymectomy in myasthenia is one treatment under present discussion. Thus far Dr. Viets has been noncommittal on the success of surgery. Dr. Cole has not only continued his clinic for speech and language disorders, but has installed one of his associates on White 11 to carry out comprehensive tests of cerebral function in a more complete manner than normally performed for the estimation of intelligence quotient.

Histamine Therapy in multiple sclerosis was recently suggested by Horton of the Mayo Clinic. It has been capitalized by the lay press to a disturbing extent. We have used it in a number of cases, and will continue to do so until proof of its value is established. To date a fair estimate seems to be as follows: acute symptoms and signs *may* resolve more quickly than with no treatment; chronic symptoms seem to be unaffected. We have seen no ill effects from this form of treatment which is somewhat arduous, requiring daily prolonged intravenous injections of histamine for a period of five weeks.

The efficient hospital program of the government absorbs all war wounded, so that this type of neurology and neurosurgery, too, is similar to peace time. This fact precludes our staff from having any significant opinion as to war neurology.

We are now looking forward to the future and the return of our missing staff members. We hope, also, for one or two men of experience to study our ever-increasing problems. The patients and the facilities are still here and we are hopeful that those who return will find the opportunities as wide and generous as they have always been at the Massachusetts General Hospital.

James B. Ayer, M.D.,
Chief of Service

* * *

MUSIC IN THE CHAPEL

In these times of stress, many people have found that the little Chapel at M.G.H., where they may get away from the workaday world and into a devotional atmosphere, has added much to their peace of mind and helped renew their spiritual strength. Because of the thoughtfulness of the founders of the Chapel two fine musical instruments were included—an organ and an automatic radio-phonograph; and in an effort to utilize the Chapel to its best advantage, programs of religious and other great music have been presented for some time.

On Wednesday and Sunday evenings at seven o'clock, members of the hospital staff, patients, and occasional visitors gather for a service of singing. Some come, perhaps, because their hospital duties have kept them from church, and others because they simply enjoy getting together and singing their favorite hymns, which can be requested. At some of the services there have been as many as nine beds and several wheel chairs in the Chapel.

On Monday and Thursday evenings from seven to eight, the recorded concerts of great classical and devotional music are being continued from last Spring. There is usually a major work—such as a symphony, concerto, or chorale—and one or two shorter pieces. The Hospital already has a small collection of records which it plans to enlarge, and several members of the staff have been generous in their loans of records for these concerts. The program selections have been made to include not only classic favorites—such as Beethoven and Tschaikovsky symphonies, negro spirituals and other religious music—but to present some of the finer works of lesser known composers. Any suggestions for these programs are most welcome.

As time goes on, it is expected that "Music in the Chapel" will grow in its scope and in its function of bringing greater devotional opportunities.

G. H. H.

War Service has moved into bigger and better quarters and is anticipating a very active winter. Our goal will be reached when we can do *all* the errands (with no errors) asked of us by the nursing service. To accomplish this we can use at least thirty workers daily. It is with pride we can say we have hit a high of 130 hours combined total for *one day*, and we are still growing.

In order that the quality of our work may be stepped up, a new system of checking on the old workers, and of more thorough training of new workers, is being used.

As volunteers we recognize the fact that we are inexperienced in hospital life, and suggestions for improvement of the War Service are always welcome. We thank the hospital personnel for their patience and help.

JOHN HARPER BLAISDELL

John Harper Blaisdell, 58, formerly on the Dermatologic Staff, died suddenly on October 25, 1944. He had served as dermatologic house officer from July 1 to December 31, 1911, and was graduate assistant from 1911 to 1916, at which time he became a member of the Dermatologic Staff, serving until 1928 when he resigned. During this period he also taught in the Harvard Medical School as Assistant and Instructor in Dermatology.

Dr. Blaisdell received the degree of A.B. from Dartmouth in 1907 and M.D. from the Harvard Medical School in 1911. On February 15, 1912 he married Inez Frances Kimball of Rockford, Ill. They had two sons, John Harper, Jr. and Elliott Kimball. Immediately upon completing his internship he began the practice of dermatology and continued active practice in this specialty until his death. It was during his internship that Ehrlich's "606" began to be available in this country and Dr. Blaisdell had the opportunity of administering some of the earliest "606" given at this Hospital. He was also one of the earliest dermatologists in New England to make use of radium for cutaneous therapy. He also became a member of the Staff of the Boston Dispensary dermatology department about 1914 and continued in that capacity for several years.

Dr. Blaisdell's particular medical interest and his greatest contribution was in industrial dermatology. He appeared frequently before the Industrial Accident Board and he was sought by numerous insurance companies and employers for opinions concerning patients with cutaneous diseases associated with occupational causes. He was interested not only in the correct diagnosis and just settlement of each individual case, but also in the intricacies of the rules and laws which concerned the particular case. His numerous reports in this field were clear, logical, and often expressed in striking phrases to emphasize special features of the case.

He had been successively secretary, vice-president, and president of the New England Dermatologic Society. He was a diplomate of the American Board of Dermatology and Syphilology and had been a member of the American Dermatological Association since 1930. He was consulting dermatologist for several hospitals about Boston.

He had numerous other interests. He had been a director of the Associated Hospital Service Corporation since its inception in 1937, having been elected as one of the representatives of the Massachusetts Medical Society. He attended its meetings conscientiously and contributed actively to the success of the Blue Cross and Blue Shield. Furthermore, as a councillor for many years and as a member of the Public Relations Committee of the Massachusetts Medical Society, he was active in clarifying the relations between the society, its members, and the public. In recent years, as a member of the By-laws Committee, he had an important part in formulating the By-laws under which the Society now operates. He had also been President of the East Middlesex District Medical Society. In his home town of Winchester he was much interested in civic affairs, serving as chairman of the finance committee, member of the Board of Selectmen, and Chairman of the Board of Health for many years.

As hobbies he maintained constant interest through the years in philately and genealogy. He was an enthusiastic stamp collector, and he had made many extensive studies of his own and related families. He had been instrumental in forming the Blaisdell Family Association and was its President. An excellent dermatologist, an able teacher, and a forceful witness in court and before the Industrial Accident Board, given to strong convictions and capable of expressing himself forcefully and logically, Dr. Blaisdell has left his imprint for the better upon the community.

C. G. L.

It is our sad duty to report another casualty in our Hospital employee group. Joseph Comeau, who had worked as an orderly at the Baker Memorial from November 7, 1940 to May 21, 1942, left with the Massachusetts General Hospital Unit. Word has been received by his family that he was killed in a motor ambulance while in line of duty in France, on September 5, 1944.

Sgt. Karl W. Buschenfeld, Jr. died in a prisoner-of-war camp, somewhere in the European Area, as the result of wounds received in action. Sergeant Buschenfeld's father is head of our Surgical Appliance Shop and has been an employee of the Hospital for many years.

* * *

The regular monthly meeting of the Medical Staff was held in the Ether Dome on Monday, November 6, at 5 P.M. Dr. Juan Reforzo-Membrives of Buenos Aires spoke on "Studies of water and sodium metabolism in Addison's disease". Dr. Reforzo has been working in the Thyroid Research Laboratory for some months, but the report he presented to the Staff was based upon work which he did at the Mayo Clinic.

Two other medical meetings, held in the Dome, are worthy of special notice. On September 26 Professor Herbert M. Evans, Hertz Stein Professor of Biology and Director of the Institute of Experimental Biology of the University of California, addressed the Staff on the subject of "Pituitary growth hormone", of which he was the discoverer. On October 16 Dr. Hans Selye, Associate Professor of Histology at McGill University, Montreal, and Dr. Johne S. L. Browne, Assistant Professor of Medicine at McGill and Physician to the Royal Victoria Hospital, Montreal, spoke on "Alarm reaction", a phenomenon discovered by Dr. Selye.

The *New England Journal of Medicine* for September 21 carried the following article:—

> A limited number of fellowships are being offered for training in extramural child psychology. Selection for these fellowships is made by the National Committee for Mental Hygiene following the recommendation of eligible applicants for appointment. . . . Candidates for fellowship award should have had at least a general internship and two years devoted to psychiatry in an approved mental-hospital service, in addition to other qualities fitting them for extramural service. . . . The stipends vary slightly with location and status of the fellow but in general range between $2000 and $2400. Requests for further information about these fellowships and applications therefor, should be addressed to Dr. Milton E. Kirkpatrick, National Committee for Mental Hygiene, 1790 Broadway, New York 19, N. Y.

◆

On November 1, 1944 all nurses, graduates and students, started on a new salary basis. Graduates receive a higher cash salary, but pay for their maintenance and laundry if they live in a residence, or have this money for rent if they live out. All meals are on a cash basis. Student nurses are issued books of tickets which are used in the dining room on the basis of one dollar a day, for three meals. The cafeteria now offers a wide variety of choices and has a "special" at noon and at night. This provides well balanced meals on the daily food allowance. Adjustments and improvements are still in progress, and many comparisons are being made to see what choices are selected and how the nurses manage to stay within or below their budgets.

On October 31 the first day of a two-day Institute on Orthopedic Nursing was held at the Hospital. The second day was spent at the Boston City Hospital. This Institute was sponsored by the Eastern Massachusetts League of Nursing Education, and proved to be very successful. There was a large attendance.

There are now 240 alumnae of the School of Nursing who, we know, are serving with the armed forces at home and abroad. There may be others, in distant units, about whom we shall be glad to have news and addresses.

Among the 44 flight nurses who were awarded air medals by Major General John K. Cannon, Commander of the 12th Air Force, was Lt. Lucia W. Sloper, ANC (*MGH* 1939). These nurses had helped in the aerial evacuation of 170,000 sick and wounded from forward areas in the Mediterranean Theatre, and were cited for "meritorious achievement while participating in aerial flight; for professional skill and devotion to duty displayed by each crew member in evacuating sick and wounded from the combat zone, which reflected high credit upon the military service of the United States."

Copies of the citations which accompanied the awards of merit presented to Major Champ Lyons, MC (*WS* 1933) and Lt. Irad B. Hardy, Jr., MC, USNR (*ES* 1939) arrived after the columns for our November issue had been set up. We did, however, make space for pictures of these two men receiving their medals, and now a more complete story can be given about each of them.

A letter from Col. Edward D. Churchill, MC (*WS* 1922), written to Dr. Faxon on October 10, pays high tribute to the work with penicillin done by Major Lyons. Sections of the letter itself, together with the text of Major Lyons's citation follow.

Despite the news from home that the war is over, there is little evidence of it over here. I have just returned from a tour of 7th Army in France. The weather is setting in—and the mud deep. In a few more days I will be on my way to 5th Army where there is also weather and mud. Everything is going well with the Medical Service, although we are very short on surgeons with training and experience that qualify them for extensive wound management. There is little talk these days of not having enough to do. Many of the men who have been over here nearly two years are getting pretty tired—but so far the high standards that have been set are being rigidly maintained.

I see the 6th from time to time, and also meet up with the individuals that have been moved out. Cantlon, Ludwig, Ellis, and Taylor are all doing well in France. The latter has Staples with him as Orthopedic Surgeon. Sullivan has done an extraordinary job for me on the blood bank system that was set up in February. Now he, Simeone, Mallory, Burnett, and Beecher are on a special study at the front with a mobile laboratory. I wonder, sometimes, whether any of us will be able to settle down again—particularly those of us who have settled into the life of traveling salesmen.

I am sending a short write-up of Champ Lyons. He has done a superb job and brought great distinction to the M.G.H. as well as credit to himself. He will be on his way home shortly, as during the summer he picked up infectious hepatitis without visible jaundice, and kept on at work although feeling miserable. When I finally flagged what was going on I put him in hospital where he has spent the last six to eight weeks. He must have a long convalescence.

Before leaving the North African Theatre, Major Lyons was awarded the Legion of Merit with the following citation:

CHAMP LYONS, O-527945, M.C., AFHQ, Medical Section (U. S.): for exceptionally meritorious conduct in the performance of outstanding services from 4 January 1944 to 1 July 1944. Major Lyons initiated and guided the methods by which the new and potent agent penicillin has been utilized in the treatment of the seriously wounded. From the most forward mobile hospitals of Italy to the large general hospitals of the Interior, he has personally operated upon and studied the treatment of the wounded, instructing his seniors and subordinates alike in a change of surgical procedures that is productive of better results. Lives and limbs of soldiers have been saved and the disability and deformity of wounds materially reduced. His professional judgment, combining a basic knowledge of the science of bacteriology with skill and experience in practical surgery, has cast new light on the age old problem of wound surgery. At no time has he spared himself mentally or physically, and the example he has set is an inspiration to all surgeons in the service.

And now for Lieutenant Hardy.

The Public Relations Section, Hq. Eastern Recruiting Division, U.S. Marine Corps, Philadelphia, sent the Hospital the following release:—

Lieutenant (MC) Irad B. Hardy, Jr., Navy doctor attached to Fourth Marine Division artillery—a former All-American tackle at Harvard and surgeon at Massachusetts General Hospital—has received the Navy and Marine Corps Medal.

The medal was pinned on Lieutenant Hardy by Colonel Louis G. DeHaven, following which the doctor took the salute of the division's entire artillery component, which paraded past him headed by the division band.

Accompanying the medal was the following citation, signed by Admiral Chester W. Nimitz:—

"For extraordinary heroism while serving against enemy Japanese forces on Kwajalein atoll, Marshall Islands, on January 31, 1944. During the early stages of the battle, three LVT's (amphibious tractors) carrying him and 40 Marines capsized on a reef. He, although narrowly escaping death himself, repeatedly swam through the surf, pulling injured and dazed men to a channel marker. After all but seven of the men had reached this point of comparative safety, he, at the risk of his own life, dauntlessly set out over treacherous, submerged reefs for a grounded LCI (Landing Craft Infantry), which was approximately 200 yards away. He obtained a line from the LCI and courageously brought it back to the men precariously stranded on the marker. He then, although exhausted, directed and assisted the injured men to safety aboard the LCI. By his great personal valor, aggressive leadership, and fearless devotion to duty, he saved many lives. His conduct throughout was in keeping with the highest traditions of the Naval Service."

It is very interesting, by way of contrast, to read again Lieutenant Hardy's own casual reference to this episode which was published in last April's NEWS. It had come in a brief letter from him to his family. We can't resist repeating that letter here.

I'll tell you briefly what happened. On our way in to the beach three of our amphibious tractors tipped over in the surf. I was in one of them. I helped get the men ashore. Good gosh, the waves were 20 feet high at least. I lost all my gear I had with me, but am thankful to be alive.

Lieutenant Hardy later wrote that he was sending home his waterproof watch, which "went bad"—after three hours in the water!

Lt. Peter T. Brooks, MC, USNR (*ES* 1943) has received a citation for outstanding services, a copy of which was sent to us by one of our Staff. It reads as follows:—

UNITED STATES PACIFIC FLEET
Flagship of the Commander-in-Chief

The Commander-in-Chief, United States Pacific Fleet, takes pleasure in commending
LIEUTENANT (JG) PETER THACHER BROOKS, (MC)
UNITED STATES NAVAL RESERVE
for service as set forth in the following
CITATION:

"For outstanding services rendered to war casualties at Saipan Island, incident to the invasion of that island, 15-22 June 1944. As a Medical Officer serving aboard an attack transport ship, he worked skilfully and tirelessly administering to wounded men evacuated from the combat zone. His professional skill and steadfast devotion to duty were responsible for saving many lives and were in keeping with the highest tradition of the naval service."

(Signed) C. W. NIMITZ
Admiral, U.S. Navy
Commendation Ribbon authorized

At a meeting of the Board of Trustees, held on October 27, it was voted to appoint the following as Interns on the Medical and Surgical Services, beginning July 1, 1945:—

Medical

Jane E. Denton
Carl W. Gottschalk
Buford Hall, Jr.
Richard B. Harvey
Norman P. Hill
Byrl J. Kennedy
Earle D. Mason
Raymond V. Randall
John C. Seed
James M. Stewart
Albert J. Stunkard
Isaac M. Taylor

Surgical

Glenn E. Behringer
John W. Bell
John P. Bunker
John M. Carey
William S. Edwards
Dwight M. Fowler
James A. Martin
Jack S. Parker
John W. Ratcliffe
Thomas Rutter
Worthington G. Schenk, Jr.
Robert S. Shaw
William D. Shorey

The Trustees also voted to appoint:—

Drs. Henry S. Forbes and Harriet L. Hardy as Assistants in Medicine;

Dr. Hans Weisz as Intern in Anesthesia for one year.

At their meeting on November 1, the General Executive Committee voted to appoint Dr. John B. Tompkins as Graduate Assistant in Medicine.

From the Director's Office have come the following notices:—

Dr. Stanley L. Chiu has been appointed Clinical Fellow in Anesthesia, beginning November 1;

Dr. Ralph H. Luikart, Jr. completed his service as Resident on the Dermatological Service November 4, because of being ordered to active duty in the Army.

⁂

MASSACHUSETTS EYE & EAR INFIRMARY

Mrs. Ada Messenger, Librarian at The Lucien Howe Library of Ophthalmology since it was started in 1928, resigned November 1. She is replaced by Miss Jeanette Loessl, formerly of the New York Public Library.

Dr. H. P. Mosher (*ES* 1897) has been re-elected President and Dr. LeRoy A. Schall re-elected to the Executive Committee of the American Board of Oto-Laryngology.

At the recent meeting of the American Academy of Ophthalmology and Oto-Laryngology, held in Chicago, Dr. Moses H. Lurie (*s. Oto-Lar.*) read a paper on "Deafness, its causes and what can be done about it", and Major Clair M. Kos, MC (*Oto-Lar.* 1941) spoke on "The effect of barometric pressure changes upon hearing". Dr. Schall's exhibit on "Cancer of the larynx" was given "First Award—for excellency in presentation".

Fifty-five former students of Dr. Mosher's gathered for dinner on Alumni Evening.

The New England Society of Otology and Laryngology meets at the Infirmary on November 15.

Capt. Joseph Lentine, MC, AUS (*Oto-Lar.* 1936) said in a letter to Dr. Schall, written October 26:—

Once again I'm on the move, this time to Camp Barkeley at the Service Forces Training Center. Nevada was left with some regret because the ENT service was one of the best I have had. On arriving here my assignment was to a general hospital overseas. Unfortunately, I was disqualified because of my back. At present new orders are being expected. There is a possibility I will remain here at the Regional Hospital.

Two weeks ago I met Paul Mertins [*Oto-Lar.* 1936]. He had been with a general hospital and was later removed. He is now assigned to another.

The MGH News is now complete since it has an E&E section. I find it very interesting, and look for it every month to catch up with familiar names and their whereabouts. Of course it gives one nostalgia, but it does make good reading.

Please remember me to the members of the Staff.

Dr. Schall received a letter from Lt. John J. Ballenger, MC, AUS (*Oto-Lar.* 1943), written in September.

Greetings from France! Last evening I came upon Capt. Richard Goldcamp [*r. Oto-Lar.* 1943]—much to my delight—and we immediately settled down to a session of toasting old Boston and all our friends there with the remainder of my precious Scotch. A better time and occasion for use of the whiskey couldn't be found. I remember Boston with a great deal of pleasure, and count my days at the Infirmary among the happiest of my life.

My unit has set up and is now operating a hospital under tents with cement bases, and it works out well enough except when it rains. Our equipment is quite good—better than it was in England—but so far we haven't had many patients. Most of our patients have received fairly adequate definitive care elsewhere, so we have only the loose ends to catch up. I still do all the ENT work, for which I consider myself most fortunate. However, the head and neck cases are far below the extremity wounds on a percentage basis, so I've done some orthopedics, too.

Captain Goldcamp, who is an Assistant Regimental Surgeon, says he spends most of his time inspecting latrines, kitchens, etc., and does very little actual medicine. He is looking forward to returning to the E&E some day.

This letter, replete with tropical atmosphere, was written to Dr. Schall by Lt. Comdr. Herman J. Sternstein, MC (*clin. asst. Oto-Lar.*) in late October.

Much has happened since our last visit together at the Infirmary. To begin with, it wasn't until we were several days out of San Francisco that we learned our destination was to be New Guinea. There were some misgivings about its climatic and malarial conditions. These doubts were in no way dispelled by the sight of the Owen Stanley Range looming up on the horizon. As we drew closer, there was little to suggest civilized inhabitation. The mountains and water were majestic in their scenic beauty, but as far as the eye could see there were dense jungle forests and coconut palms rising from shore to mountains. For the first time, the acute realization dawned upon us of the almost impossible and heroic task which was performed by our Marines and Army to clean out this Jap infested territory and hold their miraculously won beachheads.

We came ashore at one of the large Naval Supply Depots—a real beehive of activity. Road and building construction was going on full blast—dredging along the shore, sand trucks, bulldozers, and jeeps roaring along everywhere. The sharp contrast from the leisurely pace back in the States to the feverish haste seen here created a grim picture of the difficult road that lay ahead for our forces in this part of the world before victory could be won. For the two weeks during which we were stationed at this base, transports, tankers, and LCT's sailed in and out, unloading and loading, then heading for parts unknown. It was common knowledge that everything was underway for the all-out offensive in the Philippines, news of which you have already heard.

While awaiting orders for further transfer, we lived at the Transient Officers' Club—an open air structure with plenty of cots, good (?) mattresses, ample mosquito netting, and a generous supply of moisture. Rain (all 57 varieties), mud, and damp gear became a vital part of our indoctrination. However, there were some brighter aspects to the weather. Presumably, we had arrived at the end (?) of the rainy season and were heading into the hot summer. There was one definite consolation, however — the nights were cool and comfortable.

Our orders finally arrived. Some of the medical officers were transferred to operational amphibious units, others to base dispensaries. Three of us, including Comdr. Bob Joplin [*P* 1929 & *Or.* 1933], were fortunately assigned to this Base Hospital. It is considered one of the nicest activities in this area, ideally located amidst beautiful surroundings. The living accommodations in Quonset huts are excellent, with adequate ventilation. There are hot and cold showers, clean linen, spring beds, and electric light facilities (a luxurious life by comparison with the Army). Our fears about malaria quickly vanished. Malaria is no longer a grave problem—thanks to the excellent work done by malarial control units, and atabrine.

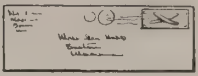
This hospital has 500 beds and is staffed by 18 medical officers. All the services are usually kept busy. Patients are constantly being moved in and out on evacuation parties. We get most of our work from the surrounding dispensaries and smaller hospitals less adequately equipped. This will give you an idea of the scope of our medical care. The other day an Australian medical missionary brought in a little native girl who had fallen from a tall coconut tree four days prior to admission and had sustained a compound fracture of the radius and ulner bones. It had been manipulated and sewn up by a native corpsman at the native village. Staphylococcic dry gangrene developed. The child was admitted moribund. She was given large doses of penicillin and the arm was amputated the next day. She was discharged back to the village in 15 days, happy and well.

There is an interesting variety of EENT cases in our department. Prior to my arrival, Commander Harrington, my Commanding Officer, operated upon an osteomyelitis of the frontal bone, an osteoma of the frontal sinus, and several mastoids, with successful results. We recently had a severe fulminating case of Ludwig's angina with threatened laryngeal obstruction who was treated with large doses of penicillin (50,000 u. for 4 doses daily) and one massive dose of 100,000 I.M. on the 5th day, followed by spontaneous rupture of the abscess into the hypopharynx with rapid recovery. This patient was also given sulfathiazole.

The supply of penicillin is very limited here and is used only in the most critically ill cases.

Surgical and medical problems arising in those who have been out here for 18 months of continuous duty, unless acute, are generally recommended back to the States for further treatment and disposition. It is felt that nothing is to be gained by returning these men to duty in a combat area—many of whom have already developed operational fatigue. It is also the belief in these areas that a more careful screening at the induction centers for physical defects which are rejectable would in the end prevent the tremendous economic expense entailed for the government.

Please convey my best regards to the Staff.



All material of a military nature in this and every issue of The News is first cleared for publication by the local Public Relations Department of the Army or Navy.

Notifications of the following promotions to ranks as indicated have been received:—

Col. James E. Fish, MC (*ES* 1930)
Major Phillip H. Gates, MC (*r.p.*)
Col. Donald S. King, MC (*EM* 1920)
Capt. James E. Kreisle, MC, AUS (*WM* 1943)
Major Eugene E. Record, MC (*NS* 1937 & *Or.* 1941)

Other promotions are mentioned in Colonel Goethals's letter, published in this issue.

The following new addresses have been received:—

Lt. Robert K. Brown, MC, AUS (*WS* 1939), Camp Pendleton, Oceanside, Cal.
Lt. George H. Carter, MC, AUS (*M* 1943), Newton D. Baker General Hospital, Martinsburg, W. Va.
Lt. Ralph H. Luikart, Jr., MC, AUS (*M* 1944), New England General Hospital, Atlantic City, N. J.
Lt. J. Wister Meigs, MC, AUS (*r.p.* 1943), Carlisle Barracks, Carlisle, Pa.
Lt. John W. Norcross, MC, USNR (*EM* 1937), USNT & D.C., SAH #5, Shoemaker, Cal.
Major David W. Wallwork, MC (*ES* 1932), Station Hospital, 2nd OTU, Homestead AAF, Homestead, Fla.
Lt. John L. Wilson, MC, USNR (*ES* 1940), Dispensary, USMCAS, Cherry Point, N. C.

Pvt. Simeon R. Gagne, Co. C, P.A.C. — R.S., 200 Mill Road, Upper Darby, Penn., was a painter here at the Hospital before he entered military service. A very interesting letter arrived from him recently, written October 24.

I have been very grateful for my regular copies of The News.

My work consists of two or three jobs. I am a pole lineman, field lineman, and a rigger. The latter I will be overseas. We are attached to the Air Corps, known as the A.A.C.S. (Army Airwaves Control Service). We construct all radio antennae and steel towers (radio beam).

Most of our traveling will be done by plane—all of our equipment with us on the same trip. Our destination is not known yet, but we well expect it to be the Hawaiian Sector where most men from here have been going. That sector controls the Southwest Pacific. The work is very interesting, as it covers a great deal in the field of construction, telephone line work, and installation of transmitting and receiving antennae. We expect to cover a lot of the country, as we are to go on a job, return to the sector, and then prepare to go to another job on another island or wherever it may be.

Lt. Stewart P. Seigle, MC, USNR (*EM* 1942) has returned from a year and a half in the Mediterranean Theatre. He says that particular area is "chock full of MGH doctors". He was with the Beach Battalion when they made the invasion of Sicily, and worked on the evacuation of the wounded when Italy was invaded. Lieutenant Seigle is now stationed at the Naval Hospital, St. Albans, N. Y.

We receive far too few letters from our nurses overseas. This highly descriptive one came from Miss Ann Moore, R.N. (*MGH* 1940), former head nurse on White 11. It was written in India, July 10, to Miss Helen Sawyer, our ward secretary on White 11.

It is 4:30 in the morning, and my third night-duty has rolled around. Fortunately, we now have only two weeks of it instead of twenty-eight days, but, of course—the usual catch—we get it more often. We are without electricity from midnight to six, so this letter is carried on with the aid of a kerosene or a Coleman gasoline lamp. I'm afraid of both of them and when they go out, as they frequently do, I sit here at the desk in the dark till the ward-man comes to my rescue.

July 8 was our anniversary. We had been here a year! Also, it rained that day—the first of the monsoons. We have been having very bad sand-storms for the past few months—such that would put an ordinary New England blizzard to shame. One day the temperature was 132°. We have been rationed on water for several weeks, so perhaps you can understand how welcome a few drops of rain would be.

Last week Miss Betty Dumaine was here on a short business trip. She came through here on the way over last year but I didn't see her. She inquired for MGH girls, but apparently we three were working. This time I happened to be off duty so we had a nice chat. She didn't have any more recent MGH information than I did, but I happened to have the June copy of THE NEWS which she was glad to see. Her group is doing wonderful work over here.

August 29

My letter was interrupted by an acute headache and slight temperature which landed me in the hospital for a week. It was just a mild case of dengue fever which is prevalent over here, and really resulted in my getting a few days' rest in bed. However, after my release from the hospital the following week, Ethel, Ginny, and I were sent to rest camp. You see, after we have been here a year we are entitled to two weeks at a rest camp in the hills. We considered ourselves very fortunate because we have been very busy and most leaves were cancelled.

Well, off we started on the twenty-ninth of July. This is what we took as luggage: 1 trunk for clothes; 1 barracks bag, with pillows, blankets, and sheets; 1 barracks bag of food, including thirty quarts of canned fruit juice; small box for ice; and three baskets containing medicines, writing materials, books, dishes, and silverware. Needless to say, people made fun of us, but it's really an experience to travel in India. We started on a two-day train ride across the desert. The three of us had our own compartment, and, after dusting it, spraying it with mosquito repellent, and washing the ladies' room with potassium permanganate solution, we were ready to go. Indian trains have the doors on the sides so you can't pass from one car to the next—and we didn't want to. We lived on crackers, dried cereals, and fruit juices for the two days. The trains have no diners, and we wouldn't have eaten in them or in the stations, anyway, because of the prevalent cholera and typhoid. At every stop—and there were many—natives would pull down the windows, look inside, and try to sell us things.

On the afternoon of the second day the scenery became really beautiful! We were out of the desert, and the land became hilly, with an occasional tree or stream. The third day we traveled in trucks up the mountains to the rest camp which is at an altitude of 7600 feet. At last I've seen some of that beauty of India. The scenery far surpassed anything I have ever seen. It was even more beautiful than the Valley of a Thousand Hills in South Africa. We were riding in and above the clouds; and often, looking down into the valley, the clouds resembled huge lakes. My enthusiasm over the view was somewhat curbed by my apprehension, for the roads were very narrow, the traffic strictly one-way according to a schedule, and the sides of the roads had little or no protection.

When we arrived at the rest camp it was raining and was actually cold. They had a fire in the fireplace! The recreation facilities at the camp were limited—tennis, horseback-riding, movies, card games, and reading being the only pastimes. So we left the next day to go on up to Kashmir.

It took us all day, from ten to six, to ride 165 miles in a taxi. The driver stopped for tea almost every hour. That's one characteristic of the natives—they just never hurry, even to cross streets.

When we arrived the sun was shining so our spirits lifted. The three of us hired a house-boat, on which we lived for eight days. It was really very nice. Outside our door the lake was covered with beautiful lotus blossoms. We had a living-room, dining-room, and bed-room on our boat. Four native servants lived on a smaller boat behind us where they did all our cooking. Our boat was anchored, so we used a smaller boat (shikara) to go to the swimming boats and to go ashore. We had a grand time relaxing in the sun, with cool water nearby to cool us off. The mountains surrounded our lake on every side, and they were beautiful. One day we went, by shikara, to see some famous gardens. (Do you remember the song "Pale hands I loved beside the Shalimar"?) The gardens really weren't any prettier than our own Public Gardens.

On August fifteenth we arrived back at the hospital—twelve hours late because roads and tracks had been washed away during the heavy rains. It seemed good to get back just to receive our mail.

Another night-duty has rolled around and we're really busy. We must have at least 75 cases of malaria. The incidence is extremely high because of the rain. I cover three wards at night and, as one is the isolation ward, I feel something like Paul Revere, mounting my bicycle to ride back and forth.

Miss Lewis has received a letter from Major Norman E. Freeman, MC (*r.s. WS* 1935), dated October 6. One paragraph is of general interest.

It's been a long time since I was back in Boston. At present I'm in Assam, India. We've been here for a year and a half, taking care of Chinese and American troops. It's been interesting and a valuable experience, but we're far off the beaten track and feel very isolated.

Last month we published a letter from Capt. Luke Gillespie, MC, AUS (*a. obst.*) from an advance New Guinea base. A more recent V-mail note is dated Dutch East Indies, October 10. It says:—

I am now Commanding Officer for a Portable Surgical Hospital. Food quite good, weather not too bad, never more than one or two raids a night.

Another letter from the Dutch East Indies, also dated October 10, has been passed on to us by Mrs. Conger Williams. It came from Capt. John J. Kneisel, MC, AUS (*EM* 1940) — the first letter from him it has been our privilege to publish. And what a pity to have been so denied, we thought, as we read this graphic description of happenings out there.

We are set up in a lovely location here, in a clean coconut grove based on gravelly, reddish soil. We overlook, from our bluff, a wide coral beach, whence there is always a cool breeze. The weather is much cooler than Brisbane or New York in summer, and much less humid than New Guinea. The moonlit nights are beyond description.

We landed here on D-day, after a lovely sea trip with impressive naval protection. Following the usual bombardment, dive-bombing, and strafing, we landed immediately behind the assault waves. The beach opposition was well in hand by that time, and after Chilt [Crane] and I did a bit of reconnaissance, we set up and were operating within two hours. Our first job was a Jap who had a lovely 50 calibre slug through his butt. Since then I've done more surgery of every type than I have done in all my previous training. We just keep going day and night, but the work is slacking off now as larger units are becoming established. I have never seen a more extravagant display of all anatomy—shells and bombs tear things wide open and present dissections such as one would see in the Warren Museum. We operate with only gloves and minimal drapes, without gowns, masks, etc. I've seen no sepsis attributable to technique—and I've seen not a single clean wound get dirty. We had only one case of gas gangrene during the last show, and none so far during this one. Some of the cases are fabulous. We had a tail-gunner who bailed out at 3000. His chute didn't open, and he landed in a tree. Except for a contused kidney, which rapidly cleared, and a probable compression of the 4th and 5th lumbar vertebrae, he had nothing wrong but a great sadness that he would have to leave the rest of his crew for a time. We strung him up to an improvised Hawley table (a strip of canvas suspended between two trees) and put a great hyperextension jacket on him for evacuation. The other boys floated to the sea right off our beach, while the pilot and co-pilot crash-landed on a small atoll. The coral ground the plane down until, when it came to rest, both men were sitting on the coral in their seats—not a scratch on them. All the others were picked up, of course.

We've now had about sixty air raids. They are interesting things, I must say. It's really a beautiful sight to watch the heavy ack-ack fill the sky with lazily arching tracers which burst in white and black star-sprays. The noise of the ack-ack is terrific—but then, as night before last, one hears that increasing hissssss (I used to think they went wheeee) of a stick released somewhere overhead, one really presses that earth, murmuring, "Miss me, boy, miss me." Gosh, my heart pounds! Then there is the relative relief when one feels the thuds and hears the whoomp, whoomp, whoomp, whoomp as the stick hits—for the chances are great that you won't hear *the* one. The raids cause surprisingly little damage and casualties, and make one realize how really difficult it is to bomb out a country. They are more a source of annoyance here, for we have been working steadily day and night, and our little rest is of course disturbed. The raids have been running on a fairly regular dusk, 2-4 A.M., dawn schedule—with occasional day raids. The strafing doesn't seem very important. I listened to a plane coming over the tree-tops the other day with its motor missing. When I saw it I noted red spouting from its wings—the "missing" was the dirty bum strafing. He didn't hit a thing.

The Nips have been trying their infiltration tactics, but have gained little. One of the boys attached to us was knifed and slugged the other night when he surprised a couple of the Nips as he went out to cut the generator during an air raid. They were apparently planting a booby trap. He wasn't badly hurt—but was damn scared.

You know, this portable has been in more invasions than any other similar outfit, we were told the other day. And we are keeping up the good work. However, please cross your fingers, for the next one is going to make this seem like a Sunday school picnic. But it's a great feeling to watch the progress being made, and with the constant gains in Europe we are quite confident. However, we know the going here must get tougher and tougher as we approach Hiro's inner defenses. But I've not the slightest doubt of the outcome.

"Juliette" — and, incidentally, Capt. Somers H. Sturgis, MC, AUS (*ES* 1933), whom she adopted

Lt. Henry F. Allen, MC, AUS (*ES* 1943), who is still with his same battalion, sends four short lines.

> We are now in England, awaiting new assignment in the E.T.O. THE NEWS is a good morale builder; keep it coming!

Whenever enthusiasms for THE NEWS, such as this, are published (and practically every letter contains a similar expression), it is done for the sole purpose of passing the appreciation on to *you,* where it belongs. You and your letters *are* THE NEWS. So—as an echo of the above—keep them coming!

Major Howard Ulfelder, MC (*ES* 1939) is home from England for the first time since he went overseas with a Station Hospital in August 1942. He worked his passage back, as he put it, helping care for a shipload of wounded. Lt. Col. Richard Warren, MC (*WS* 1936) returned on the same ship, also "working his passage". Both men expect to return to England at an indefinite later date.

A much beblotted letter from Lt. Col. Donald McNeil, MC (*Or.* 1930) bears the heading Northern France, October 20. Colonel McNeil is now with an Evacuation Hospital.

> Our hospital is an affiliated unit (750-bed) recruited in Sacramento, Cal. My job is Chief of the Surgical Service. One other Harvard man here—Capt. E. T. Rulison, Jr. We were activated October 15, 1942 at Fort Lewis, Wash. Went to Needles, Cal. (the desert, without question) April 1943. Then to Banning, Cal. in July, where we acted as a provisional general hospital until November of that year. Our closing date was stepped up a few days by a windstorm which destroyed most of our canvas and didn't help us very much. Then San Luis Obispo and Camp Cook.
>
> In April 1944 we landed on Goat Hill, Africa. Enough said! After six weeks, on to Italy where the medical officers and nurses were on detached service. Since then, Southern France and Northern France. No scarcity of work over here.
>
> The term "La Belle France" must have been coined in the summer.
>
> Best wishes to all from the —st, and a Merry Christmas.
>
> P.S. The blobs are due to the roof leaking. Sorry.

Lt. Col. Clifford C. Franseen, MC (WS 1932) has received his promotion to this rank. He is still at the same Station Hospital.

Dr. Faxon has received another letter from Colonel Goethals, parts of which are given here. It was written October 29.

> Since my last letter we have reverted to a slower tempo. The hospitals in this area are gradually being moved out to locations further up, and all evidence points to the probability that we will be the last on the list. Our new site has definitely not been picked, since all will depend upon the speed with which the Army advances. Their advance in the past six weeks has not been impressive as regards distance, but the terrain is about as tough as any which has been encountered in Europe to date, and the weather has been atrocious. When it rains here it rains in no uncertain terms, and during the night the water descends upon the tent roofs as though it were being poured on in solid sheets out of a supersized barrel. It certainly must make fox-hole life at the front a bit moist, as well as otherwise uncomfortable.
>
> Donald King is now a full colonel, Sullivan a lieutenant ditto, while Bland and Bartlett are sporting silver leaves. Davenport is now in the ranks of the field officers, while Ottesen and Singer have gone to two and one silver bar(s) respectively. All this came about as a result of changes in our governing table of organization, which have authorized a number of well-deserved promotions. Others will come through in due course. The nurses, too, have benefited, and all details of their advancement will doubtless come through in the Alumnae Magazine.
>
> Probably by this time Sherman [Thorndike] has written you that he is in full-fledged command of a station hospital, for his temporary assignment to the area command was of an evanescent nature and doubtless would not have lasted long. Stewart and I went up to his place a couple of weeks ago and spent the night. Their Officers' Club has a large castle for their demesne—a medieval affair belonging to a wealthy Italian family. There they hold their parties on off-duty occasions, and very luxurious it is. On the night we were there the unit was holding a dance. Several Brazilian officers on duty at a neighboring air unit attended, and we had a chance to get acquainted with some of our most recently arrived allies.
>
> One of the blessings the *boche* left behind when he left this unhappy country was a crippling of all hydroelectric utilities. As a result, we have to depend entirely on GI generators for light and power. The generators are splendid pieces of machinery, but like mice and men they eventually need overhauling and even wear out. We have used our generators hard perforce, and they often must carry an overload. Consequently they go out of whack every so often, and the hospital suffers. In such cases there is no relief of the situation until we send long distances to get spare parts and/or services.
>
> All best wishes to yourself and the Staff at home.

It is very interesting to get a three-way perspective on the case of a wounded soldier—the doctor's report, the nurse's comments, and a letter from the patient himself. The boy is Pvt. Peter Macomber, son of our own Dr. Donald Macomber (*SS* 1911), Assistant Obstetrician. Peter found himself, after the injury, in a bed in a General Hospital. The triple accounts of the situation came in letters to Dr. Macomber.

Major Claude E. Welch, MC (*ES* 1934) wrote:—

> Peter is in good shape. He had a couple of mortar fragments strike him. One penetrated the top of his shoe and entered the dorsum of the foot. It lay superficial to the tendons, and evidently the force of it was spent, because it did not produce a fracture. The other entered just lateral to the patella, and he now has a couple of 2-inch scars on the lower outer thigh, somewhat as if he had donated a piece of fascia for a hernia repair. The wound of the foot is on the left, the other on the right. They are now entirely healed, and he maintains he is having no discomfort at all. In fact, when I went down to see him this afternoon, Somers Sturgis [*ES* 1933], who is in charge of the ward, told me he is having a hard time trying to keep Peter in the hospital, because he is very anxious to get out and get back on duty. The present plans are to send him into the "conditioning ward" for a couple of weeks, in order that he can get his muscles and joints loosened up again before he leaves. Thereafter he will go back to his regiment. If all our patients had the attitude Peter has, we would have little to complain about.
>
> We have been steadily, and at times, intensely busy. It is a great pleasure to work with these young healthy men whose natural tendency is to live regardless of what we do to them.
>
> The colonel will almost surely have a chance to see Peter before he leaves. He, too, had not known he was here.

The nurse, 2d Lt. Bessie McLellan, ANC (*MGH* 1932) wrote:—

> Peter is so unconcerned about it all. I understand that the "higher ups" were a little upset because they didn't know Dr. Macomber's son was a patient, but Dr. Macomber's son didn't bother to tell any one who he was.

And Peter himself has this to say:—

> They are treating me like a king here. My goodness! I have been visited by captains, majors, and even colonels. I am beginning to feel like a celebrity. Bessie McLellan has been swell to me, and Dr. Sturgis, who is in charge of my ward, has been very nice. I expect to be leaving here pretty soon, but it will be a long process before I get back to the front. Red tape, as usual.

THE NEWS

No. 28 Boston, Mass. January 1945

HAPPY NEW YEAR

The News searched through its entire vocabulary, before the December issue went out, in the effort to find reasonable words for a Christmas message to go to you who are overseas. It could find none. But New Year greetings present no problem at all; and The News herewith throws in every happy and hopeful adjective it knows, from "A-bundant" to "Z-estful" to include in its New Year's wish for *all* of you—over there and here at home.

The Ladies' Visiting Committee wishes to thank its patrons of the General Store for their fine loyalty and continued interest, in spite of less satisfactory and inadequate stock. It may be well to remind everybody again that the store is not a "concession", and that every penny of its profits is spent, through the Ladies' Visiting Committee, to benefit the Hospital.

We did it again! We *knew* we would! Over the top we went on our United War Fund drive and exceeded our quota by more than $500. The Eye and Ear Infirmary topped its figure, also.

In keeping with progress in the branch of Physical Medicine, the Physical Therapy and Occupational Therapy Departments have been combined to become the Department of Physical Medicine. The occupational therapists will now have direct medical supervision, as the physical therapists have had in the past. It is particularly appropriate that this change is made now, as three-year fellowships in Physical Medicine are being offered by the Harvard Medical School, supported by funds granted by the Baruch Committee on Physical Medicine. It is expected that in the future these fellows will receive clinical training at the Massachusetts General Hospital in the new Department of Physical Medicine, of which Dr. Arthur L. Watkins is Chief of Service.

On November 17 Dr. Gerald F. Houser was elected President of the Massachusetts Association for Occupational Therapy.

In memory of Lillian Dobie Balboni, a Memorial Fund has been established at the Hospital by Dr. Gerardo M. Balboni and friends. The fund has now reached over $10,000, and is to be used for a free bed or for any other purpose the Trustees may decide upon.

The next instalment of MGH "home affairs" will appear in the February issue, with an article by Dr. Stanley Cobb.

Major Merrill Moore, MC (*gr. asst. N* 1933-34) has been awarded the Bronze Star Medal by Major General O. W. Griswold, Commanding General of the 14th Army Corps. This award, made by direction of the President, reads:—

> For meritorious achievement in connection with military operations against the enemy in the Southwest Pacific.

In recommending Major Moore for this citation, his Commanding Officer said specifically:—

> Your service at this base has been of the greatest benefit to the government and to our war effort. Facing an immense problem, in your energetic and ingenious manner, you rapidly reduced the obstacle of psychoneurosis and related disorders in this area. As the only psychiatrist, at that time, you immediately set about your assigned tasks with complete disregard for personal comfort and safety in your effort to solve existing difficulties. In addition to your regular hospital duties you devoted your personal leisure to consultations and lectures to all unit officers in this organization, often flying long distances to do so, so that they could understand and properly assist soldiers with emotional disturbances.
>
> Of the large number of cases called to your attention by line officers, or referred to you for diagnosis and treatment by medical officers, a remarkably high percentage was returned promptly to effective duty and the majority of the remainder was returned shortly thereafter. In doing this you were always efficient, sympathetic, reasonable, and constructive.
>
> Your performance of duty has been exceptionally meritorious. You have been a decided influence on the morale of our forces and an inspiration to the men with whom you have worked. You have strengthened cooperation and you have established confidence among officers and enlisted men as to the effectiveness of preventive psychiatry in the field as well as the value of mental hygiene for combat troops. Your actions contributed materially to the success of our combat operations.

Staff Education Program—1944-1945

During the week of October 16 it was proposed to all members of the nursing staff of the Massachusetts General Hospital, Baker Memorial, Phillips House, and the Massachusetts Eye and Ear Infirmary, who will be concerned with teaching the student nurses, that we have a series of 15 weekly meetings to discuss our present plans for clinical teaching on the wards. The following week the meetings began and will continue through the middle of February. To maintain the attendance (which is between 65 and 70) without sacrificing nursing care of the patients, the topic discussed on Mondays from 1 to 2:45 P.M. is repeated on Wednesdays. In addition to the graduate nurses, there are 8 selected student senior cadets who attend these meetings. Following the policy always maintained here for staff education programs, one hour per week is allowed on "on duty" time whenever it is compatible with the care of patients.

This course is given by Miss Frances Reiter, Instructor at Boston University and part-time Supervisor of Clinical Instruction at the Massachusetts General Hospital School of Nursing.

We have been able to make arrangements with the Harvard-Boston University Extension courses so that those nurses who wish to, may take this course at the Hospital and receive University credit. This means a landmark in the development of the staff education program.

At their meetings on November 10 and 24, the Board of Trustees voted to appoint:

Dr. Paulo F. Albuquerque as Assistant in Urology;
Dr. Lloyd E. Morris, Jr. as Assistant in Pathology for one year, beginning July 1, 1945;
Dr. Hans P. Mueller as Assistant Radiologist, effective December 1, 1944;
Dr. Arthur S. Spangler as Resident in Dermatology and Syphilology, beginning November 20, 1944.

The Trustees also voted:

To appoint Dr. Wyman Richardson to the General Executive Committee to fill the vacancy caused by Dr. Breed's death;
To promote Dr. John D. Crawford to the position of Resident on the Children's Medical Service, beginning July 1, 1945;
To accept the resignation of Dr. William E. Davis from the position of Radiologist, to become effective December 1, 1944.

The General Executive Committee, at their meetings on November 29, and December 6 and 13, voted to appoint:

Dr. Felipe A. de la Balze as Research Fellow in Medicine, beginning December 1, 1944;
Dr. William C. Bridges as Research Fellow in Medicine, assigned to Cardiology, for one year beginning November 1, 1944;
Dr. William D. Murphy as Research Fellow in Medicine, for one year beginning April 1, 1945;
Lawrence A. Patterson, Ph.D., as Clinical Fellow, assigned to the OSRD Malaria Contract being carried out under the direction of Dr. Butler.

The General Executive Committee also re-appointed Dr. Alan P. Freedberg as Graduate Assistant on the Dermatological Staff.

* * *

White-9 was reopened October 30; and Bulfinch-4, the research ward, was opened November 1.

RICHARD FROTHINGHAM O'NEIL

Dick O'Neil died suddenly of coronary thrombosis on November 30, 1944. For some time it had been evident to his friends that his health was failing, but his death was sudden and unexpected.

He was born in Montevideo, Uruguay, January 2, 1874, the son of Rear Admiral Charles O'Neil and Mary Frothingham O'Neil. His mother was the daughter of the well-known historian, Richard Frothingham, of Charlestown, Mass., for whom Dick was named. He attended various schools in the United States, usually in the neighborhood of the Naval Station to which his father's ship was assigned. From 1882 to 1884 he was in China and Japan, his father being at that time Executive Officer on the "U.S.S. Richmond", the flagship of the Asiatic squadron.

In May 1899 he married Adela Pegram Myers, of Richmond, Virginia, who, with one son, survives him.

In September 1892 he entered the Harvard Medical School, from which he received the degree of M.D. in 1897—one year later than most of his classmates. The reason for this delay is because at that time the M.G.H. customarily appointed medical undergraduates of the Harvard Medical School as House Pupils (as interns were known in those days) and men often deferred taking their final examinations at the Medical School until after the completion of their hospital training, and, although remaining in good standing at the school, did not try to complete the work on time. In his third year in the school he received the appointment of House Pupil on the West Surgical service at the M.G.H., and at the end of his term spent several months on the East Medical where a vacancy had occurred.

After graduating he entered private practice in Boston, also serving as District Physician to the Boston Dispensary and in the Out-Patient clinics at the Carney and St. Elizabeth hospitals. He also acted as private assistant to the late Dr. William M. Conant. At this time he joined the Massachusetts Naval Brigade and, in 1898, when the Spanish-American War broke out, he was commissioned Lieutenant (j.g.) in the U.S. Navy Medical Corps and served throughout the war on the "U.S.S. Catskill".

At the end of the war he returned to private practice and soon became especially interested in genito-urinary surgery through his association with the late Dr. Arthur L. Chute, and he then retired altogether from general practice.

In 1911 he was appointed Genito-Urinary Surgeon to Out-Patients at the M.G.H., and from 1915-17 served as acting Visiting Surgeon and Chief of Service. At the outbreak of World War I he joined Base Hospital 6 A.E.F. with the rank of Captain, and served as assistant to the Chief of the Department of Urology of the hospital in France and Consulting Urologist to Base Section 2. He was advanced to the rank of Major in 1918 and was honorably discharged with the Unit in 1919. He once more returned to private practice and to his work at the hospital, and in 1925 was appointed Associate Urologist, which position he held until 1934, when he reached the retirement age and became a member of the Board of Consultation.

At the outset of World War II he volunteered his services to the hospital to help relieve the emergency created by the absence of younger members of the Staff who had gone into military service and, until shortly before his death, served daily in the G.U. Out-Patient Department. In his later years Dick's interest centred more and more upon the hospital; and, whether he was on duty or not, a visit there was part of his daily routine. This made him one of the best known of the older members of the Staff.

His affiliations with medical societies were numerous. In addition to membership in the local groups, he was a Fellow of the American College of Surgeons. He was a member of the American Genito-Urinary and Urological Associations, in both of which he served as secretary and president. He also held membership in the New England Urological and the Societe Internationale d'Urologie. He was an honorary member of the Aesculapian Society of the Harvard Medical School, a member of the Naval and Military Order of the Spanish War, the Military Order of the World War, and one of the founders of the M.G.H. House Pupils Alumni Association.

Aside from his professional acquirements he will always be remembered for his charm of manner and his lightness of spirit. Perhaps the best examples of his wit are to be found in the records of the "Journal Club", an organization composed of a group of his medical classmates, originally sixteen in number, all of whom served as House Pupils at the M.G.H. between 1895 and 1897. This group has met more or less regularly for well over forty years—of late for convivial purposes only. There are still nine of us living, but no future gathering can again have the sparkle Dick's presence always gave.

F. S. N. and J. W. C.

(The records of the "Journal Club" will eventually be deposited in the Archives of the M.G.H.)

* * *

We learned only recently that Major James H. Townsend, MC (*WM* 1923) was seriously wounded on November 16. Working under fire, he jumped for a fox-hole when the shells began to fall too close, and was hit with shrapnel in both feet. Every one will be glad to know he is making a fine recovery. Mrs. Townsend and several of his friends have received letters from him saying everything is going well.

* * *

Capt. John P. Gens, MC, AAF (*r.s. U* 1943) is now Chief of Urology at AAF Regional Hospital, Hammer Field, Fresno, Cal.

This account of the party for the "Wives of the Sixth General Hospital", along with a motion picture film of the occasion, has been sent to the 6th General. Mrs. Charles Lyman Short was the scribe, and she says, "This is getting to be an annual affair; and, much as we enjoy it, we fervently hope this second picnic will be the final one."

No day, not even in New England in the fall, could have been more beautiful than Saturday, September 30th. Clear, sparkling, warm, it was eminently suitable for a gathering of the wives and children of the officers of the Sixth General Hospital. The clan started to convene about eleven o'clock, after a hectic morning of preparations by the various mamas. Our intrepid and inexhaustible photographers, Mmes. Welch and Kranes must have left Belmont at an early hour, for when the first cars arrived (gasoline hoarded toward this event for weeks), they were fortifying themselves with a substantial "brunch" against the anticipated rigors of the day. Children ran the gamut of age from one-plus (the closest check fails to reveal any under that early age) to late 'teens, and the mamas were all well under twenty-five. Our clothes were bright and gay and went well with the brilliant weather; and, although no fall foliage had yet graced the trees, it was an occasion made for movies.

Everything went like clockwork. With the imposing program outlined and posted for us, it was plain to see that there would be few idle moments and no time for the young to get into trouble. Where Caroline Rogers, with a grown family, ever managed to collect the assortment of tricycles, seesaws, carts, doll equipment, and hobbyhorses that filled her tennis court is a mystery, but one which made the day a vacation for many a harassed mother. In addition to these pleasures, most gracious and efficient nursemaid service was furnished by Midge Rogers and three of her friends.

Each child was name-tagged upon arrival, and it was just as well, for the number of small blonde boys in red overalls was more than a bit overwhelming. Lunch baskets soon disgorged their dainties for the young and their only slightly older mothers, quarts of cocoa and pink sherbet were consumed, and the littlest members of our happy group (if they could be persuaded) retired for well-earned and needed naps.

The picnic grounds could not have been more perfect from every point of view, most especially from that of parents who looked forward to a few hours of relaxation in which one eye would not have to be due north and one due south in an effort to keep track of peripatetic children. The tennis court was a kaleidoscope with the small fry racing, riding any and every sort of moving vehicle; and the neighboring greensward furnished enough room for the exuberant older children to wear themselves out in running, baseball, and wagon-sliding-down-hill, plus countless games of their own invention.

After a long, lazy, relaxed luncheon, during which our indefatigable photographers were busy, our dynamic Emcee, Mme. King, roused us from our comfortable seats and rural contemplation to indulge in a tug of war. It was useless to explain and plead that we were no longer up to such antics and hadn't been for two years. Sides were taken with the help of the various children who, because of the brainy fathers we had provided them, could easily see that Mama needed some assistance, even if only moral. As a consequence, the young got under foot, were trod upon and generally nearly annihilated, while the more experienced cheered or hooted from the side lines. If sore muscles and generous bedewing proved anything, we should have been able to pull up the earth's magnetic core.

The children, having one year more behind them than at our previous picnic, were thus one year better able to enjoy themselves and each other. There were, to the best of our knowledge, no feuds, vendettas, nor acrimonious set-tos of any sort. At one time, there was complete and marvelous rapport and harmony: at the merest whisper of ice cream, a concerted stampede took place from all corners of the playground toward the magic place of its delivery. To top the ecstasy of this moment, there could be seen through the slats of the drying yard a most captivating sight which intrigued the children no end. Upon the emergence of this vision into the light of day, a real, live clown, complete in full regalia and paint, was revealed. He was followed by a train of admirers and faced a spellbound group while he did his magician's tricks. True, his patter was perhaps appreciated a bit more by the adults, but his sleight of hand and clever tricks riveted the attention of all but the smallest child. Mlle. Talbott and M. Lingley were excellent stooges invited from the audience to have eggs appear from their ears and money drop from their mouths, in time honored custom. Mary Beecher enacted the role of audience heckler to the best of her great ability, raising her skirt to show her cut knee until she could easily have shown a broken clavicle, always at the most crucial moment in some enchanting trick.

We mothers, only too glad for such breathless diversion, were soon gathered up again by the executive Emcee to form a baseball team. One team, composed of mothers under seventy played against children over five. Bare feet were perforce popular among the older generation, and painful as it must be to us to admit that our children are not only creeping up on us but exceeding us in practically every way, we were forced to face the truth that our more agile, supple young knocked out much better hits and caught much more difficult balls than we did. Can it be that kitchen police does not fit us for the sporting life? They treated us with complete lack of filial deference and respect, and more than once hooted derisively over our butter-fingers and lack of base-stealing ability. Rogers was the most professional among us and lacked only a wad of gum to complete her enactment of the role of umpire—true to gestures, cap, and partiality! The only casualty reported, however, was the universal one of shortness or complete lack of breath.

Two long reels of movies sent back from you in the Sixth, showing all the daddies, were joyously received by your children and wives. I think you would be touched if you knew how eagerly your children yearn for even a brief view of you on the screen, how anxiously they wait—the younger ones asking Mommie a hundred times to tell them when Daddy is coming, and how intent they are when they see him. They are so patient and will sit through yards of (to them) uninteresting scenery and incomprehensible natives for a glimpse of their own, and are so quietly happy when their Daddy is visible.

Calisthenics, viewed by our photographers from the front and rear, finished up the day. Until we have been at it longer, I fear we will lack the suppleness and unison that your long training has given you. The spirit is willing enough, but . . . .

During all of this long, lovely afternoon your children were playing freely and as they chose, all over the wide playground. Their companions were as many and varied as their activities. A mother, cursed with conscientiousness, would occasionally bring herself to think of her responsibilities and would always find them happy and guarded by some other kind parent.

Even on such a perfect September day, surrounded by our children and well-known and loved companions, our thoughts and words were about you. If wishes could have conjured them up, the Rogers landscape was perhaps peopled with some additional dim forms in military garb. It will make your third Christmas away from home happier to know that we are all well, stout-hearted, hopeful, and filled with love and wishes for the best possible Christmas for all of you. God Rest You Merrie Gentlemen.

MASSACHUSETTS EYE & EAR INFIRMARY

Rose Brennan Garvey died suddenly on November 25th.

Rose will be very kindly remembered by many graduates of the M.G.H. and Eye and Ear as one who not only took care of the doctors' quarters, but also mended their torn shirts and darned their socks. She was keenly interested in their welfare and kept in close touch with many over a period of years.

Since the beginning of the war she wrote regularly to many of her "old boys" and was so happy to share the letters she received from them.

A faithful employee of the Eye and Ear since April 1923, it will be difficult to fill her place.

Lt. Comdr. Stanley A. Myers, MC (*Oto-Lar.* 1937), who was injured while serving with the Marines at Guadalcanal in August 1942, is now a patient in the Chelsea Naval Hospital. We are glad to report he is progressing favorably.

Lt. Comdr. Roland J. Viger, MC (*Oph.* 1937) is serving with the Canadian Navy and is stationed at present in the hospital at Newfoundland.

We are sorry to report that Capt. Charles E. Walker, Jr., MC, AUS (*Oph.* 1935) was killed in action November 22, 1944, somewhere in the European Theatre.

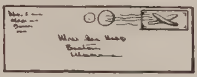
In our November issue we described the "In memoriam" folder which was a tribute to the memory of Mary Hayden. An urgent request has been made that the full text of the memorial be published for the benefit of those who did not receive copies.

The bell has tolled that we may pause, reflect,
Admire and sense a soul gone on,
For Mary Hayden joined the vast elect,
Who pass in memory anon.

We contemplate her impulse, thought and deed.
From her, who served humanity,
We trust no life attain such thoughtless speed
It cannot learn humility.
We pause to recall:
¶Her devotion to supervising the Ear Clinic, an integral part of her life and thought.
¶Her search for the better way to expedite the duties of her province.
¶Her daily pride in the size of the Clinic census and the related earliness of the closing hour.
¶Her encouraging word to the house officer delayed by stragglers and late referrals.
¶Her militant defense of the luckless patient, whose card was lost on the carrier.
¶Her periodic sight-seeing tours to acquaint groups of nurses with a modern Ear Clinic.
¶Her quick response to the call for anaesthesia in the Children's room or the call to a Barany examination.
¶Her effective blanketing of the obstreperous child—a combination of gentleness and firmness in a manner, which on a larger scale would go far toward preserving world peace, before major operations seem necessary.
¶Her genial smile and quiet mirth at humorous reactions of patient, nurse or physican to unexpected events, such as interclinic competitions and grievances, surprise at the hissing gas tanks, the occasional dousing of the ceruminous or Barany-tested patient, in his dizzy plight, or the noisy awakenings of those who inhale the "laughing gas".
¶Her profound respect for vested authority.
¶Her regret that her own authority did not extend far enough to keep house officers within working distance of the clinic at all necessary times.
¶Her eager use of the call system to see whether the Surgeon's Room or the Operating Room concealed the evanescent House Officer.
¶Her looking forward to the occasional afternoon off for well deserved relaxation and rest.
¶Her pleasurable anticipation of attending the conventions of the American Legion to renew the friendships of World War I in which she served her country in its need.
¶Her personal pride in the successes of former House Officers and her motherly gratitude in their achievements.
¶In addition are those traits and personal experiences too numerous to mention but which come to our minds.
In Conclusion:
The bell Beyond for her chimes, "Right this way!"
Though missions close, few colors fade.
Reflection paints for us the Perfect Day.
We sense a soul,—a Friend we've made!

MARY HAYDEN
The Mother of Mosher's Men

Ralph J. Frackelton, M.D.
Burton E. Lovesey, M.D.



All material of a military nature in this and every issue of The News is first cleared for publication by the local Public Relations Department of the Army or Navy.

Notifications of the following promotions to ranks as indicated have been received:—

Col. Edwin F. Cave, MC (*ES* 1926 & *Or.* 1928)
Lt. Col. Milton H. Clifford, MC (*a.p.*)
Major John R. Graham, MC (*WM* 1936)

If there are other new ranks which The News has not reported, we would appreciate it if you would let us know. We are very eager to keep our military records up to date.

The following new addresses have been received:—

Lt. John J. D'Urso, Mc, USNR (*r.p. D* 1944), U.S. Naval Hospital, Chelsea 50, Mass.
Lt. Joseph P. Holihan, MC, AUS (*ES* 1943), ASF Training Centre, Fort Lewis, Wash.
Lt. Fathollah K. Mostofi, MC, AUS (*a.P*), M.F.S.S., Carlisle Barracks, Carlisle, Pa.
Lt. Nathan D. Munro, MC, USNR (*ES* 1942), U.S. Naval Hospital, San Leandro, Cal.
Lt. Gordon S. Myers, MC, USNR (*WM* 1942), 9th Marine Aircraft Wing, Bogue Field Dispensary, Cherry Point, N.C.
Lt. Col. John C. Snyder, MC (*WM* 1939), Rockefeller Foundation, 66th St. & York Ave., New York, N.Y.
Major Howard G. Weiler, MC, AAF (*Or.* 1932), Baxter General Hospital, Spokane, Wash.

These brief bits of information regarding new assignments may be given:—

Major Lewis Cozen, MC (*Or.* 1938) is with a General Hospital which has a New York APO number.
Capt. Robert H. Detwiler, MC, AUS (*CM* 1940) has written us from India.
Capt. Daniel S. Ellis, MC, AUS (*EM* 1941) has been transferred to the 111th Medical Battalion.
Capt. William W. L. Glenn, MC, AUS (*r.s.* 1941) is with the 30th General Hospital.

Lt. Col. Harold H. Hamilton, MC (*r.s. PH* 1933) has sent an APO number. He is with the same Evacuation Hospital.

Lt. Richard V. Riddell, MC, AUS (*ES* 1943) is with a Field Artillery Battalion, probably in the European Theatre.

Lt. Benson B. Roe, MC, USNR (*WS* 1943) has been assigned to a ship in the Atlantic waters.

Lt. Comdr. George P. Whitelaw, MC (*WS* 1937) has received this promotion in rank. He, too, is now aboard ship somewhere in the Atlantic.

Responses to Dr. Castleman's request for pictures for the Ether Day exhibition included many accompanying letters, some of which have been handed over to us for publication. Regardless of the mixture of locations, parts of these letters are assembled below as a sort of "Castleman contribution".

The first account we have had of Lt. Robert H. Barker, MC, USNR (*WS* 1937) since he left the States is given in this letter from Mrs. Barker. She writes:—

> These pictures of Bob were taken this summer when he was stationed with the Headquarters Squadron of a Marine Air Group, somewhere in the Gilberts. Most of their cases consisted of fungus infections, athlete's foot, and dengue fever, with a few fractures and appendectomies thrown in for good measure. It was cooler there than in Boston, owing to a perpetual breeze and the shade afforded by many palm trees. Now they are on a much busier island farther "out", where it rains a great deal and where the heat has been 156° in the sun. There is no shade, as all the palms were "beheaded" when the Americans took over the island. The clinical thermometer, standing in alcohol, registered 108° the other morning!

A year and a half ago we published a letter from Lt. Joseph A. Holmes, MC, USNR (*P* 1936 & *ES* 1938), written from Tutuila, American Samoa. Lieutenant Holmes is now at the Naval Training School, North Dakota State School of Science, Wahpeton, N. Dak.

> The present setup is not too interesting from the military standpoint, for it is just another school where men are in uniform. But I feel I have had a real break as far as duty is concerned, for although there is little surgery here, I have learned a lot of general medicine and I have been fortunate to have been included in the meetings of the local medical society. It has been a real contact with medicine again. I guess you know that I spoke at the annual meeting of the North Dakota Medical Society, giving two papers—one on a proposed cancer program for the State after the war, and one on tropical medicine. At the present time we are in the process of decommissioning, and the school will be at an end the first of November. As yet, I have no orders, but expect them any day. Where to next is anybody's guess.

Lt. Comdr. Roy E. Mabrey, MC (*a. in S*) gives this brief word about himself:—

> Herb Adams [*ES* 1932] and I have been at this station nearly a year. We've had the opportunity to care for large numbers of casualties from Tarawa, the Marshalls Saipan, Tinian, and Guam. Activity is getting pretty far away from us. Herb is caring for all chest injuries, while I've been looking after compound and simple fractures. We hope to be there for the next Ether Day. . . . You can't beat the Hawaiian climate.

Comdr. John P. Monks, MC (*WM* 1931), Chief of Medicine at a Marine Corps hospital, writes:—

> This hospital is one of the first three hospitals ever organized by the Navy and slated for complete Marine Corps utilization. Our group was organized and trained at Camp Lejeune, and is now awaiting overseas shipment. Presumably we will go in on the third wave of wherever the Marines go in force. Comdr. E. Ross Mintz [*P* 1930 & *r.s. U* 1932] is also with our outfit. Best of luck to every one.

From McGuire General Hospital, Richmond, Va., came a letter from Major Richard Schatzki, MC (*r.*). He says:—

> After having spent the first three months of my stay here getting the department built and equipped, we started slowly with our work. But only since I came back from Chicago have we had enough to keep me busy. The department is very satisfactory. The crew was green—very green, indeed—and had to be trained. Now things run more or less automatically. The material is, of course, rather one-sided, and I often think of the abundance of interesting cases at the old General. We have some good clinicians, and I have had very interesting discussions with some of them. I find it quite healthy to hear viewpoints discussed and argued which are different from our routine, and I have learned quite a bit. Have been reading the Case Reports with great interest. There are few doctors who don't tell me that that is *one* part of current literature they'll always read.

Lt. Comdr. Allen G. Brailey, MC (*EM* 1930) wrote from the Medical Holdover Unit, U.S. Naval Training Center, Sampson, N. Y., on October 11:—

> There is nothing new with me. Either I remain here because I am too valuable at my present job or because the Navy feels I will probably do less harm here than at some other place.

The next day Commander Brailey received orders to report to the west coast.

* * *

One of the happiest bits of information ever to reach us is contained in a recent letter to Dr. Faxon from Major Henry H. Faxon, MC (*ES* 1927). You will find it in the last sentence.

> I was delighted to learn that King, Bland, Bartlett, *et al* had received "boosts", after so long a time in their original grades.
>
> I'm sure others have written you in detail of the really excellent setup we had in Italy. I am grateful that my "enforced hibernation" was not thrust upon me until after I had been working in that location for a month and a half. It has been extremely interesting for me to contrast some of the problems we had in running our hospital with comparable issues they have to face here at Fitzsimons. The turnover here is extremely slow and nursing demands minimal, whereas our turnover was rapid and a good proportion of the cases good and "sick". At both hospitals the number of nurses was relatively small. It seems to me that your non-Army MGH setup must be just about the hardest type of hospital to run these days, and the Fitzsimons figures regarding help must sound like Eutopia to you!
>
> The food here is *extraordinarily* good, and I have gained 23 lbs. in the slightly less than three months I have been here.

Lt. James G. Miller, MC, AUS (*EM* 1943) has been doing psychiatric and psychological medical work in Washington, D. C., since July.

Lt. Donald C. Balfour, Jr., MC, AUS (*EM* 1943) reported at Carlisle Barracks on October 5. He is in the 60th O.T.B., which will be graduated November 17. After that he has been ordered to Hoff General Hospital, Santa Barbara, Cal.

Another "silent one" transferred to the list of "heard-from's". A first letter from Lt. Robert H. Hepburn, MC (V)S, USNR (*r.s. U* 1943), with the heading Naval Dispensary, Submarine Base, New London, Conn., October 27.

> Forgive my uncommunicativeness, but I have been a prey to what I have considered sufficient lack of war romance (after reading about Arthur Willetts) to warrant a discrete silence.
>
> Last January I reported in to the Newport Naval Hospital, Newport, R. I., where I was assigned to the Urological Service. Actually, most of my work consisted of administering penicillin to some fifty cases of sulfa-resistant gonorrhea. They were cured in about sixteen hours, so the turn-over was rapid and the paper work mountainous. When the local naval units could obtain their own penicillin for such cases the number under my care shrank rapidly, and in April, when I left the hospital, I was out of a job, with only one remaining case.
>
> Next stop was with the CB's in Quoddy Village, Maine, till June, whence a small detachment of us put out for Alaska. While we were loading ship on the west coast I caught catarrhal jaundice and had to turn in at the Naval Hospital, Bremerton, Wash., where I later stayed for three months in charge of dermatology (!), syphilology (!!), and contagious disease (!!!). The training I received on White 10 of course made me perfectly suited for the job in the eyes of the Navy. Actually, the truth was that the hospital already had a urologist and didn't have a dermatologist, etc. I learned to do a mean pneumothorax, to call all skin lesions "fungus" till proved otherwise—which was rare, and to suspect syphilis no matter what the clinical cloak.
>
> Just when I was expecting to invade the Philippines orders came to "go back to the beginning", so my wife and I drove back to New London, Conn., where, at the Submarine Base Dispensary I've again got my hands on a cystoscope. Two nights ago, at 2 A.M., I thrashed through a mile of scrub-oak woods to gather the remains of two Navy fighter pilots from a double crash, and this morning I had my eardrums ruptured in a submarine dive-test. So you see urology here is not without interest.
>
> Along with the others I add my "Thank you for THE NEWS". I believe it means more to us doing the run-around than to you doing the work.

Fractures, zinnias, rain, and bananas (along with a few rats) contribute to the composite mental picture left after the reading of this interesting letter from Lt. Comdr. Eugene A. Osius, MC (*WM* 1923). It was written October 17.

> I went on active duty at Great Lakes Naval Hospital in June 1942, attached to the Surgical Service. In August I received orders to go to California to ready myself for extra-continental duty. There ensued a considerable wait, and in the interim I found that John Wilson [*ES* 1940], who was in the outfit, was also an MGH man. Immediately a bond of friendship was formed that has lasted to the present and will continue into the future. One of the truly wonderful advantages of having been a House Officer at the General is the splendid *esprit de corps* that is unconsciously developed, and that binds all alumni of the Hospital to another fellow alumnus as few other things can. It has been the source of greatest pleasure and satisfaction to me to find this so; and wherever I have gone in the States and throughout the South Pacific Area (where I have now been for 21 months) I have found MGH men—and worthy ones they were, too. One of the first few was Hannibal Hamlin [*r.s. NS* 1942] who saw me in consultation at a hospital in March 1943 for a back injury, and later Theodore Pratt [*ES* 1929] also had a hand in the process of making me take what

I usually give out. At the moment I hold forth in the hospital where Hap Kennard [*WS* 1934] was and am quartered in the hut he had, as is evidenced by his name on the walls of Quonset Hut "E". And so it has gone. Doors open wide to MGH men and warm is their welcome everywhere.

Our first outfit left the States in January 1943, and a short time later set up an establishment which became a Base Hospital in the Solomons. There I had charge of a large surgical ward. (I went into Surgical Service a year after leaving the West Medical.) We had a very active Surgical Service, for our hospital was then the closest one to the activities in the Solomons during the Georgia and Munda Campaigns. Later we were joined by other groups, of course.

Our island was a small but pretty one, with the hospital set up on the beach in long Quonsets with good and adequate equipment. Our staff of doctors were from some fifteen States of the Union—as far east as New York, as far south as Alabama, the middle West strongly represented, and as far west as China. It is an interesting fact that this group, brought from all over the country and farther, worked and lived together for over two years in the best of harmony and with a minimum of discord—if any. If one can believe rumors (and what is more prevalent in the Service than scuttlebutt?) this mixture is desirable for units recruited from one area, as there is such a thing as knowing your colleagues too well and having predetermined opinions—and prejudices. Our Commanding Officer was a Harvard graduate and medically able. He was a good mixer, allowed his officers full rein medically, and was one with whom discussions on differences of opinion were not amiss. Our corpsmen developed into efficient assistants, willing always to put forth any and all effort, and during active times a 22-hour day was the routine for M.O.'s and corpsmen alike.

Our cases consisted of all types of casualties, and it may be interesting to know that we had no orthopedic surgeon, as such. Two of us who had the surgical wards handled all fractures, of which we had many. Among them was a fracture of the neck of the femur which I nailed with an improvised Smith-Petersen method that would have made S.P. jealous, I am sure. The pin was manufactured on the compound out of a Steinmann pin, and the result was most satisfying. We had two operating rooms constructed by adding lean-to additions to the sides of a Quonset. There was a cement floor, double screening, and the other usual attributes of tropical O.R.'s, namely, generous exposure to the air, humidity, and heat—the latter two enhanced during black-outs and the 180 inches of annual rainfall which we enjoyed (?). We were quartered in a native-built hut of poles, palm-thatching, and screening, located on the seashore, and shared alike by officers and rats until we were able to cut down our cohabitors in various ways. Our mosquito nets were really protection against rats rather than mosquitoes, as Malaria Control had done a splendid job and only one officer contracted malaria during the sum total of 20 months' residence there.

The flora of the island varied, and the ubiquitous coconut palm was pleasant by its absence. High cliffs surrounded us, covered with many flowers, trees, and shrubs. I had a 5-blossomed orchid in front of the ward, and for pastime raised flowers in a garden that were the pride of the hospital—brilliant hued zinnias 7 inches in diameter, wild gardenias, hibiscus, cosmos, wild poinsettias, and many others. It was surprising the number of men who watched them grow from day to day. The record is for zinnias—seed to first appearance, 60 hours; seed to blossom, 5 weeks; and then blossoming in profusion for more than eight months. One zinnia was trained into a tree-like growth and had 35 blossoms most of the time. I advise a small collection of various flower seeds to all who go into these areas, for with fertilization and a little effort one can achieve fine results. A sunny spot is essential, however, as I have since discovered. Where I am now stationed—in a coconut grove—the flowers do less well.

After a tour of duty in the Solomons I was sent to New Zealand for several months, and, as in the case of many others so stationed, have left that beautiful area a staunch booster and admirer of the country and its people. Could we send students to foreign countries on the same scale in peace times, overcome language difficulties, and receive the same number of foreign students in our land, war could surely be pushed into the background, and a basis for world coöperation became a reality instead of a nebulous hoped-for dream. And at what a reduced cost!

I am at present on the Surgical Service at a U.S. Naval Base Hospital. Hospital and grounds are models of physical fitness and equipment, painted and furbished to the last word. We cut the grass with power lawn mowers, if you please! (Kennard please note; also you, Hamlin—for the contrast to what existed 18 months ago.) A banana tree grows next my hut window. On it is a big stalk of bananas not yet ripe that is being watched by at least fifty purloiners that I know of. Our outside activities consist of picnics at the N.O.C. beach, jungle walks (or Turkish baths thereby), and swimming. There is an island medical society that meets regularly and the meetings are of good general calibre. The medicine practised in the South Pacific Area in this war can take its place with the best. It is such that those who are responsible can well be proud. A record has been set that will be hard to better.

I await The News and the Harper Hospital Bulletin of Detroit (my peace time connection) with eagerness, and find much in both that makes me grateful my professional life has been bound to these two institutions.

Special greetings to my friends and erstwhile contemporary colleagues of the MGH Unit and elsewhere.

Lt. Comdr. H. Bristol Nelson, MC (*a. obst.*) sends us an outline of his military activities to date. Commander Nelson is still attached to a division of Marines in the Southwest Pacific.

Really, The News means more to us out here than you people realize.

After my indoctrination at Chelsea Naval Hospital—which, incidentally, was grand—I went through a Medical Field School training course for the Fleet Marine Force, at New River, N.C. In June 1943 I was assigned to this Marine Division as Regimental Surgeon of the —th Marines—a hard fighting Artillery outfit. From New River we went to Camp Pendleton, California, for training, and left the States January 1, 1944. We were then headed for the Marshall Islands, which we secured with little difficulty, although the islands of Roi and Namur were heavily fortified. The Navy had blasted them for several days prior to our D-day, which made it much easier for us. After the island was secured, the Division Surgeon pulled me out to aid in sanitation, which was a tremendous problem. Men were so near together one had to jump over fox-holes to walk around the island.

Following this, we were returned to a so-called "rest camp", which consisted of tents and cots, plus cold showers and real old fashioned "out houses".

Then, in June, we invaded Saipan and Tinian. I will not go into this except to say it was a bloody fight and I unfortunately lost a number of my officers and men who were real pals of mine. Men get pretty close to each other out here.

We are now back in our former rest camp and enjoying the hospitality of the civilians here. They are very kind to all of us and their homes are ours.

I might add that I have been lucky in that I was able to choose my Battalion Surgeons, three of whom are from Boston—Irad Hardy [*ES* 1939], George Lyons (Tufts), and Nick Pournaras (Tufts). These boys, plus the rest of my staff, are behind me every minute and consequently we have a fine working outfit.

Just where we go from here is "top secret", but you can rest assured that the —th Marines will be in there pitching until these "slant-eyed babies" are all gone.

Written aboard ship on December 14, is a letter to Dr. Faxon from Comdr. Franklin G. Balch, Jr., MC (*ES* 1925).

I have at last left the ranks of the landlubber Navy and am having a taste of sea duty. I joined up with this ship, as Senior Medical Officer, near the end of August, after a little over three years of surgery at the Naval Hospital in Chelsea. This ship is a large seaplane tender, carrying two medical officers and one dental. The work covers the field of medicine and surgery, plus all the specialties except obstetrics and pediatrics.

We are now in the Philippine area where we still see considerable aerial activity. I have not yet run across any of my MGH friends out this way, but expect to any day.

Written on 14 x 10 paper, is a letter from Capt. F. Thomas Gephart, MC, AUS (*WS* 1941) to Dr. Arthur W. Allen. The paper is of an unpleasant texture and is bordered with double red lines. Red lines, also, about a half inch apart, run horizontally across the sheet. Captain Gephart writes:—

As you have guessed, this paper has been furnished by the Japs. Allegedly, the two characters in the center of the page mean "Fold here", but I can't vouch for it.

Our unit joined the convoy which attacked Angaur Island in the Palau Group. We had ringside seats for all the shelling and aerial bombardment, as well as access to much of the pre-invasion information and plans, which made the whole trip extremely interesting. When one of the battalion surgeons was wounded as he hit the beach, I had the opportunity of replacing him, which I did. I spent the next three days there, after which I was relieved and returned to this Field Hospital as Battalion Surgeon. This gave me what "gravy" there is in such a job, without the long months of training, and—now that it's safely over—some interesting experiences.

Our hospital spent a pretty busy four or five weeks treating all types of war wounds—some of which, I think, did surprisingly well. We are now running an air evacuation hospital, which should give us a large turnover of patients. We are all making guesses as to where and when our next move will be.

Lt. William J. Baker, MC, USNR (*WS* 1943) is with a Marine Division F.M.F., somewhere in the Pacific. His first assignment was at Quonset Naval Air Station, Rhode Island, and from there he was sent to the west coast.

Comdr. John P. Monks, MC (*WM* 1931) is now with a Corps Evacuation Hospital in the Pacific Theatre of operations.

Col. James E. Fish, MC (*ES* 1930) is home on leave from Hawaii, where he has been stationed for three years. He expects to return to the same assignment, as Chief of Surgery in a large General Hospital. Just before leaving for home he saw Lt. Comdr. Herbert D. Adams, MC (V)S (*ES* 1932) and Lt. Comdr. Roy E. Mabrey, MC (*a. in S*) who sent their best regards to all their friends at M.G.H.

Major Merrill Moore, MC (*gr. asst. N* 1933-34)

From "Somewhere in Belgium" came a letter from Lt. Col. R. Earle Glendy, MC (*r.p.* 1934) dated November 9. He writes:—

I have just finished a word-by-word reading of the October News which reached me only a few days after the September issue. The latter was late because of my nomadic tendencies since midsummer. The inertia of a General Hospital makes it difficult to keep up with the war, but we are as near to it now as circumstances permit, after staging in southern England, a channel crossing, a beach landing, a bivouac in Normandy, a short stay in the Paris area, and the final leg of our journey to our present location. We are going into operation in tents, but have been hampered by rain and mud. Today, which is no exception to the general pattern, has yielded a generous admixture of rain, sleet, and snow! Gil Hyatt [*WS* 1931 & *Or.* 1934], Chief of our Surgical Service, is my tent mate, and we're taking turns at keeping our pot-bellied stove at forced draft to drive away the cold "humours".

Ed Thorp [*EM* 1931] is near by and I see him often. The only other MGH-er I've encountered recently is Leo Burgin [*CM* 1932] who continues in his capacity as Executive Officer of a Medical Battalion.

To say that we enjoy The News is putting it mildly, and we highly approve of the new column on MGH "affairs".

Another "silent one" to graduate from that class! Capt. Thorolf E. Gundersen, MC, AUS (*r.p. N* 1941) is now on duty with a Convalescent Hospital in Europe. His letter, written November 19, gives us a volume in two paragraphs.

I moved on to this new job two months ago. At present I have the Medical Section of this hospital as my baby, and after a year and a half with combat troops I am happy at the change. As the name of the hospital indicates, most of the work is on ambulatory patients. They present many problems, none the less, and it is interesting work. It was Col. Neil Crone [*WM* 1933] I have to thank for the change. You may be interested to know that he is now a full Colonel.

The Norwegian-American Infantry Unit I served with landed D plus 12, and we were whisked off immediately to Cherbourg and entered the day it fell. In the break-through at St. Lo we were attached to an Armoured Division and had a very rapid and exciting trip through France to the Seine and into Belgium. It was at that point that my transfer orders arrived. Medical service in Battalion Aid Stations is first aid and rapid evacuation — nothing else. The speed of evacuation of casualties in Armoured Units will always be a source of amazement to me. The great majority of our casualties were back to the Collecting Company within the hour—frequently the half-hour.

Otherwise I have little to relate. Fifteen months overseas is about enough for me, but the end is not in sight.

"Somewhere along the Siegfried Line, November 9" is the heading of a letter from Lt. Robert J. Tracy, MC, AUS (*ES* 1943) which we read with more than ordinary interest.

My News is always a treat, keeping me in touch with my friends scattered about the world.

I was assigned to this Evacuation Hospital in May 1944, and had an adequate taste of Texas sun during training at Camp Swift. In July we started on a long trip which left us in England, where we remained for several weeks getting supplies before stepping off for the big adventure. We crossed the channel in luxury and, after getting organized, we set off across France to catch up with our speeding armies. Our "Baptism of Fire" rocked us back on our heels for an instant, but we came through with a good record and feel like old-timers now. We have since moved out of France and have supported another drive. I hope we now go on to Berlin.

I have bumped into only one of the MGH crowd—Capt. Jim Kreisle [*WM* 1943]. He is located several miles ahead of me in this sector.

Please let The News keep coming. My best to the crowd.

It is good to hear again from Lt. Ben Eiseman, MC, USNR (*ES* 1943)—the first direct word from him since those "floating bathtub" days, off the coast of France, in June. This letter is headed "At sea, Nov. 12", and says:—

Since I last reported to you I have been serving aboard both LST's and LCI's in the Normandy invasion and its follow-up. Returned three weeks ago, and was immediately put aboard this ship and sent out the other way—I suppose to make my Amphibious Force background complete. At any rate, I am becoming a master of V.D. and First Aid, as well as of some distinctly kitchen table types of surgery—and those of more major proportions when absolutely required.

If these changes continue, I suppose my next address to you will be care of some Rubber Boat outfit off Antarctica; but until such time please send your most welcome bits of news and gossip as directed.

Word has reached us indirectly that Capt. Don W. Fawcett, MC, AUS (*WS* 1943) has been promoted to this rank.

Lt. Donald V. Baker, Jr., MC, AAF (*ES* 1943) has sent his first overseas address. He is with a Collecting Company.

Another "first letter"—this one from Lt. Col. Staige D. Blackford, MC (*EM* 1927). Colonel Blackford is with an Evacuation Hospital. He says:—

I have been receiving The News regularly and am a cover-to-cover reader. So many letters from so many theatres of this war are fascinating, and I read them all, whether I knew the writer or not.

You ask for news of me. It can be briefly told. In the spring of 1942, I became Unit Director of this group, which was sponsored by the University of Virginia, where I was teaching at the time, and raised the professional officer-nurse personnel. We went on active duty July 1, 1942 and sailed from the States two years ago today. Since the unit was activated, I have been Chief of the Medical Service, which, I can assure you, is no important job in an evac., and I am still wondering what a Chief of Medicine is supposed to do in a surgical outfit. feel about as important as the "sub-pup". but I don't have to work that hard. When the surgeons get busy, as they usually are, they pilfer our medical staff for anesthetists, leaving three of us to care for about 300 patients on the medical side. Then my duties are comparable to those of a clinical clerk, only there is more paper work in our rapid turnover.

As you know, there is no dearth of MGH people in these parts, aside from the —th General. Lt. Cols. Tracy Mallory, Henry Beecher, and Sullivan are just over the hill from me, and Dick Clark is down the road. Pete Churchill drops by from time to time, as does Simeone. Grantley Taylor and Staples used to be around. I have seen more MGH personnel in Italy than I ever saw in the States, outside of Boston. Needless to say, they are all doing a good job. Lang Parsons and Champ Lyons worked with us for a while; and Rip Bland, Gundersen, Mike Pinckney, Charlie Short, Don King, and Heinie Faxon have visited us in times past.

Everybody round here knows that Col. Edward D. Churchill is back home. But, for the benefit of you who are away and may not know about it, we announce his return. He has gone on to Washington to report to Surgeon General Norman Kirk. After a few weeks in Washington and Boston, Colonel Churchill will leave again for overseas.

THE NEWS

No. 29 Boston, Mass. February 1945

PSYCHIATRIC SERVICE AFFAIRS

The Psychiatric Service at the Massachusetts General Hospital has just completed its tenth year, so in writing for THE NEWS we will briefly review the history.

In September 1934 the service took over Ward 26 with Neurology and Neurosurgery. This was the third floor of the Baker, and served as a good interim arrangement until the opening of the White Building when Neurology and Neurosurgery moved to White 11, and Psychiatry, in order to keep in close touch with Medicine, moved into its present quarters in Wards B7 and B8. At this time the number of admissions rose sharply because the new wards had eighteen beds: B7 being an open ward for fifteen ambulatory patients with psychoneurotic troubles, and B8 being a small "disturbed" ward holding from two to four beds under the direct vision of one centrally seated nurse. Thus our facilities for treating and studying neurosis, and for looking after the psychiatric emergencies arriving in the general hospital, were at once increased. Therefore in 1941 the admissions rose to 217 and in 1942 to 265. The further sharp rise in 1943 to 342 is largely due to the increase in the number of "boarders", especially those from the Emergency Ward. The "boarders" are patients sent over to Ward B8 by other services because of noisiness, restlessness, or suicidal risk; these patients are not admitted to the Psychiatric Service in a formal way unless their medical or surgical disorder subsides before their psychosis. The care of these patients is an important service both to the hospital, which thereby saves risk and nurses, and to the patient who is spared transfer to another hospital because of his short delirium or other passing psychosis. The cause for the especially sharp rise in "boarders" in 1943 was a change in policy in the Emergency Ward; whereas previously they had kept disturbed patients over night when necessary, they decided (when the supply of nurses became curtailed) to send them up to B8 and arrange for disposal later. Thus many cases which formerly were mere consultations on the Emergency Ward became "boarders". Besides these explanations of the increase, there is the probability that we are learning to choose our patients better and to treat them more expeditiously.

The type of patient treated on the ward has changed somewhat since the earlier years. At first there was a tendency on the part of the local physician to send in psychotic patients in order to save them from the "stigma" of being in a "mental hospital". By degrees this has been overcome by education so now we are receiving appropriate cases of psychoneurosis, and the only cases of schizophrenia, manic-depressive psychoses, and encephalopathy that we have are those where diagnosis is a difficult problem. Many acute mental disorders come to Ward B8 from the other wards of the hospital, but these are largely cases of delirium with a few of the above-mentioned conditions that develop after admission to the hospital. These are transferred to regular mental hospitals as soon as commitment can be arranged.

Since our association with the Pennsylvania Hospital through the formation of the Hall-Mercer Hospital (of which Ward B7 is the Massachusetts General Hospital branch) an especial effort has been made to study psychoneurotic cases, especially those of the anxiety type. The special study of Neurocirculatory Asthenia for the Office of Scientific Research and Development has given added impetus to this endeavor, and a large series of cases has been seen. In this work Dr. Paul D. White has been most helpful as a cardiac advisor. Also, Dr. Finesinger's interest in respiration has added to the breadth of the work.

Dr. Lindemann and Dr. Chester Jones have been working together on gastrointestinal disorders, especially ulcerative colitis. A number of these severely ill patients have been on the ward for periods of psychiatric treatment, but closely followed by the medical service. We have thus enriched our experience in the psychosomatic field and learned the importance of working closely with a medical physician. Dr. Lane has also sent us a number of patients with dermatitis. Besides this, we occasionally have taken over patients with gastric ulcer, asthma, and thyroid disease.

The other main service given by psychiatrists in the house is the consultation service. The resident psychiatrist and one of the visiting psychiatrists see the patients for whom consultation is requested. This work has increased from 230 consultations in 1936 to an average of 420 in the last three years. The years vary and the number of calls from individual services vary greatly from year to year. This is probably due to the personalities of the resident physicians involved, how well they know each other, and how much experience the resident psychiatrist has had. The drop in number of consultations in the last two years may be due to the fact that the war has shortened the terms of residency, the men change often, do not see each other as intimately, and the resident psychiatrists have not been as experienced in their work as earlier residents. The trend over ten years, however, has been conspicuously upward.

Stanley Cobb, M.D.,
Chief of Service

(The conclusion of Dr. Cobb's article will appear in the March issue.)

* * *

Martin Gilbride, Pharmacist 1/c, a past orderly at Baker Memorial and in the operating room at Phillips House, has received a citation for devotion to duty and exceptional conduct on D-day while caring for both American and British wounded, under fire on the beachhead. Mr. Gilbride has been in the Navy for three years.

On January 4, at Surgical Grand Rounds, Col. Edward D. Churchill spoke briefly on certain problems encountered in the surgical management of the wounded in the North African and Mediterranean Theatre of Operations. The discussion was enlivened by anecdotes, and certain familiar figures appeared on the screen before us from muddy fields and mobile research laboratories. Colonel Churchill's enthusiasm for the surgery of his Theatre can best be told in his own words: "I must constantly emphasize my complete indebtedness to the surgeons of the Theatre, not only those I have mentioned from the M.G.H. but to surgeons from all parts of the country, for their superb coöperation, interest, and enthusiasm. If I ever had needed to have my faith in American surgery restored, it certainly would have been by the privilege of working in close association with the surgeons of the Mediterranean Theatre of Operations."

Major James H. Townsend, MC (*WM* 1923), who was seriously wounded while working under fire, and whose satisfactory recovery we reported in the January number, has been sent back to the States. His present address is O'Reilly General Hospital, Springfield, Missouri.

Just as THE NEWS copy was going out through the door today, on its way to the printer, we were all delightfully surprised to see Major Townsend appear here at M.G.H. He still hobbles a bit, but otherwise is very lively. He will be round here for a month or so.

Lt. Col. Albert G. Engelbach, a former Assistant Director at M.G.H. and Director of Cambridge Hospital since 1937, who has been Executive Officer of the Boston City Hospital Unit, has been made Commanding Officer of a Station Hospital.

The Spirit of Christmas came again to the Hospital.

Early in November, with their usual good will and efficiency, the Ladies' Visiting Committee started plans rolling. Shoppers went hunting for children's things—no small task this year. Voluntary singing groups were approached. And finally, by the week before Christmas, the program was ready and under way.

The cover design on the Occupational Therapy Department's Christmas folder was made by David Christensen of the Civilian Public Service group. It showed the Hospital from the river at night, with the White Building high lighted; and inside was the program for the week. The printing was the first attempt by the O.T.D. to use its small, though real, printing press.

It was particularly noticeable that the program this year included many more events by groups *within* the Hospital than ever before. The C.P.S. chorus sang one evening. There was music in the Chapel daily. On another evening Mrs. Helen Cushing of Baker Information and Miss Hope Wright of the General Information gave a concert on organ and violin. The Nurses' Glee Club, plus an accordian, sang and played for the children during the week and again early Christmas morning. Santa was especially talented this year, surprising (!) us all with a few violin selections. (Behind much padding and whiskers one could detect Dr. J. C. Coolidge—if one looked hard enough.) Miss Dorothea Elsner of the Dietary Department played piano accompaniments for the singing at the adult entertainment. Miss Katherine Foster of Social Service wrote a special monologue entitled "Christmas outside and inside the Hospital", creating much curiosity as to who the handsome doctor on B-2 might be! A quartet of House Officers sang for the patients on this same occasion and added greatly to the enjoyment of every one. Their performance was excellent. The O.T. Bell Ringers played on all the wards of both the General and the Eye and Ear Infirmary.

Volunteer groups who helped convey patients to and from the many gatherings included the Nurses' Aides under the direction of Mrs. E. M. Hazard, the War Service ladies under Mrs. David B. Arnold, the men (for the first time) under Mr. Osborne R. Perry, and the O.T. volunteers—and others—under the direction of Miss Eleanor Greenwood.

The many expressions of appreciation from patients were the most valued thanks received for all this additional help. One story, especially, is worth repeating. It is about a little girl who was seen holding tightly in her arms her rather large, and unopened, package. When asked if she would like some help in untying it she said, "I don't have to. I *know* what is inside." Such implicit faith should be adopted by all of us to strengthen our high hopes as to what the 1945 New Year "package" may contain.

Because Miss Lucy G. Morse, Chief of Occupational Therapy, provided the data for the above account, she characteristically omitted any reference to her own efficient supervision of the entire program. However, we all know to what extent the success of Christmas week at M.G.H. depended upon Miss Morse.

And so—once again, in these many ways, was the Spirit of Christmas brought to the Hospital. No one who witnessed any of the scenes, or participated in making them possible, can ever again be *quite* the same person he was before Christmas week of 1944.

The bulletin board near the foot of Treadwell stairs is completely covered with Christmas cards from many of you, all over the world, to many of us here at home. The display has proven attractive not only to members of the Hospital family but to visitors who come to see patients. Sometimes the groups gathered to read the cards assume the proportions of a medium sized crowd. Interest in the exhibition has not, even yet, begun to wane.

* * *

Dan Leary, a former newsboy at M.G.H., has received an appointment to Annapolis and will enter in four months.

Dr. Edward B. Benedict (*WS* 1926), Associate Visiting Surgeon at M.G.H., delivered the fourth Henry K. Pancoast Memorial Lecture before the Philadelphia Roentgen Ray Society and the College of Physicians of Philadelphia on November 2. Dr. Benedict's subject was "The correlation of gastroscopic, roentgenologic and pathologic findings in lesions involving the stomach".

A second meeting of the members of the Student Nurses' Cadet Corps was held in the rotunda on January 3. Miss Mary O. Jenney, Nurse Education Consultant, District #1, addressed the group. She spoke of the crucial need of senior cadets in the military hospitals and in their own hospitals as well. She emphasized the fact that the government gave the benefits of the Cadet Corps to student nurses so that there should be adequate nursing care of patients, wherever they might be. Twenty-eight senior cadets are to be assigned to Army and Navy hospitals this spring.

Surgeon (R) Burnet M. Davis (*r.s.* 1942) announces his promotion to this rank which, he explains, corresponds to that of Major in the Army or Lieutenant Commander in the Navy. He outlines his work as follows:—

> I am attached to the Division of Public Health Methods which, since the recent reorganization of the Public Health Service, has been transferred from the National Institute of Health to the Office of the Surgeon General. This Division is concerned with such matters as statistical and methodological research, preparation and editing of the weekly journal *Public Health Reports*, and of informational material (pamphlets, leaflets, motion pictures, etc.) for the public. My duties are somewhat miscellaneous but may be summed up by saying that I function essentially as Technical Medical Consultant to the Chief of the Division.

OFFICIAL NOTICE

The use of X-ray film in the armed services and war industries has increased to such an extent that the hospital has been notified recently that the amount of film formerly supplied will have to be reduced for the coming months.

The X-ray Department has taken such action as it can in economizing on films but it also will be necessary for staff members to help by ordering X-ray films only on cases where such examinations are absolutely necessary and clearly indicated.

N. W. Faxon, M.D.,
Director

The Board of Trustees, at a meeting held December 22, voted to appoint:—

Dr. Richmond Holder as Assistant Resident in Psychiatry for the term July 1, 1945 to March 1, 1946;

Dr. Samuel I. Kaplan as Dental Intern for the term March 1 to June 15, 1945, and Charles E. Rounds and Howard W. Smith as Dental Interns for the nine months' period beginning June 15, 1945.

At their meetings on December 27 and January 3, the General Executive Committee voted to re-appoint as Graduate Assistants for the term January 1 to June 30, 1945:

- Medicine
  - Winifred Chase
  - J. L. Jacobs—Allergy
  - Marian W. Perry—Pulmonary
  - E. A. Polcari—Allergy
  - R. J. Savignac—Allergy
  - J. B. Tompkins
  - P. R. Withington—Allergy
- Dermatology
  - A. P. Freedberg
  - C. S. Sawyer
- Psychiatry
  - Volta Hall
- Surgery
  - J. L. Langohr
  - D. J. Mullane—Tumor Clinic
- X-ray
  - Joseph Ferrucci
  - Harold Thomas
- Pathology
  - R. C. Henry
- Neurology
  - Rudolph Neustadt
  - A. A. Weil
- Children's Medical
  - Harriet M. G. Higgins
  - Beatrice Kershaw
  - Wilhelmina Van Dyke
- Urology
  - Joseph Lipton
  - Tetsuo Sugiyama
- Dental
  - E. J. Waddington
  - R. R. Wyman
- Clinical Fellows
  - E. B. Astwood—Malaria Study
  - S. L. Chiu—Anesthesia
  - Anne P. Forbes—Medicine
  - R. E. Herrera—Surgery
  - Joseph Hindle—Malaria Study
  - Sidney Levin—Malaria Study
  - Curtis Prout—Malaria Study
  - E. C. Reifenstein—Medicine
  - Albert Roos—Malaria Study
  - L. D. Trevett—Malaria Study
  - Samuel Tze-Tao Tsang—Medicine
  - R. C. Webster—Surgery
  - E. O. Wheeler—Medicine

MASSACHUSETTS EYE & EAR INFIRMARY

The seal of the Infirmary, shown above, is to be used hereafter as a symbol to indicate our part of THE NEWS. Its interpretation seems a very fitting one—"The Blind See; The Deaf Hear By The Help Of God". In these busy days one is apt to take things for granted, but it wouldn't hurt any of us to pause a moment and give thought to the fact that without the help of God the miracles which are being performed each day could never be accomplished.

Christmas at the Infirmary was very gay this year. Although we could not have the Christmas greens inside, there were wreathes on the outside of windows and doors, and a cluster of large, white sparkling bells hung from the center light in the first floor rotunda. Really quite festive! Dr. Lovesey (*Oto-Lar.* 1935) again came to the rescue, and the children in the Nursery were thrilled to the "goose pimple" stage by the delightful scenes he painted on the cubicles—to say nothing of the very real Santa who came with presents for each and every one on Christmas morning!

On January 1 a nurses' pay cafeteria was put into operation at the Infirmary. It is a great improvement over the old way of serving meals, and we now have a choice of food. This cafeteria is for the office personnel as well as the nurses. Miss Lynette Bishop is in charge and is doing a fine job.

We were delighted to see Major Thomas Cavanaugh, MC (*Oph.* 1940) during the Christmas holidays. He is home on leave for a short time, after 33 months in the European Theatre. After his visit here he goes to Walter Reed Hospital to be admitted as a patient. We all wish him the best of luck.

Lt. William Donoghue, MC, AUS (*Oto-Lar.* 1942 & *Oph.* 1944), who is stationed at Phinney General Hospital, Thomasville, Pa., came in to see us. He looks as though Army life agrees with him.

Lt. Daniel J. Reagan, MC, AUS (*Oph.* 1943 & *Oto-Lar.* 1944) also made us a short visit. He is attached to DeShon General Hospital, Butler, Pa. Believe it or not, he is in charge of two Orthopedic wards!

We regret to report the death of Dr. William I. Wiggin, Consulting Surgeon in Oto-Laryngology. Dr. Wiggin died on January 3. He had been connected with the Infirmary since 1916.

With equal regret we record the death, on January 5, of Dr. Charles D. Knowlton, Consulting Surgeon in Oto-Laryngology. His association with the Infirmary dates back to 1923.

It was Capt. Richard Goldcamp, MC, AUS (*r. Oto-Lar.* 1943) whose letter a while back sounded as if he were boxing the compass. We wondered where he would head next. It proved to be France. A letter to Dr. Schall, written October 24, says:—

> How are things going with all the folks at the Eye and Ear? When you get a chance say "Hi" to everybody for me.
>
> Ran into John Ballanger [*Oto-Lar.* 1943] back in France. He's taking good care of the Otolaryngology end at a General Hospital. Has a dandy setup there. I'd get homesick as hell every time I went in to see him. Gee, I'd give a half-year's pay to land something like that for just a couple of months. John gave me all the latest news he had about the crowd back home. I said goodbye to him, and moved forward.
>
> We've had rough sledding for the past month, with rain every day and sometimes two and three times a day. The mud is ankle deep. Can't keep anything dry. My little old pup tent has taken such a beating it doesn't shed water any more. But I shouldn't be kicking. There are boys in front of me living in fox-holes 24 hours a day—rain or shine. They're the ones who should get all the credit.
>
> Most of my work has been at night. Things are quiet during the day and we use that time to sleep and rest up. The work is all just first aid. Our station is set up in a bomb shelter. We have a couple of captured German stoves to keep it dry and warm. It's also very easy to black out for night work.

Capt. Joseph Lentine, MC, AUS (*Oto-Lar.* 1936) has been assigned to the ENT section at Regional Hospital, Camp Barkeley, Texas.

Capt. Robert E. McCall, MC, AUS (*Oto-Lar.* 1941) is with a General Dispensary which has a New York APO number.

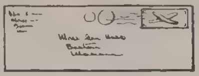
On a Christmas card to Dr. Schall, Capt. Lester A. Brown, MC, AUS (*Oto-Lar.* 1937) says:—

> I often think that on the return trip, if we dock in New York, I shall go by Boston before returning home. I believe that one nostalgic feature is that a goodly number of our nurses and several of our doctors are New Englanders. Which reminds me that some time ago I was in Plymouth and had the opportunity of seeing the place from which the Fathers started to the U.S.A.
>
> All my best to my many friends.

Captain Brown is with a Station Hospital somewhere in the European Theatre.

Comdr. Virgil G. Casten, MC (*Oph.* 1931) is stationed at a U.S. Naval Hospital in the Pacific. He writes in a letter to Dr. Schall:—

> In a few days it will be 14 months since I was detached at Chelsea. I was away from here for about ten days doing eye surgery at the invasion of Leyte. Went ashore on D+1 day. It is very interesting if you don't get hit. I have helped care for casualties from about all the islands in this area. It is a rough game, and a long one apparently. We have over 300 EENT patients now—almost as many as at the Infirmary.
>
> Dr. Macnie is at Espiritu Santos just now, but I believe he is ready to go home soon.
>
> Drs. Mabrey, Adams (Herb)—M.G.H.—Howard Gray, C. Bisgard, Snowden, Hall are here. A Dr. Lewis, ENT, Boston man, just went through here to Guam a few days ago.



All material of a military nature in this and every issue of THE NEWS is first cleared for publication by the local Public Relations Department of the Army or Navy.

The following new addresses have been received:—

- Lt. Comdr. Harvey E. Billig, Jr., MC (V)S (*Or.* 1935), 401 Ross St., Glendale 7, Cal.
- Lt. John J. D'Urso, MC, USNR (*r.p. D* 1944), Naval Construction Training Center, 144th Naval Construction Battalion (ABCD), Davisville, R.I.
- Major Champ Lyons, MC (*WS* 1933), 1664 Government St., Mobile 19, Ala.
- Lt. James J. McCort, MC, AUS (*r.p. R* 1944), Regional Hospital, Camp Shelby, Miss.
- Major Milton L. Miller, MC, AAF (*EM* 1932), Office of the Surgeon, Geiger Field, Spokane, Wash.
- Dr. A. William Reggio, (*WS* 1914), 1835 Phelps Place, N.W., Washington 8, D.C.
- Lt. Comdr. John B. Stanbury, MC (*WM* 1941), Naval Medical School, Epidemiology Dept., Bethesda, Md.

These brief bits of information may be given:—

- Lt. Comdr. Joseph A. Doherty, MC (*a.dn. s.*) is stationed at a Fleet Hospital in the Pacific Area.
- Lt. Walter S. Kerr, Jr., MC, AUS (*WS* 1943) is with the same Clearing Co., which now has a New York APO number.
- Major Sedgwick Mead, MC (*EM* 1940 & *P* 1941) has been promoted to this rank.
- Lt. James W. Newell, MC, USNR (*WS* 1943) has been assigned to a ship in Atlantic waters.
- Lt. Keith A. Shangraw, MC, USNR (*a. dn. s.*) is aboard ship somewhere in the Pacific.
- Major Richard H. Thompson, MC (*ES* 1937) has been transferred to a Station Hospital. He still has a San Francisco APO number.

Capt. John B. Millet, MC, AUS (*WS* 1943) has been transferred to the 199th General Hospital.

All of Bruno Mickeleit's friends, particularly those in the Surgical Laboratory where he served so long and so efficiently, will be glad to know he has received a promotion and has been placed where his natural talents can be utilized. He is now T/5, and is assigned to the Army Medical Museum, Washington, D.C.

In a letter to Dr. Faxon, written December 18, Capt. Louis Nathan, MC, AUS (*Or.* 1930) reports a change of address to Veterans Administration, 1001 Liberty Ave., Pittsburgh 22, Pa.

> I was very much interested in Colonel Churchill's letter in the December issue of THE NEWS. You may pass the word along if you wish. If I had his address I would send this note directly to him.
>
> I would be happy to be transferred overseas, to relieve any tired hands or lend assistance wherever needed.
>
> I wish to thank the members of the Staff for the lovely Christmas card. Season's Greetings to you all, and may the New Year carry the best news ever heard.

Capt. Robert S. Palmer, MC, USNR (*WM* 1927) is back.

It is regrettable that our recent interview with Captain Palmer could not have been broadcast, so that all here at the Hospital might have heard it. It is hopeless to attempt to convey the effect through the written word, for—to paraphrase the childhood poem—you can't write sound. And it was not only what Captain Palmer said, but his ringing enthusiasm for what those here at home are doing that should have been heard by every one at M.G.H. When we interrupted with, "But what about the kind of experiences those overseas are enduring?", Captain Palmer's reply was still nothing but profound appreciation for those here at home who, though overworked and overhoured, continue to carry on the sheer drudgery, deprived of the helpful stimulation and excitement of combat duty. He spoke particularly of the invaluable services of the volunteers here at M.G.H.—and very especially of the *men* volunteers. He was so glad to see many familiar faces here at the Hospital, and concluded with this unique comment, "The boys on the home front are most kind to us returning veterans." (!)

Captain Palmer was Naval Procurement and Assignment Officer here in Boston before he went overseas. He saw quite a bit of England and Scotland while he was attached to a small Navy Hospital and "a couple of" dispensary units. On D-day he went with his group, and has been in or about ports of France since then.

His new address is U.S. Naval Hospital, Brooklyn, N.Y.

From U.S. Naval Dispensary, 230 Fenway, Boston 15, came a note from Capt. Harold C. Bean, MC, USNR (Ret) (*WS* 1918).

> On August 25, 1944 I finally made an extra stripe.
>
> I am still living on borrowed time and enjoying it as Medical Officer-in-Charge of this Dispensary. Lt. Comdr. H. Irving Bixby, MC [*WS* 1924] is back here as our surgeon, and a mighty good one he is. It is a pleasure to work with him.

All of Captain Bean's friends know about his military record, which began in World War I. If you keep your back numbers of THE NEWS, see what he wrote about himself on page 3 of the April 1944 issue. It is well worth rereading.

We have heard from Lt. F. George Johnson, DC, AUS (*Dn.* 1943). His letter bears the heading Co. A, 71st Md. Tng. Bn., Camp Barkeley, Texas.

> My activities have not been spectacular, but very interesting. After leaving M.G.H. I immediately reported to Harmon General Hospital in Longview, Texas, where I received some excellent experience in oral surgery under Lt. Col. Charles Cashman—a Boston man, Harvard graduate, and one time member of the Staff at M.G.H.
>
> On June 10, in Longview, Edith M. MacLaren, R.N., of the MGH Anesthesia Department, and I were married. The following day we left for Camp Barkeley. Have done no dentistry here. Am serving as a field training officer. The work is interesting, but I am hoping for an assignment in a General Hospital soon.

A letter from Lt. John H. Peters, MC, USNR (*WM* 1943), published in November, said every one over there was dreaming of Christmas in the States. "May it come true!" was his concluding sentence. It did—for him. He is now stationed at U.S. Naval Dispensary, Navy Department, Washington, D.C. A recent letter gives a few more details about his experiences overseas.

> D-day found me aboard a merchant ship bound for France, in charge of caring for Merchant Marine, Army, and Navy personnel. I was kept busy at this, off the coast, for about a month, then for six weeks on a British warship with a mixed US-British complement. The latter was an interesting experience, although the Navies of both nations proved too healthy to provide much medical activity.
>
> In late summer I was sent back to my LST's and spent five or six weeks in France. Saw, among other things, the famous artificial harbors and have nothing but praise for the men who designed them. They were miracles, even in the present age of engineering omnipotence.
>
> Received orders to the States in time to have Thanksgiving at home, with regrets only that I had to leave a swell outfit. Am assigned to duty here for an unknown period.

Lt. John L. Ward, MC (V)S, USNR (*EM* 1935) sends a change of address to District Medical Office, Great Lakes, Ill. A recent letter says:—

> In late August I reported to this 9th Naval District Headquarters. My job here, like the one I had for the preceding ten months in Boston, is that of District Venereal Disease Control Officer. Instead of covering little old New England, however, this territory covers a quarter of the country and a third of the population—but only a small fraction of the Navy. Duties include reviewing VD control efforts within the service at various activities, and maintaining coöperation with State and local health departments and enforcement agencies.

Miss Marjorie H. Clarke, former secretary to Dr. Butler, has joined the WAVES and is now stationed at Hunter College, N.Y.

Lt. Lawrence B. Hobson, MC, AUS (*M* 1944) stopped in at the office of THE NEWS one day in December. He is working in Building 357 of the Toxicological Research Laboratory, Edgewood Arsenal, Md., and was in Boston on business.

It is good to hear from Lt. Col. Edward Parnall, MC (*Or.* 1932)—his first letter since returning from Nicaragua, so long ago. It is dated Battey General Hospital, Rome, Ga., November 10.

> Compared with all the exciting Odysseys I read in THE NEWS, my own has been quite unexciting for a long time. Life at a "name" general hospital, ever since the great bulk of surplus and "pool" officers have gone off (I was one, you will remember, at Fitzsimons G.H.) is simply the familiar story of work in a large hospital that is shorthanded in war time. About the only difference between this hospital and the M.G.H. is that here we wear uniforms, the pediatric and women's divisions are not exactly overpopulated, and the staff, while competent and hard working, cannot, of course, boast of the shining and eminent names in medicine that illumine Fruit Street!
>
> There are no MGH men here except myself—the closest approximation being Lt. Harry Kleinfelter, who had a Fellowship in Medicine [*res. fel. M* 1941-42].
>
> The Orthopedic Section, wherein I serve, is an extremely busy one, which keeps me humping to keep track of the patients. And right at this point I would like to take my hat off to the many surgeons in all echelons abroad who have taken such good care of thousands of compound injuries of the extremities. With but few exceptions the original surgical treatment has been skilful and sensible. The way to final reparative treatment has usually been made smooth and easy for us here.
>
> Best regards to all old friends.

Lt. Comdr. Maurice M. Tolman, MC V(S), (*a.d.*), stopped at our office one day in early October to report his return. He has been Chief of the Dermatological Service at a base hospital in England, where he has had a broad experience in casualties to persons other than Navy personnel. An English hospital, capable of caring for 1500 patients, was taken over and made adaptable for the current needs. It was divided up into departments, conforming to a modern general hospital. Commander Tolman said that the ward facilities for treatment of the skin were very adequate, and a large Out-Patient Department served the worthy purpose of cutting down the number of hospital admissions, thus saving many men hours for active military duty. Commander Tolman was also in charge of the Burn Program where large numbers of cases were treated. Capt. James M. Faulkner, MC, USNR (*EM* 1925) was Chief of Medicine, and Comdr. Henry Hudson was Chief of Surgery. Both of these men have also returned to the States.

Commander Tolman said that the period prior to D-day was spent in organizing and drilling the various surgical and medical teams. He paid high tribute to the work of the nurses. He said his was the only Naval establishment able to have nurses over there. He said they did excellent work preparing dressings and battle dressings, and that after D-day their care of the patients proved of tremendous value in the building up of morale.

Commander Tolman was to leave soon for the U.S. Naval Hospital, Seattle, Wash.

Lt. Joseph M. Stowell, MC, USNR (*gr. asst.* 1944) is on the staff of a U.S. Naval Hospital, somewhere in the Pacific Area.

The ship to which Lt. James E. Conley, MC (V)S, USNR (*WS* 1941) was assigned is now somewhere in Pacific waters. On a Christmas card to Capt. James C. White, Lieutenant Conley says:—

> We finally arrived out here where everything is water and/or sky. I did an appendectomy while *en route* which temporarily appeased my desire for surgery.

Frederick G. Munn, one of our past employees, is now with a Naval Construction Battalion in Hawaii. After 9 months in Newfoundland, he was transferred to Camp Endicott, R.I. From there he was sent to Camp Parks in California, and went overseas in October.

The Spirit of Christmas came again to the Hospital.

Early in November, with their usual good will and efficiency, the Ladies' Visiting Committee started plans rolling. Shoppers went hunting for children's things—no small task this year. Voluntary singing groups were approached. And finally, by the week before Christmas, the program was ready and under way.

The cover design on the Occupational Therapy Department's Christmas folder was made by David Christensen of the Civilian Public Service group. It showed the Hospital from the river at night, with the White Building high lighted; and inside was the program for the week. The printing was the first attempt by the O.T.D. to use its small, though real, printing press.

It was particularly noticeable that the program this year included many more events by groups *within* the Hospital than ever before. The C.P.S. chorus sang one evening. There was music in the Chapel daily. On another evening Mrs. Helen Cushing of Baker Information and Miss Hope Wright of the General Information gave a concert on organ and violin. The Nurses' Glee Club, plus an accordian, sang and played for the children during the week and again early Christmas morning. Santa was especially talented this year, surprising (!) us all with a few violin selections. (Behind much padding and whiskers one could detect Dr. J. C. Coolidge—if one looked hard enough.) Miss Dorothea Elsner of the Dietary Department played piano accompaniments for the singing at the adult entertainment. Miss Katherine Foster of Social Service wrote a special monologue entitled "Christmas outside and inside the Hospital", creating much curiosity as to who the handsome doctor on B-2 might be! A quartet of House Officers sang for the patients on this same occasion and added greatly to the enjoyment of every one. Their performance was excellent. The O.T. Bell Ringers played on all the wards of both the General and the Eye and Ear Infirmary.

Volunteer groups who helped convey patients to and from the many gatherings included the Nurses' Aides under the direction of Mrs. E. M. Hazard, the War Service ladies under Mrs. David B. Arnold, the men (for the first time) under Mr. Osborne R. Perry, and the O.T. volunteers—and others—under the direction of Miss Eleanor Greenwood.

The many expressions of appreciation from patients were the most valued thanks received for all this additional help. One story, especially, is worth repeating. It is about a little girl who was seen holding tightly in her arms her rather large, and unopened, package. When asked if she would like some help in untying it she said, "I don't have to. I *know* what is inside." Such implicit faith should be adopted by all of us to strengthen our high hopes as to what the 1945 New Year "package" may contain.

Because Miss Lucy G. Morse, Chief of Occupational Therapy, provided the data for the above account, she characteristically omitted any reference to her own efficient supervision of the entire program. However, we all know to what extent the success of Christmas week at M.G.H. depended upon Miss Morse.

And so—once again, in these many ways, was the Spirit of Christmas brought to the Hospital. No one who witnessed any of the scenes, or participated in making them possible, can ever again be *quite* the same person he was before Christmas week of 1944.

The bulletin board near the foot of Treadwell stairs is completely covered with Christmas cards from many of you, all over the world, to many of us here at home. The display has proven attractive not only to members of the Hospital family but to visitors who come to see patients. Sometimes the groups gathered to read the cards assume the proportions of a medium sized crowd. Interest in the exhibition has not, even yet, begun to wane.

* * *

Dan Leary, a former newsboy at M.G.H., has received an appointment to Annapolis and will enter in four months.

Dr. Edward B. Benedict (*WS* 1926), Associate Visiting Surgeon at M.G.H., delivered the fourth Henry K. Pancoast Memorial Lecture before the Philadelphia Roentgen Ray Society and the College of Physicians of Philadelphia on November 2. Dr. Benedict's subject was "The correlation of gastroscopic, roentgenologic and pathologic findings in lesions involving the stomach".

A second meeting of the members of the Student Nurses' Cadet Corps was held in the rotunda on January 3. Miss Mary O. Jenney, Nurse Education Consultant, District #1, addressed the group. She spoke of the crucial need of senior cadets in the military hospitals and in their own hospitals as well. She emphasized the fact that the government gave the benefits of the Cadet Corps to student nurses so that there should be adequate nursing care of patients, wherever they might be. Twenty-eight senior cadets are to be assigned to Army and Navy hospitals this spring.

Surgeon (R) Burnet M. Davis (*r.s.* 1942) announces his promotion to this rank which, he explains, corresponds to that of Major in the Army or Lieutenant Commander in the Navy. He outlines his work as follows:—

> I am attached to the Division of Public Health Methods which, since the recent reorganization of the Public Health Service, has been transferred from the National Institute of Health to the Office of the Surgeon General. This Division is concerned with such matters as statistical and methodological research, preparation and editing of the weekly journal ***Public Health Reports***, and of informational material (pamphlets, leaflets, motion pictures, etc.) for the public. My duties are somewhat miscellaneous but may be summed up by saying that I function essentially as Technical Medical Consultant to the Chief of the Division.

OFFICIAL NOTICE

The use of X-ray film in the armed services and war industries has increased to such an extent that the hospital has been notified recently that the amount of film formerly supplied will have to be reduced for the coming months.

The X-ray Department has taken such action as it can in economizing on films but it also will be necessary for staff members to help by ordering X-ray films only on cases where such examinations are absolutely necessary and clearly indicated.

N. W. Faxon, M.D.,
Director

The Board of Trustees, at a meeting held December 22, voted to appoint:—

Dr. Richmond Holder as Assistant Resident in Psychiatry for the term July 1, 1945 to March 1, 1946;

Dr. Samuel I. Kaplan as Dental Intern for the term March 1 to June 15, 1945, and Charles E. Rounds and Howard W. Smith as Dental Interns for the nine months' period beginning June 15, 1945.

At their meetings on December 27 and January 3, the General Executive Committee voted to re-appoint as Graduate Assistants for the term January 1 to June 30, 1945:

Medicine
  Winifred Chase
  J. L. Jacobs—Allergy
  Marian W. Perry—Pulmonary
  E. A. Polcari—Allergy
  R. J. Savignac—Allergy
  J. B. Tompkins
  P. R. Withington—Allergy
Dermatology
  A. P. Freedberg
  C. S. Sawyer
Psychiatry
  Volta Hall
Surgery
  J. L. Langohr
  D. J. Mullane—Tumor Clinic
X-ray
  Joseph Ferrucci
  Harold Thomas
Pathology
  R. C. Henry
Neurology
  Rudolph Neustadt
  A. A. Weil
Children's Medical
  Harriet M. G. Higgins
  Beatrice Kershaw
  Wilhelmina Van Dyke
Urology
  Joseph Lipton
  Tetsuo Sugiyama
Dental
  E. J. Waddington
  R. R. Wyman
Clinical Fellows
  E. B. Astwood—Malaria Study
  S. L. Chiu—Anesthesia
  Anne P. Forbes—Medicine
  R. E. Herrera—Surgery
  Joseph Hindle—Malaria Study
  Sidney Levin—Malaria Study
  Curtis Prout—Malaria Study

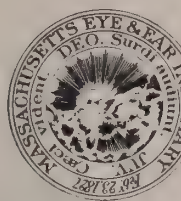
  Albert Roos—Malaria Study
  L. D. Trevett—Malaria Study
  Samuel Tze-Tao Tsang—Medicine
  R. C. Webster—Surgery
  E. O. Wheeler—Medicine



MASSACHUSETTS EYE & EAR INFIRMARY

The seal of the Infirmary, shown above, is to be used hereafter as a symbol to indicate our part of THE NEWS. Its interpretation seems a very fitting one—"The Blind See; The Deaf Hear By The Help Of God". In these busy days one is apt to take things for granted, but it wouldn't hurt any of us to pause a moment and give thought to the fact that without the help of God the miracles which are being performed each day could never be accomplished.

Christmas at the Infirmary was very gay this year. Although we could not have the Christmas greens inside, there were wreathes on the outside of windows and doors, and a cluster of large, white sparkling bells hung from the center light in the first floor rotunda. Really quite festive! Dr. Lovesey (*Oto-Lar.* 1935) again came to the rescue, and the children in the Nursery were thrilled to the "goose pimple" stage by the delightful scenes he painted on the cubicles—to say nothing of the very real Santa who came with presents for each and every one on Christmas morning!

On January 1 a nurses' pay cafeteria was put into operation at the Infirmary. It is a great improvement over the old way of serving meals, and we now have a choice of food. This cafeteria is for the office personnel as well as the nurses. Miss Lynette Bishop is in charge and is doing a fine job.

We were delighted to see Major Thomas Cavanaugh, MC (*Oph.* 1940) during the Christmas holidays. He is home on leave for a short time, after 33 months in the European Theatre. After his visit here he goes to Walter Reed Hospital to be admitted as a patient. We all wish him the best of luck.

Lt. William Donoghue, MC, AUS (*Oto-Lar.* 1942 & *Oph.* 1944), who is stationed at Phinney General Hospital, Thomasville, Pa., came in to see us. He looks as though Army life agrees with him.

Lt. Daniel J. Reagan, MC, AUS (*Oph.* 1943 & *Oto-Lar.* 1944) also made us a short visit. He is attached to DeShon General Hospital, Butler, Pa. Believe it or not, he is in charge of two Orthopedic wards!

We regret to report the death of Dr. William I. Wiggin, Consulting Surgeon in Oto-Laryngology. Dr. Wiggin died on January 3. He had been connected with the Infirmary since 1916.

With equal regret we record the death, on January 5, of Dr. Charles D. Knowlton, Consulting Surgeon in Oto-Laryngology. His association with the Infirmary dates back to 1923.

It was Capt. Richard Goldcamp, MC, AUS (*r. Oto-Lar.* 1943) whose letter a while back sounded as if he were boxing the compass. We wondered where he would head next. It proved to be France. A letter to Dr. Schall, written October 24, says:—

> How are things going with all the folks at the Eye and Ear? When you get a chance say "Hi" to everybody for me.
>
> Ran into John Ballanger [*Oto-Lar.* 1943] back in France. He's taking good care of the Otolaryngology end at a General Hospital. Has a dandy setup there. I'd get homesick as hell every time I went in to see him. Gee, I'd give a half-year's pay to land something like that for just a couple of months. John gave me all the latest news he had about the crowd back home. I said goodbye to him, and moved forward.
>
> We've had rough sledding for the past month, with rain every day and sometimes two and three times a day. The mud is ankle deep. Can't keep anything dry. My little old pup tent has taken such a beating it doesn't shed water any more. But I shouldn't be kicking. There are boys in front of me living in fox-holes 24 hours a day—rain or shine. They're the ones who should get all the credit.
>
> Most of my work has been at night. Things are quiet during the day and we use that time to sleep and rest up. The work is all just first aid. Our station is set up in a bomb shelter. We have a couple of captured German stoves to keep it dry and warm. It's also very easy to black out for night work.

Capt. Joseph Lentine, MC, AUS (*Oto-Lar.* 1936) has been assigned to the ENT section at Regional Hospital, Camp Barkeley, Texas.

Capt. Robert E. McCall, MC, AUS (*Oto-Lar.* 1941) is with a General Dispensary which has a New York APO number.

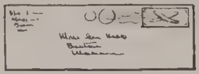
On a Christmas card to Dr. Schall, Capt. Lester A. Brown, MC, AUS (*Oto-Lar.* 1937) says:—

> I often think that on the return trip, if we dock in New York, I shall go by Boston before returning home. I believe that one nostalgic feature is that a goodly number of our nurses and several of our doctors are New Englanders. Which reminds me that some time ago I was in Plymouth and had the opportunity of seeing the place from which the Fathers started to the U.S.A.
>
> All my best to my many friends.

Captain Brown is with a Station Hospital somewhere in the European Theatre.

Comdr. Virgil G. Casten, MC (*Oph.* 1931) is stationed at a U.S. Naval Hospital in the Pacific. He writes in a letter to Dr. Schall:—

> In a few days it will be 14 months since I was detached at Chelsea. I was away from here for about ten days doing eye surgery at the invasion of Leyte. Went ashore on D+1 day. It is very interesting if you don't get hit. I have helped care for casualties from about all the islands in this area. It is a rough game, and a long one apparently. We have over 300 EENT patients now—almost as many as at the Infirmary.
>
> Dr. Macnie is at Espiritu Santos just now, but I believe he is ready to go home soon.
>
> Drs. Mabrey, Adams (Herb)—M.G.H.—Howard Gray, C. Bisgard, Snowden, Hall are here. A Dr. Lewis, ENT, Boston man, just went through here to Guam a few days ago.



All material of a military nature in this and every issue of THE NEWS is first cleared for publication by the local Public Relations Department of the Army or Navy.

The following new addresses have been received:—

Lt. Comdr. Harvey E. Billig, Jr., MC (V)S (*Or.* 1935), 401 Ross St., Glendale 7, Cal.
Lt. John J. D'Urso, MC, USNR (*r.p. D* 1944), Naval Construction Training Center, 144th Naval Construction Battalion (ABCD), Davisville, R.I.
Major Champ Lyons, MC (*WS* 1933), 1664 Government St., Mobile 19, Ala.
Lt. James J. McCort, MC, AUS (*r.p. R* 1944), Regional Hospital, Camp Shelby, Miss.
Major Milton L. Miller, MC, AAF (*EM* 1932), Office of the Surgeon, Geiger Field, Spokane, Wash.
Dr. A. William Reggio, (*WS* 1914), 1835 Phelps Place, N.W., Washington 8, D.C.
Lt. Comdr. John B. Stanbury, MC (*WM* 1941), Naval Medical School, Epidemiology Dept., Bethesda, Md.

These brief bits of information may be given:—

Lt. Comdr. Joseph A. Doherty, MC (*a.dn. s.*) is stationed at a Fleet Hospital in the Pacific Area.
Lt. Walter S. Kerr, Jr., MC, AUS (*WS* 1943) is with the same Clearing Co., which now has a New York APO number.
Major Sedgwick Mead, MC (*EM* 1940 & *P* 1941) has been promoted to this rank.
Lt. James W. Newell, MC, USNR (*WS* 1943) has been assigned to a ship in Atlantic waters.
Lt. Keith A. Shangraw, MC, USNR (*a. dn. s.*) is aboard ship somewhere in the Pacific.
Major Richard H. Thompson, MC (*ES* 1937) has been transferred to a Station Hospital. He still has a San Francisco APO number.

Capt. John B. Millet, MC, AUS (*WS* 1943) has been transferred to the 199th General Hospital.

All of Bruno Mickeleit's friends, particularly those in the Surgical Laboratory where he served so long and so efficiently, will be glad to know he has received a promotion and has been placed where his natural talents can be utilized. He is now T/5, and is assigned to the Army Medical Museum, Washington, D.C.

In a letter to Dr. Faxon, written December 18, Capt. Louis Nathan, MC, AUS (*Or.* 1930) reports a change of address to Veterans Administration, 1001 Liberty Ave., Pittsburgh 22, Pa.

> I was very much interested in Colonel Churchill's letter in the December issue of THE NEWS. You may pass the word along if you wish. If I had his address I would send this note directly to him.
>
> I would be happy to be transferred overseas, to relieve any tired hands or lend assistance wherever needed.
>
> I wish to thank the members of the Staff for the lovely Christmas card. Season's Greetings to you all, and may the New Year carry the best news ever heard.

Capt. Robert S. Palmer, MC, USNR (*WM* 1927) is back.

It is regrettable that our recent interview with Captain Palmer could not have been broadcast, so that all here at the Hospital might have heard it. It is hopeless to attempt to convey the effect through the written word, for—to paraphrase the childhood poem—you can't write sound. And it was not only what Captain Palmer said, but his ringing enthusiasm for what those here at home are doing that should have been heard by every one at M.G.H. When we interrupted with, "But what about the kind of experiences those overseas are enduring?", Captain Palmer's reply was still nothing but profound appreciation for those here at home who, though overworked and overhoured, continue to carry on the sheer drudgery, deprived of the helpful stimulation and excitement of combat duty. He spoke particularly of the invaluable services of the volunteers here at M.G.H.—and very especially of the *men* volunteers. He was so glad to see many familiar faces here at the Hospital, and concluded with this unique comment, "The boys on the home front are most kind to us returning veterans." (!)

Captain Palmer was Naval Procurement and Assignment Officer here in Boston before he went overseas. He saw quite a bit of England and Scotland while he was attached to a small Navy Hospital and "a couple of" dispensary units. On D-day he went with his group, and has been in or about ports of France since then.

His new address is U.S. Naval Hospital, Brooklyn, N.Y.

From U.S. Naval Dispensary, 230 Fenway, Boston 15, came a note from Capt. Harold C. Bean, MC, USNR (Ret) (*WS* 1918).

> On August 25, 1944 I finally made an extra stripe.
>
> I am still living on borrowed time and enjoying it as Medical Officer-in-Charge of this Dispensary. Lt. Comdr. H. Irving Bixby, MC [*WS* 1924] is back here as our surgeon, and a mighty good one he is. It is a pleasure to work with him.

All of Captain Bean's friends know about his military record, which began in World War I. If you keep your back numbers of The News, see what he wrote about himself on page 3 of the April 1944 issue. It is well worth rereading.

We have heard from Lt. F. George Johnson, DC, AUS (*Dn.* 1943). His letter bears the heading Co. A, 71st Md. Tng. Bn., Camp Barkeley, Texas.

> My activities have not been spectacular, but very interesting. After leaving M.G.H. I immediately reported to Harmon General Hospital in Longview, Texas, where I received some excellent experience in oral surgery under Lt. Col. Charles Cashman—a Boston man, Harvard graduate, and one time member of the Staff at M.G.H.
>
> On June 10, in Longview, Edith M. MacLaren, R.N., of the MGH Anesthesia Department, and I were married. The following day we left for Camp Barkeley. Have done no dentistry here. Am serving as a field training officer. The work is interesting, but I am hoping for an assignment in a General Hospital soon.

A letter from Lt. John H. Peters, MC, USNR (*WM* 1943), published in November, said every one over there was dreaming of Christmas in the States. "May it come true!" was his concluding sentence. It did—for him. He is now stationed at U.S. Naval Dispensary, Navy Department, Washington, D.C. A recent letter gives a few more details about his experiences overseas.

> D-day found me aboard a merchant ship bound for France, in charge of caring for Merchant Marine, Army, and Navy personnel. I was kept busy at this, off the coast, for about a month, then for six weeks on a British warship with a mixed US-British complement. The latter was an interesting experience, although the Navies of both nations proved too healthy to provide much medical activity.
>
> In late summer I was sent back to my LST's and spent five or six weeks in France. Saw, among other things, the famous artificial harbors and have nothing but praise for the men who designed them. They were miracles, even in the present age of engineering omnipotence.
>
> Received orders to the States in time to have Thanksgiving at home, with regrets only that I had to leave a swell outfit. Am assigned to duty here for an unknown period.

Lt. John L. Ward, MC (V)S, USNR (*EM* 1935) sends a change of address to District Medical Office, Great Lakes, Ill. A recent letter says:—

> In late August I reported to this 9th Naval District Headquarters. My job here, like the one I had for the preceding ten months in Boston, is that of District Venereal Disease Control Officer. Instead of covering little old New England, however, this territory covers a quarter of the country and a third of the population—but only a small fraction of the Navy. Duties include reviewing VD control efforts within the service at various activities, and maintaining coöperation with State and local health departments and enforcement agencies.

Miss Marjorie H. Clarke, former secretary to Dr. Butler, has joined the WAVES and is now stationed at Hunter College, N.Y.

Lt. Lawrence B. Hobson, MC, AUS (*M* 1944) stopped in at the office of The News one day in December. He is working in Building 357 of the Toxicological Research Laboratory, Edgewood Arsenal, Md., and was in Boston on business.

It is good to hear from Lt. Col. Edward Parnall, MC (*Or.* 1932)—his first letter since returning from Nicaragua, so long ago. It is dated Battey General Hospital, Rome, Ga., November 10.

> Compared with all the exciting Odysseys I read in The News, my own has been quite unexciting for a long time. Life at a "name" general hospital, ever since the great bulk of surplus and "pool" officers have gone off (I was one, you will remember, at Fitzsimons G.H.) is simply the familiar story of work in a large hospital that is shorthanded in war time. About the only difference between this hospital and the M.G.H. is that here we wear uniforms, the pediatric and women's divisions are not exactly overpopulated, and the staff, while competent and hard working, cannot, of course, boast of the shining and eminent names in medicine that illumine Fruit Street!
>
> There are no MGH men here except myself—the closest approximation being Lt. Harry Kleinfelter, who had a Fellowship in Medicine [*res. fel. M* 1941-42].
>
> The Orthopedic Section, wherein I serve, is an extremely busy one, which keeps me humping to keep track of the patients. And right at this point I would like to take my hat off to the many surgeons in all echelons abroad who have taken such good care of thousands of compound injuries of the extremities. With but few exceptions the original surgical treatment has been skilful and sensible. The way to final reparative treatment has usually been made smooth and easy for us here.
>
> Best regards to all old friends.

Lt. Comdr. Maurice M. Tolman, MC V(S), (*a.d.*), stopped at our office one day in early October to report his return. He has been Chief of the Dermatological Service at a base hospital in England, where he has had a broad experience in casualties to persons other than Navy personnel. An English hospital, capable of caring for 1500 patients, was taken over and made adaptable for the current needs. It was divided up into departments, conforming to a modern general hospital. Commander Tolman said that the ward facilities for treatment of the skin were very adequate, and a large Out-Patient Department served the worthy purpose of cutting down the number of hospital admissions, thus saving many men hours for active military duty. Commander Tolman was also in charge of the Burn Program where large numbers of cases were treated. Capt. James M. Faulkner, MC, USNR (*EM* 1925) was Chief of Medicine, and Comdr. Henry Hudson was Chief of Surgery. Both of these men have also returned to the States.

Commander Tolman said that the period prior to D-day was spent in organizing and drilling the various surgical and medical teams. He paid high tribute to the work of the nurses. He said his was the only Naval establishment able to have nurses over there. He said they did excellent work preparing dressings and battle dressings, and that after D-day their care of the patients proved of tremendous value in the building up of morale.

Commander Tolman was to leave soon for the U.S. Naval Hospital, Seattle, Wash.

Lt. Joseph M. Stowell, MC, USNR (*gr. asst.* 1944) is on the staff of a U.S. Naval Hospital, somewhere in the Pacific Area.

The ship to which Lt. James E. Conley, MC (V)S, USNR (*WS* 1941) was assigned is now somewhere in Pacific waters. On a Christmas card to Capt. James C. White, Lieutenant Conley says:—

> We finally arrived out here where everything is water and/or sky. I did an appendectomy while *en route* which temporarily appeased my desire for surgery.

Frederick G. Munn, one of our past employees, is now with a Naval Construction Battalion in Hawaii. After 9 months in Newfoundland, he was transferred to Camp Endicott, R.I. From there he was sent to Camp Parks in California, and went overseas in October.

From Major Arthur A. Holbrook, MC (*CM* 1933 & *EM* 1934) came this exciting letter, written December 20. Major Holbrook is still with the same General Hospital.

Our outfit steamed up on D+ not very much, and before reaching our anchorage spot we were baptized in true Baptist fashion. Though bombs rained on other ships ¼ mile away, as far as I was concerned they were near misses for us. The ach-ach was dense and effective, and at least one suicide diver was blown up by the guns from his ship-target. [Major] Eddie Gordon [*P* 1935] snapped it with his camera. When the smoke had cleared away and the geysers had subsided, all our ships were gratifyingly afloat. We hit the beach in landing craft just like in the movies, and thus began our Philippine experience.

Our area turned out to be miles from the beaches, in a veritable mud-hole on the outskirts of a town. The rainy season had been, was, (and is) in full force, and the accumulative effect could be measured in mud and muck from calf to hip depths. That is, if one was careful! I saw many vehicles with little more than tops showing above seas of mud and water. "Motor pool" was indeed an appropriate term.

For many days we dug ditches and drained and drained. The quagmires were such, however, that the best walking was in the very ditches. Air raids were frequent, and foxholes were used to the full, especially at first. Fortunately our installation lacked a high priority in the Jap aggressions and we were spared actual bombing. As time passed we had other acute situations to deal with. If I tried to describe them, my pages would look like scraggly lace because of the censor. However, we set up for professional service and have been increasingly busy from the start.

Incidentally, I don't know that it is generally appreciated that our unit includes a number of men from M.G.H. and P.B.B. As to the latter, there are Dick Farnsworth and Pete Midelfart. From the halls of Bulfinch came [Major] Dick Hockwalt [*Or.* 1931], Eddie Gordon, and I.

From Sampson, N.Y., to Trinidad, B.W.I., to Philadelphia, to New Guinea. So reads the record for Lt. Wayne Hobbs, MC, USNR (*a. in M* 1921-42). On December 13 he wrote:—

I am attached to a CB Battalion out here. Not so long ago I saw Orthopedist Joplin [*P* 1929 & *Or.* 1933] at the other end of New Guinea. He is Chief of Orthopedics in a Base Hospital.

Lt. Gordon E. Jones, MC, USNR (*ES* 1939) is now on an LST, somewhere in the Pacific Area. On December 31 he wrote:—

The 1944 Christmas card was a most welcome reminder of previous pleasant Christmases spent in the company of many of the signatories.

I deserted Pan American Airways, after almost three years with them, when the Navy called me to active duty in October 1944. Within two weeks I was sent to Hawaii by air and assigned to this ship. Duty with the amphibious forces should provide interesting and busy moments, and I feel fortunate in the type of assignment I was given. My ship resembles a seagoing bathtub, and makes a complete roll every 6 seconds or over 14,000 rolls a day. Going ashore after a period at sea, I have an ataxia which would make one suspect the worst.

I have already, in the short time I've been here, run into Irad Hardy, Jim Conley, Roy Mabrey, and Herb Adams. Irad is none the worse for his heroic and harrowing experiences.

Best wishes to all.

A change of address has arrived from Comdr. Rodney F. Atsatt, MC, USNR (Ret) (*Or.* 1926). For 9 months Commander Atsatt was Senior Medical Officer with a group in the Midway Islands. He is now Chief of Orthopedic Surgery at a large Naval Hospital on Oahu.

The first letter in nearly a year has arrived from Lt. Col. Charles G. Mixter, Jr., MC, AC (*WS* 1940). It contains the announcement of his promotion and an interesting account of his duties.

THE NEWS continues to come through regularly and breaks the monotony of existence in the tropics. After 22 months out here, I think I would roll in any snow I saw just for the pleasure of being cold again.

Last December I was transferred to the Headquarters of the 13th Air Force. I remained there, performing many varied duties, mostly on paper, until June of this year when I was assigned to this Central Medical Establishment. We serve as a Central Medical Unit for the Air Forces in this theatre and have many functions, including research into aero-medical subjects, consultation service, indoctrination of flying personnel and flight surgeons arriving for the first time in this theatre, and the periodic examination and disposition of flying personnel. As you can see, the work is interesting and certainly keeps one busy. In August I was given command of the CME, and received a pleasant surprise a month ago by being promoted to my present rank. We have an extremely capable and interesting group of medical officers, and our staff continually grows.

My duties entail a considerable amount of travel, for which I am thankful, for it enables me to keep in close touch with all the interesting things that are happening out here. On a recent trip I saw [Major] Myles Baker [*EM* 1930] for a few seconds while he was waiting for his plane. He looked well and has, lucky person, been practising medicine! [Capt.] Ben Huntington [*WM* 1940] lives close by and we have had occasional get-togethers with [Lt.] Jim Heyl [*WM* 1939] in the past, but he has now left here. Most of the other MGH men who were in this area have moved on one way or another, though I hear of one now and then, and hope to see them from time to time.

My best regards to every one at M.G.H.

Lt. Col. Robert G. Rae, MC (*dn. s.*) emerges again as the hardy perennial. This is the third February issue in which something from, or about, Colonel Rae has appeared. This year it arrives by way of a Christmas card from Italy to Miss Peck. Colonel Rae's message reads:—

Words can't express how much it means to get a Christmas card with a kindly word of greeting from all my friends at the Clinic.

We are still doing our little bit to help those boys who go through Hell at the front. Here is hoping this war will soon be finished and that we may see you all before this time next year.

A V-mail letter from Lt. Col. Horatio Rogers, MC (*ES* 1925) to Dr. Arthur W. Allen says:—

Having dreamed about you last night I'm breaking a 3-year silence to drop you a line. You probably know more about us, from your other sources of information, than we know about ourselves.

We miss Heinie [Major Henry H. Faxon] but hear he's doing well in Denver. Welch is Chief of General Surgery, and excellent at the job. Aufranc, since his long-delayed promotion, has been the busiest man on the service, with bad femurs, knees, backs, and feet.

I wish you could see our O.R. on a busy day when we run a list of 150 or so cases. We've developed a sort of Willow Run assembly line system which works like a charm. No hurry, no confusion, and good standards maintained. The real test is when it has to be repeated several days running, without any one breaking down. I described our system at a medical meeting elsewhere in Italy a week ago and was surprised at the interest shown by both British and American surgeons. There were about 400 there. The dull times are most unpleasant, but we're getting used to standing even them with good grace.

A letter from Major William M. Jefferies, MC, AAF (*EM* 1942) shows a promotion in rank since the last time we heard from him—a year ago. Major Jefferies is with an Air Base Unit in India. He writes:—

I have now been in India for fourteen months, and for the past nine months have been located at this station as Base Surgeon. Although the administrative work gets a bit monotonous at times, there are enough tropical diseases, dermatoses, etc., out here to keep things interesting. And our pilots are doing a fine job.

I have had an opportunity to see most of India, also Burma and China; but the prettiest place out here couldn't look half as good as the worst place in the States right now.

I have seen [Capt. Charles E.] MacMahon [MC, AUS (*ES* 1938)] fairly frequently. He is located at a Station Hospital in this area and is doing some fine work. Last month I ran into [Lt.] Henry Fuller [MC, AUS (*WM* 1943)], who is having some interesting experiences in Burma.

Thanks for THE NEWS. I really look forward to each issue.

Lt. S. Grant Holmes, MC, AUS (*CM* 1943), another "silent one" to be heard from, is brought up to date in a letter from Mrs. Holmes. On October 5 she wrote:—

Grant left the Dermatological Service in January 1944. His first six weeks in the Army were spent at Carlisle, with Walter Kerr and Joe Holihan; then two stations in California. (On most of our moves we didn't stay long enough to unpack!) Next, Illinois for a staging area, and then off to England right on the dot of the Carlisle prediction of three months.

Lieutenant Holmes is now with a General Hospital.

Major Lewis Cozen, MC (*Or.* 1938), who is with a General Hospital, sent a "first letter", dated December 19. He says briefly:—

Merry Christmas!

THE NEWS is a very welcome item of my mail, just as the M.G.H. and the Orthopedic Staff there represent fond memories.

My work is the usual Army orthopedics, where every unit turns one nut in the machine of evacuation. Luckily, I am *now* in the Paris area and the Parisians are very hospitable.

I had lunch recently with Dr. Calvé, of Calvé's disease, but could not see any cases for lack of time.

The list of "silent ones" is dwindling. Capt. Ernest Craige, MC, AUS (*M* 1943) wrote on December 22, from an Auxiliary Surgical Group:—

I am at present with a Field Hospital in Germany. Although the staff is small, it includes two HMS men—Capt. Henry Swan ('39) and Capt. Kenneth Tanner ('43).

We have been having an interesting time but, unfortunately, the situation is such that we cannot write anything about. Maybe later.

Major Lamar Soutter, MC, AUS (*r.s.* 1941)

Major Lamar Soutter, MC, AUS (*r.s.* 1941) was one of the volunteer medical team which went to the rescue of the American 101st Airborne Division trapped inside Bastogne. Supplies of food, guns, and ammunition were flown in and dropped by parachute; and doctors and medical corpsmen, with first aid personnel, plasma, and medicines, were landed by gliders. The gliders had to be towed over enemy lines, and it was expected that landings would have to be made by parachute. None of these men had had any training in jumping, yet every one who participated in this heroic rescue was a volunteer.

In a letter to Mrs. Soutter, written a few days after the aerial supply operation, Major Soutter said that painted on the emergency exit of the glider which carried him in was "Is this trip absolutely necessary?"

The last time we heard from Lt. Donald N. Sweeny, Jr., MC, AUS (*WS* 1941) he had arrived in Kansas, expecting to see wheat but finding only oil! Now comes a letter from a General Hospital in France, dated December 25.

> The first mail I have had since leaving the United Kingdom came this morning—The News! I hasten to second Bill McDermott's letter expressing the gratitude each of us away from home feels when he gets the Hospital paper.
>
> I am at present Chief of the General Surgical Section of this hospital and am enjoying my work a great deal. We are very busy, and see a good many cases one would not believe could be evacuated from the Field Hospitals.
>
> I have seen Russ Baker, and have had several nice letters from [Capt.] Tom Gephart [*WS* 1941] and [Lt.] Nate Munro[*ES* 1942]. Tom recently saw quite a bit of action as a Battalion Surgeon with a unit in the South Pacific. Recently we have had several patients formerly taken care of by [Lt.] Bob Tracy [*ES* 1943] who is with an Evacuation Hospital somewhere ahead of us in the chain in France.
>
> My best to all.

Not until we received the letter from Lt. Robert J. Tracy, published in our January issue, did we know the whereabouts of Capt. James E. Kreisle, MC, AUS (*WM* 1943). Even though so long delayed, we admit that the following letter from Captain Kreisle to Dr. Means is worth the waiting for. It was written December 14.

> I left Camp Hood in April to become surgeon for a newly activated Mechanized Cavalry Squadron. Soon thereafter I was shifted to my present unit, which has been in the European Theatre for several months now. My travels have included parts of Scotland, England, France, and Luxemburg. At present I am "somewhere in Belgium". I was impressed with the rugged beauty of Scotland, charmed by garden-like rural England, and depressed by the desolation, poverty, and filth of France. Paris stands out like a jewel in an ash pile, yet even there life is far from what we have come to regard as normal. Prices are high, and the simplest luxuries quite scarce. Cigarettes and chocolate, with which the Army is abundantly supplied, are given almost unbelievable values.
>
> We have seen some combat service, and I've had the experience of operating an aid station during an attack. As far as battle casualties go, my work comprises first aid and evacuation to higher medical echelons. I have been deeply impressed with the use of morphine in the field. Our line officers and medical personnel have been instructed in its use and furnished with syrettes, so that practically all the severely wounded (except those with head and chest wounds) receive medication before being moved to the aid station. I have yet to see a man in great pain. Sulfadiazine tablets, compress dressings, splints, and blood plasma constitute the remaining essentials of my armamentarium. Mild diarrheas, upper respiratory infections, and trench foot furnish some of our non-battle casualties.
>
> It seems to me that an unusually large number of women in Luxemburg and Belgium have goiters. I don't recall whether or not this is a goiter district, but I can't help suspecting it is. Among the civilians who occasionally drift into my dispensary was a young woman who complained of a very annoying cough of six months' duration. She stated that several chest X-rays had been negative. A glance at her neck showed what I suspect is the root of her trouble—a large nodular goiter. At the time, I thought what a pity it was I couldn't make her an appointment at your Thyroid Clinic. The medical facilities available to civilians are apparently very meagre indeed.
>
> I've encountered several Harvard graduates and MGH men here on the continent. In Normandy I met [Capt.] Bill Glenn [*r.s.* 1941] at an Army General Hospital, and in Luxemburg I ran into Logan Jones (Harvard Med. '43), Bill Brewster (H.M.S. '42) and Bob Tracy [*ES* 1943] at an Evacuation Hospital. Larry Wesson (H.M.S. '42) is with a Field Artillery Battalion in Alsace. Roger Newstedt (H.M.S. '42), whose Army career paralleled mine until last March, is now with an Amphibious Tractor Battalion in the South Pacific Area.
>
> My best wishes, sir, to you and all the others who helped make my year at M.G.H. so pleasant and profitable.

A letter from Capt. Henry F. Allen, MC, AUS (*ES* 1943) shows this promotion and says briefly:—

> At present I am in Belgium performing the usual duties of a battalion surgeon—evacuation of casualties to the nearest clearing station or evacuation hospital and acting as general practitioner and public health officer to the several hundred officers and men of the battalion. Lack of opportunities for definitive treatment are partially compensated for by many fine relationships in a combat outfit.
>
> Regards to all.

Burdened as we all are with the serious problems and complexities of the times, let's stop for a little moment to indulge in the facetious.

Once upon a time the Admitting Office received a letter, undated—the body of which reads as follows:—

> On admitting my wife I was told I would have to pay her doctor $5 per day. Now I have a bill stating *three* doctors and *two* at $6 a day. Will you rectify this and send me the total balance I owe you?
>
> Also could you tell me who R. H. Factor is? I noticed you also charged $3 for him.

THE NEWS

No. 30 Boston, Mass. March 1945

PSYCHIATRIC SERVICE AFFAIRS

(Conclusion of Dr. Cobb's article)

When the Psychiatric Ward was opened in the autumn of 1934 the Out-Patient Clinic was reorganized to run in the afternoons on an appointment system. Miss Dorothy Clark was the invaluable secretary, and she still is. Miss Sarah Evarts headed the Social Service, in both the Out-Patient and house, but for the first years most of the social work was in the Out-Patient. Members of the McLean Hospital staff came in to help run the clinic, and continued this until the shortage of men caused by the war made it impossible for the McLean staff to give their hours. At first there was a child guidance division run by Drs. Margaret Anthonisen, Florence Clothier, and Robert Young. This had special facilities for social work and psychological study. The first year the adult clinic was run by Dr. Frank Fremont-Smith, followed in 1936 by Dr. Maurice Fremont-Smith. During these two years the number of new patients rose from 460 to 590. In October 1937 Dr. Erich Lindemann became Chief of the Psychiatric Clinic. At this time the policy of the clinic was somewhat changed, and the child guidance division was gradually absorbed into the general clinic. This was because many children with behavior problems were sent in for treatment, and it seemed to us that our first duty was to look after children from Pediatrics, already patients of the hospital, rather than to bring in new cases of the "guidance" type that could go to other agencies, such as the Judge Baker Center and the Habit Clinics. Thus the work of the clinic has been unified, at some loss at first to the care of the children from outside agencies, but we feel it a gain in service to the Pediatrics Department of this hospital. Dr. Robert Young, who did so much of this children's work and ran the summer camp for our children in Maine for three years, has gone to the Judge Baker Center, where he continues his good work.

Since Dr. Lindemann took over the direction of the clinic the number of patients increased at first rapidly to a peak of 840 new cases in 1940; since then there has been a slight falling off in number commensurate with that of the whole Out-Patient during the war years. It seems to be striking a level of about 700. Forty-six per cent of the cases are consultations and are seen only once, the remainder are seen eight or nine times, making an average of four and five visits per patient.

These statistics give an impression of expansion, but they do not show the steady improvement in the quality of the work. Recently teaching has become a much more important part of Dr. Lindemann's work.

In fact, the amount of teaching of psychiatry at the Massachusetts General Hospital has increased conspicuously during the last years. At first we had only voluntary courses which attracted from 25 to 50 men per year. In 1936 we started with Dr. Chester Jones a course on "Psychogenic Symptoms in Medical Practice" which we now call "Psychosomatic Medicine". This became more and more popular until in 1943 and 1944 there were between 130 and 150 men attending, packing the Ether Dome to the roof. Probably this great increase in interest came because of the experience in the Army that people began to hear about concerning the great importance of emotional disturbances in causing medical symptoms, especially in the gastrointestinal sphere. Dr. Erich Lindemann and Dr. Chester Jones were especially helpful to the students in this, whereas Dr. Finesinger and Dr. Cobb talked more about circulation and respiration. Fourth year psychiatry in 1945 became a required course, so we now have regular psychiatric students every month all year round at the Massachusetts General Hospital.

Our work in the laboratories in the first years was concerned with observing the phenomena caused by emotional disturbances in man. This was largely what one might call autonomic neurology, which is hardly to be distinguished from medicine because so many medical symptoms are due to disorders of the autonomic innervation of the various organs. Dr. Finesinger, who is in charge of the laboratory, made especially important contributions concerning respiration in the neuroses and how it showed on a spirogram. He also initiated work on the conditioned reflex in man. This had to stop with the beginning of the war because we then took on practical problems related to choice of pilots in aviation personnel and the oxygen requirements of the nervous system at various altitudes. This work fitted in well with our former work on cerebral circulation and it is now all heading up in an interesting way to an understanding of the metabolism of the nervous system in relation to oxygen and carbohydrate needs as shown by experimental procedures in which chemical changes and the electroencephalogram are used as indicators.

Stanley Cobb, M.D.,
Chief of Service

CROSSROADS

It has been said that if a man sits long enough in the Cafe de la Paix in Paris, the whole world will pass before him. We are not sufficiently vainglorious as to suggest any close parallelism in this regard between the Cafe de la Paix and the Massachusetts General Hospital, nevertheless it is the truth that our institution has at times taken on in some measure the aspect of a world crossroads.

One day last summer, in the Thyroid Clinic, colleagues from nine different countries described types of thyroid disease which they encountered at home. On this same day citizens of half a dozen or more other countries could have been found, undoubtedly, among the doctors working or studying here.

Very recently, at medical grand rounds in the Ether Dome, one of the patients shown was a South African graduate student at MIT who had developed his first symptom of schistosomiasis in Buenos Aires on his way from Cape Town to the United States. A South African physician, spending some months here, had discovered him and brought him to this hospital for treatment. Taking part in the discussion of this case were physicians from China, Iraq, and Mexico. Each told of the disease in his own country — the parasite in China being the S. japonicum, in Iraq, S. hematobium, and in Mexico, S. mansoni. The patient's variety was the hematobium.

Such meetings at the crossroads are profitable to all concerned.

J. H. M.

At their meetings on January 5 and 19, the Board of Trustees voted:

To appoint Dr. J. Peter Kulka as Assistant Resident in Pathology for the nine months' period beginning July 1;

To appoint Dr. Dorothy A. S. Macnaughton as Assistant in Psychiatry;

That the resignation of Dr. Abraham Colmes be accepted with regret.

The General Executive Committee, at their meetings during January, voted to appoint:

Dr. Nicolau M. Barros as Research Fellow in Surgery, beginning January 15;

Dr. Marjorie F. Bauer as Graduate Assistant in Dermatology, beginning March 1;

Dr. Ihsan A. Dogramaji of Iraq, as Graduate Assistant in Pediatrics for a period of six months;

Dr. Arnold L. Johnson as Graduate Assistant in Medicine;

Dr. James A. Meath as Research Fellow in Psychology, beginning February 1, and as Research Fellow in Neuropathology for one year, beginning May 1.

The picture of War Service activities, reduced to miniature for this issue, was conceived and executed by Mrs. Allen H. Mathewson. The animated figures are skilfully cut from white paper and arranged on a bright red background — gay and clever beyond description. They depict, accurately and very ably, a typical day's work for a War Service volunteer. If, for any reason, you are unable to see the original in the War Service office, take time to study and enjoy the smaller copy shown here on another page.

The War Service worker, in her white uniform and red arm-band, is now a familiar sight to every one in the Hospital. As you probably know, this service is set up to help the Nursing Staff. All errands that would take a nurse or a Red Cross Aide away from her floor should be done by the War Service.

Following are a few facts:— 152 volunteers are enrolled in the War Service, with an average of 30 per day. Approximately 150 telephone calls to do errands or escort patients are received from the wards each day — and this is exclusive of many routine daily services. The training of the new worker today is a great deal more thorough than in the past, for the services now rendered are often very exacting and detailed.

Much credit is due the Captains who direct the service from the War Service office. They are the ones who receive the requests on the telephone. They must be thoroughly acquainted with the routines of the Hospital, and must keep track of all that goes on during the time they are responsible for their teams of workers. A different pair of Captains is on duty each day of the week. It is up to each Captain to see that her team is working accurately, and to organize her schedules in such a way that she can always answer a telephone request with the assurance, "Yes, I will send some one right away". In short, she must try to make "her day" give the best service of any day during the week.

Incidentally, at 8:45 on the morning after the great storm this week, the War Service was ready and on the job, as usual. To any one who lives near Boston, that is sufficient proof of the high standard of efficiency maintained by the service. To those who did not experience this recent blizzard be it said that even when street cars and busses stop running, and private automobiles are sealed within their snowbound garages, *nothing* can keep the War Service volunteers "from their appointed rounds".

There was a special Staff meeting on January 29, when a well-filled Ether Dome listened to Major James H. Townsend's interesting talk about "Medical aspects of the war in Italy". Tea was served in the Staff Room before the meeting, as a "welcome home party" for Major Townsend.

The Medical Art Department has started the new year with a bang!

The Boston Medical Artists' group entertained three visiting Medical Art celebrities at a small reception and dinner on January 20. The guests were Professor Tom Jones, from the University of Illinois, who has the assignment of surveying all medical illustrations in the United States; Mr. Shepard, Medical Art Editor in the Saunders Publishing Company; and Mrs. Edna Hill Krell, Medical Artist in the University of Pennsylvania.

Following dinner, the Medical Artists discussed plans for a future organization. A committee of five members, representing the United States and Canada, was formed last summer. Mr. Jones has been elected acting chairman, and Miss McLatchie acting secretary.

Graduation exercises for the School of Medical Illustration have been omitted this year. The graduates are Mrs. Ann Ogden Alston, who will free lance in Boston; Mrs. Pat Ordway, who has left to take a position in Cornell University; and Miss Janet Sullivan, who will relieve Miss McLatchie of the work in the Eye and Ear Infirmary. Miss Sullivan has specialized on head anatomy and is well equipped for the Eye and Ear work.

With this beginning, the department is looking forward to a happy and interesting year in 1945.

At a special meeting held in the Ether Dome on January 12, Dr. Edwin J. Kepler, Division of Medicine of the Mayo Clinic, spoke on "Comparative pathologic physiology of Addison's disease and Cushing's syndrome".

Dr. Francis M. Rackemann (*EM* 1914) has been elected Chairman of the Board of Trustees of the Boston State Hospital.

The new residence for student dietitians had its official opening on January 26, when the Trustees of the Hospital and members of the Dietary Department entertained at Herrick House, 27 Commonwealth Avenue. The guest of honor at a tea in the afternoon and at open house in the evening was Mrs. Robert F. Herrick, whose late husband gave the house to the Hospital.

In spite of bitterly cold weather, well over two hundred people attended the two functions. Those who hadn't seen the house since it was the headquarters of the British War Relief were amazed and delighted with the changes that had been made toward restoring this beautiful old residence into the gracious home it had formerly been.

Refreshments consisted of a fascinating variety of sandwiches made by members of the Dietary Department, and an assortment of petits fours which only Mr. Becker at his very best could prepare. All members of the Dietary Department acted as hostesses, and the fact that the student dietitians wore formal dresses increased the note of festivity that prevailed. Recognizing the importance of the occasion, many friends of the Department sent beautiful flowers and plants.

The four rooms on the first floor open off a large entrance hall, and are furnished as a library, drawing room, living room, and bed-sitting room. The color schemes have been carried out mostly in pastels. These tints, coupled with the high-studded ceilings, give a feeling of warm spaciousness. A very wide, open staircase leads to the second and third floors, which accommodate twenty-four girls. Their rooms are done in tints of blue, peach, yellow, and gray, with color accents provided by bed-spreads, flowered draperies, and individual decorative touches.

In spite of record-breaking snow, the seating capacity of the Moseley rotunda was almost taxed on the evening of February 9, when the members of the largest class of student nurses in the history of the Nursing School — 109 strong — were graduated.

A trio, consisting of violin, cello, and piano furnished appropriate music until it was time for the exercises to begin.

The double file of nurses created a very impressive picture as they marched into the room to their assigned places and remained standing until the first strains of our National Anthem brought the guest audience to its feet.

Dr. Lincoln Davis, Chairman of the Trustees' Committee on the School of Nursing, was Presiding Officer. In his opening remarks Dr. Davis gave a very amusing account of how he started out from home that morning, necessarily luggageless, fought his way through hip-deep snowdrifts to the highway, thumbed a ride for his first hitch on the journey, and finally arrived in Boston. In accounting for what he called his "bizarre" attire, he explained that credit for many things should go to certain younger members of the medical profession who, in the emergency, proved their special skill in proper geriatric treatment.

Miss Effie J. Taylor, M.A., L.H.D., Professor and Dean Emeritus of the Yale University School of Nursing, delivered the address of the evening; Miss Johnson gave a report of the school and its achievements during the past year; the School Glee Club sang two songs; and Dr. Davis called the roll of the graduating class.

Following the last song by the Glee Club and School a reception was held in the Brick Corridor. Refreshments were served, and a social hour brought the evening to a close.

* * *

Lt. Oglesby Paul, MC, USNR (*WM* 1943) is back after 19 months' sea duty. He paid us a visit not long ago, and the report of his activities — which we literally had to *drag* out of him — sounded like a tour of the Seven Seas. His journeyings included the North Atlantic, Aleutians, Australia, and the islands of the Southwest Pacific, where he took part in four major campaigns. He has been detached from his destroyer.

Lt. Frederick C. Gevalt, Jr., MC, USNR (*r.p.* 1943) has been awarded the Bronze Star Medal for courageously attending the wounded while under fire on a French invasion beach. As you may remember, Lieutenant Gevalt was wounded during that invasion. He has been stationed at Chelsea Naval Hospital since his return home.

Lt. Gerhard Nellhaus, a past orderly at Baker Memorial, has been awarded the Air Medal with two Oak Leaf Clusters. Lieutenant Nellhaus has participated in long-range combat missions in the Mediterranean Theatre and over Germany. He is a radio operator-gunner on a Flying Fortress.

A letter has come from Pvt. John Szerejko, another past orderly at Baker. He wrote to Mr. MacNair, from England General Hospital, Atlantic City, N.J., on January 28:—

> Well, they finally got me, but I'm not out. It happened in France. I was hit by a mortar shell. One piece struck me in the stomach. I just said a little prayer — that's all. I was lucky that some of the fellows were there to pick me up and rush me to the Aid Station. From there I went to the Field Hospital to be operated upon. And another thing — I didn't lose an ounce of blood. Am I lucky! Now that I am in the States I hope to get well soon.

* * *

I have just come from one of the concerts now being given in the Chapel every other Thursday afternoon by members of the American Guild of Organists and instigated by Mr. Osborne R. Perry, head of the men's volunteer group. Sixty-three patients — five of them bed, fourteen wheel-chair, and the rest ambulatory — had been brought from the wards by *volunteers* to listen to this organ music, with the addition today of violin solos. The effect of these afternoons in the Chapel cannot be put into words nor measured in terms of therapy.

Music has always meant much at the Massachusetts General Hospital, expressed variously through choral groups and talented individuals among its personnel, through professional musicians imported on occasion from without, and through the radio and recorded music. Recently, in order to integrate all these streams of musical activity, an MGH Music Committee was formed, with Dr. Faxon's enthusiastic support.

Consisting of six members so far — each representing a different service of the Hospital — the Committee plans to act for the present as clearinghouse rather than as originator of music within the Hospital. It will serve as headquarters for the building up of a suitable library of recorded music, and as administrator of such gifts, bequests, and funds as may be put at its disposal.

Still in its infancy, the Music Committee invites criticism, suggestions — and donations. Two of the latter have recently been received from members of the Armed Forces now overseas: one, a gift of three record albums from Pfc. Joseph E. Garland, in memory of Dr. William B. Breed; the other, a check from Capt. Luke Gillespie with which to buy records, "because", as he writes, "I know from experience over here what it can mean to hear good music." To them both, many thanks for making it possible for us to have more good music on the home front, too.

Last August we reported the establishment of the new Norton Award of $3,500 offered to encourage the writing of books on medicine and the medical profession for the layman. W. W. Norton & Company announce that the award has been won by Dr. Carl Binger (*EM* 1915), with his manuscript, *The doctor's job.* To quote the Norton announcement: "The book undertakes to put the lay public in living touch with the medical world as it exists today. The publishers feel extremely fortunate to be able to give the award to a book which so clearly relates medicine to society and demonstrates the spirit that inspires and sustains men of medicine in their work.

"Dr. Carl Binger is a graduate of the Harvard Medical School, who served with the Rockefeller Institute for Medical Research and is now on the faculty of the Cornell Medical College. He is also a practising physician in New York City."

The doctor's job will be published on March 26.

The Norton Medical Award is again offered for a book to be published in 1946. Those interested may write to the publishers, W. W. Norton & Co., Inc., Medical Award, 70 Fifth Ave., New York 11, N. Y.

This letter from Capt. Francis G. Scholl, OAC 55, Fort Sill, Okla., addressed to the Staff, Massachusetts General Hospital, speaks for itself.

> I have been anticipating writing you all for quite some time; however, due to the acute shortage of nurses and medical personnel in the armed forces, this may be quite the appropriate moment.
>
> The medicos and all medical personnel in the military forces are greatly underrated. The one and only test, to find out what great work is being done by the medicos and how indispensable they really are, is for one to become a battle casualty.
>
> I was a patient at the 6th General Hospital in Casablanca, in April 1943, and may I say that Major [Henry H.] Faxon [*ES* 1927] and the nurses from Massachusetts General Hospital made it possible that this bit of information can be written.
>
> Seriously, words cannot express the treatment that was given us GI's nor the work that is being done; but the Units that represent the hospitals in the combat zones can be mighty proud of them all. While at Halloran General and Walter Reed I had the opportunity to talk with many men who have come through the 6th General, and you can rest assured there was nothing but praise in the right place.
>
> We all are in accord on one thing — to wit: make all medicos and nurses Generals, and even then they would not be overrated.
>
> Remember — they are not forgotten, nor will they ever be.

The Stars and Stripes of December 12 carried the following article:—

> High among the snow-capped Italian mountains, medical science has established its newest research outpost.
>
> Deep in the combat zone, where blackout vigilance is nullified by the reflection on searchlights, shell bursts and flares, a group of Army officers have come in search of a clue and a cure.
>
> Each of them an internationally known member of the medical profession, these front-line men in white are on the trail of an elusive kidney ailment, which has brought death to American soldiers who otherwise might have recovered from major combat wounds.
>
> On a shell-shattered site once occupied by an evac hospital, this unique research party has set up shop in a truck — a small but complete medical laboratory containing microscopes, spectroscopes and the dozens of other delicate instruments needed in their work.
>
> The men who compose this strange wartime scientific expedition were handpicked for their two years of experience in the theatre and for their civilian backgrounds of distinguished medical service. To them has fallen the task of finding the "bug" in the otherwise smoothly running Army machinery for management of the wounded.
>
> This distinguished group of Army medicos have two things in common. They're all "high" on research and they all come from Boston, Mass. What's more, they all worked together in the hospitals of that city before the war. It's an ideal medical team, with the backfield composed of lieutenant colonels Henry K. Beecher [*WS* 1934], Eugene R. Sullivan [*EM* 1936 & *P* 1937], Tracy B. Mallory [*c. P*], and Fiorindo A. Simeone [*WS* 1936], and Capt. Charles H. Burnett [*r.p.* 1942]. . . .
>
> This massing of medical talent up where only doughfoots dare to tread was precipitated by the discovery that the kidneys of certain severely wounded soldiers were clogged fatally by an unidentified pigment. It's a condition which is strangely confined to only those cases in which the odds of recovering are stacked heavily against the patient.
>
> The job of these medically-wise pioneers and their mobile laboratory is twofold. First, they must discover the origin of the pigment. If and when they do, they must determine how to prevent its formation or how to keep it from being fatal.
>
> Working long hours under harrowing conditions, the researchers report some progress in the long and tedious processes of cause and effect and elimination. But, already, the search is narrowing
>
> The first question they asked and answered was whether the medicants which were used to save these lives in the first place — plasma, whole blood, penicillin, sulfa drugs — were reacting against the kidneys. The answer was an emphatic no, as these medical bloodhounds swung over to another scent and scores of other questions. For example:
>
> Why does the pigment appear only in the case of the most severely wounded? Does it result from a crushing of the muscles? . . . and so on.
>
> This handful of researchers high in the Apennines, however, are not alone in their quest of the illusive "bug". They are constantly corresponding with leading civilian authorities in the U.S., who have gone right to work on their own carefully coordinated experiments.
>
> One day the right question will be asked and the right answer found. Until then this handful of scientists will continue in their quest of a clue and a cure.

Accompanying this article is a picture showing Lieutenant Colonel Mallory, at work in the mobile laboratory.

MASSACHUSETTS EYE & EAR INFIRMARY

It is with deep regret that we record the death, on February 11, of Mr. Russell G. Fessenden, President of the Board of Managers. Mr. Fessenden was elected a Manager in 1903 and became President of the Board in 1928. His loss will be keenly felt by those of us who were privileged to work with him.

In December Dr. Schall was the guest of The Asociación Médica de Puerto Rico at their 40th annual meeting in San Juan. His two addresses were on "Cancer of the larynx" and "Cancer of the nasal sinuses".

Dr. Carlos Muñoz MacCormick, president of the Association, was a former postgraduate student in oto-laryngology at Harvard Medical School.

Lt. Comdr. Stanley A. Myers, MC (*Oto-Lar.* 1937), who is back from two years in the Pacific and is now a patient at Chelsea Naval Hospital, spent his first day out of hospital visiting the Clinical Conference on February 1.

We had a pleasant surprise the other day when Dr. Irl H. Blaisdell (*Oto-Lar.* 1939) came in to see us. He is practising in Syracuse, N.Y., and said they were "snowed under — 115 inches of snow".

A letter, headed Birmingham General Hospital, Van Nuys, Cal., came in January from Lt. Horst J. Heinicke, MC, AUS (*Oto-Lar.* 1944). Excerpts follow.

Already it seems a long time since leaving the Infirmary and civilization for the more remote parts of the country.

Carlisle, during my stay, was notable for its penetrating, damp cold. Most of us were forced to don every stitch of clothing we owned or could lay our hands on, distributing it in various layers about our persons, according to each individual's own ideas of the methods of efficient insulation. Seating us, thus encumbered, in a hot lecture hall, then letting us sit outside watching demonstrations in a bleak, cold field, did little to reduce our almost universal incidence of upper respiratory infections! Strangely enough, it seemed to do little harm, either. There may have been some who were sorry to leave; however, any one voicing these regrets would have been considered mentally alienated. Nevertheless, it was a good program on the whole. Our physical condition improved markedly. Also, we were—as a result of our experiences—ready to face almost anything the enemy could offer, even the most frightening prospect.

Burmingham General is a most pleasant change, though it promises to be temporary. My particular ward of debarkation patients are mostly cases of dermatitis, which yield readily to change of climate, to a few simple ointments or lotions, and not too infrequently to a cessation of all treatment. The mere change of atmosphere—i.e. boarding the boat for home—was enough to change many of the incapacitating, stubbornly oozing areas of skin which had been resistant to all previous treatment, to dry, rapidly healing lesions. These included a good many cases of external otitis. One wonders at times about neurogenic and nutritional elements. To see these men, gazing in awe at the beds—spotless, with changeable sheets, in clean wards—and then hear them say repeatedly, "I can't believe it", leaves a deep impression.

The EENT department here is practically non-existent for the present. However, during spare time I am privileged the run of the hospital, seeing whatever interesting cases are on hand. There is a ward or so of rheumatic fever, allowing the review of diastolic murmurs, of sedimentation rates, of electro-cardiography, and of similar subjects.

Dr. Schall received a V-mail letter from Capt. John E. McKeigue, MC, AUS (*Oto-Lar.* 1943). Captain McKeigue says, in part:—

It has been very strenuous on us over here ever since we have been in it, but we have always managed to find a little more zip to keep on pushing.

After what we call "sweating it out" with the Infantry on the front for over three months, I was transferred to the Field Artillery in the same Division. I had some real experience with the Infantry, but it wasn't along medical lines. I spent over ten days riding with the tanks, and that is truly rapid warfare. We have a great Division and have excelled in every phase. I can't think of one time when we were not able to secure our objective. This may sound as though we are the only Division over here, but you *do* get to be proud of your outfit.

As for the general opinion concerning the length of the war in this Theatre, we feel there is some time to go yet; but when the word comes for us to make an all-out effort, the enemy will be thrown back on his heels.

We are all anxious to get back home, but not until the job is done right. We hope that will be soon.

Dr. Schall has passed along another letter — this one from Capt. Richard Goldcamp, MC, AUS (*r. Oto-Lar.* 1943). It was written in Germany, December 6.

A lot has happened since my last letter. I'll just put down a few of the high lights since leaving Metz.

We kept going day and night without a letup. Progress was slowed up because of weather, and fighting was hard all the way to the Saar. Jerry didn't want us to get the high ground commanding the Saar basin and he fought like a cornered rat. The Maginot Line was a laugh! Those pillboxes and forts didn't give as much protection as an ordinary German house. Jerry didn't even stop to fight back there. After the initial break-through, we travelled at full speed and hit Saarlautern before they had a chance to blow up the main bridge over the Saar River. Saarlautern was the toughest town to date. House to house fighting, and daily progress measured by houses. They were pretty mad about our taking that bridge and they turned every gun of the Siegfried Line right at us. In two days 7,600 enemy shells hit our side of the town. Mopping up took quite a while, and then we sat awaiting orders. What next? The counterattack in the First Army sector. All plans changed. "Daddy George" Patton was called in to help those boys out up there. And now we're waiting.

You should see these German houses. Each one a pillbox in itself. And they aren't new, either. They were built years ago. Foundations really solid, walls of basements three to four feet thick and reënforced with steel girders or thick wooden beams. Quite a few have airtight, air-conditioned rooms to be used in case of chemical warfare. Bunks are built in in basement rooms and each room is equipped with an individual stove. Plenty of coal and coke stored. All sorts of canned food. The homes themselves are furnished beautifully. These people really lived well. There's no evidence of food shortage in Saarlautern—the first large town in Germany we've hit.

One of the first nights in Saarlautern the Major and I had just crawled into bed in our first floor room — inner-spring mattresses, sheets, and everything—when a shell hit fairly close. It sounded like a freight-train coming in. After the second one we looked at each other, wondering if we should take to the basement. The third shell had us flying downstairs in our underwear. We were down there in the dark for almost two hours—colder than hell. When we finally went back, our beds were covered with glass and plaster. We moved to the basement.

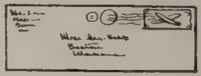
Medical personnel of the Division have done a wonderful job throughout the campaign. Many have been cited for bravery and rewarded for heroic deeds. Aid men and litter-bearers, constantly under artillery and small arms fire, have saved hundreds of lives at the risk of their own. They work like lightning and their work (dressings, splints, medication, etc.) is excellent.

Not getting any ENT work, I routinely look at all ears, noses, and throats, just to keep in mind what the normal looks like. One of these days I'm going to get mad and do a submucous or a tonsillectomy. Then they'll court-martial me and send me back to a hospital or the States for punishment.

Looking around in the drug stores and hospitals in search for medical supplies we could use, I came across cases of champagne, cognac, and rum. It took my jeep and trailer to carry it all. Now all patients get a good healthy shot (not in the arm). I have very small sick call. The boys don't come in unless they're really sick. No more riding the sick book. The trip across France and into Germany cured them. They're fightin' men now—a lot of 'em real heroes.

As a note before I close—I think Patton is the best leader the Army has. Look at his front now!

Am in good shape and feeling fine. Give my best to everybody.



All material of a military nature in this and every issue of The News is first cleared for publication by the local Public Relations Department of the Army or Navy.

The following new addresses have been received:—

Lt. Comdr. Robert B. Bigelow, MC (*a. Psychiat.*), 241 Adams St., Milton, Mass.
Sgt. Dominic W. Cervizzi, MC, Det. Medical Dept., Station Hospital, Camp Howze, Tex.
Major Richard S. Cosby, MC (*EM* 1940), Regional Hospital, Fort Jay, N.Y.
Major J. Maxwell Chamberlain, MC (*NS* 1934 & *WS* 1937), ASFTC, Fort Lewis, Wash.
Sgt. George A. Cribbins, Hq. & Cont. Grp. 1st T.C.G., 2nd Cont. Sqdn., Esler Field, Alexandria, La.
Major Ephraim P. Engleman, MC, AAF (*res. fel. M* 1941-42), Torney General Hospital, Palm Springs, Cal.
Capt. Carl E. Horn, MC, AUS (*Or.* 1940), Station Hospital, Oakland 14, Cal.
Lt. Fathollah K. Mostofi, MC, AUS (*a. P*), Medical Section, S.C.U. 1967, Camp Haan, Cal.
Capt. Dexter N. Richards, Jr., MC, AAF (*WS* 1943), Lincoln Army Air Field, Lincoln, Nebr.
Lt. Edward P. Richardson, Jr., MC, AUS (*EM* 1943), ASF Personnel Replacement Depot, Camp Beale, Cal.

Brief bits of information:—

- Col. F. Dennette Adams, MC (*WM* 1918) has been promoted to this rank.
- Capt. Daniel S. Ellis, MC, AUS (*EM* 1941) is with the 116th Evacuation Hospital.
- Donald Giberson, former plaster man on the orthopedic wards, is now in New Guinea.
- Lt. Joseph P. Holihan, MC, AUS (*ES* 1943) has been transferred to the 252nd General Hospital.
- Major James A. Halsted, MC (*WM* 1932) is with the 15th Field Hospital.
- Lt. Comdr. R. Starr Lampson, MC (*ES* 1936), now aboard ship somewhere in Pacific waters, has received this promotion in rank.
- Lt. Herbert C. Moffitt, Jr., MC, USNR (*EM* 1942) is now with Com. Serv. Pac., Force Medical Office, somewhere in the Pacific Area.
- Lt. Charles A. Wheeler, MC, AUS (*NS* 1935 & *WS* 1938) has been assigned to the 230th General Hospital.

A note from Ens. Eileen Glynn, NC, USNR (*MGH* 1936), headed U. S. Naval Hospital, Corona, Cal., gives us a hint as to the whereabouts of two of our men. The third one mentioned had already notified us of his transfer. Ensign Glynn says:—

> We had an unexpected visit from Comdr. Walter Burrage [*EM* 1927] on New Year's Eve. He was at our dance here with the Hugh Montgomerys [Lt. Comdr. (*EM* 1932)] and the Frederic Tudors [Lt., USNR (*a.M*)].

Lt. Comdr. George P. Sturgis, MC (*a.p.*) sent us a change of address and announced his promotion in rank. He says:—

> I am one of those many about whom Milton wrote "They also serve who only stand and wait." For ten months our unit has waited, usually impatiently, for orders to move out. Six months we spent at Lido Beach, Long Island, and for four we have been here in California, receiving training, primarily in the art of patience.
>
> I have met no MGH men out here, but Harvard Medical School is well represented by Comdr. Olin C. Hendrix, '28, and Lt. Comdr. Herbert L. Elias, '27, both MC, USNR. Dr. Hendrix is the senior medical officer of the medical component of our unit, whose function is to establish an advance air base—somewhere.

It was a letter dated January 1 that contained a contribution to the Music Fund from Capt. Luke Gillespie, MC, AUS (*a. obst.*) — appreciation of which is expressed on another page in this issue. The rest of Captain Gillespie's letter reads:—

> Life is less hectic here in the Moluccas these days. On Christmas Eve we enjoyed the beautiful sight of a Jap raider exploding in mid-air and falling in flames. The GI cheers could have been heard for miles. Although most of the raiders are destroyed or damaged, it's still unusual for the ground troops to be in on the kill.

The first issue of THE NEWS gave a list of MGH-ers who had gone into military service prior to September 1, 1942. Not since then had we heard from Lt. Keith A. Shangraw, MC, USNR (*a. dn. s.*), until Miss Peck brought us a letter from him, in which he thanks the Dental Clinic for their Christmas card. Lieutenant Shangraw is aboard ship somewhere in the Pacific. One section of his letter says:—

> THE NEWS finds its way to me quite regularly and I enjoy its pictures and reading matter very much. A recent issue informed me as to the whereabouts of [Major] Otto Aufranc [*Or.* 1938] and [Major O. Sherwin] Staples [*Or.* 1938]. I've often wondered where they were and how they were making out.
>
> We manage to keep pretty busy out this way most of the time, as you no doubt already know from reading the papers. From those I've seen—sent here by mail—the accounts seem to be quite accurate.

Lt. William J. Baker, MC, USNR (*WS* 1943) wrote us a "first letter" on January 10. The moment we had finished reading it we were already eagerly awaiting the next one from him. Our greed for more is easily understood after reading what he has to say.

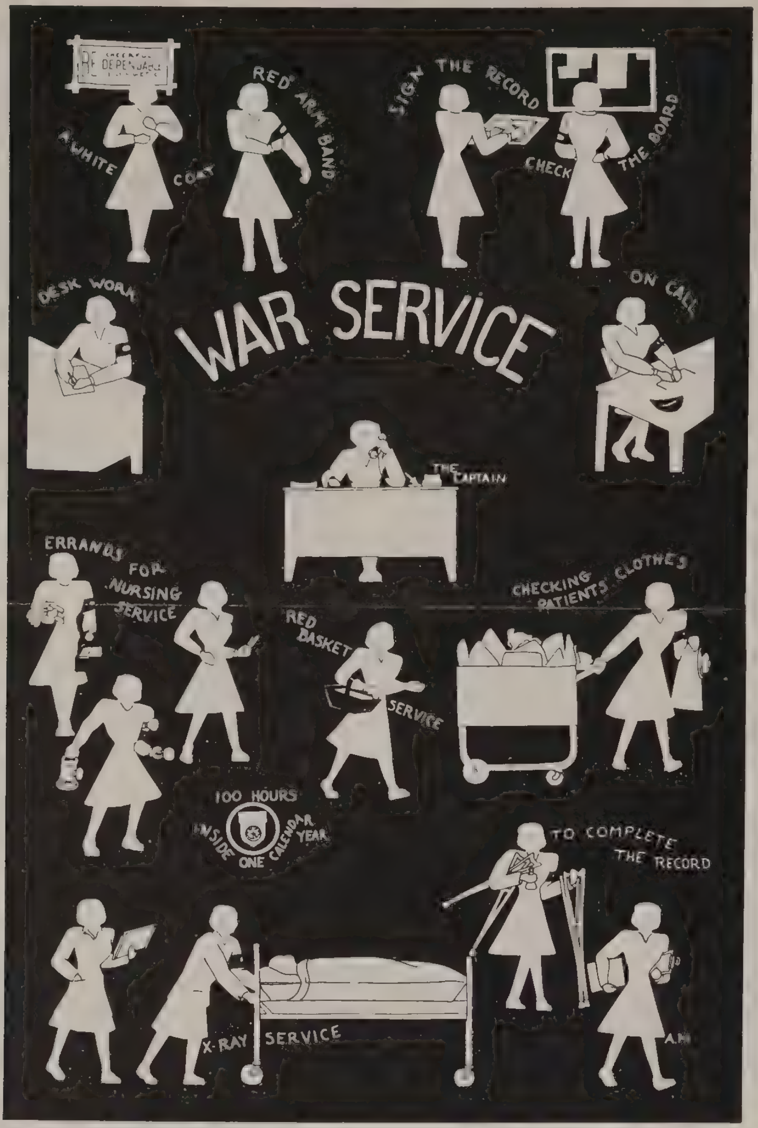
> I received the nice Christmas card from M.G.H. and it made me not a little homesick for the hospital to see again all the familiar signatures.
>
> Here is a brief résumé of my career in the Navy. I went on active duty at Quonset in July 1943, with my intern roommate, Bill Ayers [*WS* 1943]. The duty there was very pleasant but rather short-lived. I did accomplish one thing while there—much to my satisfaction—and that was to marry Jean Houghton, who used to work in the MGH O. R. From Quonset I went to duty with the Fleet Marine Force, starting in at New River, N. C., at the Field Medical Service School for training in amphibious operations with the Marines, and treatment of the wounded, sanitation, and the like. As far as I can gather, it serves as a counterpart of Carlisle for those who go into the Navy for duty with the Marine Corps. Several MGH graduates had been there before me—among them Irad Hardy [*ES* 1939] and George Mixter [*WS* 1943]. Hardy had already left when I arrived, but on occasion I ran into Mixter. The school was all right, but as far as I am concerned they can give that part of North Carolina back to the Indians or whoever else would want it—and I doubt if there would be many takers.
>
> Two months after arriving there I was detached and sent to the west coast, assigned to an Infantry Battalion in a Marine Division, and have been with them ever since. Irad Hardy and Dr. [Lt. Comdr. H. Bristol] Nelson [*a. obst.*] are in the same outfit. Those are the only MGH-ers I know of, but there are several HMS graduates. Our outfit got its baptism on the Marshalls (Roi and Namur), after which we had a brief rest before hitting Saipan and Tinian. And I might say that the former was a Sunday school picnic compared with the latter. I think that Saipan deal made Christians out of a lot of us. When we landed on the beach the Japs were just beginning to register in that area with their artillery, and we soon learned to hit the ground in no time flat and start digging. (I think when I get home I will be a qualified ditch digger—might even get a foreman's job under the right system.) From then on it was a case of dodging artillery and mortar shells, a few bombs, and any number of machine gunners and snipers.
>
> Being in an infantry outfit, you never know what you will be called upon to do next. I even practised a little pediatrics on the side. One morning early a youngster, about 2 or 3 months old, was brought into our sick bay, screaming like an eagle. We looked it all over and could find nary a scratch to account for the noise. Then some one had the brilliant idea that it was probably hungry. (At that time we couldn't even look a C-ration in the face, so it hadn't occurred to most of us that that could be the case.) We scurried round and found a can of milk, which we watered down. Then came the problem of how to get the milk into the baby. I finally took a rubber glove, punched a hole in one of the fingers, and filled the glove with milk. We stuck the finger into the screamer's mouth, and it worked wonders. Not another sound out of it. Later we evacuated it to the rear so I never knew what happened to it, but my corpsmen at least had a short lesson in the care of the relatively newborn.
>
> Our aid station was usually 300 to 600 yards behind the front lines, so we got our casualties fairly quickly after they had been hit. We are set up to do only first aid and get the patients ready for evacuation back to the rear, so our work consisted mainly of giving plasma (and lots of it), redressing when necessary, and splinting. Occasionally we would get a real emergency such as a sucking chest wound and would then break out a suture or two and put it in. I am afraid all my teachers would turn over if they saw the way it was done, but out there technique was something you didn't get a chance to worry about too much. Anyway, the results were quite satisfactory. Toward the end of the operation, I didn't duck quite low enough and got a little nick in my leg from a Jap sniper, but I guess he wasn't a very good shot because I was able to carry on with no ill effects except a stiff leg for a few days.
>
> After Tinian we returned to our rest camp and more training for further inroads into the ever decreasing Jap holdings in the Pacific. Unfortunately, I managed to pick up, along toward the end of Tinian, what I subsequently found out was lichen planus hypertrophicus, a condition not uncommon in this general area, I find. It cleared up, except for occasional itching, but apparently in the affected areas of the legs and feet the skin has little or no resistance to infection, so I have to keep as clean as possible. If you happen to know of any one who has any particularly hot dope at M.G.H., I certainly would appreciate knowing about it.
>
> Some time after arriving back here I was promoted to full lieutenant—as were, I suppose, all the others who graduated about my time and went into the Navy. Promotions are a little slower here than in the Army, I gather.
>
> A short while ago I had a very interesting letter from [Don W.] Fawcett [MC, AUS (*WS* 1943)] who is with an AA outfit in Belgium, and a captain. He apparently has run into quite a few old friends in his travels. I have seen Ayers on a couple of occasions, but he is the only one. I was more than shocked to hear the tragic news about Ted Robie. He was my lab partner in Anatomy way back in first year medical school, so I had known him for some time. Let's hope there will be no more similar tragedies.
>
> Give my best to all at the M.G.H.

Dr. Faxon has received this note from Major Leo B. Burgin, MC (*CM* 1932), dated Belgium, January 14:—

> The arrival today of the M.G.H. Christmas card has given an impetus to the Season's Spirit which was just beginning to lag. It is stimulating to see the facsimile handwriting of all my friends at the hospital and to think of a story in connection with each name as one goes through the list. To merely say thank you hardly expresses one's feeling on such an occasion. I am optimistic enough to feel that next Christmas I shall be seeing the Chapel in person.
>
> Kindest regards to all my friends.

Capt. Alfred O. Ludwig, MC, AUS (*EM* 1932) has been mentioned from time to time in several of his friends' letters. At last we have heard from him directly, and a most interesting account he gives of his activities.

> THE NEWS has been a very welcome source of information about friends from M.G.H., and I have enjoyed it greatly. Perhaps one of the reasons for this sudden urge to write is because my copy now reaches me by way of three forwarding addresses, which makes it arrive where I now am several months after it should.
>
> Having begun my overseas career in the Army with a General Hospital, I am now in my third different assignment. The first orders reached me on September 10, 1943,



sending me to a Station Hospital to which I was later assigned. This was a hospital which was remodelled into a psychiatric installation, serving in a base section. While this was in the process of being set up, several others on the staff and I were loaned to another General Hospital—the Washington University affiliated unit—to help them out with their enormous NP service. This was most interesting from many points of view, but at that time an added attraction was the location of the hospital, high up in the barren mountains somewhere in North Africa, near some hot springs, which furnished the unheard-of luxury of hot showers. After a month of this, I did a week's tour of duty with still another Station Hospital in a little sea-coast town, then went back to the original one.

On December 10, 1943 I was ordered to report to the 5th Army, and there, with Capt. Calvin Drayer from Philadelphia, Stephen Ranson of Chicago, and Capt. Walter Ford, we set up a forward treatment unit for psychiatric battle casualties. After ironing out the kinks and gaining the necessary experience for this special sort of work, this installation functioned in admirable fashion and we were able to salvage for duty a large number of patients who, under previous policies, might well have been lost to the combat units. In time we became a sort of training station for other men interested in psychiatry who wished to become familiar with the special problems of forward area treatment and policies. Therefore, we had the opportunity to meet and work with a large and varied group. This work was done in a Clearing Station which was expanded in order to furnish enlisted personnel and tentage to care adequately for our patient load. It was very well administered, and the work with the officers of the company was most pleasant.

On July 21, 1944 there was still another change of scene for me, namely to Headquarters 7th Army—my present assignment—as Neuropsychiatric Consultant to 7th Army. Before this—just to let me get a taste of what being near and on a target was like—I had the opportunity of working in one of the Evacuation Hospitals on the Anzio beachhead when this delightful stretch of land was still "hot", in the parlance of the soldier. While I can't say that I relished the shelling and bombing, caring for psychiatric casualties in such an area was most instructive. It served to further substantiate our previously gained impression that these men tend to progress rapidly in their symptoms the further they are evacuated to the rear, and that they are much more amenable to treatment and cure in the earliest stages. This has been a most important lesson, from which we have profited greatly.

With the 7th Army, the task was to set up an installation similar to the one we had run in the 5th Army. In the offing was also an amphibious landing which, I must say, I looked forward to with some trepidation. All of us mixed up in that affair were happy that the opposition was relatively light, and we were not too much harassed by enemy attentions. I landed with a Field Hospital on D-day, but late in the afternoon, at 6 o'clock, when practically all of the excitement was over—other than a visit by the Luftwaffe at dusk. Our own installation was running within a week. After that it ran and ran, trying desperately to keep up with the rapid advance over and through France.

In the course of this forward work, there is an opportunity to keep in touch with medical installations both ahead of us, in the Divisions, and also those to our rear, in the base section—a fact which has been highly stimulating to all of us, not to mention giving us the chance to see a lot of the country and meet and work with many men in our particular field. This close liaison has made it possible to improve the treatment of our cases very markedly.

Throughout all of these peregrinations I have met MGH men—among them Lt. Col. Grantley Taylor, Colonel Churchill, Lieutenant Colonel Beecher, Lieutenant Colonel Simeone from Surgeon's Office AFHQ, Lieutenant Colonel Parsons, Major Townsend, Lieutenant Colonel Drake, Captain Giddings and Captain Cantlon, Captain McKittrick, Lieutenant Colonel Mallory, and Major Capps. It has been a great pleasure to see these men, and we have short chats whenever we run into each other all over the theatre. I am hoping to run into some of the group from England some time, now that we are getting near them in France.

Another letter has come to Dr. Faxon from Colonel Goethals. It was written January 21.

After my last letter to you things began to relax a bit, until finally, on 22 December, we discharged our last patients and reverted to the status of a staging unit. We went into winter quarters, so to speak, by pulling all our personnel in from tents and giving them rooms in the building. We packed all the supplies and have been ready for a month to move. In the meantime we have lost all of our medical corps officers save seven; all of our dentists except two; all of our MAC officers save eight. No nurses are left except Miss Knights and two others. Over 100 of our men are gone. All losses have been to detached service or temporary duty elsewhere.

Hiram Jones and Knowles Lawrence are on one surgical team, Jack Frazee and Claud McGahey on another—both with the Fifth Army. Sullivan is perennially away; we carry him on our strength but have had him present for duty hardly a fortnight in the past year. Halsted and Kranes have been working with the Fifth Army for approximately four and three months respectively. The other professional officers and nurses are in other hospitals in this base section. King, Rogers, Bland, Bartlett, Gundersen, Smith, and I hold the fort representing the Medical Corps; Rae and Wands the Dental Corps. Even Hamilton has been away on an inspection trip, but he should be back shortly. Kelley, with two MAC officers, six nurses, and thirty-seven men, has taken over a hospital train.

In short, we are in reserve, waiting for the next move. All depends upon what the Fifth Army does. If they go ahead, either by fighting their way or unopposed (due to the possibility that the *boche* will give up Italy to reinforce his eastern or western fronts), we shall follow. Until then, here we are and, so far as I can predict, here we remain. We are in exactly the same situation as that of another General Hospital last year which staged for six or seven months before a place was available in which to open station.

We have gone back to basic military training, with lectures, orientation talks, training films, close order drills, and road marches. The latter are strenuous and show how much we have softened since coming overseas. I am glad the nurses and most of the professional service officers are off our hands, as they are much better off when kept at professional jobs.

T. Stewart Hamilton has just been promoted to the grade of lieutenant colonel. The young man won his spurs in the give and take and rough and tumble of the present complexion of administrative life.

You may have seen one or two of our nurses who have recently returned on rotation or temporary duty. I understand that the quota for TD is to be liberalized in the near future, so you may well yet see more of us before the war ends.

THE NEWS

MASSACHUSETTS GENERAL HOSPITAL 1811

No. 31 Boston, Mass. April 1945

SURGICAL SERVICE AFFAIRS

Adjustments to the War program on the Surgical Services have been continuous. After the first great exitus of General Hospital #6, there has been a steady flow of staff and resident personnel going into some branch of military service. At present, exactly one half of all of the surgical staff are in service. There are only six men left under the age of 46 and four of these have been rejected by either the Army or Navy or both. It became necessary to declare a few of these men "essential" for the maintenance of the Hospital and Medical School and all have bewailed their lot at being left behind. The increased load has been divided as well as possible and all are doing their utmost to keep the standards of the hospital at a high level.

The most serious handicap has been in the resident personnel. The 9-9-9 program has worked better than any of us thought it could. These men with a speeded-up curriculum have matured more rapidly and have taken responsibility surprisingly well. Fortunately, we have had some excellent 4F material that in most instances have been kept longer and are therefore able to carry more of the load. The special services have suffered more for the want of well-trained senior residents. This is particularly true of Orthopedics and Neurosurgery. Urology has been greatly aided by South American residents. All special services have the benefit of a few weeks' assignment from general surgical interns on the rotating system. This rapid turnover may be bad, but it is useful in the education of the intern and helpful in maintaining all departments. We are now going through a new adjustment in interns and residents ordered by Procurement and Assignment. The entire hospital is allowed only thirty men beyond the grade of intern. Of these, only fifteen may be reserve officers. We wish there were a few more good aliens and 4F men available.

Teaching every month of the year is tough on the full-timers used to a leisurely summer vacation. No complaints, however, are heard, but War casualties from overwork are common enough. Hamlin carries the bulk of the Out-Patient teaching. Cope does a lion's share, in addition to valuable research under the Office of Scientific Research and Development. He also assumes the important role of personnel officer for the house staff. All the oldsters do a turn with the students at more frequent intervals than in peacetime. None of the regular sessions have been omitted and actually some new exercises have been added.

Research has been almost entirely under the O.S.R.D. The contributions to the treatment of burns and shock have been outstanding. Clinical research continues to a considerable extent. Interest in the problems of thrombosis and embolism, ulcerative colitis, transthoracic approach to diseases of the upper abdomen, vascular lesions, hypertension, ulcer and cancer has been maintained. The circulators still meet at eight o'clock on Thursday mornings. The fracture clinic holds forth on Friday at eight.

The weekly staff meetings on each service are continued — the East at noon on Mondays and the West at five on Wednesdays. The bimonthly "dirty linen" session has been changed from Tuesdays at noon to a weekly session at 8:30 a.m. on Thursdays. Each week one of the special services gives a report for the previous month. This arrangement, immediately preceding the still popular "Grand Rounds" in White 3A, has been successful. The errors in diagnosis, complications, deaths, and autopsies still call for the usual cryptic remarks by the unresponsible parties. Of special interest at the moment is the big juicy carbuncle treated by penicillin alone or with early excision and graft with the aid of this substance — average hospital stay about 15 days. All complicated cases of any kind now referred from other hospitals have had a course of penicillin, just as a few years ago they had all had sulfa drugs.

The nursing situation becomes more serious all the time. We have gotten over the impact of patients coming out of ether all by themselves. It is hard to believe, but no catastrophies on this account have occurred. Volunteers have helped tremendously. Often, we see the wives of our service men making beds or carrying trays. Business men do the cleaning during the evening hours.

Although the turnover is slowed up somewhat because only a limited number of operations can be done each day, the type of care has changed little. We still get all the complicated "old crocks" from the surrounding country. These are gradually older in years as time goes on. A cross section of a thirteen-year period shows that the patients now average 8 years older than they did 13 years ago. The boys get plenty of operative experience in the interruption of femoral veins. We are in the process of a controlled experiment with Dicumarin and increasing the use of early ambulation in an effort to reduce this load on the operating rooms.

We are seriously engaged in postwar planning. First of all, we need our teachers and staff men back on the job. We must expect to take a major part in the completion of training of the men in service. The administration believes that we may be able to increase the house staff to 100 from its present quota of 60. The probabilities are that this will be universal in all teaching institutions, and estimates indicate that approximately 5000 additional residencies can be found throughout the nation by this means alone. Investigations are in progress by the American College of Surgeons to equip the best non-teaching hospitals for resident training. It is believed that all medical men in service can expect to receive the type and amount of graduate work they desire.

Arthur W. Allen, M.D.,
Chief of East Surgical Service
Leland S. McKittrick, M.D.,
Acting Chief of West Surgical Service

While attending a meeting of the American National Red Cross in Washington, February 17, Dr. Roger I. Lee and Dr. Henry R. Viets acted as an impromptu welcoming committee for Miss Betty Dumaine, recently returned from a long stay in India with the Red Cross.

A special Staff meeting was held in the Ether Dome on March 1, to hear Dr. Jan Waldenstroem, Professor of Medicine at the University of Upsala, speak on "Studies on serum iron in anemia and other conditions". Dr. George R. Minot and Dr. William B. Castle were present, and a very interesting discussion of Dr. Waldenstroem's paper took place. Tea was served in the Medical Staff Room before the meeting.

Comdr. Channing S. Swan, MC (*WS* 1925) instructs us to send his next NEWS to his home address, 2 Willow Road, Weston, Mass. Commander Swan has been overseas for eighteen months. Among other duties out there, he was Urologist at Base Two Hospital for about a year, and for the past six months he has been Senior Medical Officer at Advance Base Personnel Administration. He saw several MGH men at both places.

Pvt. Donald Giberson, former plaster man on the orthopedic wards and now a paratrooper in the Southwest Pacific, has sent us some Japanese invasion money to add to our collection of World War II material. The notes, in denominations of 10 pesos, 5 pesos, and 50 centavos, are at present on exhibition on the bulletin board near the foot of Treadwell stairs.

OFFICIAL NOTICE

A new preservative solution for whole blood is being used by the Blood Bank in an attempt to reduce the number of transfusion reactions and to extend the life of red blood cells. This solution contains, in addition to the usual sodium citrate, a suitable admixture of citric acid and dextrose. In it, after a storage period of twenty days, 85% of the red cells are viable. At the present time we are setting an expiration date of 14 days which may be extended at the discretion of the Blood Bank Staff.

It is still of the utmost importance that all transfusion reactions be reported to the Blood Bank. In 1944 the reaction rate was 2.3%, 3.2% lower than that in 1943. This rate is calculated on the *reported* reactions, and is probably actually a little higher. We wish to keep these figures as *low* and as true as is within our power. Therefore, all House Officers are urged to see that reactions are reported to the Bank as soon as possible.

The supply of Rh negative blood is limited, and its use must be restricted to those cases in which the Rh factor is known to be negative or in cases of extreme emergency. Rh negative bloods must not be used indiscriminately. If a patient in the Emergency Ward requires supportive treatment, the use of plasma is strongly advocated, unless the Rh factor is known.

A very small quantity of valuable, high potency Rh typing serum is now available for emergency cases. The Blood Bank Staff, including the medical students, are able to do this test, and it can be done in a few minutes. However, *its use is to be restricted to those cases which have been in the Emergency Ward twelve hours or less, or during hours when the test cannot be done by the Baker Laboratory.* Any other cases must be referred to the Director of the Bank.

Carroll C. Miller, M.D.,
Director—Blood Bank

HUGH WILLIAMS

In the death of Dr. Hugh Williams, on February 22, 1945, Boston lost a distinguished surgeon and a rare personality. He was born in Brookline on June 29, 1872, the son of Moses and Martha Williams. He prepared for college at the Nichols School in Boston, received his A.B. from Harvard in 1894, and M.D., *cum laude,* from the Harvard Medical School in 1898. He was a surgical intern at the Massachusetts General Hospital during 1898 and 1899. In 1903 he was appointed Out-Patient Surgeon at that Hospital, passing through the grades of Assistant Visiting and Associate Visiting Surgeon, to Visiting Surgeon in 1919. In 1929, he retired to the Consulting Staff. He was also, for many years, on the staffs of hospitals in Natick, Gardner, and Peabody, Massachusetts, and Brattleboro, Vermont.

For five years, Dr. Williams was the assistant of that master surgeon, Maurice H. Richardson; he proved an apt pupil and before long rivalled the master in surgical technique and skill. In 1905, he started in private practice on his own account and very early acquired a large and distinguished clientele which constantly grew until he was forced to retire because of ill health in 1929.

Hugh Williams was not a serious student in college, but the lighthearted, carefree Harvard student of the nineties vanished when he entered the Medical School. There was an awakening; his intense interest was aroused, and he worked hard and intelligently. But it was in the hospital that he really came into his own; he loved the clinical work and excelled in it, and the patients loved him.

Throughout Dr. Williams' career, his outstanding characteristic was his intense personal devotion to the welfare of each and every patient, rich and poor alike. As an operating surgeon his technique was unexcelled in his day. His skill, dexterity, and speed were astonishing and unerring. There were no lost motions and he never seemed to hurry. His surgical judgment was sound; he had, to a high degree, surgical intuition and diagnostic acumen. His greatest achievements were, perhaps, in biliary surgery to which he made important and original contributions. He was a member of all the important national and local surgical societies, but he never read papers or made a speech. He disliked publicity. His ambition was solely clinical, to excel in operating and to get his patients well.

Dr. Williams, like so many doctors, was very fond of the out-of-doors. He was a lover of nature and a sportsman in the best sense of the word. He was an expert gunner in the field and brush, as well as at the trap, shooting equally well from either shoulder. In skeetshooting he was a champion, and even after three score years and ten and in spite of crippling arthritis, could hold his own with the younger experts.

For many years Dr. Williams was totally incapacitated by serious illness and lived in complete retirement. During the last three years he recovered sufficiently to resume occasional trapshooting and tend his garden. He was interested in art and had a notable collection of paintings and antique clocks. He bred canaries and grew flowers. He never married. He had a host of friends whom he attracted without effort. During his last illness he attained a philosophical resignation and serenity which sustained his spirit through many painful weeks and months.

There are many persons in this community in all walks of life who will long remember with gratitude the professional skill and personal charm of Dr. Hugh Williams.

L. D.

FRED HOUDLETT ALBEE

Dr. Fred H. Albee (*SS* 1904), noted pioneer in orthopedic surgery, died in New York on February 15. Dr. Albee is best known, in both America and Europe, for his original techniques in bone grafting. An account of his many accomplishments in the field of surgery, and a list of his contributions to medical literature, may be found in the *Journal of the American Medical Association* for February 24.

EUGENE PARDON SISSON, JR.

Dr. Eugene P. Sisson, Jr. (*CM* 1918) died in New Haven, Connecticut, January 27, after a brief illness. Since his graduation from the Harvard Medical School in 1918 and his internship at the Massachusetts General Hospital in 1919, he was engaged in practice in Lawrence, Kansas, until 1942. More recently he was associated with the Yale Department of Health.

WILLIAM ATKINS BISHOP

Dr. William A. Bishop, a member of the Staff at Massachusetts General Hospital since 1929, died very suddenly on February 14. Dr. Bishop graduated with honors from the Tufts Medical School. He went directly to Panama, where he was a medical officer in the Ancon Hospital during the construction of the great canal. After that he served in hospitals during the construction of the dams on the upper Tennessee River. He went into the Army during World War I, and was Adjutant at the Parker Hill Hospital in Boston. For the past several years he was a loyal and faithful member of the Out-Patient Medical Clinic at Massachusetts General. His work was careful, thorough, and detailed; his manner was happy; and his relations were kindly. In private practice he became a leader in industrial medicine and did much to advance the work in this field. His advice and counsel was much sought. He was a true physician and a devoted friend.

H. C. M.

At a meeting of the Board of Trustees, held on February 23, it was voted:

To accept the resignation of Dr. George Gilbert Smith with sincere appreciation of his past services and appoint him to the Board of Consultation;
To promote Dr. Fletcher H. Colby to the position of Chief of the Urological Service;
To appoint Dr. Huntington Porter as Resident on the Neurological Service to begin July 1;
To create the position of Assistant Oral Surgeon and Stomatologist and to promote Dr. David Weisberger to this position; also, to create the position of Visiting Orthodontist and to promote Dr. Fred R. Blumenthal to this position;
To accept the resignation of Dr. David G. Freiman with regret and sympathy.

The following changes in Staff were accepted by the Trustees:

Dr. John A. Abbott's title changed from Assistant in Psychiatry to Assistant in Neurology;
Dr. Erna G. Anderson and Dr. Wilhelmina Van Dyke promoted to Assistants to the Children's Medical Service;
Dr. Volta Hall promoted from Graduate Assistant to Assistant in Psychiatry;
Dr. Carl S. Sawyer promoted from Graduate Assistant to Assistant in Dermatology;
Dr. Earl J. Waddington and Dr. R. Ronald

Wyman promoted from Graduate Assistants to Assistant Dental Surgeons.

The General Executive Committee voted, at their meetings on February 14 and March 7:

That Dr. Adelaide H. C. Frick, who has been appointed as Assistant Resident on the Children's Medical Service, beginning July 1, be given the title of Clinical Fellow;
To appoint Dr. Madelaine Longtin as a Graduate Assistant in Medicine;
To appoint Dr. Catharine R. Michie a Clinical Fellow in Cardiology;
To appoint Dr. Edna Sobel a Clinical Fellow on the Children's Medical Service.

Two new Trustees, appointed by Governor Maurice J. Tobin, are Dr. Roy J. Heffernan, who replaces Eben S. Draper, and Samuel J. Tomasello, who replaces Michael A. Fredo. Mrs. Robert Homans and Rt. Rev. Robert P. Barry were reappointed.

T/Sgt. Ronald W. Sweeney has been given the Bronze Star for meritorious service in combat. Sergeant Sweeney was an orderly in the operating room at Baker for three years, and was transferred to the General Hospital, as Mr. Kilcoyne's assistant, before he went into military service.

By way of devious channels, an article from the *South Bend Tribune* of February 5 shaped its course into our office. Needless to say its sailing directions were not furnished by Lt. Oglesby Paul, MC, USNR (*WM* 1943), and we are rushing our copy to the printer before Lieutenant Paul can order us "put in irons" on the subject.

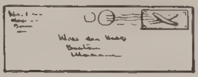
> The most surprised man at the inspection of officers and ship's company by Capt. J. Richard Barry, Commandant of the Naval Units at Notre Dame, last Saturday, was Lieut. Oglesby Paul, of the Medical Corps, who was recipient of a citation for meritorious conduct. The citation came from Vice Admiral T. C. Kincaid, Commander of the Seventh Fleet, and was in recognition of the treatment of wounded survivors by Lieutenant Paul, following anti-aircraft action in December 1943.
>
> "Lieutenant Paul labored tirelessly in crowded conditions and with limited facilities to render treatment and care to the wounded during a period of 48 hours until a hospital ship could be reached," the citation said. "By this constant devotion to duty he undoubtedly saved many lives. For this meritorious conduct Lieutenant Paul is hereby commended and authorized to wear the commendation ribbon."

Lieutenant Paul's present address is Naval ROTC Unit, Notre Dame University, Notre Dame, Ind.

An article about Lt. Comdr. Richard E. Alt, MC (*WS* 1933) appeared in the *Boston Herald* of February 18. It said, in part:—

> Lt. Comdr. Richard E. Alt, Navy surgeon who designed and built an operating room from a salvaged trailer, and has directed a huge underground hospital at Torokina, Bougainville, regained consciousness today at Beverly Hospital after an emergency appendectomy to learn that his feats had won him the Bronze Star Medal.
>
> Lt. Comdr. Alt, home on leave after 20 months in the Pacific, . . . served as senior medical officer at Torokina from Nov. 1, 1943 to March 8, 1944, going ashore on D-day to organize the handling of casualties and to supervise the building of his underground institution. His citation said also that he kept "valuable" records on performances of penicillin in battle areas.

Major Lamar Soutter, MC (*r.s.* 1941) has been awarded the Silver Star for gallantry in action at Bastogne. A brief account of Major Soutter's heroic participation in the relief of the trapped 101st Airborne Division was given in the February issue of The News. He is now back with his old Auxiliary Surgical Group, in Luxemburg, and writes that their hospital has very little heat and no running water.



All material of a military nature in this and every issue of The News is first cleared for publication by the local Public Relations Department of the Army or Navy.

The following new addresses have been received:—

Major John C. Angley, MC, AAF (*a. M*), School of Aviation Medicine, Randolph Field, Tex.
Capt. Victor G. Balboni, MC, AUS (*WM 1942*), Ashburn General Hospital, McKinney, Tex.
Lt. Robinson L. Bidwell, 2d, MC, AUS (*ES 1943*), 894th Medical Professional Service Detachment, Fort Lewis, Wash.
Capt. Lemuel Bowden, MC, AUS (*ES 1940*), Sqdn. H, 332d AAF Base Unit, U.S. Army Air Field, Lake Charles, La.
Dr. Austin M. Brues, 1232 East 57th St., Chicago 37, Ill.
Lt. John J. D'Urso, MC, USNR (*r.p. D 1944*), U.S. Naval Air Station, Alameda, Cal.
Lt. Fathollah K. Mostofi, MC, AUS (*a. P*), Station Hospital, Fort Douglas, Utah.
Lt. Comdr. Eugene A. Osius, MC (*WM 1923*), U.S. Naval Hospital, Great Lakes, Ill.
Lt. Joseph C. Placak, Jr., MC, USNR (*WS 1936*), Bureau of Medicine and Surgery, Navy Dept., Washington, D. C.

Brief bits of information:—

Lt. Rebecca M. Benedict, ANC (*MGH 1937*) is with a General Hospital on Leyte.
Sgt. George A. Cribbins, past employee at M.G.H., sent us an APO number from an Atlantic seaport.
Lt. Harold E. Elrick, MC, USNR (*M* 1944) is on a DE boat, somewhere in Pacific waters.
Major Luke Gillespie, MC (*a obst.*) has been promoted to this rank. He is with a Portable Surgical Hospital, somewhere in the Moluccas.
Lt. Stephen L. Madey, MC, AUS (*CM* 1944) has sent us a San Francisco APO number.
Lt. Roger W. Morrison, MC, AUS (*ES 1943*) is with the 224th General Hospital.
Capt. Richard V. Riddell, MC, AUS (*ES 1943*) has received this promotion.
Lt. Col. Edward G. Thorp, MC (*EM 1931*), who is with a General Hospital in Europe, has been promoted to this rank.
Lt. Col. Otto C. Yens, MC (*CM 1930 & WM 1932*) is with an Evacuation Hospital. He has a New York APO number.

Pvt. John Szerejko, a past orderly at Baker, who was wounded in action in France, writes to Mr. MacNair from England General Hospital, Atlantic City, N.J., that he has undergone a third operation, feels fine, and is now being wheeled out into the sunshine.

MASSACHUSETTS EYE & EAR INFIRMARY

The Board of Managers, at a meeting held February 28, elected Henry Hixon Meyer as President, to succeed Russell G. Fessenden who died February 11.

Henry W. Porter was appointed a Manager.

Dr. Edwin B. Goodall (*Oph.* 1918) was appointed Consulting Surgeon in Ophthalmology.

Dr. John G. Jennings, Associate Surgeon in Ophthalmology, has resigned because of ill health.

We are grieved to announce the sudden death, on February 12, of Dr. Ruth P. Guilder.

A graduate of Northwestern, Dr. Guilder devoted her life to the problems of deafness and to the hard of hearing. She joined the Infirmary Staff June 1, 1940 as director of The Winthrop Foundation for the Study of Deafness. Her unselfish devotion, her tireless enthusiasm, her patience and kindness endeared her to the Staff and her patients.

Dr. Guilder's contributions to the science of Otology have been outstanding. Her handling of the pre-school child, her audiometric examination of these children, and her rehabilitation of the hard of hearing child are but a few of her accomplishments. Her work has attracted national attention and her loss is most grievously felt, not only by the Infirmary but by the many patients who looked to her for guidance in their affliction.

We have received word that Lt. Comdr. Donald E. Moore, MC (*Oph.* 1937) is home on leave after 20 months in Australia and New Guinea.

We are glad to learn that Major Thomas Cavanaugh, MC (*Oph.* 1940) who was recently admitted to Walter Reed Hospital, is back home again. He is feeling very well, and expects to be reassigned to active duty in the near future.

Lt. Comdr. David P. Cordray, MC (*Oto-Lar.* 1940) dropped in for a short visit the other day. He is stationed at the Naval Hospital, Newport, R.I.

Comdr. Edwin B. Dunphy, MC (*Oph.* 1923) is stationed at the Chelsea Naval Hospital.

Lt. Nellie Wrigley, ANC (*MGH* 1939), former Operating Room nurse, is now attached to the 32nd General Hospital and is "up front".

Lt. Eunice Grant, ANC, former Head Nurse on the Men's Ward, is with the 36th General Hospital.

Edna Tozer, RN, past Head Nurse on the Women's Ward, recently joined the Army Nurse Corps and has been assigned to Camp Devens.

Miss Mary E. McLaughlin, formerly a Social Service worker assigned to the Ophthalmological Service, and for the past year and a half with the American Red Cross in Africa, has been reassigned to Italy. We understand she spent a short furlough in Rome.

Capt. Henry A. Mosher, MC, AUS (*Oph.* 1941) is now with the 227th General Hospital.

Lt. Comdr. Bernard M. Jacobson, MC (*a.p.*) has returned from the Russell Islands. He stopped in at the office of The News to tell us that Tom Gephart (*WS* 1941), who was also in the Russells, is now on Palau. Commander Jacobson is home on leave, and expects another assignment soon.

A letter—full of enthusiasm for persons, places, and things—has come from Lt. John E. Goodman, DC, USNR (*Dn.* 1944). He writes:—

Receiving the copy of The News was sure a great thrill. Wherever a fellow may be, away from the old M.G.H., information about people there—known or unknown—is welcome news.

I reported to Camp Wallace, Texas, 1 June and was assigned to general dental work for four months. My next and present duty is the most pleasant imaginable at this U.S. Naval Air Station, Pensacola, Florida.

Throughout this short tour of duty I have found the training I received under Dr. Thoma and Dr. Arrowood of invaluable assistance. The question often asked by men utterly amazed is this, "How does Dr. Thoma accomplish so much?"

Dr. Castleman has passed on a letter from Flight Lt. Donald Murnaghan, MC, RCAF (*res. fel. & gr. asst. M* 1940-42). It was written in late October, from RCAF Hospital, Trenton Air Station, Ontario—the first we have heard from him since he was at No. 2 Initial Training School, Regina, Saskatchewan, early in 1943. He has this to say about himself:—

I have become familiar with the vast expanse of the Canadian prairie and have seen such famed beauty resorts as Banff and Jasper Lodge, through the Rockies to the west coast, and inside the mountains to the snowy land of Yukon Territory—where I have the doubtful honor of being the first person to bring in a portable ECG machine. Lake Lebarge is just as Robert Service described it, but Whitehorse and Dawson City are changed.

I worked on a Selection Board for air crew for two years, then finally got back to clinical work in a hospital where I have been for the major part of this year—even though on the move. One's knowledge of tumor pathology, pediatrics and geriatrics, grows dust-covered. As to Ob. and Gyn.—well, that just isn't. Surgery is passed on to those with a desire for that sort of business. And so it goes. One grows expert in psychosomatic troubles and less distinct in handwriting.

I look forward to getting back some day. If the big powers get clicking well, that day will come sooner.

Lt. Allan L. Friedlich, Jr., MC, AUS (*M* 1943) sends a new address which includes eleven letters of the alphabet and seven numerals! Besides all that, his entire message is a mere footnote which says, "India China Division — Air Transport Command as Flight Surgeon on the Hump."

At last we have heard directly from Major Arthur M. Walker, MC (*EM* 1925). This letter from Burma, dated January 9, is a most refreshing one.

For many months I have enjoyed reading news about people like [Capt.] Jim White [USNR] and [Comdr.] Chan Swan of my own vintage and younger names with which I am more or less familiar, and reports of deeds and activities that are interesting for their own sake, apart from any familiarity with the actors.

This theatre is strictly minor league stuff in comparison with the European job or that in the South Pacific, for all the talk about the Hump Run and Merrill's Marauders. That does not alter the fact that it has been a mildly exciting experience for an elderly Professor of Pharmacology.

I came over with a General Hospital two years ago this month and acted as Registrar in the modified wilds of Lido, Assam, till last September. By that time the wilds were very dilute, indeed, for we all had tin roofs, cement floors, gravel paths, and an Officers' Club complete with bar and lousy liquor known locally as Dickum Death. What with that and the petrifying routine of a Registrar's life, I was keen for a change — and I must say that as an attempt to get away from a desk job and pretend I am 20 years younger than is obviously the case, it has been a complete success. Since October I have been serving in the field with a Chinese Infantry Regiment, in a sort of liaison job. It involves chiefly matters of supply and evacuation. It also involved walking over more territory with a heavier pack and less food and sleeping on harder ground than I was quite sure I could manage, so I take a rather childish pleasure in having accomplished it. The two chief views that I retain of Burma are 1) the hind end of a laden mule, and 2) Chinese bings (soldiers) paddling along with two kitchen pots on one end of a bamboo pole, a pack and their rifle on the other.

At the moment we are in reserve in a small village, hidden in the woods, and by a little stream. I have acquired a bamboo bed, a tarpaulin over it, get three hot meals a day, and, in short, am living what used to be called "the life of Riley" (though who he was I have never been sure).

One of the pleasantest and most curious events of the last months has been the appearance of my eldest boy as a Pvt. (PFC, my apologies to him) in another Regiment of the same Brigade, so that I have had many good visits with him. He has gone on by us now, but I hope to see him again.

We are indeed fortunate to have two letters from Capt. Leonard D. Rosenman, MC, AUS (*ES* 1943). This first one was written, in January, to Dr. Cope.

I presume that writing after every campaign is as good a way as any other to space my letters to you. After every battle there is a period of relative "quietness" in which thoughts of home dominate one's consciousness. Perhaps there is a release of the suppression of nostalgia that battle-life imposes. It is no different, now, after a long hard campaign in the Philippines.

It is good to report that I escaped all injuries. (Is my luck running out?) The Shigella group, however, attacked me again in force, and again I repulsed the attack with that good weapon, sulfaguanidine. Incidentally, having used and dispensed many pounds of it, I have noted no response in man to sulfaguanidine akin to that in garden fowl, e.g., folic acid deficiencies.

The most recently received issue of The News (bless it) contained the sad report of Ted Robie's death. As you know, Ted and I were very good friends and worked together on the same services and wards for nine months. He was a fine fellow. I shall miss him very much.

Every journal that strays my way is searched for articles about Boston and M.G.H., and The News is the best link with the old places and friends.

At present life is fairly easy. I enjoy the comforts of my own thatch best, and manage to keep well occupied during the day. I filled the open hours after the Guam battle by writing a short paper on metabolism and heat exchange in jungle climates. Now, I am studying and describing the little known and very important group of febrile diseases loosely named dengue or tropical influenza. I am comforted against the limitations of my study by knowing I have at least the materials with which Bright and Hodgkins worked! From the many dumps of Jap medical supplies found by us, I salvaged a microscope and some lab equipment. I hope to supplement clinical descriptions with a few lab studies.

Best wishes to all my friends for a good new year.

A later letter, to The News, says:—

I am today in receipt of the December News. There was never a doubt that it would arrive; and great expectations are pleasant. Thank you again for that pleasure.

A few words will suffice to describe my activities during the past few months. After leaving Guam, we came to the Philippines, and fought the Japs in a campaign that made the Guam fight seem child's play. There were plenty of "to-whom-it-may-concern" bullets that were very nearly deposited in my mailbox! I have been very lucky.

That statement has its own humor, for it is written from a bedside in a General Hospital. I am now recovering from infectious hepatitis. The high protein and high CHO diet is a welcome change from field rations. Before I leave, though, there remain a few matters to be cleared up. Tomorrow I will begin treatment for amebic dysentery; and after that (pity my liver) a Shigella infection will be dealt with.

In a sense this is not all time lost. There is no better way to learn about a disease than to have it. I think I will describe the unenthusiastic mastication of roast beef (the pained expression, and the nose turned away from the redolent tray) as Rosenman's sign of catarrhal icterus!

Maj. Arthur A. Holbrook [*CM 1933 & EM 1934*] is part of this hospital's staff. We mix MGH talk with cribbage. It is expensive entertainment, but worth every peso it costs. He is well, and very good company.

Best wishes to all of you.

Col. Edwin F. Cave (*ES* 1926 & *Or.* 1928) has been Commanding Officer of the 105th General Hospital for a year or more. Recently he sent us a copy of parts of a letter he had received from Capt. Lester P. K. Yee, MC, AUS (*EM* 1939 & *WS* 1941). Captain Yee is with a surgical team on detached service from the 105th General. The letter was written in late January.

After leaving the 105th domain, and after about a month of improving my volleyball playing, we finally got in a tub similar to the one that took us out of Australia. We were "harbor sailors" for a while—something all of the 105th can remember quite well, I'm sure—and were then on the warm Pacific in a fashion. The trip over here was uneventful, except for a few air raids such as you read about in the papers. The Japs' "Special Attack Corps" is really something, and I know now that they play for keeps. However, we were intact and I'm still "percolating" as usual. Tommy (Botsford, HMS '35) and the enlisted men think I "thrive on danger", but thus far everything is calm and quiet so far as I'm concerned, although some of the other boys don't seem to think so.

We have made three or four moves, traveling a total of about 115 miles around the Philippines. The Filipinos are courteous and are surely glad to see the Americans. Practically every Filipino speaks some sort of English, mostly "pidgin". The Japs certainly left a sour taste in their mouths. They are all eager to help out in any sort of work we can give them, and one can get an orderly quite easily. Bartering is at present the system of exchange, and thus far I believe I'm doing quite satisfactorily. However, I doubt if the same condition will prevail long because supplies will be coming in for the civilians soon.

On arrival here, we were detached to the second power and were supposed to join [Lt.] John Lambert [*WM 1942*] who is with a Portable outfit. However, that did not mature, and we finally ended up in a Clearing Company with the Infantry. The boys there were surely glad to see us, as "real surgeons"—so they put it—are scarce and work was plentiful. Their C.O. was anxious to get well-trained men so he could learn something himself. I do not believe I fall into that category, but he seems to think so. I'm sure the real reason they were happy was that their personnel strength was not up to T.O. I did not realize that surgeons were so difficult to find in the Army, but I do believe it now.

A few days ago we returned to the Field Hospital, and at present are situated in a former schoolhouse. Life really is not too bad here, although the artillery firing causes some vibration and one is reminded of blasting and dynamiting one sees in construction work at home. Rivers are plentiful and they furnish the chief means of bathing for the GI's. I saw some snails in the river near our camp and I often wonder about schistosomiasis, etc., after I wash, but I'll get over that, I'm sure.

The sojourn thus far has been quite satisfactory because surgical work is plentiful. The Field Hospital officers treat us well and are glad to get help. I have averaged only about 3 or 4 hours sleep a day thus far, and often only 1 or 2 when we were too far behind. I'm doing general surgery as well as orthopedics. Yesterday I opened my first abdomen since I joined the Army and took out a piece of shrapnel from a GI spleen. Orthopedics and traumatic work prevail, however. We have been quite busy up to now, but I do not know how long this will last. The patients are wonderful, and surprisingly enough one does not see many "crocks" up here.

Tommy is getting along well, although he has lost some weight. He did the first major abdominal case in this hospital on a patient with six perforations, requiring suturing, resection, and anastomosis. We have been rotating cases thus far—he giving me advice in general surgery when I need it, and I giving him the orthopedic side of things when he needs it.

Lt. Col. Albert G. Engelbach, MC, Commanding Officer of a Station Hospital, reports to Dr. Washburn that Lt. Col. Richard Warren, MC (*WS* 1936), who is with a General Hospital near by, is his Consultant in Surgery; and that Major Garrett L. Sullivan, MC (*Oph.* 1938), Executive Officer of the same General Hospital, is Consultant in EENT at Colonel Engelbach's hospital.

This V-mail letter gives a distillation of what Lt. Col. Walter M. Bartlett, MC (*CM* 1927) is doing in England.

Certainly appreciated the Christmas card and the receipt of THE NEWS every month. It's a long cry from my work at M.G.H. to Chief of the Medical Service here in the United Kingdom, but funnier things than that have happened right here in the ETO during the 18 months I've had a chance to observe them. There's a saying here that "anything can happen in the ETO and it usually does".

We are very busy with the ravages of winter warfare in addition to the usual military casualties. On the Medical Service we have been admitting about everything seen at M.G.H. plus. Our expectancy based on past experience is that one third of our cases will be neuropsychiatric, about one quarter cold injury ground type, about one quarter general medicine including a good deal of the rheumatic conditions and a few metabolic disturbances, and the remainder upper respiratory infections. Most of the neuropsychiatric casualties are not true combat exhaustion cases, nor are they operational fatigue, but simply acute exacerbations of fixed and chronic neuroses, constitutional psychopathic states with aggressive behavior, and all sorts of maladjustments and emotional and anxiety states. We use insulin-amytal treatment only in carefully selected cases, and sodium pentothal narcosynthesis in occasional cases. It's very interesting to abreact some of the combat cases, as we get a first-hand vision of all sorts of battle situations.

The surgical admissions here are about fifty per cent orthopedic. It is commonly stated that this is an orthopedic surgeon's war. Venereal disease has ceased to be a problem with the advent of penicillin therapy, since GC is cured in nine hours and syphilis in seven and a half days. In fact, the Medical Service in this war has been so good that practically no patients are lost who are evacuated as far back as England. Our only losses have been accidental, or due to rapidly fulminating acute nephritis or rapidly growing malignancies, and those we can count on our ten fingers and have a few left.

The development of our own rehabilitation programs in these cantonment hospitals has been a revelation to most of us—especially, the value of special neuropsychiatric rehabilitation following adequate therapy has been a particularly practical advance, as far as anything we've seen in civilian institutions. I hope that enough of our experiences will accumulate to have an effect on psychiatric work in the veterans' hospitals and state institutions after this war is over. The training and rehabilitation of our disabled veterans is going to be a massive postwar problem, and I hope that M.G.H. will get in on the ground floor in that work. If our military hospitals could be operated as efficiently as M.G.H. it would save the Army and the government billions of dollars, and estimated in "wear and tear" on medical men it would amount to even more than that! If more money were spent on proper orientation of soldiers from a mental and emotional standpoint, it would go a long way toward the prevention of neuropsychiatric casualties, also.

Best regards to the Staff.

Lt. Robert P. Smith, MC, AUS (*M* 1943) brings us up to date in a "first letter". And how much ground he covers in a few pages!

THE NEWS has followed me very faithfully and I prize it very much, reading it from end to end as soon as it arrives.

I entered the Army January 5, 1944 and served in the States until late July when I came overseas as a replacement. I had a very interesting stay in England for three weeks.

Then I sailed for France, landing over one of the most famous invasion beaches. Seeing the hedgerows with entrenchments every few feet gave me a foretaste of the intensity of combat in this Theatre. I had an interesting, though arduous, journey across France, seeing one beat-up town after another. As a GI said of St. Lo, "It's all there, just piled different." I got three brief visits to Paris and found it all it's been claimed to be.

Then I was sent to a General Hospital for a period of surgery. While there I was sent on detached service to a Field Hospital. This was the best ten days of my Army career. I worked on the night shift, was extremely busy treating shock, and got in on considerable chest and belly surgery.

The Field Hospitals are the best jobs in Army medicine. Their staffs are an expert and gallant bunch. Hardly a case they receive would survive if they were not there, and yet they lose surprisingly few. Because of penicillin and the sulfonamides an infected wound is the rare exception. Shock is combatted in spectacular fashion by plasma and whole blood (the latter from Boston and Brooklyn). A German medical officer, pressed into service in a moment of crisis at one Field Hospital, is supposed to have given up on one patient. "His pulse is weak; he will die." Yet the patient (and many worse) was saved by plasma and blood.

After a happy stay at the General Hospital, where I got to run a surgical ward of 140 beds, I was suddenly pulled out and sent to a new and rugged job. I became Bn. Surgeon in an Armored Infantry which, I may now say, was in the siege of Bastogne. I arrived as the siege was lifted, but there was heavy shelling from three sides and all was not quiet. It was a great spectacle, though I don't remember thinking so at the time.

At the moment I'm in a quiet spot and have had a chance to see two old friends—Capt. Lu Rosenberg and Capt. Rafe Banks [*ES 1943*], both HMS '43 with me. Captain Banks is his usual jovial self, working hard in an Evacuation Hospital, doing traumatic surgery. I have paid him several visits, always being entertained with complete Gainesville, Ga. hospitality.

I sure yearn for the peaceful corridors of that very old institution on the Charles and hope to return before all its teachings have left me.

Dr. Arthur W. Allen has given us permission to publish parts of a letter he received from Capt. Donald V. Baker, Jr., MC, AUS (*ES* 1943). When the letter was written, in January, Lieutenant Baker was in Belgium.

Since leaving the General, almost two years ago, I have had a grand tour of the U.S.A. and now am beginning on the European Theatre. I started at Carlisle in the Army Medical Service School. For the next seven months I was held in the Air Corps graduate resident training program for recent interns. I rotated through the services of the Station Hospitals in Atlantic City and Scott Field, Ill. My group was then alerted and all but two were transferred to ground forces General Hospitals for overseas. For some reason I went along with the Air Forces and was sent to a B-29 bomber field where I became doctor to the ground echelon of a squadron of these new bombers. Unfortunately—or perhaps not—the organization was changed just before the squadron was to leave. There was to be only one doctor to a squadron, and he a graduate of the school at Randolph Field where training preparatory to Flight Surgeon is given. I applied and was assigned to the next class there. The course was a very excellent one. Capt. Dan Cahoon [MC, AAF (*WS 1942*)] and Capt. Henry Thacher [MC, AUS (*CM 1942*)] were both in my class. I was then sent immediately to a three-weeks' course at Orlando on overseas problems of the Air Forces. By the time I finished I was assigned to a hospital at a different B-29 field. As soon as I arrived there I met orders sending me to still another Station Hospital in Tennessee. I was really happy there, as I finally had achieved the Surgical Service of a Hospital. It was not to last long because the ground forces again made a large call on the "excess" numbers of doctors in the Air Force. Company grade men in the lower age group were needed and I was given my present assignment in a Medical Collecting Company (separate). As such, we are given odd jobs around the areas of higher headquarters which are not always of very great medical interest. Some day we may spell a Divisional Company when the front here is more active. I have had about three months over here now, and our main work has been running a dispensary and keeping our ambulances ready for possible casualties.

I have taken great pleasure in hearing, via

Lt. Comdr. Richard E. Alt, MC (*WS* 1933) receiving the Bronze Star Medal from Capt. F. L. Conklin, MC, USN, medical officer in charge at Chelsea Naval Hospital.

The News, of all the M.G.H. doings and about its graduates at home and abroad. I am sorry I have never written to them, but my experiences have been not lively.

I would enjoy hearing about the possibilities for postwar training at M.G.H. I am anxious to go on with more hospital training and hope it can be done at the General. I am extremely grateful for those twelve short months I was allowed there. I would like to be remembered to the men under whom I worked.

As a P.S., Captain Baker added:—

The height of my Army surgical career was delivering six babies—with the aid of two nurses *and* the mothers—at Scott Field Station Hospital, as Medical Officer of the Day.

Letters from Cpl. Malcolm A. Conner, our past Hospital newsboy, always make good reading. This one was written to Dr. Faxon.

I want to thank you for the very nice Christmas card which I received from the Hospital. Have been hoping to meet some one from M.G.H. over here, but just don't seem to be able to be at the right place at the right time.

Am now in Germany, and it does feel rather strange to be here. Things are pretty well smashed up, and the towns present a very ghostly spectacle—especially at night when there happens to be a heavy fog which shuts out almost everything except the dim outlines of what used to be buildings. The people, of course, are unfriendly, and none are to be trusted.

I know you are all very busy, especially with the additional burdens brought about by the war; but I hope the day is not too far off when we will be able to come back and take up our old positions.

When Dr. Means handed along this letter, he labeled Capt. Arthur S. Pier, Jr., MC, AUS (*WM* 1941) a "two war soldier". And such he really is, for, after two years or so in the Pacific Area, he is now in Europe. His letter reads:—

I stayed in the States just long enough to run an infiltration course in Texas and a gas mask drill and get re-equipped, and then came to France with this Evacuation Hospital. I am glad we came this way this time instead of going west.

So far, my professional experience in this area has been nil, but we have hopes for the future and in the meantime are getting an opportunity to see something of France. Some of the towns are pathetic sights, large sections of them having been blasted into rubble. In the worst hit ones you see few people except old women and children, and the houses look deserted and the whole town dead and ghostlike. In others everything seems to be coming to life—shops are open, though with very little to sell, and every one seems busy. The countryside is very beautiful and the fields are meticulously tilled and cared for. Most of the people look pretty well and I gather they get enough to eat, though their diet is monotonous. We are greeted everywhere with a great deal of enthusiasm by the French.

A very beautiful Christmas card to The News, from Capt. Adney K. Sutphin, MC, AUS (*WM* 1943), not only announced this promotion in rank, but brought a message which will be quite as much appreciated now as during the holiday season. The message reads:—

With the approach of the Christmas season the thoughts of us overseas naturally turn to home—and to me that includes the M.G.H. My very best wishes to the "family", and please accept my sincere gratitude to The News for its marvelous job in keeping us assured that things are all right at home.

Captain Sutphin is with the 12th Army Group of the 4th General Hospital.

A letter from Capt. Edward L. Young, III, MC, AUS (*WS* 1942), from Luxemburg, announces his promotion in rank — and very much in the way of promotion as to territory covered.

This is at least the third letter I have started, to break my epistolary silence; but, like Bob Hepburn, "I have been prey to what I considered sufficient lack of war romance to warrant a discreet silence". However, here goes just to let people know I am still well and kicking (the old Army game).

On reaching England, in April '43, I fell prey to a cystitis with all the fixings up and down the line, which necessitated three months in various hospitals and caused me to miss D-day for which I had been slated. I finally reached France in early August, and my outfit the end of the month. I could fill volumes about replacement depots through which I had to pass and my final flight across France, bumming rides on the backs of 2½-ton trucks.

The first of September found me back at Brest, assigned again as assistant on a General Surgical team. My boss is an exceptionally fine surgeon and has taught me a lot. With only a short interval, in which our team was assigned to an Evac Hospital, we have been constantly with various Field Hospitals. These latter institutions are the farthest forward hospitals in which definitive surgery is done, and are intended for the sole purpose of treating "non-transportables" — those patients so severely wounded they stand very poor chance of survival if transported further back. Hence, most of our cases are chest and belly, a few amputations, and a very rare neuro case. We have no facilities nor trained personnel for the latter. The surgeons of the Auxiliary Surgical teams assigned to these hospitals are in complete charge of the professional care rendered, but the best part is that except for writing the operative note (my job) we are free of all the cumbersome Army reports—the hospital does that. I wish I could give some of the statistics of type of case treated and mortality, as they are amazing. A very important part of our work is the shock-pre-op-triage which is handled by separate "shock teams" we carry with us. According to civilian standards our setups for surgery and general care are often primitive, and improvisation often at a premium.

Our group of surgical teams was relieved from the Brest sector by those of another unit three days before the fall of that place. One of the relieving members was Charlie Burbank [*WS 1939*]. He was well. On our trip east we all got three days in Paris before joining the "other" front, which I have since cruised up and down. Somewhere along the way I picked up a Captaincy, as of Sept. 15. I spent one enjoyable afternoon with Ward Gregg [*WS 1935*], and have seen Bimi Soutter and Gene Record [*NS 1937 & Or. 1941*] a few times.

You have no idea how much The News means to us, scattered far and wide, but it is tremendous, and I add my thanks to all the others.

Most of us were introduced to "Juliette" as she sat perched atop the shoulder of Capt. Somers H. Sturgis, MC, AUS (*ES* 1933), in a picture in the December News.

Because of her regal bearing and general air of sophistication, we felt certain the lady had had a "past" and might well be headed for a very exciting future. To satisfy our curiosity we wrote to Captain Sturgis for her biography to date, and this is his reply:—

It happened that Lang Parsons, Dan Holland, another officer, and I returned by car from an assignment through some of the remote and seldom visited foothills of the Atlas Mountains. In a little brick-red mud village we ran low on gas and spent the night at an obscure outpost of the French Foreign Legion. This is in the "monkey country". Our hosts treated us royally, and before leaving we went into the native market and managed to buy two little balls of mangy fur—little tailless monkeys about two or three weeks old, captured by the natives in the hills. Lang took his to Oujda, where he was stationed. Juliette lived with me in the yard of the French family with whom I was billeted for fifteen months in Casablanca. She grew to be the size of a Scottie, came to be devotedly attached to me, and terribly affectionate with any one in a G.I. uniform. She fell in love with an Air Corps lieutenant, however, and the happy couple flew to England one day before the invasion. I have not heard from her since. You see, I could not keep her any longer because of our impending change of station.

THE NEWS

No. 32 Boston, Mass. MAY 1945

THE WOMEN

The women—God bless them!—how could we do without them? We couldn't, of course. Yet I was reminded yesterday, while reading an article in the *New York Times* on the late Susan B. Anthony (first militant suffragette in America), of how women have had to fight for everything in the way of equal rights and opportunities which they have extracted from their self-styled lords and masters.

So it has been in medicine. Women are in medicine (and to stay), but to get there they have had to struggle against the greatest male conservatism to be found in any profession.

What the women physicians on our staff are doing for us during this war crisis came home to me sharply not long ago when two of their leaders asked if they might use the Medical Staff Room for a tea for Massachusetts General Hospital lady doctors. The request made me conscious, as never before, of how many there are—over twenty-five—and of their contribution to our professional work. This realization carried me into a bit of research on the subject, and Miss Holbrook, our archivist, has been good enough to furnish me with some illuminating data.

The first woman on the staff appears to have been Loretta J. Cummins, who was appointed Assistant in Dermatology in 1916. She served for many years on the active staff and now is a member of the Board of Consultation. Mary Wright of the Children's Medical Service was the first woman on the house staff, making that service clearly the pioneer in admitting women. Marian W. Ropes was the first woman resident on the Medical Service. She was appointed to that office in 1932, has been on the staff ever since, and has now reached the grade of Associate Physician. She is doing her trick of ward visiting, and is also taking full charge of the arthritis studies during the absence on military duty of Colonel Walter Bauer. The first woman intern on the Medical Service was Margaret S. Shipley, East Medical 1943.

It is interesting, in this connection, that the Harvard Medical School now admits women. In April 1943, its forward-looking Faculty made the recommendation that women be admitted, but the Corporation vetoed it. A year later, in June 1944, the Faculty repeated its recommendation and this time the Corporation accepted it. Now nine women have been admitted as medical students.

There are those who bewail this female intrusion into an erstwhile strictly male purlieu; but most of us, I think, are grateful for the help our women physicians have given us and place a high value on their contribution.

J. H. M.

To supplement the above article, manuscripts which discuss (mostly in the negative) the advisability of admitting women to our staff are now on display in the Archives Room. They date back to 1857, and carry the signatures of several outstanding individuals of that period. We wonder, as we read one of the letters, whether certain suggested restrictions, to be placed upon the women (if admitted), were proposed as a safeguard for the men on the staff—or otherwise! Anyway, we believe you would feel well repaid for the few minutes spent, if you would come over to the Archives Room and read some of these letters.

* * *

Some letters which were recently brought to us produced so strongly the effect of the unfolding of a drama that we present the episode to you just as it impressed us.

Place: Italy
Time: February 1945
Scene: 6th General Hospital
Cast of characters: Lt. (formerly T/Sgt.) Harry E. Munro, MAC, AUS, past MGH employee; officers and men of 6th General Hospital

Prologue

Two of the finest recommendations for Munro's commission any man could possibly receive, written by officers under whom he had worked both overseas and at M.G.H.

The Play

Lieutenant Munro (in a letter):

> Dear Mom and Dad,
>
> Yesterday was the big day and the only thing that could have made me happier would have been for you and Betty to have been here with me. I was commissioned a second lieutenant in the Medical Administrative Corps here at the hospital. Although it wasn't possible for most of my friends who are a considerable distance away to be here, there were about two hundred present at the ceremony. I wasn't nearly as nervous as I expected to be. I guess I've grown quite a bit older these past two years.
>
> The ceremony started with Colonel Goethals making a little speech, after which Captain Jones gave me my honorable discharge from the Service (just like Dad's). I then took the oath and was sworn in as an officer. I wore my new uniform without any insignia. Then Major Herwick pinned on my medical insignia, Colonel Goethals pinned on one gold bar and Colonel Hamilton the other. I then waited on the platform while every one filed past and offered congratulations. The rest of the day was spent getting paid and signing my name about a thousand times. I also got my uniform allowance.
>
> Colonel Rogers and Colonel Bartlett have really been swell to me. They took me to the officers' mess and made me feel at home. In the evening the officers had a party for me and it was all very nice.
>
> Truthfully, this is the first time I've felt clean in two years. From what I hear, there won't be any more mud and rain and living in tents for me for a while, as I have a really good assignment. I'll be doing work that was formerly done by doctors, which will release them for more important professional work.

Epilogue

Lt. Col. T. Stewart Hamilton (in a letter):

> My dear Mrs. Munro,
>
> I am a stranger to you but not to your son Harry. I have been the Adjutant and later Executive Officer of his hospital since we were activated. Though I haven't worked with him daily, as have our surgeons, I have come to know him and to admire both his work and his gentlemanly bearing. Now that he is about to leave us, we here all join with you in pride at his achievement.
>
> Direct commissions over here are rare and are won only by the few most eminently suited. It is always the custom in the Army that when a man is commissioned he is transferred. Sorry as we are to see Harry go, we are happy for him and proud of him. We are glad to send such an able representative of the 6th out to another hospital.
>
> Please accept the congratulations of one of his fellow-workers to you on your son's success.

Lieutenant Munro was an orderly for many years in E.W. Later, he worked in the Maintenance Department. He went, as a private, with the original 6th General group.

Every one will be relieved to know that recent word has come regarding Capt. James K. Keeley, MC, AAF (*NS* 1937), who has been a prisoner of war under the Japanese Government since 1942. A letter from his mother, to a friend, says:—

> While in Davao, Mindanao, James treated some prisoners, who later escaped and sent messages to me about the medical and surgical care he had given them, and about his help in sustaining the morale of the men. When possible he studied cases of malarial fever, for which he was supplied with quinine and sulfa drugs. One man who wrote me was a Dartmouth classmate of his.
>
> In June 1944, he was transferred to Camp Osaka, Japan. U.S. Army Headquarters notified me of this, and in December 1944 I received a P.O.W. card stating the same fact.
>
> Although I continue to send 24-word messages (all that is permitted) I feel quite sure he has received no mail.
>
> A broadcast, made by him in December 1944, was heard and reported to me by several different people—one of whom was a neighbor's son, then stationed in the Pacific Area.

The next instalment of MGH "home affairs" will appear in the June issue, with an article by Dr. W. Jason Mixter.

EDWARD LORRAINE YOUNG, III

Capt. Edward L. Young, III, MC, AUS (*WS* 1942) was killed in action in Germany, on March 24. Nothing more than the tragic report of Captain Young's death has yet reached his family.

CHARLES HENRY LAWRENCE

Doctor Charles Henry Lawrence died suddenly of coronary disease on March 13th. He was born in Chicago October 17th, 1882; his precollegiate education was obtained in Evanston, Illinois, and at the University School in Chicago. He was graduated from Harvard College in 1904, although he had earned his A.B. *cum laude* a year earlier. In the fall of 1904 he entered the Harvard Medical School, from which he was graduated in 1908. Doctor Lawrence was an intern on the medical service at the Massachusetts General Hospital. Doctor Frederick Shattuck considered him one of his most promising interns and made him his assistant in private practice. He also held the Henry P. Walcott Fellowship in Medicine from 1910 to 1915, was assistant visiting physician at the Massachusetts General Hospital from 1911 to 1915, and assistant and instructor in Medicine at the Harvard Medical School from 1911 to 1917.

From October 8, 1918 to March 14, 1919 Doctor Lawrence served as First Lieutenant in the Medical Corps, U.S.A. After the war, he was Physician at the Evans Memorial Institute, a position which he held from 1919 to 1930. For eleven years he has been Chief of the Endocrine Clinic at the Boston Dispensary and attending physician at the New England Medical Center. From 1934 to 1938 he was instructor in medicine at Tufts Medical School; in 1938 he was made Assistant Professor. He also served as a director of the Household Nursing Association of Boston.

In 1911 Doctor Lawrence married Miriam Oliver Williams of Plymouth, Massachusetts. They had four sons, Charles Henry 3rd, Edward Williams, David Bissell, and George Hugh. The last is now a third year student at Harvard Medical School.

Doctor Lawrence was a member of the Massachusetts Medical Society, the Aesculapian Club, the American College of Physicians, the Society for the Study of Internal Secretions (a subject in which he was greatly interested), and the American Clinical and Climatological Association.

These are the biographical data of Doctor Lawrence's career. They served as a foundation for a singularly complete and happy life. Those of us who knew and loved "Jimmy" are aware of many things which do not appear in such a summary. He had a keen wit and the ability to write English in a lucid and admirable style. Music meant much to him, as did his church; he had a sincere religious faith which grew with the years and was a guiding motive in his life. He loved sailing and spent many happy vacations on his ketch. Duck shooting he liked, and everything connected with the sea.

His medical knowledge was applied with great common sense; bedside visits were enlivened by his humor and enriched by his sympathy. He was the "wise physician", a loyal friend, and perhaps most important of all, a devoted husband and father.

G. G. S.

At their meetings on March 9 and 23, the Board of Trustees voted:

That the resignation of Dr. John Rock be accepted with regret and that he be appointed to the Board of Consultation;

To grant leave of absence to Capt. James C. White, USNR, with the understanding that he may resume his position on the Staff upon completion of his service;

To appoint Drs. Dean K. Crystal and John G. Scannell as Assistants in Surgery, beginning July 1;

To appoint Dr. William J. Emerson as Assistant Resident in Pathology for nine months beginning July 1;

To promote Dr. John H. Tucci to the position of Assistant Anesthetist on completion of his service as Resident, June 30.

At meetings held during March, the General Executive Committee voted to appoint:

Dr. Fred Alexander as Clinical Fellow in Medicine (Cardiology);
Dr. Martin J. Bellinger as Graduate Assistant in Surgery;
Dr. José Decusati as Graduate Assistant in Urology, retroactive to September 1, 1944;
Dr. Charles W. Findlay, Jr. as Clinical Fellow in Surgery (Thoracic), effective July 1;
Dr. H. Dunster Howe as Graduate Assistant in the Dental Department;
Dr. Edward R. Hubbard as Graduate Assistant in Surgery;
Dr. R. Wenner Machamer as Clinical Fellow in Plastic Surgery, beginning October 1;
Dr. Richard S. Rogers as Clinical Fellow in Urology, beginning July 1;
Dr. Kenneth W. Thompson as Graduate Assistant in Surgery;
Dr. Charles S. Wise as Research Fellow in Physical Medicine.

Capt. Walter S. Kerr, Jr., MC, AUS (*WS* 1943) paid us a nice visit the other day. He described some of his work overseas, and brought us up to date on several MGH-ers over there. We learned that Lt. Joseph P. Holihan (*ES* 1943) is in England; Major Dwight Harken, head of the Chest Centre for the United Kingdom, asked to be remembered to his friends at M.G.H.; Capt. Alexander B. Vial (*ES* 1943) is in the Medical Clearing Co. with the 3rd Army; and Major John W. Ewell (*WM* 1937) is in charge of the disposition of men at a Station Hospital in England.

Captain Kerr returned to the States, by plane, for a bit of surgery. His present address is Camp Edwards General Hospital, SCU 1102, Mass. He is eager to get back to England soon.

OFFICIAL NOTICES

Blood Bank

As of April 15, 1945, it will no longer be necessary for verbal permission to be secured from an Assistant Director for patients who do not have credit for transfusions.

Accurate records will be kept in the Blood Bank for each visiting physician and each service in the General Hospital, and at the end of each month the figures for transfusions and replacements will be compared. A notice will be sent to each visiting man and resident giving the results of the previous month. If any service in the General Hospital fails to keep a credit balance in the Bank, approval of an Assistant Director for all patients who have not an individual Blood Bank credit will again be required.

Visiting men who consistently fail to replace the transfusions given their patients will also be requested to consult personally with an Assistant Director.

It is further agreed

That the service charge for blood for which credit had been provided by House Patients be reduced to $2.50.

That the charge for blood for which credit had been provided by Baker patients be reduced to $5.00.

That the charge for blood for which credit had been provided by Phillips House patients be reduced to $7.50.

Members of the Staff who would like to use radium in the treatment of their patients, but who are not on the Tumor Clinic Staff and have not already been certified, should apply to the Radium Committee for certification before requesting the use of radium.

N. W. Faxon, M.D.,
Director.

The 141st Naval Construction Battalion, somewhere in the Pacific Area, publishes a journal called *The island X-ray.* A recent issue announced the organization of a club, to be known as the Mass Mates. Membership consists of Massachusetts men in the 141st. Among the officers elected to the Executive Committee for 1945, is Carl Dexter, SC 2/c, USNR, who was a carpenter at M.G.H. before he joined the CB's in 1943.

S/Sgt. John T. Keating, past Storekeeper in the Dietary Department, is back home. He was with one of the first Air Force units to go to Iceland. Its purpose was to train combat crew replacements. After 14 months there he was sent to Europe to serve with the Adjutant General Section. During his year there he visited London, Edinburgh, Paris, and other large cities. At the end of his leave he is to report at Atlantic City for reassignment.

Lt. William J. Gorrell, past orderly in Baker Operating Room, now serving overseas with the Canadian Army, has been reported seriously wounded.

MASSACHUSETTS EYE & EAR INFIRMARY

The 40th Annual Meeting of the New England Oto-Laryngological Society was held at the Massachusetts Eye and Ear Infirmary on Wednesday, February 7. The morning session was presented through the regular Wednesday Conference, with many interesting cases from the Ear, Nose, and Throat Departments. Dr. Edward J. Whalen, of Hartford, presided at the afternoon session. The speakers were Drs. Charles N. Gettes; James E. Poulin, of Waterville, Maine, John Adams, of Salem, John R. Richardson, Edgar M. Holmes, Werner Mueller, and Richard T. Barton.

In the evening the Annual Dinner was held at the Harvard Club. Dr. Philip E. Meltzer was elected President; Dr. John D. Rice, Vice-President; Dr. Burton E. Lovesey, Secretary and Treasurer. Dr. Gordon Follette, the guest speaker, spoke on "The art, economics, and scientific application of oto-laryngology in private practice". Dr. Frederick T. Hill, of Waterville, Maine, and Dr. Harris P. Mosher, of Marblehead, gave a very able discussion.

The regular Spring Meeting will be held at the Infirmary on May 23.

Major Joshua C. Drooker, MC (*Oto-Lar.* 1939) visited the Infirmary recently. He is now stationed at Wakeman General and Convalescent Hospital and is Chief of the Ear, Nose and Throat Section.

A letter from Lt. Daniel J. Reagan, MC, AUS (*Oph.* 1943 & *Oto-Lar.* 1944) tells us he is now at the Borden General Hospital, Chickasha, Okla. Things look a little brighter for him now—he is doing ear, nose and throat work and *not* orthopedics.

Following is an interesting article about Dr. Derrick T. Vail, Jr. (*Oph.* 1924), taken from the *Journal of the American Medical Association,* March 24th issue:

> Derrick T. Vail, Jr., colonel in the Army medical corps and chief consultant to the Surgeon General in ophthalmology, has been appointed professor of ophthalmology and chairman of the department at Northwestern University Medical School. He will succeed the late Dr. Sanford R. Gifford, who was professor of ophthalmology at the medical school from 1929 until his death in February 1944. Dr. Vail graduated at Harvard Medical School, Boston, in 1923. Since 1926 he has been associated with the University of Cincinnati College of Medicine, first as instructor in ophthalmology and since 1937 as professor. Dr. Vail was Secretary of the Section on Ophthalmology of the American Medical Association from 1937 to 1942. He will take up his appointment at Northwestern as soon as he is released from the Army.

This letter, headed "Somewhere at sea", has come to Dr. Schall from Lt. Aram Roopenian, MC, AUS (*Oto-Lar.* 1944).

Much water has passed through the old mill since I last saw you on my Christmas leave. As you know, I had been stationed at Borden General Hospital, working with hard of hearing cases and learning a great deal about deafness. But, alas, this was not to continue. Immediately after returning to Borden, I received orders to join a Field Hospital, and thence an entirely new type of life has unfolded for me. I fear my association with ENT work has come to an end for many days, a fact I deeply regret.

A Field Hospital is quite a unique organization. It is designed for rapidity of movement and flexibility, as the situation demands. It may act as a medical unit in almost any capacity, from a battalion aid station to an evacuation hospital. Two or three field hospitals together may even act as a general hospital. Here the Army has invented a very efficient organization—one that probably has no equal in any other Army in the world. It is composed of three separate hospitalization sections which may operate together as a station or evacuation hospital, or individually in support of a division, combat team, task force, etc. Its usual position is in support of a clearing station, receiving the more seriously wounded who are not able to be moved further back immediately in the chain of evacuation. I have been fortunate enough (or have I been unfortunate?) to have been appointed commanding officer of one of the hospitalization sections. It is a new type of position for me—having command of men and officers; the responsibility is tremendous; a great deal of training has had to be accomplished. However, I have gradually become acclimatized to my job, and my section now shapes up pretty well on paper. It remains to be seen how well it will operate under combat conditions. I hope to Heaven we can accomplish our mission as well as those men who are to be our patients accomplish theirs.

After months of training we finally joined our ship and left the States. The sight of our shores disappearing from view left an impression which, I am sure, not one of us will ever forget. The previously present wise-cracking and jocularity very suddenly dampened. Heartfelt emotion, psychologists tell us, cannot be expressed in words, and this was definitely so. Of course, the thought uppermost in our minds was the leaving behind of our loved ones—for God knows how long.

The first few days out it was rather rough. Almost everybody experienced that old well-known labyrinthine disturbance called seasickness, and quite a few fed the fishes. The meals, incidentally, are the best imaginable, and it broke many hearts to have to pass up rare steaks!

Life aboard ship is a lazy one. The three outstanding events of the day are breakfast, lunch, and dinner. The rest of our time is spent lying on the decks, reading, smoking (cigarette supply abundant), and swapping stories. Most of the conversation is about home, which is a healthy state of mind—that is, the airing of those factors which otherwise cause a great deal of tension. The trip has been remarkably free of personality clashes. The ability of all these people to get along with each other under these circumstances is really surprising, and I believe the very fact that this group is not reticent to talk about things that bother them has contributed tremendously toward bringing about this happy situation.

We have medical meetings three times a week, the discussion centering about diseases peculiar to our destination. Occasionally we get a radio program from the States, but not often enough. Gambling is very prevalent amongst both officers and enlisted men. I must confess I have partaken of this diversionary vice myself—not doing badly, either! Flying fish are plentiful in this section of ocean. It is a strange sight to see small white fishes shoot out of a wave, skim gracefully along about a foot over the surface of the water for 30 or 40 yards, and then suddenly disappear into another wave. Our composure was somewhat disturbed one day when a large ship appeared on the horizon. Fortunately, it was one of our own vessels. It gave us something different to talk about for a few days, anyway.

We have received no mail since we embarked—and, believe me, it will be a memorable day for all when it finally catches up with us. There is no doubt whatsoever in my mind that mail is the greatest single morale factor that exists in this type of life. It is strange how things comparatively meaningless in civilian life take on the greatest importance in the Army.

Today we sighted land for the first time since we left the dear old U.S.A. After a long stretch at sea, with nothing on the horizon but water, sky, and clouds, land is a welcome sight. We are passing through a group of very historic islands, and it is with a feeling of awe that I look upon them. At this very moment we are about three miles offshore from the most famous of them all. Knowing the history of this island, it is a grim sight to behold. The clouds hang ominously low about it. The smoke of battle still seems to be present. The waters about it seem to have taken on a reddish hue, as though tinged with the blood of those who died in taking it. It is the thought of the sacrifices made by these men that makes one glad he is doing his part in this struggle for civilization. A boat ride like this one would be just the tonic needed for those at home who think they are making sacrifices by working twelve hours a day. Then would they realize the insignificance of their "hardships".

Memories of my days at the old Infirmary are among my fondest. Some day I hope to be able to take up again where I left off.

All material of a military nature in this and every issue of THE NEWS is first cleared for publication by the local Public Relations Department of the Army or Navy.

New addresses:—

Dr. Paulo F. de Albuquerque, Rua Gomes Carneiro No. 28, Rio de Janeiro, Brazil.

Lt. Col. Richard Chute, MC (*ES* 1929), Fitzsimons General Hospital, Denver 8, Col.

Lt. Comdr. G. Douglas Krumbaar, MC (*a. obst.*), 2762 S.W. Montgomery Drive, Portland 1, Ore.

Lt. Col. Edward Parnall, MC (*Or.* 1932), Moore General Hospital, Swannanoa, N. C.

Lt. Frederick J. Pollock, MC, USNR, (*Oto-Lar.* 1935), U.S. Naval Hospital, Portsmouth Navy Yard, Portsmouth, N. H.

Lt. Karl Riemer, MC, USNR (*Oph.* 1943), U.S. Naval Training School, Noroton Heights, Conn.

Capt. William B. Scoville, MC, AUS (*r. NS* 1938), Cushing General Hospital, Framingham. Mass.

Capt. Robert Talkov, MC, AUS (*res. fel. M* 1942), Ashburn General Hospital, McKinney, Tex.

Lt. Frederic Tudor, MC, USNR (*a. M*), 51 Randolph Ave., Milton, Mass.

Brief bits:—

Lt. John F. Bell, MC, AUS (*Or.* 1941) has been transferred to the 24th Evacuation Hospital.

Major Bradford Cannon, MC (*a.s.*) has been promoted to this rank.

Lt. Col. Wilfred J. Comeau, MC (*a. in M* 1937-39) is Chief of the Medical Service in a General Hospital in England.

Lt. Comdr. George E. Gardner, MC (*CM* 1938) is Chief of the Neuropsychiatric Service at Naval Hospital, N.O.B., Norfolk, Va.

Lt. Lytt I. Gardner, MC, AUS (*CM*) is with the 2nd Auxiliary Surgical Group, which has a New York APO number.

Lt. Henry B. Garrigues, MC, AUS (*WS* 1939) is with his same outfit, but it now has a New York APO number.

Capt. Henry L. George, Jr., MC, AUS (*CM* 1929) is with the 179th General Hospital.

Lt. Oscar W. Hills, MC, AUS (*M* 1943) is still with the 312th General Hospital, which now carries a San Francisco APO in its address.

Capt. George S. Jenkins, MC, AUS has been transferred from the 6th General to the 171st Evacuation Hospital.

Capt. Robert D. Mattis, MC, AUS (*Oph.* 1942) is with the 32nd Evacuation Hospital (SM).

Lt. Edward P. Richardson, Jr., MC, AUS (*EM* 1943) sends a San Francisco APO number and the cryptic "NSGH".

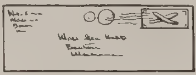
Major Charles D. Roberts, MC (*r.p.* 1938) has received this promotion. His hospital has a new APO number.

Lt. Col. Richard Schatzki, MC (*r.*), still at McGuire General Hospital, Richmond 19, Va., has been promoted to this rank.

Major William T. S. Thorndike, MC (*WS* 1919) is now with the 154th Station Hospital.

Capt. Alexander B. Vial, MC, AUS (*ES* 1943) has received this promotion.

Lt. Norman Zamcheck, MC, AUS (*P* 1943) is with the 10th Station Hospital.



Col. Thomas R. Goethals, MC, AUS, is now in command at Lovell General Hospital, Fort Devens, Mass.

The last time we heard from Dr. Roy H. Whitham (*WS* 1926) he held the rank of Commander and had been stationed at U.S. Naval Hospital, Great Lakes, Ill., for over two years. He was Chief of Orthopedic Service there. A recent letter announces, with regret, his retirement from military service. He writes:—

It has been a great pleasure to me to receive THE NEWS throughout my period of service in the Navy, and to get the accounts of so many other people in the service, scattered all over the world.

Unfortunately, in March 1944 I suffered a coronary occlusion, was confined to bed for three months, and for six months more was inactive. This eventually ended in my retirement from the Navy on February first of this year. I am now back in my old home in Lincoln, Nebraska. Have opened an office at 921 Stuart Building and am back in the swing doing surgery. Through THE NEWS I shall continue to hear about my old friends and acquaintances still in Military Service.

Needless to say, it has been a deep disappointment to me to have to retire from the Navy, but I have every confidence that the end of the war is now near. I only regret that I cannot be with the service men for the final guns.

I hope that any one from M.G.H., coming through Lincoln on his return, will look me up. It will always be a pleasure to see any of them.

A recent letter brought Lt. Daniel H. Hindman, MC, USNR (*a. obst.*) up to date.

Since returning to the U.S. some eight months ago, my activities have produced little toward bringing V-Day nearer. After a few weeks at the U.S. Naval Air Station, Norfolk, Va., unusually kindly orders took me home to Boston to a six-months' course in anesthesia at Lahey Clinic, followed by directions to report to the *U.S.S. Haven* at Brooklyn — the town of the hitless wonders, "dem bums", and the TREE of which every one is talking.

We are to be here in Brooklyn several weeks to await the commissioning of the *Haven*, which is one of a class of five new hospital ships—the first the Navy has ever constructed as such, i.e. not converted from transports or liners. The vessels are to be the first Navy ships ever to be air-conditioned throughout. The plans bespeak a floating hospital, luxurious in equipment, with more than 800 hospital beds, and facilities to accommodate twice that number when conditions demand.

In our present state of flux the ship has been assigned no permanent mailing address, but by the time she sports the large red crosses and wide green streamer, when we hoist the sail and get the wind astern, and feel our way through the canal, the guy what carries the mail will surely know her whereabouts.

Probably, when we can see that snow-capped volcano from our decks there will be something of interest to scribble about.

Major Carl E. Horn, MC (*Or.* 1940) writes from Torney General Hospital, Palm Springs, California:—

My first station was at Camp White, Oregon, where I was Chief of the Orthopedic Section of the Station Hospital from Sept. 8, 1942 until June 1, 1944. During that time three divisions underwent training under simulated battle conditions. The simulation was too real on many occasions, so that I gained a small idea of the problems of the forward areas.

My second station was at Oakland Regional Hospital until March 14, 1945. The setup for orthopedic work was excellent for care of Zone of Interior patients.

This is my third station, where I am again Chief of the Orthopedic Section. The recent influx of orthopedic patients from overseas is staggering in dimensions. The patients arrive in really excellent condition, attesting to the fine work being done overseas. Many of the patients have been treated by MGH men, which gives them an additional interest to me.

A quest for information as to what Lt. Col. Reno R. Porter, MC (*res. fel. M* 1939-41) might be doing, resulted in a "first letter" from him from Lovell General Hospital, North, Fort Devens, Mass. He writes:—

I have enjoyed reading THE NEWS regularly and have been much interested in the varied activities of my former associates. I have not sent an account of myself chiefly because my existence has been for the most part unexciting, although quite interesting from a professional point of view.

I have been very fortunate in having been located at this general hospital since my entrance on active duty in October 1941. Professionally this has been an ideal assignment, with my work along the lines similar to that in which I was engaged in civilian practice, and with the opportunity to observe a lot of interesting and varied medical problems. My initial duties were those of Chief of the Cardio-Vascular Renal Section, but in the recent past I have also functioned as Assistant Chief of the Medical Service.

Some time ago the capacity of this hospital was increased to 4,000 beds, which has markedly increased my work, as well as the number of interesting problems.

As you can see, aside from my particularly good opportunities for medical work and my recent promotion, my activities have been on the unexciting side, and certainly do not compare with the unusual experiences others have had. Just how long this sinecure will last I do not know; and while I am thankful for the opportunities I have enjoyed here, I hope I am not stuck here for the duration.

In this letter from Major Robert H. Detwiler, MC (*CM* 1940) to Dr. Faxon we learn of his promotion in rank and are enlightened a bit as to the nature of his work.

You have no idea how enjoyable it is to get THE NEWS out here in this God-forsaken country of India.

For the past six months I have been Surgeon for the Headquarters of the Combat Cargo Task Force. It is an integrated organization and, as such, brings up many interesting side lights as well as many new acquaintances with the English medical officers. We have frequent opportunities to visit the front and to see and watch what they are doing to the little yellow men. To pick out incidents would very likely annoy the censor, therefore the stories had better wait until later. The flights, however, are beautiful—flying over snow-capped mountains, and then down into the valleys at treetop level.

Hope this finishes the list of "silent ones". [It doesn't, but it helps. Who'll make it still one less? *Editor*]

Lt. Col. David B. Dill, QMC (*res. fel. M* 1925-27) has a new address which contains a New York APO number. A recent letter from him brings a report of a long journey.

I spent last October and November as an observer for the QMC in the Pacific, visiting many of the islands from New Guinea to Saipan. One outstanding accomplishment of the Medical Corps, as it seemed to me, was the control of insects. In this the QMC is proud of the part we have played in the production of insecticides and repellents.

In this Theatre I have had the pleasure of sitting in on some meetings with Col. [John E.] Gordon, [MC (*cons. prev. med.*)], who is the expert over here on many subjects—particularly trench foot.

A little over a year ago Miss Marian Tufts left the Diabetic Clinic to go to Halloran General Hospital. Here is a letter from her to Miss Cannon, written in New Guinea on November 11.

I have been here only a short time and have not yet started to work, although I have my assignment which sounds like a good one. I will be in the Social Service Department in a large hospital unit staffed by a university group of doctors.

I left Halloran (reluctantly) on September 8, and have led a very strange and confusing existence since then. My stay in Washington would have been fun if I had not had the poison oak. After being alerted on a Wednesday we spent three hectic days doing finance, uniforms, shots, etc., and left on a Saturday morning. There was a large group of us, including 25 men—one a psychiatric social worker, the first to come to this area. They will use him in the front lines. We had a pleasant but brief stay at our POE camp, where we were processed from A to Z. From there to a luxury liner, after a three-mile hike, loaded down with helmet, gas mask, musette bag, pocket book, rain coat, canteen, and first aid kit. Only one older woman passed out. It was midday sun, also! The ocean voyage was wonderful—just miles and miles of beautiful sky-blue water and bright sunshine, with nothing to do but look at it. We had two big meals a day, which we now think about quite often. We stopped, but could not get off, at two lovely harbors. I hope some day I may return to see them again.

It was quite a surprise to see this countryside as we approached. It resembled the hillsides and mountains of Vermont with an ocean beside them. At our present location we are surrounded by coconut trees, palm trees, and lovely red and orange flowering trees, with a mountain range on one side. Our barracks are filled with permanent and transient Red

Cross girls, many of whom have been here 22 to 30 months. We all assume a hideous yellow color from the atabrine and bright sunshine. Two nights a week we are allowed out until 12, other nights 11. Two couples must always be together, with both men armed. It's a strange feeling. Our transportation is by jeep or truck. My, but they are hard on one's seat! Next to our barracks is a large recreation hall, fixed up attractively with yellow and white parachutes draped from the ceiling. We also have a little kitchenette, but have had to close it for lack of clean water with which to wash dishes. Food becomes a large topic of conversation out here, and although our mess is supposed to be the best around this area, one frequently gets up hungry. We did have steak yesterday, but I am sympathetic with the GI's about bully beef. Working in and cleaning the hall are two natives (fuzzy wuzzies). They have bleached their hair with peroxide, and wear flowers in their hair and tied on their arms. One had a Delmonico peach label tied on his head last week. Some of the natives speak quite a bit of English, and one was whistling a Christmas carol the other day.

We made the mistake of arriving with hospital dresses and skirts, and, of course, no women are allowed anywhere in the Southwest Pacific in anything but pants. I have just sent everything I brought with me home, and have purchased our uniform, which consists of shirts (long sleeved at all times), slacks, with high boots and leggings at night.

I am very much impressed with the work done here by the Red Cross. They have built clubs for the GI's and run entertainments in unheard-of jungle areas. Some of the girls get up at 4 A.M. and go out with canteen service to the air strips. They all work very long hours, and often have to drive for an hour over the dustiest roads to get to work. These girls live at the hospitals.

On the boat I talked with a nurse who was returning from leave. She was with the 105th General Hospital. I heard many fine things about Colonel Cave [*ES* 1926 & *Or*. 1928]—loved by them all—plus many other MGH men. I hope soon to be near them. They are said, by the people out here, to be the best unit anywhere.

Mail becomes all-important out here, and I hope I may soon hear from my Boston friends. I know you are all working beyond endurance, and I feel quite guilty sitting in the sun.

When MGH-ers who are not on the Hospital Staff go into Military Service, there is no way of our learning this fact and adding their names to our mailing list unless they notify us or we are informed by interested friends.

Lt. John Vernon Cantlon, MC, USNR (*ES* 1935) has evidently been in the Navy for quite some time. We did not know this, therefore he has not been receiving The News. And we might *never* have known about it had not Dr. Edward Hamlin, Jr. sent us this letter from Lieutenant Cantlon.

I wonder if you would do me a favor. I have somehow or other gotten out of touch with the MGH gang in recent years and would like to find out more about them. Would you be so kind as to send my mailing address to The News and ask them to send me all future copies?

Fortunately, as regards my career, I had no illusions concerning my part in the war. I was sent for a month to a grand hospital—Oak Knoll, in Oakland — and really was doing plenty of surgery, but found that that was merely a plum, for I was then transferred to Camp Parks in California, ostensibly as surgeon. When I arrived I found there was no surgery, no surgical instruments, and that I could do a lot of tonsils if there was anything to do them with. So I was made a back diagnostician after working for a month on venereal disease and a month on malaria. By that time a surgery was constructed and I started doing from 6 to 10 tonsils a day, under local, after a man showed me how to do a few. In August our instruments arrived, and in October I was transferred to Seattle for the purpose of commissioning this ship. Since then I have really lived a life of ease and comfort. We sailed from Seattle in November and have been flitting round from place to place since then. I have not been entirely inactive, though, for one of my pharmacist's mates developed mesenteric adenitis at sea and I removed his appendix a couple of months ago.

I saw Herb Adams and had a nice visit with him in Pearl Harbor. One day I drove thirty miles to see him do a pneumonectomy with Jim Fish at an Army hospital, but when I got there I found the man had started to run a fever so they canceled it. Mabrey is at Pearl with Herb. They both have good assignments.

In spite of the fact that there is little to do in the medical line aboard this ship (which is a honey as far as ships go—a small seaplane tender) I have had a most interesting, pleasurable, and restful time. I am catching up on reading, practise gunnery with the gun crews, and study navigation, meteorology, and aviation. (I took flying lessons just before leaving Reno and finally got to solo before I left.)

At present we have good duty in a somewhat active Theatre. It consists of sea rescue work, and I feel that the cost of this ship and crew to us taxpayers has more than justified itself already.

I hear from Ed [Capt. Cantlon, MC, AUS (*ES* 1938)] from time to time. He is somewhere in Alsace, doing interesting work with the 7th Army. He mentions seeing Grantley Taylor and Roy Cohn not long ago.

I didn't make any arrangements about my practice when I left Reno. I simply closed the books with the intention of starting from scratch after the war ends. My practice is probably spread to the four winds, but maybe I can bamboozle some of them into returning. If not, I'll sell life insurance or settle down to some steady farming.

Another "first letter" from the Pacific Theatre—this one from Lt. Harold E. Elrick, MC, USNR (*M* 1944).

Your Christmas card with all the signatures of the Staff reached me today. Needless to say, I was delighted to receive it and would like to express my appreciation and thanks.

Since June 1944 I have been attached to a Division of Destroyer-Escort Vessels as Division Medical Officer. In November we arrived in the Pacific Theatre, and in January participated in the Leyte and Lingayen Gulf Campaigns.

The only other MGH man I've run into so far is [Lt.] Connie Shea [MC, USNR (*ES* 1943)] who is on a rescue and casualty ship.

Please continue to send The News. I look forward to receiving it every month.

My best regards to every one.

Surely, every one who read the letter from Capt. John J. Kneisel, MC, AUS (*EM* 1940), in the December issue, remembers it. And yet, in a letter from the Philippines, dated January 10, he writes:—

I have not written before because I never believed I had anything of general interest to offer. It's not flattery to tell you I've thoroughly enjoyed each issue of the hospital paper. I'm sure you must know how much news of one's friends means out here.

We've had a fairly hard go in this campaign, but are happily out of combat for the minute, resting and re-equipping for the next show. Following *that* one I am beginning to have hopes of visiting home.

More than a year has passed since we last heard from Capt. Lloyd S. Saltus, MC, AUS (*CM* 1938). This letter, from Belgium, is written in the inimitable Saltus style.

My address, new at Christmas time, indicates a stroke of good fortune in getting into a useful, active job among friends from St. Luke's in New York. For two months we were very busy with the damage caused by the respiratory bugs and viruses, melting snow and freezing mud, and sometimes by the Germans. Now the sun has taken care of some items and the Army is working on the Germans, so that we are left behind for the time being.

Just before Christmas I was in the same company as Capt. Sidney Cobb, son of Stanley. He was a most staunch supporter, and made my work easy for me while we conducted a "tactical withdrawal". We didn't get into the lion's mouth like Lamar Soutter, but felt a few drops of saliva.

Thank you for the always interesting News and for the Christmas card with all its familiar signatures, legible or as usual.

From "Somewhere in Germany" comes this brief V-mail note from Lt. Col. Harold H. Hamilton, MC (*r.s. PH* 1933):—

I am glad to say The News has followed me through Wales, England, France, and countries east, better than any other publication—second only to Mrs. H's letters. Please keep it coming.

A brief report on matters military and otherwise has come from Lt. Benson B. Roe, MC, USNR (*WS* 1943).

For the benefit of my curious friends I find it necessary to report a matter of some importance—namely, that the bug I had been so deftly avoiding finally bit with serious consequences, and on January 2 I ceremoniously added my name to that of one Jane St John. Although her father is a Presbyterian Hospital (NYC) surgeon and she a P.H. graduate, I am glad to report that they are broad-minded enough to concede the M.G.H. as "OK". However, my medical loyalties have been unswayed by marital influence.

Since leaving Boston my duty has been (1) briefly at the Naval Air Station in Norfolk, and now (2) on a light cruiser. We have experienced no martial excitement as yet, but the duty is excellent considering what I hear of many of the "docs".

My regards to every one on the banks of the Charles, and many thanks for The News which is always much appreciated.

Breezy, as usual—and enthusiastic about everybody else's work—is this letter from Major Henry F. Howe, MC (*r.s. PH* 1934).

Sans Origine
Date unmentionable

Dear MGH News:

For nearly a year now I have been shuttling the Atlantic in command of the little hospital aboard a troop transport. To date I have covered well over sixty thousand miles and have grown quite familiar with most of the ports from Scotland to North Africa. On the outward voyage I am practising among the usual Army community of healthy young males in splendid physical trim and full of *esprit de corps* that our training camps have managed to instill. It is a personal tragedy, to the man and the outfit, when sickness makes it necessary to separate one of these men from his unit. On the inbound voyage we often become an ambulance. Our gunshot wounds and compound fractures reach us in splendid condition, without infection, and with adequate records and X-rays.

Sitting near the end of the chain of evacuation as we do, we have a chance to sum up at leisure the work done by the various medical echelons. I have been very much impressed with the intelligent handling of the more severe traumatic cases in the forward areas. The

MASSACHUSETTS GENERAL HOSPITAL ROLL OF HONOR

young battalion surgeons, recently out of internships, are doing a good job. We have had occasion to work with many of them on outward voyages, so we are not surprised that their work in the field is of a high order.

Another powerful impression one gets is of the spirit of the wounded. They don't complain. They show enormous appreciation of anything we do for them. They seem surprised at the "good deal" the hospitals have given them. The amused intolerance with which the soldier regards the medics on the outward voyage turns into fulsome praise when he returns as a casualty.

Thus we get the impression that the quite complicated chain of medical institutions through which the patients travel, from the battalion aid post all the way down to the hospital centers from which we evacuate them, are doing an effective job both clinically and humanly. It is rather amazing that institutional medicine of this sort can work as well as it does, for no single medical officer follows a patient longer than a few weeks at most; each takes up more or less from scratch where the other left off. Still, it seems to work pretty well—thanks to the generally high calibre of the Corps as a whole.

I have not happened to run into MGH men on any of my travels, and have so far not been in a position to visit any of the installations where Boston men are congregated. For that reason I sit down and devour THE NEWS with particular relish and look forward to its arrival with great anticipation. It should get a Pulitzer! [See how all your letters are appreciated? *Editor*]

Many thanks for the Christmas card, and regards to the gang.

The last time we heard from Capt. William E. Flood, MC, AAF (*r.p. D* 1942) was in 1943 when he was in North Africa. A where-are-you inquiry from us finally caught up with him and resulted in the following letter:—

I returned to the U.S. July 1, 1944 for a thirty-day leave. Then I attended the School of Aviation Medicine at Randolph Field. Upon graduation I went to the School of Applied Tactics at Orlando, Fla., and from there was sent here to the Regional Hospital, Smoky Hill Air Base, Salina, Kansas. It is a small hospital at present, but is expected to grow. I have been made Chief of the Dermatology Section.

I was unable to see the —th General Hospital before I left, but did see a few of the men. It was good to run into so many MGH men around Naples.

This V-mail letter from Capt. Philip P. Thompson, MC, AUS (*WM* 1942) makes us wish he would write at greater length soon.

I have followed with interest the whereabouts and activities of my MGH friends and acquaintances through the pages of THE NEWS. During the two and a half years since I left, it has been my principal source of contact, although I have met some MGH friends during my travels through North Africa, Corsica, and Italy. Being somewhat isolated with an Infantry Unit, as I now am, I don't see or have the opportunity to talk with many other doctors, either in hospitals or in other field units. For this reason, I am especially appreciative of THE NEWS, and through it hear of the experiences of others.

Medically my experiences have been somewhat limited but never dull; whereas my experiences otherwise have occasionally been exciting, to say the least.

The following letter from Lt. Rose C. McDonnell, ANC (*MGH* 1935), to a friend, has been forwarded to us.

I had been trying to get a transfer for the past year or so, and tho I didn't succeed I did finally manage Detached Service which I think will probably be for the duration of the war in Italy. It all came about when Colonels Sullivan and Simeone came down looking for two nurses to do research with them. Marguerite Cronin and I grasped the opportunity and here we are—just where we have been aching to be for so long. Naturally, we hated to leave our old outfit, for there were some wonderful people there, but this is the type of work we came over here to do and I'm glad to be doing it. We work with only the most seriously wounded patients, and I have done more worth-while work here in the past four days than I did in all the time I was in Rome.

This Medical Research Board is made up of Colonels Simeone, Mallory, Sullivan, and Beecher, Captains Burnett and Chenez, plus five or six enlisted men—one, a medical artist, and the rest lab technicians and ward men. They do their work in several hospitals, but the bulk of it is done at the most forward Evac, so that's where we are stationed.

We are in a muddy but very beautiful spot. The surrounding mountain peaks are covered with snow and, as you might well imagine, it is very cold. We wear long woolen underdrawers, long-sleeved woolen undershirts, a woolen overshirt, woolen pants, socks, high leather boots and rubber arctics, plus a wool cap, a field jacket, and mittens. On duty we remove the cap, mittens, overshoes, and field jacket—unless it is very cold. It is amazing that we are able to do such an extreme amount of work on these patients under such difficult conditions, yet their physical condition when they are injured must be fit enough to withstand unfavorable conditions. They all get penicillin night and day. They all get blood, plasma, and glucose almost constantly. We have a heavy wire strung from one end of the tent to the other and we tie the bottles of solution to this with a piece of bandage, and away they go. Every second or third patient has a Wagenstein, and when there is a rush morphine is mixed up in three or four ounces of solution, with a rubber stopper on the bottle, so that all one has to do is aspirate the desired amount, otherwise things would never get done.

If you like shells let me know, for I can send you some. We have all kinds—our own from behind, and the type we don't care for on the other three sides. We'd be scared if we weren't too busy to realize.

Letters from our men in Italy and thereabouts are so rare we always pounce upon the few that do come, with the hope that they may contain NEWS material. This one to Dr. Faxon from Major James A. Halsted, MC (*WM* 1932) discusses a subject of vital interest to many, both at home and abroad.

As is true of all of us, I appreciate THE NEWS very much and await it eagerly each month. Having been much interested in reading Dr. Cobb's two articles on the Psychiatric Service and Major Ludwig's letter in the March issue regarding his experiences in psychiatry, I am impelled to send a brief note on another aspect of the same subject which we, as internists, have had to deal with.

I have had the good fortune to be attached to the Fifth Army since October—my job being to try to sort out psychosomatic cases in the forward area, make diagnoses and evaluation of the man's capabilities up here, and thus prevent over-hospitalization, which has been found definitely to be very harmful in these cases, just as it is in the battle neuroses. The Army Surgeon is very much interested in medicine, realizing the important fact that men evacuated for disease constitute a problem which is more important numerically, from the man power point of view, than the battle casualties. He established a Gastro-Intestinal Center, of which I have been in charge, and the work has been both interesting and productive. We cut down hospitalization time about three fourths, and are able to return a considerably higher percentage to full duty. Lately, since the work has been rather light, we have been able to make a fairly extensive study of the non-ulcer dyspeptic patient by gastroscopy and careful psychiatric examination by the psychiatrists from the Army N.P. Center. I have been doing the gastroscopies with a man who is a real expert with large experience whom we were able to get up here for this purpose. The MGH gastroscope is serving its purpose well, and I expect we shall be able to get together some data which may be of some value.

When the 6th will be set up again is any one's guess. In the meantime its members have been scattered hither and yon, making special surveys and working in various institutions. One or more of us can invariably be found in the Excelsior Hotel in Florence, either engaged in some mission or traveling to another, so that it has come to be almost like the Harvard Club of Boston.

THE NEWS

No. 33 Boston, Mass. JUNE 1945

NEUROSURGICAL SERVICE AFFAIRS

My introduction to neurosurgery was unpleasant, bloody, and unsatisfactory. I was a "striker" on the surgical service, with little or no experience, as it was early in my fourth year at the Medical School. Some one sat me on a low stool beneath the head of a patient lying prone on an operating table. In one hand I held an ether cone, while my other hand supported the patient's forehead. One of the older visiting surgeons uncovered the cerebellum. I was in the dark, literally and completely, as to the patient's condition. Blood was dripping into my hair. I wonder what the anesthesia service, the neurosurgical service, and the assembled wisdom of Surgical Grand Rounds on Thursday mornings would say to such a performance today. Perhaps the remembrance of this early experience gave me the desire to help improve, if I could, the practice of neurosurgery.

There have been many changes since those days when neurology had two house beds on the medical wards. My father was doing more neurosurgery than any one else in the hospital, but that was because of his interest in trigeminal neuralgia. Tumors were operated on by any one on service, as were cases of head trauma. The beginning of a real neurosurgical assignment came later, when neurology and neurosurgery were given Ward 26 in the Bulfinch building. Some of the neurological department will remember this ward, as will Miss French from her experience as head nurse. Of the present active members of the neurosurgical service, only your reporter will have a clear picture of the work we did. In that ward was fostered the close association between neurology and neurosurgery which has meant so much to me and to the hospital throughout the years.

Neurosurgery at the M.G.H. has given many men to the Armed Forces. The Chief of the Service, Captain White, holds a position of great responsibility in the care of wounded Navy personnel and up to now has found time to continue his teaching and research work. I wish him every success in his new position at St. Albans, and know that he will do well. As I have visited Army hospitals during the past two years and have gone over Army lists, I have been made happy and proud of the work of our ex-residents in neurosurgery. Some, here in this country, are doing a splendid job in restoring function to paralyzed limbs by nerve suture and closing gaping defects in blown-out skulls. Others are in general hospitals overseas. Others are in evacs, and still others in mobile surgical teams. The list is too long to name them individually, but the reports show they are doing excellent work. I envy them.

Neurosurgery as seen in the Armed Forces is a very different problem from that seen in a civilian hospital. Ten per cent of battle casualties fall to the neurosurgeons at one time or another. Most of them suffer from peripheral nerve injury, whereas the peripheral nerve case is rare in a civilian service. However, the problems studied in this hospital are applicable to war work. Dr. White's work on intracranial injuries, brain swelling, blood loss and so forth, are all of value. Low back injury and ruptured intervertebral disc is a very difficult problem in the Armed Forces and our work in this field has been useful. Dr. Michelsen's work on ruptured cervical disc has taught us to look for this lesion in cases of otherwise unexplained brachial neuritis. This work is still going on and gives promise of really important results.

We have watched with interest and have had some small part in the development of surgery of the sympathetic nervous system. Many of the procedures now carried out on the general surgical services were first tried out on the neurosurgical service. This is true of dorsal sympathectomy, presacral neurectomy, and lumbar sympathectomy. Dr. Smithwick's work in hypertension has been developed from these small beginnings. To my mind, this is one of the outstanding contributions to the surgery of our time. It is a great satisfaction to know that his work here at the M.G.H. has gone far toward solving this difficult and important problem.

We who remain on the service look forward to the day when those in the Armed Forces will return. They will bring with them new problems and wider vision as a result of their experiences.

I feel that the future of neurosurgery here at the M.G.H. is full of promise.

W. Jason Mixter, M. D.,
Acting Chief of Service

* * *

Jane D. McCarrell, Ph.D., is leaving M.G.H. on May 15, and will start teaching at Vassar in August, as Professor of Physiology. She will replace Professor Ruth Conklin, head of the Department of Physiology, who is on a sabbatical leave of absence. Dr. McCarrell has been working with Dr. Henry K. Beecher since January 1942.

VOLUNTEER DAY—1945

On June 14, from 3 to 5, simple exercises will take place on the Bulfinch lawn. In case of rain, the program will be postponed until the following day—June 15.

It is unnecessary to urge that all the hospital family be present. As this is the one time in the year planned for an all-out get-together, every one of us, surely, is looking forward to the event.

His Excellency Maurice J. Tobin, Governor of the Commonwealth of Massachusetts, has been asked to speak. His Honor John E. Kerrigan, Mayor of Boston, has also been invited.

The program will include:

Music by the United States Port of Boston Coast Guard Band

The MGH good neighbor policy—Introduction of doctors from foreign countries

The famous Vincent Drill

Cold drinks and cookies will be served.

Since this notice in THE NEWS is the only invitation you will receive this year, we ask that you accept it as if it were an announcement addressed and mailed directly to you.

At the Vincent Club Annual Meeting, held May 8, it was voted to give $20,000 for the support of the Vincent Memorial Hospital. This sum is derived from the proceeds of the Vincent Show and from dues paid by the Club members.

A Medical Staff meeting was held in the Ether Dome on May 28. Comdr. Bernard M. Jacobson, MC (*a.p.*) gave an interesting talk on "Men, medicine, and mosquitoes on a South Sea isle". Tea was served in the Staff Room, as usual, before the meeting.

E-J

It seems as if everything—and more, besides—has been said, in more ways than there are, about V-E Day. We, here at M.G.H., received the announcement with quiet understandably mixed emotions—a feeling of relief that for you who are in Europe the slaughter has ended, and an anxious prayer that for you in the Pacific war's end come soon.

This may be the best time to remind you that now, during this period of numerous transfers, it is more important than ever that you keep THE NEWS informed of your latest address. Also, please *do* let us know if and when you return to the States. Not only will this help us keep your military record complete, but it will relieve the overburdened mail service of unnecessary forwarding.

ROBERT SATTERLEE HURLBUT

Lt. Robert S. Hurlbut has been reported as "Missing" since the loss of his ship, in the Pacific Area, on March 26. He is presumed lost. Lieutenant Hurlbut was an Intern and then Assistant Resident on the East Surgical Service from 1938 until 1942, when he was called to active duty in the Navy.

He was born in Cambridge and attended the Belmont Hill School before his entry into Harvard College in 1930. While at college, in addition to his premedical courses, he was interested in many sports and organizations. He was especially active in football and rowing. He was a member of the Owl Club, the Hasty Pudding Institute of 1770, the Speakers' Club, and the Harvard Instrumental Clubs. Upon graduation from Harvard, he was married to Sally Drew of Newton, and the following fall he entered the Harvard Medical School, graduating in 1938. He was the permanent Secretary of his Medical School class.

He started out as Intern here at the Massachusetts General early in 1939, in the last days of the corrugated iron operating rooms, and was one of the last to have his "pupship" under the old system. He was an Intern on the Urological Service when it still inhabited the old Ward F, now defunct. The Surgical Services moved into their new building in December 1939 and January 1940, and Bobby's Odyssey through the various branches of the service continued in the new quarters. Between his Internship and his Assistant Residency, he spent nine months in the Department of Pathology, working in this basic field as a part of his surgical background.

Even during the most hectic period of his "white suit training" Bob maintained his place at Marblehead which was so much a part of his life. His joy in the ownership of this property was fulfilled only in sharing it with others; he gave many picnics and clambakes there for members of the House Staff and for large groups of medical students—gatherings that will always be remembered for the easy hospitality and gracious generosity of host and hostess.

Having been in the Naval R.O.T.C. at college and always interested in ships and sailing, he applied for his commission in the Navy soon after our declaration of war and was promptly called to active duty. Because he had sailed the Atlantic coast a good deal, he was hopeful of being assigned to sea duty in this region. However, for many months he fought the "battle of Causeway Street" and was extremely restless in this position—always anxious to get out and do more of an active nature in the prosecution of the war. This idea so obsessed him that at one time he threatened to resign from the Naval Medical Corps and become a line officer, which he was fully qualified to do as a result of his R.O.T.C. training at Harvard

Finally, early in 1943, he was made the Medical Officer on one of the new 2100-ton Fletcher Class destroyers, and was delighted with this appointment. He was assigned to the ship before she was fully commissioned, and spent many days collecting the right equipment for his sick bay with all the same loving care with which he would have outfitted the cabin of his schooner in the days of peace, or his new office had he been going into practice.

His destroyer went on duty first in the Atlantic, escorting President Roosevelt to the Teheran Conference. He was then transferred to the Pacific. He participated in many engagements in the Pacific war, including the landings at Leyte and Luzon, the battles of the Philippine Sea and other actions in that neighborhood, and a foray into the South China Sea where he was on the edge of the great typhoon which destroyed other Naval units.

While on this duty he was extremely happy, and was well loved by all the men on his ship. They called him the "morale officer", and with his familiar accordion, which he played so well and to which he referred as his "belly Baldwin", he gave the officers and crew many an entertaining evening. He was active in many ways other than matters medical while on his ship, and one of the men who left the destroyer five days before she was lost says that "the doc" knew more about everything that went on that ship and how it worked than any one else on board.

His letters during this period were filled with vivid descriptions of the combat action he saw, but were also interspersed with many expressions of his desire to return to peacetime medicine and life with his wife and family. In addition to his wife he left his four children—Robert, Jr., 8, Sally, 6, Patricia, 2½, and Caroline 17 months.

The characteristic vim and vigor with which Bob did everything and the lighthearted mannerisms which were so much a part of his character will be sorely missed in the life of the Massachusetts General Hospital in the years of peace to come.

F. D. M.

One of Lieutenant Hurlbut's very last letters was sent to The News. It was quite the most humorous ever received by us. Excepts which are of general interest are given below.

A short time ago several back issues of The News arrived and were carefully read, chewed, and digested with extreme pleasure. The postprandial result of this literary feast was a sudden awakening to your request for news from the "silent ones". I believe I can easily qualify for the somewhat dubious honor of heading well up at the top of the list, [He did. *Editor*] if not already classified among the deaf mutes. To alleviate this situation, the ensuing synopsis is offered with certain not too pertinent observations. It could possibly be titled, like one of the Rollo books, "The adventures of Robin in the Navy" or more autobiographically "The memoirs of a tin can quack". But enough of the preface. Let us press on to the first chapter.

This can be fittingly called "The battle of Boston". My first two months of active duty were put in at Chelsea Naval Hospital. At that time the hospital seemed to be functioning as a virtual annex to M.G.H., for it seemed that nearly half the doctors emanated from the old *alma mater*. The duty was extremely pleasant, with ample opportunities to "wash the hands".

Such things do not last long, and early in December of '42 I found orders assigning me to the Naval Aviation Cadet Selection Board, First Naval District Headquarters, better known as the salty "U.S.S. Concrete". This was, to say the least, a little disconcerting. Of the two things I least desired, one was recruiting, the other aviation. I got both in one lump. After some five months of thumping chests and listening to hearts of young prospective birdmen, I had started a sufficient agitation which, coupled with a trip to the Mecca of Medicine in Washington, was productive of a somewhat saltier berth.

I had watched my present station grow, develop, and finally float at Boston Navy Yard, and had little difficulty in landing a job for fitting out, commissioning, and permanent duty. Specifically, it was (or she is) a 2100-ton Fletcher Class Destroyer. To my mind she's the best looking ship in the Navy, and subsequent experiences have shown she is one of the fightenest. All others contrary minded are herewith challenged. Prior to final assignment aboard, I spent a month at Harvard as doctor for the V-12 program. This really moved the war into my own back yard and gives the final touch to "The battle of Boston".

Life on the destroyer has been all that was hoped for and a lot more besides. Including the shake down cruise we spent nearly five months in the Atlantic, the high light being escorting the President to the Teheran conference. We then came through the canal early in January of '44, and have had the satisfaction of taking varying sized pieces out of the pants of Nippon ever since.

Medicine on a destroyer, although somewhat limited, is to say the least varied. One is a general practitioner in every sense of the word. Surgery, psychiatry, dermatology, public health —in fact, everything but gyn. and obs.—has appeared. The sick bay, although small, is very well equipped, and the "worm" has been extracted more than once. One of my proud possessions is a "Henry Marble irrigation setup" for handling hand injuries, and so far all tendon sutures — seven in number — have healed 100% uneventfully.

Dermatology is perhaps one of the largest problems. Spick itch, the Navy's name for athlete's foot, is one of the chief offenders. The remainder of the rashes run from heat rash in its most violent forms to bizarre eruptions which I defy some of the most eminent men in the field to diagnose.

It's quite surprising to see how many different things crop up over a period of time. Add to this the occasional opportunities to make sick call in several of the base hospitals when we hit port, and one keeps pretty well up to date. These bases are doing a grand job, and they're always glad to let you scrub in on a case.

Besides medical duties, my extra curricular activities are legion. A ship of this size has practically everything a battleship has except on a smaller scale and without formality. We have a perfectly grand skipper, and he has given me free rein. Much of my time is spent as an assistant navigator, and also standing deck watches at sea. The communication department also gets a fair share of attention, and during general quarters I'm usually armed with a sixteen millimeter movie camera to get official pictures of any action. It's certainly far from being a dull life.

Censorship regulations have been much stricter in the Pacific than in the European Theatre, but they've relaxed sufficiently now to allow us to emerge from our cloud of mystery and say briefly we've had a part in every campaign in the Central Pacific since Tarawa. Our latest adventures involved the invasions of Leyte and Luzon, as well as the Second Battle of the Philippine Sea.

It is impossible to express how proud one feels to have been a part of the General, especially way out here where you still find so many of her sons. Among those I've run into are Kit Carson and Roy Mabrey, both doing big things on orthopedics. I saw Irad Hardy several times at Pearl Harbor. We've covered the Marines on more than one invasion, and a harder fighting, harder hitting outfit never existed. I've run into Bob Schwab several times, as well as Commander Casten. Bill Ayers was my next door neighbor, so to speak, for many months. Pete Brooks popped up on the end of a dock for a short talk. These and many others have hove up over the horizon, and we've talked over lots of pleasant memories of the old M.G.H. It certainly will be great to get back.

This, I'm sure, gets me more than up to date, and I'd best bring the curtain down on the second chapter. However, before securing, I do want to express thanks for the Christmas card, and many thanks for THE NEWS. It's swell.

Good luck and best wishes to all.

Its choicest sections—uproarious accounts of activities on shipboard—are not included here. All of Lieutenant Hurlbut's friends, who knew and appreciated his unique type of wit, will enjoy reading the letter in its entirety. You will find it on a table in THE NEWS office.

A description of an incident, with Lieutenant Hurlbut acting as prestidigitator, is included in a letter from Lt. Terry E. Lilly, Jr., elsewhere in this issue.

At their meetings on April 20 and May 4, the Board of Trustees voted:

To appoint Dr. Marjorie F. Bauer as Resident in Dermatology, beginning July 1;

To appoint Dr. William H. Mathis, Jr. as Assistant Resident in Radiology, beginning July 1.

The General Executive Committee, at meetings held during April and on May 9, voted to appoint:

Dr. W. Jason Mixter as Acting Chief of the Neurosurgical Service;

Dr. Jung-Tien Chen as Clinical Fellow in Anesthesia;

Dr. William S. Clark as Clinical Fellow in Medicine;

Dr. Emil J. Ganem as Graduate Assistant in Urology, beginning July 1;

Dr Lloyd Mills, Jr. as Graduate Assistant in Medicine;

Dr. Leon Rosenfeld as Research Fellow in Surgery.

The Committee also voted:

To accept the resignation of Jane D. McCarrell, Ph.D., effective as of May 15.

S 1/c John D. Kenney, USCG, a past orderly at Baker Memorial, is back at his home, 65 Summer St., Stoneham, Mass. Kenney participated in most of the major invasions in the Southwest Pacific; and, upon his return to the States, was one of the service men selected for the color guard at the San Francisco conference.

Dr. Henry L. Heyl (*r. NS* 1940) carried the rank of Captain with the 6th General Hospital group overseas. Several months ago he was invalided home and was sent to Fitzsimons General Hospital in Denver. A note just received from him says:—

> I have been retired from the Army, am nearly back to normal health, and am planning to resume practice this summer. Meantime, I am living on and working our farm in Norwich, Vermont, which is my home address.

OFFICIAL NOTICE

The Blood Bank is prepared to supply concentrated red cells suspended in small amounts of physiological saline. It is recommended that such suspensions be used when the hemoglobin is approaching critically low levels but where bleeding has ceased and the blood volume may be presumed to have returned to normal. The use of whole blood in large amounts under such circumstances may precipitate circulatory failure and pulmonary edema. It is also thought that transfusions may tend to inhibit the bone marrow response following hemorrhage. If bleeding has stopped it may be wiser not to use transfusions unless the hemoglobin is critically low, but rather to wait for the normal marrow response. After the first week, hemoglobin should increase at the rate of 2.0 to 3.0 grams a week, especially if iron is given by mouth. Of course, in the case of patients suffering from shock, especially when accompanied by hemorrhage, multiple transfusions are indicated, in order to restore blood volume and increase the hemoglobin level.

Wyman Richardson, M.D.
Carroll C. Miller, M.D.
for the Blood Bank Committee

TALENCE CLUB

The twenty-sixth reunion of the Talence Club (formerly Enlisted Men's Club of Base Hospital No. 6) was held at the Parker House on April 20th, with thirty-one members in attendance at dinner.

It was noted that at least six members of the Club were participating in World War II, namely: Major Stephen S. Bean, Sgt. Michael J. Gaddis, Lt. Col. George W. Gardiner, Capt. William H. Lee, Capt. William E. O'Brien, and Pharmacist Mate 1st Class Howard E. Pooler.

The President spoke of the recent deaths of two members—Alfred Barnard and James Scott—and a moment of silence was observed in memory of departed members.

Stephen S. Brown, Superintendent of the Maine General Hospital at Portland, gave an interesting account of his activities since the last World War, and William J. McMorrow spoke of his recent trip to California and his meeting there with Frederick A. Bolsten, a member of the Club.

Officers elected for the ensuing year included:

President	Albert E. Hunter
Vice-President	Clement J. Beaudet
Secretary and Treasurer	Nathan E. Andrews
Executive Committee	Messrs. H. Averill, Bigelow, Blazo, Bonin, Carey, Chase, Chick, Clark, Everberg, Gardner, Kimball, Mahoney, McMorrow, MacNair, Mills, Putney, and Thoner

Comdr. Meinolph V. Kappius, MC (*a. obst.*) has been reported missing, following a routine flight near Leyte, late last January. Commander Kappius was Flight Surgeon on an aircraft carrier in the Pacific.

In our December issue we published the text of the citation which accompanied the Navy and Marine Corps Medal given to Lt. Irad B. Hardy, Jr., MC, USNR (*ES* 1939) for extraordinary heroism during the Marshall Islands Campaign. The information came to us by way of a Public Relations release.

A short time ago we chanced to hear that Lieutenant Hardy had received another decoration. In response to a note of inquiry, Mrs. Hardy sent us this copy of the second citation:—

> In the name of the President of the United States, the Commanding General, Fleet Marine Force, Pacific, takes pleasure in awarding the Bronze Star Medal to Lt. Irad B. Hardy . . .
>
> For meritorious achievement as medical officer of a Marine Artillery Battalion during operations against the enemy on Saipan and Tinian, Marianas Islands, from 15 June to 8 August 1944. By cool and capable direction, Lieutenant Hardy attended to the wounded in the face of heavy enemy fire and under difficult conditions. He continually administered aid to all nearby casualties as well as those of his own unit, and his prompt actions were undoubtedly responsible for the saving of many lives. His conduct throughout both operations was in keeping with the highest traditions of the United States Naval Service.
>
> H. M. Smith
> Lieutenant General
> U.S. Marine Corps

Mrs. Hardy adds this to her letter:—

> Irad sent me this temporary citation just before leaving for the Iwo Jima Campaign. He got through that safely and is now back at a rest camp. It was pretty grim, I guess; but, as usual, he writes little about what he's gone through. No explanation was ever given about this citation.
>
> Thought you might also like to know that in the fall, at their rest camp, he helped coach one of the Divisional football teams. He sent me a certificate stating they became the Divisional Champions of the Pacific. It was great relaxation for them all, and he loved it.
>
> I'm hoping he will get home after this Iwo Jima Campaign. He will have been out there 18 months in July, and has already been in four big campaigns which have been pretty messy.

Lt. Col. R. Earle Glendy writes from Belgium that Lt. Elizabeth Upton Wright (*MGH* 1927) will be home on leave. Colonel Glendy says Lieutenant Wright has been of invaluable help in his Medical Service. He tells us she has received the Purple Heart and Cluster. Her first injury occurred when a nearby hospital, in which she was a patient, was destroyed by a buzz-bomb. She was wounded again, six weeks later, when their own medical supply area was ruined.

Dr. Olof H. Pearson (*WM* 1941) paid us a call the other day. He had arrived home for a few days' visit. He is still Medical Director for the Africa-Orient Division of Pan-American Airways. He told us his outfit had last month completed its 5,000th crossing of the Atlantic, and said his work is similar to that of a Flight Surgeon. He said it is not difficult to keep the men well, as they are a pretty healthy group. Dr. Pearson has himself made ten crossings.

MASSACHUSETTS EYE & EAR INFIRMARY

At their meeting held on April 11, the Board of Managers appointed Mr. Francis S. Hill Assistant Director of Massachusetts Eye and Ear Infirmary. Mr. Hill reported for duty on May 1. He will take over much of the work which Dr. Faxon has been unable to handle because of pressure of work.

Dr. Faxon will still remain Director of the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary. The Infirmary will now have the same relationship, through its Assistant Director, as the M.G.H. units—Phillips House, Baker Memorial, the General Hospital, and the Out-Patient Department.

Mr. Hill will gradually assume, with Miss Robertson as his assistant, the details of operations. The general coördination of the activities of the two institutions should be achieved through the central directorship.

CHARLES TERRELL PORTER

Dr. Charles T. Porter, Surgeon in Oto-Laryngology at the Massachusetts Eye and Ear Infirmary, died suddenly on April 19. Dr. Porter served as House Officer on the Ophthalmic Service in 1914 and on the Aural Service in 1915. He was appointed Clinical Assistant in Oto-Laryngology in 1916, served through the various grades and was appointed Surgeon in Oto-Laryngology in 1935—a position which he held at the time of his death. He will be greatly missed by his associates and friends.

The Lucien Howe Laboratory of Ophthalmology

Believing that the participation of the Howe Laboratory in the war effort might be of general interest, the late Mr. Russell Fessenden requested that The News carry a resumé of the war activities in the Laboratory. The following brief description is taken largely from the Annual Report.

The Laboratory's chief activities have been twofold—the one under the auspices of the Navy, and the other under the auspices of the Office of Scientific Research and Development.

The projects for the Navy have been directed by Elek J. Ludvigh, Ph.D., assisted by Lt. Comdr. S. Forrest Martin (*Oph.* 1938) and Lt. S. Ransom Lynch, USNR, and have centered around optical problems arising directly out of Fleet operations. The newer techniques of naval warfare have naturally involved optical problems of a technical nature not heretofore encountered nor, in many cases, anticipated. Under the present arrangement the studies undertaken by the Howe Laboratory are referred directly from the Headquarters of the Commander-in-Chief of the United States Fleet. The expenses are entirely absorbed by the Navy through contracts between the Eye and Ear Infirmary and the Bureau of Aeronautics, the Bureau of Ships, and the Bureau of Ordnance.

The projects under the auspices of the Office of Scientific Research and Development have been conducted by David G. Cogan (*Oph.* 1935), V. Everett Kinsey, Ph.D., and W. Morton Grant, M.D., and have been concerned with the effects of war gases on the eyes. The Howe Laboratory group has been one of several in the country organized by the Committee on Medical Research of the National Research Council to study the war gases. An extensive investigation has been made of the biologic mechanism by which these agents exert their toxic effects, and the results of the investigation are submitted to the O.S.R.D. in the form of confidential reports. To date, the Howe Laboratory has prepared 45 such reports in the two and one half years of O.S.R.D. contract. It is hoped that after the war the material so presented may form the basis for a series of publications in the general literature.

All in all, the Laboratory has been dedicated almost completely to war problems since early in 1942. The lines of investigation have necessarily departed considerably from strictly ophthalmologic research and from the type of research to which the Laboratory is devoted in peacetime; but only in this way could the personnel, composed of relatively young and conscientious investigators, make its maximum contribution to the common good.

We have heard indirectly that:

Capt. John Thomas Schnebly, MC, AUS (*Oph.* 1938) has recently returned from Greenland and is now stationed at Hot Springs, Arkansas.

Garrett L. Sullivan, MC (*Oph.* 1938) has been promoted to the rank of Lieutenant Colonel. Congratulations!

Major George A. Filmer, MC (*Oph.* 1939) is Chief of the Department of Ophthalmology at the William Beaumont General Hospital, El Paso, Texas.

During the past few weeks we have had the pleasure of renewing acquaintance with several of our alumni.

Dr. Ralph J. Frackelton (*Oto-Lar.* 1933) was in Boston on a brief visit, but managed to come in to the Infirmary to observe some operating and to attend the Wednesday morning Clinical Conference. He is Chief of Staff of the Fairview Park Hospital, Cleveland, Ohio.

Capt. Edward F. Lawlor, MC, AUS (*Oto-Lar.* 1941) is back in the States after two years in China. He expects to report shortly to the Redistribution Center for further assignment.

Lt. Col. Clair Michael Kos, MC (*Oto-Lar.* 1941) came in the other day. He was looking "top notch", and we were all glad to see him. He gave us a brief resumé of his duties since he left here in 1941 to join the Army Medical Corps. Commissioned a First Lieutenant, he reported at the A.A.F. School of Aviation Medicine, Randolph Field, Texas, served through the various ranks, and was recently promoted to Lieutenant Colonel. He was here on official business and expected to return soon to Randolph Field. Incidentally, he has a most attractive daughter, age two years.

Lt. Betsy Bradford, ANC (11th Army Air Force) is home on a furlough after two years in the North Pacific Area as Flight Nurse with the Air Evacuation Service. She wears the Air Medal with Oak Leaf Cluster, the Presidential Citation, and 4 gold stripes. At the expiration of her furlough she will report to the Atlantic City Redistribution Center, and expects to be assigned to Army Hospital duty.

The News has received a letter from Lt. William F. Donoghue, Jr., MC, AUS (*Oto-Lar.* 1942 & *Oph.* 1944). It bears the heading Walter Reed General Hospital, Washington, D.C., "Dear friends of the Massachusetts Eye and Ear Infirmary".

After one year at Finney General Hospital in Thomasville, Georgia, I received orders to report here.

I spent a very happy year in the deep South, and although I was doing no ENT work—only straight eye—there was plenty to keep me busy. Two other Infirmary men were coming to Finney just as I felt—Capt. Robert E. McCall (*Oto-Lar.* 1941) and Capt. Earl C. Slaughter (*Oto-Lar.* 1940). I missed seeing both of them by a few days. [Lt.] Horst Heinicke [*Oto-Lar.* 1944] was the only Infirmary man I had met until coming here. He was assigned to the Medical Service at Finney General.

I have been one of the lucky ones as far as doing my own work is concerned. Here at Reed I am doing both Eye and ENT. Major [Mercer G.] Lynch [*Oto-Lar.* 1936], of the New Orleans Lynches and a contemporary of John Richardson, Burton Lovesey, Ned Holmes, and Werner Mueller, is, as you know, Chief of the ENT section here.

Kindest regards to all. May the time be brief between V-E and V-J Days.

An error was made in the copy sent to The News office for publication in the last issue. The guest speaker's name on the program of the New England Oto-Laryngological Society Meeting should have read Dr. Gordon Follette Harkness, of Davenport, Iowa.

All material of a military nature in this and every issue of The News is first cleared for publication by the local Public Relations Department of the Army or Navy.

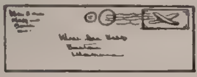
New addresses:—

Comdr. Charles H. Allman, MC (*Oto-Lar.* 1930), U.S. Naval Hospital, Chelsea, Mass.
Lt. William B. Ayers, MC, USNR (*W.S.* 1943), Portsmouth Navy Yard, Portsmouth, N.H.
Lt. Comdr. H. Irving Bixby, MC (*WS* 1924), U.S. Naval Hospital, Chelsea 50, Mass.
Lt. Addison G. Brenizer, Jr., MC, AUS (*WS* 1942), 348th Med. Surg. Dpt., Sec. 1 Madigan General Hospital, Madigan Hospital Center, Fort Lewis, Wash.
Lt. Comdr. Harold E. Dyer, DC (*a. dn. s.*), U.S. Naval Proving Ground, Dahlgren, Va.
Lt. Col. Kendall A. Elsom, MC (*res. fel. M*), ASF Regional Hospital, Fort Benning, Ga.
Major Henry H. Faxon, MC (*ES* 1927), Trudeau Sanitarium, Trudeau, N.Y.
Major Russell V. Fuldner, MC (*Or.* 1939), Convalescent Hospital, Surgical Section, Camp Edwards, Mass.
Lt. Robert S. Grier, MC (*EM* 1942), U.S. Coast Guard Academy, New London, Conn.
Capt. Joseph Lentine, MC, AUS (*Oto-Lar.* 1936), Army & Navy General Hospital, Hot Springs National Park, Hot Springs, Ark.

Capt. Robert E. McCall, Jr., MC, AUS (*Oto-Lar.* 1941), Finney General Hospital, Thomasville, Ga.
Major Milton L. Miller, MC, AAF (*EM* 1932), AAF Regional and Convalescent Hospital, AAFRS #4, SAAAB, Santa Ana, Cal.
Dr. R. Bretney Miller (*a. in M*), TWA—Hangar 2, National Airport, Washington 25, D.C.
Lt. Fathollah K. Mostofi, MC, AUS (*a. P*), Birmingham General Hospital, Van Nuys, Cal.
Lt. Comdr. Stanley A. Myers, MC (*Oto-Lar.* 1937), Naval Hospital, Springfield, Mass.
Capt. Frederic W. Rhinelander, II, MC, AUS (*ES* 1937 & *Or.* 1938), Hammond General Hospital, Modesto, Cal.
Major Marshall deG. Ruffin, MC, AAF (*P* 1939), AAF Regional and Convalescent Hospital, Coral Gables, Fla.
Major Ellsworth H. Trowbridge, Jr., MC (*r.p. N* 1940), NP Service, Regional Hospital, Camp Joseph T. Robinson, Ark.
Capt. James C. White, MC, USNR (*WS* 1925), U.S. Naval Hospital, St. Albans 12, N.Y.

Brief bits:—

Major H. Thomas Ballantine, Jr., MC (*WS* 1939) has received this promotion in rank.
Lt. Robert K. Brown, MC, AUS (*WS* 1939) has been transferred to the 403rd Med. Thor. Surg. Det., which has a San Francisco APO number.
Comdr. John H. Fay, MC (*EM* 1929) is now with U.S. Fleet Hospital #111, somewhere in the Pacific Area.
Lt. Comdr. Walter E. Garrey, MC (*ES* 1933) has been assigned to U.S. Navy Base Hospital #20, c/o Fleet Post Office, San Francisco.
Capt. John Homans, Jr., MC, AAF (*WM* 1942) has joined the staff of the 314th General Hospital. It has a San Francisco APO number.
Major Edwin R. Irgens, MC (*Oto-Lar.* 1936) is with the 369th Station Hospital, somewhere in the Southwest Pacific.
Lt. Comdr. G. Douglas Krumbaar, MC (*a. obst.*) is now on board ship in Pacific waters.
Major Alfred O. Ludwig, MC (*EM* 1932) has been promoted to this rank.
S/Sgt. Bruno Mickeleit, past employee in our Surgical Laboratory, has been sent to the 165th Med. Sv. Det., Museum and Medical Arts, which carries a San Francisco APO.
Lt. Edwin W. Peterson, MC, AUS (*M* 1944) also has a San Francisco APO number. He is with the 381st Station Hospital.
Lt. Col. Reno R. Porter, MC (*res. fel. M* 1939-41) is Chief of the Medical Service at La Garde General Hospital, New Orleans 12, La.
Lt. J. Robert Spencer, MC, USNR (*EM* 1943) is on a DD boat in the Pacific Theatre.
Lt. Col. Richard Warren, MC (*WS* 1936) has gone to the 158th General Hospital.
Major Howard G. Weiler, MC, AAF (*Or.* 1932) is with the 315th General Hospital, in the Pacific Area.
Lt. Comdr. John L. Wilson, MC (*ES* 1940) has evidently gone out into the Pacific again. His new address includes NATS Pac Unit and VRE-1.
Major J. Wallace Zeller, MC (*WM* 1935) has received this promotion in rank.



Lt. Comdr. Joseph A. Doherty, MC (*a. dn. s.*) is now stationed at U.S. Naval Training Station, Newport, R.I. A note giving change of address says:—

Am concluding three years of active duty, the greater part of which has been spent in a Naval Hospital in the Southwest Pacific. It is a grand feeling to again step upon American soil.

Major John R. Graham, MC (*WM* 1936) came to The News office not long ago. He gave us first hand reports and new addresses for many of our men, and had this to say about himself:—

I started out with the original 6th General group and was with them in Florida. I was then transferred to the 160th Station Hospital. We were in Northern Ireland for four months, and then went to England where we took care of Flying Fortress crews for nearly a year. The 160th covered more mileage on bicycles than any other hospital. From England I went to Wales to open a new hospital, and then joined the 302nd Station Hospital. Soon after my arrival there the Chief of the Medical Service left, and I was made Chief. Since I came home the 302nd has moved to France.

Major Zeller's wedding was a real MGH social event. There I met Major Ulfelder, who has been made Chief of the Surgical Service with the 55th General Hospital; Major Chafee, the sole remaining professional member of the 160th who came over with the 6th General group; Major Whiting, of the 103rd General, who left the 160th about a year ago to become the physician, under Army jurisdiction, for the American Embassy in London. Major Whiting later returned to the 160th, and then was taken out to become the Assistant Chief of Medicine in the 103rd, and later to run its Gastro-enterology Section.

I expect to return to the 302nd along the middle of May, but wish I might be sent west on my next assignment.

Major David W. Wallwork, MC, AAF (*ES* 1932) seems to be on his way—somewhere—after having shuttled from Morrison Field, to Carlisle, to Morrison, to Presque Isle, to Carlisle, to Presque Isle, to Memphis, to Homestead, Florida. A letter written early in May says:—

Finished six months as CO of the Station Hospital at Homestead and now for my overseas tour. I would appreciate having The News come along, even through this temporary APO, so that I may not miss any issue. The notes it contains are just like so much food. They nourish one's ego no end—to have been at one time or another associated with so distinguished a family.

Another to relinquish his title of "silent one" is Lt. Roger W. Morrison, MC, AUS (*ES* 1943). This letter was written to Dr. Faxon in April.

It has been a long time since I left the M.G.H. We traveled to the opposite corner of the country, and from there I started for the ETO. I now find myself in France, where our only moderately busy General Hospital is situated about three miles from the nearest town. We are in a beautiful spot. The hospital occupies what was a French hospital. There are several large cement buildings, rather modern in construction but in poor repair, since they have been used by Germans, British, and French before us. It was here that General Rommel was brought, following his "accident". The country, the large sun decks, and the remoteness make it an ideal location for Army purposes.

I've enjoyed thoroughly all my copies of The News. It's quite a good feeling to have that means of keeping in touch with associates, as well as with the institution one holds in the highest regard.

Capt. John G. Flynn, MC, AUS (*CM* 1943) is with the 110th General Hospital. In a letter to Dr. Allan M. Butler, Captain Flynn says that his pediatric training at M.G.H. is being utilized on a ward where Miss Esther M. Bean (*MGH* 1934), formerly head nurse on our Ward 10, is the head nurse. The letter closes with the following:—

As time passes, I feel quite sure that pediatrics is the only thing for me, and I long to hear on ward rounds the pleasant sound of crying babies rather than the all too frequent and unpleasant sound of "Attention" and "At ease".

This "first letter" from Major Thomas C. Worth, MC (*WM* 1938) gives the location of several members of our MGH family. It was written from the 110th General Hospital.

We have quite a large contingent of MGH graduates, all of whom enjoy reading the copy of The News which is sent to me.

The officers are: Capt. John G. Flynn and myself.

The nurses are: Esther M. Bean, '34; Mary C. Coolidge, '27; Mary M. DeWolfe, '43; Grace R.Forgey, '33.

We have a very fine hospital and have seen many interesting cases. We are situated in one of the most historic and beautiful sections of England, but we will be perfectly willing to go home when that time comes.

The nurses are very busy and seem to enjoy their work here. Captain Flynn, although a pediatrician at M.G.H., is now an orthopedic surgeon—and a good one. I am Chief of X-ray Service and have seen a large variety of interesting work.

In order to supply a connecting link with what we hope will come later from Capt. Robert E. Mason, MC, AUS (*M* 1943), this "first letter" from him is published. It was written in March, to Dr. Means, from the 56th General Hospital, somewhere in Belgium.

For several months we operated a 1,000-bed tent hospital in Normandy—until we had nice roads and walks built, and had put in the trimmings in our clinics, etc. Then we moved up here nearer the scene of action.

We are located in a fair-sized city, in permanent buildings which had been a cavalry school. But carpenters, paint, and a lot of elbow grease have turned it into a very comfortable and efficient plant which really isn't so bad to look at now.

For several months we were troubled by robot bombs which kept blowing out our windows and kept us dodging plaster and flying glass. Fortunately, we had no direct hits and very few minor casualties, and things are much quieter now in that line.

We opened for patients about two weeks after arriving here, and have been very busy ever since. I have spent the majority of my time between infectious diseases and general medical work. We have seen some very interesting cases. In England our chief infectious disease—aside from pneumonia, common colds, and venereal diseases—was meningitis and meningococcemia. Over here, however, we see almost no meningococcal infection, but are seeing quantities of diphtheria. There is an increasing amount of infectious or epidemic hepatitis, too. It is all fairly mild, but is certainly widespread.

Casualities are being handled wonderfully, as you must have heard. They are in excellent shape when they reach us, thanks to whole blood, plasma, penicillin, and early medical care. We are handling large numbers of prisoner patients, also. Many of them are lousy but we've seen no typhus, thank God. Occasionally we receive prisoners who had been in German hospitals when taken by our forces. Some of these are in frightful condition—weak, emaciated, exhausted, with infected wounds and inadequately treated diseases and huge filthy bedsores.

Dr. Dingle came through here recently and I talked with him for a short time. He is the only Boston man I've run across in some time.

I was *very* sorry to read of Dr. Breed's passing. That is a great loss to the M.G.H as well as to his friends. Such warm and glowing personalities are too few.

Lieutenant Robert S. Hurlbut—reported missing in action in the Pacific since March 26

Lt. Col. William F. Hoyt, MC (*WS* 1932) is now with a General Hospital, somewhere along the Ledo Road in India. In a letter to Miss Meehan he writes:—

I finally arrived here on April 22, after a very comfortable trip. I am Chief of the Surgical Service, and the CO is a friend of mine who was formerly the Executive Officer at Glennan General Hospital.

I have met many friends of [Major] Norman Freeman's [*r. s. WS* 1935] near here, and [Capt.] Bill Snyder [*WS* 1933] is not far away. I have not seen any other MGH men so far.

Lt. Joseph M. Stowell, MC, USNR (*gr. asst.* 1944) has sent us an outline of his military service, to date. He is stationed at a U.S. Naval Hospital in the Pacific Area.

I went on active duty at U.S. Naval Hospital, Newport, R.I., on July 31, 1944. I was there only eight days when orders came through for duty here. I arrived September 4, on the Orthopedic Service. In December I was ordered to a Naval Air Station. After working there on surgery and orthopedics for a little over three months, I was ordered back here for temporary duty on the Orthopedic Service. We have been very busy and have had many interesting cases. The patients, when they reach us here, are in fine general condition, as a rule. They certainly have had excellent care in the forward areas.

Herb Adams and Mabrey have been doing a grand job here. We all feel The News is a great institution.

Comdr. Robert S. Schwab, MC (*r. s. N* 1935) was transferred a few months ago from his LCT Flotilla to a Fleet Hospital. A letter to Dr. Viets says, in part:—

I still have seen *no* myasthenia gravis out here. This hospital has recently opened, and we are now getting our share of combat casualties. I am seeing all the peripheral nerve cases, as we have no neurosurgeon on our staff so far.

I have built myself a sailboat out of two airplane belly tanks, which I call *Alpha Wave* II and which sails very fast.

I was in the Leyte Landing, which is the only excitement so far.

Here is that letter from Lt. Terry E. Lilly, Jr., MC, USNR (*ES* 1943) which contains, among other interesting accounts, the story about Lieutenant Hurlbut. It was written to Dr Faxon, on April 15.

I have been the grateful recipient of The News, and consequently have not felt completely detached—remote as this anchorage may be. Incidentally, we call this spot in the Pacific "Nothing Atoll"!

A year ago I gave you a picture of our "floating clinic", at that time new and untried. Last month Admiral Nimitz announced the identity of the so-called "Pacific Secret Weapon", shedding the first light on the work of this vast and far-flung supply and repair activity. So I suppose I might now say something within censorship bounds myself.

The whole organization is a motile unit, having the facilities of a "Pearl Harbor Afloat". This force, by its front line services, backs the fleet right up to within snapping distance of the buck-toothed Japs. Needless to say, the enemy has suffered many radical extractions—so many, in fact, that it is rapidly becoming a question whether his remaining chewing surfaces meet minimal naval requirements.

It has been our privilege to perform all manner of service to the "work-horses" of the Navy—destroyers and escorts. Since young medical officers of lieutenant junior grade and those who were plucked from internships and residencies most likely serve their first sea duty on "tin cans", we have found with these men a pleasant fellowship as they come and go. This ship, like other tenders, is a point of medical consultation, diagnostic assistance, social and news exchange. These medical officers, with long periods on isolated duty, take their "postman's holiday hikes" here in our sick bay.

We have given seven major invasion forces their last polish, final send-off, and waited ready to "lick their wounds". The personnel wounded are seldom ours, for the excellent work of hospital ships and Transportation Air Group in caring for the wounded and removing them rapidly to base hospitals has bypassed us with most of the combat casualties. This makes our duty unique, in that we maintain a purely "peacetime practice" in combat areas. Elective surgery and disabling medical cases make up the bulk of our referred patients. Because of the large repair unit under our care, we are essentially "industrial surgeons", and are so labeled by our fighting friends.

In a full year out here I have seen but few from M.G.H. Bill Ayers and Bob Hurlbut have come and gone several times. On our first meeting we were tied up three abreast. Bill Watts (HMS '42) may always be counted upon for a few interesting cases, as well as full accounts of battle drama (amounting to our fighting the war second hand). I just missed Oglesby Paul on his return to the States. Also, I could not get shore leave to see Bill Baker after he found a Purple Heart.

I do have a story you may not have heard, however. Several months ago, following a tragic explosion from which there were many casualties, taxing the facilities of the base hospital which received these victims, Bob Hurlbut appeared on the scene as did many others of us available. While he was working with an operating team I saw him make a startling discovery in foreign bodies. A sailor had been struck while standing on the deck of his ship, some four hundred yards from the point of explosion aboard another ship. He did not enter the water, but fell to the deck under a shower of steel fragments and oil. In the operating room, while irrigating a deep shrapnel wound of the buttock, Hurlbut found there and removed unharmed a FISH, two and one half inches long—weight unknown!!!

Most all the letters in The News speak the familiar note of nostalgia we all carry in our hearts out here. For me, the M.G.H. holds a very dear particular place. It is not surprising, then, that I reckon time in terms of returning. I do hope there will be an opportunity at the General to recommence the preparation for a career in surgery. All of us whose training was interrupted by military service await news of M.G.H. postwar plans.

THE NEWS

MASSACHUSETTS GENERAL HOSPITAL 1811

No. 34 Boston, Mass. JULY 1945

ANESTHESIA SERVICE AFFAIRS

The program in the Anesthesia Department has undergone little change during the war years. The total number of anesthesias administered during 1944 was only slightly smaller than in 1941. The distribution of cases according to technique and method of anesthesia has undergone little change, although there has been a very small increase in the use of intravenous or spinal anesthesia. We have been interested in developing proficiency in the use of regional block techniques and the number of these administered by the Department has increased during the past year.

The personnel of the Department totals eighteen, of whom twelve are nurses and six are physicians. A regular service meeting is held once a month.

Since the absence with the Armed Forces of the Chief of Service, Dr. Beecher, the research program in the Department here has been reduced. We have been doing some work on the use of a continuous drop method for administration of spinal anesthesia, and Dr. Foldes is continuing his studies of lipid metabolism.

The course in anesthesia for nurse anesthetists has been rearranged and reorganized under the leadership of Miss Estelle LeMaitre to meet the requirements of the American Association of Nurse Anesthetists. We now admit and train four young women in this course each year.

During the past two years we have had on the House Staff three men from other countries: Dr. Oscar Barretto from Sao Paulo, Brazil, and Dr. Stanley Chiu and Dr. Jung-Tien Chen from China. They have made a very real contribution to the work of the Department.

Julia G. Arrowood, M.D.,
Acting Anesthetist

* * *

Lt. Col. A. William Reggio (*WS* 1914) has been put in charge of a newly created department of Physical Medicine, for the United States Public Health Service. He has been visiting Marine Hospitals all over the country, studying what already exists and what he thinks should be developed along this line. His recent visit here at the Hospital was to ask for help and guidance, as his responsibilities will necessitate a certain amount of reorganizing and revolutionizing physical therapy and occupational therapy in order to establish a Physical Medicine Service.

Dr. Reggio's present address is 2301 Connecticut Ave. N.W., Washington 8, D.C.

VOLUNTEER DAY

The third annual observance of Volunteer Day took place on the Bulfinch Lawn on Thursday afternoon, June 14th. Although the exercises this year were not as elaborate as those of 1944, the tribute to the foreign doctors and the famous Vincent Drill were new features and made the day an outstanding event. The gathering together of approximately 1500 people — including the entire hospital family, the Trustees, the Ladies' Visiting Committee, and invited guests — provided a pleasant and inspiring interlude for all.

We were exceedingly fortunate to have with us again this year the U.S. Port of Boston Coast Guard Band, under the able leadership of Warrant Officer Jacobson, and the stirring music started our party off in a very gay mood.

The Bulfinch balcony was festively decorated with a set of flags, loaned us by the Mayor's office, which represented the evolution of the American flag. There were 29 banners, showing all the changes from the time of the first Betsy Ross flag to that of the present day.

Dr. Faxon opened the program with a hearty welcome to all. He gave special thanks to the volunteer men cleaners and orderlies who have made such a tremendous contribution to the hospital during the past year. He then urged all volunteers to stick to their jobs until the hospital personnel can get back to its normal capacity, which will not be until some time after V-J Day.

Next, Dr. Means paid glowing tribute to the doctors from foreign countries who are working in the Massachusetts General, and who, by the mutual friendships established here, are increasing the understanding between the nations. Each doctor was escorted to the Bulfinch steps by a War Service worker, wearing her white uniform and red arm band, and carrying the flag of the country from which the doctor had come. There were more than a dozen countries represented. As each doctor's name was called, he received enthusiastic cheers.

Bishop Sherrill spoke briefly of the fine way in which all the hospital employees and volunteers are pulling together for a common cause — which spirit of coöperation is so obvious to every one. He touched upon his recent European trip, and ended on a note of inspiration.

Mayor Kerrigan said a few words about the important part M.G.H. plays in the affairs of the community.

The Vincent Drill was preceded by very interesting remarks from Dr. Meigs, who told a bit about the past and future of the Vincent Hospital and then introduced the Drill.

As the 16 girls, in their brilliant costumes, stepped out to the martial music of the Coast Guard Band, they were given a roaring welcome. Under the direction of Miss Dorothy Rackemann, the Drill went through its paces without an error. As they marched back into the Bulfinch Building, resounding applause which refused to recognize all attempts at interruption was silenced only when the Band finally went into our National Anthem.

Light refreshments were served to all— again by the War Service workers — and our third annual Volunteer Day came to a close.

As the various groups left the Lawn and returned to their regular duties, each individual experienced a feeling of renewed good fellowship and friendliness.

A volunteer

* * *

On May 22, the members of the Dental Staff of the Massachusetts General Hospital held their annual dinner meeting at the Harvard Club. Several members of the staffs of the Marine Hospital and the Cushing General Hospital were present. The speaker of the evening was Dr. Francis D. Moore, who gave an excellent paper on "Preoperative and postoperative care of surgical cases".

Dr. George Sweetnam presented the dental staff members with a piece of property in Maine, located in a region where good hunting and fishing abound. A corporation was formed and the members contributed a sum of money to build a cabin on the property where members may spend week-ends and vacations. A committee consisting of Drs. Sweetnam, Durant, and Carnes was appointed by Dr. Thoma to supervise the building of the cabin and to further assist the members in this enterprise.

A postgraduate course in orthopedics has been given at Boston University during the winter semester; the clinical teaching has been presented at this Hospital, one session weekly. This extramural course has been conducted bv Marie Scherer Andrews (*MGH* 1936), orthopedic-surgical supervisor, and Miss Margaret Arey (*MGH* 1931), orthopedic consultant in the State Health Department. There were fifty graduate nurses who were members of the class.

Dr. Lloyd Mills, Jr., who has been serving as Graduate Assistant in Medicine, has completed this service as of May 18. He has returned to his home, 720 So. Lucerne Blvd., Los Angeles, Cal.

On May 3rd, Captain Theodore P. Robie (*ES* 1943) was posthumously awarded a Silver Star, together with a citation which describes one incident, only, in a continuous record of outstanding heroism.

Mrs. Robie, to whom the presentation was made by Major General Sherman Miles of the First Service Command, has sent us an official copy of the citation. It will occupy forever an honored place in the military files of the sons and daughters of Massachusetts General Hospital.

HQ 35th Infantry Division
11 October 1944
Silver Star Posthumous Award

1 Silver Star . . . is awarded posthumously, to the following officer:

Captain Theodore P. Robie 0475651, Medical Corps, United States Army, for gallantry in action in the —— River section near ——, France, 12 September 1944. When the second and the third battalions, —— Infantry had established a bridgehead on the east bank of the —— River, numerous casualties lay exposed to continuing intense fire of a determined enemy advantageously situated on the ground above the east bank. Captain Robie, Medical Officer attached to the second battalion, on duty at the battalion aid station on the west bank of the river, proceeded across the river with a four-man litter squad in order to evacuate the wounded. He made many trips across to the east bank while the river was raked by enemy fire, wading in deep water and holding the stretchers above his head in order to keep dry the stretcher borne wounded. Captain Robie was killed in a later action. His gallantry in action, his personal courage and the disregard for safety in his zealous devotion to duty, reflect credit upon his character as an officer and upon the Medical Corps of the Army. . . .

By command of Major General Baade:
Maddrey A. Solomon
Colonel, GSC
Chief of Staff

By command of General MacArthur, the Legion of Merit has been awarded Major George A. Marks, MC (*ES* 1931). An unofficial copy of the citation reads:—

For exceptionally meritorious conduct in the performance of outstanding services in the Southwest Pacific Area from 11 July 1942 to 13 June 1944. Major Marks organized, trained, and commanded a portable surgical hospital which was attached to an infantry regiment during the Papuan Campaign. Under his exceptional leadership, the unit moved in close proximity to front line troops and achieved a remarkable record in the care of the sick and wounded. It was essentially as a result of his professional ability and guidance that many lives were saved under the most difficult conditions of jungle warfare. Later, as a surgical consultant, he visited hospitals in advanced areas as an instructor and adviser. His knowledge and advice proved invaluable, both in the treatment of casualties and in assisting and planning of additional facilities. By his outstanding ability in the field of surgery, Major Marks made a signal contribution to medical treatment in the Southwest Pacific Area.

The following news release has arrived from the Public Relations Office, Lake Charles Army Air Field, Louisiana.

The Legion of Merit was awarded Capt. Lemuel Bowden [*ES* 1940] at a formal military review at the Lake Charles Army Air Field where he is stationed as Medical Officer. . . .

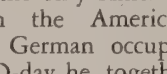
Captain Bowden served as platoon surgeon of the 685th Signal Aircraft Warning Station at Fogo Island, Newfoundland, from May 1943 to December 1944. He was cited for performing surgical operations under extremely adverse conditions with little equipment and at places far removed from his base.

Dr. Sumner W. Jackson (*ES* 1916) was among the 1300 prisoners of the Germans reported dead when a German warship was sunk off Hamburg on May 3rd, after orders for the ship to halt had been ignored.

Dr. Jackson went overseas with the Harvard Unit in World War I, and had made his home in Paris since that time. He served for many years on the staff of the American Hospital in Paris, and had been on the faculty of the University of Paris.

According to newspaper reports, Dr. Jackson was the only American doctor to remain with the American Hospital through the German occupation. Two days before D-day he, together with Mrs. Jackson and his 18-year-old son Peter, was taken into custody by the Vichy police on orders from German authorities. The family was taken to Germany, where Mrs. Jackson was confined in one camp and Dr. Jackson and Peter in another. Mrs. Jackson was later liberated and managed to make her way to Sweden, where she is reported ill in a Stockholm hospital. Peter has written from Germany that he believes his mother is dead. Peter searched for his father during the ten minutes the ship stayed afloat and then jumped into the ocean. He was picked up by a German rescue boat.

A note from Lt. Comdr. George E. Gardner, MC (*CM* 1938) gives the added information that Dr. Jackson was placed in the concentration camp because of his aid to downed American flyers.



At their meetings on May 18 and June 1, the Board of Trustees voted:

To return Dr. George W. Holmes, at his request, to the Board of Consultation;

To promote Dr. Emery O. Lewis to the position of Assistant Radiologist, as of July 1;

To appoint Dr. Laurence L. Robbins as Acting Chief of the Radiological Department, pending the return of Dr. Hampton;

To appoint Dr. Marguerite Schwyzer as Assistant Resident Physician, beginning July 15.

* * *

A recent letter from Lt. Joseph A. Holmes, MC, USNR (*P* 1936 & *ES* 1938) announces a transfer to California and gives an outline of his present duties.

I left the Naval Training School at Wahpeton, N. Dak., when it closed at the end of October, and, with orders to the Fleet Marine Force at Camp Pendleton, Oceanside, Cal., came to the east coast for a two-day visit with my family and then drove across the country to San Diego and to Camp Pendleton.

Duty with the Marine Corps is a bit rugged, as many of the doctors know, and Camp Pendleton is no exception.

Lt. William J. Gorrell is back.

A brief statement that he was a past orderly in Baker Memorial Operating Room, that he was serving overseas with the Canadian Army and that he had been seriously wounded, was made in our May issue. But now Lieutenant Gorrell is back. He is back at his old job in Baker Operating Room.

Mr. MacNair brought him over to our office the other day. While he did not offer much in the way of unsolicited information, he did answer enough of our questions for us to get an outline of his military record. He volunteered with the Canadian Army in May 1942. He was in England until December 1944. He participated in the Belgium and Holland Campaigns and moved on into Germany at the start of the Rhine drive. It was in February, in the Hochwald Forest, that shrapnel got him — just above the left wrist.

"What happened then?"

"One of the boys in my platoon tied my arm up for me and I went back to the Regimental Aid Post."

"How did you get there?"

"I walked." (!)

From there he was shifted to the Field Dressing Station, given penicillin, and sent back to the Casualty Clearing Station for surgery. Then he was flown to England, where the work was finished in a Canadian Hospital. He returned to Canada on a Hospital Ship in May, and is spending his time while on leave working at his old job. Within a few days he will go up to Canada for his discharge and for further medical or surgical attention, after which he will return to Baker to stay.

He talked almost affectionately about the enlisted men in his company, and spoke very highly of the Hollanders. He quoted this sentence from a letter from a Dutch family with whom he had been billeted: "We only gave you a good home, but you helped give us a free Holland."

Lieutenant Gorrell is thoroughly sincere when he says he considers himself lucky. We couldn't go all the way with him on that, until some hours after his visit. Then, when we reviewed the conference in retrospect — remembered the quick and sure footsteps, the calm expression and the ready smile — we began to be convinced that he probably was lucky, after all. Not one of the luckie*st*. Just lucky.

Anyway — Lt. William J. Gorrell is back.

From time to time letters written before V-E Day will appear in THE NEWS. Even though they may sometimes give the effect of looking back over a road already traversed, they will be chosen for publication because they present subjects just as conducive to reflection now as when they were written. Also, many of the letters give connecting links in the military records of the writers.

MASSACHUSETTS EYE & EAR INFIRMARY

Major Trygve Gundersen, MC (*Oph.* 1930) made a surprise visit recently. He is back home on a 21-day leave, after 27 months overseas with the 6th General Hospital Unit. It was good to see him looking so well. He has been assigned to temporary duty in the Surgeon General's Office at Washington, and is to work with Col. Derrick T. Vail, MC (*Oph.* 1924). After that assignment is over it is any one's guess as to the next move. We, at the Infirmary, hope he will be coming back to us.

Dr. Gundersen said that Capt. John R. Frazee, MC, AUS (*Oto-Lar.* 1934) is still working with the advance units of the 5th Army. He also told us that Capt. Sumner D. Liebman, MC, AUS (*Oph.* 1943) was in England, stationed at one of the Evacuation Hospitals.

Via the "grapevine" we understand that Comdr. James I. Farrell, MC (*Oph.* 1932) has been assigned to the *U.S.S. Samaritan.*

Surgeon Lt. Comdr. Roland J. Viger, MC, RCN (*Oph.* 1937) came in to see us recently. He is on tour for the Royal Canadian Navy and will visit the larger Eye Centers throughout the United States. Previous to this assignment he was Ophthalmologist for the Newfoundland Command for the Army, Navy, and Air Forces.

Lt. Col. Garrett L. Sullivan, MC (*Oph.* 1938) is still in England and the latest word is that he has no idea when he will be homeward bound. We hope it will be in the very near future.

The following may be of interest to members of the Oto-Laryngological Staff:—

The regular Spring Meeting of the New England Oto-Laryngological Society was held at the Massachusetts Eye and Ear Infirmary on May 23.

The Clinical Meeting consisted of presentation of cases from the Services of Drs. Moses H. Lurie and Robert L Goodale. Dr. LeRoy A. Schall presided.

The afternoon meeting was opened promptly at 2 o'clock, with Dr. Philip E. Meltzer presiding. The following subjects were presented:

1. Recurrent severe hemorrhage from the nose and pharynx. Dr. Francis B. Sargent, Providence, R.I.
2. The use of tantalum in frontal sinus surgery. Dr. Robert L. Goodale, Boston.
3. Bilateral optic neuritis as a complication of bilateral suppurative otitis media. Dr. Raymond H. Marcotte, Nashua, N.H.
4. Penicillin in streptococcic infections. Comdr. Charles H. Allman, Boston.
5. Petrositis — A case history. Dr. Paul B. MacCready, New Haven, Conn.
6. Acute frontal sinusitis with extensive edema. Lt. Comdr. Frederick J. Pollock, Portsmouth, N.H.

The guest speaker was Major Edward H. Truex, Jr., MC, Chief of Rehabilitation, Deshon General Hospital, Butler, Penn. His subject was "Chronic deafness — Its treatment in the U.S. Army". Major Truex handled this subject very well and it proved of marked interest to the members present. Dr. Gordon Berry of Worcester, Massachusetts, headed a lively discussion on the subject.

There are many who will remember Lt. Lennie Carlson, ANC, who was Dr. Dunphy's office nurse for many years. The following is an excerpt from a letter recently received by one of the members of our Staff.

> At Sea, 20 May. Having my Spring Cruise —and quite a one at that! It is better than I expected, which is saying much. Quarters are naturally rather cramped, but we manage to stay out of each other's hair. I am now a full-fledged shellback and my forehead still bears the mark of the initiation. I scrubbed until the skin broke down, so decided to leave a little red paint. My color otherwise is mahogany.

All material of a military nature in this and every issue of THE NEWS is first cleared for publication by the local Public Relations Department of the Army or Navy.

New addresses:—

Lt. George H. Carter, MC, AUS (*M* 1943), Newton D. Baker General Hospital, Martinsburg, W. Va.

Lt. James D. Clement, Jr., MC, AUS (*WS* 1944), Carlisle Barracks, Carlisle, Penn.

Col. Neil L. Crone, MC (*WM* 1933), Headquarters First Army, Fort Jackson, S.C.

Capt. Robert H. Talkov, MC, AUS (*res. fel. M* 1942), Chief, Section D, Rheumatic Disease Service, Ashburn General Hospital, McKinney, Tex.

Col. Derrick T. Vail, Jr., MC (*Oph.* 1924), Surgeon General's Office, 1818 H St. N.W., Washington 25, D. C.

Capt. John P. Wood, MC, USN (*gr. asst. R* 1938-39), Naval Medical Supply Depot, Oakland 4, Cal.

Brief bits:—

Capt. Samuel B. Beaser, MC, AUS (*gr. asst. M* 1942), is with the 161st General Hospital. He has a Miami APO number.

Lt. Addison G. Brenizer, Jr., MC, AUS (*WS* 1942), whom we reported last month as being with the 348th Med. Surg. group at Fort Lewis, now has a San Francisco APO. He is still with the 348th.

Lt. Robert E. Carroll, MC, AUS (*ES* 1943) has been transferred to the 368th Med. Orthopedic Det., probably in the Pacific Area.

Major C. Fred Goeringer, MC (*Or.* 1940), after nearly two years with the 71st Evacuation Hospital, is now with the 118th General —still in the Pacific Theatre.

Dwight F. Hennessey, AMM 2/c, USNR, past MGH employee, has CASU 27 as a part of his new address overseas.

Major Arthur A. Holbrook, MC (*CM* 1933 & *EM* 1934) has returned home after more than three years of active military service—including the invasion of the Philippines. His present address is 711 Goldsmith Bldg., Milwaukee, Wis.

Capt. Robert S. Hormell, MC, AUS (*Or.* 1942) has received this promotion. He is still with the 27th Station Hospital, somewhere in the Pacific.

Lt. Ralph H. Luikart, Jr., MC, AUS (*M* 1944) has evidently left for overseas. Before we had time to publish his first letter, written from Camp Miles Standish, Mass., a new address, c/o Postmaster, New York, N.Y., has arrived.

Major Foster L. Matchett, MC (*Or.* 1934) is still overseas with the 29th General Hospital, somewhere in the Pacific Area.

Capt. Duane H. Mitchel, MC, AUS (*M* 1943) has been promoted to this rank. He, too, is with the 29th General.

Lt. John W. Norcross, MC, USNR (*EM* 1937) has been assigned to a Military Government Dispensary. He has a San Francisco APO number.

Lt. Col. Frederick K. Poulin, DC (*Dn.* 1942), who has recently received this promotion, is still attached to Headquarters of the 12th Air Force Medical Section.

Lt. Comdr. Lyman G. Richards, MC (*Oto-Lar.* 1924) has joined a Naval Hospital out in the Pacific Theatre.

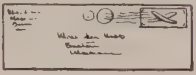
Major William B. Scoville, MC (*r. NS* 1938) has risen to this rank.

Lt. Cornelius J. Shea, MC, USNR (*ES* 1943) is aboard ship in Pacific waters.

Lt. Col. John C. Snyder, MC (*WM* 1939) has gone overseas. We await his new address.

Lt. Benjamin V. White, MC, USNR (*res. fel.* Psychi. 1937-38) has been assigned to a hospital ship, c/o Fleet Post Office, New York, N.Y.

Lt. Comdr. George P. Whitelaw, MC (*WS* 1937), still aboard the same ship, has changed oceans.



Col. Edwin F. Cave, MC (*ES* 1926 & *Or.* 1928) has returned from overseas where he has been on active duty with the 105th General Hospital for many months. We are promised an interview with Colonel Cave soon, and will tell you later what he had to say. We can report now, however, that he appeared at the Hospital the other day with a fine atabrin tan!

The May issue of *The Post Record,* which carries the subtitle "The N.E.I.'s Leading American Newspaper", contains an interesting article by Colonel Cave. It is transcribed here for the benefit of those who do not see *The Post Record.*

COL. CAVE VISITS HOSPITALS IN P.I.

The battle for the Philippines has been won and American soldiers now occupy essentially every strategic point of the entire island group. This success, although accomplished quickly was not without cost in American lives and in destruction of cities, particularly Manila. As the conquests of the islands proceeded from early landings in Leyte into the other islands, the necessity of establishing hospitals became immediate. It was my recent good fortune to visit some of these installations. Because ours is a General Hospital, it is natural that we are more interested in the establishment of similar units in the Philippine area. We already know the difficulty encountered in unloading our supplies and establishing our hospital at this Base but our troubles here were mild as compared to those encountered by the several General Hospitals established in Leyte. They were forced to unload their ships long distances from their hospital sites during complete blackouts and very often under enemy bombing and strafing. The hospital sites are largely on lowlands, frequently in coconut groves and drainage of the land was a tremendous problem. Mud, rain and Japanese opposition made difficult the setting up of installations so that it was several weeks before these General Hospitals were able to function completely as such. In fact, during the first few weeks, after considerable delay in establishing their units, they acted simply as evacuation hospitals. Only recently have they been able to "board" patients and function as General Hospitals should, for definitive treatment. At the present time, however, General Hospitals in that area are well established and working efficiently, caring for a large number of patients. All of them are under canvas with raised wooden floors, the tents being supported by bamboo poles. Water is plentiful but the contaminated streams offer a serious menace to the health of our troops.

In Luzon, where General Hospitals have been more recently established, they are in previously-built installations such as Santo Tomas University and the Quezon Tuberculosis Institute. These hospitals were set up with much less difficulty than the hospitals on Leyte because they were able to use fixed buildings. As a matter of fact, however, the tent hospital or prefabricated insulated hospital, is far more desirable in the tropics because either can be organized more efficiently and can be kept clean with less difficulty. The hospitals in the Philippines are carrying a heavy burden, not only in caring for sick and wounded American soldiers but for the Philippine soldiers and civilians as well. There is no question but that General Hospitals there will become more frequent in number and more efficiently organized, so that in the very near future essentially all of our hospitalization will be concentrated in this area for air and ship evacuation and for definitive treatment.

A new address for Col. Alexander Marble, MC (*r.p. WM* 1930) is: Headquarters, Sixth Service Command, Civic Opera Bldg., 20 North Wacker Drive, Chicago 6, Ill. He writes briefly:—

My new assignment is to be that of Medical Consultant for the Sixth Service Command. I am completing over 26 months' service at Harmon General Hospital.

Not since September 1943 have we had any direct word from Capt. Philip L. Pillsbury, MC, AUS (*WM* 1942). A note, giving his new address as Dugway Proving Ground, Tooele, Utah, contains this brief addition:—

I was moved to Dugway two months ago to take charge of a small medical research laboratory attached to this proving ground. The desert is not an unwelcome change after having spent nearly a year in the swamp land of Florida.

Major R. Nelson Hatt, MC (*Or.* 1919) has been back in the States for almost a year. He is Chief of the Orthopedic Service at Thomas M. England General Hospital, Atlantic City, New Jersey. A letter written in April says:—

Certainly my appreciation of THE NEWS should have prompted me to keep you informed of my change of address. Perhaps my failure to do so is based somewhat upon the psychology that allows one to neglect old and dear friends, knowing full well they will overlook and forgive such omissions. While overseas, THE NEWS reached me quite regularly and was always interesting and inspirational.

Since coming here, my problems of salvage have kept me extremely busy and happy.

Warm regards to all old friends.

Two years is a long time to wait for news of Lt. Col. William A. Reilly, MC (*CM* 1928). The last we knew, he was Chief of Medical Service with the 59th Evacuation Hospital in Africa. This note, giving his address as 1008 Lakeview Way, Redwood City, California, says:—

Injuries suffered last fall in E. France sent me back to the States where I am convalescing. Driving blackout one night, my driver was blinded by oncoming truck lights, and we bashed into a large French truck which had broken down (as they often did) and was left in mid-road (as they often were). A compound fracture of the left tibia has just healed and a fractured left femur is now all right. My knee is loosening up, and I shall be well by August, I hope. Col. [Aubrey O.] Hampton [*c.R*] was one who consulted on me.

Best regards to all, and to the 6th G.H. in particular.

Dr. Castleman has passed on this letter from Lt. Norman Zamcheck, MC, AUS (*P* 1943) — of especial interest to pathologists.

When I left the States with the —th General Hospital, I was working as a surgical ward officer. At that time we had no Chief of Laboratories and were wondering when one would be acquired. As soon as we came overseas a laboratory man, who had been in England almost three years, was assigned the job, and shortly thereafter Colonel Edington called me in and announced that an "opportunity" was open for me as Chief of Laboratories at a Station Hospital. I was sorry to leave the —th, as I liked my job there and had made many friends; but "opportunities" in the Army are not easily turned down. I didn't know how decent a setup was in store for me here.

I was assigned to a 750-bed hospital which has been overseas for almost three years. It is one of the most comfortable and most attractive I have seen in England. It was a civilian hospital, built ten or more years ago, and is located only a short distance from one of England's largest cities. It is built on the European Plan like the Brigham, and the laboratories occupy one whole pavilion.

The laboratory setup is unusually good. We have five or six rooms which are used for bacteriology, hematology, chemistry, urinalysis, serology, etc., and one for darkfields (one of the most flourishing of our departments). The P-M room is done in white tile and completely equipped with modern British instruments. The rest of the laboratory is stocked with fairly good British equipment, supplemented by American. The real asset of the laboratory, however, is the technical ability of the men, who have been together for a great many months and comprise a very competent group. Several of them are college graduates, and my non-com-in-charge had two years of medical school before wandering feet led him into the Army. All of the men know routine and emergency procedures, and each has been trained in one or more special departments. In addition, I inherited two English civilians. One is a highly skilled technician who has had 38 years' experience at the University of Manchester and Manchester Royal Infirmary, and served as pathologist and bacteriologist to this hospital before the Army took over. In the short time I have been here he has taught me a great deal. The second is an English girl who types, takes dictation, and functions generally as a secretary.

It took a while at first for me to get rolling smoothly with the men, all of whom had been overseas for two to three years. At present, however, we work together very nicely. We had many hot arguments over techniques and procedures, for I soon found my own civilian standards clashing with existing Army routine; but we pulled out books, argued a bit more, and eventually effected a compromise. At first they all taught me a great deal more than I taught them, but now, after three months, I am beginning to be of some use to the laboratory. We have an adequate library with many British books and the standard American texts.

Most of our work is routine hematology, urinalysis, chemistry, etc. Pathology here, as in most Army hospitals, plays a relatively minor role. We cut our own sections, but except for an occasional tumor, interesting specimens are infrequent. For the more difficult ones I have recourse to the First General Medical Laboratory (the chief pathologist of which is Lt. Col. Murray Angevine, a friend of Dr. Mallory), pathologists of General Hospitals within the surrounding 50 miles or so, and the pathology department of Manchester University. The latter has been one of the most pleasant contacts I have made. Professor Stephen Baker and Dr. William Susman have been very hospitable and helpful to me, and I have consulted them frequently. Professor Baker, whose special interest is bone pathology, straightened me out on one of our bone specimens recently by showing me how to differentiate between lamellar and non-lamellar bone by using the bone section as a polarizer.

Most of my time is devoted to other aspects of the laboratory work. For example, during my first week here I saw more primary luetic lesions than I thought I would ever see in civilian life. For a while we had many malaria patients and I had my fill of positive smears. Practically, I find that bacteriology presents most of the interesting problems. We had an interesting time trying to isolate Leptospira from a case of Weil's disease recently. By virtue of being laboratory officer I find myself the accepted authority on water potability for surrounding troops. Although this seemed dull at first, I soon learned that the subject is complex as well as interesting in its own right, and I have had to pick up a working knowledge of the matter. There are innumerable other aspects to this job which keep me on my toes most of the time. As laboratory data from the whole hospital pass before me I keep a clinical eye open for the interesting medical and surgical cases. My clinical awareness is further stimulated one or two days a week when I serve as Medical Officer of the Day and see all patients admitted to the hospital.

I have gone into some detail on this because I thought you might be interested in the type of work the boys who take a pathology internship can look forward to if they get a laboratory job in the Army. Men with pathology training are infrequent, and some hospitals I have seen have no one with any pathology background. Laboratory setups are fairly good in all the American hospitals I have seen, and I cannot help but feel enthusiastic about this job.

All is not work here. I have seen something of Wales, Scotland, and much of England, and have made many friends.

I hope everything in the laboratory is running smoothly. It's a real pleasure to read the case reports in the *Journal* and recall the worth-while days I spent there.

We have Mrs. Donald N. Sweeny, Jr. to thank for information about four MGH-ers, two items of which might *never* have reached us had it been left to the men concerned. She writes:—

We hear frequently from [Capt.] Tom Gephart [*WS* 1941] from the Pacific Area. Evidently he has not yet told you he was awarded the Silver Star Medal last winter, [He hasn't. First we've heard of it. *Editor*] and I'm sure Boston should know about it. I don't know any of the details of the award, but perhaps he could be persuaded to tell them. [We're at work on it. *Editor*]

[Lt.] Nate Munro [*ES* 1942] has been at sea only a few weeks, on the destroyer *U.S.S. Burns.*

[Capt.] Dick Goldcamp [*r. Oto-Lar.* 1943] was awarded the Bronze Star Medal in Europe this winter. [Something else we're working on. *Editor*]

Don [*WS* 1941] has finally become Captain Sweeny. He remains for the present with the 177th General Hospital in France. It can be told now that he is in Le Mans.

Major James S. Mansfield, MC, AUS (*gr. asst.* M 1942-43) sent us a "first letter", written from a General Hospital.

I appreciate very much receiving The News regularly and getting first-hand accounts of the doings of so many friends.

I have been with this Hospital since its formation, and began my active service by going through the mill at Carlisle. After training at Fort Devens and Camp Edwards, our unit went to England in December 1943. We opened a new General Hospital plant in January, on a beautiful estate a few miles from one of the historic cathedral cities. There was considerable difficulty at first in getting adequately supplied and equipped, but we gradually became a pretty well set up outfit. Our nurses lived in the ancient stone mansion known as "—— Hall"; and the Officers' Club was elegantly installed on its ground floor, with lofty rooms and huge open fire places.

This is the first published letter from Capt. Russel L. Baker, MC, AUS (*r.p. N* 1943), who is with the General Hospital Unit, sponsored by the Boston City Hospital.

We have been in England ever since leaving the U.S. The interesting letters you have already received have told you much about England. We, too, have done as much sight-seeing as time and transport will allow. When the latter fails there is the bicycle, although I must confess it is quite a job to get Larry Ellis (Lt. Col., Chief of Medical Service [*EM* 1928]) to keep his tires pumped up.

Medically we have done just about what every one else has done here. We were very active soon after D-day and handled several thousand casualties of a mixed variety and severity. At the same time we supported the air transport force. The first French Division to enter Paris was served by us here in England. General Le Clerc was impressed by Boston medical service. By the time casualties reach us they have been wounded from one to five or six days, and it is surprising how few of these do not survive. A fatality is a rare thing this far back. One cannot give too much credit to the advance units, battalion surgeons, and surgical teams, as well as to the evacuation chain. Though every patient had received penicillin and sulfadiazine, it was rare for one to miss a dose on the way back.

I enjoy The News very much, as do the others here. You are doing a fine job in keeping us posted on activities of our friends. I am sorry I have no novel bits of interest.

In this letter to Dr. Faxon, Lt. Roger W. Morrison, MC, AUS (*ES* 1943) takes us on a visit to the Pasteur Institute, and reports on certain medical procedures in present day France.

I have been able to visit Paris for a short period. The high spot of the trip was a tour of the Institut de Pasteur — which, incidentally, is quite a busy place. They are preparing all the vaccines for the French Army —the common one being pentavalent, *i. e.*, one ampule containing a prophylactic dose for typhoid, paratyphoid A & B, diphtheria, and tetanus. Also, I saw the first cultures of penicillin I have ever seen — including a culture of the original Fleming strain. I was told that the Germans came, demanding cultures, but were refused. However, in a few months they returned, stating that they knew the Institut had cultures of the mold. Under additional pressure, they were given several strains.

They are also doing work on diphtheria and typhus fever. B.C.G. is very popular with them, and they are very interested to hear that we do not use it. To supplement their laboratory work they have an immaculate 120-bed hospital for communicable disease. All patients are treated free of charge.

Of great interest are the apartments of M. Pasteur — furnished as they were when he passed on. The museum contains the original apparatus used in his many classic works, all arranged by him and labelled with cards inscribed in his own hand. Pasteur's remains rest in a very beautiful tomb, the walls of which are of exquisite mosaic. Here the artist has portrayed pictorially the many contributions M. Pasteur made to the welfare of mankind. Not far distant rest his associates Roux and Metchnikov.

I was able to spend a very delightful afternoon in this environment, and everybody was most hospitable and desirous of answering all my queries. In addition, they were very interested in hearing about our experiences, especially during the years they have been isolated from us.

This "first letter" from Capt. Don W. Fawcett, MC, AUS (*WS* 1943) was well worth waiting for.

I came overseas early last summer. That seems a very long time ago, but I realize it actually is not when compared with the foreign service of many other MGH-ers whose letters in The News I have read with much interest.

I have been a Battalion Surgeon with the 126th AAA Gun Bn., which was engaged last August and September in the defense of London against flying bombs. Our batteries were situated on the "White Cliffs of Dover", where we were occasionally subjected to long-range shelling from German batteries on the French coast. We moved to Normandy in November, and then to Belgium, where we became part of the antiaircraft defenses of the number one supply port of Antwerp which was under bombardment from flying bombs and rocket bombs for 154 days. In the defenses of London and Antwerp our battalion destroyed over 250 flying bombs, and were credited with the destruction of several enemy aircraft during the "battle of the bulge".

The assignment has been interesting even though our casualties were very light, and much of the time my medical duties consisted of routine sick call and sanitary inspections. The four gun batteries are now widely separated, and traveling from one to another takes me through some very beautiful parts of Germany.

I suppose I was prejudiced by the high standards taught at the M.G.H., but what I have seen of medicine and surgery as practised here on the continent has been a great disappointment. I will be very glad when I can return to Boston and the M.G.H. and begin to learn again.

It is always good to hear from Capt. Lloyd S. Saltus, MC, AUS (*CM* 1938). Surely every one remembers his "We didn't get into the lion's mouth like Lamar Soutter, but felt a few drops of saliva", in our May issue. A letter, from Naumburg, Germany, concludes with:—

In April I had the pleasure of working with Thorolf Gundersen [*r.p. N* 1941], at the 4th Convalescent Hospital. One day a familiar face appeared — Jack Snyder [*WM* 1939], now Lt. Col., in search of typhus victims. We dug up one suspect who was a dud but stimulated conversation. After a few moments of talking, Gundersen asked Snyder, "Now give us your Typhus Lecture." Snyder: "I just did!"

Dr. Meigs considers this letter to him from Major Howard Ulfelder, MC (*ES* 1939) "interesting news for The News". We agree — most heartily. Major Ulfelder is now with the 55th General.

On my return over here I found my outfit only moderately busy, and about two months ago I was transferred here. Though it was hard to leave the group I had known for so long, I wasn't needed professionally any longer. Moreover, I have been treated so well here it would be churlish to seem dissatisfied with the change.

This is a pleasant valley, with a near-by chain of hills, in west central England. The hospital is the usual dispersed group of one story brick or tile buildings, connected by covered walks. Although near a town, the general aspect is definitely English rural, and we are right beside a nine-hole golf course— in fact, the hospital is built on the other nine. We are on a gentle slope, the buildings are attractively arranged, and the grass grows luxuriously — all of which make it one of the most attractive temporary type hospital set-ups I've seen. Our capacity has been augmented by tents, and during the busy times last year well over 1700 patients were carried here. Census still keeps consistently above 1000, but we are not crowded. My service includes all varieties of war surgery, but neurosurgery is particularly well represented, as we are a center for that specialty and receive all such cases from a dozen or more other general hospitals. Equipment is excellent, as it always has been over here, and I have a very capable and friendly group of officers. My own job is necessarily largely administrative, but I scrub often enough to keep my hand in and I am being exposed to orthopedics and neurosurgery as I never will be again.

A very interesting project under way at the moment is concerned with wounds involving bone and nerve. Past practice has been to delay nerve suture until bony union, but that may be long past the optimum. We're getting them as early as possible after wounding (often 4-5 days), getting skin closed as soon as possible, and then doing nerve suture within the first month. No results to date, of course, but no question but that they will be an improvement over the past.

My immediate professional superior is Col. [Thomas H.] Lanman [*ES* 1918]. I owe him a great debt for his efforts to get me this fine position and for his help since I have come here. He's doing a big but not particularly pleasant job so quietly and well he's not going to get the credit he deserves. Imagine what it must be like to have a dozen or two chiefs of surgery, and try to get them to put personal bias for certain procedures into the background and to treat things with uniformity. In short, I have not only as fine a position as I could ever have dreamed of, but I hold it under most favorable auspices, and I am very grateful.

I certainly enjoyed every moment of my leave, even though sometimes now it almost seems that I dreamed it. It gave me a chance to tell you that the intervening years and variety of surgical experiences haven't particularly altered me or my plans for the future, even though my ideas have crystallized a lot— chiefly in the philosophical vein.

The news is exceedingly good these days and our chief speculation is "What next?" Hospitals are closing down, little by little. I feel reasonably sure this will be one of the last plants in England to cease functioning, because of the type of case we treat, but even that will probably be a matter of late summer or early fall. Whether units or individuals will then be moved no one knows. Probably some of both. Personally, I am anxious to get back to the States. Servicing the Army of Occupation holds no particular challenge, and I am afraid if I were transferred to the Pacific I would become a "recent arrival" and my years here soon overlooked. However, I expect to continue in the Army for some time, and am willing to do so.

The first part of the American Board of Surgery is to be given over here next fall and I plan to apply. As things slacken off this summer I'll have an ideal opportunity to study the texts and prepare for such a written exam.

I still think rehabilitation is important, and have gradually changed the program here and put some teeth in it.

I'm busy and I'm happy and I'm being treated far better than I deserve. But I still can't help counting time as starting the day I get back and settle in again.

Top sides—left to right: Major Daniel J. Holland, Jr., DC (*Dn.* 1938); Miss Josephine C. Barbour, ARC; Col. Donald S. King, MC (*EM* 1920)

Our surprise rivalled our delight when we received the picture shown in this issue, together with a note of explanation, from Major Daniel J. Holland, Jr., MC (*Dn.* 1938). The note reads:—

> We three have joined the "Camel Corps" in the sands of Egypt. Colonel King and I, both attached to Medical Section Allied Force Headquarters, had been Acting Medical Consultant and Acting Dental Consultant respectively, in the Mediterranean Theatre during the inactive period of the 6th General Hospital.
>
> Joined by Miss Barbour, Director of American Red Cross Hospital Service in Italy, we have recently completed a tour of temporary duty in the Middle East. Our itinerary called for brief stops at Malta and Greece, and ten days of touring Egypt and the Holy Land.

Miss Josephine Barbour wrote an "instalment letter", begun in October and finished in November, to Miss Cannon, who has passed it on to us.

> This experience here is an interesting one, and never a day goes by that I am not grateful for my years of happy and valuable association with you and the many people at M.G.H. The relationships with administrative heads in the hospitals, though terrifying at times, made it easier to cope with commanding officers and others in authority.
>
> I still miss the unit with which I came over, yet I do get the chance to see them all once in a while and it is like going home. I have also derived added pleasure from my present over-all work, because there seems to be hardly a hospital where I do not find some one who was at one time House Officer or Resident at M.G.H. It is such fun to walk into a mess hall and see a familiar face. Sometimes the name fails me, but I can somehow picture him or her in the rotunda at visiting hour, on the East Medical wards, or in the Orthopedic Clinic. I have been especially fortunate in that so many people in the Surgeon General's office are friends. We can be mighty proud of the contribution they are making to medical care in this Theatre. In one trip of a few days I saw Tom Ballantine, Phil Giddings, Gene Sullivan, Simeone, Tracy Mallory, and Charles Burnett. One never knows where an old MGH-er is going to appear.
>
> We were all so sorry that Heinie Faxon had to come home. We saw him off early one morning and he was being mighty fine about it all.
>
> Edith Stephen used to talk so much about Dijon, and during the few days I was in France I so wished I could have had her with me, for I know she could have told many stories about her experiences in the last war and pointed out places to me.
>
> Red Cross work in the hospitals here has shown growth and development in our contribution to the total care of the sick and wounded soldier. We now have workers in all types of hospitals, from the Field and Evacuation Units through Station and General Hospitals —the last step before the boat home. The individual worker feels some frustration in that the patient moves on and she never can carry along with him, but must have confidence that in the long chain of hospitals are other Red Cross workers who will continue to help him face his illness or handicap. Each step is an interesting and challenging stage in his adjustment from the first traumatic impact to the slowly increasing realization that comes in the General Hospital just before he may leave for home. Both the early attitudes and the later sustaining help toward independence as the weeks and months go by, are important, and we are trying to serve better in both.
>
> Our recreation and craft program is a vital part. To make something for some one, with one's own hands, brings a feeling of usefulness—of being human again, after the ugliness and horror of battle—relaxed from the tension and fears of war and its consequences. We are not doing occupational therapy—and cannot—but we are helping useless hands gradually to move; listless, stunned humans to show interest in things and people; and, in this way, one sees personalities come to life again. I can't tell you how I miss that part of the work with the patients, but I do find other satisfactions in helping, in small ways, the splendid staff of workers in the hospitals. Theirs is the real job of day after day meeting the many problems put before them, often facing personal danger and discomfort themselves.

Capt. F. Thomas Gephart, MC, AUS (*WS* 1941) is with a Field Hospital somewhere in the Southwest Pacific. In a letter dated April 13, he says:—

> In spite of frequent changes in APO number, The News is reaching me very regularly. I just want to tell you how much we all appreciate it. It is the most vital link most of us have with the Hospital.
>
> I have nothing new to report as to my activities, as things are pretty quiet for us at present.

Lt. Burdick G. Clarke, MC, USNR (*EM* 1943) is still aboard *U.S.S. Dorothea L. Dix.* His complaints against inactivity, as expressed in his last published letter, have evidently been appeased. In a letter to Dr. Faxon he says:—

> I've been on this vessel for a couple of years, have seen many places and a number of pretty tough casualties when we have been in invasions.

Comdr. Richard W. Dwight, MC (*WS* 1931) has put to sea again — this time on *U.S.S. President Monroe.*

> After nine months at N.C.T.C., Davisville, R.I., where I was Chief of Surgery in a Dispensary which had about 400 patients when I arrived but enlarged to around 700 before I left, I now find myself on a ship again —and am glad of the change.
>
> It was good to get my hand in again at surgery, after my previous 19 months at sea; but the routine hernias and appendices, enlivened only occasionally by a thyroid adenoma, or a perforated ulcer, were beginning to get monotonous. The alternate week-ends at home were the best feature of the setup down there. I remarked, after the last symphony concert on April 28, that now I was ready to go to sea again; and the Bureau of Medicine and Surgery, with its usual omniscience, came through with proceed orders on May 3rd.
>
> The ship is a transport, formerly a passenger ship, and consequently very comfortable as far as the officers' quarters are concerned. It also has a very good sick bay and operating room. It seems like very good duty, and I expect I shall see quite a lot of the world. Hope to meet many of the MGH men who are scattered round this part of the globe.

We have received our first direct communication from Martin J. Gilbride, Pharmacist Mate 1/c, a past orderly at Baker Memorial and in the operating room at Phillips House. Mr. Gilbride wrote from *U.S.S. Bulmer*:—

> I have been transferred for a short period—how long, I don't know. I'm well, only I'm baking down here in the sunshine and what goes with it.
>
> There's little news I can give you now. Please remember me to all at Baker and Phillips House. Best of luck to everybody.

For over two years no communication had come to us from, or about, Lt. Comdr. Alfred L. Duncombe, MC (*EM* 1934). Therefore, most welcome is this letter from him. His address is *U.S.S. Haven,* AH-12, and he says — much too briefly:—

> I returned in December 1943, after nineteen months' duty with a Mobile Hospital in Samoa; then had seventeen months at the U.S. Naval Hospital, Shoemaker, California —where the other MGH representative was [Comdr. John T. B.] Carmody [*NS* 1934]. Dan Hindman [*a. obst.*] is the only other MGH man on the *Haven* — one of the six new hospital ships being commissioned at this time.

We left Capt. D. Crosby Greene, Jr., MC, AAF (*CM* 1940) on Long Island a year or so ago. Recently, from China, came a renewal of his subscription to The News — paid for not only in U.S. money, but with an additional $50 note on the Bank of China! The note is on exhibition in the wall case near the foot of Treadwell stairs. We wish it were possible to show both sides at the same time, but it will be reversed after a few days.

THE NEWS

No. 35 Boston, Mass. AUGUST 1945

THE VINCENT MEMORIAL HOSPITAL

The Gynecological Service has kept its allotted 24 beds full and has been very busy. The Service has averaged 500 operations each year. The Visiting Staff has consisted of Drs. Meigs, Simmons, and Ingersoll, and the surgery has been done by them and by the Resident and House Staff. The morbidity and mortality have been exceedingly low. There has been an increasing number of radical hysterectomies for cancer of the cervix and more vaginal hysterectomies and plastic operations. On the whole, however, the main emphasis has been upon training the Resident Staff to think gynecologically and to do better gynecologic surgery.

We have continued to have our Thursday afternoon rounds. We have been fortunate enough usually to have some visiting surgeon or gynecologist with us to add to our interest in seeing the patients and advising what should be done. Rounds have been very well attended by the Resident and House Staff and the Medical Students, and I think that by free and open discussion of cases we have all learned a great deal.

We now have a Vincent Memorial Laboratory in the old House Officers' Laboratory on the ninth floor of the White Building. Here Dr. Maurice Fremont-Smith, Mrs. Ruth Graham, and Mrs. Helen Gilbert are busy doing vaginal smear work. Mrs. Lois Janzen, who worked with us for a year, has left to join her husband in Texas. The first paper on the vaginal smear in the diagnosis of cancer of the cervix was very successful, and over 1,000 reprints have been requested; in June 1944 — at the American Medical Association Convention — we were awarded a certificate of merit. Our last paper, reporting over 1,000 cases, showed a four percent error in the diagnosis of cancer of the cervix and endometrium. We have had many out-of-town technicians and pathologists come to our laboratory to study and learn this technique. Other very interesting problems, such as the vaginal smear following radiation, are being investigated.

We also have a technician in the Huntington Memorial Laboratory, where Dr. Ira T. Nathanson and Dr. Patricia H. Smith are endeavouring to measure basic hormonal studies in cancers of the cervix, endometrium, and fibroids. Obviously, interesting findings have been made and certainly openings have been made for more far reaching studies.

We are doing satisfactorily with our makeshift quarters, staff, and laboratory, but we all joyfully await the return of our old Staff members: Drs. Parsons, Bartlett, Sturgis, Gregg, and Ulfelder, and feel that then we should be able to advance much further.

One of the greatest events will be the building of the new Vincent Memorial Hospital, which is to replace Ward G, and eventually Ward I. This building is to be six stories high — the lower three floors will be for the Gynecological Service, and the upper three for the Children's Medical. We are to have office space, very satisfactory laboratory space, and facilities for 40 gynecologic patients. The plans are already drawn and are going through the process of the "detailed stage". It is obvious to us that this building is to be one of the very best and that the Trustees and the Lady Visitors of the Vincent Memorial Hospital will have something to be unusually proud of. One of the extra curricular spots in the new Vincent Memorial Building is to be the Vincent Room—equipped with committee room, lounging room, and kitchen. This innovation will be only a small reward for the wonderful support, both moral and financial, of the Vincent Club of Boston.

We hope that a new type of training in Gynecology will eventuate, with the closest possible coöperation between the Surgical Staff, the Medical Staff, the Psychiatric Staff, the various hospital laboratories, and the Gynecological Staff. There is a great deal to be done and we certainly will not be lacking in material and workers.

Joe V. Meigs, M.D.,
Chief of Service

Local newspapers recently published the following article:—

> Distinction of being the first Honorary Fellow of the Royal College of Surgeons asked to deliver the monthly Hunterian lecture, originated in 1793, was bestowed on Col. Elliott C. Cutler [*r. s.* 1916] professor of surgery at Harvard University, now serving as Chief of Professional Services and Chief Consultant in Surgery for the U. S. Army in the European Theatre. . . .

Pfc Donald Giberson, former plaster man on our orthopedic wards and now a paratrooper in the Pacific, has made another valuable contribution to our World War II collection. It is a Japanese textbook, handsomely illustrated with colored plates and line drawings. It would pay you to come to the Archives Room to see it.

Lt. Col. Albert G. Engelbach, MC, reports to Dr. Washburn that he has moved with his 250th Station Hospital from near Salisbury, England, to a temporary location in Verdun, France.

GEORGE WINSLOW HOLMES

In February of 1941, our beloved Radiologist in Chief, after having served the hospital faithfully for thirty-four years and having reached the retirement age, was placed on the Board of Consultation, and went to his home in Belfast, Maine, to spend the remainder of his life in quiet piscatorial and literary pursuits.

He was not allowed to remain in this blissful state long, because in September of 1942, Dr. Hampton, his successor, was ordered to active duty in the Army, and ever since, with the rank of Lieutenant Colonel, has acted as Radiologist in Chief to the Walter Reed Hospital in Washington. Holmes, therefore, as the British would say, was dug out of his retirement and came back to full duty, thus saving the hospital from a serious situation in its X-ray Department.

For nearly three years now he has worked here running this department and serving on the General Executive Committee, and indeed being a tower of strength and source of wisdom to the Staff in many ways. Finally, however, at the present writing, July 1945, Dr. Holmes feels that Dr. Robbins is fully equipped to take over as Acting Chief, and he has asked, therefore, to be allowed again to retire, and the Staff and Trustees have acquiesced in his request.

What we all think of George Holmes was illustrated at the Grand Rounds of the Medical Service on June 28th. When it had been pointed out that this was to be his last regular attendance, an expression of affection and gratitude to him was given in the shape of prolonged applause.

Dr. Holmes is again headed for Belfast, Maine — that lovely town beside Penobscot Bay — where he will continue to catch fish and use his fine brain in a leisurely way to the production of further literary works that he has long wished to get at. We hope, however, that he will be with us in the winter months from time to time, and give us more of his wisdom as a member of the Board of Consultation. As he goes to his well deserved leisure, he can be assured that every one of us will be with him constantly in spirit.

J. H. M.

Dr. Kurt H. Thoma has been asked by the State Department, Division of Cultural Coöperation, to spend the month of August at the University of San Carlos, Guatemala, as a visiting professor from the United States. He will give an intensive course in oral surgery. He is expected back September 10.

EDWARD LORRAINE YOUNG, III

It was our sad duty to announce, in the May issue, the death of Capt. Edward L. Young, III, MC, AUS (*WS* 1942). No details regarding the tragedy were then known; but Mrs. Young has since received a letter from Col. Edward Sigerfoos, Division Surgeon of the 17th Airborne Division, and she gives us permission to publish it in its entirety.

> Please accept my heartfelt sorrow in the death of your husband, who was killed in action on the 24th of March, 1945, following an airborne landing by this Division into the heart of Germany.
>
> Your husband was a member of a Surgical Team that was attached to this Division and to my office for the purpose of this operation. After a glider flight of approximately three hours, our gliders landed across the Rhine River, northeast of Wesel, Germany, and Edward was killed shortly after the gliders landed. He is now buried in the U. S. Military Cemetery in Margraten, Holland, and the cross that marks his grave bears his name. A chaplain of Edward's faith conducted the burial services.
>
> I first knew Edward during a previous operation in the Battle of the Ardennes, at which time his Surgical Team was attached to one platoon of a Field Hospital which was in support of this Division at the time. I came to know your husband rather well and thought very highly of him. He was a fine person and did excellent work as a surgeon. During this acquaintance, his services and the services of the other members of his team were volunteered to work with this Division in any future airborne operation. His death was a great shock to the officers and the men of this office, since everyone who knew your husband held him in high esteem.
>
> Do not feel that his life was given in vain, for it was the courage and perseverance of many brave men such as your husband that made this great airborne landing into the very heart of Germany a successful operation. Determination such as his is now taking our boys on to Berlin.
>
> He was a true soldier to the end and he died in the service of his country.

A Statement Relative to the Nursing Situation at the Massachusetts General Hospital

The nursing situation in this hospital is again becoming critical. Last year it was necessary to close a floor in the Phillips House, one in the Baker Memorial, and one in the White Building of the General Hospital. Unless this shortage can be relieved we shall be forced again to close floors.

The pre-war number of graduate nurses for all units of the Massachusetts General Hospital averaged about 300. Now the average is about 150. The pre-war number of student nurses averaged about 300. Now it is 450. However, there are many reasons why the increase in the number of students does not compensate for the loss in the number of graduates. Only a small amount of bedside nursing service is given by students during the pre-clinical course, none while they are on affiliation in other institutions, and none while in such special services at the home hospital as Diet Kitchen, Operating Room, and Out-Patient Department. In contrast, the graduate floor duty nurse gives all of her time to the care of the patients.

Another factor in reducing the amount of nursing care given by students is the request of the United States Public Health Service that fifty percent of the Senior Nurse Cadet Corps be assigned during their last six months to government services. The number of Senior Cadets thus lost to the Massachusetts General Hospital, just when they have become most competent, varies from month to month. In September it will be 42.

This explains in part why 150 student nurses do not replace 150 graduate nurses. Furthermore, we must consider the inexperience and immaturity of students. Too much responsibility cannot be placed upon their shoulders.

A larger enrollment in the School would be of some help but the number of well qualified applicants is beginning to fall off; an adequate number of teachers and supervisors is not available; our housing facilities for additional students would be inadequate, and the necessary beds to provide medical experience are limited.

There are but two remedies to the present shortage of nursing service: the closing of certain floors of the hospital or the addition of graduate nurses.

We are loath to close floors because of the demand for beds. All units are operating at 94% capacity. All units have long waiting lists, with appointments for six weeks ahead.

The other remedy is to increase the number of graduate floor duty nurses. To be specific,

One floor of the Phillips House had to be closed on July first. Before it can be reopened it will be necessary to provide seven graduate floor duty nurses.

If we are to prevent the closing of a floor at the Baker Memorial and one in the White Building it will be necessary to provide thirteen more graduate floor duty nurses than we now have by September first, twenty-five more than we now have by September twelfth, and thirty-seven more than we now have through October and November.

While a number of part-time nurses will greatly help, they cannot entirely meet the need. There is need for stability, particularly at night, which only a certain percentage of full-time workers can give.

This communication is being sent to all Trustees, members of the Medical Staff, Ladies' Visiting Committee, Advisory Committee to the School of Nursing, and to a group of the Nurses' Alumnae in this area, urging all to make every effort to recruit nurses for service in the Massachusetts General Hospital, particularly during the months of July through November. We hope that by December first the members of the Fall graduating class will be available. By then there should be also less demand from the Army Nurse Corps.

We shall welcome any suggestions that will help us to find the nurses during the next six months.

N. W. Faxon, M.D.,
Director

The following graduates of the School of Nursing received their commissions as 2nd Lieutenants, ANC, after completion of the course in basic training: the Misses Winifred Allard, Priscilla M. Cole, Marian Waterhouse. The exercises took place at Fort Devens on June 2, 1945.

Miss Elizabeth O'Loughlin (*MGH* 1943) returned in June from a four months' course in Pediatrics at Teachers College, Columbia. She was studying under a scholarship from the U.S. Public Health Service, Division of Nurse Education.

Lt. Anna M. McKee (*MGH* 1937) was recently presented with the Air Medal with Oak Leaf Cluster for air evacuation missions flown during April and May with a troop carrier unit of a jungle Air Force.

Alice R. Clarke (*MGH* 1939) has been promoted to Captain, and is Chief of the Army Nurse Corps, Public Relations Section, in the Philippines. She has been overseas 40 months, and will return to the States after touring the Visayan Islands and Sulu Archipelago.

Lt. Inez Cardinali (*MGH* 1943) has been assigned to overseas duty in Panama.

The Board of Trustees, at their meetings on June 14 and 29, voted to appoint:

Dr. Harold F. Bosco as Dental Intern for nine months beginning June 15, replacing Charles E. Rounds who has been called into service by the Navy;
Dr. Lewis W. Kane as an Assistant in Medicine;
Dr. Gertrud C. Reyersbach as Assistant to Children's Medical Service;
Dr. William H. Sweet as Assistant in Neurosurgery.

The Trustees also voted that:

Dr. Jost J. Michelsen be granted leave of absence to enter Military Service, it being understood he may resume his present position on the Staff on completion of this Service;
Dr. Edwin A. Robinson be granted a Dalton Scholarship of $500, to be paid in monthly installments from August 1, 1945 to July 31, 1946.

At meetings during June, the General Executive Committee appointed Dr. Milton B. Lorber as Graduate Assistant in Anesthesia, and reappointed as Graduate Assistants for the term July 1 through December 31:

- Medicine
  - Herbert Barry, Jr.
  - Winifred Chase
  - J. L. Jacobs
  - Madeleine Longtin—Student Asst.
  - Marian Perry
  - Eda A. Polcari
  - R. J. Savignac
  - J. B. Tompkins
  - E. O. Wheeler
  - P. R. Withington
- X-ray
  - Joseph Ferrucci
  - Harold Thomas
- Dermatology
  - A. P. Freedberg
- Neurology
  - Rudolph Neustadt
  - A. A. Weil
- Surgery
  - Martin Bellinger
  - E. H. Hubbard
  - J. L. Langohr
  - D. J. Mullane—Tumor Clinic
  - K. W. Thompson
- Urology
  - Joseph Lipton
- Dental
  - H. D. Howe
- Clinical Fellows
  - Fred Alexander—Medicine
  - Anne P. Forbes—Medicine
  - Joseph Hindle—Malaria Study
  - Sidney Levin—Malaria Study
  - Curtis Prout—Malaria Study
  - E. C. Reifenstein, Jr.—Medicine
  - Edna Sobel—Children's Medical
  - L. D. Trevett—Malaria Study

All material of a military nature in this and every issue of The News is first cleared for publication by the local Public Relations Department of the Army or Navy.

MASSACHUSETTS EYE & EAR INFIRMARY

At a meeting of the Board of Managers held June 28, 1945, the resignation of Mr. Leverett Saltonstall was accepted with regret. Mr. Saltonstall had been associated with the Infirmary as a Manager since 1925.

Mrs. Sullivan A. Sargent, Jr., Chairman of the Ladies' Visiting Committee, was appointed a Manager to fill the vacancy caused by the resignation of Mr. Saltonstall.

Lt. Eunice Grant, ANC, formerly Head Nurse on the Third Floor at the Infirmary, came in to see us recently. She is back in the States after serving in North Africa, Italy, and France, and has four Bronze Stars to her credit. Lieutenant Grant said she was flown back, and is to report for treatment at the Walter Reed General Hospital. We gathered from our conversation that her outstanding wish is to be able to stay in one place for a while.

Dr. Julio Quevedo (*Oto-Lar.* 1941) writes that he has been appointed, through a competitive examination, Head of the Oto-Laryngological Service in the Guatemala City General Hospital. He writes, also, that his first total laryngectomy was successful. Incidentally, it was the first ever to be performed in Guatemala.

Cpl. Alfred LaBranche, formerly a baker at the Infirmary, who left in October 1942 for service with the Army, came in to see us the other day. He served as a First Aid Man with a Combat Medical Unit assigned to front line duty. He has been in New Guinea, Australia, and the Philippines, and has four Bronze Stars. He hopes to be released from the Army in the very near future.

The following have been appointed to the Resident Staff, Ophthalmological Service:

Dr. Alexander R. Irvine, Jr.	July 1, 1945
Dr. Lloyd Mills, Jr.	October 1, 1945
Dr. Gustav C. Bahn	January 1, 1946
Dr. Lawrence B. Holt	April 1, 1946

1st Alternate: Dr. Gerald J. Halton
2nd Alternate: Dr. Sidney W. Penn

The fact that Boston and Los Angeles are not very far apart these days is evidenced by the fact that 48 hours after Dr. Irvine received his appointment he reported for duty at the Infirmary.

The Lucien Howe Library of Ophthalmology has recently been enriched, through a gift from Dr. Paul A. Chandler (*Oph.* 1925), with some very interesting old books, among which that of Fabricius of Acquapendente: *De visione, voce, auditu* is worthy of special note.

This volume, published in Venice in 1600, may be seen in the Treasure Room of Harvard University, where are lodged a number of rare works on ophthalmology, placed there for safe keeping by the late Mrs. Lucien Howe. Among these may be mentioned the *Augendienst* of Georg Bartisch, published in 1584, and famed as the earliest ophthalmologic textbook to appear in the German language.

New addresses:—

Lt. Ronald C. Bishop, MC, AUS (*M* 1945), 69th OTB, Carlisle Barracks, Carlisle, Pa.
Capt. Douglas A. Farmer, MC, AUS (*WS* 1943), A.A.F. Regional Hospital, Mitchell Field, Long Island, N. Y.
Lt. Arthur C. Guyton, MC, USNR (*WS* 1943), Camp Detrick, Frederick, Md.
S 1/c John D. Kenney, Co. D, Coast Guard Training Station, Fort McHenry, Baltimore 30, Md.
Col. Thomas H. Lanman, MC (*ES* 1918), 95 Suffolk Road, Chestnut Hill 67, Mass.
Lt. George R. Livermore, Jr., MC, AUS (*WS* 1943), Hdqrs. Med. Training Group, ASFTC, Camp Crowder, Mo.
Lt. Oglesby Paul, MC, USNR (*WM* 1943), U.S. Naval Hospital, Chelsea, Mass.
Lt. Gardiner Pier, MC, AUS (*WS* 1943), Med. Det., 702nd Military Police Bn., Logan Field, Dundalk, Md.
Capt. Earl C. Slaughter, MC, AUS (*Oto-Lar.* 1940), Finney General Hospital, Thomasville, Ga.

Brief bits:—

Lt. Comdr. Allen G. Brailey, MC (*EM* 1930) is stationed at a U.S.N. Base Hospital on Guam.

Lt. Robert K. Brown, MC, AUS (*WS* 1939), still attached to the 403rd Med. Thor. Surg. Det., has a new San Francisco APO number.

Capt. Charles H. Burnett, MC, AUS (*r.p.* 1942) is serving with the 225th Station Hospital.

Lt. Charles H. DuToit, MC, AUS (*WM* 1943) is with the 134th Evacuation Hospital in France.

Lt. Lytt I. Gardner, MC, AUS (*CM*) has been transferred to the 170th Evacuation Hospital.

Capt. William W. L. Glenn, MC, AUS (*r.s.* 1941) is still with the 30th General, but has a new APO.

Capt. John B. McKittrick, MC, AUS (*An.* 1938 & *WS* 1939) has been appointed Chief of the General Surgical Section, Walter Reed General Hospital, Army Medical Center, Washington 12, D. C.

S/Sgt. Bruno Mickeleit, past employee in our Surgical Laboratory, writes he is on the move again, to "strange lands" in the Pacific.

Lt. Comdr. Hugh Montgomery, MC (*EM* 1932) is stationed at a U.S.N. Base Hospital out in the Pacific Area.

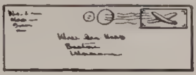
Ph 2/c Benjamin S. Parsons, past Baker orderly, is at a Landing Craft Repair Base, somewhere in the Pacific.

Lt. John H. Peters, MC, USNR (*WM* 1943) has gone to sea again.

Capt. Leonard D. Rosenman, MC, AUS (*ES* 1943), who has been in and about the Philippines for well over a year, writes that his address has changed and will change again.

Capt. Charles A. Wheeler, MC, AUS (*NS* 1935 & *WS* 1938) has been promoted to this rank. He is still with the 230th General Hospital.,

Lt. Comdr. Arthur T. Willetts, MC (*r. U* 1941) has finished land duty and is back aboard ship, again in the Pacific Theatre.



In reporting his transfer to Cushing General Hospital, Framingham, Mass., Major Russell V. Fuldner, MC (*Or.* 1939) adds just 16 words: "THE NEWS continues to be the only publication of which I read every word. Grand work!"

Such a tribute should be much appreciated by those of you whose letters make THE NEWS what it is. However, with a military record such as Major Fuldner's — varied service both in the States and overseas — why doesn't *he* send us something for publication?

And we don't confine this suggestion to the Major alone. Others of you have friends who eagerly search the columns of THE NEWS for some word from you. We know this is true, from their letters.

Sgt. Dominic W. Cervizzi left our Out-Patient Pharmacy early in 1941 for military service. After participating in action in New Caledonia and Guadalcanal, he was returned to the States in 1943. A "first letter" from him, from Glennan General Hospital, Okmulgee, Oklahoma, says:—

> THE NEWS has been a constant source of interest, and since it has not been my good fortune to run into any of the MGH crowd, I have been kept informed of whereabouts and activities through this medium.
>
> Glennan General has recently been activated to handle American casualties from the European Theatre. My work is in the Pharmacy, and we're kept plenty busy with incoming patients.
>
> I am sending you the local paper of last Sunday, which edition was a welcome by merchants of Okmulgee to the staff and personnel of the Hospital.

The newspaper — containing dozens of articles about Glennan officers and men — is on display in the wall case near the foot of Treadwell stairs.

A new correspondent to join our ranks is Lt. Joseph A. Elliott, Jr., MC, AUS (*M* 1945). From the 69th O.T.B., Carlisle Barracks, Pa., comes this letter.

> Although I have thoroughly enjoyed THE NEWS, I know I shall enjoy it more as time goes by and more of my intimate friends at the General go into the armed forces and write home about their experiences.
>
> I received my commission 29 July 1944 and was ordered to active duty at Carlisle 8 June 1945. At present that is about all I can say, since I am merely at the beginning of the course here at the Medical Field Service School and do not know what my next post will be. However, I will keep you posted on my changes of address and on any interesting episodes that occur.

Major George B. Beaman, MC, AAF (*a. Psychi.*) has sent a new address.

> I have been transferred from Bowman Field Convalescent Hospital, where I was Chief of Service, to Buckley Field Regional Hospital, where I am also Chief of Neuropsychiatric Service and where I hope THE NEWS will continue to reach me. I have found it a very interesting

method of keeping in touch with old friends.

Throughout the war, one of the interesting experiences I have had, as a hide-bound New Englander, is to see the United States back and forth from coast to coast—an experience every other hide-bound New Englander ought to have. Further than that, I have had a rather vast experience in the field of psychiatry and have observed man in every stage of his military career except for actual battle conditions.

Last month we reported that Major Arthur A. Holbrook, MC (*CM* 1933 & *EM* 1934) has returned to the States. A more recent letter tells us why.

Home again! The heat finally exacted its consuming toll and my fair complexion would have given comfort to a leper beholding me. So they sent me back, and I'm still asking people to pinch me.

At present I'm at the Schick General in Clinton, Iowa. I'll let you know the next assignment.

For over two years the War Records form, sent to Capt. Chester W. Fairlie, Jr., MC, AAF (*WM* 1942) has lain dormant. It came alive in a reply just received from the 290th AAF Base Unit Det. "D", in one of the West Indies, and gives us our first inkling as to Captain Fairlie's location and his record of military activity.

The discrepancy in dates between receipt and return of this note is so inexcusable that apologies are useless; but I hope the fact that I've carried the note safely with me all this time will show that I do appreciate the interest and ties which it represents.

After entering the Army in November 1942, I attended the Miami OTS (at the same time that Perry Culver [*EM* 1942] and John Homans [*WM* 1942] were there, although not in the same class) and after that the course at Carlisle. Then came a very enjoyable 21 months at a Station Hospital in Great Bend, Kansas. Such a job, I think, is about the most desirable the Army offers for a man who has just completed his internship (the necessary abbreviation of which I still sadly regret). It provides fairly abundant practice of medicine if the hospital census is good; and, if one is lucky in his associates, the personal contacts and the general level of medical practice in the hospital are most satisfactory.

Since leaving M.G.H. my family has been increased by two—married in October 1942, and a son born in November 1944.

I am starting my fifth month of so-called "overseas" service in the Caribbean Area—first in Porto Rico and now here.

From the 141st General Hospital, Devizes, England, Major Donald W. Bickley, MC (*WM* 1936) writes:—

As a rule, Lieutenant Colonel Comeau's [*a.* in *M* 1937-39] copies of The News have substituted for those of mine which have been lost in the long chain of APO numbers.

Colonel Comeau is our Chief of Medicine. I am still Chief of the General Surgical Section, but there are many changes afoot.

Dr. Faxon has received this letter from Lt. Col. R. Earle Glendy, MC (*r.p.* 1934), headed Liége, Belgium.

It looks like a long haul yet, even though the Krauts have folded up. Our one desire is to return home, but it isn't as simple as it looks when one realizes the staggering proportions of men and matériel we have scattered over the face of Europe.

We have been in operation in tents since November, have listened to and shuddered at the drone of some 6,000 buzz-bombs, contemplated being overrun by Rundstedt's hordes when we were dangerously close to the upper rim of the bulge, handled some 20,000 patients since we opened, and though still fairly busy we're impatient and anxious to return to home and loved ones.

Best wishes to my friends at M. G. H.

Since good intentions have finally been carried out, and particularly since Capt. William V. McDermott, Jr., MC, AUS (*WS* 1943) convinces us he has not been idling away his time since V-E Day, we can overlook the gap between his two letters. This latest one carries the heading 30th Field Hospital.

For over five months I have had almost daily intentions of notifying you of my change of assignment, so there would be no obstacles to the regular and speedy arrival of The News, but until tonight I remained strictly in the good intentions class.

This has been a busy and interesting job, as our platoon of the hospital served as the surgical unit with the 5th Infantry Division during the campaigns in Luxemburg and Germany, and since V-E Day has operated hospitalization units for various liberated concentration camps in Austria. How long this latter work will last I have no idea, but, like everyone else in the ETO, we have hopes of a westward crossing soon.

Regards to all at the M.G.H.

After the ice is broken with a "first letter", the habit of writing occasionally becomes, happily, an easy one to adopt. This second letter from Capt. Robert P. Smith, MC, AUS (*M* 1943) contained a snapshot of himself and Capt. Rafe Banks (*ES* 1943), both all abristle with skis. The picture will appear in an early issue; but we hasten to publish the letter now, even though devoid of its accompanying illustration, since word has just come from Captain Smith that a new address will follow soon.

When I last wrote you, in February, I was in Southern France, near Saarburg, and mentioned meeting Rafe Banks. Now I can complete the tale and report that Rafe and I have finished the war in the same town and, to make things still better, there is a large Alp near by where we go skiing—as you can see from the enclosed photo.

To bring my own story up to date: I spent the rest of the war as Battalion Surgeon (as one tends to do when one becomes a Battalion Surgeon). I was in the 54th Armored Infantry Battalion, 10th Armored Division.

From the Saarburg region, where we were in temporary reserve for the 7th Army, we went via Metz to the Saar-Moselle triangle where, after very bitter fighting through the pillboxes of the Siegfried Line, we took Trier. Then we made a wild dash toward the Rhine, hitting two or three hot spots but actually meeting surprisingly little resistance. We passed mile after mile of destroyed German matériel, horses, and men—mostly due to strafing, but not entirely. As we closed off a large pocket near Speyer we hit a very hot spot, but it soon cooled.

Then we crossed the Rhine via a bridge already prepared, went to Mannheim (badly destroyed), and out to Heidelberg. There the university and castle were untouched by war. We fought down to Neckargartack, across the Neckar from Heilbronn. That wall being too solid, we made a 1-day end run to Krailsheim, about 50 miles beyond, and doubled back to open Heilbronn. Thence, a fast drive through the Schwabisch Alps and to Ulm. From there we rushed to Garmisch Partenkirchen, and, while I was on pass to Paris, the Division arrived there (rumor says) about 2 hours ahead of the German Government moving from Munich.

So, here Rafe and I sit waiting for someone to send us a boat and, in the meantime, thoroughly enjoying ourselves touring the spectacular countryside. We have visited Brenner Pass, Arlberg Pass, Innsbruck, Tegernsee (where Himmler lived), Berchtesgaden, and many local spots such as Oberammergau.

May the time be near when I can return to Fruit Street and relearn all those big words.

Capt. Lloyd S. Saltus, MC, AUS (*CM* 1938) sends this description of the pitiful condition of liberated allied prisoners in his section of Germany.

We have been in Naumburg for the past month and have had the pleasure of treating many recovered allied prisoners fresh from camps. Practically all those sent here made the grade, though a few could not believe they would until improvement and a few jokes began to take effect. Many Tbcs., as one would expect, many nutritional edemas, and—as perhaps a corollary—many patients with pneumonia, hypertension, etc., who developed pulmonary edema as a complication much more quickly than one would expect with a normal subject. Many had merely stomach aches, mild or severe, from their first chance at solid food. Rapidly cured, they gave pleasure and amusement by their eating whenever and whatever available—usually with the smile that won't come off.

Other hospitals got loads of those so nearly dead it was said to be difficult sometimes to tell the patients from the recent patients.

More recently many of us have been detached as liaison officers—tending to the operation, supply, and necessary details of captured German hospitals. The immediate future is a complete question mark—made only more distinct by press releases and other rumors to date.

In reporting his promotion and transfer to a hospital ship, Lt. Robert H. Hepburn, MC, USNR (*r.s. U* 1943) adds a fine tribute to Robert S. Hurlbut.

This is to inform you that a kindly Fate has (1) changed my address and (2) raised my rank from Lt. j.g. to Lt. It is both a privilege to serve as urologist in this swanky 800-bed hospital and a pleasure to be paid a little more for doing so.

Congratulations on giving Bob Hurlbut such a fine write-up. He was a magnificent human being in so many ways. It should encourage us all to take bigger and better sized "pieces out of the pants of Nippon", as Bobby phrased it.

Lt. Comdr. W. Martindale Shedden, MC (*ES* 1920) is again on his way for overseas duty — this time in the Pacific. He will be at an Advance Base, and hopes to meet his three sons out there. One is an Army B-29 pilot, another a Navy Fighter pilot on a carrier, and the third has just enlisted in the Marines. The two oldest sons, both of whom have been awarded medals for outstanding gallantry, recently met each other in the Marianas — for the first time in five years!

From Okinawa comes a "first letter" from Lt. Comdr. Philip Solomon, MC (*Psychi.* 1936-37). He outlines his military activities to date, and has much to say which is of special interest to psychiatrists.

Though my period of service at the M.G.H. was not long, I look back to it with considerable pleasure. I have not written before of my experiences in the Service since nothing very much happened and I doubted that anyone would be interested. Recently, though, the pace has quickened, and here are the facts—if only for the record.

I entered active duty as a Lieutenant on July 2, 1941, because I was told that a neurologist was needed at the USNH, Chelsea. I served there for 2 months, doing—of all things—dermatology, contagious diseases, and chronic medicine (with a bit of neurology consultation on the side). I then was sent to the USNTS, Newport, to take part in the NP screening program which was starting up there. The 3 months after Pearl Harbor were a nightmare. We averaged 18 to 20 hours a day, 7 days a week! I screened as many as 400 men a day. It didn't seem that psychiatry could be done at that rate, but it had to be done, and it was. In October 1942 I was transferred to the new Training Station which was opening up at Bainbridge, Md., and I continued screening there. In September 1943 I was asked to start a new NP unit for screening Women Marines and colored Marines at Camp Lejeune, N. C. By late 1944 I was thoroughly fed up with screening and asked to be sent overseas to see something of the war.

In December 1944 I was ordered to the Sixth Marine Division as Division Psychiatrist—a newly created job. We trained at a tropical Southwest Pacific base and I immersed myself in an impromptu preventive psychiatry program. We landed here on Okinawa on Easter Sunday. My experience since then have been those of combat. I have been fortunate enough to see what few psychiatrists witness—NP breakdowns at the source. My unit has followed the front lines and has succeeded in returning hundreds of men to duty who might otherwise have been evacuated. The methods used have involved a few new wrinkles—for example, what I call "coercion techniques", and the use of plasma as an adjuvant.

At present, life is unusually exciting. About a week ago we moved into Naba, almost ahead of the front lines. We can still look out across the estuary and see the war going on in our back yard. Sniper fire we have learned to ignore, but we hit the deck fast for machine guns or shells. Our pet dislike is a new rocket affair the Nips have come out with. It comes over with a hideous nasty snarl instead of the respectable whine of a shell, and it packs a terrific wallop. The younger men call them "screaming-meanies", the older men, "flying mother-in-laws". The high spot for chill-thrills came the other day. We were awakened about 0530 by a crash and splintering wood. When we investigated, there on the ground under our cots was a huge 8-inch Howitzer shell—a dud! There was much laughter, of a hollow sort, and I noticed that the next day everyone went to church with a determined look.

The only MGH man I have seen out here is Commander Monks. When I saw him last, about a month ago, he was quite unhappy at prolonged inactivity, but doubtless by now his unit has swung into action.

In conclusion, may I say that I am enjoying my work immensely, but anyone who says he likes combat is either a fool or a liar.

A postscript, not intended for publication, asks us to deliver a message to some of Commander Solomon's friends. In it he says he has written some 12 articles since going into the Service, mostly in a desperate attempt to keep mentally alive. They have appeared, or are about to appear, in various military-minded journals.

Lt. Comdr. Walter E. Garrey, MC (*ES* 1933) writes from a Naval Base Hospital on Peleliu:—

Receipt of the April issue this week reminded me that I had not reported to The News since leaving the States, for the second time, in November 1944.

I went back to an attack transport of the Amphibious Forces, and made the Okinawa invasion on Easter Sunday morning. The trip up was made more enjoyable by having [Lt.] John Norcross [*EM* 1937] aboard as a passenger for 6 weeks. Casualties were light in the early days and we handled only a few.

Two months ago I was transferred to this hospital, flying from Hawaii through Guam to the Palau Islands. The censorship rules now permit us to say we are located on Peleliu. Having had a total of 29 months on attack transports, it was a pleasure to land in a hospital. Gordon Morrison [*Or.* 1941] is in charge of Orthopedics here, and is very busy. I am at present serving as Chief of Surgery. We are running at only part capacity, but do get some casualties from Mindanao, and there have been some very interesting abdominal cases lately.

In my travels during April I had one evening with [Lt. Comdr.] Herb Adams [*ES* 1932], and another with [Lt. Comdr.] Roy Mabrey [*a. in S*] and [Lt. Comdr.] Hugh Montgomery [*EM* 1932]. All three had recently been busy and had much of interest to report.

The News means much to us and I hope it keeps on coming.

My best to all at the hospital.

Letters from Lt. Comdr. John L. Wilson, MC (*ES* 1940) make such good reading, it is a pity this one is so brief. Maybe it's only a curtain-raiser for more to follow soon. Let's hope so.

Here's a request that my subscription to The News be continued — for life (if I have to stay away from M.G.H. that long). It is such a pleasure to be able to keep up, in a way, with so many good friends and acquaintances. I notice by the letters which you publish that the nostalgia must affect everyone.

I must apologize for my frequent changes of address, but I am moving tomorrow to another Base out here in the Pacific.

This very unusual letter has come to Mr. MacNair from Lt. Earl D. Sneary, ChC, USN, a past orderly at Baker Memorial.

After I left Baker to go into the Navy, I was sent to Chaplains' School at Williamsburg, Virginia, and then to Parris Island, South Carolina, for my first duty. As you may know, that is a large boot camp for the Marine Corps. I stayed there until September 1944, when I came overseas and joined the Fourth Marine Division as Regimental Chaplain of the Service Troops Regiment, where I am at present stationed.

Lt. William Baker [*WS* 1943] is in my outfit. He was interning in Baker when I was there. On the trip out to Iwo Jima, as I left my ship to go over to another to hold a service, I cut my hand on the jacob's ladder. Who should dress it but another Baker intern —Lt. [James E.] Conley [*WS* 1941].

While we were waiting to go ashore at Iwo, I worked down in the sick bay of the ship, helping take care of casualties brought aboard, doing dressings, catheterizations, injections of plasma and blood, SC and intramuscular injections of drugs — including penicillin, and making myself useful generally. I took time out to pray with the men who were dying and tried to cheer those who were glum and despondent. I did several treatments that we weren't allowed to do at Baker, and I wouldn't have taken a thousand dollars for the training you and Mr. Bates and Mrs. Reid gave me there.

Iwo Jima was rugged. Several times I just missed getting hit when mortars exploded round me, killing men who were as close as 50 feet. Large as I am, I made a perfect target for snipers, but I guess they weren't very good shots. We certainly were glad to get off that piece of sand and back to our rest camp.

I have a nice chapel and office — all tents, of course — and I like the men in my outfit very much. I have been accepted in the Regular Navy and plan to stay in after the war. There is nothing I would like so much as to get duty at Chelsea Naval Hospital or Boston Navy Yard after the fighting is over. At any rate, when I do come back to Boston, Baker is the first place I'm heading for, and I hope some of the old familiar faces will still be around.

This letter from Comdr. John P. Monks, MC (*WM* 1931), to Dr. Means, is every bit as graphic as the best of our war movies. It was written from Okinawa, on the back of Japanese forms of some undecipherable sort—one of which is being displayed in the case near Treadwell stairs.

This hospital sat on Guam, overlooking the Pacific and with the trade wind constantly in our faces, from December '44 until March '45. Though we sat, we were not set up as a hospital and so had much time on our hands, filled with the usual griping, building an impermanent camp for ourselves, and wondering where we were going next. We carved tent sites for ourselves out of the jungle which is thick with prickles and tenuous vines, and collected sea shells (any that the omniverous CB's left behind). While on the island I saw Chappie Fay, Allen Brailey, Dave Halbersleben (HMS), and frequently got together with Bob Schwab.

Late in March we embarked and reached this island on 11 April (L-day plus 11). We were in the midst of air raids while at anchor for 2-3 days, and during our first night on the beach — in old Jap trenches — several planes were shot down close to us. Later we moved to the northern part of the island, but the Marines had met with so little opposition here that we betook ourselves to the fields of a communal farming project and sat down again — first among the potatoes and cabbages, later in the mud. The air raids and snipers were troublesome enough to our sleep, so I built myself a nice sandbagged fox-hole with a flack-proof roof and slept cosily there on a Jap straw sleeping mat and my sleeping bag for a couple of weeks.

The surgeons in the outfit — including [Comdr.] Ross Mintz [*P* 1930 & *r.s. U* 1932] —were loaned to an Army Field Hospital at the active southern front, where they did a good job in support of the considerably less experienced younger Army surgeons. Several of our medical men were loaned to various military government hospitals (so-called), where the native Okinawans were herded in great compounds. Their chief problem was utterly inadequate medical personnel and supplies to cope with every sort of foul festering sores and gunshot and shell fragment wounds, always grossly infected from their long hiding out in the caves in the hills following wounding. Gradually the word spread that we would not torture or kill them and they poured out of the hills in hundreds and thousands. Since then, for the most part, they have been coöperative and friendly to us. One of our doctors had as his helpers in a dispensary several Korean prostitutes, captured from the Jap Army and very valuable, as they would catch on quickly as to what was wanted. The invariable English speaking native turned up — this time in the form of an ex-chauffeur of a vice-president of a large oil company in N. Y. C. where he had been for ten years.

The country in the north was mountainous and very lovely, and we would have wandered further afield except for the little yellow men all over the hills waiting to blow you to pieces and steal your boots. Finally we were shipped further south — about 10 miles behind the lines — to back up the Marines who had also been brought to the south to help the Army break the stubborn resistance of the cave-dwelling Japs in their various defense lines. Then we came under the command of the 10th Army. Ross and I may enjoy the somewhat weird distinction of being the only

Captain Edward L. Young, III, killed in action in Germany, March 24, 1945

MGH-ers who have been successively under immediate command of the Navy, the Marine Corps, and the Army.

For 5 weeks we performed the work of an Army field hospital, receiving chiefly Marine Corps casualties, however. Our function as an evacuation hospital was never fulfilled. The vast majority of the cases have, of course, been surgical of all sorts, except for traumatic amputations and huge abdominal wounds which were screened out and evacuated by hospitals further forward. Medically our chief concern has been cases of combat fatigue usually received within a few hours of their evacuation from the front. They usually appeared after our troops were "pinned down" and unable to move under Jap artillery, mortar, and machine gun fire. Especially did this occur during the famous Sugarloaf Hill episode, when the Hill was captured and lost by our troops nine times. The sense of inability to retaliate adequately against the enemy and of being unable to move seems to be the trigger mechanism. Most cases were treated successfully by our able young Navy trained psychiatrist and returned to duty. A point he has noted, contrary to previous experience with combat fatigue cases, is that when the elapsed time since combat is apparently so short — as here — battle dreams have not had time to develop and can evidently be aborted by adequate rest at this stage. Most cases have required no sedation, and little psychotherapy has been necessary. About the time that those cases who are uncomplicated by an underlying psychoneurosis are anxious to return to duty, those with an underlying psychoneurosis start to reveal what has been previously hidden by the symptoms of simple combat fatigue. Two other points he notes are the general lowering of ward morale and an increase of guilt feeling when surgical cases are admitted to the ward. Acute gastro-enteritis, and various fungus and impetiginous infections make up the majority of the rest of the medical cases.

A Naval Medical Research Unit, of which Cheever is a member, has been temporarily attached to our hospital. It is under the leadership of Shope, of the Rockefeller, and contains a hand-picked group of several others from the Rockefeller.

Medical intelligence, before the invasion, claimed this island a hellhole of disease, with very poisonous snakes lurking everywhere and wild boar ready to gore one. The report was utterly erroneous. The facts are as follows: There has been one case of schistosomiasis in a Jap soldier, presumably acquired in Japan, and some among our troops acquired in Leyte. No known case of primary malarial infection among the troops. Possibly a few cases of amoebic dysentery, and an occasional one of bacillary. There are some cases of encephalitis — unlike Japanese B — and no cases of yellow fever, cholera, or plague. A good deal of filariasis is present among the natives, as are intestinal parasites — frequently the infection being multiple in nature. A good deal of tuberculosis and leprosy and much tetanus in the natives. Some cases of gas gangrene among our troops. Most interesting to the Research Unit are various cases of dengue-like fever among our troops. Less than half a dozen snake-bites and no goring from the as yet invisible wild boars. The health of the troops generally has been excellent, so, as Chief of the Medical Service, I am a pretty useless ornament.

I live now in the forecourt of a typical Okinawan tomb which is covered by a pyramidal tent with walls covered with greenery. It is reminiscent of the mossy, fern covered New England rock-walled blue ribbon exhibit of some garden club at the annual Flower Show in Mechanics Hall. Nurses from a neighboring Army hospital work in our wards and give color to an otherwise drab existence.

Now that the island has been declared secure, my chief occupation seems to be that of censoring the souvenirs being sent to clutter the homes of the U.S. Some of the junk that is sent home is fantastic — a large collection of ordinary buttons, a pair of spectacles, a package of the Jap equivalent of testosterone, gold teeth, a carpenter's rule, albums of photos of stiffly posing Jap families, and ration coupons being among some of the more unusual ones. Rifles, bayonets, officers' swords, and money, by the dozens. Jap flags are the greatest prizes, and one of our men was doing quite well in selling futures in Jap flags — except that he had some difficulty in keeping off the prospective purchasers until the red paint was dry on the white cloth.

The News is a highly prized piece of mail out here, as it is to everyone else. We all appreciate it greatly.

Lt. George Mixter, Jr., MC, USNR (*WS* 1943) has been transferred to an Engineer Battalion attached to a Fleet Marine Force. His last letter was published more than a year ago. This one, just received, is equally interesting.

This is to add my two bits to the universal thanks for your grand sheet, which really is manna in the wilderness.

M.G.H. is certainly widely scattered. I only wish I could manage to run into some of our men. [Lt.] Bill Baker [MC, USNR (*WS* 1943)] was the last I saw, back in New River, N. C., almost 18 months ago!

Have been Battalion Surgeon with this grand bunch of engineers for about 6 months now. It's an "old" outfit which hit Guadal in '42 and has been "out" ever since. We got in on this Okinawa show pretty early and have covered the entire island. Now setting up our 20*th* camp in ten weeks! It is in a lovely valley, and now that the island is secured we hope to make a good rest area out of it.

No wounds, decorations, or heroic surgery to report—(I haven't scrubbed on anything bigger than a pilonidal sinus in the past two years!)—although there were two weeks of shell fire that made life a bit complex.

This job as a "commissioned corpsman" has its recompenses but they aren't medical! The work is all spot sanitation, writing reports, and moving from place to place. The high points were a trimalleolar Potts put up in plaster during an air raid and a couple of pretty bad chest wounds we got back to surgical teams in A-1 shape.

I greatly appreciate hearing from other theatres of operation and getting reports on their problems. Our health has been *excellent* all the way and our casualties pretty light, largely due to superior training of the men and their long experience out here.

It is a terrible shock to hear of Pinky Young's death. I know how impatient he was to be in the thick of it. A real loss to us all.

We're pretty isolated here but the welcome mat is always out to MGH-ers who happen to wander this way.

My best regards to all personnel I knew there at Massachusetts General—especially to Mrs. Cushing, whose Sunday afternoon playing in the Chapel is one of my pleasantest memories.

THE NEWS

No. 36 Boston, Mass. SEPTEMBER 1945

...—V...—

WAR'S END

There is an old Civil War song, "Tenting on the Old Camp Ground", that expressed the longing for peace of the people after four years of war. On Monday night August sixth we, too, could have echoed the words of that old song.

> "Many are the hearts that are weary tonight
> Wishing for the war to cease.
> Many are the hearts looking for the right
> To see the dawn of peace."

And then suddenly, at seven o'clock on the evening of Tuesday August 14, came the news that the world had been waiting for. "Japan has surrendered. The war is ended." To us this meant the end of an armed conflict that began on December 7, 1941—over 3 years and 8 months ago. To England, Russia and China it meant years longer. To us it had meant hard work, long hours, some deviation from our acccustomed way of living, and to most of us a constant sense of impending danger of the loss of loved ones. To those other countries—hardship, destruction, suffering and frightful loss of life.

But now it was over and we could rejoice. We who experienced the relief brought by that Tuesday announcement will never forget it. Some expressed their relief by jubilant shouting, others by silent prayer, others by a visit to their church or the Hospital Chapel. All gave thanks to Almighty God that this day had come.

N. W. F.

ORTHOPAEDIC SERVICE AFFAIRS

Wednesday, 8 a.m. — Staff Room, White 5:

Dr. Smith-Petersen: "All right, Dr. Williams, let's start." Yes, we still carry on Ward Rounds at 8 a.m. on Wednesdays and we still try to start on the dot; some of the old offenders—you know who they are—sneak in late and still think I don't see them! The stage setting is the same and the arguments essentially the same. This is true of Fracture Rounds as well as of Orthopaedic Rounds.

Friday, 8 a.m.—Bigelow Amphitheater:

"This is a 71-year old woman who fell and sustained an intertrochanteric fracture," says the House Officer, addressing himself to the film. "How are you going to treat her, doctor?" "Well, there seems to be a difference in opinion—she is not in awfully good shape—she has diabetes and hypertension." "All the more reason for nailing her—relieving her of pain and enabling her to move around." "I disagree with Dr. Smith-Petersen. These fractures heal with properly carried out Russell Traction. I deliberately say 'properly carried out Russell Traction'. I don't know why, but we do not seem to be able to do it in this Hospital. I can do it in other hospitals and they all unite." "Has she had her veins tied off?" (Guess who asked that question!) "Yes, sir. She entered night before last and she had them tied yesterday afternoon. No matter how she is going to be treated, we thought she ought to have prophylactic ligation."

White 5:

"Calling Dr. Larson, calling Dr. Larson." "B—s—s, B—s, B—s": "This is Dr. Larson." "Just a minute, doctor, Fracture Follow-up wants you." "Hello, this is Dr. Larson." "Oh, Dr. Larson—this is Miss Maloney—it is almost 11 o'clock and we have 23 follow-ups, no Visiting Surgeons, only one House Officer and this is his first day on Service!" "All right, Miss Maloney, I'll be right out," says Dr. Larson calmly, knowing full well it will be at least half an hour before he gets there. Since Orthopaedic Out-Patient has been given up on Wednesday mornings this situation is now under control—much to Miss Maloney's joy.

Surgical Executive Committee Meeting, Tuesday 4 p.m.; Staff Room, White 4. May 7th:

"What you got there?" "This, Dr. Faxon," says Dr. Smith-Petersen, proudly displaying a beautiful hip specimen, "is the specimen you requested me to produce before you would grant a room for anatomical specimens and reference books. Dr. Saunders, at the University of California, had it prepared for me. Smell it!" "Sniff, sniff—my olfactory nerve is satisfied!" This episode was followed by a lengthy discussion of possible locations for such an anatomical reference room. The final decision was that nothing could be done until Pete Churchill gets back. So, V-E Day was defeat day for this project which was started two and one-half years ago.

As you all know, the M.G.H. Orthopaedic Department has been divorced from the Children's Hospital Orthopaedic Department. Whether this is going to turn out to be a divorce or a temporary separation no one knows; it is an unsettled problem which has not as yet been discussed. This step became necessary because of our inability to secure surgically trained House Officers. The Orthopaedic House Staff is now "integrated horizontally and vertically" (quoted from the Harvard Medical School curriculum committee report) with the House Staff of the general Surgical Service. It is amazing how quickly these young men catch on and how well they carry out their duties during their short weeks' stay with us. We have been exceptionally fortunate in our Residents—we have had some real stars. As evidence of our not slipping too badly in operative technique, we have the statistics on sepsis: 2½% sepsis during 1944—number of operations practically the same as in normal times.

On the whole it is fair to say that the Orthopaedic Department is holding its own in spite of having lost 9 members of its Visiting Staff, leaving only 7 to carry on.

M. N. Smith-Petersen, M.D.,
Chief of Orthopaedic Service

At a meeting of the Board of Trustees held on June 29, it was voted:

To increase the room rates in the Baker Memorial by 75c a day, and to authorize changes in the operating room charges in accordance with recommendations of a Committee of the Staff;

To increase the rates on certain rooms in the Phillips House by approximately $1.00 a day, and to authorize certain increases in the operating room charges;

To authorize certain changes in the operating room charges in the General Hospital.

At their meeting on July 27, the Trustees voted to appoint:

Dr. Rosemary V. Gorman as an Assistant in Medicine;

Dr. Wade Volwiler as an Assistant in Medicine;

Dr. Patricia Wanning as Assistant to the Children's Medical Service, beginning July 1, 1945.

The Trustees also voted to accept with regret the resignation of Dr. Anne M. Hopkins.

The General Executive Committee, at a meeting held July 18, voted to appoint:

Dr. Nicholas A. Brose as Graduate Assistant in Surgery;

Dr. Stanley J. Sarnoff as Research Fellow in Surgery.

Pvt. Raymond F. LeMoine, USMCR, a past orderly in Baker Memorial, was killed in action on Okinawa several weeks ago. He was only 18 years old, and had been in the Marine service since July 1943. It was his first active engagement.

Dr. Faxon heartily endorses this urgent request we are about to make.

Ever since that first group left the Hospital for military training, the News office has endeavored to maintain a complete record of every MGH-er's participation in the war. This record includes not only the various changes of address, but contains — or *should* contain—the names of those killed and wounded, and the recipients of citations or decorations. This last file is, at present, most incomplete and unsatisfactory—due to the fact that many of you, because of reticence or procrastination, have failed to tell us when special recognitions have been conferred upon you. In several instances it has been by the merest chance that we have heard of these honors.

M.G.H. is justly proud of the work of her sons and daughters in World War I. Their records, in book form and in manuscript, comprise some of the most highly valued possessions of the Archives Department. The records of MGH-ers in World War II will be just as valuable, but it depends entirely upon your coöperation whether these files will be complete or not. Therefore, if you have received any one of the various commendations, won't you please acquaint the News office of that fact? We promise to refrain from publishing the information you send, if you so desire —although we don't see why we should. In either event, we trust you will accept this request with understanding and treat yourself objectively, in this one instance. Try to realize that the citation you may have received is the result of the opportunity for outstanding work (or courage) that good (or bad) fortune, or special professional equipment, presented to you; and that any honors bestowed upon you redound, because you are one of her sons or daughters, to the credit of M.G.H. Do not withhold from her that well-deserved reward.

In the light of this interpretation, we are hoping for early responses.

Brig. Gen. Elliott C. Cutler (*r.s.* 1916) has been decorated with the Croix de Guerre. The ceremony was held before Napoleon's Tomb in Paris.

Lt. Col. Frederick K. Poulin, DC (*Dn.* 1942) has been awarded the Bronze Star Medal for "meritorious service in direct support of combat operations in the Mediterranean Theatre of operations. Brig. Gen. Charles T. Myers, Commanding General of the Twelfth Air Force, made the award.

The citation reads in part: "As Dental Surgeon, Colonel Poulin resourcefully obtained vitally needed equipment and set up prosthetic dental laboratories in strategic locations".

Colonel Poulin, assigned to Headquarters of the Twelfth Air Force, has been overseas since August 1942, and is authorized to wear five Bronze Battle Stars.

Lt. Col. Milton S. Thompson, MC (*Or.* 1934) has been awarded the Bronze Star Medal. His citation reads: ". . . for meritorious service in connection with military operations as Staff Officer, G-3 Section, Headquarters European Theatre of Operations, from 15 February 1944 to 10 March 1945. Lieutenant Colonel Thompson has performed outstanding service in planning for the establishment of the rehabilitation training program for this Theatre. His services included the management of administrative details as well as a thorough study and understanding of both the medical and military problems involved. Lieutenant Colonel Thompson has contributed in great measure to the improvement of morale and efficiency of the personnel scheduled for return to combat. . . ."

We have reason to believe that Colonel Thompson may be on his way home. He left G-3 to become Commanding Officer of the 826th Convalescent Center which has been alerted.

Lt. Comdr. Maurice M. Tolman, MC (*a.d.*) has been transferred to the U. S. Naval Hospital, Long Beach, California. From there he writes:—

> As in my other activity, I am Chief of the Department of Dermatology and Syphilis, which keeps me very busy with both an active hospital service and a tremendous consultation service for the entire Naval Area. I am enjoying an extensive experience with penicillin in the treatment of the various stages of syphilis.
>
> I am very proud to inform you that I was recently invested with the Commendation Ribbon as a result of a letter from Admiral Stark.

A copy of the letter follows:—

HEADQUARTERS OF THE COMMANDER
TWELFTH FLEET
FLEET POST OFFICE
NEW YORK

From: Commander TWELFTH Fleet
To: Lieutenant Commander Maurice M. Tolman, Medical Corps, United States Naval Reserve

Subj: Commendation

1. Your performance of duty while serving at a large Naval Base Hospital in southern England prior to, during and after the invasion of the coast of France in June 1944, has been brought to my attention. You were instrumental in the efficient organization and preparation of the hospital for the reception of casualties, and your work in instructing and indoctrinating clinical teams for the most efficient and modern treatment of burns was outstanding. Your meticulous professional supervision was reflected in the excellent results obtained in the cases of large numbers of battle casualties. You exhibited the highest degree of professional skill in the effective treatment of the many difficult cases which fell within your specialty, and the superior quality of your services, in both routine and consultive capacities, was appreciated by all. Your devotion to duty, initiative and industry contributed materially to the excellent record of the institution.
2. For your outstanding services during this period you are hereby commended.
3. A copy of this letter is being forwarded to the Chief of Naval Personnel to be filed in your official record.

HAROLD R. STARK,
Admiral, U. S. Navy

Major Leo B. Burgin, MC (*CM* 1932), Executive Officer of the First Division's First Medical Battalion, is back home. He was in the thick of the fighting from Oran to Cheb, and has been awarded the Croix de Guerre with Silver Star, the Bronze Medal, and eight Battle Stars.

We succeeded in getting hold of him the other day, and plied him with questions about his experiences at the front. He felt there wasn't much of interest to tell about, but that depends upon the point of view, for here are some of the high lights in his story: He said that more people were killed in the Cocoanut Grove disaster than were lost from his unit at Oran. After Oran he went to Gafsa, the last oasis before the desert proper, in the southern part of Tunisia, then north to Beja to finish the campaign. He returned to Oran to prepare for the Sicilian invasion, and landed in Sicily on D-day. After that he returned to England to prepare for the Normandy invasion, where his Division spearheaded that landing. He participated in the break-through at St. Lo, proceeded up through France to Belgium, and on to Aachen in September. They came out for a rest on December 10, but were called back in again on the 16th, at the time of the German break-through in the Ardennes. He continued on through the crossing of the Roer, the closing of the Roer pocket, and across the Rhine. Advanced east to the Harz Mountains, and from there southeast through Bavaria and into Czechoslovakia as the war ended. He flew back to the States on the same plane with Lt. Col. Theodore L. Badger, MC (*EM* 1928).

He said that before crossing the Rhine his unit went through Bonn. The officers' mess was set up in the library of Dr. Sabota, the famous Anatomist of the University of Bonn. One day Major Burgin happened to pick a book at random from one of the shelves. He found, to his surprise, that it was Dr. Frank Mallory's work on Histology; and on the title page was written this inscription: "Presented to the University of Bonn by the American Army of Occupation, 1920".

More than once Major Burgin spoke of the effects (or, rather, absence of any effects) of his harrowing experiences. He is very grateful to find there are no remaining scars—either physical or mental. "Well there might have been," he said. "Immediately following each of the close engagements most of us, for a time, showed many of the symptoms of combat fatigue. The only difference between us and those who are still in hospitals undergoing treatment is that we got over it and they didn't."

Major Burgin has been released from the Army on inactive service, subject to call.

Everyone will remember that very dramatic letter from Capt. Robert P. Smith, MC, AUS (*M* 1943) in the August issue, in which he said that he and Capt. Rafe Banks, Jr., MC, AUS (*ES* 1943) were waiting in the Bavarian Alps for a boat to come and get them out. The boat arrived for Smith, but not for Banks at that time, although we have reason to believe that the latter has recently been released from the 117th Evacuation Hospital where Smith last saw him in a ward tent operating room in the little town of Oberau, busy with abdominal and fracture surgery.

The skiff that picked up Captain Smith pulled up alongside our office the other day for one of the most enjoyable visits we have yet received. His word pictures of combat conditions will never be forgotten, and his snapshots (including one of himself astride the "great window" in Hitler's Berchtesgaden retreat) made his word pictures doubly impressive. (We are still going to publish that picture he sent us of Captain Banks and himself taken atop an Alp, as soon as space permits.)

Their unit—the CCB of the 10th Armored Division—received a Presidential Citation for its heroic work in the breakthrough at Bastogne. Captain Smith said that each night during that drive, as soon as the men paused for a few minutes' rest, around midnight would come the inevitable one-word order from General Patton — "PUSH". And *"push" they would.* Someone had said (was it Patton?) that if Hannibal could get his elephants through the Alps the Americans could get their tanks through. And *get them through they did,* as we all know now.

Captain Smith is to go to a brief temporary assignment at Fort Jackson, S.C., and will send his next permanent address as soon as he knows it himself.

Major Henry H. Brewster, MC (*WM* 1940) appeared at the NEWS office recently to give us a report on his own work overseas and information regarding several other MGH-ers. Major Brewster has been working in psychiatry with the 5th General Hospital for over three years. He has received the Purple Heart, and wears Battle Stars for engagements in Normandy, Northern France, and the Rhineland. He has been Chief of Psychiatry since September 1944, when he was given a special assignment in England taking care of combat fatigue. In France his work was with combat neurosis.

When he arrived home he met, for the first time, his 3-year old son. The youngster is wary about accepting his father, and always refers to him as "that man" or "Major Brewster".

It is almost impossible to keep up to date on anybody's whereabouts these days, but we give the following, as reported by Major Brewster, for what it may be worth. He said that Major J. Evarts Greene, MC (*a. M*) is back in the States; Lt. Col. Horatio Rogers, MC (*ES* 1925) is Chief of Surgery at Cushing General Hospital, Framingham, Mass.; Major Howard I. Suby, MC (*a.u.*) is still with the 5th General, and when last seen was in Paris, assisting the G.U. in the writing of a history on G.U. surgery; Lt. Col. Moses S. Strock, MC (*oral s.*) is busy with his photographic equipment and waiting impatiently to come home; and Major Frederic W. Ilfeld, MC (*Or.* 1937) has arrived home, but has no assignment yet.

After a 30-day leave Major Brewster was to report back to Fort Dix for reassignment in the States.

Major Luke Gillespie, MC (*a. obst.*) reports that the personnel of the 13th Portable Surgical Hospital, of which he is the Commanding Officer, have been awarded the Combat Medical Badge for their close support of the Infantry during the recent campaign in Mindanao.

Capt. James G. Miller, MC, AUS (*EM* 1943) paid us a call one day in July. He told us he went overseas in February, visited England, all the American Armies in France and Germany and the French 1st Army, and had an opportunity to witness the handling of psychiatric casualties in combat areas. He has returned to his same assignment in Washington.

Dr. Faxon reports that Col. Walter Bauer, Lt. Thomas S. Risley, and Dr. Morris B. Sanders visited M.G.H. recently. Dr. Sanders, formerly a member of the staff of the American Hospital at Neuilly-sur-Seine, was interned by the Germans at the beginning of the war and was held by them for several months.

Col. John E. Gordon, MC (*cons. prev. med.*) is back after more than four years of service as Chief of Preventive Medicine in the Office of the Chief Surgeon, European Theatre of Operations. He has promised to send us an account of his work over there. He has been given a special assignment in the Pacific Area, attached to General MacArthur's Headquarters.

Ph 2/c Benjamin S. Parsons, a former Baker orderly, has been home on a 30-day furlough.

* * *

All material of a military nature in this and every issue of THE NEWS is first cleared for publication by the local Public Relations Department of the Army or Navy.

Apparently it took the arrival of a daughter to make Capt. Victor G. Balboni, MC, AUS (*WM* 1942) break a year and a half's silence. From Ashburn General Hospital, McKinney, Texas, he writes:—

> I have no exciting war news, but news which for me was far more exciting—the birth of Lillian Fletcher Balboni on June 8. When not admiring her, I am carrying on here as a Section Chief of the Rheumatic Disease Department.

MASSACHUSETTS EYE & EAR INFIRMARY

Comdr. Virgil G. Casten, MC (*Oph.* 1931) called on July 18th. He was stationed for 18 months in the South Pacific, covering assignments at Pearl Harbor, New Guinea, and at the invasion of the Philippines. He has now been transferred to the U. S. Naval Hospital, Newport, R. I.

Comdr. Raymond E. Meek, MC (*Oph.* 1926) has been on service in the South Pacific since shortly after Pearl Harbor.

Comdr. Abbott W. Dean, MC (*Oph.* 1929) is now stationed at the U. S. Naval Hospital at Aiea, Hawaii.

Major Thomas Cavanaugh, MC (*Oph.* 1940) is in charge of the Eye Department at Cushing General Hospital.

Comdr. John P. Macnie, MC (*Oph.* 1929) is completing a tour of duty at Espiritos Santos.

Lt. Comdr. Lyman G. Richards, MC (*Oto-Lar.* 1924) is stationed at the U. S. Naval Hospital, Pearl Harbor.

Lt. Comdr. S. Forrest Martin, MC (*Oph.* 1938) is *en route* to a station in the Pacific.

Major Trygve Gundersen, MC (*Oph.* 1930) is now at Valley Forge General Hospital.

Lt. Edward E. Moore, MC, AUS (*Oph.* 1944) is also stationed at Valley Forge General Hospital. We understand he is doing eye plastic surgery.

Lt. Daniel J. Reagan, MC, AUS (*Oph.* 1943 & *Oto-Lar.* 1944) called recently. He has been doing work with the hard-of-hearing (rehabilitation) at Borden General Hospital, Oklahoma. He is now on his way to the Arctic.

Lt. Trumbull Frazer, MC, AUS (*Oph.* 1943) has been reported killed in action over Germany, February 7, 1945.

Lt. Caroline Densmore, USNR (WAVE) who, before her enlistment, did Ophthalmological research work at the Infirmary, is stationed at the U. S. Naval Barracks, Washington, D. C. She is Personnel Officer, handling placement transfers and changes and advancement in rating of the thousands of enlisted men and women on duty in the Navy Department.

At long last we have started to remodel the Wards of the Infirmary. Sufficient funds not being available at this time for a new building, which has been our hope for many years, the fact that remodeling work on the Third Floor (Men's Ward) has actually begun, is most encouraging. Briefly, the plans call for removing the partitions which divided the Ward, replacing the wooden floor with tile, a new Treatment Room with up-to-date equipment, a Nurses' Station, glassed in and situated so that all patients are under constant supervision. The Utility Room is being equipped with the latest type sterilizers, flush sinks, and other equipment which will add materially to the efficiency of caring for patients. The Ward Kitchen comes in for its share of new equipment, with the installation of a dishwasher, refrigeration units, and modern sinks.

When the Third Floor has been completed, the same improvements will be made on the Second Floor (Women's Ward).

Plans are also under consideration for a new wing to be erected after the war.

Dr. Theodore Terry's research on retrolental fibroplasia has revealed numerous social and educational problems in the premature blind child. The Social Service Department, which has been studying social aspects of the disease process over a period of two years, brought to light the lack of local resources for parental education of the pre-school blind child. Following consultation with an advisory committee which included ophthalmologists, pediatricians, psychiatrists, psychologists, nursery school directors, and workers in the field of the blind, Perkins Institution offered a two weeks' summer course for a limited number of mothers and their children who are under study. Twenty mothers and seventeen babies were enrolled in the course, which was held the last two weeks in June. Both mothers and children lived at Perkins Institution during this period. The mothers attended lectures on the medical aspects of the retrolental fibroplasia on the physical and emotional development of the children and observed the educational processes of the nursery school, which was in session for the children daily, from 9 A.M. to 4 P.M. The nursery school was under the direction of Mrs. Louise Wood, of the Boston Nursery for Blind Babies.

Two experts in the field of education for the pre-school blind child, Miss Harriett Totman, Department of Education, Cleveland, Ohio, and Miss Gertrude Vandenbroek, Bureau of Services for the Blind, New York State, as well as Miss Ruth Butler, of the Massachusetts Eye and Ear Infirmary Social Service Department, Miss Frances Marshall, social worker at Perkins Institution, and Miss Virginia Beale, nutritionist, from the Harvard School of Public Health, were in residence during the project for frequent consultation with the mothers in regard to the individual problems.

Mothers were enthusiastic about the information they obtained from all of the instructors, and all of those participating in the teaching program and in planning for the project believed the results indicated the value of parental education in the field of the pre-school blind child. The instruction given in nursery school techniques demonstrated that much can be accomplished by mothers in stimulating the activities of the pre-school blind child in his home. Exchange of opinions and information among the mothers on their common problems lessened their anxiety in regard to the tremendous handicap faced by the blind child and his family.

Dr. Mosher received this interesting letter from Capt. Paul S. Mertins, Jr., MC, AUS (*Oto-Lar.* 1936). It was written July 10, on Okinawa.

> I have been rather neglectful in my correspondence largely because, until the recent campaign, I have had so very little of interest to report.
>
> Since the first of the year I have had a very wonderful tour of a large part of the Pacific which, under slightly different circumstances, has been one of my great ambitions.
>
> Since our unit was not ready to function I have been associated with an Auxiliary Surgical Team in a Field Hospital here during a part of the campaign. Now that it is safely over I look back on the whole thing as a very interesting experience. Needless to say, I was quite frightened at times, but it is surprising how, in the press of work, one can become accustomed to the most unusual circumstances and more or less take them for granted. It furnished a most ideal situation for seeing and doing a world of very interesting work. We were frequently only a short way from the action, and often received cases before they had had any other medical care. We were allowed a great deal of latitude in our methods of handling cases and how long we could keep them. And, tho there were times when we had to pitch in and do everything that came for eighteen and twenty hours a day, there was a world of Eye, Nose and Throat pathology—and anatomy the like of which I had never imagined before. It was very interesting and enlightening to me. I will not bore you with details, but I was repeatedly amazed at the number of severe neck injuries that somehow missed the large vessels. The men here also sutured the most awful and dirty face injuries, closing all dead spaces first, and following that with intensive chemico therapy. The absence of infection and the plastic results were far better than I had hoped, and much of it seemed to bear the earmarks of Dr. Kazanjian's teachings.
>
> I will be associated with a very large General Hospital. Major McKay and myself are hoping to make the EENT Department a center for referred work in this part of the world. We are hoping to add chest surgery to the department. We have already formed a plan for an EENT society with monthly meetings, as there will be a world of material that all of us — and especially myself — will profit from by going over it together.

New addresses:—

Capt. Lemuel Bowden, MC, AAF (*ES* 1940), Station Hospital, 815th AAF Base Unit, Malden, Mo.

Col. Edwin F. Cave, MC (*ES* 1926 & *Or.* 1928), Chief of the Surgical Service, General Hospital, Camp Edwards, Mass.

Lt. Burdick G. Clarke, MC, USNR (*EM* 1943), U. S. Naval Mine Warfare Test Station, Solomons, Md.

Lt. Col. Milton H. Clifford, MC (*a.p.*), 21 Lowell Street, Cambridge 38, Mass.

Surgeon (R) Burnet M. Davis (*r.s.* 1942), U. S. Public Health Service, 17 North Avenue, N.E., Atlanta 3, Ga.

Lt. Joseph A. Elliott, Jr., MC, AUS (*M* 1945), Ward 418, Moore General Hospital, Swannanoa, N. C.

Major John R. Graham, MC (*WM* 1936), Oliver General Hospital, Augusta, Ga.

S 1/c John D. Kenney, USCG Barracks C-43, Naval Munition Depot, Co. 21, Earle, N. J.

Lt. James J. McCort, MC, AUS (*r.p. R* 1944), Lawson General Hospital, Atlanta, Ga.

Major Monroe A. McIver, MC (*ES* 1922), 32 Fair Street, Cooperstown, N. Y.

Lt. Henry D. Moorman, MC, USNR (*WS* 1943), U. S. Naval Hospital, Fort Eustis, Lee Hall, Va.

Lt. Col. Edward J. Ottenheimer, MC (*ES* 1924), WPBC, Office of the Surgeon, APO 244, c/o Postmaster, San Francisco, Cal.

Capt. Gordon A. Saunders, MC, AUS (*EM* 1937), Lovell General Hospital, North, 354, Fort Devens, Mass.

Capt. Robert G. Snow, MC, AUS (*Oto-Lar.* 1940), 50th Co., Pers. Center, Fort Dix, N. J.

Lt. Col. John C. Snyder, MC (*WM* 1939), Rockefeller Foundation, IHD Laboratories, 66th Street & York Avenue, New York 21, N. Y.

Lt. Jesse E. Thompson, MC, AUS (*ES* 1943), Carlisle Barracks, Carlisle, Pa.

Major Alexander M. Waldron, MC (*EM* 1938), Regional Hospital, Fort Knox, Ky.

Lt. Frank C. Wheelock, Jr., MC, AUS (*ES* 1943), Carlisle Barracks, Carlisle, Pa.

Brief bits:—

Col. Richard Collins, Jr., MC (*ES* 1933) sends a new address—ODI, Hq. USGCC. His APO number is c/o Postmaster, New York, N. Y.

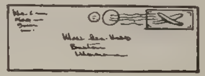
Capt. Henry L. George, Jr., MC, AUS (*CM* 1929) has been transferred to the 199th (US) General Hospital, APO 562, c/o Postmaster, New York, N. Y.

Major C. Fred Goeringer, *MC* (*Or.* 1940) is with the 247th General Hospital. He has a San Francisco APO.

Pvt. Tom Hennessy, past employee at M.G.H., left recently for training as a gunner on a plane. His address is 3706th AAF Base Unit, Squadron Q, Sheppard Field, Tex.

Lt. Daniel H. Hindman, MC, USNR (*a. obst.*), still on *U.S.S. Haven,* is now in Pacific waters.

Capt. John Homans, Jr., MC, AAF (*WM* 1942) has gone to the 5th Field Hospital. His APO is c/o Postmaster, San Francisco.



Last month we reported that four members of the Shedden family—father and three sons—are now on active duty in the Pacific. A quest for the whereabouts of Lt. Comdr. W. Martindale Shedden, MC (*ES* 1920), through Mrs. Shedden, brought forth this priceless letter from the Commander himself. Get ready for one of the most humorous accounts of Navy life you have ever read.

> My wife tells me that inasmuch as 24 months have elapsed, you would like another letter from me. If you will remind me every 24 months, I will be glad to write.
>
> We have just landed in the Philippines—a large number of us—after crossing a very pacific but unnecessarily wide ocean. Never again shall I sleep easily unless 47 others are packed into the room with me (I've notified my wife to make such arrangements), never—pardon me a minute, a Filipino boy is calling "Papers!" outside my Quonset—never mind. the papers are dated *May 27th!*—never, as I

was saying, shall I be able to brush my teeth without at least 8 other companions ogling themselves as they shave beside me. The senior officers, as a special favor, slept on the top tier of 3-tiered bunks. From that dizzy height it is interesting to observe the early matutinal gyrations of one's fellow humans. Then, up the ladder briskly to the deck for a little wake-up snooze. But the word has gotten out. Instantly a sailor appears with a hose and earnestly washes down the deck.

One night, in desperation, I slept on deck and under what I fondly imagined were protecting eaves. But nay, they found me out—better than that, they found that my feet were just under a gutter leading down from the deck above. That was a moment of rejoicing for the deck-washing crew.

I find the Philippines delightful, the jungles really fascinating, and the Filipinos most friendly and coöperative. At the moment I cannot tell whether this is all a most pleasant end-of-the-road or a *Dementia Propter Calore.*

P.S. My wife told you about my three boys, I think. My paternal soul glows, but I shall in *ré puerorum* remain mute.

Comdr. G. Elliott May, MC (*a. obst.*) has joined the fleet of "heard-from's". He writes:—

After three years in Boston, at the Receiving Station, Dependents' Dispensary, and Chelsea Naval Hospital, the Navy finally decided I was getting too set in my ways. Consequently, during the past month I have been Base Medical Officer at this island "Paradise" in the New Hebrides. We have a 200-bed dispensary and, for a place that the war has passed by, a goodly amount of business. The only MGH man I have met is Comdr. John P Macnie. John is Executive Officer to a Base Hospital that is going forward; but, after 22 months in these tropics, John hopes he is going backward.

Very like a bread-and-butter letter is this one from Capt. Paul E. Spangler, MC, USNR (*WS* 1925), in appreciation of his 3-weeks' visit at M.G.H. last March.

I left Base Hospital #8 over a year ago. I was Senior Medical Officer at NAS, Honolulu, for 9 months, where I built a dispensary and organized the Medical Department of that Station. Then I was ordered to the *U.S.S. Repose,* and have been with her during her intrauterine life and now for over two months since her birth. We hope to get into action soon, and then I expect we will have something more exciting to write about than the Cook's Tour we have been on for the past few weeks. Have one other MGH man here —[Lt.] Robert Hepburn [*r.s. U* 1943], who is my Urologist.

I did so enjoy my 18 days at M.G.H. in March. Everyone was so nice and helpful to me. They all went out of their way to show me things they knew would be of interest to me. I hope you can print this much of my letter so that those whom the shoe fits can know I am ever grateful to them for their kindness.

If it hadn't been for his friends who mentioned him in their letters, we would have had no idea of where Lt. Comdr. Herbert D. Adams, MC (*ES* 1932) might be nor of the nature of his work. We are hoping for a real letter from him soon, but in the meantime here are a few sentences just received from him.

Have been here 20 months, taking care of large numbers of casualties from Tarawa to Okinawa. The enclosures will give you some idea of this work. Best regards to everyone at M.G.H.

The "enclosures" are on exhibition in the wall case near Treadwell stairs.

We knew that Lt. John R. Paul, Jr., MC, USNR (*CM* 1943) had been transferred from Portsmouth Navy Yard because a copy of The News, sent to him there, was returned. Our attempt to locate him resulted in this letter from his father.

I am forwarding your letter to my son. I hope that upon receipt of it Jack will be able to write directly to you, as I am sure that Massachusetts General Hospital is very dear to his heart.

In the meantime I might say that he has been serving for some months on an amphibious landing craft—an LCS (Landing Craft Support)—at Okinawa. I received a letter from him today saying he has just been transferred to a Navy hospital at Guam. I am sure he is very happy to find that in addition to his routine medical work as a Navy doctor he will be able to spend some time on his favorite subject of Pediatrics. I gather that on the invasion beaches this particular subject received very little actual practice.

Comdr. James B. Graeser, MC (*WM* 1929) reports in and tells us where he's been.

I arrived back in the States from the South Pacific in February 1944 and was assigned duty at USNH, Oakland, California. There I was in charge of Medical SOQ (Sick Officers' Quarters). In November 1944 I was transferred here to USNH, Treasure Island, San Francisco, to be Chief of Services and Chief of Medicine.

All of us in the service greatly appreciate The News, for there is always someone we know who has reported to you. Thanks!

In this "first letter" Major Richard H. Thompson, MC (*ES* 1937) outlines his entire military career and gives us news of several other MGH-ers. But why didn't he tell us whether they ever got that extra ice box?

Although I am fortunate enough to be back from overseas, I still feel the urge to get out of the "silent ones" group.

The News was read to the last word by all MGH people overseas, but it seemed especially welcome to us in Australia and New Guinea.

I went over with the 105th General and spent the first year as a ward officer in Australia. During part of that time our Portable Hospitals, under [Major] George Marks [*ES* 1931] and Neil Swinton (from the Lahey Clinic), were distinguishing themselves in the Buna Campaign.

These units returned for reorganization, and in June 1943 I joined one of them (the 4th Portable Surgical Hospital) and went to New Guinea, arriving at Port Moresby. We expected to stay there for only a few days before jumping off for some forward area, but our short stay lasted for two and one-half months. We passed the time as best we could by taking road marches, going swimming, watching with amazement the lanky form of [Capt.] Arthur Pier [*WM* 1941] *running* a couple of miles each day, and between times making trips to Medical Supply to try for the extra ice box which would come in so handy where we were going—if we ever got going, and if we ever got the ice box.

At last we did get under way, and when we had the hospital and ourselves loaded into planes, it took only about two hours to get to the Markham Valley. Here we found the only coconut grove there was and set up our hospital. For about two months we were busy, but there was very little surgery. Art Pier had lots of malaria to treat. He could be seen at almost any hour of the day and far into the night, carrying an intravenous with quinine in it to give to one of his "young boys", as he called them, who was pretty sick

I left the Portable in March of 1944, and went as Chief of Surgery to a Station Hospital in the same area. The work at this hospital was the best of all because we had more of a variety of general surgery than at either the General or Portable Hospitals. From time to time we functioned as an Evacuation Hospital, for we were in the line of evacuation from the north coast of the island. During the quiet periods we took jeep trips round the valley, went to visit native villages, or hiked up into the hills behind the hospital. We got pretty well accustomed to the heat, and as that part of New Guinea was quite dry, we were really very comfortable.

In September 1944 my promotion came through, and the next month I got the chance to go for a time to a General Hospital as Chief of Surgery. This was a pleasant assignment, and everyone was extremely nice to me.

In December I received orders to a Station Hospital in Hollandia where I again had a Surgical Service. However, I had dermatitis on my hands which had bothered me since October. This progressed steadily, and by the end of January I was boarded home because of it.

During my stay in the Markham Valley it was a great pleasure to have friends stop in at frequent intervals on their way through, as they traveled about the Theatre. In this way I saw [Major] Myles Baker [*EM* 1930] and George Marks several times while they were working as consultants. They always stayed for a day or two, had many helpful suggestions to make, and, of course, brought news of what was going on in other parts of the Theatre. Art Pier dropped in on his way home from Biak, and [Capt.] Lew Dahl [*r.p. WM* 1942] on his way back to the 105th after a spell of combat with the 5th Portable.

At Hollandia I again saw Myles Baker, and found him doing an outstanding job as Chief of Medicine in a large General Hospital. He is now in the Philippines, back at the job of being a consultant.

Now I find that the wheel has come full circle. I am assigned to the General Hospital at Camp Edwards, with Colonel Cave as my Chief. There is a lot of general surgery here, and it is good to be busy once more.

Lt. Peter T. Brooks, MC, USNR (*ES* 1943) has returned home after many months in the Southwest Pacific. He is stationed at the U. S. Naval Hospital, St. Albans, N. Y., and sends this expression of appreciation for what your letters have meant to him.

Even though at long last I have finally returned to this country for a while, my desire to find The News once a month at mail call is no less keen. Though I never took the trouble to write and tell you so, every copy received overseas was read from cover to cover and very thoroughly enjoyed. All of us who are away certainly owe you all a very sincere vote of thanks.

After spending 25 months aboard my ship, those wonderful orders "to the nearest US port" arrived on board, and I was able to leave the Philippines by plane one Sunday, with a group of patients, and be in New York City at 0600 the next Saturday—a distance of 10,000 miles in less than 6 days!

After that, it seemed almost impossible to have any more luck, but my new orders finally came through to this hospital, to make everything perfect. Duty at present is on the Orthopedic Service which is large, very active, and I couldn't be happier.

In the July issue we placed Lt. Robert E. Carroll, MC, AUS (*ES* 1943) out in the Pacific. From Tinian comes this brief note, with an enclosure.

Greetings! This is in no way a "first letter" nor a bid for journalistic debut in your compendium of peregrinations. Just a note of appreciation for receiving The News. Thought you might like to see our daily bugle.

The newspaper has been on exhibition in the wall case near Treadwell stairs.

The Vincent Drill—Volunteer Day, 1945

Major Merrill Moore, MC (*gr. asst. N* 1933-34) is back home. In a letter to Dr. Means he says:—

> After 31 months overseas, I became ill in the Philippines and was evacuated to the States. After a period of rest at Letterman General Hospital, I have been given sick leave, which I am spending at home, and will report back soon for reassignment to duty.

In a letter to Miss Meehan, Capt. Robert K. Brown, MC, AUS (*WS* 1939) discloses the nature of his work and reveals his promotion in rank. He says, in part:—

> We have at last arrived and are at work in a very fine spot. My group is assigned to a General Hospital for the time being, and we are doing thoracic surgery. This is the chest center for the area, and we have enough cases to keep us on the job. The treatment of chest wounds is quite different from what we used to teach the lieutenants and majors two years ago, and I am bug-eyed all day long at what I see and do. The management of these cases, based on the Chief's principles worked out in the M.T.O. and on plenty of whole blood and penicillin, is strange and wonderful to a civilian like me.

Comdr. James I. Farrell, MC (*Oph.* 1932) writes from the *U.S.S. Samaritan*:—

> There are three other H.M.S. graduates on this ship, so there has been no lack for conversation when we get together.

A letter to Dr. Faxon supplies the first direct word we have had from Lt. George H. Carter, MC, AUS (*M* 1943). His letter is headed 107th General Hospital, Fort Lewis, Wash., and says in part:—

> I had a very brief tenure of overseas duty, including about two weeks in a Replacement Depot in France and about ten weeks in England, partly in a psychiatric Station Hospital for the treatment of combat fatigue, and partly in the General Hospital to which I am now assigned.

An atmosphere of quiet, after the tempest, pervades this letter from Capt. Lloyd S. Saltus, MC, AUS (*CM* 1938). He is with the 2nd Evacuation Hospital.

> I have (thank goodness) no wildly startling news, such as a San Francisco Post Office address. A new APO is the only change, as we have settled down to care for occupation troops in the neighborhood of Fulda, under the control of the 7th Army. Things are peaceful here and we enjoy good weather, a big swimming pool, and an increase in the previously rare leaves and passes, but always with the suspense about when we go home. Officially, our unit will sail home some time next winter, but a few have been pulled out on short notice and flown home, so we have to keep our luggage light, just in case.

Another "silent one" has spoken up—Captain John B. McKittrick, MC, AUS (*An.* 1938 & *WS* 1939), who writes from Walter Reed General Hospital:—

> My long silence does not reflect the untold pleasure, not to say useful information, The News has given me these last few years. Without it the old M.G.H. would have been a sharp but ever-receding memory, but the pages of The News brought me back home each month in a manner nothing else could have done except an enormous correspondence, which I am obviously incapable of keeping up. I can report, first-hand, that it has received its reward in the eager enthusiasm with which it is read.
>
> My own itinerary is drab and uninteresting when compared with most of those I have followed in The News. Beginning with the 6th G.H. (Remember those delightful summer months in Blanding?), I was indoctrinated into the communal way of life. I went overseas with them in February 1943 and remained at Casablanca until the following July. Lang Parsons [*WS* 1929] was the first to leave, and I was second. From Casablanca I went to Tunisia, just outside Bizerte, to join the 9th Evacuation Hospital which was encamped atop the dustiest hill available. The 9th stems from the Roosevelt Hospital in New York, and there I found several old friends—Walt Crandell [*r.s PH* 1941], Hugh McMillan, and Charlie Roberts [*r.p.* 1938]. I spent the remainder of my overseas time with the 9th and, unfortunately, never again was able to contact the 6th in toto, although I did see many of its members at intervals.
>
> From Africa we went to Sicily, September 1943, and thence to Naples, January 1944. In Naples we were attached to the French and had a very fine service, indeed—linguistically, sociologically, and professionally. Seven months of that, and then Southern France with the 7th Army. I made it as far as Luneville, and then was turned in for salvage because of fifteen months of recurrent hepatitis and amboebic dysentery. I arrived back in N.Y.C. just two years from the day of departure. Life with the 9th Evac. was as enjoyable as such duty could be, and I can truthfully say I regretted to leave.
>
> After a period of "observation and treatment" at Lovell General Hospital, I was assigned to the Surgical Service at Walter Reed.
>
> Throughout my travels I constantly ran into old friends too numerous to mention at this late date, but meeting them was always unexpected and thereby doubly pleasurable.
>
> At the moment I am one of those limited duty specimens but hope to have that erased from my 201 file soon. It is wonderful to be back, but aside from the family angle I find that Army life offers much more overseas than in the States. Here it lacks the real companionship and feeling of group unity that was so strong in most of the hospitals I knew over there. We are all in the same boat here as we were overseas, and yet we console each other to a lesser degree because we all leave the hospital at about 5:30 and do not reassemble until the next morning. Evenings over there were the times for crying in each other's *eau de vie.*

THE NEWS

No. 37 Boston, Mass. OCTOBER 1945

UROLOGICAL SERVICE AFFAIRS

In the last annual report of the hospital six names are listed as composing the house staff of the Urological Service. Five of these men are on active duty with the armed forces—a contribution of over eighty percent, and not bad from any standard, even the income tax.

To adequately run the service under these circumstances has required a change from the past when we had a full staff. An added embarrassment has resulted from the shortening of the appointments of the assistant residents and residents to nine months each and a similar decrease to six weeks in the length of time the surgical interns spend on our service. This is true of the other surgical service, of course. How have things gone with these changes? The answer is, exceedingly well. The reason, though simple, perhaps deserves some thought. It is because of the efforts of the resident staff. The residents and assistant residents have taken the added responsibility in their stride. They have worked hard and have done well in spite of the handicap of a shortage of help on the wards and in the operating rooms. To them the credit is due.

Since the beginning of the war the Urological Service has had five residents—John Gens, Robert Hepburn, Paulo Albuquerque, Alexander Michie, and the present resident, Howard Hoffman. Gens and Hepburn are now in the armed forces, and Albuquerque returned to his home in Rio de Janeiro last February. The two assistant residents now on service are Tetsuo Sugiyama from California and Richard Rodgers from Wisconsin. Each of these men has contributed to the smooth running of the service. It is perhaps fair to mention particularly one of our ex-residents, Paulo Albuquerque. After three years with us, he is now practising in Brazil. During his stay at the hospital he won the friendship of all who came in contact with him, performed over 300 major operations, and before leaving this country had passed the examinations for the Board of Urology.

Of all the service activities, probably the Out-Patient Department has suffered the most from the shortage of men. Much of the work here has been done by the first assistant resident, ably aided by faithful Frank Eggleston. Other members of the Out-Patient staff have unselfishly devoted their limited time to teaching and the clinic. A recent addition to the staff is Dr. E. J. Ganem, who was trained in New York at the Squier Urological Clinic. But special mention is due those men who had retired from active service and have turned a hand to help when needed. Until his death Dr. O'Neil worked again in the O. P. D. Dr. J. D. Barney, our ex-chief, deserves special praise for being willing to help in the Out-Patient Department and to give his advice at all times. The greatest loss to the service has been the absence of Dr. G. G. Smith from the wards and operating rooms since his retirement as chief.

The Urological Service is ready to give a hearty welcome to any or all of its members who return from the wars. May that be soon!

Fletcher H. Colby, M.D.,
Chief of Service

WHAT OF THE HOSPITAL VOLUNTEER?

All through the long trying years of war, men and women and young people have trekked to the Massachusetts General Hospital and the Massachusetts Eye and Ear Infirmary, unmindful of weather or transportation difficulties. "No gas? Why, that's all right; I'll use my 'bike' to the corner and take the trolley in to Boston!" Thus, in sun or storm, literally hundreds have kept faith with their hospital obligations and have come in to serve in their special capacities.

How many times we've heard the director, Dr. Faxon, a department head, and even floor nurses say, "We just cannot get along without the volunteers!" Yes, it is true that the volunteer has become a vital, human part of hospital service, and as such will be welcome through the years to come.

Right now, some short-thinking people are heard to say, "The war is over. Why doesn't the volunteer resign and let his work be done by a paid worker?" The fact remains that the volunteer never has taken work away from a paid worker, and never will!

The difficulty in securing paid help for a hospital is still very real, and the consensus of opinion is that it will be a long time before hospital routine will be normal once again. In the meantime, telephone calls come repeatedly to the Volunteer Service Bureau, "Hello, Miss Greenwood, if you still want me, I'll be in. Yes, I'll stay as long as I am needed."

There is comfort in the thought that the volunteer who looked upon hospital service as a war effort, now will look upon it as a civic effort. Many have come to know and love the Massachusetts General Hospital and the Eye and Ear Infirmary, and they do not wish to sever the relationship which has grown up between them.

So through the difficult, demanding years of the past, we are emerging into a new project—that of holding the postwar fort as long as needed, and in years to come to remember with satisfaction and pride that as a hospital volunteer we helped carry the load for those who struggled with almost superhuman endurance to care for the sick.

Thank God for doctors, nurses, dietitians, and all who help to make the running of a hospital possible. Thank God, too, for the human heart and hand of the volunteer who walks along in the procession.

Eleanor Greenwood,
Chief, Volunteer Service Bureau

This letter was written to Miss Viden by a British sailor who used to come in to help with the cleaning and scrubbing whenever his tanker was in port. He volunteered here off and on, from September 1944, all through the winter, and was always cheerful and smiling. His letter reads:—

> I am writing this on the *Queen Mary,* so that I can air mail this back to you in the first post office I see.
>
> I called at the Hospital before I left, but you were on your holidays, which I hope you enjoyed, and which you deserved, because I have seen the work you do. I must admit I was sorry when I left the U. S. A.—especially the Hospital. You and your Nursing Office Staff treated me with kindness which I could not have got better in my own country. I must tell you I loved working there. Also, you trusted me to carry on my work alone. I was free to walk all round the Hospital, and everyone who knew I was a British Sailor used to speak to me. Also, when I used to eat, the girls were so kind to me. I made such a lot of friends in the Hospital, and I made it like a home for myself. I admit to you now, Miss Viden, I shed a few tears before I left. Well, perhaps we will meet again. Any of your staff are always welcome at my home if they come this way.
>
> Wishing you and your staff the best. And God Bless You. Also, the U. S. A.

Plans for Ether Day, October 16, are not yet completed nor officially published, as we go to press. While the celebration this year will be simple and informal, one very interesting feature on the program will be the presentation of medals to all those who have worked here in the Hospital for more than ten years.

* * *

Miss Josephine C. Barbour has been appointed Chief of the Social Service Department, to succeed Miss Ida M. Cannon who is retiring.

HUGH CABOT

Dr. Hugh Cabot was born in Beverly Farms, Massachusetts, on the eleventh of August, 1872. He was graduated from Harvard College in 1894 and from the Harvard Medical School in 1898. He was, by all accounts, a rugged youth; whenever he could, he took to the woods or lived in a shack which he had helped build on the marsh at Barnstable.

After graduation from the medical school, Dr. Cabot served as Surgical House Pupil at the Massachusetts General Hospital. Following this, he assisted his uncle, Dr. Arthur Tracy Cabot; this association must have been a major factor in arousing his interest in genito-urinary surgery. Although he never limited his practice to that specialty, it was as a urologist that he acquired his reputation.

In 1910 Dr. Cabot was appointed Genito-urinary Surgeon to out-patients at the M. G. H.; one year later he was made Chief of the newly established Department of Genito-urinary Surgery, a unit of ten beds which was set aside for urological patients as a result of his persuasive powers.

In 1916 he organized and became Chief Surgeon of the Harvard Unit, B. E. F.; the unit, known as Base Hospital No. 22, saw long service in France. Dr. Cabot, who served as commanding officer in 1917-18, was made a Companion of the Order of St. Michael and St. George and later, in 1925, was granted the honorary degree of LL.B. by Queen's University, Belfast.

For a short period after the war, Dr. Cabot returned to take up his duties as Chief of the Urological Department at the General, but the larger opportunities offered by the position of Professor of Surgery and Dean of the Medical School at the University of Michigan appealed to him and he went to Ann Arbor in 1919. After eleven years at the University of Michigan, he moved to Rochester, Minnesota, where he became Professor of Surgery in the Graduate School of the University of Minnesota and Surgeon at the Mayo Clinic. These positions he held until his retirement from active practice in 1939.

Since that time, Dr. Cabot has lived in Needham, Massachusetts, but for him retirement meant anything but inactivity. For years he had been interested in the sociologic and economic aspects of medicine; he had written "The Doctor's Bill" (1936), an excellent review of the situation, and in 1940 "The Patient's Dilemma". Always somewhat inclined to the left, he became one of the leaders in a movement which aimed to inject a new point of view into the relations between the medical profession and the public. For the past few years he had been Chairman of the Russian Relief, a position which he filled with his usual vigor.

In 1902 Dr. Cabot married Mary Anderson Boit of Brookline; they had four children. Mrs. Cabot died in 1936; in 1938 Dr. Cabot married Elizabeth Cole Amory, who survives him.

In writing of a man's life no summary, however brief, should be concerned solely with his achievements. We remember a man, particularly if we knew him well, not so much by the things he did as by what he was. Hugh Cabot had a vivid personality which one could never forget. In his youth he had spent considerable time with those who lived simple lives in the woods or on the sea; from them he had learned a direct and forceful way of talking, well larded with expletives and figures of speech, which gave great emphasis to what he said. Whenever Hugh Cabot stood up to discuss a paper, people listened.

Dr. Cabot was always interested in teaching; he had held some teaching position from 1910 until he retired. From 1929-35, he was an Overseer of Harvard College. To his younger associates he was a stimulating teacher; he was a link between the older generation of surgeons—those who were active in the final decades of the last century—and the men of the new century. Dr. Cabot told many an anecdote of the former group, handing on not only the record of their sharp wit but also the traditions which had developed in the M. G. H. during a century of medical service.

We think of Hugh Cabot as he was when he worked in this hospital and there is no reason to believe that he ever changed. His forte, it seems to me, was teaching; the young men and women of the middle west must have got much that was wholesome and stimulating from the vigorous, sturdy personality of this product of New England's forests and marshes, of her schools and colleges and of her Massachusetts General Hospital.

A group of thirty Medical Illustrators met in Chicago on July 16 - 19, to organize the Association of Medical Illustrators. Mr. Tom Jones, professor of Medical and Dental Illustration, University of Illinois College of Medicines, was elected President of the Association. The other officers are Mr. Willard C. Shepard, Art Director of W. B. Saunders Publishing Company, Philadelphia, Vice-president; Elon Clark, Duke University Hospital, Durham, North Carolina, Chairman of the Board of Governors; Elizabeth Brodel (daughter of the father of Medical Art in this country), Presbyterian Hospital, New York, Treasurer; Muriel McLatchie, Massachusetts General Hospital, Boston, Secretary.

The Association of Medical Illustrators has been formed to promote the study and to encourage the advancement of Medical Illustration and allied fields of visual education, to promote understanding and coöperation with the medical and dental professions, including Public Health and Nursing, and to advance medical education.

The Association begins with a charter membership of about fifty-five. Philadelphia has been tentatively selected as the site for the 1946 meeting.

The Association will include members in Latin America and Canada.

The Medical Art Department announces the opening of a large traveling exhibit sponsored by the Moderne Medicine, on November 5, 1945. In the exhibit will be masterpieces by Mr. Max Brodel, loaned from Johns Hopkins Medical School, and a pictorial history of Medical Art loaned from a collection by Miss Vera Morel, New Orleans, Louisiana. Many well known illustrators are represented in the show. Tom Jones, W. C. Shepard, Elizabeth Brodel, Russell Drake, and Ralph Sweet are only a few of those included.

The exhibit is very much in demand and has become widely popular in less than a year's travel to Baltimore, Yale, New York, Mayo, etc. We are indeed fortunate to have secured the November date.

At the meeting of the Board of Trustees held on August 24, it was voted to appoint:

Dr. Thomas B. Brazelton as Assistant Resident on the Children's Medical Service for the term September 17, 1945 to April 1, 1946;

Dr. Clito R. Damiani as Resident in Dermatology for the term August 27, 1945 to March 31, 1946;

Dr. Thomas B. Fitzpatrick as Resident in Dermatology for the term beginning April 1, 1946;

George Edward Foley as Assistant in Bacteriology;

Dr. Nathan O. Kaplan as Assistant Chemist, to work with Dr. Lipmann in the Surgical Bio-chemical Laboratory for six months;

Dr. Richard C. Webster, Jr., as an Assistant in Surgery, with particular attention to plastic surgery.

Dr. Charles P. Sheldon has returned from military service and has resumed his former position on our staff, as Assistant Obstetrician.

Dr. J. Evarts Greene has returned from active military duty and has resumed his former position on the staff at the Hospital, as Assistant in Medicine.

* * *

S/Sgt. John T. Keating, past Storekeeper in the Dietary Department, appeared at the Hospital recently, wearing his discharge button.

Capt. Marlow B. Harrison, MC, AUS (*EM* 1938) paid us a call recently. He went to Camp Blanding with the original 6th General Unit and remained with them in Italy until this last June, when he was transferred to the 60th Station Hospital which was slated for Manila. While waiting to board ship the Jap surrender came, but Captain Harrison didn't know until two days before sailing that he was on the way to the States. After 30 days spent at home in San Francisco, he is to report at Camp Sibert, Alabama, for further orders.

Capt. Ralph H. Luikart, Jr., MC, AUS (*M* 1944) came in to say hello the other day. He told us he went to Europe in May, had a very luxurious tour of Paris and other places, and returned in June with a boatload of wounded men—mostly psychiatrics. He gave us accounts of several specific instances where the high reputation of MGH men for outstanding professional ability was acclaimed. He said that very often one would hear, "He can do that; he's a Mass. General"; and that when a doctor said, "They do it that way at Massachusetts General", it was immediately accepted as the best treatment.

* * *

In addition to the citations already mentioned in THE NEWS, the following, brief or detailed, have been received from various sources:—

Major Otto E. Aufranc, MC (*Or.* 1938)—Bronze Star

Capt. Franklin G. Balch, Jr., MC, USNR (*ES* 1925)—Bronze Star Medal

Lt. Col. Marshall K. Bartlett, MC (*WS* 1931)—Bronze Star Medal . . . for meritorious achievement in connection with military operations in North Africa and Italy from 20 February 1943 to 8 May 1945. As Assistant Chief, Surgical Service, and later as Commanding Officer of the 6th General Hospital, Lieutenant Colonel Bartlett continually sought, in addition to performing his routine professional and administrative duties, to further medical knowledge of his staff. In early 1944 he published an article which showed that the diet as eaten by combat troops was sufficiently lacking in Vitamin C to delay wound healing and in late 1944 and early 1945 he worked long and arduous hours culling important information from a large series of records, sorting and compiling this information and supervising the preparation of articles summarizing the results obtained from various types of treatment. When, in March 1945, he was called unexpectedly to the temporary command of the hospital, he entered upon this new task with the same industry and enthusiasm he had shown in his professional work. . . .

Lt. Col. Edward F. Bland, MC (*EM* 1929)—Bronze Star

Capt. John R. Frazee, MC, AUS (*Oto-Lar.* 1934)—Bronze Star Medal . . . for meritorious achievement in connection with military operations in North Africa and Italy from 20 February 1943 to 20 May 1945. Captain Frazee, on three different occasions, set in operation an Ear, Nose, and Throat Clinic which in its twenty-two months of operation cared for more than 4,400 patients. Captain Frazee worked with diligence and great skill to keep his department at a peak of efficiency, and by his able care many soldiers were enabled to continue to render useful service with their organizations, rather than to become non-effective through hospitalization. Captain Frazee's diligent application to duty and the high level of efficiency which he personally maintained, as well as leading his department in rendering continued superior medical service, reflected great credit upon himself and the Medical Corps of the Army of the United States. . . .

Capt. F. Thomas Gephart, MC, AUS (*WS* 1941)—Silver Star, Bronze Star . . . For gallantry in action on Angaur Island, Palau Group, 17 September 1944. When a battalion surgeon was severely wounded in action, CAPTAIN GEPHART volunteered to take his place. After a heavy enemy attack was sustained by the battalion with which he was serving, CAPTAIN GEPHART went to the front and, while under continuous enemy fire, administered first aid and blood plasma to the wounded. His complete disregard for his personal safety and actions in the face of the enemy undoubtedly saved many lives.

By command of Major General MUELLER:

JAMES C. SHORT,
Colonel, G.S.C.,
Chief of Staff

Major James A. Halsted, MC (*WM* 1932)—Legion of Merit . . . for exceptionally meritorious conduct in the performance of outstanding services in the Mediterranean Theater of Operations from 15 February 1943 to 12 April 1945. Major Halsted by his continuous study of the problem of gastro-intestinal disorders in combat soldiers, evolved new methods of treatment which decreased the average hospitalization time from 25 days to 6, and enabled the Medical Corps to return 80 percent of such cases to full combat duty, whereas formerly only 40 percent could be returned. In addition, the adoption of these methods unquestionably resulted in the saving of thousands of men for combat duty in other theaters of operations. This remarkable improvement in medical science was solely the result of Major Halsted's personal effort and skill, and represented a major advance in medicine as well as an important saving of combat manpower. . . .

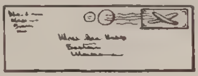
Col. Donald S. King, MC (*EM* 1920)—Legion of Merit . . . for exceptionally meritorious conduct in the performance of outstanding services in North Africa and Italy from 20 February 1943 to 8 May 1945. By his outstanding ability, his tireless energy and his inspiration and wise counsel, Colonel King developed the Medical Service of the 6th General Hospital to an extremely high degree of efficiency. Not content with superior performance of his regular duties, he devoted many hours to the conduct of research and the guidance of other officers in his department in the preparation of articles which presented important information gathered from studies of patients in the hospital. Because of his high professional qualifications, Colonel King was chosen as the physician to attend the Right Honorable Winston S. Churchill when the British Prime Minister was taken ill upon his return from the Teheran Conference. In the summer of 1944, as the senior officer of a committee to study tuberculosis in the Mediterranean Theater, he completed an exhaustive study of the disease as found in that Theater. Colonel King's superior performance of duty and broad contributions to the furtherance of medical knowledge reflect great credit upon himself and the Army Medical Service. . . .

Lt. Col. James R. Lingley, MC (*res. R* 1930)—Bronze Star Medal . . . for meritorious achievement in connection with military operations in North Africa and Italy from 20 February 1943 to 8 May 1945. Not content with the operation of a highly efficient X-Ray department over a period of almost two years, Lieutenant Colonel Lingley, as Chief of X-Ray Service, 6th General Hospital, always sought for methods of improving existing facilities with whatever means he had at hand. Foreseeing the need for a spot film device, he assigned the problem of its design to his junior officer. While the details of this device were being worked out he constantly supervised and guided those designing it. He later designed and had built a very simple but highly efficient laminagraph, thereby permitting much more detailed roentgenographic study of deep body structures. While his hospital was stationed at Rome, Italy, where the operating schedule was extremely heavy, he readapted and redesigned an operating room fluoroscope designed originally by another officer. With this fluoroscope the roentgenologist was able to guide the operating surgeon to a foreign body without interrupting the operation. Lieutenant Colonel Lingley's thorough knowledge of his field, coupled with his inventive skill and his energy, resulted in contributions of great usefulness to the Medical Service of the Army of the United States. . . .

Lt. Col. Langdon Parsons, MC (*WS* 1929)—Legion of Merit . . . in recognition for his work in maxillo-facial surgery.

Capt. Herman D. Scarney, MC, USNR (*Oph.* 1928)—Bronze Star

Major Charles L. Short, MC (*WM* 1930)—Bronze Star Medal . . . for meritorious achievement in connection with military operations in North Africa and Italy from 1 October 1943 to 8 May 1945. In addition to performing his routine duties as Medical Internist, Medical Service, 6th General Hospital, with resourcefulness and ability, Major Short devoted much of his time to the furtherance of research in the field of Arthritis. Early in 1944 he began to publish the results of his findings and later submitted to the Theater Surgeon a comprehensive article on Arthritis. This article, representing a masterly and complete summary of the disease as seen in the Theater, was a most valuable as well as scholarly contribution to the field of medical literature. Major Short, by his interest, enthusiasm and diligence, went far beyond the normal requirements of his assigned duties, and in so doing contributed to the furtherance of medical knowledge of the Army. . . .



All material of a military nature in this and every issue of THE NEWS is first cleared for publication by the local Public Relations Department of the Army or Navy.

New addresses:—

Lt. Ronald C. Bishop, MC, AUS (*M* 1945), General Delivery, Moore General Hospital, Swannanoa, N. C.

Capt. Lester A. Brown, Jr., MC, AUS (*Oto-Lar.* 1937), 16th General Hospital, APO 113, c/o Postmaster, New York, N. Y.

Asst. Surgeon Harvey S. Collins (*M* 1944), U. S. Public Health Service, Hillman Nutrition Clinic, Birmingham, Ala.

Lt. Comdr. Bernard M. Jacobson, MC (*a.p.*), 108 Longwood Ave., Brookline 46, Mass.

Lt. E. Porter Jewett, MC, USNR (*Oph.* 1945), 7th Fleet, c/o Fleet Post Office, San Francisco, Cal.

Capt. Paul S. Mertins, Jr., MC, AUS (*Oto-Lar.* 1936), 233rd General Hospital, APO 331, c/o Postmaster, San Francisco, Cal.

Lt. Comdr. George M. Noss, MC (*gr. asst. Dn.* 1939-43), District Medical Office, U. S. Coast Guard, 40 Broad St., Boston, Mass.

Lt. John H. Peters, MC, USNR (*WM* 1943), *U.S.S. Paracutin* (AE 18), c/o Fleet Post Office, New York, N. Y.

Lt. Gardiner Pier, MC, AUS (*WS* 1943), APO 21234, c/o Postmaster, San Francisco, Cal.

Lt. John W. Raker, MC, USNR (*ES* 1942), Hotel Beaumont, Room 515, Beaumont, Tex.

Major Francis C. Skilling, MC (*Oph.* 1933), Base Surgeon, AAF Station Hospital, Key Field, Meridian, Miss.

Brief bits:—

Lt. Col. Myles P. Baker, MC (*EM* 1930) has received this promotion. He has been home on leave, and is to return to military service.

Lt. Harry A. Bliss, MC, USNR (*M*) has sent a Pacific Area address, which includes "7th Fleet under orders".

Major Spiros P. Sarris, MC (*WS* 1939) has been promoted to this rank. He has been home on leave, and is not sure where his next assignment will be. He was still attached to the 171st Evacuation Hospital.

MASSACHUSETTS EYE & EAR INFIRMARY

The regular Fall Meeting of the New England Oto-Laryngological Society was held at the Massachusetts Eye and Ear Infirmary on October 3. The regular Wednesday conference was held in the morning.

An innovation was received with a great deal of success, in presenting seven instructional courses for the first part of the afternoon. These were given by Drs. Edward J. Whalen, Philip Mysel, John A. Murtagh, V. H. Kazanjian, Philip E. Meltzer, John R. Richardson, and Werner Mueller.

The speakers for the afternoon were Mr. James A. Caughlin and Dr. Werner Mueller who spoke on the Preliminary Report of the Massachusetts Hearing Tests. The next subject presented was on Status Asthmaticus by Dr. George O. Cummins of Portland, Maine. Dr. William Dameshek, by invitation, opened the discussion.

We regret to announce the death of the following:

"Henry" Knoop, elevator man at the Infirmary for many years, died at the Massachusetts General Hospital on August 20, after a brief illness. "Henry" was a friend to many House Officers. He had been employed at the Infirmary since 1925, and will be missed by all who knew him.

Dr. Clarence Field Worthen (*Oph.* 1917) died on August 21.

Last month we reported that Major Trygve Gundersen, MC (*Oph.* 1930) was stationed at Valley Forge General Hospital. We now learn that he is Chief Consultant in Ophthalmology to the Surgeon General of the United States Army and is stationed in Washington. Just where he will be when the next NEWS goes to press is anyone's guess, but we hope he will be back on the active staff at the Infirmary.

Dr. Derrick T. Vail, Jr., (*Oph.* 1924) has been released from military service and is to take up his duties as Professor of Ophthalmology and Chairman of the Department at the Northwestern University Medical School.

We are glad to welcome back Dr. Michael J. O'Connor who has returned to finish his residency in Ophthalmology. Dr. O'Connor was called to military service in 1940, just before he had completed his junior service. He is the first to return to resume a residency interrupted by the war. We understand there are several others who plan to come back.

A recent release from the Marine Corps Air Station at Cherry Point, N. C., reports that Capt. Herman D. Scarney, MC, USNR (*Oph.* 1928) has been promoted to this rank. The release continues:—

> Senior medical officer on the station, Captain Scarney is in charge of the station dispensary which serves the medical needs of thousands of Marines at the largest Marine Corps Air Station. He reported here for duty in July, after a year of action-packed service aboard an aircraft carrier in the Pacific.
>
> His carrier, operating with the Third and Fifth fleets, participated in attacks on Tokyo, Iwo Jima, Okinawa, Luzon, Hong Kong, and actions in the China Sea. Kamikaze pilots attacked often, scoring several hits on the large flattop. His carrier also rode out one terrifying typhoon which wrenched gun mounts loose from the deck, twisted gun barrels, and tore planes loose from their moorings. It was a badly mauled carrier that returned to the States for overhauling. For his services during that period of heavy action Dr. Scarney was awarded the Bronze Star.
>
> Captain Scarney first joined the Navy Medical Corps in 1925, after receiving his medical degree at the University of Michigan. Later he resigned his regular commission to take specialized training at the Harvard Medical School. For a few years he served as house surgeon at the Massachusetts Eye and Ear Infirmary in Boston, Mass., then entered private practice as an eye surgeon in Detroit.
>
> Although separated from the regular Navy, Captain Scarney retained his commission as a member of the organized reserve, and while practising in Detroit served as flight surgeon for Marine and Naval aviation squadrons at Grosse Ile, Mich. Recalled to active duty in 1940, he became senior medical officer at Grosse Ile and later was assigned as senior medical officer for the Naval Air Station, Dallas, Tex., before joining the carrier staff.

Headed Camp Atterbury, Atterbury, Indiana, came this letter from Major Joshua C. Drooker, MC (*Oto-Lar.* 1939), to Dr. Schall.

> It's difficult to write to an old Army Surgeon from a camp stationed in the zone of interior, for I have no dramatic tales of operating from sunup to sundown under a hail of shrapnel and using two wooden crates for an operating table. But the day's routine is quite the Army, and there's no mistaking that, even if it is in Hoosierland.
>
> You asked me about our neurosurgeon's routine in using tantalum. He has given up the chisel in making a slot for the tantalum plate. He feels that it isn't necessary. I believe you said that Dr. Kazanjian feels the same way. He simply sets it down to the edge of the cortex of the bone and trims it with heavy bandage scissors if necessary. He then makes it secure with glazier points. They appear very smooth postoperatively.
>
> Our overseas cases have fallen off lately and most of our work now is routine. The clinic load of patients is terrific and there are only three of us to handle it. In addition to the regular general hospital cases we function as a sort of reviewing authority (I like to call it that; it's flattering) for what may be called a chronic hospital for broken down GI's. It is similar to the use we made of Long Island or Tewksbury hospital when I was an intern at the Boston City Hospital. When the other general hospitals tire of a case he is sent here. I think I have a new scale of vital statistics that is the last word. A soldier who goes through the gamut of studies from one hospital to another with only three or four diagnoses on his 55 A sheet is unquestionably destined to the good fortune of becoming a centenarian.
>
> As to things clinical, we are having good results with penicillin in Vincent's infection. 20,000 in 5 drops of saline placed under the membrane in tonsil ulcers, three times daily for about two days. We have also had dramatic results with intramuscular use in acute frontal sinusitis in the engorgement stage with recovery without going through the suppurative stage. It was given systemically in the patient and a rigid trial given because no local treatment was used.
>
> Thank you very much for the notice of my reappointment at the medical school. It's nice to see glimpses of the horizon.
>
> Best regards to the Infirmary crowd.

Lt. Daniel J. Reagan, MC, AUS (*Oph.* 1943 and *Oto-Lar.* 1944) has been transferred to the 188th Station Hospital in Greenland.

Never was more excitement created in the NEWS office than when this letter, with its enclosures, arrived from Capt. Robert K. Brown, MC, AUS (*WS* 1939). The surrender leaflet, particularly, is a prized addition to our World War II collection. Stop by the Treadwell stairs bulletin board and see it. The *Target* is also on display.

The letter reads:—

> Thank you, first of all, for THE NEWS. It is the most interesting and concentrated piece of mail we get. I thoroughly appreciate it, and so do all the MGH and Boston people to whom I pass it along. The November to June numbers, in one bundle, were awaiting me when I arrived on Saipan, and the rest have come regularly.
>
> During these last two months my thoracic surgical team has been attached to a General Hospital, doing chest work. The service is large and there was considerable operating to do—mainly decortications of the lung for clotted or infected hemothorax, and a few diaphragmatic repairs. Now, with the cases cleared up and the war over, we are waiting to see what will happen to us next.
>
> You might be interested in the enclosed papers. The *Target* is the daily paper on Saipan. The leaflet is one they are now scattering by plane over the woods and hills of the island in an effort to bring out the Japs who are still in hiding.

This long-awaited letter from Capt. F. Thomas Gephart, MC, AUS (*WS* 1941) contained a copy of his citation, of which we were informed by the wife of a friend of Captain Gephart's.

> Your letter has just reached me, after two and a half months *en route*. I am enclosing a copy of the citation which you requested for the MGH records.
>
> I have been fortunate in being with a Field Hospital during my stay overseas. We have done a lot of moving around, which helps the time pass. I was also fortunate in being able to spend a few days as a Battalion Surgeon during combat without losing my hospital position. We've been busy at times—in fact, very busy—but, of course, our census fluctuates greatly. Between each of our frequent moves there is always a spell without any patients at all.
>
> Right now we are in the Philippines. During the past month I've been able to have brief visits with six former MGH-ers—George Berkheimer, Ed Goeringer, Lester Yee, Lloyd Evans, Ed Albright, and Gustav Kaufmann. They are all Majors, and each has seen many months of service in this Theatre. They should all be getting back to the States before too long. Unfortunately, I am afraid I can't say the same thing for myself; my

prospects for an early return are definitely poor.

THE NEWS is coming through regularly. Many thanks for keeping us so well informed as to life at the Hospital and the activities of those in the services. We do appreciate it.

A thank you letter for that $50 note on the Bank of China, which Capt. D. Crosby Greene, Jr., MC, AAF (*CM* 1940) sent us for our war collection, brought forth this first communication from Captain Greene, other than mere changes of address. It is headed "Somewhere in China".

I have always hesitated to write THE NEWS because my experiences have been so peaceful and insignificant compared with most of your correspondents'.

I am still Surgeon for my old outfit, the 36th Fighter Control Squadron. We sailed from California six months ago, and stayed in India for a month. I was able to visit Bombay and Calcutta several times. Despite the prevalence of disease and filth in the country, the Army camps were clean and sanitary, and sick call was light. I visited the wards of a large General Hospital and saw cases of smallpox, malaria, amoebic dysentery, and dengue fever in the course of a few minutes.

From India we traveled "over the Bump", via motor convoy, into China. The vast jungles and mountains over which the Stilwell Road winds was something I shall never forget. Nor shall I forget the inner intracacies of the Army Cross-Country Ambulance.

Endemic goiter is very prevalent in Southwest China, and more of the inhabitants seem to have it than not. I landed at my first "permanent" base by plane. There I graduated in the course of a few weeks from chief latrine sniffer to Base Surgeon. I was able to see and treat such diseases as malaria, bacillary and amoebic dysentery, cholera, leprosy, and parasitic infestations, among the Chinese and Americans. Recently we have been transferred again—this time to a base so healthy I am becoming irritable for lack of work.

About that $50 Chinese note—it is quite valid, but don't get excited over the amount. It is worth just 3 cents on the market here.

In closing I might say that while overseas I have never seen a Jap, never treated a battle casualty, never heard a bomb blast nor felt a sniper's bullet—which pretty well backs up my first statement.

Capt. W. Philip Giddings, MC, AUS (*WS* 1939) has given us permission to publish this letter from him to Dr. Haase. It came from Riva del Garda, Italy. Captain Giddings has been with the 2nd Auxiliary Surgical Group for over two years.

Since the war over here ended we have spent most of the time on the shores of Lake Garda—the first few weeks near the southeastern end, and since June 10 here in Riva. We have a large old resort hotel which is exactly adequate for our large officer personnel. Swimming is excellent, we have boats as well, and there are two fine tennis courts—all of which adds up to the best situation we have had overseas.

We are in our 30th month away from the States now, and though rumors are thick, there is as yet nothing concrete about our getting home. In spite of our comfortable life in this beautiful place, everyone is restless and a little annoyed that we have been kept here so long. We have been very busy compiling a report on our surgical experiences. It includes over 3000 abdominal cases alone, so you will realize the task is not a small one. The material is valuable, and we believe warrants the effort being put into the compilation. Some excellent papers have been written, and some really fascinating facts brought out. I am somewhat in the thick of the whole thing, and so long as we are here that is good, for it keeps me busy enough so that I can't spend all my time griping at not being home yet.

I confidently expect, however, that I shall see the last of Italy in the next six or eight weeks. I hope I'm not wrong. Whenever the time comes, you may be sure one of my early visits will be to the M. G. H.

Please give what portions of this you will to THE NEWS for publication. That sheet is read not only by the MGH alumni here, but seems to have interest for many others as well. It has been an excellent and highly successful enterprise.

Capt. Henry L. George, Jr., MC, AUS (*CM* 1929) sends another change of address—the 124th (US) General Hospital, APO 777, c/o Postmaster, New York, N. Y.—and says in addition:—

This unit is setting up in an old S. S. barracks, about 3 miles south of Salzburg, Austria. It is very picturesque here, with mountains on all sides of us. I have been to two of the "Orchester Konzerte" of the "Salzburger Festspiele 1945". Hitler's wrecked home at Berchtesgaden is about 13 miles south of here.

It took two false starts before Major Albert E. Rauh, MC, AUS (*CM* 1936) reached Iceland. In this "first letter" he gives us an excellent description of the island and its people, and finally carries us along with him to his present assignment in England.

In May 1941 I was accepted in the reserves as a 1st Lieutenant with good prospects of being called soon to serve a year of active duty. Shortly after the commission arrived, a friend who was serving as neuropsychiatrist on one of the induction teams at Fort Jay recommended that I apply for such work. I saw some of the officers at Fort Jay, found they had a vacancy, and, as it was mutually compatible, we agreed I should start work the following Monday. This procedure must sound as naive to anyone who has been in the Army for any length of time as it now does to me. However, a day or so later a telegram informed me to report to the Induction Station at the previously arranged time. How the Army managed to get an order through—even a telegraphic order—in so short a time will, in my mind, forever remain a deep, dark mystery. There was something in the telegram about COL SUPPLEE, but, as there were a number of errors in spelling and many abbreviations I didn't understand, I guessed I was being instructed to COLLECT SUPPLIES on arrival.

My friend at Fort Jay went to the Induction Station with me. He told me to sign a book so that everyone would know I had reported for duty that day. A private room was awaiting me, and I set to work psychiatrically screening the prospective inductees. For the first few days I was very slow, averaging no less than 6 or 7 minutes a man, but after a week I had reduced the time to 3 minutes; and at one period, when I clocked myself, I averaged 1.9 minutes per man. It is really remarkable what one can learn from a nude male in 3 minutes—part of which time is spent performing a hasty neurological examination. At the end of the first week I received a phone call from someone who wanted to know if I were there and when I had begun to work. After getting that information he wanted to know why I had not reported for duty. Of course, I thought signing the book was the equivalent, but it wasn't. I should have reported to COL. SUPPLEE, whom I have never seen to this day and of whom I still think as a typographical error. However, I never lost any pay over the matter, and have long since read in the Officers' Guide the proper manner of reporting for duty at a new station. I seriously regret not having done it that time, for never again—although I have had three subsequent assignments—have I been able to hang my hat on the hook outside the C. O.'s door, knock, advance to within the prescribed number of paces, salute, and announce my arrival on duty status. Perhaps this will happen at a Separation Center—soon.

Toward the end of August I was becoming rapidly convinced that after three more months I would be thoroughly fed up with induction screening, which made excellent bait of a telegram I received asking whether I wished to apply for the position of Neuropsychiatrist, Bermuda Base Command. I volunteered, and several weeks later more papers arrived. Then several months passed, and on 9 December 1941 I received orders assigning me to the 50th Signal Battalion and warning me to prepare for the cold. Obviously, Bermuda was not to be my destination. After purchasing what I thought would be needed for "cold" of unspecified degree (I bought much more than I needed) and clearing the post (a more complicated procedure than I had anticipated), I taxied to the POE, showed my orders, and was informed that although no one could tell me where I was going, I was on my way to Iceland. The following day I headed for Fort Slocum, and there, after extensive inquiry, finally found soldiers belonging to the 50th Signal Battalion. They weren't quite sure where I should report for duty, but seemed to think Captain Musgrave would be able to help. While looking for his office I ran into another medical officer who was also looking for the 50th. When we entered Captain Musgrave's office there was certainly no opportunity to report in a formal fashion. Papers seemed to be flying all over the room, and soldiers were dashing in and out asking questions in a language that seemed foreign to both the other medical officer and myself.

As soon as Captain Musgrave spotted our MC insignia he expressed delight at our having finally arrived, inasmuch as we had been requisitioned at least a month previously. One of the clerks wanted to know which of us was the ranking officer. This stumped us both, as we were obviously of the same rank. However, he seemed irritated and intimated that such a thing was beyond precedent in the Army. Didn't we know which one of us had been commissioned first? No, we didn't. So we proceeded to ask each other and discovered that I had been commissioned two months prior to the other officer, which made me Battalion Surgeon and him Assistant Battalion Surgeon. Frankly, the idea of being a Battalion Surgeon rather frightened me, as in medical school I had taken a minimum of surgical training and had no idea what a Battalion Surgeon did. It was not long before I learned that the title had no literal application and that the Staff Sergeant in the detachment was well qualified to make up the monthly reports I had to sign.

Not long after arriving at Slocum I learned that our battalion was only a part of a larger task force headed for Iceland. The next two days were spent giving innumerable shots to innumerable men listed on innumerable rosters, and on the next morning we boarded a rather small harbor craft that didn't look as if it could hold half the task force, but somehow we managed to squeeze on board. Shortly before noon we reached the POE in Brooklyn, and the following morning we sailed, not expecting to see the States again for many months. The first day out was rough, the second was rougher, and on the third we all thought the old tub would never make it. Our confidence was not enhanced when our Naval hosts told us the last time the ship had been overhauled, three months previously, it was not expected she would be able to see more than three months of "limited service". During these three days we were introduced to the gentle art of "watching", and found that our Naval companions could virtually see in the dark. We also learned that even sailors who had been on the high seas for several years were not above becoming seasick. We were further encouraged that seasickness was not all psychogenic by observing the behavior

Brig. Gen. Francis H. Oxx congratulates Col. Donald S. King, after presenting him with the Legion of Merit

of our mascot, a fox-terrier of sorts, whom the enlisted men had managed to get on board in a barracks bag. This poor little fellow had all the symptoms of any seasick GI, and it was a pitiful sight to see him standing on deck, his feet wide apart, and moving his head from side to side trying to bring forth gastric contents that had long since been washed overboard.

The convoy dropped anchor in Halifax Harbor, but the next day the rest of the convoy sailed and left us behind. Apparently the prediction of the men who had previously repaired our ship was accurate, for it was almost three months to a day that the ailing turbine refused to function. At the end of a week another ship began blinking in the clear that she had come to escort us to Boston, where we arrived without incident a few days before Christmas. There, among other things, we purchased a harness and lead for our mascot, on which he had his name and unit engraved. We also bought him a plaid jacket for the "cold", on which were sewn Sergeant's chevrons and a hash mark. Needless to say, the presentation of these honors was duly ceremonious.

Within a few days all our cargo was transferred from one ship to another—a ship that, so far as anyone knew, would take us to Iceland; but no sooner had the second ship been loaded when it was learned other plans had been made for her, necessitating our return to Fort Slocum by train. During the next two weeks, before we again left for Iceland, many of us received leaves home and bade farewell a second time.

The second trip was successfully completed in 11 days. We arrived at our future camp site after dark on 25 January 1942—tired, hungry, and rather cold. The Nissen huts to which we were assigned were damp, in poor repair, and the only source of heat was a small British job filled with wet ashes. After supper at a neighboring camp, we were issued beautiful sleeping bags consisting of two goose-down bags which fitted one inside the other. Believing it would be bitter cold, we zipped ourselves inside both bags, but in short order had to open the outer one. Iceland was not so cold as its name implied.

In an incredibly short time our camp became a real home—the most welcome additions to which were potbellied stoves that could be relied upon to give even more heat than we needed.

During my early weeks in Iceland I realized that my professional duties were all but nonexistent and that I should have to find some way to occupy my time. Why I decided on weaving I do not know, unless it was because a woolen mill was not far from camp. There I made the acquaintance and later the friendship of the manager—a German refugee, who had in his possession a small hand-loom, a copy of which I built. I later wove cloth according to his directions.

For five weeks during the summer of 1942 I had the good fortune to be posted with the construction company of our battalion on a peninsula some 30 miles west of Reykjavik. We lived in a tent camp and were favored by generally excellent weather. About 65 miles north we could see the Snaefellsjokull, one of Iceland's smaller glaciers. Being near the Arctic Circle, the sun set almost directly behind the Snaefellsjokull at about 2330 hours and in two hours rose on the other side. There was nothing even remotely resembling darkness, or even dusk, and the skies during these prolonged sunsets and sunrises were spectacularly beautiful—rivaling only the winter displays of Northern Lights, which are neither like those sometimes seen in the States, nor like the picture calendar conception where there is a focal point on the horizon from which the Lights emanate. Rather, they hang vertically from the sky like a fine, shimmering, vari-colored veil suspended in mid-air from any part of the sky and taking all sorts of swirling shapes. The most spectacular movement takes place when this vertical veil begins to whirl around itself and passes across the sky almost from one end to the other. One never tires of watching the Lights, and as they appear on still, clear nights, I have watched them for hours on end. Such nights are not excessively cold, as the temperature round Reykjavik almost never drops to zero.

Not long after arriving in Iceland I told the Base Surgeon of my interest and training in psychiatry, and he promised I should be placed in my field as soon as possible. That was February 1942. By February 1943 I received orders to proceed to the 208th General Hospital, where it was understood I should be on the Psychiatric Service; but I had to remain with the 50th, on detached service, until July 1943, when a suitable replacement arrived from a disbanded hospital in the north of Iceland and I proceeded to the 208th which, on the day of my arrival, was changed to the 327th Station Hospital. At last I was back in Psychiatry and, until our unit left for England in November 1943, we had quite an active service.

During my stay in Iceland I made a number of firm civilian friends in whose homes I spent many pleasant evenings. I attempted to learn something of their language under the guidance of an exceedingly fine teacher. It is a very highly inflected language and has changed little in the 800 years since it was developed by monks from the Norse runes. Illiteracy is practically unknown in Iceland and, although not all Icelanders write their language correctly, it is so correctly spoken by all that no one Icelander can tell from the manner of his speech the educational status of another. The Icelanders may have taken too much pride in their "splendid isolation", but nevertheless they belong to one of the most highly cultured communities in the Western World. Not only do they print more books per capita than any other country, but they show a lively and active interest in all the fine arts.

My present unit did not come to England until January 1944, at a time when I was still with the 327th Station Hospital, and apparently had no idea it was to become a Neuropsychiatric Center until after its arrival in Malvern Wells, Worcestershire. Such a change meant many transfers in and out of the organization among officer personnel, and extensive training of nurses and enlisted men —to say nothing of the training of junior officers who remained with the unit. We were designated as a "Holding Hospital", which meant that our primary function was to hold patients after they had been Boarded for the Z/I elsewhere; but until such Boarding was simplified in December 1944, the vast majority of our patients arrived un-Boarded. After D-day the number of patients greatly increased and, due to the fact that we were much under T/O strength, long hours of work were needed to keep pace with our case load. In September we began to receive officers with at least some psychiatric training—officers who had been promised us as far back as March. Shortly after our arrival we found it necessary to make more secure our closed wards—of which we have many. Some of the closed wards have been devoted solely to insulin coma treatments, and another is used for Electro-Convulsive Therapy. One ward is devoted to neurological cases—principally epilepsy—and we eventually acquired an electro-encephalographic apparatus.

As a Station Hospital in England, we found ourselves shorn of our former authority to Board patients to the Zone of Interior, as well as of our ability to keep patients longer than 30 days. Thus our Psychiatric Service was all but non-existent. This alone made me desire a transfer to another unit; and a rumor that our hospital was to take only German prisoners of war after the invasion of the continent made me more determined in this effort. In February 1944 I was transferred to the 96th General Hospital. I soon became Chief of the Admission Section and Ward Officer for the closed ward officer patients. Later I became Ward Officer of the open ward officer patients. In June 1944 I had my first interview for promotion and finally became Major in March 1945.

The location of our hospital in a valley of the Malvern Hills has been ideal, and we were subjected to no enemy aerial activity. We are situated about 10 miles from the city of Worcester—famous for its Cathedral where King John is entombed, its Royal Worcester Porcelain Works, and its meat sauce.

Having celebrated four birthdays overseas, it now appears very likely I shall be sent directly to the CBI in order, if for nothing else, to make symmetrical my overseas duty which I began in the IBC.

Three trophies—two for baseball and one for softball—won in Africa and Italy by the 6th General Hospital teams, are on exhibition in the Archives Room. They are appropriately inscribed, and are unique in that they are made from shells used in the war. If someone, familiar with such things, would tell us whether the large one is a "bread basket" bomb, as is our guess, we'd appreciate it very much.

No. 38 Boston, Mass. NOVEMBER 1945

DENTAL SERVICE AFFAIRS

The Dental Department has undergone an evolutionary change during the last three years. Principally an out-patient clinic since it was founded in 1868, its oral surgery division was established as a house service when the official relationship with the Harvard School of Dental Medicine was effected in 1943.

The out-patient staff continues to attend to the regular surgical dental procedures on ambulatory patients under the excellent supervision of Drs. Glenn W. Lawrence, Harold A. Carnes, John C. Stanton, F. Chester Durant, and John A. Breen, each of whom is in charge of the clinic one day a week. We have been fortunate in that only ten out of thirty-nine dental surgeons, assistant dental surgeons, and graduate assistants were called into service; therefore, the out-patient dental clinic did not suffer too much during the war, for those who remained performed their duties conscientiously. The staff will soon be complete again, and the clinic will profit from the experiences gained by those who have served in the combat zones.

New developments in this division of the service were recently effected to conform with the recommendations made by the Hospital Dental Service Committee of the American Dental Association which has been working with the Council on Professional Practice of the American Hospital Association. It has suggested that dental departments should give special consideration to the differentiation of the dental staff into various specialties, such as are recognized by the dental profession, and that men should be appointed for special work who are qualified in their fields in accordance with the accepted standards.

With this trend in view, the service in our out-patient department has been gradually extended. A stomatologic clinic conducted by Dr. David Weisberger is held every Thursday morning and is attended by students of the Harvard School of Dental Medicine.

Dr. Fred R. Blumenthal who was recently appointed orthodontist is available by appointment for the diagnosis of developmental defects and malocclusion of the teeth of children.

Lt. Col. Henry J. Carney who has just returned from military service, has agreed to accept an appointment as maxillofacial prosthetist. Well known before the war as an expert in the production of prosthetic appliances including artificial ears and noses, Dr. Carney will, with his additional experience, be able to make an outstanding contribution in various departments of the hospital.

Captain Henry M. Goldman who has been attached to the Army Medical Museum as pathologist for diseases of the maxillofacial region, is to develop a periodontia clinic. Periodontal disease, one of the most common dental afflictions, certainly deserves special attention in our hospital.

A careful investigation of the oral and dental health of the entering class of student nurses was made this year. Although these young women were supposed to have had their teeth attended to before coming to the hospital, routine clinical examination and X-ray surveys carried out show that in a group of 112 examined, 42 had moderate and 26 extensive dental caries; 11 had one or more apical abscesses; and 83 had impacted teeth. Pericoronal infection of impacted teeth and chronic dental abscesses which may become acute because of fatigue, toothaches due to progressive caries interrupt the training of many of the nurses, and often have serious consequences such as submandibular and submaxillary abscesses. Our dental hygienist, Miss Lillian Peck, who is in charge of the admission and supervises the follow-up treatments of the patients, has given the dental problem of the student nurses a great deal of attention and deserves much credit for her untiring effort.

The house service takes care of all major oral surgery cases, and is the direct responsibility of the chief of the department who also has the title of oral surgeon. He serves on a half-time basis, with Dr. Weisberger who is assistant oral surgeon.

Two dental house officers are appointed on an annual basis. They rotate between the out-patient department and the house service. The arrangement which provides for presentation of oral cases in the various conferences such as fracture rounds, the osteomyelitis and tumor clinics, gives these interns not only an excellent knowledge of the care of similar diseases in other parts of the body and the use of supportive therapy, but also affords an opportunity for the medical house officers to observe the treatment of the diseases of the jaws and oral cavity.

Dental staff meetings are held once a month from October to June. These furnish an opportunity to discuss some of the departmental problems and to present for review interesting cases treated by the staff. These meetings are frequently attended by visitors from near and far, civilians, and men in the armed forces.

A semiannual publication, *The Clinic of the Dental Department of the Massachusetts General Hospital* has been started; the fifth issue has just appeared in the *American Journal of Orthodontics and Oral Surgery.* In these clinic reports have been included papers describing new methods developed by members of the department, such as the fixation of condylar fractures of the mandible by internal wiring, the use of a peripheral bone clamp instead of pins for skeletal fixation of the jaw, the repair of the mandibular nerve in cases of paresthesia following jaw injuries, the value of chemotherapy and penicillin in the treatment of odontogenic neck infections, and the use of lipiodol injections for the investigation of swellings of the salivary glands.

Kurt H. Thoma, D.M.D.,
Chief of Dental Department

Dr. Thoma brought back with him from Guatemala a very beautiful certificate which announces his appointment as Honorary Professor on the Faculty of Oral Surgery in the University of San Carlos. Dr. Thoma is also an Honorary Member of the Dental Society of Guatemala.

* * *

To the Massachusetts General Hospital Ida M. Cannon *is* Social Service. It is largely due to her initiative, foresight, planning, and hard work, that the idea of Social Service has become a reality. Having served additional years to help meet wartime staff deficiencies, Miss Cannon has recently tendered her resignation. The regret at her leaving and the appreciation of her service are expressed in the following resolutions passed by the Hospital Trustees:

> "In accepting the resignation of Miss Ida M. Cannon as Chief of the Social Service Department the Trustees of the Massachusetts General Hospital wish to record their grateful acknowledgment of her outstanding services.
>
> "Miss Cannon entered the Hospital as a volunteer in 1906 and in 1907 was appointed in charge of Social Service. For nearly four decades she has given devoted service to this Hospital in the hitherto neglected field of human relations.
>
> "Dr. Richard Cabot was the founder of the organized union of professional and social work, while Miss Cannon was in large measure the instrument who through the years put into operation the principles and developed the techniques of this essential service. A large part of the credit for the development of medical social service here and in other hospitals is due to her. She was a true pioneer.
>
> "As author, lecturer, consultant and trainer of social workers she made such an impress in the field of social work that she is looked upon as an acknowledged leader throughout the nation.
>
> "Endowed by nature with a sympathetic and kindly disposition, Miss Cannon brought to her problems a deep human understanding and sound judgment. The merit of her work has

reflected happily upon the history of this Hospital. With her resignation we lose one who has been an abiding helper but retain the inestimable heritage of her great contribution in the field of medical social service.

"The Trustees feel assured that Miss Cannon's writings in the days to come will continue to contribute to the good of the Hospital and the general welfare."

The ninety-ninth anniversary of Ether Day was observed in the Moseley rotunda on October 16.

Dr. Faxon opened the program by reading the following excerpts from *The personality of a hospital,* an address given by Dr. Harvey Cushing in 1921, at the Centennial Celebration of the opening of the Hospital:—

> . . . What are the elements that make a hospital what it comes to be as the years roll round? Given two institutions side by side in the same community with the same purpose, the same organization, the same initial endowment, and starting at the same time, differing only in their personnel, how quickly, yet unconsciously, do they assume different characteristics and acquire differing personalities. Nothing should be more alike than two sister ships, yet in time how markedly different is the life aboard. How alike and yet how different are Andover and Exeter, twin offspring of a single brain; Harvard and Yale; Boston and New York; Massachusetts and Maryland. Each as an institution in which people combine for definite and similar objects has become a composite of many personalities, —some dominant, some less so,—all, living or dead, nevertheless discernible however faintly in the ultimate picture. . . .
>
> It is on the personality rather than on the personal accomplishments of these surgeons and of others who have been connected with the hospital that I would dwell, for it is their combined individualities rather than their individual contributions which in the end have produced that complex which we recognize as giving to the hospital its particular flavor, tone and color. It is an intangible thing—this distinctive character of one hospital which makes it differ from others of its kind. Like an old wine, it has acquired a certain quality which only comes with age and a new institution cannot imitate, for it represents the fusion of the countless personalities of all those who have worked for it or in it, no matter how lowly—of a nurse or house officer or orderly, no less than of a trustee or superintendent or member of the staff. . . .
>
> Every hospital recognizes more or less clearly its set obligations; what helps or hinders most in their fulfillment are the crystallized traditions which give an institution its particular individuality. In the development of this quality countless people, however unconsciously, have contributed— those whose charity has given comfort and peace of mind, as well as those whose professional skill has brought physical well-being to the maimed and sick; those who have brought the greatest sympathy and understanding to the problems of the young people here to learn; those who may never have come in special contact with either patients or students, but, freed from the killing routine of the clinic, have applied themselves to the forwarding of knowledge; those who have managed the business affairs of the hospital and its relations to the outside world; those, too, who have made the beds, kept the books, answered the 'phone, cooked the food, done the wash, stoked the fires, scrubbed the floors, and killed the rat—in the Hospital Jack built.

Then followed a new and most impressive feature. Very lovely pins of blue enamel on gold were distributed by Mr. John R. Macomber, President of the Corporation, to all those employees who had served the Hospital for ten years or more. The pins bear the Hospital seal, and include one star for each ten years of service rendered. Many received pins with one star, several with two, fewer with three, and Mrs. Genevieve C. Chase, our Record Librarian, was awarded a pin with four stars for more than forty years of service. Then came the high point in the program. Two men — Mr. Eric Frankson, our Storekeeper, and Mr. Robert Henderson, Dean of Orderlies — were presented with pins, similar in design, but fashioned entirely of gold. These special pins signify over fifty years of association with the Hospital.

After the applause had subsided, Dr. Faxon extended to all an invitation to enjoy a social hour in the Brick Corridor. Light refreshments were served by members of the M.G.H. War Service from tables decorated with colorful autumn leaves and brilliant pumpkins.

Although the exercises were simple, it seemed to one observer, at least, that never within her memory had an Ether Day program been more inspiring.

The names of all who received pins will be published in the next issue of THE NEWS.

* * *

By a very circuitous route a most exciting piece of news came to our ears. Listen! At the Royal Palace in Italy, Col. Edward D. Churchill and Major Daniel J. Holland, Jr., were decorated by His Royal Highness, Prince Umberto, Lt. General of the Realm, with the Order of the Crown, for "meritorious service to the Italian nation".

In addition to the citations already mentioned in THE NEWS, the following, brief or detailed, have been received from various sources:—

Major Otto E. Aufranc, MC (*Or.* 1938)—Bronze Star Medal . . . for meritorious achievement in connection with military operations in North Africa and Italy from 15 May 1943 to 8 May 1945. As the only experienced orthopedic surgeon in the 6th General Hospital, Major Aufranc performed his routine duties in a highly commendable manner and personally trained, with great skill and patience, the several officers with whom he worked, with the result that a high standard of excellence was attained by his entire section. In addition Major Aufranc summarized, in a series of articles, the results obtained with various types of treatment and devised and put into service a number of simple, useful orthopedic appliances. Major Aufranc's contribution to the field of orthopedic surgery in the Mediterranean Theater was fourfold in that he proved himself an accomplished surgeon, an ingenious improviser, an able teacher, and astute observer and reporter. . . .

Lt. Col. Henry K. Beecher, MC (*WS* 1934)—Legion of Merit . . . for exceptionally meritorious conduct in the performance of outstanding services in the Mediterranean Theater of Operations from 6 September 1943 to 1 August 1945. Lieutenant Colonel Beecher, by personally treating soldiers seriously wounded in combat, evolved principles and procedures of resuscitation and anaesthesia that were accepted and put into practice throughout this and other theaters of war. First hand experience gained during the cold winter months before Cassino and in the dug-out shock tents of the hospitals at Anzio was translated by him into basic concepts to govern these phases of the management of the wounded soldier from the time the missile strikes until the damage it caused has been repaired. Original observations were made on the pain suffered by man wounded in battle that had never been recorded in the history of warfare, and combined with his observations on the hazards of the traditional use of morphine, those studies pointed the way toward the giving of this time-honored remedy of the battlefield in a manner that was both safe and humane. . . .

Lt. Col. Edward F. Bland, MC (*EM* 1929)—Bronze Star Medal . . . for meritorious achievement in connection with military operations in North Africa and Italy from 20 February 1943 to 8 May 1945. Performing his assigned duties as Assistant Chief of Medical Service of the 6th General Hospital in a highly efficient manner, Lieutenant Colonel Bland displayed great interest and enthusiasm in the furtherance of medical knowledge within the Mediterranean Theater of Operations. He was chairman of a committee which inaugurated a series of highly successful interallied medical meetings, and in his chosen field of cardiology he had already made several contributions to the medical literature of the Theater when he began to compile records of war wounds of the heart. Not merely by study of all available records, but by personal contact with as many as possible of the medical officers who attended patients with heart wounds, he gathered a series of cases which was of such scope that no comparable piece of work on the subject exists in medical literature. Lieutenant Colonel Bland's industry, ability, and resourcefulness in gathering, digesting and summarizing important data from each case in his series resulted in an outstanding contribution to war surgery and medicine. . . .

Major Richard B. Capps, MC (*CM* 1931 & *EM* 1933)—Bronze Star Medal . . . for meritorious achievement in connection with military operations in the Mediterranean Theater of Operations from 21 January 1944 to 8 July 1944. By his great technical skill, diagnostic ability and painstaking persistence, Major Capps contributed in a large measure to the discovery and standardization of methods for diagnosing and treating infectious hepatitis, a disease which was common to the Allied Forces throughout the Theater, but about which very little was known prior to the work of Major Capps and his associates. . . . The investigations in which Major Capps played such an outstanding role constitute one of this war's major contributions to the medical science, and are in keeping with the highest traditions of research in the Medical Corps of the Army of the United States. . . .

Capt. Daniel S. Ellis, MC, AUS (*EM* 1941)—Bronze Star Medal

Major Daniel J. Holland, Jr., DC (*Dn.* 1938)—Bronze Star Medal . . . assigned the arduous task of preparing the dental history of the Mediterranean Theater of Operations while on temporary duty with the Medical Section, Allied Force Headquarters, Major Holland attacked the problem of collecting, compiling and writing the history with such diligence, zeal and skill that he not only completed the project considerably sooner than reasonably could have been expected but turned out a manuscript of such quality that it was commended in the Office of the Surgeon General for its completeness and its orderly, systematic and graphic portrayal of facts. Instrumental in establishing central dental treatment centers, Major Holland effectively utilized dental personnel and equipment and determined the most advantageous location of successive centers in order to render the highest possible dental care in accordance with the large troop movements throughout the Theater. During the period of redeployment of large numbers of troops from the Theater, he planned and established large dental centers in five redeployment training and staging areas. . . .

Comdr. E. Ross Mintz, MC (*P* 1930 & *r.s. U* 1932)—Bronze Star Medal

Capt. Richard V. Riddell, MC, AUS (*ES* 1943)
